Monitoring of U.S. Imports of Tomatoes

Publication 3064

September 1997

Preface

Section 316 of the North American Free-Trade Agreement Implementation Act (NAFTA Implementation Act), Public Law 103-182, requires the U.S. International Trade Commission (Commission) to monitor U.S. imports of "fresh or chilled tomatoes" and "fresh or chilled peppers, other than chili peppers," until January 1, 2009. As a result, the Commission instituted investigation No. 332-350, Monitoring of U.S. Imports of Tomatoes, and investigation No. 332-351, Monitoring of U.S. Imports of Peppers, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)). This report on the Commission's monitoring investigation covers tomatoes for fresh-market use and for processing. The purpose of this monitoring is to permit the Commission to conduct an expedited investigation and, if appropriate, recommend to the President provisional relief should a petition for relief be filed under section 202 of the Trade Act of 1974 with respect to imports from all countries, or a petition requesting such relief be filed under section 302 of the NAFTA Implementation Act with respect to imports from Canada or Mexico. Generally, such provisional relief would remain in effect, pending completion of the investigation by the Commission and action by the President.

Since 1993, the Commission has conducted two safeguard investigations under section 202 of the Trade Act of 1974 and an antidumping investigation under the Tariff Act of 1930 with respect to imports of fresh tomatoes. The second safeguard investigation also included imports of fresh bell peppers. The Commission instituted the first safeguard investigation, No. TA-201-64, *Fresh Winter Tomatoes*, on March 29, 1995, in response to a petition filed by the Florida Tomato Exchange, et al.¹ The petition requested, *inter alia*, that provisional relief be provided pending completion of the investigative process. The Commission made a negative determination in the provisional relief phase of the investigation in late April 1995, and the petition was subsequently withdrawn and the investigation terminated without a final determination. On March 11, 1996, the Commission instituted a second safeguard investigation, No. TA-201-66, *Fresh Tomatoes and Bell Peppers*, at the request of the Florida Fruit and Vegetable Association, et al. On July 2, 1996, the Commission made a negative injury determination in that case; as a result, no relief was provided.²

In late March 1996, the Florida Tomato Growers Exchange, et al., filed an antidumping petition with the Commission and the U.S. Department of Commerce (Commerce) alleging that imports of fresh tomatoes from Mexico are being sold in the United States at less than fair value.³ The Commission and Commerce instituted investigations on April 4, 1996,⁴ and

¹ U.S. International Trade Commission (USITC), *Fresh Winter Tomatoes* (investigation No. TA-201-64), USITC publication 2881, Apr. 1995.

² USITC, *Fresh Tomatoes and Bell Peppers* (investigation No. TA-201-66), USITC publication 2974, Aug. 1996.

³ Under the U.S. antidumping law (19 U.S.C. 1673 et seq.), antidumping investigations are conducted by Commerce and the Commission. A full investigation involves four phases, including preliminary and final phases at each agency. Commerce may issue an antidumping duty order only if it finds dumping, and the Commission finds that a domestic industry is materially injured or threatened with material injury, or that the establishment of an industry in the United States is materially retarded, by reason of imports of goods that have been found by Commerce to be sold in the United States at less than fair value.

⁴ 61 F.R. 15968, Apr. 10, 1996.

April 25, 1996,⁵ respectively. In May 1996, the Commission made an affirmative determination in the preliminary phase of its investigation.⁶ Following Commerce's announcement in October 1996 of a preliminary finding of dumping margins ranging from 4.16 to 188.45 percent, Commerce and Mexican growers entered into a suspension agreement. The agreement took effect on November 1, 1996. To ensure that there will be no undercutting or suppression of prices, the agreement sets a reference price, which can be adjusted after one year if market conditions undergo significant changes. The agreement also suspended the antidumping duty investigation.

This report contains statistical information gathered by the Commission on the U.S. tomato industry in the course of its monitoring. This information includes (1) consumption and trade data (including U.S. imports and U.S. exports) and (2) other industry data (including U.S. production quantity, value, unit value, harvested area, and yields; U.S. weekly arrivals and shipping point quantities; average U.S. retail and shipper prices; and U.S. cost-of-production estimates). The information presented in this report on the U.S. tomato industry was obtained from a number of sources, including the U.S. Department of Agriculture, the U.S. Department of Commerce, the Florida Tomato Committee, and the University of Florida Cooperative Extension Service. This report principally covers 1992-96 data and partial-year data for 1997.

Highlights

The following are highlights of the statistical data collected on tomatoes for fresh-market use and processing for the period 1992-96.

Fresh-market Tomatoes

- U.S. apparent consumption rose by 11 percent from 1.8 million metric tons in 1992 to 2.0 million metric tons in 1996; consumption in 1996 was valued at \$1.5 billion. The ratio of the volume of imports to consumption in 1996 was 37 percent, up from 11 percent in 1992.
- U.S. production of tomatoes for fresh-market use fell by 21 percent, by volume, from 1.8 million metric tons in 1992 to 1.4 million metric tons in 1996. The value of production fell steadily from \$1.4 billion in 1992 to \$879 million in 1996, or by 37 percent, with a similar drop in unit values from \$0.79 per kilogram in 1992 to \$0.63 in 1996.
- Florida and California have been the two most important producers of fresh-market tomatoes since 1992. In 1996, Florida and California accounted for 39 and 31 percent, respectively, by volume of total U.S. production of tomatoes for fresh-market use. Other States with significant production included Georgia, South Carolina, and Virginia.
- U.S. exports of fresh-market tomatoes declined 20 percent, by volume, from 166,686 metric tons in 1992 to 134,010 metric tons in 1996, and by 29 percent, by value, from \$140.2 million in 1992 to \$99.7 million in 1996. Canada was the leading market for U.S. exports of fresh-market tomatoes in 1996, accounting for 96 percent by volume of the total.
- U.S. imports of fresh-market tomatoes increased 276 percent, by volume, from 196,028 metric tons in 1992 to 737,150 metric tons in 1996. Imports were valued at \$672.5 million in 1996. Mexico accounted for 93 percent, by volume, of total imports of fresh-market tomatoes in 1996. The average unit value of imports fluctuated from a low of \$0.73 per kilogram in 1995 to a high of \$0.91 in 1996.
- During 1994-96, two-thirds annually of total U.S. imports of fresh-market tomatoes from Mexico entered through the Nogales, AZ, customs district, with a similar trend noted for January-April 1997. Most of the remaining U.S. imports of fresh-market tomatoes entered through the San Diego, CA, district.
- Historically, January-April has been the period when U.S. imports from Mexico of fresh-market tomatoes have been greatest; in recent years, about 60 percent of total annual imports from Mexico have entered during this period. During January-April 1996, U.S. imports from Mexico amounted to 392 million kilograms, up 63 and 22 percent, respectively, from imports entered during the corresponding periods of 1994 and 1995. Imports from Mexico during January-April 1997 amounted to 386 million kilograms, down 2 percent from the 1996 level.

Fresh-market Tomatoes—*Continued*

- U.S. harvested area for fresh-market tomatoes fell from an annual average of 133,850 acres in 1992-95 to 118,760 acres in 1996. In 1996, Florida and California accounted for 33 and 28 percent, respectively, of total U.S. harvested area of tomatoes for fresh-market use.
- Retail prices for fresh-market tomatoes vary seasonally, with the highest prices generally occurring early in the Florida marketing season (December-February) and early in the California marketing season (June-July). During the 1994-96 period, average retail prices of fresh-market tomatoes have trended upward.

Processing Tomatoes

- U.S. production of tomatoes for processing increased 30 percent from 8.0 million metric tons in 1992 to 10.3 million metric tons in 1996. The value of production was estimated at \$723.9 million in 1996. U.S. harvested area for processing tomatoes rose by 24 percent from 273,910 acres in 1992 to 339,120 acres in 1996. The average unit value received by growers of tomatoes for processing rose steadily from \$2.90 per hundredweight in 1992 to \$3.17 per hundredweight in 1996.
- U.S. exports of processed tomatoes increased by 53 percent, by volume, from 93,684 metric tons in 1992, to 142,976 metric tons in 1996, and by 45 percent, by value, from \$73.8 million in 1992 to \$107.3 million in 1996. Canada, Japan, and South Korea were leading U.S. export markets for processed tomatoes in recent years, accounting for 51, 16, and 5 percent, respectively, by volume of exports in 1996.
- U.S. imports of processed tomatoes rose 49 percent, by volume, from 75,389 metric tons in 1992 to 112,390 metric tons in 1994, before falling 24 percent to 85,713 metric tons in 1996. Imports were valued at \$75.6 million in 1996, up from \$65.7 million in 1992. Spain, Italy, and Israel were the leading sources of processed tomatoes in 1994. The average unit value for U.S. imports of processed tomatoes fell steadily during the 1992-94 period, before rising to a recent 5-year high of \$0.88 per kilogram in 1996.

199506	.79	.79
199607	.75	.88

¹ Data are for raw product intended for processing. Data are converted using a factor of 2.20462 pounds per kilogram.

² Data are for prepared or preserved tomatoes (*Schedule B* No. 2002.10.0000, 2002.90.0060, and 2002.90.0080) on a processed-weight basis.

³ Data are for frozen tomatoes (*HTS* subheadings 0710.80.40-0710.80.50) on a frozen-weight basis, dried tomatoes (*HTS* subheading 0712.90.75) on a dried-weight basis, and prepared or preserved tomatoes (*HTS* subheadings 2002.10.00 and 2002.90.00) on a processed-weight basis.

Note.—Unit values for U.S. production are low, relative to those for exports and imports, because production includes only raw, not finished product intended for processing. Exports and imports are finished product. U.S. production of processed tomato products has not been reported for a number of years.

Note.—Consumption of processed tomato products is not applicable since production is on a raw-product basis and imports include, frozen, dried, and canned products on their respective processed-weight basis.

¹ Includes 80,000 pounds shipped by boat from Puerto Rico.

² Includes 1,040,000 pounds shipped by boat from Puerto Rico.

³ Includes 1,640,000 pounds shipped by boat from Puerto Rico.

⁴ Includes 320,000 pounds shipped by boat from Puerto Rico.

⁵ Includes 120,000 pounds shipped by boat from Puerto Rico.

⁶ Includes 70,000 pounds shipped by rail from California.

⁷ Includes 130,000 pounds shipped by rail from California.

⁸ Includes 70,000 pounds shipped by rail from California.

⁹ Includes 330,000 pounds shipped by rail from California.

¹⁰ Includes 400,000 pounds shipped by rail from California.

¹¹ Includes 1,070,000 pounds shipped by air from California.

Note.—Data for domestic shipments are obtained by the USDA from various sources, including Federal marketing order administrative committees, Federal-State inspection service, shippers, and transportation agencies. Mexico data are border crossings secured from records of the Animal and Plant Health Inspection Service of the U.S. Department of Agriculture.

¹ Includes 200,000 pounds shipped by boat from Puerto Rico.

² Includes 1.42 million pounds shipped by boat from Puerto Rico.

³ Includes 1.4 million pounds shipped by boat from Puerto Rico.

⁴ Includes 280,000 pounds shipped by boat from Puerto Rico.

⁵ Includes 70,000 pounds shipped by rail from California and 400,000 pounds shipped by air from California.

⁶ Includes 40,000 pounds shipped by air from California.

⁷ Includes 140,000 pounds shipped by rail from California.

⁸ Includes 330,000 pounds shipped by air from California.

⁹ Includes 30,000 pounds shipped by air from California.

¹⁰ Includes 740,000 pounds shipped by air from California.

Note.—Data for domestic shipments are obtained by the U.S. Department of Agriculture from various sources, including Federal marketing order administrative committees, Federal-State inspection service, shippers, and transportation agencies. Mexico data are border crossings secured from records of the Animal and Plant Health Inspection Service of the U.S. Department of Agriculture.

29	120	1,320	210	40	1,690	200	1,140	370	0	1,710

¹ Nothing reported.

Note.—This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments is sold directly from the shipping point and is not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale market are believed to be indicative of the overall trade for the region.

¹ Nothing reported.

Note.—This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments is sold directly from the shipping point and is not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale market are believed to be indicative of the overall trade for the region.

Source: Compiled from USDA, AMS data.

¹ Nothing reported.

Note.—This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments is sold directly from the shipping point and is not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale market are believed to be indicative of the overall trade for the region.
