Monitoring of U.S. Imports of Peppers

Investigation No. 332-351

Publication 3559 November 2002

Preface

Section 316 of the North American Free-Trade Agreement Implementation Act (NAFTA Implementation Act), Public Law 103-182, requires the U.S. International Trade Commission (Commission) to monitor U.S. imports of "fresh or chilled tomatoes" and "fresh or chilled peppers, other than chili peppers," until January 1, 2009. As a result, the Commission instituted investigation No. 332-350, Monitoring of U.S. Imports of Tomatoes, and investigation No. 332-351, Monitoring of U.S. Imports of Peppers, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)).

This report on the Commission's monitoring investigation covers peppers for fresh-market use and for processing. The purpose of this monitoring, as expressed in the NAFTA Implementation Act, is to permit the Commission to conduct an expedited investigation and, if appropriate, recommend to the President provisional relief should a petition for relief be filed under section 202 of the Trade Act of 1974 with respect to imports from all countries, or a petition requesting such relief be filed under section 302 of the NAFTA Implementation Act with respect to imports from Canada or Mexico. Generally, such provisional relief would remain in effect, pending completion of the investigation by the Commission and the taking of final action by the President.

This report contains statistical information gathered by the Commission on the U.S. pepper industry in the course of its monitoring. This information includes (1) consumption and trade data (including U.S. imports and U.S. exports) and (2) other industry data (including U.S. production quantity, value, and unit value, and harvested area; U.S. cost-of-production estimates; shipments; U.S. weekly shipping-point quantities available; and average U.S. shipping-point prices and wholesale terminal market prices). The information presented in this report on the U.S. pepper industry was obtained from a number of sources, including the U.S. Department of Agriculture, the U.S. Department of Commerce, the University of Florida Cooperative Extension Service, and various other State agencies. This report principally covers 1997-2001 data and partial-year data for 2001 and 2002.

¹ Nothing in this report should be construed to indicate how the Commission would find in an investigation conducted under other statutory authority covering the same or similar subject matter.

Highlights

The following are highlights of the statistical data collected on peppers for fresh-market use and for processing for the 1997-2001 period.

Fresh-market Peppers

- Apparent U.S. consumption of fresh-market peppers amounted to 808,711 metric tons in 2001, a 9 percent decrease from 891,512 metric tons in 2000 after 4 consecutive years of increases, and up by 1 percent from 797,052 metric tons in 1997 (table 1). Consumption was valued at \$676.5 million in 2001, down by 5 percent from \$713.2 million in 2000 but up by 9 percent compared to \$623.5 million in 1997. In 2001, the ratio of import volume to consumption was 26 percent, up by 4 percentage points from that in 2000 and in 1997. The ratio of import value to consumption value was up from 32 percent in 1997 to 49 percent in 2001 (table 1).
- U.S. production of fresh-market peppers fell by 12 percent from an estimated 764,803 metric tons (\$572.5 million) in 2000 to 671,953 metric tons (\$420.7 million) in 2001 (table 1). Unit values of production fell by 9 percent from \$0.69 per kilogram in 2000 to \$0.63 per kilogram in 2001. Florida and California were the leading States in production during the 1997-2001 period, accounting for 43 percent and 35 percent, respectively, of total U.S. production value of fresh peppers in 2001 (table 10). U.S. harvested area for peppers amounted to 56,720 acres in 2001, about the same as in 1997-99, but down by 9 percent from acreage in 2000. Much of the decrease in harvested acreage from 2000 to 2001 was accounted for by a drop in harvested acreage in Florida. In 2001, harvested area in California, New Jersey, and Ohio had grown, compared to 2000.
- U.S. exports of fresh-market peppers were up by 3 percent from 71,478 metric tons in 2000 to 73,355 metric tons in 2001 (table 1). The value of U.S. exports rose steadily during 1997-2001, from \$54.4 million in 1997 to \$72.7 million in 2001. Canada has been the leading foreign market for U.S. fresh-market pepper exports in recent years, accounting for 95 percent by volume and by value of U.S. exports in 2001 (table 3). Other important markets in recent years included Mexico and Japan. U.S. export volume was up by 8 percent during January-June 2002 as compared with the same months in 2001. Export value was down by 8 percent in January-June 2002 as compared with that in January-June 2001.
- U.S. imports of fresh-market peppers increased by 6 percent from 198,187 metric tons in 2000 to 210,114 metric tons in 2001, and by 30 percent in value from \$253.4 million in 2000 to \$328.5 million in 2001 (table 4). U.S. import volume was up by 19 percent during January-June 2002 as compared with imports during January-June 2001. Mexico accounted for 68 percent by volume of total imports of fresh-market peppers in 2001. Other important foreign suppliers in 2001 included Canada and the Netherlands. U.S. imports from Canada and the Netherlands, although accounting for a small share of total imports in recent years, were up by 32 percent and by 3 percent, respectively, in volume from 2000 to 2001, and rose by 233 percent and 15 percent, respectively, in volume from 1997 to 2001, with imports from each country continuing their upward trend through January-June 2002 (table 4). The bulk of imports from both countries are believed to be high-value greenhouse-grown peppers. Imports from virtually all suppliers except Mexico have usually twice to three-times the unit value of imports from Mexico, which are lower-cost, field-grown peppers.

- U.S. imports of fresh-market peppers from Mexico, entered on a July-June crop-year basis, amounted to 165,450 metric tons in July 2001-June 2002, a 23 percent increase from 134,590 metric tons in July 2000-June 2001 (table 5). During the 1999/2000 to 2001/02 crop-years, the bulk of U.S. fresh-market pepper imports from Mexico entered through the Nogales, AZ, Customs District, principally during December through the following May, coinciding with the peak pepper production period in Florida. Imports from Mexico during December 2001-May 2002 were up 28 percent in volume from the level in the corresponding months of 2000/01. In recent crop-years, imports from Canada, the Netherlands, and the European Union were greatest during those months (June-October) when Florida production was normally low (tables 6-8), but when domestic production in California and other States is usually high. Imports of fresh market peppers from Canada in July 2001-June 2002 were up 23 percent in volume over the July 2000-June 2001 level. U.S. imports from the Netherlands were up 9 percent from July 2000-June 2001 to July 2001-June 2002.
- Comparing U.S. weekly ranges of prices on a crop-year basis for fresh-market green peppers, f.o.b. Florida and f.o.b. Nogales, showed lower prices for Florida peppers than Mexican peppers during December 2000, while the January 2001 comparison was reversed (table 26). Ranges of prices for Florida fresh-market red peppers were lower than Mexico's in December 2000 but higher in January 2001 (table 28). Ranges of prices were higher for Florida fresh-market red peppers during March 2002 (table 29).

Processed Peppers

• U.S. production of processed peppers was down by 16 percent from an estimated 24,438 metric tons in 2000 to 20,600 metric tons in 2001, but up by 11 percent from an estimated 18,482 metric tons in 1997 (table 2). The value of production in 2001 was an estimated \$37.1 million, down 17 percent from \$44.5 million in 2000 but up 3 percent from an estimated \$36.0 million in 1997. U.S. imports of processed peppers rose by 115 percent from 8,371 metric tons in 1997 to 18,034 metric tons in 2001 (table 9). Imports amounted to 8,995 metric tons in January-June 2002, an 18 percent increase compared to imports entered during the corresponding January-June 2001 period. Throughout the 1997-2001 period, Spain was the primary supplier, accounting for 78 percent by volume of U.S. imports in 2001. Turkey, Greece, Mexico, and Chile were other important suppliers in recent years.

Data are for raw product intended for fresh-market use and for processing, and are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram. Data are not reported separately for each end use.

Note.—Production data are revised annually and data for the most recent calendar years may not match data presented in earlier reports.

Note.—Production data are estimated from raw product intended for fresh-market use and for processing, whereas export and import data are shipments of fresh-market peppers actually recorded. Thus, apparent consumption may be somewhat smaller and the ratio of imports to consumption somewhat larger than shown.

Source: Production data calculated by the Commission from USDA, NASS, *Vegetables*, 1999 Summary: Jan. 2000, Vg 1-2 (00), pp. 35-36; 2000 Summary: Jan. 2001, Vg 1-2 (01), pp. 35-36; and 2001 Summary: Jan. 2002, Vg 1-2 (02), p. 36; exports and imports compiled from official statistics of the U.S. Department of Commerce, except as noted.

² Data are for fresh or chilled peppers (Schedule B No. 0709.60.0000) on a fresh-weight basis.

³ Data are for fresh or chilled peppers, other than chili peppers (*Harmonized Tariff Schedule (HTS*) subheading 0709.60.40) on a fresh-weight basis.

⁴ Calculated by the Commission.

⁵ Not applicable.

¹ Production data include frozen peppers and are not directly comparable with other processed (e.g., canned) pepper import data. Quantity data are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram and production values were calculated by the Commission.

Note.—Data on exports of processed peppers are not separately reported.

Source: Production data compiled calculated by the Commission from official statistics of the American Frozen Food Institute, except as noted; imports compiled from official statistics of the U.S. Department of Commerce, except as noted.

² Data are for prepared or preserved peppers (HTS subheading 2005.90.50 and item 2005.90.5510) on a processed-weight basis.

³ Calculated by the Commission.

¹ Data are for prepared or preserved peppers (HTS subheading 2005.90.50 and item 2005.90.5510) on a processed-weight basis.

Note.—Unit values for peppers from such countries as Canada, Israel, and most EU countries are generally significantly higher than unit values for products from Mexico because they are believed to include field- and greenhouse-grown peppers of different colors.

Source: Compiled by the Commission from official statistics of the U.S. Department of Commerce, except as noted.

² Less than 500 kilograms.

³ Calculated by the Commission.

¹ Not reported separately.

Note.—According to officials with the Florida Agricultural Statistics Service, data for the most recent crop—year are not available until after December following the end of the most recent crop—year.

Note.—The data presented here are on a crop-year basis and do not match annual data reported elsewhere in this report.

Source: Compiled by the Commission from data of the USDA, AMS, as published in *Marketing Florida Vegetables*, Federal-State Market News Service, Orlando, FL.

² Data are calculated by the Commission using average crop–year sales prices.

Table 12
Estimated production costs for fresh-market peppers grown in Palm Beach County, Florida, by average cost per acre, 1998/99 to 2001/02 crop-years¹

(In dollars)

Items	1998/99	1999/2000	2001/02
Preharvest costs:			
Operating costs:			
Transplants	800	800	800
Fertilizer and lime	297	295	260
Fumigant	550	602	560
Other pesticides	578	789	679
Labor	250	426	426
Machinery	491	342	330
Interest	202	159	152
Miscellaneous	1,148	997	991
Subtotal	4,316	4,410	4,198
Fixed costs:			
Land rent	400	400	400
Machinery	119	125	125
Management	1,158	955	914
Overhead	1,621	1,195	1,143
Subtotal	3,298	2,675	2,582
Total preharvest costs	7,614	7,085	6,780
Harvest and marketing costs:			
Harvest, pack, and haul	1,870	1,760	1,760
Containers	1,100	1,045	1,045
Selling	550	550	550
Subtotal	3,520	3,355	3,355
Total production costs	11,134	10,440	10,135

¹ Data for the 2000/01 crop–year were never reported by the industry.

Note.—These cost budgets are constructed based on input prices obtained from various industry sources and are believed to reflect typical costs of production for growers in a given production area, but do not necessarily reflect the actual industry average cost of production.

Note.—Because of rounding, figures may not add to the totals shown.

Table 13
Estimated production costs for the initial crop of a double-crop system for fresh-market peppers grown in Palm Beach County, Florida, by average cost per acre, 1998/99 to 2001/02 crop-years¹

(In dollars)

Items	(In dollars) 1998/99	1999/2000	2001/02

Note.—Because of rounding, figures may not add to the totals shown.

¹ Data for the 2000/01 crop-year were never reported by the industry.

Table 15
Estimated production costs for the initial crop of a double-crop system for fresh-market peppers grown in Southwest Florida, by average cost per acre, 1998/99 to 2001/02 crop-years¹

(In dollars) Items 1999/2000 1998/99 2001/02 Preharvest costs: Operating costs: 384 880 880 369 310 422 Fumigant 506 602 530 785 713 397 430 Labor 141 430 572 829 785 286 271 Interest 188 1,519 457 439 4,417 4,017 4,691 Fixed costs: Land rent 450 450 450 Machinery 379 264 264 Management 1.165 1.024 972 1,165 1,280 1,214 3,017 2,900 3,158 7,175 7,708 7,317 Harvest and marketing costs: Harvest, pack, and haul 3,710 2,980 2,980 950 950 Containers 1,050 500 500 Selling 210 Assessments $(^3)$ 70 Subtotal 5,040 4,430 4,430 12,216 12,138 11,747

Note.—These cost budgets are constructed based on input prices obtained from various industry sources and are believed to reflect typical costs of production for growers in a given production area, but do not necessarily reflect the actual industry average cost of production.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—A double–crop system is one in which two pepper crops are grown during a 12–month period on the same land, one crop right after the other.

Note.—Data for the 1998/99 crop-year are believed to be revised figures of estimates made for the 1997/98 crop-year, which might explain some of the variation in costs from one year to the next.

¹ Data for the 2000/01 crop-year were never reported by the industry.

² Data were not separately reported for this item.

¹ Cost budgets for most states are not prepared on an annual basis. The data presented here are for the most recent budgets available.

Note.—These cost budgets are constructed based on input prices obtained from various industry sources and are believed to reflect typical costs of production for growers in a given production area, but do not necessarily reflect the actual industry average cost of production.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Even though the crop-year shown here is not that current, the purpose in presenting these data is to provide for comparisons across various cost items, both within this table and among data tables from the other states.

Note.—Integrated crop management is a system of production wherein alternative practices other than pesticide use are employed, or the timing of application or total quantity of pesticide used, is less than under a more conventional system of production.

Source: Compiled by the Commission from *Crop Rotational Budgets for Three Cropping Systems in the Northeastern United States*, by Robin G. Brunfield and Margaret F. Brennan, Rutgers Cooperative Extension, New Brunswick, NJ, pp. 1-15.

² Data were not separately reported for these items.

Table 17
