(AA1921-Inq.-27)

SUGAR FROM CANADA

Commission Determines "A Reasonable Indication of Injury"

On the basis of information developed during the course of inquiry No. AA1921-Inq.-27, undertaken by the United States International Trade Commission under section 201(c) of the Antidumping Act, 1921, as amended, the Commission unanimously determines that there is a reasonable indication that an industry in the United States is being or is likely to be injured by reason of the importation of sugar--dutiable under items 155.20 and 155.30 of the Tariff Schedules of the United States--into the United States from Canada allegedly sold at less than fair value as indicated by the Department of the Treasury. 1/

On April 25, 1979, the Commission received advice from the Department of the Treasury that, in accordance with section 201(c)(1) of the Antidumping Act, 1921, as amended, an antidumping investigation was being instituted with respect to sugar from Canada and that, pursuant to section 201(c)(2) of the act, information developed during Treasury's preliminary investigation led to the conclusion that there is substantial doubt that an industry in the United States is being or is likely to be injured by reason of the importation of such merchandise. Accordingly, the Commission, on May 1, 1979, instituted inquiry No. AA1921-Inq.-27 under section 201(c)(2) of the act to determine whether there is no reasonable

1/ Although the vote to continue Treasury's investigation is unanimous, the Commissioners voting state their determinations differently. Vice Chairman Bill Alberger and Commissioners George M. Moore, Catherine Bedell and Paula Stern state that they determine that there is a reasonable indication that an industry in the United States is being or is likely to be injured by reason of the importation of sugar into the United States from Canada allegedly sold at less than fair value as indicated by the Department of the Treasury. Chairman Joseph O. Parker states that he does not determine that there is no reasonable indication that an industry in the United States is being or is likely to be injured by reason of the importation of sugar into the United States from Canada allegedly sold at less than fair value as indicated by the Department of the Treasury.

indication that an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of the importation of such merchandise into the United States.

Public notice of both the institution of the inquiry and of the hearing was duly given by posting copies of the notice at the Secretary's office in the Commission in Washington, D.C., and at the Commission's office in New York City, and by publishing the original notice in the Federal Register of May 3, 1979 (44 F.R. 25950). A public hearing was held on May 10, 1979, in Washington, D.C., and all persons requesting the opportunity to appear were permitted to appear by counsel or in person.

In arriving at its determination, the Commission gave due consideration to all written submissions from interested persons and information adduced at the hearing and obtained by the Commission's staff from questionnaires, personal interviews and other sources.

Statement of Reasons of Chairman Joseph O. Parker and
Commissioners George M. Moore and Catherine Bedell

This inquiry under section 201(c) of the Antidumping Act, 1921, as amended, was instituted by the Commission after receiving advice from the Department of the Treasury that, during the course of a preliminary investigation with respect to a complaint filed under that act, Treasury had concluded that there is substantial doubt that an industry in the United States is being or is likely to be injured by reason of the importation of sugar from Canada classified under items 155.20 and 155.30 of the Tariff Schedules of the United States. Treasury's investigation was initiated after the filing of a complaint by Amstar Corp.

The petitioner alleges that because almost all the sugar from Canada is imported through customs districts located in the Northeastern/Eastern Great Lakes (NE/EGL) area of the United States, it is the domestic producers located in this region which are affected by the imports sold at less than fair value (LTFV). Official statistics show that more than 99 percent of sugar imported from Canada, almost all of which is refined, enters this area of the United States. Preliminary information developed during this inquiry indicates that because of the low value-to-weight ratio, the bulk of these imports are also marketed within this area. There are also indications that domestic refineries located in the NE/EGL area market most of their production within 250-300 miles of the refineries. Refiners located in this area responding to Commission questionnaires indicated that more than 85 percent of their output was sold to customers within this area. Thus, there is at least a reasonable indication that a distinct marketing area, as alleged by petitioner, may exist and must be considered in determining whether to terminate this investigation.

In each year since 1974, world production of sugar has been in excess of world consumption and has resulted in an accumulation of world stocks of more than 45 million metric tons of raw sugar, the equivalent of about one-half of annual world consumption. This inventory has had a significant downward impact on world sugar prices and has left large stocks of sugar to be marketed in the few remaining accessible markets of the world, of which the United States is one.

Since sugar is a fungible commodity, price is the primary factor in determining which sugar is purchased. With the world price of sugar at about one-half that at which it is supported by a Government program in the United States, a system of tariffs and fees has been instituted to attempt to prevent imported sugar from impairing this price support program. This system is based on world raw sugar prices, and together with transportation, handling costs, duties, and fees, is designed to raise the price of imported raw sugar to a fixed domestic target price. To the extent, however, that refined sugar can be imported into the U.S. market at or below the support price for refined sugar it can penetrate the U.S. market, if the quantities involved are within applicable quotas. Since Canada has joined the International Sugar Agreement, imports of refined sugar from Canada are subject only to an annual global quota of 6.9 million tons established by Presidential Proclamation No. 4610 on November 30, 1978. 1/ To date this quota has not been filled.

Petitioner has alleged that sugar imported from Canada is being sold at LTFV margins ranging from 11 to 45 percent. These margins are based on price comparisons made during the first quarter of 1979. Petitioner alleges that by reason of these LTFV sales, imports from Canada have increased.

1/ Headnote 3, pt. 10(A), schedule 1, of the Tariff Schedules of the United States.

Prior to the expiration of the Sugar Act on December 31, 1974, the importation of refined sugar was virtually prohibited. With the expiration of the Sugar Act, imports of refined sugar from Canada increased from 1 ton in 1974 to 138,000 tons in 1977, the equivalent of about 4 percent of the primary distribution of sugar in the NE/EGL area by domestic producers. Although imports of refined sugar decreased in 1978 to 98,000 tons, this decrease is at least partially explained by the large tonnage imported at the end of 1977 to avoid the fees which were to be imposed under section 22 of the Agricultural Adjustment Act, as amended, effective January 1, 1978. Monthly import figures show that imports of refined sugar from Canada during the first quarter of 1979 were three times as much as in the first quarter of 1978 and twice as much as in the first quarter of 1977.

Information developed during the Commission's inquiry indicates that production by NE/EGL area producers declined from 1977 to 1978. There are also indications that employment and man-hours worked decreased and the profitability of these producers declined by more than 50 percent from 1977 to 1978.

The petitioner has contended that the alleged LTFV imports have caused it to lose sales. In particular, petitioner alleges that it has lost sales to industrial users of refined sugar such as soft-drink bottlers in Western New York State. There are also allegations of sales lost by domestic producers in Michigan.

In order for the Commission to make a determination under section 201(c) of the Antidumping Act that an investigation should be terminated it must find that there is "no reasonable indication" of injury, or likelihood of injury by reason of the importation of the subject merchandise alleged to have been sold at LTFV. Thus, in an inquiry under section 201(c) the

threshold for determining that an investigation should continue is lower than that which is ultimately required for a determination of injury under section 201(a). In our judgment, the criteria for terminating the Treasury investigation before petitioner has had an opportunity to fully present its case have not been satisfied. There are reasonable indications of injury or likelihood of injury by reason of alleged LTFV sales including increased market penetration, declining profitability, and underselling. On the basis of these factors and the applicable statutory criteria, we have determined that this investigation should not be terminated.

STATEMENT OF REASONS FOR COMMISSIONERS ALBERGER AND STERN

Determination

On the basis of the information developed during the course of this inquiry, we determined that there is a reasonable indication that an industry in the United States is being or is likely to be injured^{1/} by reason of the importation of sugar into the United States from Canada allegedly sold at less than fair value (LTFV) as indicated by the Department of the Treasury.

Statutory Criteria of Section 201(c)(2)

Section 201(c)(2) of the Antidumping Act, 1921, as amended, under which this inquiry is being conducted, states, in effect, that if the Secretary of the Treasury (Treasury) concludes, during a preliminary investigation under the Antidumping Act, that there is substantial doubt regarding possible injury to an industry in the United States, he shall forward to the U.S. International Trade Commission (Commission) his reasons for such doubt. Upon receipt of the Secretary's reasons, the Commission shall, within thirty days, determine whether there is no reasonable indication that an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of the importation of merchandise allegedly sold in the United States at less than fair value. In making its determination in this inquiry, the Commission developed

^{1/} Prevention of establishment of an industry in this inquiry is not in question and will not be discussed further in these views.

information from various sources and did not consider the information received from Treasury as determinative.

The Imported Article and the Domestic Industry

The imported article that is the subject of this inquiry is sugar from Canada imported under items 155.20 and 155.30 of the Tariff Schedules of the United States (TSUS). Virtually all of the imports consist of refined sugar which competes directly with domestically refined sugar over a geographic area spreading from Michigan to New England. The domestic product is refined in locations over the entire length of the United States. Almost all refined sugar produced along the Northeast Atlantic Seaboard is refined from raw cane sugar imported into the United States from countries other than Canada. In Michigan and Ohio, and elsewhere in the United States, refined sugar is produced either from raw cane sugar or directly from sugar beets.

The petitioner claims that virtually all imports of sugar from Canada are sold in the United States at less than fair value (LTFV) and that the LTFV margins average 24 percent of the Canadian home-market price for bulk sugar and 13 percent of the Canadian home-market price for 5-pound bags of sugar.

A Reasonable Indication of Injury

In a thirty-day inquiry, to assess whether there is a reasonable indication of injury by reason of imports allegedly sold at less than fair value, the Commission relies on the same indicators as it does in a full-scale ninety-day investigation. Although the statutes give the Commission no specific direction on what factors to consider, the Senate Report on the Trade Act of 1974 (which amended the Antidumping Act of 1921), suggests we consider suppression or depression of prices, lost sales, and penetration of the U.S. market. Additionally, the Commission traditionally considers production, capacity, capacity utilization, consumption, inventories, employment, profits, and foreign capacity to produce for export. In this inquiry, we found reasonable indications of price depression or suppression, increased market penetration, declining profits, and reduced employment, particularly in one geographic area,^{1/} where over 99 percent of Canadian sugar enters the United States and is consumed. Other indicators do not contradict this finding. Some do not indicate clear injury at a national level and all are based on unconfirmed, preliminary, and/or incomplete data.

As in all such thirty-day cases, the period surveyed is necessarily limited by considerations of time and inconvenience to the respondents incurred in collecting data. In this inquiry, data were solicited for five years, 1974-1978. Analysis is complicated by the fact that 1974 was

^{1/} The Northeastern/Eastern Great Lakes (NE/EGL) area, in addition to the District of Columbia, consists of the States of Connecticut, Delaware, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, and Vermont. Should this case come back to the Commission, before approaching the issue on a regional basis, we would look at the regional criteria we applied in Sugar from Belgium, France, and West Germany, Investigation No. AA1921-198, 199, and 200 (May 1979).

an exceptionally good year for the sugar industry. However, in making a determination under Section 201(c)(2), the Commission need only consider whether a "reasonable indication" of injury, or the likelihood thereof, exists, even if later examination of the full record mitigates against a final injury determination.

Capacity of the five domestic cane sugar refiners and beet sugar processors responding to Commission questionnaires increased gradually from 3.8 million short tons in 1974 to 4.0 million tons in 1977 and 1978. These producers accounted for about 35 percent of U.S. production of refined sugar in 1978. However, reported capacity in the Northeastern/Eastern Great Lakes (NE/EGL) area declined irregularly by about 5 percent during the same period.

In 1978, production of refined sugar by the five respondents, which account for an estimated 35 percent of total U.S. production, was 6.6 percent below the peak year of 1974. However, in the NE/EGL area, 1978 production was twenty percent below the level achieved in 1974.

Capacity utilization by the five reporting producers fell from full utilization in 1974 to 85 percent in 1975, but rose to an average of 93 percent during 1976-78. Those responding producers in the NE/EGL area reported approximately the same trends as were indicated for all U.S. producers, but experienced slightly lower capacity utilization in 1978.

Domestic consumption of refined sugar, as measured by the primary distribution of the domestic and imported products, fell from 10.5 million short tons in 1974 to 9.3 million tons in 1975, increasing to 10.5 million tons in 1977, and falling again to 10.1 million tons in 1978.

U.S. producers' shipments of refined sugar, measured by primary distribution of the U.S.-produced product, generally follow the trends reported for consumption. Shipments fell in 1975 from the peak in 1974, rebounded almost completely in 1977, only to fall again in 1978 to a level four percent below the level reached in 1974. U.S. producers' shipments by NE/EGL area producers followed the same trend, but in 1978 were nine percent below the level set in 1974.

Yearend inventories of refined sugar by all refiners and processors that responded to the Commission's questionnaires rose from 300,000 short tons in 1974 to 539,000 tons in 1976 but fell in 1978 to 486,000 tons. Yearend inventories of refined sugar held by reporting producers in the NE/EGL area increased by nearly 40 percent from 1975 to 1977, but fell by 14 percent in 1978.

The average number of production and related workers employed in the production of refined sugar by four U.S. producers that reported such data to the Commission increased irregularly from 5,700 workers in 1974 to 6,500 workers in 1978. Employment by reporting firms in the NE/EGL area, however, showed a downward trend during the same period.

The partial data available to the Commission indicate that responding domestic sugar producers who principally sell their products in the NE/EGL area in competition with Canadian imports have experienced a decline in net profits in recent years. Such a decline may be at least partly attributable to the influx of Canadian sugar in 1977 and 1978. The principal area in which competition from the alleged LTFV imports occurs is in the NE/EGL area,

which is supplied primarily by cane sugar refiners located on the Northeast Atlantic Seaboard and by sugar beet processors in Ohio and Michigan. If this case returns for a final determination, we will need much more complete information on the industry's profits for the nation as well as for this geographic area.

Market penetration by alleged LTFV imports from Canada rose from one short ton in 1974 to 138,000 tons in 1977, and then declined to 98,000 tons in 1978. Nearly 60 percent of the imports during 1977 occurred during the last four months of the year, taking advantage of exemptions from import fee increases proclaimed under Section 22 of the Agriculture Adjustment Act in 1977. The Section 22 fee increases became effective on January 1, 1978. Imports from Canada during the latter months of 1978 have been relatively high compared to the same months in earlier years; during January-March 1979, they were nearly triple the level of imports during the corresponding period of 1978 and more than double the level of imports during the corresponding period of 1977. Our data indicate that imports from Canada have been increasing their penetration of the U.S. market. The ratio of imports of sugar from Canada to consumption of sugar in the United States rose from a negligible level in 1974 to 1.3 percent in 1977 and 1.0 percent in 1978, while in the NE/EGL area the ratio of imports from Canada to consumption (primary distribution) of sugar rose from an insignificant level in 1974 to an average of 3.4 percent in 1977-78. It appears that the penetration for the first three months of 1979 may be even higher.

Lost sales in the Northeast have been alleged by the petitioner, but these have not been verified.

Canadian sugar allegedly has been sold for export to the United States at prices significantly below those of sales to Canadian markets. Prices reportedly received by the petitioner on its sales of refined sugar are significantly lower in areas of heavy concentration of the Canadian imports than in areas which are not so heavily penetrated. This may indicate price suppression or depression. In the Detroit area, some Canadian sugar has reportedly been sold at prices below the price-support level.

With respect to the likelihood of injury, there is a possibility that declining sugar consumption in Canada and the present underutilization of Canadian refineries may result in increased sales of Canadian sugar which may be sold at LTFV margins on the U.S. market. Such increased sales could result in further increases in market penetration and present a possibility of injury in the future.

Conclusion

There are reasonable indications of reduced employment, declining profits, increased market penetration, and price suppression or depression, particularly in the NE/EGL area. It is conceivable the Commission could find that a regional market exists consisting of all or part of the NE/EGL area where import penetration is highest and that injury may be found in such a region. In this inquiry, we have relied on data for the entire

area because the petitioner has claimed that this was the relevant impacted region. It appears that factors which have led the Commission in previous instances to find injury to a regional industry may be present, and we should not dismiss such a possibility. Therefore, based on our present information, we must conclude that there is a reasonable indication of injury by reason of possible LTFV imports from Canada.

INFORMATION OBTAINED IN THE INQUIRY

Summary

On May 1, 1979, the United States International Trade Commission instituted inquiry No. AA1921-Inq.-27 on sugar dutiable under items 155.20 and 155.30 of the Tariff Schedules of the United States after receiving advice from the Department of the Treasury on April 25, 1979, that there is substantial doubt that imports of the subject merchandise from Canada alleged to be sold at less than fair value are the cause of present or future injury to an industry in the United States. Treasury's advice is consequent to a preliminary antidumping investigation begun on March 19, 1979, upon receipt of a complaint from counsel for Amstar Corp. The petitioner contends that, because of the importation of sugar from Canada sold at less than fair value, it and other domestic producers are being injured by reason of lost sales, price suppression and depression, reduced employment, and declining profitability.

About 55 percent of the sugar consumed in the United States comes from domestic sources (30 percent from sugar beets and 25 percent from sugar cane) and 45 percent comes from foreign sources. Most of the imports are of raw cane sugar; however, most of the imports from Canada are of refined cane sugar.

The leading suppliers of U.S. raw and refined sugar imports, which totaled 4.7 million tons 1/ in 1978, are the Philippines, the Dominican Republic, and Brazil. Canada is a somewhat minor supplier: imports from Canada increased from 1 ton in 1974 to 40,000 tons in 1975, to 49,000 tons in 1976, to 138,000 tons in 1977, and declined to 98,000 tons in 1978. It is, however, the principal supplier of refined cane sugar. The average alleged margin of sales at less than fair value for sugar from Canada is 24 percent for bulk sugar and 13 percent for sugar in 5-pound bags, on the basis of the Canadian home-market price.

1/ Unless otherwise specified, the term "tons" as used in this report refers to short tons of 2,000 pounds each.

Total U.S. inventories of sugar increased from 2.9 million tons in 1974 to more than 4.5 million tons in 1977. In 1978, U.S. inventories were 4.0 million tons. Yearend refined sugar inventories of two cane sugar refiners which sell * * *.

* * * * *

During the period 1960-73, annual U.S. consumption of sugar increased from 9.5 million to 11.8 million tons, raw value. Consumption then dropped sharply to 10.2 million tons in 1975 following the increase in sugar prices to record levels toward the end of 1974. Total sugar consumption rose to 11.4 million tons in 1977, and then declined to 11.0 million tons in 1978. As a share of the primary distribution of sugar to all U.S. markets by mainland producers, all imports from Canada increased from a negligible level in 1974 to 1.3 percent and 1.0 percent in 1977 and 1978, respectively.

Virtually all U.S. imports of sugar from Canada enter through customs districts in the Northeastern/Eastern Great Lakes (NE/EGL) area, where it is alleged that domestic refiners have lost sales to such imports resulting in injury to U.S. refiners. As a share of the primary distribution of sugar in the NE/EGL area that was produced in U.S. mainland operations, imports from Canada entering through customs districts in the NE/EGL area increased from an exceedingly minor level in 1974 to 3.8 percent and 2.9 percent in 1977 and 1978, respectively. The refiners that sell most of their cane sugar output to markets * * *.

Introduction

On April 25, 1979, the United States International Trade Commission received advice from the Department of the Treasury that there is substantial doubt that an industry in the United States is being or is likely to be injured by reason of the importation of sugar from Canada that may be sold in the United States at less than fair value (LTFV) within the meaning of the Antidumping Act, 1921, as amended. 1/ Accordingly, on May 1, 1979, the Commission instituted inquiry No. AA1921-Inq.-27 under section 201(c) of said act to determine whether there is no reasonable indication that an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of the importation into the United States of sugar from Canada provided for in items 155.20 and 155.30 of the Tariff Schedules of the United States (TSUS). By statute, the Commission must render its determination within 30 days of its receipt of advice from Treasury--in this case by May 25, 1979.

In connection with the investigation, a public hearing was held in Washington, D.C., on May 10, 1979. Notice of the institution of the inquiry and the public hearing was given by posting copies of the notice at the Office of the Secretary, U.S. International Trade Commission, Washington, D.C., and at the Commission's office in New York City, and the notice was printed in the Federal Register on May 3, 1979 (44 F.R. 25950). 2/

Treasury's advice is consequent to a preliminary antidumping investigation it initiated in response to a petition it received on March 19, 1979, from counsel for Amstar Corp. The petitioner contends that, because of the importation

1/ Treasury's letter of notification to the U.S. International Trade Commission is presented in app. A.

2/ A copy of the Commission's notice of inquiry and hearing is presented in app. B.

of sugar from Canada, the sugar-producing industry in the Northeastern/Eastern Great Lakes (NE/EGL) area 1/ is being injured by reason of lost sales in its regional market, where the bulk of the alleged LTFV imports have been sold.

In the event that the U.S. International Trade Commission finds in the affirmative--that there is no reasonable indication that an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of the importation of sugar from Canada that may be sold at less than fair value--Treasury's investigation as to the fact or likelihood of sales at LTFV will be terminated. If the Commission finds in the negative, Treasury's investigation will continue. The Commission reported to the President on sugar in investigation No. TA-201-16 on March 17, 1977, and in investigation No. 22-41 on April 17, 1978. With respect to sugar from the European Community (EC), the Commission reported to Treasury in inquiries Nos. AA1921-Inq.-20, 21, and 22 on September 17, 1978, and in investigations Nos. AA1921-198, 199, and 200 on May 16, 1979.

Description and Uses

Treasury stated in its notice that the sugar under consideration includes sugars and sirups provided for in items 155.20 and 155.30 of the TSUS. Raw and refined sugar are classified in TSUS item 155.20, and liquid sugar and other sugar sirups, in item 155.30.

Sugar is derived from the juice of sugar cane or sugar beets. It is present in these plants in the form of dissolved sucrose. Most sugar is marketed to consumers in refined form as pure granulated or powdered sucrose. Substantial quantities also reach consumers as liquid sugar (sucrose dissolved in water) or in forms not chemically pure, such as brown sugar and invert sugar sirups, or as blends of sucrose with simpler sugars such as glucose and fructose.

1/ For the purposes of this inquiry, the NE/EGL area includes Connecticut, Delaware, the District of Columbia, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, and Vermont.

Sugar cane is a perennial subtropical plant which is cut and milled to obtain sugar cane juice. Through a process of filtering, evaporating, and centrifuging this juice, a product consisting of large sucrose crystals coated with molasses, called raw sugar, is produced. Raw sugar derived from sugar cane is the principal "sugar" actually shipped in world trade. However, most of the sugar imported into the United States from Canada is refined sugar. Raw sugar is generally refined near consumption centers through additional processes of melting, filtering, evaporating, and centrifuging to yield the refined white (100 percent pure sucrose) sugar of commerce.

Sugar beets are annual temperate zone plants usually grown in rotation with other crops to avoid disease and pest problems that result from growing two beet crops successively in the same field. Most sugar beets, including those grown in the United States, are converted directly into refined sugar; sugar beets grown in some countries, however, are used to produce a product known as raw beet sugar. The refined sugar product derived from sugar beets is not distinguishable from that of sugar cane inasmuch as both are virtually chemically pure sucrose.

The overwhelming use of sugar in the United States is for human consumption, although some is used in specialty livestock feeds and in the production of alcohol. Sugar is primarily a caloric sweetening agent, but it also has preservative uses. In the United States, about one-third of the sugar consumed goes to household users and two-thirds, to industrial users. There is currently little nonfood use of sugar in the United States and even less, proportionately, in the rest of the world.

U.S. Customs Treatment

U.S. tariff

The TSUS does not attempt to separately identify sugars, sirups, and molasses by name for classification purposes. Rather, products of this description are

classified in accordance with their physical and chemical properties regardless of the name by which a particular product may be called. Under the description "sugars, sirups, and molasses, derived from sugar cane or sugar beets, principally of crystalline structure or in dry amorphous form" (TSUS item 155.20) are classified all the solid sugars of commerce, including raw and refined sugar.

Pursuant to Presidential Proclamation No. 4539, issued November 11, 1977, the column 1 rate of duty for TSUS item 155.20 was established at 2.98125 cents per pound less 0.0421875 cent per pound for each degree under 100 degrees (and fractions of a degree in proportion) but not less than 1.9265625 cents per pound. By general headnote 4(b) of the TSUS, the column 2 rate was established at the same level. The rate formula provides a duty of 2.8125 cents per pound for 96 degree raw sugar. All countries exporting sugar to the United States are subject to these rates of duty except for certain countries eligible for duty-free treatment under the Generalized System of Preferences (GSP).

Sugars, sirups, and molasses, derived from sugar cane or sugar beets, not principally of crystalline structure and not in dry amorphous form, containing soluble nonsugar solids (excluding any foreign substance that may have been added or developed in the product) equal to 6 percent or less by weight of the total soluble solids, are classified for tariff purposes in TSUS item 155.30. Articles imported under this description are primarily liquid sugar and invert sugar sirups. Articles classified under TSUS item 155.30 are dutiable on total sugars at the rate per pound applicable under item 155.20 to sugar testing 100 degrees. All designated beneficiaries under the GSP are eligible for duty-free treatment on imports under TSUS item 155.30.

Import quotas

On November 16, 1974, when the President, by Proclamation No. 4334, established rates of duty for sugar provided for in TSUS items 155.20 and 155.30 pursuant to headnote 2, part 10A, schedule 1, of the TSUS, he also established an annual global quota on such sugar imports of 7 million tons, 1/ raw value. At that time it was announced that the quota was not intended to be restrictive on normal import levels. On November 30, 1978, the President signed Proclamation No. 4610, which lowered the quota to 6.9 million tons, raw value. The quota included 210,987 tons for the products of Taiwan and 150,544 tons for the products of all countries not parties to the International Sugar Agreement, 1977, for the calendar years 1978 and 1979. The quota for Taiwan has not yet been filled; however, at the time of the proclamation, the quota for nonmembers of the International Sugar Agreement had already been overfilled, which in effect made the quota restriction an embargo on further imports from such countries through December 31, 1979. Canada is a participant in the International Sugar Agreement and, thus, is subject to the global quota.

Section 22 fees

Presidential Proclamation No. 4547, issued January 20, 1978, pursuant to section 22 of the Agricultural Adjustment Act, as amended, provided for additional import fees on certain sugars in TSUS items 155.20 and 155.30. 2/ For sugar provided for in item 155.20 that was to be further refined or improved in quality, the additional fee under TSUS item 956.15 was 2.70 cents per pound. For sugar provided for in item 155.20 that was not to be further refined or

1/ As used in this report, the term "ton" refers to a short ton of 2,000 pounds unless specifically stated otherwise.

2/ The additional fees applied under sec. 22 do not apply to sugar entered for the production of polyhydric alcohols (i.e., manitol and sorbital) not for use in human consumption and may not exceed 50 percent ad valorem. U.S. sugar imports from all countries, including designated beneficiaries under the GSP, are subject to the additional fees.

improved in quality, and for sugar provided for in item 155.30, the additional fee under TSUS items 956.05 and 957.15 was 3.22 cents per pound. These fees were established under emergency powers of the President pursuant to section 22 pending receipt by the President of a report on sugar from the U.S. International Trade Commission (issued April 17, 1978) and his action thereon.

On December 28, 1978, the President signed Proclamation No. 4631 pursuant to section 22, which established a system for assessing variable import fees on sugar to be managed by the Secretary of Agriculture and provided for additional import fees on certain sugars in TSUS items 155.20 and 155.30. (See footnote 2 on previous page.) The system provides for a quarterly adjustment of import fees based upon world prices of sugar for the 20 consecutive market days preceding the 20th day of the month preceding each calendar quarter, and an automatic adjustment whenever the world price of sugar plus duties, fees, and attributed c.i.f. costs varies from a price objective of 15 cents per pound by more than 1 cent per pound. On the basis of this system, the Secretary of Agriculture established fees for the first quarter of 1979 of 3.35 cents per pound for TSUS item 956.15 and 3.67 cents per pound for TSUS items 956.05 and 957.15. For the second quarter of 1979, beginning April 1, 1979, fees were adjusted downward to 2.76 cents per pound for TSUS item 956.15 and 3.28 cents per pound for TSUS items 956.05 and 957.15. The basis world price that was used to compute the fees in the first quarter of 1979 was 7.94 cents per pound; for the second quarter of 1979 the basis world price was 8.53 cents per pound. As of May 15, 1979, however, the world price was about 7.74 cents per pound.

Countervailing duties on imports from the EC

On July 30, 1978, the U.S. Customs Service announced a final countervailing duty determination that sugar from the EC provided for in items 155.20 and 155.30 which benefited from bounties or grants was being entered into the United States. Such sugar, imported directly or indirectly from the EC, if entered or withdrawn from warehouse for consumption on or after July 31, 1978, is subject to payment of countervailing duties equal to the net amount of any bounty or grant determined or estimated to have been paid or bestowed. The net amount of such bounties or grants was ascertained and estimated to be 10.8 cents per pound of sugar. Belgium, France, and West Germany are the only known sources of such sugar from the EC.

Antidumping duties on imports from the EC

On May 16, 1979, the U.S. International Trade Commission reported to the Secretary of the Treasury its unanimous determinations that an industry in the United States is being injured by reason of the importation of sugar from Belgium, France, and West Germany, provided for in items 155.20 and 155.30 of the TSUS, which the Department of the Treasury had determined was being, or was likely to be, sold at less than fair value within the meaning of the Antidumping Act, 1921, as amended. The Commission's determinations will result in the imposition of dumping duties on imports from the countries in question entered on or after February 12, 1979. The weighted average dumping margin found by Treasury for the three countries in question ranged from 51 to 55 percent of the home-market prices. Any dumping duties assessed in the absence of changes in the margins found by Treasury, however, would be less than the countervailing duty of 10.8 cents per pound applicable to most imports of EC sugar if the countervailing duty were applicable to future import shipments. The Commission estimate of current EC home-market value of 20.69 cents a pound, however, would probably result in the dumping duty assessment's being higher than the countervailing duty.

Nature and Extent of Alleged LTFV Sales From Canada

On March 19, 1979, counsel for Amstar Corp., a major U.S. refiner, complained to Treasury that Canadian sugar was being sold in the United States at less than fair value, and that such sales were injurious to Amstar Corp. and other sugar producers. The complainant provided price comparisons for bulk sugar and for 5-pound bags of granulated sugar. According to the complainant, for bulk sugar the Canadian home-market price has recently averaged 14.59 cents per pound, the price of Canadian sugar exported to the U.S. market has averaged 11.05 cents per pound, and the LTFV margin, therefore, has averaged 3.54 cents per pound. As calculated according to Treasury methods, the LTFV margin for bulk sugar (when divided by the export price to the U.S. market) would be 32 percent; as calculated according to U.S. International Trade Commission methods, the average LTFV margin (when divided by the home-market price) would be 24 percent. According to the complainant, for sugar in 5-pound bags the Canadian home-market price has recently averaged 17.33 cents per pound, the price of Canadian sugar exported to the U.S. market has averaged 15.13 cents per pound, and the LTFV margin, therefore, has averaged 2.20 cents per pound. As calculated by Treasury, the LTFV margin for 5-pound bags of Canadian sugar has been 15 percent of the export price; as calculated by the U.S. International Trade Commission, the margin has amounted to 13 percent of the home-market price.

The home-market prices used by the complainant are the prices at which bulk sugar had been offered for consumption in Canada, f.o.b. Toronto. In computing the export prices of sugar from Canada, the petitioner adjusted actual prices by grade differences, if any, and deducted import duties, import fees, and freight when a delivered price was quoted. No allowance was made to reduce LTFV margins to give effect to drawback of Canadian duties on sugar imported into Canada and subsequently exported.

The petitioner claims that all the imports from Canada represent lost sales to U.S. producers, particularly to those producers marketing their products in the NE/EGL area. Imports of sugar from Canada entering through customs districts in the NE/EGL area as a share of the primary distribution of sugar in the NE/EGL area by continental U.S. cane sugar refiners, beet sugar processors, and cane mills increased from a negligible percentage in 1974 to an estimated 3.8 and 2.9 percent in 1977 and 1978, respectively (table 1 in app. C).

The Domestic Industry

About 55 percent of the sugar consumed annually in the United States comes from domestic sources (30 percent from sugar beets and 25 percent from sugar cane) and 45 percent, from foreign sources (virtually all cane).

U.S. sugar beet growers and beet sugar processors

Sugar beets are currently produced in 18 States. The number of farms producing sugar beets in 1977/78 most likely increased from the 12,000 farms producing sugar beets in 1973/74 (the last year for which official statistics are available). Sugar beets are grown by farmers under contract to beet sugar processors. The contracts generally call for growers to deliver beets from a given acreage to processors and for processors to reimburse the growers on a basis which includes a percentage of the return processors receive from the

sale of the refined sugar. In 1976 there were 58 beet sugar factories owned by 13 companies or cooperatives scattered throughout the sugar-beet-producing regions in the United States. The 58 factories had a daily processing capacity of about 200,000 tons of sugar beets.

There are eight beet-sugar-processing plants that produce refined beet sugar in the NE/EGL area. The four companies operating these eight plants, and the locations of the plants, are as follows:

<u>Company</u>	<u>Location of plant</u>
Buckeye Sugars Inc-----	Ottawa, Ohio
Michigan Sugar Co-----	Caro, Mich.
	Carrollton, Mich.
	Croswell, Mich.
	Sebewaing, Mich.
Monitor Sugar Co-----	Bay City, Mich.
Northern Ohio Sugar Co-----	Findlay, Ohio
	Fremont, Ohio

Hawaiian sugar cane growers and millers

Hawaii is noted for having the highest yields of sugar cane per acre in the world. In 1977, 97,000 acres of sugar cane were harvested in Hawaii from more than 500 farms. About half the acreage is irrigated, and it produces two-thirds of the sugar cane harvested. Five large corporations, often called the five factors, 1/ account for more than 95 percent of the acreage and production of Hawaiian sugar cane through their subsidiary producing and/or milling companies.

More than 95 percent of the raw sugar produced in Hawaii is refined on the U.S. mainland by the California & Hawaiian Sugar Co. (C&H), a cooperative agricultural marketing association. The refining company is owned by 16 Hawaiian raw-sugar-producing and/or cane-milling companies, but also serves as the refiner and marketing agency for independent nonmember sugar cane farmers in Hawaii.

A-12

1/ The five factors are C. Brewer & Co., Ltd.; Castle & Cooke, Inc.; Amfac, Inc.; Alexander & Baldwin, Inc.; and Theodore H. Davies & Co., Inc.

Mainland sugar cane growers and millers

Louisiana, Florida, and Texas are the principal mainland States producing sugar cane. The mainland cane-milling industry takes sugar cane from growers and processes it into raw sugar. Because it rapidly becomes more difficult to recover sucrose from sugar cane as the time lengthens between cutting and milling, the cane mills are located close to the producing areas. In 1977/78 some 40 mainland cane-milling companies produced about 1.65 million tons of raw sugar and several byproducts, such as molasses and bagasse.

Puerto Rican sugar cane growers and millers

In the last decade, there has been a severe decline in the number of farms producing sugar cane and in sugar cane production in Puerto Rico. The number of farms declined from 11,608 in 1963/64 to 2,551 in 1973/74 (the last year for which official statistics are available). The bulk of the sugar cane acreage and most of the sugar-cane-processing mills are owned, leased, or contracted for by the Sugar Corporation of Puerto Rico, a quasi-governmental corporation. In 1975/76, 12 sugar cane mills in Puerto Rico had a daily processing capacity of about 55,000 tons of sugar cane.

Cane sugar refiners

There are 22 cane sugar refineries in the continental United States, located mainly on the east and gulf coasts. The 22 cane sugar refineries are operated by 12 companies and 1 cooperative. Traditionally, cane sugar refiners have provided about 70 percent of the refined sugar consumed in the mainland U.S. market. In 1978, U.S. cane sugar refiners produced 7.35 million tons, raw value, of sugar. Cane sugar refiners are the principal users of imports of raw sugar. They obtained about 61 percent of their raw sugar supplies from foreign sources and 39 percent from domestic sources in 1975.

There is no production of raw cane sugar in the NE/EGL area; therefore, cane sugar refiners in that area import raw sugar from other countries to sustain their operations or obtain supplies from raw-sugar-producing areas of the United States. In recent years, imported raw sugar is believed to have accounted for more than 90 percent of the raw sugar used by these operations; the percentage may have been 98 percent in 1978.

Four companies currently operate cane sugar refineries in the NE/EGL area. These four companies, as well as the locations of their eight refineries, are as follows:

<u>Company</u>	<u>Location of refinery</u>
Amstar Corp. ^{1/} -----	Baltimore, Md. Boston, Mass. Brooklyn, N.Y. Philadelphia, Pa.
National Sugar Refining Co-----	Philadelphia, Pa.
Revere Sugar Corp-----	Brooklyn, N.Y. Charlestown, Mass.
Refined Syrups & Sugars Inc-----	Yonkers, N.Y.

^{1/} Amstar Corp., the petitioner to Treasury, also has a cane sugar refinery at New Orleans, La., a liquid sugar plant at Chicago, Ill., 4 beet-sugar-processing plants in California and 1 in Arizona, and a corn-sweetener plant at Dimmit, Tex.

U.S. importers and sugar operators

Besides the cane sugar refiners, which contract for the bulk of U.S. sugar imports, other importers and sugar operators are involved in the importation of raw, semirefined, or refined sugar. They import sugar and arrange for the sale and delivery of the commodity to buyers (mostly cane sugar refiners). The need for the importers' and sugar operators' services arises because producers cannot always find refiners willing to buy at the

times and locations that producers have sugar to sell and vice versa. The importers' and sugar operators' services consist of financing the transaction, chartering the transportation, arranging for loading, doing import and export documentation, delivering to buyers' docks, and taking the risk of price changes while these procedures are being undertaken. The operators also engage in significant trading in sugar futures markets, and may operate in the world sugar trade outside the U.S. market. In 1974, there were at least 16 sugar operators dealing in raw sugar and an unknown number of importers dealing in refined sugar for direct-consumption sales.

Alternative Sweeteners

The principal alternatives to sugar in sweetener markets are corn-based sweeteners. They are derived from cornstarch by hydrolysis, usually with enzyme processes. The products of this process include anhydrous and monohydrate dextrose and glucose sirups. Corn sweeteners have generally been cheaper than sugar. Because their glucose (dextrose) base is less sweet than sucrose, their application has been limited. However, a recently developed product, high-fructose sirup, is rapidly growing in use and appears to have disturbed the complementarity in use of the other sweeteners. 1/ For example, the soft-drink industry is the largest industrial user of sugar and, although ordinary corn sirups have not made significant inroads into this market, high-fructose sirup appears to be ideally suited for use in soft drinks.

Industry and Government sources indicate that high-fructose sirup could substitute for all sweetener uses that do not specifically require dry crystals. It is unlikely that this will occur, but it has been estimated that high-fructose sirups will eventually supply approximately one-half of the industrial market.

1/ Virtually all high-fructose sirup is produced from corn.

While recent use of corn sweeteners has been limited because of lack of sufficient productive capacity, there are reports of current excess processing capacity, a result of low sugar prices and the coming on stream of new capacity started during the 1974-75 period of very high sugar prices.

There are 11 firms in the U.S. corn-sweetener industry operating 21 plants, most of which are located in the corn-producing States of the Midwest. Eleven of these plants produce high-fructose sirup; the capacity to produce this sweetener has greatly expanded in recent years.

Three companies have corn-sweetener operations in the NE/EGL area, and each of their plants in that area produces high-fructose sirup. The locations of the plants, and the companies operating them, are as follows:

<u>Company</u>	<u>Location of plant</u>
A.E. Staley Manufacturing Co-----	Morrisville, Pa.
CPC International, Inc-----	Montezuma, N.Y.
Car-Mi Inc-----	Dayton, Ohio

U.S. sales of corn sweeteners increased by about one-fourth from 1974 to 1977, rising from 6.1 billion pounds, dry basis, in 1974 to 7.6 billion pounds in 1977. Sales of high-fructose sirup increased more than those of any other corn sweetener during 1974-77, rising from 0.6 billion pounds to 2.1 billion pounds and becoming the principal corn sweetener (on the basis of quantity) produced in the United States (table 2).

Although most of the corn-sweetener plants are located outside the NE/EGL area, large quantities of their products are distributed in that area. Respondents to the U.S. International Trade Commission questionnaires on corn sweeteners--

accounting for about one-fifth of total U.S. sales--shipped 45 percent of their output (765 million pounds) to markets in the NE/EGL area in 1978.

Other caloric sweeteners include molasses, maple sirup, honey, sorghum sirup, lactose, and levulose. Noncaloric sweeteners include saccharin and aspartic-acid-based sweeteners.

Foreign Producers

The European Community, the U.S.S.R., Brazil, India, Cuba, and the United States are the world's leading producers of sugar (table 3). The U.S.S.R., the EC, and the United States are also the world's leading consumers of sugar (table 4), consuming most of their own production, while Brazil, Cuba, and India export significant portions of their output.

In most years, world production of sugar exceeds world consumption of sugar (table 5), resulting in world sugar prices that are generally low. When world consumption exceeds world production for any prolonged period, prices generally rise quickly. During 1974-77, world production was in excess of world consumption by increasing amounts in each year. In 1978, production in excess of consumption was about half of that in 1977, but the excess amounted to more than 3 percent of consumption, or 3.3 million tons. This situation has resulted in the current low level of world sugar prices.

In 1978, the leading suppliers of sugar to the United States were the Philippines, the Dominican Republic, Brazil, Argentina, Peru, Australia, and Guatemala (table 6). Although 46 countries supplied sugar to the United States in 1978, the principal suppliers listed above accounted for more than 63 percent

of the total quantity. Canada is a minor supplier, accounting for only 2 percent of total U.S. imports of sugar in 1978. However, Canada is the principal supplier of refined sugar, supplying more than 98 percent of the quantity of such imports in 1978.

Six refineries make up the eastern Canadian sugar-refining industry. The five companies operating the refineries, and the locations of the refineries, are as follows:

<u>Company</u>	<u>Location of refinery</u>
Redpath Sugars Ltd-----	Montreal, Quebec Toronto, Ontario
Atlantic Sugar-----	Saint John, New Brunswick
St. Lawrence Sugar-----	Montreal, Quebec
Cartier Sugar Ltd-----	Montreal, Quebec
Westcane Sugar Ltd-----	Oshawa, Ontario

Redpath Sugars Ltd., Atlantic Sugar, and St. Lawrence Sugar are the principal refiners of Canadian sugar exported to the United States.

The estimated production capacity of refineries in Eastern Canada is 85,444 metric tons per month (table 7), or 1,025,328 metric tons per year. During the 12-month period October 1977-September 1978, average monthly production was 76,059 metric tons, or 89 percent of capacity. During 1978, about 10 percent of the production in Eastern Canada was exported to the United States.

The complainant alleges that Cuban raw cane sugar is used in Canadian refineries to produce refined sugar that is exported to the United States. It is alleged that the exportations of that sugar to the United States are used as a basis for claiming drawback of Canadian customs duties on Cuban sugar imported into Canada. The Commission has no evidence to dispute or substantiate

this allegation. Inasmuch as the importation into the United States of all goods of Cuban origin, subject to exceptions established by the Secretary of the Treasury, are prohibited, Treasury has been requested to conduct an investigation to determine whether the importation of refined cane sugar from Canada is in violation of U.S. law. Under current manufacturing economics and refinery operating procedures, the petitioner believes that it is practically impossible for Canadian refiners to segregate their output of refined sugar by the country of origin of the raw sugar used in the refinery process.

U.S. Capacity, Production, and Capacity Utilization

The annual capacity to produce refined sugar, as reported by respondents to Commission questionnaires, which accounted for about 35 percent of U.S. production of refined sugar in 1978, increased from 7.6 billion pounds in 1974 to 7.9 billion pounds in 1978 (table 8). 1/ * * *

During 1975-78, total U.S. refined sugar production of questionnaire respondents steadily increased from 6.6 billion pounds in 1975 to 7.5 billion pounds in 1978. Production in 1974 was 8.0 billion pounds. Production by NE/EGL area refiners * * *. * * *

The indicated capacity utilization of all questionnaire respondents declined from 105 percent in 1974 to 85 percent in 1975, and increased thereafter to 94 percent in 1978. NE/EGL area refiners * * *. * * *

1/ Capacity is an estimate that is not a true indication of maximum output at any one point in time. Data are for five refiners.

U.S. Producers' Inventories

Monthend stocks of cane sugar refiners, beet sugar processors, importers of direct-consumption sugar, mainland cane mills, and total U.S. inventories of sugar during 1974-78 are listed in table 9. In 1978, monthend stocks of cane sugar refiners were about 1.6 times as much as their stocks during 1974-76. The increase is reflected in their inventories of both raw and refined sugar, which totaled 1.4 million tons at the end of December 1978. The inventories of beet sugar processors and mainland cane sugar mills fluctuate widely during the year depending upon the growing season for sugar beets and sugar cane. The monthly stock levels of refined sugar by beet sugar processors gradually rose from 1974 to 1977, and then subsided somewhat in 1978 when they were generally 85 to 90 percent of the respective monthend inventories in 1977. The December 1978 inventory of beet sugar processors was 1.6 million tons. During 1974-78, monthend stocks held by mainland cane sugar mills experienced a steady upward movement in comparison with respective months from 1 year to the next, and the 12-month average for 1978 was 3.3 times as much as the 1974 average. The mainland cane sugar mills had a 1978 ending inventory of 0.8 million tons of raw sugar.

Monthly total stocks of sugar producers gradually increased, when comparing respective months from 1 year to the next, during 1974-78, with the 1978 monthly stocks averaging about 1.6 times those of 1974. The ratios of total yearend inventories to U.S. distribution (shipments) of sugar during 1974-78 were 25, 27, 31, 39, and 34 percent, respectively.

Inventories held by importers of direct-consumption sugar (virtually all of which is refined) were negligible or nonexistent during January 1974-November 1977, but then increased to 91,000 tons in December 1977, or 4.3 per-

cent of the total inventory of refined sugar. These inventories, believed to be mostly of Canadian sugar, steadily declined and were zero in November-December 1978.

Yearend inventories of refined sugar by all refiners and processors that responded to questionnaires of the U.S. International Trade Commission increased from 472 million pounds in 1973 to 1,077 million pounds in 1976, declining thereafter to 972 million pounds in 1978. Yearly inventories from 1973 to 1978 were as follows:

<u>Year</u>	<u>Inventories</u> <u>(million pounds)</u>
1973 -----	472.2
1974 -----	599.8
1975 -----	873.2
1976 -----	1,077.4
1977 -----	1,031.8
1978 -----	971.9

Respondents to questionnaires of the U.S. International Trade Commission indicated that for cane sugar refiners selling mostly to markets in the NE/EGL area, inventories of refined sugar varied from * * * million pounds in 1973 to * * * million pounds in 1977. 1/ Inventories during 1973-78 of the two companies supplying such data were as follows:

<u>Year</u>	<u>Inventories</u> <u>(million pounds)</u>
1973 -----	***
1974 -----	***
1975 -----	***
1976 -----	***
1977 -----	***
1978 -----	***

Yearend inventories of refined sugar by refiners and processors selling mostly to markets outside the NE/EGL area, mainly beet sugar processors, were significantly greater than those of cane sugar refiners selling mostly to NE/EGL area markets. Their inventories during 1973-78 were as follows:

1/ Includes data for Amstar Corp.'s cane sugar refinery located in New Orleans, La.

<u>Year</u>	<u>Inventories</u> <u>(million pounds)</u>
1973-----	***
1974-----	***
1975-----	***
1976-----	***
1977-----	***
1978-----	***

U.S. Employment in Cane-Sugar-Refining and
Beet-Sugar-Processing Operations

The number of production and related workers employed in producing refined sugar in the four cane-sugar-refining and beet-sugar-processing firms that responded to the Commission's questionnaires rose from 5,728 workers in 1974 to 6,451 workers in 1976, fell to 6,324 workers in 1977, and rose to 6,529 workers in 1978, its highest level of the period (table 10). The average number of production and related workers in cane-sugar-refining operations of Amstar Corp.'s NE/EGL area refineries * * *. * * *

The person-hours worked by production and related workers employed by the four respondents in their sugar-refining operations increased from 12.6 million hours in 1974 to 13.9 million hours in 1976, fell slightly to 13.4 million hours in 1977, and rose again to 13.9 million hours in 1978 (table 11).

Financial Performance of Domestic Producers

Six firms--accounting for 40 percent of U.S. production of refined sugar in 1978--responded to the Commission's questionnaires regarding their profit-and-loss experience. Net sales of the six firms increased from \$1.7 billion in 1974 to \$2.4 billion in 1975 but fell to \$1.3 billion in 1977 and 1978. Net profit before taxes for the six firms increased from \$70.2 million in 1974 to \$128.1 million in 1975, but fell to \$42.6 million in 1977 and \$3.5 million in 1978, as shown in table 12.

The two respondents that sell their sugar mostly to markets in the NE/EGL area reported that their net sales of sugar * * *.

2/ Data of 5 sugar producers.

3/ Includes only 10-month data for 1 refiner whose sales are mostly to markets in the Northeastern/Eastern Great Lakes area.

Source: Compiled from data submitted in response to questionnaires of the U.S. International Trade Commission by domestic cane sugar refiners and beet sugar processors.

U.S. Consumption and Market Penetration of Imports

During the period 1960-73, annual U.S. consumption of sugar increased gradually from 9.5 million to 11.8 million tons, raw value. However, the rapid increase in prices to record levels toward the end of 1974, followed by continued high prices during much of 1975, caused total U.S. sugar consumption to fall in each of those years--to 11.5 million tons in 1974 and then sharply to 10.2 million tons in 1975. Total sugar consumption recovered in 1977 to 11.4 million tons as prices declined sharply from their 1974 peak, but declined to 11.0 million tons in 1978 (table 13). As shown in table 14, industrial uses account for the majority of sugar consumption--more than 60 percent of the deliveries during 1978.

Primary distribution of U.S.-produced sugar (continental) into the NE/EGL area decreased from 3.7 million tons in 1974 to an estimated 3.4 million tons in 1978 (table 1). ^{1/} During this period, primary distribution to other States declined from 6.8 million tons to 6.6 million tons. Respondents to questionnaires of the U.S. International Trade Commission indicated sales of refined sugar to U.S. markets during 1974-78 as follows (in millions of tons):

<u>Year</u>	<u>NE/EGL area</u>	<u>Other States</u>	<u>Total</u>
1974-----	***	***	4.35
1975-----	***	***	3.71
1976-----	***	***	4.09
1977-----	***	***	4.16
1978-----	***	***	4.07

Per capita U.S. consumption of sweeteners increased from 129.0 pounds in 1974 to an estimated 134.9 pounds in 1978 (table 15). During this period, however, refined sugar consumption declined from 96.6 pounds per capita in 1974 to an estimated 92.7 pounds per capita in 1978; the share of consumption accounted for by refined sugar steadily declined from 75 percent in 1974 to an

^{1/} Includes refined sugar of cane sugar refiners and beet sugar processors and direct-consumption sugar of mainland cane mills.

estimated 69 percent in 1978. The increase in per capita consumption of sweeteners resulted from increased use of corn sweeteners, specifically, high-fructose corn sirup, per capita consumption of which increased from 3 pounds, dry basis, in 1974 to an estimated 11 pounds in 1978.

In addition to a decline in per capita consumption of sugar, there was a population decline of 104,000 people in the NE/EGL area of the United States during 1974-77. According to the U.S. Bureau of the Census (in the Statistical Abstract of the United States, 1978), the population in the NE/EGL area in 1974 and 1977 was as follows:

<u>Year</u>	<u>Population</u> <u>(1,000 people)</u>
1974-----	74,625
1977-----	74,521

Based upon 1970-75 migration patterns, however, the population in the NE/EGL area is projected to increase to 77.1 million people by 1985.

U.S. imports of sugar from all sources decreased from 5.8 million tons, raw value, in 1974 to 3.9 million tons in 1975, and then increased to a high of 6.1 million tons in 1977. Imports totaled 4.7 million tons in 1978. About 25 percent of the 6.1 million tons imported in 1977 was imported in December to fulfill contracts for delivery in 1978. The large quantity of imports in December 1977 resulted from importers' taking advantage of exemptions from import fee increases proclaimed under section 22 in November 1977.

During 1974-78, the ratio of imports to domestic consumption varied from 38 percent in 1975 to 54 percent in 1977 (table 13). The ratio in 1978 was 42 percent.

Prior to the expiration of the Sugar Act of 1948, as amended, on December 31, 1974, that act and the preceding sugar acts permitted the importation of refined sugar only in nominal quantities. Imports from Canada amounted to only 1 ton in 1974, and then increased to a high of 138,000 tons in 1977, accounting for 1.2 percent of U.S. consumption of sugar. Sugar imports from Canada totaled 98,000 tons in 1978, or 0.9 percent of U.S. consumption.

U.S. imports from Canada predominantly enter through five customs districts for distribution to markets in the NE/EGL area (table 16). ^{1/} Imports entering through these customs districts accounted for more than 99 percent of the total quantity of imports from Canada in 1978. Almost half of the 1978 imports from Canada entered through the customs district of Buffalo, N.Y. As a share of total sugar imports entering through customs districts in the NE/EGL area, imports from Canada (virtually all refined sugar) increased from a negligible amount in 1974 to 5 percent in 1978.

Imports of sugar from Canada entering through customs districts in the NE/EGL area, as a share of the primary distribution of sugar in the NE/EGL area by mainland producers, increased from a negligible percentage in 1974 to 3.8 percent in 1977, and then decreased to 2.9 percent in 1978 (table 1).

^{1/} Because import data are obtained from more than one source in order to compile certain types of data, import data shown in this report vary.

Prices

U.S. and world prices

The prices of raw sugar on the world and U.S. markets increased dramatically in 1974 and then declined as abruptly as they had risen (table 17). The average price of sugar delivered in New York increased from 13 cents per pound in January 1974 to a peak of 57 cents per pound in November 1974, then fell to just below 10 cents per pound in September 1976. At that time there was a twofold tariff increase of 1.25 cents per pound and New York-delivered prices remained above 10 cents per pound through October 1977. After the additional duty increase and imposition of section 22 fees announced in November 1977, the price of sugar rose gradually to 14 cents per pound in June 1978, but fell to 13.49 cents per pound in July 1978. During August-December 1978, the price remained above 14 cents per pound, exceeding 15 cents per pound during September and October. During December 1978, the New York price amounted to 14.48 cents per pound. In the first quarter of 1979, despite the increase in import fees, the price in New York remained below 15 cents per pound. In the second quarter of 1979 the fees were reduced and the price fell to 14 cents per pound.

The trend of Northeast wholesale prices of refined sugar was similar (table 18). The wholesale price of refined sugar increased dramatically from about 16 cents per pound in January 1974 to a peak of almost 61 cents per pound in November 1974. The price declined to less than 16 cents per pound in September 1976 and then gradually began to rise and exceeded 22 cents per pound during October-December 1978. Prices of other selected sweeteners 1/ had similar trends. However, prices of high-fructose corn sirup, a major competitor of refined sugar, declined relative to those of refined sugar from levels in

1/ Corn sirup, dextrose, and high-fructose corn sirup.

excess of 80 percent of refined sugar wholesale prices during August 1975-June 1976 to 56 percent or less during August-December 1978.

The dutiable unit value of imports from Canada declined from 48 cents per pound in January 1975 to 12 cents per pound in October-November 1977, and then increased irregularly to more than 14 cents per pound in December 1978 (table 19). During 1975 and 1976, the dutiable unit value of sugar imports from Canada was usually more than 80 percent of the Northeast wholesale price for refined sugar, and in August 1976 it was nearly 100 percent of the Northeast price. The dutiable unit value of imports dropped to less than 80 percent of the Northeast wholesale price of refined sugar in January 1977, and was generally below that level during 1977 and 1978. In fact, it declined to less than 70 percent of the Northeast prices during November 1977 and June-December 1978, and during December 1978, it was 64 percent of the Northeast wholesale price of refined sugar.

Price depression

The petitioner supplied price data (February-March 1979) for different sales areas as an indication of price depression resulting from Canadian imports of sugar. The three areas indicated are upstate New York, which is reported to be seriously affected by imports from Canada; Philadelphia, Pa., which is less seriously affected by imports; and Baltimore, Md., which is relatively unaffected by Canadian imports. The prices at which the following grocery items were recently being sold in the three areas by the petitioner are as follows:

<u>Area</u>	<u>12 5-pound bags of granulated sugar</u>	<u>24 1-pound boxes of 10X confectioners sugar</u>
Upstate New York-----	***	***
Philadelphia, Pa-----	***	***
Baltimore, Md-----	***	***

Lost Sales

The petitioner claimed that sugar sales were lost to traditional customers in the NE/EGL area. For example, in the Buffalo, N.Y., marketing area, substantially all of its sales of industrial sugar products reportedly have been lost to imports from Canada--a loss estimated to be in excess of 2,500 tons annually. Also, the petitioner has estimated that the domestic industry has lost sales in excess of 5,000 tons to soft-drink bottlers in Western New York. In addition, other large industrial users reportedly have been purchasing substantial quantities of Canadian sugar or purchasing domestic sugar at depressed prices competitive with the prices of imports from Canada.

The petitioner also claimed to have lost sales of 5-pound bags of grocery sugar to imports from Canada. In just one of its account areas, Rochester, N.Y., the petitioner estimated that the domestic sugar industry has lost sales of approximately 2,500 tons annually.

Michigan Sugar Co. has complained repeatedly, since 1976, of low-priced Canadian sugar being sold in its traditional market areas, resulting in lost sales and depressed prices for Michigan Sugar Co. The Canadian sugar is sold, at times, below the Government's support price. Canadian sugar being sold in the Detroit marketing area reportedly accounts for more than 20 percent of Michigan Sugar Co.'s historic share of the Detroit market, a market that formerly consumed about one-third of the sugar production of Michigan Sugar Co. 1/

1/ Transcript of the hearing, pp. 125-131.

Factors Relating to a Regional Approach for Sugar From Canada

Transportation costs for refined sugar are relatively high in relation to its value; therefore, refined sugar is normally shipped to markets within 250-300 miles of refineries in the NE/EGL area. The distance refined sugar can profitably be shipped depends to a large degree on the location of competitors and shipping rates. Refined sugar shipped by water, for example, can be sent a greater distance to compete with other producers than can refined sugar shipped by truck.

At present there appear to be four major marketing regions for refined sugar in the continental United States; the West (basically States west of the Mississippi river), the Southeast, the NE/EGL area, and Chicago. The Chicago market is a national market that obtains refined sugar from all of the other regions.

The refineries located in the NE/EGL area market the bulk of their product therein. An exception to this pattern is Amstar Corp.'s Baltimore refinery, which is on the fringe of the designated NE/EGL area and markets refined sugar in States south and west of Maryland in competition with Southern refineries. Six NE/EGL area refiners responding to questionnaires of the U.S. International Trade Commission indicated sales of * * *. Thus, of the respondents supplying sugar to the NE/EGL area in 1978, the refineries located therein supplied 96 percent of the total.

Less than 0.1 percent of refined Canadian sugar entered the United States outside customs districts in the NE/EGL area, and the Canadian sugar is principally marketed in upstate New York and other States in the NE/EGL area. A small portion of Canadian sugar, however, is believed to be marketed in the Chicago area.

APPENDIX A

TREASURY'S LETTER OF NOTIFICATION TO THE
U.S. INTERNATIONAL TRADE COMMISSION

THE GENERAL COUNSEL OF THE TREASURY
RECEIVED WASHINGTON, D.C. 20220

BOX NUMBER APR 23 1979 #571 Office of the Secretary Intl. Trade Commission

'79 APR 25 PM 12:13

APR 23 1979

OFFICE OF THE SECRETARY
U.S. INTL. TRADE COMMISSION

Dear Mr. Chairman:

In accordance with section 201(c) of the Antidumping Act of 1921, as amended, an antidumping investigation is being initiated with respect to sugars and syrups from Canada. Pursuant to section 201(c)(2) of the Act, you are hereby advised that the information developed during our preliminary investigation has led me to the conclusion that there is substantial doubt that an industry in the United States is being, or is likely to be, injured by reason of the importation of this merchandise into the United States.

The bases for my determination are summarized in the attached copy of the Antidumping Proceeding Notice in this case. Additional information will be provided by the U.S. Customs Service.

Some of the information involved in this case is regarded by Treasury to be of a confidential nature. It is therefore requested that the Commission consider all the information provided for its investigation to be for the official use of the ITC only, not to be disclosed to others without prior clearance from the Treasury Department.

Sincerely,

Robert H. Mundheim
Robert H. Mundheim

The Honorable
Joseph Parker
Chairman, International
Trade Commission
Washington, D. C. 20436

Enclosure

APPENDIX B

NOTICE OF COMMISSION'S INQUIRY AND HEARING

Sugar From Canada; Inquiry and Hearing

The United States International Trade Commission (Commission) received advice from the Department of Treasury (Treasury) on April 25, 1979, that during the course of determining whether to institute an investigation with respect to sugar provided for in items 155.20 and 155.30 of the Tariff Schedules of the United States from Canada in accordance with section 201(c) of the Antidumping Act, 1921 as amended (19 U.S.C. 160(c)), Treasury had concluded from the information developed during its preliminary investigation that there is substantial doubt that an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of the importation of this merchandise into the United States. Therefore, the Commission on May 1, 1979, instituted inquiry AA1921-Inq.-27, under section 201(c)(2) of that act, to determine whether there is no reasonable indication that an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of the importation of such merchandise into the United States.

Public Hearing

A public hearing in connection with the inquiry will be held in Washington, D.C. on Thursday, May 10, 1979, at 10:00 a.m., e.d.t. The hearing will be held in the Hearing Room, United States

International Trade Commission Building, 701 E Street, NW., Washington, D.C. All parties will be given an opportunity to be present, to produce evidence, and to be heard at such hearing. Requests to appear at this public hearing, or to intervene under the provisions of section 201(d) of the Antidumping Act, 1921, as amended (19 U.S.C. 160(d)), should be received in writing in the office of the Secretary of the Commission not later than noon Monday, May 7, 1979.

Written statements.

Interested parties may submit statements in writing in lieu of, and in addition to appearance at the public hearing. A signed original and nineteen true copies of such statements should be submitted. To be assured of their being given due consideration by the Commission, such statements should be received not later than Tuesday, May 15, 1979.

Issued: May 1, 1979.

By order of the Commission.

Kenneth R. Mason,
Secretary.

1/ Data for January 1974 to October 1977 are spot prices for Contract No. 11, bulk sugar, f.o.b., stowed at Greater Caribbean ports (including Brazil). Beginning November 1977, data are world prices as reported by the International Sugar Organization pursuant to art. 53 of the International Sugar Agreement.

2/ Includes sec. 22 fees.

3/ Prior to 1975, the premium or discount in the U.S. market was attributed to quota limitations under the Sugar Act.

4/ Data for January 1975 to October 1977 are spot prices for Contract No. 12, bulk sugar, delivered at Atlantic or Gulf ports, duty paid or duty free. Beginning November 1977, data are estimates calculated on the basis of the spread in futures prices for the nearest trading month with both Contract No. 11 and 12 futures.
