A hub is a type of gear system used on bicycles. Hub gears are used primarily on utility bicycles and various types of small-wheeled bicycles. The outer case of the hub gear unit, which is attached to the spokes, is made to turn at a different speed relative to the rear wheel's sprocket, depending on which gear is selected. Hub gears and lubricants are sealed within the hub of the bicycle's rear wheel. Gears are changed by a cable which is tightened or loosened by a lever or twist grip on the handlebars.⁴
