III. Other product information, including uses/applications and source(s) of imports

The subject product includes children's leather moccasin-type booties, not covering the ankle. In this method of footwear construction, which dates back to medieval times, the leather upper is stitched to the outsole with the flesh or wrong-side out before the shoe is turned right-side out again to expose the leather grain. China is the leading exporter of such footwear, followed by New Zealand.

Note: Customs revenue loss is provided for 5 years, although the effective period of the proposed legislation may differ. Regarding the HTS subheading listed in the article description of the bill, the Commission may express an opinion on the HTS classification of a product to facilitate consideration of the bill. However, by law, only U.S. Customs and Border Protection is authorized to issue a binding ruling on this matter. The Commission believes that Customs should be consulted prior to enactment of the bill.
