Rebar Imports: Then and Now

2000

2013

Key Issues In This Review

- Price is paramount
- All seven subject countries should be cumulated
- Subject producers have massive excess and divertible capacity
- Subject producers face challenges in alternative markets
- The U.S. is an open, large, and attractively priced market
- The domestic industry is vulnerable
- Revocation will materially injure the domestic industry

Rebar is the Ultimate Commodity Product

In five investigations and sunset reviews since 1996, the Commission has consistently found that rebar is highly fungible and readily interchangeable:

“{R}ebar is a highly fungible product, with domestically produced product and imported product being readily interchangeable.”*

Nothing has changed.
