## USITC REPORTS RESULTS OF SURVEY OF THE U.S. COLOR TV INDUSTRY

The United States International Trade Commission has completed its tenth quarterly survey of U.S. manufacturers of color television receivers to obtain data on economic factors indicative of conditions in the U.S. industry. The survey, required by Presidential Proclamation No. 4511, covers the third quarter of 1979. The Commission has previously reported data obtained for the fourth quarter of 1976, for the years 1977 and 1978, and for the first half of 1979.

The Commission has submitted detailed data in confidence to the Special Representative for Trade Negotiations, who is responsible for monitoring the orderly marketing agreement implemented by the Presidential Proclamation. Data which do not reveal operations of individual firms have been aggregated in USITC Publication 101. This publication provides data for July 1977 through September 1979 and shows production, shipments, inventories, imports, employment, man-hours, and certain prices of U.S. producers.

Copies of the survey can be obtained by calling (202) 523-5178 or from the Office of the Secretary, United States International Trade Commission, 701 E Street NW., Washington, D.C. 20436.

## Highlights

Third quarter 1979 U.S. production of color television receivers was 2.1 million sets, which was approximately the same as production in the corresponding quarter of 1978, but 101,000 sets less than the second quarter of 1979. Imports of complete color sets by U.S. producers continued to decline rapidly in the third quarter of 1979, falling 93.5 percent below comparable 1978 levels to 8,754 sets. Ending September 1979 average inventories of U.S. producers were 11.9 percent higher than September 1978 levels. Inventories of 17-inches and under and 20-inches and over screen sizes decreased somewhat, but this decrease was compensated for by an increase in inventories of 18- and 19-inch screen sizes. U.S. producers' shipments increased by 5.8 percent in the third quarter of 1979 compared with shipments in the comparable 1978 period, despite a 10.3-percent decline in shipments of screen sizes 20 inches and over.

Employment of all persons and of production and related workers employed by U.S. producers each declined by 5.8 percent from the third quarter of 1979 to the corresponding quarter of 1978. Average unit prices of all screen sizes rose, however. Average quarterly prices in the screen size categories of 13 inches and in 16-17 inches increased substantially by \$9.16 (4.2 percent increase) and \$22.00 (7.6 percent increase), respectively, in the third quarter of 1979, as compared with the corresponding 1978 quarter. Third quarter 1979 average prices for screen size categories of 18-19 inches and for the 20 inches and more increased by \$10.62 (3.6 percent increase) and \$20.42 (4.5 percent increase), respectively, compared with prices in the corresponding period of 1978.

## Capsulized Trend Analysis

### U.S. production

U.S. production of color television receivers in the third quarter of 1979 was 2.1 million sets, 1.8 percent higher than production in the third quarter of 1978 and 24.1 percent higher than in the third quarter of 1977. Compared with production in the third quarter of 1978, it was higher in the categories of 17 inches and under and of 18 and 19 inches but lower for sets 20 inches and over. The share of production contributed by each of the three major screen size categories changed minimally from the second to the third quarter of 1979.

### U.S. producers' imports

U.S. producers' imports of color sets in the third quarter were 8,754 units, 93.5 percent lower than imports in the third quarter of 1978. The decline occurred in both screen size categories for imports, with imports of 18 inches and larger screen sizes falling to a relatively insignificant level. Compared with the figures in the third quarter of 1977, the current imports of U.S. producers are 91.4 percent lower, or only 8.6 percent of the prior import levels.

### U.S. producers' inventories

U.S. producers' inventories of color television receivers at the end of September 1979 were 654,446 units, 11.9 percent lower than in September 1978. Quarterly average inventories for the third quarter were .2 percent lower than inventories in the third quarter of 1978 and 5.7 percent lower than those in the third quarter of 1977. Stocks of 18- and 19-inch sets rose on the average by 8.8 percent, compared to the average monthly ending levels in the third quarter of 1978. This increase was offset, however, by decreases of

5.0 and 6.6 percent for the 17-inches and under and for the 20-inches and over categories, respectively. Compared to the third quarter of 1977, current average quarterly inventories for the 18- and 18-inches and for the 20-inches and over screen size categories were 8.9 percent and 12.7 percent higher. Third quarter 1979 average inventories for the 17-inches and under category, however, were 45.2 percent lower than comparable 1977 levels.

#### U.S. producers' shipments

U.S. producers' shipments of color television receivers continued to increase. In the third quarter, shipments amounted to nearly 2.3 million sets, 5.8 percent higher than in the third quarter of 1978 and 21.5 percent higher than in the third quarter of 1977. Shipments rose in all categories except for 20 inches and over, in which they dropped 10.3 percent. Shipments of 18- and 19-inch receivers accounted for the greatest absolute increase (119,651 units) from the third quarter of 1978 to the third quarter of 1979. Total shipments in the third quarter of 1979 recorded a significantly slower rate of increase over shipments in 1978, than that recorded between the corresponding periods of 1978 and 1977 (5.8 percent compared to 14.9 percent, respectively).

#### U.S. employment

Employment in U.S. producers' establishments maintained the slow general decline in both production and related workers and in managerial employees. The average number of production and related workers employed during the third quarter of 1979 was 23,094 persons, down from 24,506 persons in the corresponding period of 1978. The total of all workers was 26,780, down from 28,417 in the third quarter of 1978. The decline in employment occurred in a quarter of slightly increasing production and significantly decreasing imports by U.S.

producers over the comparable 1978 period. This trend continues to indicate increased labor productivity and increased purchases of foreign-made sub-assemblies by U.S. manufacturers.

### Prices

Average unit net selling prices were higher for every screen size category during the third quarter of 1979, compared with those in previous corresponding quarters. The average prices of the categories of 18-19 inches and 20 inches and over were higher than in the third quarter of 1978 by \$10.62 (3.6 percent increase) and \$20.42 (4.5 percent increase), respectively. The 13-inch screen size was higher by \$9.16 (4.2 percent increase) and the category of 16-17 inches was higher by \$22.00 (7.6 percent increase).

The upward trend in average quarterly prices for the 13-inches and for the 18- and 19-inches screen size categories, which had persisted since the third and second quarters, respectively of 1978, was reversed in the third quarter of 1979. Third quarter 1979 average prices for 13-inches and for 18- and 19-inches screen sizes decreased by \$2.35 and 60 cents, respectively, from the second quarter of 1979. The average quarterly prices for the 20-inches and over and for the 16- and 17-inches categories, however, increased by \$3.51 and \$8.23, respectively, over the second quarter 1979 averages.
