United States International Trade Commission  
Washington, D.C. 20436

## Highlights

Second quarter 1980 U.S. production of color television receivers was 2.7 million sets, which was 23 percent greater than production in the corresponding quarter of 1979, but only about 63,000 sets more than in the first quarter of 1980. Imports of complete color sets through U.S. producers' facilities continued their rapid decline in the second quarter of 1980. Specific data on imports were not released in the public report because such data would reveal operations of individual firms.

Ending June 1980, total inventories of U.S. producers were 6.8 percent higher than June 1979 levels. Inventories of all screen-size categories ranged from a 0.3-percent decrease in the category of 20 inches and over to a 14-percent increase in the 18- and 19-inch screen-size category.

U.S. producers' shipments increased by 5.9 percent in the second quarter of 1980 compared with shipments in the corresponding 1979 period. Shipments of sets 20 inches and over declined by 8.2 percent, while shipments in the 18- and 19-inch screen-size category increased by 5.8 percent and those in the 17-inch-and-under category increased by 28.5 percent.

The number of all persons and of production and related workers employed by U.S. producers declined by 1.9 and 0.1 percent, respectively, from the second quarter of 1979 to the corresponding quarter of 1980.

Average unit net selling prices rose for all four of the screen sizes. In the second quarter of 1980, average quarterly prices in the 13-inch category increased by \$7.38 (3.2 percent), in the 16- and 17-inch category by \$16.28 (5.4 percent), in the category of 18- and 19-inches by \$5.40 (1.8 percent), and in the 20 inches and over category by \$33.56 (7.2 percent), as compared with prices in the corresponding 1979 quarter.

## Capsulized Trend Analysis

### U.S. production

U.S. production of color television receivers in the second quarter of 1980 was 2.7 million sets, 23 percent higher than production in the second quarter of 1979 and 28 percent higher than in the second quarter of 1978. Compared with production in the second quarter of 1979, it was higher in the categories of 17 inches and under and of 18 and 19 inches, but slightly lower for sets 20 inches and over. The share of production contributed by each of the three major screen-size categories changed minimally from the first quarter of 1980 to the second quarter of 1980.

### U.S. producers' inventories

U.S. producers' inventories of color television receivers at the end of June 1980 were 988,050 units, 6.8 percent higher than the number in June 1979. Quarterly average inventories for the second quarter were 6.9 percent lower than inventories in the second quarter of 1979 and 8.9 percent higher than those in the second quarter of 1978. Stocks of sets 17 inches and under decreased on the average by 11.6 percent, compared with the levels in the second quarter of 1979. Decreases during the second quarter of 1980 in categories of 18 and 19 inches and 20 inches and over were 5.3 and 6.8 percent, respectively. Compared with the second quarter inventories of 1978, current average quarterly inventories for screen-size categories 17 inches and under were 13.4 percent lower; for 18 and 19 inches, 45 percent higher; and for 20 inches and over, 11.7 percent lower.

### U.S. producers' shipments

U.S. producers' shipments of color television receivers in the second quarter of 1980 were slightly less than those in the first quarter. However, in the second quarter, shipments amounted to over 2.2 million sets, 5.8 percent higher than those in the second quarter of 1979 and 7.9 percent higher than shipments in the second quarter of 1978. Shipments rose in the categories of 17 inches and under and 18 and 19 inches, but declined in the category of 20 inches and over. Total shipments in the second quarter of 1980 recorded a greater increase over shipments in 1979 than that recorded between the corresponding periods of 1979 and 1978 (5.9 percent and 2.1 percent, respectively).

### U.S. employment

Employment in U.S. producers' establishments maintained the slow, general decline in both production and related workers and in managerial employees. The average number of production and related workers employed during the second quarter of 1980 was 22,003 persons, down slightly from 22,024 persons in the corresponding period of 1979. The average number of all workers was 25,183, down from 25,663 in the second quarter of 1979. However, the number of man-hours worked by production and related workers was 11.5 million in the second quarter of 1980, up significantly from 10.0 million in the corresponding period of 1979. The decline in employment occurred in a quarter of increasing production and significantly decreasing imports by U.S. producers compared with production and imports during the corresponding 1979 period. The increased number of man-hours worked probably indicates a reluctance of producers to hire additional employees in the present recessionary climate.

## Prices

Average unit net selling prices were higher for all four major screen-size categories during the second quarter of 1980, compared with those in the corresponding quarter of 1979. The average prices of the 13-inch size increased by \$7.38 (3.2 percent), those of the 16- and 17-inch sizes by \$16.28 (5.4 percent), those of the 18- and 19-inch sizes by \$5.40 (1.8 percent), and those of the 20-inch and over sizes by \$33.56 (7.2 percent). These increases are well under the inflation rate as measured by the Consumer Price Index.

All categories of screen sizes except the 20 inches and over showed increased average quarterly prices in the second quarter of 1980 as compared with the first quarter. The 13-inch size increased by \$5.32, the 16- and 17-inch sizes by \$10.72, and the 18- and 19-inch sizes by \$7.66. The 20-inch and over sizes decreased by \$19.45.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

Furthermore, it is noted that the records should be kept in a secure and accessible format. Regular backups are recommended to prevent data loss in the event of a system failure or disaster. The document also mentions the need for periodic audits to ensure the integrity and accuracy of the information stored.

In conclusion, the document stresses that proper record-keeping is essential for the smooth operation of any business or organization. It provides a clear framework for how to handle and store financial data, ensuring that all necessary information is preserved and readily available for review.

The second part of the document outlines the specific procedures for handling incoming payments. It details the steps from the receipt of a check or cash to the recording of the transaction in the accounting system. This includes verifying the amount, the date, and the source of the payment.

Additionally, it discusses the process of reconciling bank statements with the internal records. This step is crucial for identifying any discrepancies and ensuring that the books are balanced. The document also touches upon the handling of customer disputes or returns, providing guidelines on how to adjust the records accordingly.

Overall, the document serves as a comprehensive guide for managing financial records. It covers the entire cycle from initial entry to final reconciliation, providing clear instructions and best practices for each stage of the process.
