Summary of Trends

Highlights

The following are highlights of economic data collected on color television receivers for the first calendar quarter of 1982. These data are compared with data reported for the first quarter of 1981.

- o U.S. production of color television receivers amounted to 2.3 million sets, a decrease of 19.5 percent.
- o U.S. producers' shipments totaled 2.2 million sets, a decrease of 11.3 percent.
- o Average inventories were 976,944 sets, an increase of 15.2 percent.
- o Exports of U.S.-made color television receivers amounted to 110,443 sets, a decrease of 30.0 percent.
- o The total number of employees of U.S. producers amounted to 20,756, a decrease of 12.5 percent.
- o Average unit sales prices ranged from a decrease of less than 1 percent in the 13-inch category, to an increase of 6.0 percent in the category of 14 through 17 inches.

Quarterly statistics

U.S. production.--U.S. production of color television receivers in January-March 1982 amounted to 2.3 million sets, compared with 2.8 million sets produced in January-March 1981. In January-March 1980, 2.7 million sets were produced. Compared with production in January-March 1981, production in January-March 1982 was lower in all screen-size categories. This share of production contributed by each screen-size category did not change appreciably from October-December 1981 to January-March 1982. Of total production in January-March 1982, the screen-size category of 17 inches and under accounted for 21.5 percent; that of 18 and 19 inches, 54.3 percent; and that of 20 inches and over, 24.2 percent.

U.S. producers' shipments.--U.S. producers' shipments of color television receivers in January-March 1982, 2.2 million sets, were 11.3 percent fewer in quantity than those in January-March 1981. They were 8.9 percent fewer than shipments in January-March 1980. Shipments in January-March 1982 decreased in all three screen size categories compared with shipments in the corresponding period of 1981. Total shipments in January-March 1981 had increased 2.7 percent over shipments in the corresponding period of 1980.

U.S. producers' inventories.--U.S. producers' inventories of color television receivers at the end of March 1982 were 959,288 units, 5.1 percent higher than the number at the end of March 1981. Quarterly average inventories for January-March 1982 were 15.2 percent higher than inventories in the corresponding period of 1981, but 67.4 percent higher than those in January-March 1980. Stocks of sets 17 inches and under increased by an average of 30.6 percent in January-March 1982 compared with the level in the corresponding period of 1981. In the category of 18 and 19 inches, average inventories increased by 13.8 percent, and those for screen sizes of 20 inches and over increased 10.0 percent. Average quarterly inventories for screen-size categories 17 inches and under were 9.0 percent lower in January-March 1982 compared with inventories in October-December 1981; those for 18 and 19 inches, 4.4 percent higher; and those for 20 inches and over, 6.0 percent higher.

U.S. producers' exports.--U.S. producers' exports of color television receivers amounted to 110,443 sets during January-March 1982, compared with 157,714 sets exported during January-March 1981, a decrease of 30.0 percent. Compared with exports in January-March 1981, exports in January-March 1982 were lower in all screen-size categories. Of total exports in January-March 1982, the screen-size category of 17 inches and under accounted for 38.3 percent; that of 18 and 19 inches, 45.0 percent; and that of 20 inches and over, 16.7 percent.

U.S. employment.--Employment in U.S. producers' establishments maintained the general decline in both production and related workers and in managerial employees. The average number of production and related workers employed during January-March 1982 was 17,562 persons, down 15.0 percent from 20,671 persons in the corresponding period of 1981. The average number of all workers was 20,756 down from 23,723 in January-March 1981. Also, the number of man-hours worked by production and related workers was 8.5 million in January-March 1982, down from 10.5 million in the corresponding period of 1981. This continuing decrease in employment and man-hours worked is believed to be the result of increasing imports of major subassemblies and the increasing use of integrated circuits in color television receivers, both of which reduce the amount of assembly labor required. This has been a continuing trend since 1977, when the collection of these data commenced.

Prices.--Except for the 13-inch category and the 20-inches and over category, average unit selling prices of U.S. producers were higher during January-March 1982 compared with those in the corresponding quarter of 1981. The average prices of the 13-inch size decreased by \$0.36 (less than 1 percent); those of the 14- through 17-inch category increased by \$16.38 (6.0 percent); those of the 18- and 19-inch sizes increased by \$0.26 (less than 1 percent); and those of sets 20 inches and over decreased by \$7.33 (1.5 percent). These increases are well under the inflation rate as measured by the Consumer Price Index.

Except for the 13-inch category, all screen-size categories showed decreased average quarterly prices during January-March 1982 compared with prices in October-December 1981. Prices in the 13-inch category increased by \$1.16; those for 14- through 17-inch sizes decreased by \$26.86; those for the 18- and 19-inch sizes, by \$5.70; and those for the 20 inches-and-over sizes, by \$14.28.
