## **Nonrubber Footwear Quarterly Statistical Report**

**Publication 2839**

**December 1994**

## PREFACE

This series of quarterly reports on the U.S. nonrubber footwear industry is published by the U.S. International Trade Commission pursuant to a request from the Senate Committee on Finance. In a letter received on August 10, 1984, the Committee requested that the Commission institute an investigation under section 332 of the Tariff Act of 1930 (19 U.S.C. 1332) for the purpose of preparing and publishing quarterly reports on nonrubber footwear. In response to this request, the Commission instituted investigation No. 332-191 on August 28, 1984.

The Committee requested the reports in order that it might monitor the condition of the industry on a quarterly basis. The Committee requested that the quarterly reports include data on (1) production and/or shipments, (2) imports, (3) exports, (4) apparent consumption, (5) market share, (6) employment, and (7) unemployment. In addition, the Committee requested that the Commission provide, on an annual basis, information on plant closings in the industry. The Commission publishes information on plant closings in the reports covering the fourth quarter of each year.

## HIGHLIGHTS

U.S. production.--Nonrubber footwear production has fallen for 3 consecutive quarters, declining by 10 percent both in the third quarter and in the first 3 quarters of 1994, from the corresponding 1993 levels. Production had grown by 4 percent for all of 1993, the first increase in 4 years. The value of U.S. producers' shipments in the third quarter of 1994 dropped for the first time this year, by 3 percent. However, the value of these shipments so far this year is up by 2 percent (table 1).

Part of the decline in U.S. production reflected sluggish demand. The growth in U.S. consumption of nonrubber footwear during the first 3 quarters of 1994 slowed to slightly less than 3 percent from the level of the earlier year, compared with 9 percent for all of 1993. The share of the domestic market supplied by the U.S. industry so far in 1994 declined to 10.5 percent in volume and to 26 percent in value. The ongoing decline in the industry's employment accelerated to 5 percent in the third quarter, bringing the average decline so far this year to slightly more than 3 percent.

U.S. imports.--Sluggish demand also slowed the growth in U.S. imports of nonrubber footwear, whose share of the domestic market rose by 2 percentage points to 89.5 percent in the first 3 quarters of 1994. Imports were up by just 2 percent in both quantity and value in the third quarter and by 4 to 5 percent year to date.

China expanded its already dominant share of the U.S. market to 55 percent in the first 3 quarters of 1994, compared with 51 percent for all of 1993. The growth in imports from China, which averaged 23 percent in 1993, slowed to 9 to 10 percent both in the 1994 third quarter and year to date. The average cost of the Chinese imports increased by 4 percent in the first 3 quarters of 1994 to \$6.42 a pair, following an increase of 6 percent in all of 1993. Nevertheless, the average cost of the Chinese shoes was almost half that of \$11.96 for imports from all other countries together.

The import performance of other major low-cost supplying countries weakened in 1994. In the third quarter, declines of 19 and 4 percent occurred in imports from Brazil, the second largest supplier, and from Indonesia, the third largest volume supplier, respectively. Whereas imports from Brazil are up by 2 percent so far this year, the increase is much lower than the 22-percent annual growth achieved in 1993. Imports from Indonesia are down by 6 percent year to date, partly reflecting sluggish demand for athletic shoes, an important item in its footwear product mix. Both China and Indonesia have been major beneficiaries of footwear investment from Taiwan and Korea, which had been the principal suppliers in the 1980s. Imports from Taiwan and Korea continued their rapid decline; shipments from Taiwan decreased by 31 percent and those from Korea by 38 percent so far this year.

Significant growth occurred in imports from the European Union (EU), up by 13 percent in the third quarter and by 31 percent so far in 1994. Part of the gain stemmed from a resurgence in imports from Spain, which rose by over 60 percent both in the third quarter and year to date. Imports from Italy, the main EU supplier, were up by 1 percent in the quarter but by 23 percent year to date. Imports from these EU countries benefited from the depreciation of their respective currencies against the dollar, which in effect improved

iii

the price competitiveness of their goods in the U.S. market. The average cost of their shoes fell by 15 percent for Spain and by 8 percent for Italy.

1/ Data for 1992, 1993, and the first quarter of 1994 were revised by the U.S. Department of Labor in June 1994.

2/ Data on quarterly unemployment rates are subject to considerable fluctuation because of the small sample used and therefore, should be used with caution.

3/ Preliminary.

1/ Percentages based on unrounded data.

2/ This increase probably reflects the change in export classification from the Schedule B to the HTS, and not necessarily an actual increase in export volume.

3/ Preliminary.

Note.--Because of rounding, figures may not add to totals shown.
