Monitoring of U.S. Imports of Tomatoes

Publication 2912

July 1995

PREFACE

Section 316 of the North American Free-Trade Agreement Implementation Act (NAFTA Implementation Act), Public Law 103-182, requires the U.S. International Trade Commission (Commission) to monitor U.S. imports of "fresh or chilled tomatoes" and "fresh or chilled peppers, other than chili peppers," until January 1, 2009. As a result, the Commission instituted investigation No. 332-350, Monitoring of U.S. Imports of Tomatoes, and investigation No. 332-351, Monitoring of U.S. Imports of Peppers, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)). This report on the Commission's monitoring investigation covers tomatoes for fresh-market use and for processing. The purpose of this monitoring is to permit the Commission to conduct an expedited investigation and, if appropriate, recommend to the President provisional relief should a petition requesting such relief be filed under section 302 of the NAFTA Implementation Act with respect to imports from Canada or Mexico or with respect to a petition for relief from all countries under section 202 of the Trade Act of 1974.¹ Generally, such provisional relief would remain in effect pending completion of the investigation under section 302 or 202.

This report contains statistical information gathered by the Commission on the U.S. tomato industry in the course of its monitoring. This information includes (1) apparent U.S. consumption, (2) U.S. imports, (3) U.S. exports, and (4) industry published data (including U.S. and Mexican production and

¹ The Commission instituted investigation No. TA-201-64 under section 202 of the Trade Act of 1974, following the receipt of a petition filed on March 29, 1995, on behalf of the Florida Tomato Exchange, and the constituent members thereof (95 FR 16883). The Commission made a negative determination with regard to provisional relief on April 19, 1995 (95 FR 20506). For additional information, see the Commission's report, *Fresh Winter Tomatoes*, USITC publication No. 2881, Apr. 1995. The petitioner subsequently withdrew the petition on May 4, 1995, and the Commission terminated the investigation (95 FR 25248).

planted and harvested area, U.S. weekly arrivals and shipping point quantities, average U.S. retail and shipper prices, average Mexico City monthly wholesale prices, and U.S. and Mexican cost-of-production estimates). The information presented in this report on the U.S. tomato industry was obtained from a number of sources, including the U.S. Department of Agriculture, the U.S. Department of Commerce, and the University of Florida Cooperative Extension Service. This report covers 1990-94 data and partial-year data for 1995.

HIGHLIGHTS

The following are highlights of the statistical data collected on tomatoes for fresh-market use and processing for the period 1990-94.

Fresh-market tomatoes

- U.S. production of tomatoes for fresh-market use rose by 5.5 percent, by volume, from 1.5 million metric tons in 1990 to 1.6 million metric tons in 1994. In 1994, Florida and California accounted for 45.1 and 28.2 percent, respectively, of total U.S. production of tomatoes for fresh-market use. Other States with significant production included Virginia, Georgia, and South Carolina.
- U.S. harvested area for fresh-market tomatoes declined by 4.1 percent from 54,467 hectares in 1990 to 52,213 hectares in 1994. In 1994, Florida and California accounted for 37.1 and 28.3 percent, respectively, of total U.S. harvested area of tomatoes for fresh-market use.
- U.S. imports of fresh-market tomatoes increased by 9.7 percent, by volume, from 360,995 metric tons in 1990 to 395,974 metric tons in 1994, but were down by 8.9 percent, by value, from \$377.7 million in 1990 to \$343.9 million in 1994. Mexico, the source of 376,032 metric tons of U.S. imports, accounted for 95 percent, by volume, of total imports of fresh-market tomatoes in 1994.
- During 1990-94, approximately two-thirds of total U.S. imports of fresh-market tomatoes from Mexico entered through the Nogales, AZ customs district. Most of the remaining U.S. imports of fresh-market tomatoes entered through the San Diego, CA district.
- The average unit value for U.S. imports of fresh-market tomatoes fluctuated from a high of \$1.05 per kilogram in 1990 to a low of \$.72 per kilogram in 1991. In 1994, the average unit value of imports was \$.87 per kilogram.
- U.S. exports of fresh-market tomatoes increased by 16.3 percent, by volume, from 132,928 metric tons in 1990 to 154,561 metric tons in 1994, and by 41.2 percent, by value, from \$84.8 million in 1990 to \$119.8 million in 1994. Canada and Mexico were the leading markets for U.S. exports of fresh-market tomatoes in 1994, accounting for 85 and 14 percent by volume, respectively, of the total.
- During 1990-94, harvested area in Mexico of tomatoes for fresh-market use averaged 62,691 hectares annually.

- Retail prices for fresh-market tomatoes vary seasonally, with the highest prices occurring in the first two quarters of the year.

Processing tomatoes

- U.S. production of tomatoes for processing increased by 11 percent from 9.4 million metric tons in 1990 to 10.5 million metric in 1994.
- U.S. harvested area for processing tomatoes declined by 4 percent from 143,542 hectares in 1990 to 137,617 hectares in 1994.
- U.S. imports of processed tomatoes declined 18.5 percent, by volume, from 137,937 metric tons in 1990 to 112,390 metric tons in 1994, and by 34.9 percent, by value, from \$124.1 million in 1990 to \$80.8 million in 1994. Mexico, Italy, and Chile were the leading sources of processed tomatoes in 1994, accounting for 26, 20, and 20 percent, respectively, by volume of imports.
- The average unit value for U.S. imports of processed tomatoes fell irregularly during the 1990-94 period, to a recent 5-year low of \$0.72 per kilogram in 1994. Unit values of processed tomatoes from Mexico have fallen over 20 percent and, after Spain, demonstrated the largest price drop during 1990-94 of the 4 major suppliers in 1994.
- U.S. exports of processed tomatoes increased 130.6 percent, by volume, from 44,789 metric tons in 1990 to 103,303 metric tons in 1994, and by 90.6 percent, by value, from \$43.0 million in 1990 to \$82.0 million in 1994. Canada, Japan, and the Philippines were leading U.S. export markets for processed tomatoes in recent years, accounting for 62, 13, and 5 percent, respectively, by volume of exports in 1994.
- The average unit value received by growers of tomatoes for processing remained steady during 1990-94 at \$0.07 per kilogram, except in 1992, when the price was \$0.06 per kilogram.

<u>1994</u>	<u>.07</u>	<u>.79</u>	<u>.72</u>

¹ Includes raw product intended for processing.

² Includes prepared or preserved tomatoes (Schedule B No. 2002.10.0000, 2002.90.0060, and 2002.90.0080) on a processed-weight basis.

³ Includes frozen tomatoes (*Harmonized Tariff Schedule (HTS)* subheadings 0710.80.40-0710.80.50) on a frozen-weight basis, dried tomatoes (*HTS* subheading 0712.90.75) on a dried-weight basis, and prepared or preserved tomatoes (*HTS* subheadings 2002.10.00 and 2002.90.00) on a processed-weight basis.

Note.--Unit values for U.S. production are low, relative to those for exports and imports, because production includes only raw, not finished, product intended for processing. U.S. production of processed tomato products has not been reported for a number of years.

¹ Includes fresh or chilled tomatoes (Harmonized Tariff Schedule subheadings 0702.00.20-0702.00.60) on a fresh-weight basis.

Source: Compiled from official statistics of the U.S. Department of Commerce.

Figure 1
Fresh-market tomatoes: Seasonal index¹ of U.S. imports from Mexico, 1990-1994

¹ The seasonal index is calculated as the average import volume for a particular month divided by the average monthly import volume for the 1990 through 1994 period. For instance, the average January import volume is 84 percent higher than the average monthly import volume for the overall period.

Source: Prepared by the staff of the U.S. International Trade Commission based on data reported by the U.S. Department of Commerce.

Capital costs	644.73	650.60	738.27	722.50
Total production costs	4,976.92	5,790.17	6,454.43	6,629.96

Note.--These costs are constructed based on input prices obtained from various industry sources and are believed to reflect estimated costs of production for growers in a given production area, but do not necessarily represent the actual industry average cost of production.

Note.--Because of rounding, figures may not add to the totals shown.

Source: CAADES as reported by the U.S. Department of Agriculture, "Tomatoes and Products, Annual Report," U.S. Embassy, Mexico City, Mexico, AGR Numbers MX1236, MX2253, MX3132, and MX4085. Annual production costs converted to U.S. dollars using exchange rates quoted as of Dec. 31 of each year, as reported by the International Monetary Fund (IMF) *International Financial Statistics*.

Note.--This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments are sold directly from the shipping point and are not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale market are believed to be indicative of the overall trade for the region.

Source: Compiled from data of the Agricultural Marketing Services, U.S. Department of Agriculture.

Note.--This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments are sold directly from the shipping point and are not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale market are believed to be indicative of the overall trade for the region.

Source: Compiled from data of the Agricultural Marketing Services, U.S. Department of Agriculture.

Figure 7
Fresh-market tomatoes: Seasonal index¹ of U.S. average retail prices, 1990-1994

¹ The seasonal index is calculated as the average price for the month divided by the average cost for the 1990 through 1994 period. For instance, the average January price is 18 percent higher than the average price for the overall period.

Source: Prepared by the staff of the U.S. International Trade Commission based on data reported by the U.S. Department of Commerce.
