ITC READER SATISFACTION SURVEY

Monitoring of U.S. Imports of Tomatoes

The U.S. International Trade Commission (ITC) is interested in your voluntary comments (burden < 15 minutes) to help us assess the value and quality of our reports, and to assist us in improving future products. Please **return survey by fax (202-205-2384) or by mail** to the ITC.

Your name and title (please print; responses below not for attribution): _____

Please specify information in this report most useful to you/your organization: _____

Was any information missing that you consider important? Yes (specify below) No

If yes, please identify missing information and why it would be important or helpful to you: _____

Please assess the **value** of this ITC report (answer below by circling all that apply): **SA**—Strongly Agree; **A**—Agree; **N**—No Opinion/Not Applicable; **D**—Disagree; **SD**—Strongly Disagree

Monitoring of U.S. Imports of Tomatoes

Investigation No. 332-350

Publication 3367

November 2000

This report was prepared principally by
Timothy P. McCarty

With assistance from
Phyllis Boone and Janice Wayne
Office of Industries

Under the direction of
Lowell Grant, Chief
Fruits, Vegetables, and Specialty Products Branch

Cathy L. Jabara, Chief
Agriculture and Forest Products Division

Preface

Section 316 of the North American Free-Trade Agreement Implementation Act (NAFTA Implementation Act), Public Law 103-182, requires the U.S. International Trade Commission (Commission) to monitor U.S. imports of "fresh or chilled tomatoes" and "fresh or chilled peppers, other than chili peppers," until January 1, 2009. As a result, the Commission instituted investigation No. 332-350, Monitoring of U.S. Imports of Tomatoes, and investigation No. 332-351, Monitoring of U.S. Imports of Peppers, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)). This report on the Commission's monitoring investigation covers tomatoes for fresh-market use and for processing. The purpose of this monitoring, as expressed in the NAFTA Implementation Act, is to permit the Commission to conduct an expedited investigation and, if appropriate, recommend to the President provisional relief should a petition for relief be filed under section 202 of the Trade Act of 1974 with respect to imports from all countries, or a petition requesting such relief be filed under section 302 of the NAFTA Implementation Act with respect to imports from Canada or Mexico. Generally, such provisional relief would remain in effect, pending completion of the investigation by the Commission and the taking of final action by the President.

This report contains statistical information gathered by the Commission on the U.S. tomato industry in the course of its monitoring. This information includes (1) consumption and trade data (including U.S. imports and U.S. exports) and (2) other industry data (including U.S. production quantity, value, unit value, and harvested area; U.S. cost-of-production estimates; U.S. weekly arrivals and shipping-point quantities; and average U.S. retail and shipping-point prices). The information presented in this report on the U.S. tomato industry was obtained from a number of sources, including the U.S. Department of Agriculture, the U.S. Department of Commerce, the Florida Tomato Committee, the University of Florida Cooperative Extension Service, and various other State agencies. This report principally covers 1995-99 data and partial-year data for 1999 and 2000.¹

¹ Nothing in this report should be construed to indicate how the Commission would find in an investigation conducted under statutory authority covering the same or similar subject matter.

Highlights

The following are highlights of the statistical data collected on tomatoes for fresh-market use and processing for the 1995-99 period.

Fresh-market Tomatoes

- ! Apparent U.S. consumption remained steady at 2.2 million metric tons in 1998 and 1999, up by 7 percent from 2.1 million metric tons in 1995; consumption in 1999 was valued at \$1.5 billion (table 1). The ratio of import volume to consumption in 1999 was 34 percent, up from 30 percent in 1995. U.S. production of tomatoes for fresh-market use was up by 3 percent from 1.57 million metric tons in 1995 to 1.61 million metric tons in 1999 (table 1). The value of production rose from \$891 million in 1995 to \$920 million in 1999, with unit values at \$0.57 per kilogram in 1995 and 1999.
- ! Florida and California have been the two States with the largest amount of production of fresh-market tomatoes since 1995, accounting for 42 percent and 31 percent, respectively, of total U.S. production volume of tomatoes for fresh-market use in 1999 (table 30). Other States with significant production quantities during 1995-99 included Virginia, Georgia, Ohio, South Carolina, and New Jersey. Since 1995, production volume has trended downward in Florida, Georgia, South Carolina, and New Jersey. Fresh tomatoes are harvested in Florida during October-June and California primarily during June-November, with harvesting in most other States occurring during March-September. U.S. harvested area of fresh-market tomatoes was down by 1 percent from 132,820 acres in 1995 to 131,680 acres in 1999 (table 30). In 1999, California and Florida each accounted for 33 percent of total U.S. harvested area of tomatoes for fresh-market use. During the 1995-99 period, harvested area in California and Florida fell steadily through 1997, but then trended steadily upward through 1998 and 1999. During the same period, harvested area fell in Georgia, Tennessee, South Carolina, and New Jersey.
- ! U.S. exports of fresh-market tomatoes rose by 16 percent, in volume, from 131,192 metric tons in 1995 to 151,657 metric tons in 1999, and rose by 20 percent, in value, from \$102.0 million in 1995 to \$122.7 million in 1999 (table 1). U.S. export volume was up by 14 percent during January-June 2000 as compared with exports during the corresponding months in 1999. Canada was the leading market for U.S. exports of fresh-market tomatoes throughout the 1995-99 period, accounting for 91 percent of the total volume (85 percent of value) in 1999 (table 3).
- ! U.S. imports of fresh-market tomatoes increased by 19 percent, in volume, from 620,927 metric tons in 1995, to 740,656 metric tons in 1999 (table 1). Imports were valued at \$689.3 million in 1999, up by 53 percent from the value in 1995. Imports were down 4 percent by volume during January-June 2000 as compared with imports during the corresponding months in 1999. Mexico, the leading supplier of imports throughout the 1995-99 period, accounted for 83 percent, by volume, of total imports of fresh-market tomatoes in 1999 (table 5). U.S. imports of fresh-market tomatoes from Canada and the Netherlands, although accounting for a small share of total imports since 1995, rose by 583 percent and by 176 percent, by volume, respectively, from 1995 to 1999. The bulk of imports from both countries are believed to have been greenhouse-grown tomatoes. During 1995-99, the average

unit value of imports fluctuated from a low of \$0.73 per kilogram in 1995 to a high of \$0.93 per kilogram in 1999.

- ! U.S. imports of cherry tomatoes rose by 22 percent from 41,515 metric tons in 1995 to 50,814 metric tons in 1999, with Mexico accounting for 98 percent annually of total imports (table 6). Imports were valued at \$63.2 million in 1999, up by 47 percent from \$43.0 million in 1995. Imports of cherry tomatoes amounted to 22,198 metric tons in January-June 2000, down by 25 percent from 29,465 metric tons in January-June 1999. U.S. imports of roma tomatoes rose by 61 percent from 160,749 metric tons in 1995 to 258,432 metric tons in 1999, with Mexico accounting for 99 percent annually of total imports during the 1995-99 period (table 7). Imports of roma tomatoes were valued at \$175.5 million in 1999, up by 69 percent from \$104.0 million in 1995. Imports of roma tomatoes amounted to 141,017 metric tons in January-June 2000, down by 6 percent from 150,569 metric tons in January-June 1999.
- ! U.S. imports of fresh-market tomatoes from Mexico, entered on a July-June crop-year basis, amounted to 593,766 metric tons in July 1999-June 2000, down by 3 percent from 614,234 metric tons in July 1998-June 1999 (table 9). During July 1997-June 2000, about two-thirds annually of total U.S. imports of fresh-market tomatoes from Mexico entered through the Nogales, Arizona customs district. Most of the remaining U.S. imports from Mexico entered through the San Diego, California district. During the July 1997-June 1998 to July 1999-June 2000 crop-years, 55 percent of total average annual imports from Mexico entered during January-April. Historically, U.S. imports from Mexico are greatest during this 4-month period. During January-April 2000, U.S. imports from Mexico amounted to 323,154 metric tons, down by 1 percent from imports entered during the corresponding period of 1999. In recent crop-years, significant quantities of imports from Mexico have also entered during the months of December and May.
- ! U.S. imports of fresh-market tomatoes from Canada, entered on a July-June crop-year basis, rose by 77 percent from 49,795 metric tons in 1997/98 to 88,019 metric tons in 1999/00. Imports from Canada were valued at \$137.8 million in July 1999-June 2000, up by 79 percent from \$77.0 million in July 1997-June 1998 (table 10). During July 1997-June 2000, about 78 percent annually of total U.S. imports of fresh-market tomatoes from Canada entered through the Detroit, MI and Seattle, WA customs districts. Most of the remaining U.S. imports from Canada entered through the Buffalo, NY district. During the same July 1997-June 2000 period, 55 percent of total average annual crop-year imports from Canada entered during March-June, coinciding with the latter half of the normal Florida shipping season.
- ! U.S. imports of fresh-market tomatoes from the Netherlands, entered on a July-June crop-year basis, fell by 7 percent from 33,557 metric tons in 1997/98 to 31,130 metric tons in 1999/00 (table 11). Imports from the Netherlands were valued at \$51.5 million in July 1999-June 2000. During July 1997-June 2000, about 60 percent annually of total U.S. imports of fresh-market tomatoes from the Netherlands entered through the New York, NY and Boston, MA customs districts. During the same July 1997-June 2000 period, about one-third of total average annual crop-year imports from the Netherlands entered during March-June, coinciding with the latter half of the normal Florida shipping season.
- ! U.S. imports of fresh-market tomatoes from the European Union, entered on a July-June crop-year basis, fell by 11 percent from 42,886 metric tons in 1997/98 to 38,253 metric tons in 1999/00 (table 12). Imports were valued at \$64.6 million in 1999/00, down by 6 percent from

\$68.9 million in 1997/98. During the July 1997-June 2000 period, about 50 percent annually of total U.S. imports from the European Union entered through the New York, NY customs district (table 12). During the same July 1997-June 2000 period, nearly one-half of average annual crop-year imports from the European Union entered during the November-May period, which coincides with the normal Florida marketing season.

- ! Average U.S. monthly retail prices of fresh-market tomatoes have trended significantly upward in recent years, from \$1.23 per pound annually in July 1995-June 1996 to \$1.34 per pound annually in July 1999-June 2000 (table 53). Average monthly shipping-point prices trended downward from \$0.32 per pound in 1995/96 and 1996/97 to \$0.27 per pound in 1999/00. These prices usually vary a great deal throughout the season. During the 1997/98 to 1999/00 period, average annual crop-year prices for Florida shipments of both mature green and vine ripe tomatoes fell steadily, reaching 3-year lows in 1999/00 (table 54).

Processed Tomatoes

- ! U.S. production of tomatoes for processing increased by 14 percent from 10.2 million metric tons in 1995 to 11.6 million metric tons in 1999 (table 2). The value of production was estimated at \$913.0 million in 1999, up by 28 percent from an estimated \$713.5 million in 1995, with a slight rise in unit values from \$0.07 per kilogram in annually 1995 through 1998 to \$0.08 per kilogram in 1999.
- ! California, Indiana, and Ohio have been the three States reporting the largest amounts of fresh tomato production for processing since 1995, with production in each of these States accounting for 95 percent, 2 percent, and 2 percent, respectively, of total production volume in 1999 (table 32). U.S. harvested area of tomatoes for processing rose by 2 percent from 344,380 acres in 1995 to 350,410 acres in 1999, with California accounting for 94 percent of total harvested area in 1999.
- ! U.S. exports of processed tomatoes increased by 3 percent from 124,166 metric tons in 1995 to 127,683 metric tons in 1999, and by 3 percent in value from \$97.9 million in 1995 to \$100.6 million in 1999 (table 2). Canada, Japan, Korea, and Mexico were the leading U.S. export markets for processed tomatoes in 1999, accounting for 53 percent, 16 percent, 7 percent, and 6 percent each, respectively, of total export value in 1999 (table 4). Export volume during January-June 2000 was up by 15 percent over the amount exported during the corresponding period of 1999.
- ! U.S. imports of processed tomatoes rose steadily from a low of 85,713 metric tons in 1996 to 126,089 metric tons in 1999 (table 29). Imports were valued at \$121.7 million in 1999, up by 61 percent from \$75.6 million in 1996. Chile, Mexico, Italy, and Israel were the leading sources of imported processed tomatoes in 1999, together accounting for 75 percent of import volume in 1999. The average unit value for U.S. imports of processed tomatoes amounted to \$0.97 per kilogram in 1999, up by 23 percent from \$0.79 per kilogram in 1995. Imports during January-June 2000 were down over 700 percent by volume as compared with imports during the corresponding period of 1999.

CONSUMPTION

Table 1
Fresh-market tomatoes: U.S. production, exports of domestic merchandise, imports for consumption, apparent consumption, and ratio of imports to consumption, 1995-99

Year	Production¹	Exports²	Imports³	Apparent consumption	Ratio of imports to consumption
<i>Quantity (1,000 kilograms)</i>					<i>Percentage</i>
1995	1,566,483	131,192	620,927	2,056,218	30

199878	.93	.89	.81	(⁵)
199957	.81	.93	.68	(⁵)

¹ Data are for raw product intended for fresh-market use and are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram.

² Data are for fresh or chilled tomatoes (Schedule B No. 0702.00.0000, 0702.00.0010, 0702.00.0030, and 0702.00.0050) on a fresh-weight basis.

³ Data are for fresh or chilled tomatoes (Harmonized Tariff Schedule (HTS) subheadings 0702.00.20-0702.00.60) on a fresh-weight basis.

⁴ Calculated by the Commission.

⁵ Not meaningful.

Note.—Production data are revised annually and data for the most recent calendar years may not match data presented in earlier reports.

Note.—Production data are estimated from raw product intended for fresh-market sales, whereas export and import data are shipments actually recorded. Thus, apparent consumption may be somewhat smaller and the ratio of imports to consumption somewhat larger than shown.

Source: Production data compiled by the Commission from U.S. Department of Agriculture (USDA), National Agricultural Statistics Service (NASS), *Vegetables*, 1997 Summary: Jan. 1998, Vg 1-2(98), pp. 3-4; 1998 Summary: Jan. 1999, Vg 1-2(99), pp. 2-3; and 1999 Summary: Jan. 2000, Vg 1-2(00), p. 3; exports and imports compiled from official statistics of the U.S. Department of Commerce, except as noted.

199707	.68	.85
199807	.72	.73
199908	.79	.57

¹ Data are for raw product intended for processing and are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram. U.S. production of processed tomato products on a processed-weight basis has not been reported for a number of years.

² Data are for prepared or preserved tomatoes (Schedule B No. 2002.10.0000, 2002.90.0060, and 2002.90.0080) on a processed-weight basis.

³ Data are for frozen tomatoes (HTS subheadings 0710.80.40-0710.80.50) on a frozen-weight basis; dried tomatoes (HTS subheading 0712.90.75) on a dried-weight basis; and prepared or preserved tomatoes (HTS subheadings 2002.10.00 and 2002.90.00) on a processed-weight basis.

⁴ Calculated by the Commission.

Note.—Production data are revised annually and figures for the most recent calendar years may not match data presented in earlier reports.

Note.—Consumption of processed tomato products is not applicable since production is on a raw-product basis and imports include frozen, dried, and canned products on their respective processed-weight basis.

Note.—Unit values for U.S. tomato production are low, relative to those for exports and imports, because production includes only raw product intended for processing, not finished product. Exports and imports are finished products.

¹ Data are for fresh or chilled tomatoes (HTS subheadings 0702.00.2060, 0702.00.2065, 0702.00.4060, 0702.00.6060, and 0702.00.6065) on a fresh-weight basis.

² Calculated by the Commission.

Note.—Unit values for tomatoes from such countries as Canada, Israel, Morocco, and most EU countries are generally significantly higher than unit values for products from Mexico because they are believed to be primarily greenhouse-grown tomatoes.

Note.—Because of rounding, figures may not add to the totals shown.

Source: Compiled from official statistics of the U.S. Department of Commerce, except as noted.

¹ Shipments from Mexico are imports reported as border-crossing by USDA.

Note.—Data shown are for the actual week-endings reported during the 1999/00 season. Data for other crop-years are for weeks ending closest to the dates shown.

Note.—Totals for all sources sometimes include data from U.S. supply sources other than Florida and are included in the totals for all sources rather than in a separate column for all other.

Note.—This table will be discontinued after this year and new tables with more detail inserted instead.

¹ Data are not available.

Note.—This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments are sold directly from the shipping point and are not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale markets are believed to be indicative of the overall trade for the region.

Source: Compiled by the Commission from USDA, AMS data.

¹ Data are no longer reported and this table will be discontinued after this year's report.

² Data are not available.

Note.—This table shows weekly arrivals at the wholesale terminal markets in selected cities. It should be noted that a significant share of shipments are sold directly from the shipping point and are not traded at the wholesale market. Nonetheless, the relative shares of product from the different sources sold at wholesale markets are believed to be indicative of the overall trade for the region.

Source: Compiled by the Commission from USDA, AMS data.
