#### Introduction

This report by the U.S. International Trade Commission on trade between the United States and nonmarket economy countries is made pursuant to section 410 of the Trade Act of 1974 (19 U.S.C. 2440), which requires the Commission to publish a detailed summary of such trade not less frequently than once each calendar quarter and to transmit such publication to Congress and to the East-West Foreign Trade Board. This is the second quarterly report in a series. 1/

The nonmarket economy countries for which trade statistics are included in this series of reports are Albania, Bulgaria, People's Republic of China, Cuba, Czechoslovakia, German Democratic Republic, Hungary, Mongolian People's Republic, Poland, Romania, the U.S.S.R., and Yugoslavia. At a later date, North Korea and North Vietnam may be included in this series of reports, pending the development of trade. Within this group of countries there is considerable variation in the amount of central planning and market intervention that exists in their respective economies. All of the countries maintain state trading monopolies of one degree or another, although some have recently relaxed the central control in this area. Yugoslavia has the most liberalized policy of state trading, allowing domestic enterprises to deal directly with Western corporations and maintaining state trading agencies only for negotiations with other communist countries. Most of the countries have been denied most-favored-nation

<sup>1/</sup> A special report on the impact on U.S. imports of granting most-favored-nation treatment to Romania was transmitted to Congress and to the East-West Foreign Trade Board on June 27, 1975.

(MFN) treatment by the United States over most of the last 25 years. At the present time only Poland and Yugoslavia receive MFN treatment from the United States. 1/

In the Tariff Schedules of the United States (TSUS), the unconditional MFN rates are set forth in rate of duty column 1, and the rates applicable to products of designated Communist nations or areas are set forth in rate of duty column 2; for the most part these rates are the original statutory rates enacted in 1930. The rate policy involved was made effective by action initially taken by the President in 1951 and 1952 pursuant to section 5 of the Trade Agreements Extension Act of 1951, which directed the President as soon as practicable to take such action as was necessary to deny the benefit of trade-agreement concessions to imports from certain Communist nations or areas. An examination of the individual items or rate provisions of the TSUS reveals that the rate discrimination involved varies considerably from item to item and sometimes is not present at all, as where imports from all sources have been historically free of duty or dutiable at the same rates. It is important, therefore, to look at the particular rate treatment in the TSUS when interest is to be focused on the actual or potential trade in specific imports.

In these reports, the Commission will describe and analyze the structure of U.S. trade with the nonmarket economy countries.

<sup>1/</sup> On Apr. 2, 1975, the President for the first time applied the authority of sec. 405 of the Trade Act of 1974 and signed an agreement on trade relations with Romania. The agreement, which treats with the general enhancement of all trade relations between the two nations, would include MFN treatment for Romanian goods exported to the United States. The agreement has been submitted to Congress for approval.

The volume of U.S. imports and exports with each of the countries and the commodity composition of that trade will be analyzed, as will the balance of U.S. trade with these countries. In addition, this series of reports will examine U.S. imports from the nonmarket economy countries in detail. Of particular interest will be any changes in the importation of commodities from these countries, including the appearance of new items and significant increases in the level of previously traded items. The emphasis here will be on identifying similar items produced in the United States with which the imported products compete and on assessing the economic impact of such imports on the relevant U.S. industry and on employment within that industry. For this purpose, imports will be examined at the detailed product level of the Tariff Schedules of the United States Annotated (TSUSA) in order to clearly identify the specific products involved.

This second quarterly report contains an analysis of U.S. imports of articles in five product groups from the nonmarket economies. That import trade is analyzed with respect to the share of total U.S. imports of each product group accounted for by imports from the nonmarket economies and the trends in the imports of the products. When possible the products imported from the nonmarket economies are compared with the equivalent domestic product and those imported from other countries with respect to their quality and method of production.

A brief section that highlights certain very recent developments with respect to imports from the nonmarket economies has also been included.

Besides reporting the trends in trade and analyzing the impact on U.S. industries, these reports will carry the findings of any investigations conducted by the International Trade Commission as the result of the filing of a petition for import relief under section 406 (Market Disruption) of the Trade Act of 1974. At the date of publication of the current report, no such petitions had been received by the International Trade Commission.

## Developments in Trade Between the United States and the Nonmarket Economies

During the first quarter of 1975, the value of total trade (exports and imports) between the United States and the nonmarket economies was greater than \$1 billion, nearly 40 percent greater than in the fourth quarter of 1974 (see table 1). The quarterly increase was in sharp contrast to the decline in the value of total U.S. trade, which was 3.5 percent smaller in the first quarter of 1975 than in the fourth quarter of 1974. Nevertheless, trade with the nonmarket economies in the first 3 months of 1975 was below the record achieved in the first 3 months of 1974.

The United States had a total trade surplus of \$2.1 billion in the first quarter of 1975, in contrast with a deficit of \$0.5 billion in the previous quarter. The surplus with the nonmarket economies in the first quarter of 1975 (\$412 million) was about double the surplus of the previous quarter. Although trade with the nonmarket economies was only 2 percent of total U.S. trade in the first quarter of 1975, the surplus with the nonmarket economies was nearly 20 percent of the total U.S. trade surplus.

An increase in U.S. exports of agricultural products to the nonmarket economies in the first quarter of 1975 was the principal factor causing the rise in the value of U.S. exports in this period. Exports of these products had been declining since the large shipments of 1973 and early 1974, but in the first quarter of 1975, shipments of food products to nearly all the nonmarket economies increased. (See the export tables in the appendix.) A notable exception was the People's

Republic of China. In the last quarter of 1974 and the first quarter of 1975, shipments of agricultural products to China were negligible, despite reports that the Chinese wheat harvest was off slightly in 1974 and that China would require about the same amount of grain imports during 1974 and 1975 as in the previous year (7.5 million tons). 1/

The importance of agricultural products in U.S. trade with the nonmarket economies can be seen in table 2.

Mineral fuels (mainly petroleum products) account for a large share of total U.S. imports, as well as U.S. imports from the non-market economies. Two countries, Romania and the U.S.S.R., supply all U.S. imports of petroleum and petroleum products from the nonmarket economies. The surplus in total U.S. trade in the first quarter of 1975 was partly the result of a \$900-million drop in imports of mineral fuel from the fourth quarter of 1974. However, petroleum imports from the nonmarket economies were up slightly in this same period.

Table 3 shows the mineral fuel imports from Romania and the U.S.S.R. in the last five quarters, as well as total U.S. fuel imports in this same period.

A large share of U.S. imports from the nonmarket economies consist of food products. In fact, food items constitute a larger share of U.S. imports from the nonmarket economies than from all countries. The food items imported from the nonmarket economies in largest volume

are canned hams, pork, shellfish, frozen fish, and spices. Table 2 indicates that manufactured goods account for a larger share of U.S. exports than of U.S. imports in U.S. trade with all countries, but that in trade with the nonmarket economies these relationships are reversed. That is, manufactured goods constitute a larger share of U.S. imports from nonmarket countries than of U.S. exports to them. This generality, however, masks the fact that manufactured goods exported by the United States to the nonmarket economies are quite different from the manufactured goods imported from them. The types of manufactured goods imported include unfinished or semifinished products such as unwrought tin, platinum metals, steel wire rod, and unwrought copper, as well as finished goods such as clothing, footwear, and glass. Most U.S. exports of manufactures to these countries are of a sophisticated nature; they include aircraft, gas compressors, metalworking machines, electronic computers, and scientific instruments (see detailed import and export tables in the appendix).

The relative importance of the individual nonmarket economy countries as sources of U.S. imports did not change appreciably in the first quarter of 1975, but the importance of some of them as destinations of U.S. exports shifted materially (see figures 1 and 2). The share of U.S. imports from the nonmarket economies accounted for by the U.S.S.R. was about 3 percentage points lower in the first quarter of 1975 (24 percent) than it had been in the calendar year 1974 (27 percent). The share accounted for by the People's Republic of China rose about 4 percentage points (8.6 percent versus 12.4 percent); other changes were nominal. In contrast, the share of U.S. exports to the nonmarket

Source: Table 4.

economy countries accounted for by the U.S.S.R. and China in the first quarter of 1975 changed greatly from that of calendar year 1974. The U.S.S.R.'s share rose from 24 percent to 38 percent, and China's share dropped from 32 percent to 10 percent. Changes in the share of U.S. exports sent to other countries were more nominal.

U.S. imports from China were 89 percent greater in the first quarter of 1975 than in the corresponding quarter of 1974. The change was largely the result of increased U.S. imports of tin from China. The increased tin imports accounted for \$11.1 million of the \$17.0-million increase in U.S. imports from China between the two periods. (See table 1A in the appendix and the section on tin).

U.S. imports from the U.S.S.R. were 25 percent smaller in the first quarter of 1975 than in the corresponding quarter of 1974. The decline is attributable largely to reduced shipments of platinum group metals, of which there is now a world glut because of the general economic decline in the industrial nations (see table 3A in the appendix). South African platinum producers had expanded their capacity to produce the metal in anticipation of heavy demand from the U.S. auto industry for use in catalytic converters for exhaust pollution control. 1/U.S. imports of gasoline and kerosene from the U.S.S.R. also dropped sharply in the first quarter of 1975. U.S. imports from Romania were down nearly a third in the first quarter of 1975 compared with the corresponding quarter of 1974. The decrease was the result of a sharp decline in U.S. imports of gasoline (see table 9A in the appendix).

<sup>1/</sup> An announcement by the United States Environmental Protection Agency to delay the implementation of stricter auto-exhaust regulations will probably result in a continued demand slump for the metal.

An examination of U.S. imports from the other nonmarket economies shows that the imports from these countries changed only moderately in the first quarter of 1975 compared with the corresponding quarter of 1974. Imports from Yugoslavia increased by \$7.9 million (13.6 percent); from Hungary, by \$6.2 million (88.6 percent); and from Czechoslovakia, by \$1.9 million (21.6 percent). Although imports from Hungary in the first quarter of 1975 were above those of the corresponding quarter of 1974, they were sharply down from the volume of the last three quarters of 1974. Very large imports of Hungarian gold coins occurred during May-December 1974, but such imports have nearly disappeared in 1975 (see table 15A in the appendix). Table 4 and the appropriate tables in the appendix present more detail on these changes.

U.S. exports to most of the nonmarket economies increased in the first quarter of 1975 compared with the corresponding quarter of 1974. Nevertheless, a decrease in exports to the People's Republic of China was of such magnitude that total U.S. exports to the nonmarket countries were lower. Most of the increased U.S. sales to the individual countries consisted of agricultural products. In some instances, exports of other products were important. For example, increased exports to the U.S.S.R. included steel plate, machine parts, and metal-cutting machine tools, as well as food products (see table 4A in the appendix). Increased shipments to Yugoslavia included tractors and gas turbines (table 8A, appendix). Increased exports to Romania and Hungary included gas turbines. The decreased exports to China resulted largely from reduced or terminated shipments of wheat, soybeans, corn, and raw cotton.

#### Footwear

In the 5-year period 1970-74, annual imports of footwear from the nonmarket economy countries increased markedly in value from \$9.7 million to \$37.9 million (see table 7). This increase of nearly 290 percent was 1ed by dramatic increases in footwear imports from Poland, Yugoslavia, and Romania. These three countries, together with Czechoslovakia, accounted for 98.4 percent of all footwear imports from the nonmarket economies. As a group, the nonmarket economies have more than doubled their share of U.S. imports between 1970 and 1974 accounting for 3.2 percent of total U.S. footwear imports in

Of the four leading countries, Poland and Yugoslavia receive

MFN treatment from the United States while Romania and Czechoslovakia

do not. MFN treatment represents a considerable advantage since the

column 1 rates of duty on footwear are much lower than the column 2

rates.

Despite the rapid increase in the value of imports from the non-market economies in recent years, their share of the overall U.S. import market remains small. In certain footwear categories, however, shoes from these countries have gained an important segment of the import market. For example, in three classes of low-priced (\$6.80 or less) leather welt footwear, imports from the nonmarket economies accounted for 50.6 percent of total U.S. imports in 1973 (see table 8).

<sup>1/</sup> Import for consumption.

Source: U.S. Department of Commerce publications.

A closer examination of the types of leather welt footwear being imported from the nonmarket economies reveals that most of it is men's footwear, and a large portion is work shoes. Table 9 shows the types of footwear being imported from the individual nonmarket economies in detail, and that the trends discussed above have continued in 1974 and the first quarter of 1975.

An examination of other types of shoes imported from the nonmarket economies shows the same predominance of men's footwear. In 1973, for example, \$12.5 million in footwear imports from the nonmarket economies were classified under TSUS item 700.35, a men's leather footwear classification. The sum of men's footwear imports in the leather welt classes, together with the footwear in item 700.35, accounted for 81.2 percent of all footwear imports from the nonmarket economies in 1973. On the other hand, total U.S. footwear imports show women's footwear to be predominant.

The reason for the predominance of men's footwear in imports from the nonmarket economies is explained primarily by style. Today the styling of footwear is very important, especially in women's shoes. Foreign firms in the countries that supply most U.S. shoe imports—Italy, Spain, Brazil, Republic of China—maintain close contacts with the U.S. market and supply the market with shoes designed to appeal to the current tastes in fashion. Producers in the nonmarket economies do not have this close contact and, as a result, they have concentrated their sales in types of footwear not as dependent on current styling.

Another significant difference between total U.S. shoe imports and shoe imports from the nonmarket economies is that a large share

<sup>1/</sup> All categories of products from each country for which \$100,000 or more in imports were recorded in 1974 are explicitly listed.

2/ This country does not receive MFN status and its products are subject to Column 2 duties.

3/ This country receives MFN status and its products are subject to Column 1 duties.

of total U.S. imports are vinyl-upper footwear, whereas almost all footwear from the nonmarket economies is of leather. Thus, even though this footwear is not the most fashionable, it is of higher quality than most imported footwear, since leather is generally considered to be a better shoe material than vinyl. Furthermore, over one-third of the footwear imports from these countries are of welt, or stitched, construction, which is generally considered superior to cement or vulcanized footwear.

The ability to continue producing a low-priced leather welt shoe will insure the nonmarket economies of some sales in the United States. Unless, however, these producers are able to follow current footwear fashions more closely, there would seem to be scant prospect that they will be able to capture a large share of the U.S. import market. The high column 2 tariff rates faced by most of the nonmarket economies also present a clear handicap to increased sales in the United States.

On March 13, 1975, the Treasury Department advised the Commission that welt work shoes from Romania are being, or are likely to be, sold at less than fair value within the meaning of the Antidumping Act. On receipt of Treasury's advice, the Commission instituted an investigation (No. AA1921-144) to determine whether an industry in the United States is being or is likely to be injured, or is prevented from being established, by reason of imports of welt work shoes from Romania sold at less than fair value. On June 13, 1975, the Commission notified the Secretary of the Treasury that, by a vote of 4 to 2, it had made a negative determination. As a result of the Commission's determination, welt work shoes from Romania sold at less than fair value will not become subject to special dumping duties.

#### Iron and Steel

The value of iron and steel imports from the nonmarket economy countries was up sharply in 1974, reflecting the supply shortages that pervaded in the domestic steel markets throughout the first 9 months of the year. The increase in the quantity of these imports was not nearly as great as the increase in the value, since iron and steel product prices rose precipitously during the year. For example, the average unit value of imports of such standard products as steel wire rod and steel plate rose from about \$0.07 per pound in 1973 to \$0.14 per pound in 1974.

Many of the higher priced imports, including those from the nonmarket economies, were shipped into the country during the last half
of the year when some softening in the domestic markets was beginning
to be felt. The reason for this seeming contradiction is that early
in the year, before the full extent of the economic downturn was evident, domestic users of steel products feared continued shortages, possibly aggravated by a prolonged coal strike. In response to these fears,
orders were placed in world markets for future delivery of steel products. The actions of many users during the period have been described
in the trade as "panic buying," and there were reports of companies
placing double orders for some products. In this seller's market the
steel exporters in the nonmarket economy countries benefited greatly.
Table 10 indicates that the value of U.S. imports from Czechoslovakia,
Poland, and Yugoslavia amounted to two to four times the values recorded
in 1973.

<sup>1</sup>/ The figures are from Schedule A, item 67 - iron and steel. The figures are General imports.

Source: U.S. Department of Commerce publications.

<sup>2/</sup> Imports from China were subject to embargo in 1970.

<sup>3/</sup> No imports.

 $<sup>\</sup>overline{4}$ / Less than \$50.

There is general agreement in the trade that iron and steel imports from the nonmarket economies will be less this year than last owing to the state of the economy and significant easing of supply in the U.S. industry. During the first quarter of 1975, imports from the nonmarket economies were running slightly ahead of the corresponding quarter of 1974, but only because of deliveries on future contracts made during 1974. Steel imports from the nonmarket economies decreased from \$9.1 million in January to \$5.6 million in February, and to only \$3.5 million in March. 1/

Table 11 shows the composition of U.S. iron and steel imports in 1975 from all countries and from the nonmarket economy countries.

Imports in the few separate TSUS items shown in the table account for 70 percent of total iron and steel imports. Over 60 percent of imports from the nonmarket economies consisted of either steel wire rod or steel plate and sheet. The concentration in these two import classifications results from factors bearing on both supply and demand. From the standpoint of supply, these two classifications represent very basic steel products with little or no alloying, finishing, or shaping involved in their manufacture. Although the steel industries in the nonmarket economies have large basic steel capacities, they do not have the capacity to produce quality finished and semifinished products in large quantity. 2/ From the standpoint of demand, both wire rod and

<sup>1/</sup> These figures exclude imports of ferrosilicon from Yugoslavia, which have remained high during 1975. The reason for not including these figures at this point is that ferrosilicon imports should be viewed from a different perspective than other iron and steel imports. This explanation will be amplified below.

<sup>2/</sup> See various editions of the Minerals Yearbook, U.S. Department of the Interior, Washington, D.C.

plate and sheet were in extremely short domestic supply during 1974. The independent fabricators found domestic integrated steel producers allocating less steel to the production of wire rod, and these fabricators were forced to seek supplies elsewhere, including the nonmarket economy countries. World and domestic demand for steel plate was very strong during the year as the production of oil tankers, offshore drilling platforms, railway stock, pipe, and barges kept supplies of this product very tight. Again, domestic firms turned to foreign sources, including the nonmarket economy countries.

Besides the imports of wire rod and plate, the other important products imported from the nonmarket economies are in the ferroalloy classifications, particularly ferrosilicon and ferrochromium. While these products account for only a small share of total U.S. iron and steel imports, the nonmarket economy countries have been important sources of the amounts that are imported. This is particularly true with respect to Yugoslavia, which supplied 32.8 percent of U.S. imports of ferrochromium in TSUSA item 607.3100 and 10.8 percent of ferrosilicon imports in TSUSA item 607.5100. (See table 12.) As a group, the nonmarket economies supplied 20.2 percent of U.S. ferrochromium imports in 1974 and 11.3 percent of the ferrosilicon imports (see table 11). 1/

While some of the increase in imports of these ferroalloys from the nonmarket economies can be attributed to the general demand-induced shortages in the industry, there are more basic forces at work. The U.S. industry has been slow in expanding its domestic ferrosilicon

<sup>1/</sup> The U.S.S.R. supplied 21.9 percent of imports of ferrotitanium (valued at \$684,000), a relatively minor ferroalloy. See table 12.

capacity because of low profitability prospects, which are the result of particularly high pollution control costs and rapidly rising energy costs. As a result, some domestic firms have been locating production facilities abroad. Therefore, countries with the appropriate raw material and energy resources can be expected to supply larger shares of imports of ferrosilicon in the future. Yugoslavia and the U.S.S.R. have this potential. 1/

Table 12 summarizes the principal iron and steel imports from each of the nonmarket economies in 1973, 1974, and the first quarter of 1975. The figures in the table show the large increases in imports in 1974 quite clearly. As noted previously, however, these increases are considered temporary, and import values in 1975 will probably be lower. The table also shows the column 1 and column 2 tariff rates on each of the products listed. The high column 2 rates undoubtedly restrict imports from some of the nonmarket economy countries. Czechoslovakia, Romania, and U.S.S.R. are the three countries most likely to increase exports of iron and steel products to the United States if MFN status is accorded to them. Each of these countries has a steel industry of some size, and each of these countries is now a net exporter of iron and steel products.

<sup>1/</sup> The U.S.S.R. is potentially a very important source of ferrochromium because of the large chrome ore deposits found in the country, but the very high col. 2 tariff rate on the product (30 percent ad valorem) excludes it from the U.S. market.

### Chemical Products

In the period 1970-74, U.S. imports of chemical products 1/
from nonmarket economy countries increased in value from \$10.1
million to \$72.0 million. The value of imports of those products
in the first quarter of 1975 equaled \$13.9 million, slightly less
than the value of imports in the first quarter of 1974.

In 1970, total U.S. imports of chemical products, in terms of value, were \$1.5 billion, of which imports from nonmarket economies accounted for 0.7 percent. In 1973, the value of total U.S. imports of chemical products increased approximately \$1 billion over the 1970 value, to \$2.4 billion, and increased further in 1974 to a value almost three times as great as in 1970 (see table 13). The value of imports from nonmarket economies also increased from 1970 to 1973, and more than doubled from 1973 to 1974, accounting for 1.4 percent and 1.9 percent of the value of total U.S. imports in the last 2 years. The growth of U.S. imports from several of the nonmarket economies was substantial: imports from Poland increased from \$3.4 million in 1970 to \$20.0 million in 1974; from the U.S.S.R., from \$1.0 million 1970 to \$12.4 million in 1974; from Yugoslavia, from \$2.3 million in 1970 to \$11.7 million in 1974; and from the People's Republic of China, from no trade in 1970 2/ to \$18.4 million in 1974. The value of imports from these countries accounted for 87 percent of the value of imports of chemical products from all the nonmarket economies.

<sup>1/</sup> Chemical products are defined as those articles in schedule 4 of the Tariff Schedules of the United States except those in TSUS items 475.05 through 475.70, which include petroleum and petroleum products. 2/ Imports from China were subject to a U.S. embargo in 1970.

<sup>2/</sup> No imports. China was subject to a U.S. embargo in 1970.

Some of the most important chemical products from nonmarket economies are classified as "other cyclic organic chemicals" (see table 14). These chemical products are imported primarily from Poland. However, Yugoslavia, Romania, Czechoslovakia, and Hungary have also provided a small percentage of total U.S. imports. One of the primary cyclic organic chemicals imported from Poland was beta-naphthol, a white, lustrous intermediate used in dyes, pigments, and as an antioxidant for In 1973, total U.S. imports of beta-naphthol amounted to 5.2 million pounds; 2.9 million pounds came from Poland, accounting for 56 percent of total U.S. imports. In 1974, total U.S. imports decreased to 2.1 million pounds, of which Poland supplied 48 percent. Other chemical products imported under this classification included benzene sulphochloride, alpha-naphthylamine, meta-nitroaniline, and monochloro-Besides the cyclic organic compounds, the United States imported antibiotics, casein, polyvinyl chloride resins, and inedible gelatin from Poland in 1974.

Essential and other distilled oils are a primary U.S. chemical import from the People's Republic of China. Such oils are derived from certain plants and are characterized by a particular individual odor. Sources of U.S. imports for these oils also include Poland, Yugoslavia, and Bulgaria. The major U.S. imports in this group are anise oil, cassia oil, lemon grass oil, and caraway oil. Virtually all essential and other distilled oils are duty free and have been duty free for many years. With few exceptions, the United States imports all of its requirements of essential and other distilled oils. Two principal essential oils are anise oil and cassia oil. The U.S.S.R.,

Poland, and Bulgaria are among the largest producers, while Chinese star anise oil is produced in the southeastern portion of the People's Republic of China. Over 65 percent of U.S. imports of anise oil were from China in 1974. Cassia oil, which is used in medicines as an antiseptic and a stimulant, in soaps, and as a flavoring agent in candy and cola drinks, is produced chiefly in the provinces of southeastern China; the United States imports approximately 45 percent of its total imports of cassia oil from China. These imports were valued at \$607,100 in 1974. In 1974 China was a source of natural advanced drugs, barium compounds, and synthetic camphor.

Imports of caprolactam monomer from the U.S.S.R, valued at \$3.3 million, accounted for 26 percent of total U.S. imports of that product in 1974 (see table 14). Caprolactam monomer is used as an intermediate in the preparation of a polyamide, Nylon 6, which is used in the manufacture of synthetic fibers, molding resins, and nonwoven fibers. The monomer, which is used in molten form in domestic processes, must be flaked by foreign producers for export and then remelted in the United States. Import activity was essentially nonexistent until 1972, when U.S. production capacity could not meet domestic demand, necessitating increased imports. Since the imported flaked material must be remelted, a low price and the capability of domestic consumers to build facilities for remelting are the basic determinants of future U.S. imports. The Soviet Union, which has access to oil reserves from which caprolactam is derived, constitutes a potential source of imports.

In 1974, imports of zirconium oxide, valued at \$171,800, from the U.S.S.R. accounted for 72 percent of the total U.S. imports, valued at \$238,500. Total U.S. production of zirconium oxide in 1973 amounted to 24 million pounds. U.S. imports from the U.S.S.R. accounted for less than 1 percent of U.S. consumption in 1973.

Other U.S. imports of chemical products from the U.S.S.R. consisted of nonradioactive isotopes, potassium chloride, and barium compounds.

Many nonmarket economies are expanding facilities for the production of chemical products and contracting for new production plants. In 1974, the World Bank approved a loan to Romania for construction of a fertilizer plant at Tecuci in the province of Galati. Bulgaria and Hungary are negotiating with U.S. and European companies for plant design and construction contracts for plants to produce polypropylene and ethylene. The U.S.S.R. has recently contracted with a subsidiary of General Tire & Rubber Co. for the construction of four ammonia plants in the Soviet city of Kuybyshev. In late 1974, the Angarsk styrene plant was commissioned for the production of polystyrene in the U.S.S.R. Expansion of production capacity in these fields will permit the U.S.S.R. to increase its exports.

Tin

The United States is the world's largest consumer and importer of tin. Except for some very small mining operations in Colorado, New Mexico, and Alaska, all of the tin metal and tin ore that is consumed in the country is from foreign sources. In 1974, domestic mines provided less than 100 tons 1/ of the estimated 71,300 tons of metal that were consumed 2/ during the year.

In past years the largest share of U.S. imports of tin has been provided by Malaysia, by far the world's leading producer. In recent years the People's Republic of China has become an important source, although Malaysia has retained its position as the primary supplier by a large margin. In 1974, Malaysia supplied the United States with 46.2 million pounds of metal (52.1 percent of total U.S. imports). Malaysia was followed by Thailand with 12.9 million pounds (14.6 percent), Indonesia with 9.2 million pounds (10.4 percent), and China with 7.4 million pounds (8.3 percent). 3/ China's position is significant, considering that no imports of tin were received from China between 1951 and 1972. Early indications suggest that the share of tin imports

<sup>1/</sup> Keith L. Harris, "Tin in 1974," Mineral Industry Surveys, Bureau of Mines, U.S. Department of the Interior, Washington, D.C., Dec. 24, 1974.

2/ Commodity Data Summaries: 1975, Bureau of Mines, U.S. Department of the Interior, Washington, D.C., Jan. 1975, p. 174. A significant share of consumption is of secondary, or reclaimed, metal, and in recent years tin from GSA stockpiles has also contributed a large share to consumption; however, the ultimate source of this metal is nearly totally foreign.

<sup>3/</sup> U.S. Dept. of Commerce microfilm tape IM-146.

from China will be even larger in 1975, 1/although how much larger is subject to speculation. Very heavy imports of tin from China during the first 4 months of 1975 were said to be the result of contracts negotiated at the Canton Fair in December of 1974. As these contracts were filled, shipments from China during the remainder of 1975 had been expected to taper off. There have been, however, reports of active trading at the most recent fair, suggesting that substantial imports of tin from China may continue throughout the year.

There is some question regarding the extent to which increased tin exports from China are contributing to the sharp decline in world tin prices, which began to fall in mid-1974 and have continued downward with only slight pauses. Most analysts conclude, however, that the increase in the supply of Chinese tin is but a minor factor in the price fall and that decreased consumption associated with the general world recession is a much more important factor. Indeed, the extra supply from China cannot even be considered the major supply factor since sales of tin stocks by the General Services Administration (GSA) during 1973 and 1974 were nearly two and one-half three times as large as Chinese exports during the same years (see table 15). Although sales by GSA fell rapidly during the last half of 1974, they were still very substantial during the second quarter after prices began to fall.

Despite evidence that Chinese tin has not been an important factor in current world tin markets, member countries of the International Tin

<sup>1/</sup> In the first quarter of 1975, tin from China accounted for 14.0 percent of total imports (see table 15). Reports for April indicate 1,871 tons were brought in from China, 35 percent of the total for the month. The U.S. Customs Service reported that a large shipmnt was received as recently as June 9, when 387,065 pounds arrived in New York.

<sup>7/</sup> The estimates on exports for 1970 and 1971 are by the Bureau of Mines. The remaining figures are based on figures supplied to the International Trade Commission from reporting countries, but not all importing countries are included in the survey.

<sup>3/</sup> Based on figures supplied to the International Trade Commission by reporting countries.

Council (ITC) 1/ and other tin-market observers suggest that Chinese tin exports may become a much more important force in the future and that unless the Chinese market their added supplies of tin under a structural arrangement such as the ITC, these supplies may cause disruption of tin prices. In 1972 it was reported by the Bureau of Mines that the Chinese were considering membership in the International Tin Council, 2/ but they have apparently decided that their objectives are best fulfilled by remaining outside the group. 3/

Currently, little is known about conditions within the Chinese tin industry or what China's future objectives may be. It is known that China possesses perhaps the world's largest reserves of tin, 4/ and it is believed that most of this tin is obtained from subsurface mines, which are usually considered more costly than surface mines. However, China's abundant labor is probably an advantage since the subsurface mines are more labor-intensive than the surface mines. Although China may decide to expand its production capacity and its exports of tin, it may also decide that it is more important to enlarge the capacity for utilizing its current tin supplies

<sup>1/</sup> The International Tin Council is an intergovernmental organization of seven producing and twenty-two consuming nations whose primary objective is the maintenance of an orderly world tin market. The ITC attempts to regulate prices by purchasing or selling tin at set floor or ceiling prices. A buffer stock is maintained for this purpose, but the bylaws of the organization also provide for export limitations on member producers should the need arise. Currently such an export limitation is in effect in order to bolster efforts by the ITC to maintain prices through tin purchases.

<sup>2/</sup> Minerals Yearbook, 1972, Bureau of Mines, U.S. Department of the Interior. (Vol. III, International Reports), Washington, D.C., p. 230.

<sup>3/</sup> The Chinese are not alone in making this assessment, for the United States, while maintaining observer status as a consuming country, has also declined to join.

<sup>4/</sup> Minerals Yearbook, 1972, op. cit., p. 230.

by expanding its timplate industry. Currently China imports large supplies of timplate (mainly from Japan), which is used primarily in food packaging.

Whatever the uncertainties concerning China's future activities in the world tin market, there is more concern at present over that market's immediate problems. The ITC has been unable to halt the fall in tin prices during the first half of the year. Compounding the problems of the ITC has been a move to increase the floor and ceiling prices at which tin for the ITC buffer stock is bought and sold. These prices were increased twice during the last year in the face of increasing production costs of the member producing countries, and there is currently a move to increase these prices again. Today the floor price at which the ITC buys tin is well above the May 1974 ceiling price at which ITC sold tin. 1/ Since over the past 13 months market prices have dropped from well above the ITC ceiling to lower levels, the ITC has recently found itself purchasing heavily for its own stocks.

The unit values of U.S. imports of tin from China have generally been at or near the prevailing New York price, and those deviations

<sup>1/</sup> The current floor price of the ITC is \$2.97 per pound while the ceiling price is \$3.63. The prices used by the ITC in instigating their buy/sell activities are those quoted in Penang, Malaysia. These prices are generally 14 cents to 17 cents below the New York prices.

that have occurred may be attributable to customs valuations being declared for a previously contracted price which is not the current market price.  $\underline{1}/$ 

<sup>1/</sup> One obvious exception to this statement is that the unit values of Chinese imports (see table 15) in the second and third quarters of 1974 were well below the unit values of other imports and well below the New York price. There is a belief that these unit values may have been the result of an incorrect customs valuation, an issue that is now being studied.

### Textiles

Textile imports from the nonmarket economy countries rose in 1974, continuing the growth that has accompanied improved trade relations with these countries during the 1970's. Nonmarket economy countries expanded their share of total U.S. textile imports to 2.07 percent in 1974 from 1.59 percent in 1973. This expansion occurred despite a softening in the domestic market for fiber, fabric, and apparel during most of 1974. As shown in table 16, imports of textiles from China and East Germany increased more than 100 and 200 percent, respectively, during 1974. The People's Republic of China was the principal nonmarket economy supplier of textiles to the United States in 1973 and 1974. Textile imports from five nonmarket economies -- Hungary, the U.S.S.R., Romania, Bulgaria, and the People's Republic of Mongolia -- declined in 1974. Notwithstanding China's position as the principal single supplier among the countries considered here, more apparel imports came from Eastern European nonmarket economy countries as a group than from other nonmarket economy countries.

Imports from the nonmarket economy countries declined during the first quarter of 1975, apparently reflecting the current economic downturn. The share of U.S. imports of textiles supplied by them remained nearly constant at 2.11 percent of all textile imports during that quarter.

Table 17 gives the composition of textile imports from the nonmarket economy countries. In 1974, 55 percent of nonmarket economy textile imports were fiber and fabric. This emphasis on fiber and

fabric rather than more sophisticated textile manufactures reflects
the still fairly basic structure of the apparel industries in the
main source countries, which do not produce stylish apparel in large
quantities. Thus, most imports were of fabrics which were fashioned
into garments and household textile furnishings by U.S. producers.

Apparel imports from all nonmarket economies except Poland and
Yugoslavia faced column 2 rates of duty which were considerably higher
than fabric rates.

During 1973, the most important items imported from a nonmarket economy were cotton shirting and silk from the People's Republic of China. By 1974 the most important items were cotton shirting and sheeting from China, as indicated in table 17. The imports from the U.S.S.R., Bulgaria, and the People's Republic of China were predominantly fabrics.

<sup>1/</sup> All categories of products from each country for which \$100,000 or more in imports were recorded in 1974 are explicitly listed. Owing to statistical processing problems, Yugoslavia could not be included at the time of publication.

Source: U.S. Department of Commerce publications and the Bureau of East-West Trade, U.S. Department of Commerce.

<sup>2/</sup> This country does not receive MFN status, and its products are subject to col. 2 duties.

3/ This country receives MFN status, and its products are subject to col. 1 duties.

## Very Recent Developments

Among recent imports reported to the International Trade Commission by the U.S. Customs Service just prior to the publication of this report were certain machine tools from the U.S.S.R. that arrived in the Midwest on June 11. These tools are described as combination boring, drilling, and milling machines (TSUS item 674.3270), and the recent importation marks the first appearance of this type of machine, although other types of machine tools from the Soviet Union have been imported in the past. The recent shipment was valued at less than half a million dollars.

Bituminous coal imports from Poland continued to arrive in early

June. New England power companies have been importing coal from Poland

for over a year now in response to domestic shortages and price increases.

Large shipments of electrical conductors from Yugoslavia were recorded in June. Yugoslavia has become the second leading source of imports of conductors classified under TSUS item 688.04. The value of shipments from Yugoslavia in the first quarter of 1975 was slightly below the corresponding quarter in 1974.

Finally, a shipment of cotton sport shirts from China valued at \$328,233 was recorded on May 29, giving some indication that China will continue as an important source of textile products. 1/

<sup>1/</sup> See the section in this report on textiles.

# APPENDIX

LEADING U.S. IMPORTS (TSUSA) FROM EACH OF THE NONMARKET ECONOMY COUNTRIES AND LEADING U.S. EXPORTS (SCHEDULE B) TO EACH OF THE COUNTRIES

Note: All data appearing in the appendix are from the Bureau of East-West Trade, U.S. Department of Commerce. The import figures reported are imports for consumption.

Table 1A.--Leading items imported from the People's Republic of China in 1974 and the first quarters of 1974 and 1975

(In U.S. dollars) First First TSUSA Description 1974 quarter quarter number 1974 1975 9.396.447 1.569.795 1,259,808 320.2032 : Print-cloth shirting, not elsewhere specified, white cotton, not fancy or figured----622.0200 : Tin, other than alloys, unwrought-----11,780,352 9.395.564 652,100 188.5040 : Rosin------2,062,079 7,876,325 1.303.400 766.2500 Antiques, not specially provided for-----6,673,799 924.825 1,208,590 186.3000 Bristles, crude or processed-----1.620.398 903.576 5,925,012 114.4545 : Shrimps and prawns, shell-on-----1,110,358 20.929 5,269,761 320.1038 . Pepper, capsicum or cayenne, or red, unground-----97,889 190,139 998,504 161.8300 . 100,607 550,328 966,587 755.1500 . Articles, not elsewhere specified, of unspun fibrous material-----240.774 80,669 931,129 222.6400 . Additional major first-quarter (1975) imports Cryolite or kryolith-----: 141,431 763.902 273.541 521.9100 . Tung oil----:: 32,061 711,809 101,946 176.6000 . Alkaloids and compounds not specially provided for, natural-----661,301 7,252 703,878 437.2400 . Men's, boys' cotton wearing apparel, not knit, not elsewhere specified------564 518,296 324,947 380.3984 . Headwear, not caps, neither bleached nor colored, other fiber-----477.590 530,510 84,008 702.3780 . Baskets and bags of unspun vegetable materials, not elsewhere specified-----369.815 575,375 118,097 222.4400 . Cotton headwear, not knit-----356,209 504,951 118,877 702.1020 . Bauxite, calcined-----349,952 30,570 521.1700. Men's, boys' cotton coats not elsewhere specified, not knit, not over \$4 each-----302,386 451,056 213,440 380.0990. Nut oils, not specially provided for-----300,117 204,159 176.6400. Total imports itemized above-----13,319,709 26,898,948 69,962,313 Total U.S. imports-----19,099,775 36,068,043 105,756,439

Table 2A.-- Leading items exported to the People's Republic of China in 1974 and the first quarter of 1975

number	Description :	1974	First quarter
041.0020 :	Wheat, unmilled, except relief::	234,014,893	
263.1031 :	Raw cotton, upland domestic, staple, 1 - 1-1/8 inches:	157,411,015	
221.4000 :	Soybeans:	140,482,996	
044.0020 :	Corn, unmilled, except seed and popcorn:	95,671,435	: -
734.1060 :	Aircraft, passenger/cargo combinations, 33,000 pounds and over, nonmilitary, new:	33,695,195	:
734.1050 :	Aircraft, passenger transports, 33,000 pounds and over, nonmilitary, new:	21,738,846	:
711.4223 :	Jet and gas turbines for aircraft, nonmilitary, new::	16,179,200.	
263.1021 :	Raw cotton, upland domestic, staple, 1-1/8 inches and over::	15,226,079	
263.1041:	Raw cotton, upland domestic, staple, under 1 inch::	12,963,345	:
	Number 1 heavy melting steel scrap, except stainless::	9,044,207	
	Tallow, incdible::	7,538,854	:
719.2230 :	Gas compressors, centrifugal and axial:	4,853,070	: 7,333,12
734.9230 :	Parts and accessories, not elsewhere classified, for aircraft, airships & balloons:	4,675,111	958,69
	Machines and parts for temperature-changing treatment, condenser unit parts and heat exchanger parts.	4,031,202	2,809,19
41.3010 :	Kraft wrapping and bag paper	3,953,366	
	Additional major first-quarter (1975) exports		
	Steam engines and turbines incorporating boilers, & parts, not elsewhere classified:	115,892	•
	Geophysical prospecting apparatus:::	-	: 2,398,74
	Metal-working machines not elsewhere classified, \$1,000 and over::	-	: 1,433,55
718.4254 :	Boring and drilling machines, not elsewhere classified, for mining & construction:	2,011,217	
711.2030 :	Accessories (and parts thereof) for steam-generating power boilers::	2,114,391	•
591.1015:	Fabricated structural iron and steel::	2,337,512	
	Gas turbines and parts, not elsewhere classified, for mechanical drives:		: 1,006,21
711.2020 :	Heat exchangers, steam-generating power boiler accessories::	754,077	
678.2020 :	Carbon steel line pipe, seamless:		: 818,23
719.1970 :	Heat exchangers, not elsewhere classified	1,057,153	. 788,86
	Total exports itemized above:	769,869,056	55,155,37
	Total U.S. exports	820,479,497	70,205,51
