UNITED STATES TARIFF COMMISSION

Washington 25, D. C.

TABULATIONS SHOWING THE CALCULATED AVERAGE AD VALOREM EQUIVALENTS
OF UNITED STATES RATES OF DUTY

INTRODUCTION

The attached tables show the calculated average ad valorem equivalents of U.S. rates of duty in specified periods on the basis of Standard International Trade Classification 3-digit categories.

Coverage of import statistics used in calculating the
average ad valorem equivalents

Table 1 reports the average ad valorem equivalents of U.S. duties on imports for consumption in 1960, the latest full year for which data are available. The import statistics on which the ad valorem equivalents were calculated include those for dutiable imports only from countries to which M.F.N. rates are applicable. The calculations therefore do not take account of the following:

- (1) Imports that enter free of duty.
- (2) Imports from Communist-dominated nations (including Poland) as designated by the President pursuant to section 5 of the Trade Agreements Extension Act of 1951.
- (3) Imports from Cuba.
- (4) Imports from the Republic of the Philippines.

(TC27836)

Table 1 shows, to the extent that an average ad valorem equivalent may be used as a measure, ^{1/} (a) the height of the tariff on dutiable imports subject to non-preferential trade agreement rates, and (b) the effect of tariff reductions made pursuant to trade agreements on the height of the tariff.

Table 2 reports the average ad valorem equivalents of U.S. rates of duty based on the dutiable imports covered in table 1, as well as the "free list" imports. Imports "specially free" (e.g., free for Government use), however, are not included inasmuch as they do not generally enter into ordinary commercial transactions. Table 2 also reports (a) the height of the tariff and (b) the extent of trade-agreement reductions on that height.

Table 3 reports the average ad valorem equivalents of U.S. rates of duty based on data for all imports for consumption in 1960, both dutiable and duty-free and regardless of source.

In arranging imports in 1960 by SITC categories, the Commission used the "Master Listing" prepared by the Bureau of the Census for reporting foreign-trade data to the United Nations. In many instances, the Schedule A classification and the SITC classification are not fully compatible; in preparing the master listing in such instances, the Bureau of the Census made certain "arbitrary" classifications. For example, portions of a given Schedule A item might be regarded as falling in any of two or more SITC classifications. The Bureau allocated the respective Schedule A items in their entirety to the SITC class believed to cover the larger or largest share of the imports involved.

In reviewing the aforementioned "arbitrary" classifications, the Commission tentatively concludes that less than 15 percent of total U.S. imports have been "misclassified" by these allocations. To such extent only would the average ad valorem equivalent shown in the tabulations be affected by these "misclassifications". The calculations for most 3-digit categories would not be affected at all.

^{1/} See comments later on limitations of ad valorem equivalents.

Rates of duty used in calculating the average ad valorem equivalents

The rates of duty used in calculating the average ad valorem equivalents for 1960 were those actually in effect during that year.

Certain difficulties were encountered in applying the rates in effect before trade-agreement reductions (generally the 1930 rates) to import statistics for 1960. For example, numerous tariff and Schedule A classifications have been changed substantially since pre-trade-agreement rates were in effect; in several instances, the changes were such as to make it impossible to appropriately apply the 1930, or pre-trade-agreement rate, to the 1960 classification. In those instances, more or less arbitrary judgments or estimates had to be employed, but in the Commission's judgment none of the average ad valorem equivalents in any of the broad classes of commodities covered by the SITC 3-digit categories were thereby significantly affected.

At the time the tabulations were prepared, definite data for the concessions being negotiated at Geneva were not available. Included in the rates used in making the "post-Geneva" calculations were the concessions tentatively identified as those to be granted to the following countries:

Austria	Haiti	New Zealand	Sweden
Canada	India	Pakistan	Switzerland
Denmark	Israel	Peru	United Kingdom
E.E.C.	Japan	Portugal	Finland

The Commission does not have information on other concessions that might be granted, but it is doubtful that their inclusion would significantly change the average ad valorem equivalent reported for the broad 3-digit categories.

Limitations on use of average ad valorem equivalents

Subject to the qualifications set forth above, the data presented in the three tabulations reflect the average ad valorem equivalents of U.S. duties collected for each 3-digit SITC category. The Commission, however, wishes to make certain observations with respect to the meaningfulness of average ad valorem equivalents, particularly those calculated on broad groups such as the 3-digit SITC categories.

Especially if they are to be used for intercountry comparisons, the type of broad commodity-class headings used for SITC categories give the impression that for each of the respective countries virtually identical components make up the imports in such categories, whereas, in reality, the classes often include articles in one country's trade quite unlike those of the country for which a comparison might be sought. Moreover, the component articles of a country's imports under a designated SITC category would not likely bear close resemblance to its exports under the category bearing the same heading. Even in the detailed classifications used in Schedule A for U.S. import items, an analysis of imports reveals that the majority of classes include a variety of imported articles a substantial portion of which are neither like, nor similar to, one another, and that an average ad valorem equivalent for the class as a whole might actually be representative of few of the articles being imported. In broad groups, such as a 3-digit SITC category, the average ad valorem equivalent would not likely be representative of many of the component articles.

(The ratio applicable to)
U.S. imported articles within a 3-digit category are subject to widely different types of customs treatment. For example, some of such imports are limited by quota. On articles subject to a specific rate of duty, the duty might exclude those of low value with the result that a computed average ad valorem equivalent would take account of only such foreign articles as entered over the tariff. An average ad valorem equivalent either for individual import classes or broad categories, therefore, is at best an inadequate measure of the restrictiveness of the duty on imports, or the degree of protection afforded domestic producers of like or directly competitive articles.

Another limitation of the ad valorem equivalent concept is that it does not take account of the changing composition of a country's imports. A calculation based on the composition of imports in 1960 of the average ad valorem equivalent of the duties that were in effect in 1930 or that will be in effect pursuant to the negotiations just concluded at Geneva does not take into account changes in the composition of imports that the tariff concessions themselves are intended to, and in fact do, bring about.

TABLE 1.--AVERAGE AD VALOREM EQUIVALENTS OF THE U.S. DUTIES, ARRAYED BY STANDARD INTERNATIONAL TRADE CLASSIFICATION (SITC) 3-DIGIT CATEGORIES, BASED ON IMPORTS FOR CONSUMPTION IN 1960 EXCEPT: IMPORTS FROM CUBA, FROM THE REPUBLIC OF THE PHILIPPINES, FROM COMMUNIST-DOMINATED NATIONS AS DESIGNATED BY THE PRESIDENT PURSUANT TO SECTION 5 OF THE TRADE AGREEMENTS EXTENSION ACT OF 1951, IMPORTS FREE OF DUTY, AND IMPORTS TOTALING LESS THAN \$10,000 IN ANY SCHEDULE A CLASS

Table 1.--Average ad valorem equivalents of the U.S. duties, arrayed by Standard International Trade Classification (SITC) 3-digit categories, based on imports for consumption in 1960 except: Imports from Cuba, from the Republic of the Philippines, from Communist-dominated nations as designated by the President pursuant to Section 5 of the Trade Agreements Extension Act of 1951, imports free of duty, and imports totaling less than \$10,000 in any Schedule A class

Column (1) - Average ad valorem equivalent of the pre-trade agreement rates (mostly 1930)
 Column (2) - Average ad valorem equivalent of the rates in effect in 1960
 Column (3) - Average ad valorem equivalent of the rates that will be in effect as a result of the negotiations now being completed in Geneva

895	Office and stationery supplies, n.e.s.-----	32.0	22.8	20.0
896	Works of art, collectors' pieces and antiques-----	0.6	0.3	0.2
897	Jewellery and goldsmiths' and silversmiths' wares-----	71.9	33.4	31.4
899	Manufactured articles, n.e.s.-----	58.3	30.9	27.5

TABLE 3.--AVERAGE AD VALOREM EQUIVALENTS OF THE U.S. DUTIES, ARRAYED BY STANDARD
INTERNATIONAL TRADE CLASSIFICATION (SITC) 3-DIGIT CATEGORIES, BASED ON TOTAL
IMPORTS FOR CONSUMPTION IN 1960, EXCEPT IMPORTS TOTALING LESS THAN \$10,000 IN
ANY SCHEDULE A CLASS

Table 3.--Average ad valorem equivalents of the U.S. duties, arrayed by Standard International Trade Classification (SITC) 3-digit categories, based on total imports for consumption in 1960, except imports totaling less than \$10,000 in any Schedule A class

Column (1) - Average ad valorem equivalent of the pre-trade agreement rates (mostly 1930)
 Column (2) - Average ad valorem equivalent of the rates in effect in 1960
 Column (3) - Average ad valorem equivalent of the rates that will be in effect as a result of the negotiations now being completed in Geneva
