Other transport equipment-----	86.01-09; 87.10-11; 87.14	731; 733 excl. 733.1(2)
I-3 <u>Ores and metals, and metal manufactures</u>		
Ores and metal waste-----	26.01; 26.03; 73.03	281; 282; 283 excl. 283.1(2) & 283.2(2); 284.0(1); 285.0(1) 286
Iron and steel:		
Unworked-----	73.01; 73.04-07	671 excl. 671.4 & 671.5; 672.1; 672.3(1); 672.5(1); 671.4-5
Ferro-alloys-----	73.02	672 excl. 672.1, 672.3(1), & 672.5(1); 673-677; 678.1-3
Semi-manufactured products-----	73.08-18	
Nonferrous metals, unwrought:		
Copper-----	74.01-02	283.1(2); 284.0(2); 682.1
Nickel-----	75.01	283.2(2); 284.0(3); 683.1
Aluminum-----	76.01	284.0(4); 684.1
Magnesium-----	77.01	284.0(5); 689.3(1)
Lead-----	78.01	284.0(6); 685.1
Zinc-----	79.01	284.0(7); 686.1
Tin-----	80.01	284.0(9); 687.1
Nonferrous metal products:		
Copper-----	74.03-08	682.2
Nickel-----	75.02-05	683.2
Aluminum-----	76.02-07	684.2
Lead-----	78.02-05	685.2
Zinc-----	79.02-04	284.0(8); 686.2
Tin-----	80.02-05	687.2
Other (unworked or semi-manufactured)-----	77.02; 77.04; 81.01-04	688; 689.3 excl. 689.3(1); 689.4; 689.5

Appendix table 13-A.--Product sectors: Coverage in Brussels Tariff Nomenclature headings and Standard International Trade Classification categories--Continued

Sector	Brussels Tariff Nomenclature headings	Standard International Trade Classification categories
<u>Industrial Sectors--Con.</u>		
I-3 <u>Ores and metals, and metal manufactures--Con.</u>		
Metal manufactures:		
Tools-----	82.01-07	695
Cutlery-----	82.09-15	696
Household equipment-----	73.38;74.17-18;76.15;82.08; 83.06;83.12	697.1(2);697.2;697.9 excl. 697.9(1);719.4(1);812.3
Containers, etc.-----	73.22-24;74.09;76.09-11	692
Others-----	73.19-21;73.23-35;73.39-40; 74.10-16;74.19;75.06;76.08; 76.12-14;76.16;77.03;78.06; 79.05-06;80.06;83.01-03; 83.07-11;83.13-15	678.4-5;679;691;693;694; 697.9(1);698;812.4(2)
I-4 <u>Chemicals</u>		
Chemical elements & compounds:		
Organic chemicals-----	15.11;29.01-37;29.40;29.43; 29.45	512 excl. 512.2(4) & 512.2(5)
Chemical elements, inorganic acids, oxides and halogens-----	27.05;28.01-28	513
Other inorganic products-----	28.29-58	514; 515
Dyeing, tanning and coloring materials:		
Tanning materials-----	32.01-03	532 excl. 532.1
Coloring materials-----	32.04-07	531;532.1;533.1
Paints, varnishes, etc.-----	32.08-13	533 excl.533.1;895.9(1)
Medical and pharmaceutical products-----	29.38-39;29.41-42;29.44; 30.01-05	541
Plastics:		
Plastic materials-----	39.01-06	581
Articles thereof-----	39.07	893
Essential oils, perfume materials, toilet preparations, soaps:		
Essential oils, perfume materials-----	33.01-05	551
Perfumery, cosmetics, soaps, cleaning preparations, etc.-----	33.06;34.01-02;34.04-05	553;554;599.7(1)
Other chemicals:		
Semi-manufactured products-----	35.04;38.01-03;38.05-10; 38.12-15;38.19	599.5(6);599.6;599.7 excl. 599.7(1);599.7(7), & 599.7(8); 599.9(2);599.9(4);599.9(9); 662.3(3)
Finished products-----	34.07;35.03;35.06;36.01-05; 36.07;38.11;38.16-18	571 excl. 571.4;599.2; 599.5(5);599.5(9);599.7(7)- (8); 599.9(1);599.9(3); 599.9(5)
I-5 <u>Textiles</u>		
Textile fibers and waste:		
Wools-----	53.01-05	262 excl. 262.5(1)
Cotton-----	55.01-04	263
Synthetic and artificial fibers-----	56.01-04	266
Jute-----	57.03	264
Hard fibers-----	57.01-02;57.04	265 excl. 265.1 & 265.3
Others-----	50.01-03;54.01-02;63.01-02	261;265.1;265.3;267

I-8 <u>Coal, petroleum, natural gas</u>		
Coal, coke and agglomerates-----	27.01-04	321
Gas-----	27.11	341.1
Crude petroleum-----	27.09	331.0(1)\
Products derived from coal, petroleum or gas-----	27.06-08; 27.10; 27.12-14; 27.16; 34.03; 38.04	331.0(2); 332; 521
I-9 <u>Mineral products and fertilizers</u>		
Stone, sand and gravel-----	25.05; 25.14-17; 25.20-21	273
Fertilizers-----	25.10; 31.01	271.1; 271.3
Other crude minerals-----	25.01-04; 25.06-09; 25.11-13; 25.18-19; 25.24-32; 26.02; 26.04; 27.15; 71.04	274; 275.2; 276
Manufactured fertilizers-----	31.02-05	271.2; 271.4; 561
Other mineral manufactures (except glass)-----	25.22-23; 68.01-16; 69.01-14	661; 662 excl. 662.3(3); 663; 666; 812.2
Glass and glassware		
Flat glass and manufactures-----	70.04-09	664.3-5; 664.7-8; 664.9(1)
Other glass manufactures-----	70.01-03; 70.10-21	651.8; 653.8; 664.1-2; 664.6; 664.9 excl. 664.9(1); 665.1-2; 665.8; 812.4(1)
I-10 <u>Professional, scientific and controlling instruments, photo- graphic apparatus, clocks and watches</u>		
Photographic and optical apparatus-----	90.01-13	861.1-6
Professional, scientific and controlling instruments-----	90.14-18; 90.20-29	726; 729.5; 861.7-9
Watches and clocks-----	91.01-11	864
I-11 <u>Wood and cork</u>		
Wood and cork in the rough-----	44.01-04; 45.01	241; 242; 244.0(1)
Wood based panels-----	44.15; 44.18	631.2(1); 631.4(2)
Semi-manufactured products-----	44.05-14; 44.16-17; 44.19; 45.02	243; 244.0(2); 631 excl. 631.2(1) & 631.4(2)
Manufactured articles-----	44.20-28; 45.03-04	632; 633
I-12 <u>Precious stones and precious metals</u>		
Precious stones, pearls-----	71.01-03	275.1; 667
Unworked or semi-manufactured precious metals-----	71.05-11	285.0(2); 681
Articles of precious stones and precious metals-----	71.12-16; 72.01	897; 961
I-13 <u>Rubber</u>		
Raw rubber-----	40.01-04	231
Semi-manufactured products-----	40.05-09; 40.15;	621
Manufactured articles-----	40.10-14; 40.16	629; 841.6

BRUSSELS NOMENCLATURE  
FOR  
THE CLASSIFICATION OF  
GOODS IN  
CUSTOMS TARIFFS

## SUMMARY

Rules for the interpretation of the Nomenclature.

## SECTION I

## LIVE ANIMALS; ANIMAL PRODUCTS

- 1 Live animals.
- 2 Meat and edible meat offals.
- 3 Fish, crustaceans and molluscs.
- 4 Dairy produce; birds' eggs; natural honey; edible products of animal origin, not elsewhere specified or included.
- 5 Products of animal origin, not elsewhere specified or included.

## SECTION II

## VEGETABLE PRODUCTS

- 6 Live trees and other plants; bulbs, roots and the like; cut flowers and ornamental foliage.
- 7 Edible vegetables and certain roots and tubers.
- 8 Edible fruit and nuts; peel of melons or citrus fruit.
- 9 Coffee, tea, maté and spices.
- 10 Cereals.
- 11 Products of the milling industry; malt and starches; gluten; inulin.
- 12 Oil seeds and oleaginous fruit; miscellaneous grains, seeds and fruit; industrial and medical plants; straw and fodder.
- 13 Raw vegetable materials of a kind suitable for use in dyeing or in tanning; lacs; gums, resins and other vegetable saps and extracts.
- 14 Vegetable plaiting and carving materials; vegetable products not elsewhere specified or included.

## SECTION III

ANIMAL AND VEGETABLE FATS AND OILS AND THEIR CLEAVAGE PRODUCTS;  
PREPARED EDIBLE FATS; ANIMAL AND VEGETABLE WAXES

- 15 Animal and vegetable fats and oils and their cleavage products; prepared edible fats; animal and vegetable waxes.

## SECTION IV

PREPARED FOODSTUFFS;  
BEVERAGES, SPIRITS AND VINEGAR; TOBACCO

- 16 Preparations of meat, of fish, of crustaceans or molluscs.
- 17 Sugars and sugar confectionery.
- 18 Cocoa and cocoa preparations.
- 19 Preparations of cereals, flour or starch; pastrycooks' products.
- 20 Preparations of vegetables, fruit or other parts of plants.
- 21 Miscellaneous edible preparations.
- 22 Beverages, spirits and vinegar.
- 23 Residues and waste from the food industries; prepared animal fodder.
- 24 Tobacco.

## SECTION V

## MINERAL PRODUCTS

- 25 Salt; sulphur; earths and stone; plastering materials, lime and cement.
- 26 Metallic ores, slag and ash.
- 27 Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral waxes.

## SECTION VI

## PRODUCTS OF THE CHEMICAL AND ALLIED INDUSTRIES

## Section Notes.

- 28 Inorganic chemicals; organic and inorganic compounds of precious metals, of rare earth metals, of radio-active elements and of isotopes.
- 29 Organic chemicals.
- 30 Pharmaceutical products.
- 31 Fertilisers.
- 32 Tanning and dyeing extracts; tannins and their derivatives; dyes, colours, paints and varnishes; putty, fillers and stoppings; inks.
- 33 Essential oils and resinoids; perfumery, cosmetics and toilet preparations.
- 34 Soap, organic surface-active agents, washing preparations, lubricating preparations, artificial waxes, prepared waxes, polishing and scouring preparations, candles and similar articles, modelling pastes and "dental waxes".
- 35 Albuminoid substances; glues.
- 36 Explosives; pyrotechnic products; matches; pyrophoric alloys; certain combustible preparations.
- 37 Photographic and cinematographic goods.
- 38 Miscellaneous chemical products.

## SECTION VII

ARTIFICIAL RESINS AND PLASTIC MATERIALS, CELLULOSE ESTERS AND ETHERS,  
AND ARTICLES THEREOF;  
RUBBER, SYNTHETIC RUBBER, FACTICE,  
AND ARTICLES THEREOF

- 39 Artificial resins and plastic materials, cellulose esters and ethers; articles thereof.
- 40 Rubber, synthetic rubber, factice, and articles thereof.

## SECTION VIII

RAW HIDES AND SKINS, LEATHER, FURSKINS AND ARTICLES THEREOF;  
SADDLERY AND HARNESS; TRAVEL GOODS,  
HANSBAGS AND SIMILAR CONTAINERS; ARTICLES OF CUT (OTHER THAN SILK-WORM CUT)

- 41 Raw hides and skins (other than furskins) and leather.
- 42 Articles of leather; saddlery and harness; travel goods, handbags and similar containers; articles of animal gut (other than silk-worm gut).
- 43 Furskins and artificial fur; manufactures thereof.

SECTION IX

WOOD AND ARTICLES OF WOOD; WOOD CHARCOAL; CORK AND ARTICLES OF CORK;  
MANUFACTURES OF STRAW, OF ESPARTO AND OF OTHER PLAITING MATERIALS;  
BASKETWARE AND WICKERWORK

- 44 Wood and articles of wood; wood charcoal.
- 45 Cork and articles of cork.
- 46 Manufactures of straw, of esparto and of other plaiting materials; basketware and wickerwork.

SECTION X

PAPER-MAKING MATERIAL; PAPER AND PAPERBOARD AND ARTICLES THEREOF

- 47 Paper-making material.
- 48 Paper and paperboard; articles of paper pulp, of paper or of paperboard.
- 49 Printed books, newspapers, pictures and other products of the printing industry; manuscripts, typescripts and plans.

SECTION XI

TEXTILES AND TEXTILE ARTICLES

Section Notes.

- 50 Silk and waste silk.
- 51 Man-made fibres (continuous).
- 52 Metallised textiles.
- 53 Wool and other animal hair.
- 54 Flax and ramie.
- 55 Cotton.
- 56 Man-made fibres (discontinuous).
- 57 Other vegetable textile materials; paper yarn and woven fabrics of paper yarn.
- 58 Carpets, mats, matting and tapestries; pile and chenille fabrics; narrow fabrics; trimmings; tulle and other net fabrics; lace; embroidery.
- 59 Wadding and felt; twine, cordage, ropes and cables; special fabrics; impregnated and coated fabrics; textile articles of a kind suitable for industrial use.
- 60 Knitted and crocheted goods.
- 61 Articles of apparel and clothing accessories of textile fabric, other than knitted or crocheted goods.
- 62 Other made up textile articles.
- 63 Old clothing and other textile articles; rags.

SECTION XII

FOOTWEAR, HEADGEAR, UMBRELLAS, SUNSHADES, WHIPS, RIDING-CROPS AND PARTS THEREOF;  
PREPARED FEATHERS AND ARTICLES MADE THEREWITH; ARTIFICIAL FLOWERS;  
ARTICLES OF HUMAN HAIR; FANS

- 64 Footwear, gaiters and the like; parts of such articles.
- 65 Headgear and parts thereof.
- 66 Umbrellas, sunshades, walking-sticks, whips, riding-crops and parts thereof.
- 67 Prepared feathers and down and articles made of feathers or of down; artificial flowers; articles of human hair; fans.

SECTION XIII

ARTICLES OF STONE, OF PLASTER, OF CEMENT, OF ASBESTOS, OF MICA AND OF SIMILAR MATERIALS;  
CERAMIC PRODUCTS; GLASS AND GLASSWARE

- 68 Articles of stone, of plaster, of cement, of asbestos, of mica and of similar materials.
- 69 Ceramic products.
- 70 Glass and glassware.

SECTION XIV

PEARLS, PRECIOUS AND SEMI-PRECIOUS STONES, PRECIOUS METALS,  
ROLLED PRECIOUS METALS, AND ARTICLES THEREOF;  
IMITATION JEWELLERY; COIN

- 71 Pearls, precious and semi-precious stones, precious metals, rolled precious metals, and articles thereof; imitation jewellery.
- 72 Coin.

SECTION XV

BASE METALS AND ARTICLES OF BASE METAL

Section Notes.

- 73 Iron and steel and articles thereof.
- 74 Copper and articles thereof.
- 75 Nickel and articles thereof.
- 76 Aluminium and articles thereof.
- 77 Magnesium and beryllium and articles thereof.
- 78 Lead and articles thereof.
- 79 Zinc and articles thereof.
- 80 Tin and articles thereof.
- 81 Other base metals employed in metallurgy and articles thereof.
- 82 Tools, implements, cutlery, spoons and forks, of base metal; parts thereof.
- 83 Miscellaneous articles of base metal.

SECTION XVI

MACHINERY AND MECHANICAL APPLIANCES; ELECTRICAL EQUIPMENT; PARTS THEREOF

Section Notes.

- 84 Boilers, machinery and mechanical appliances; parts thereof.
- 85 Electrical machinery and equipment; parts thereof.

SECTION XVII

VEHICLES, AIRCRAFT, AND PARTS THEREOF; VESSELS AND CERTAIN ASSOCIATED TRANSPORT EQUIPMENT

Section Notes.

- 86 Railway and tramway locomotives, rolling-stock and parts thereof; railway and tramway track fixtures and fittings; traffic signalling equipment of all kinds (not electrically powered).
- 87 Vehicles, other than railway or tramway rolling-stock, and parts thereof.
- 88 Aircraft and parts thereof; parachutes; catapults and similar aircraft launching gear; ground flying trainers.
- 89 Ships, boats and floating structures.

# SECTION XVIII

OPTICAL, PHOTOGRAPHIC, CINEMATOGRAPHIC, MEASURING, CHECKING, PRECISION,  
MEDICAL AND SURGICAL INSTRUMENTS AND APPARATUS; CLOCKS AND WATCHES;  
MUSICAL INSTRUMENTS; SOUND RECORDERS AND REPRODUCERS;  
TELEVISION IMAGE AND SOUND RECORDERS AND REPRODUCERS, MAGNETIC;  
PARTS THEREOF

- 90 Optical, photographic, cinematographic, measuring, checking, precision, medical and surgical instruments and apparatus; parts thereof.
- 91 Clocks and watches and parts thereof.
- 92 Musical instruments; sound recorders and reproducers; television image and sound recorders and reproducers, magnetic; parts and accessories of such articles.

# SECTION XIX

ARMS AND AMMUNITION; PARTS THEREOF

- 93 Arms and ammunition; parts thereof.

# SECTION XX

MISCELLANEOUS MANUFACTURED ARTICLES

- 94 Furniture and parts thereof; bedding, mattresses, mattress supports, cushions and similar stuffed furnishings.
- 95 Articles and manufactures of carving or moulding material.
- 96 Brooms, brushes, feather dusters, powder-puffs and sieves.
- 97 Toys, games and sports requisites; parts thereof.
- 98 Miscellaneous manufactured articles.

# SECTION XXI

WORKS OF ART, COLLECTORS' PIECES, AND ANTIQUES

- 99 Works of art, collectors' pieces, and antiques.

# ABBREVIATIONS AND SYMBOLS

C	Centigrade	m	metre(s)
cg	centigram(s)	m <sup>2</sup>	square metre(s)
cm	centimetre(s)	mg	milligram(s)
cm <sup>3</sup>	cubic centimetre(s)	mm	millimetre(s)
g	gram(s)	mm <sup>2</sup>	square millimetre(s)
kg	kilogram(s)	%	per cent
l	litre(s)	°	degrees

# Examples.

1,500 g/m <sup>2</sup>	means one thousand five hundred grams per square metre.
15° C	means fifteen degrees Centigrade.

# RULES FOR THE INTERPRETATION OF THE NOMENCLATURE

Interpretation of the Nomenclature shall be governed by the following principles :

1. — The titles of Sections, Chapters and sub-Chapters are provided for ease of reference only; for legal purposes, classification shall be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require, according to the following provisions.
2. — (a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as imported, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), imported unassembled or disassembled.  
(b) Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of Rule 3.
3. — When for any reason, goods are, *prima facie*, classifiable under two or more headings, classification shall be effected as follows :  
(a) The heading which provides the most specific description shall be preferred to headings providing a more general description.  
(b) Mixtures and composite goods which consist of different materials or are made up of different components and which cannot be classified by reference to 3 (a) shall be classified as if they consisted of the material or component which gives the goods their essential character, insofar as this criterion is applicable.  
(c) When goods cannot be classified by reference to 3 (a) or 3 (b), they shall be classified under the heading which involves the highest rate of duty.
4. — Goods not falling within any heading of the Nomenclature shall be classified under the heading appropriate to the goods to which they are most akin.

## Section I

### LIVE ANIMALS; ANIMAL PRODUCTS

#### Chapter 1

##### Live animals.

##### Notes.

1. — This Chapter covers all live animals except :
  - (a) Fish, crustaceans and molluscs, of headings Nos. 03.01 and 03.03;
  - (b) Microbial cultures and other products of heading No. 30.02; and
  - (c) Animals of heading No. 97.08.

*English text only :*
2. — Any reference in this Chapter to a particular genus or species, except where the context otherwise requires, includes a reference to the young of that genus or species.

01.01	001.5	Live horses, asses, mules and hinnies.
01.02	001.1	Live animals of the bovine species.
01.03	001.3	Live swine.
01.04	001.2	Live sheep and goats.
01.05	001.4	Live poultry, that is to say, fowls, ducks, geese, turkeys and guinea fowls.
01.06		Other live animals.
	001.9	A. Animals of a kind mainly used for human food.
	001.0	B. Other (including zoo animals, dogs and cats).

#### Chapter 2

##### Meat and edible meat offals.

##### Note.

- This Chapter does not cover :
- (a) Products of the kinds described in headings Nos. 02.01, 02.02, 02.03, 02.04 and 02.06, unfit or unsuitable for human consumption;
  - (b) Guts, bladders or stomachs of animals (heading No. 05.04) and animal blood (heading No. 05.15); or
  - (c) Animal fat, other than products of heading No. 02.05 (Chapter 15).

02.01		Meat and edible offals of the animals falling within heading No. 01.01, 01.02, 01.03 or 01.04, fresh, chilled or frozen.
	011.1	A. Meat of bovine animals.
	011.2	B. Meat of sheep and goats.
	011.3	C. Meat of swine.
	011.5	D. Meat of horses, asses, mules and hinnies.
	011.6	E. Offals.
02.02	011.4	Dead poultry (that is to say, fowls, ducks, geese, turkeys and guinea fowls) and edible offals thereof (except liver), fresh, chilled or frozen.
02.03	011.8 (1)	Poultry liver, fresh, chilled, frozen, salted or in brine.
02.04	011.8 (9)	Other meat and edible meat offals, fresh, chilled or frozen.
02.05	411.3 (1)	Pig fat free of lean meat and poultry fat (not rendered or solvent-extracted), fresh, chilled, frozen, salted, in brine, dried or smoked.
02.06		Meat and edible meat offals (except poultry liver), salted, in brine, dried or smoked.
	012.1	A. Bacon, ham and other pig meat.
	012.9	B. Other.

#### Chapter 3

##### Fish, crustaceans and molluscs.

##### Note.

- This Chapter does not cover :
- (a) Marine mammals (heading No. 01.06) or meat thereof (heading No. 02.04 or 02.06);
  - (b) Fish (including livers and roes thereof), crustaceans and molluscs, dead, unfit or unsuitable for human consumption by reason of either their species or their condition (Chapter 5); or
  - (c) Caviar or caviar substitutes (heading No. 16.04).

03.01	031.1	Fish, fresh (live or dead), chilled or frozen.
03.02	031.2	Fish, dried, salted or in brine; smoked fish, whether or not cooked before or during the smoking process.
03.03	031.3	Crustaceans and molluscs, whether in shell or not, fresh (live or dead), chilled, frozen, salted, in brine or dried; crustaceans, in shell, simply boiled in water.

# Chapter 4

**Dairy produce; birds' eggs; natural honey;  
edible products of animal origin, not elsewhere specified or included.**

## Notes.

1. — The expression "milk" means full cream or skimmed milk, buttermilk, whey, kephir, yoghurt and similar fermented milk.
2. — Milk and cream put up in hermetically sealed cans are regarded as preserved within the meaning of heading No. 04.02. However, milk and cream are not regarded as so preserved merely by reason of being pasteurised, sterilised or peptonised, if they are not put up in hermetically sealed cans.

04.01	022.3	Milk and cream, fresh, not concentrated or sweetened.
04.02		Milk and cream, preserved, concentrated or sweetened.
	022.1	A. In liquid or semi-solid form.
	022.2	B. In solid form, such as block or powder.
04.03	023.0	Butter.
04.04	024.0	Cheese and curd.
04.05	025.0	Birds' eggs and egg yolks, fresh, dried or otherwise preserved, sweetened or not.
04.06	061.6	Natural honey.
04.07		Edible products of animal origin, not elsewhere specified or included.

# Chapter 5

**Products of animal origin, not elsewhere specified or included.**

## Notes.

1. — This Chapter does not cover :
  - (a) Edible products (other than guts, bladders and stomachs of animals, whole and pieces thereof, and animal blood, liquid or dried);
  - (b) Hides or skins (including furakins) other than goods falling within heading No. 05.05, 05.06 or 05.07 (Chapter 41 or 43);
  - (c) Animal textile materials, other than horsehair and horsehair waste (Section XI); or
  - (d) Prepared knots or tufts for broom or brush making (heading No. 96.03).
2. — For the purposes of heading No. 05.01, the sorting of hair by length (provided the root ends and tip ends respectively are not arranged together) shall be deemed not to constitute working.
3. — Throughout this Nomenclature elephant, mammoth, mastodon, walrus, narwhal and wild boar tusks, rhinoceros horns and the teeth of all animals are regarded as ivory.
4. — Throughout the Nomenclature the expression "horsehair" means hair of the manes and tails of equine or bovine animals.

05.01	291.9 (1)	Human hair, unworked, whether or not washed or scoured; waste of human hair.
05.02	291.9 (2)	Pigs', hogs' and boars' bristles or hair; badger hair and other brush making hair; waste of such bristles and hair.
05.03	292.4 (1)	Horsehair and horsehair waste, whether or not put up on a layer or between two layers of other material.
05.04	291.9 (3)	Guts, bladders and stomachs of animals (other than fish), whole and pieces thereof.
05.05	291.9 (4)	Fish waste.
05.06	291.9 (5)	Sinews and tendons; parings and similar waste, of raw hides or skins.
05.07	291.9 (6)	Skins and other parts of birds, with their feathers or down, feathers and parts of feathers (whether or not with trimmed edges) and down, not further worked than cleaned, disinfected or treated for preservation; powder and waste of feathers or parts of feathers.
05.08	291.1 (1)	Bones and horn-cores, unworked, defatted, simply prepared (but not cut to shape), treated with acid or degelatinised; powder and waste of these products.
05.09	291.1 (2)	Horns, antlers, hooves, nails, claws and beaks of animals, unworked or simply prepared but not cut to shape, and waste and powder of these products; whalebone and the like, unworked or simply prepared but not cut to shape, and hair and waste of these products.
05.10	291.1 (3)	Ivory, unworked or simply prepared but not cut to shape; powder and waste of ivory.
05.11	291.1 (4)	Tortoise-shell (shells and scales), unworked or simply prepared but not cut to shape; claws and waste of tortoise-shell.
05.12	291.1 (5)	Coral and similar substances, unworked or simply prepared but not otherwise worked; shells, unworked or simply prepared but not cut to shape; powder and waste of shells.
05.13	291.9 (7)	Natural sponges.
05.14	291.9 (8)	Ambergris, castoreum, civet and musk; cantharides; bile, whether or not dried; animal products, fresh, chilled or frozen, or otherwise provisionally preserved, of a kind used in the preparation of pharmaceutical products.
05.15	291.9 (9)	Animal products not elsewhere specified or included; dead animals of Chapter 1 or Chapter 3, unfit for human consumption.

## Section II

### VEGETABLE PRODUCTS

#### Chapter 6

**Live trees and other plants; bulbs, roots and the like;  
cut flowers and ornamental foliage.**

##### Notes.

1. — This Chapter covers only live trees and goods (including seedling vegetables) of a kind commonly supplied by nursery gardeners or florists for planting or for ornamental use; nevertheless it does not include potatoes, onions, shallots, garlic and other products of Chapter 7.
2. — Any reference in heading No. 06.03 or 06.04 to goods of any kind shall be construed as including a reference to bouquets, floral baskets, wreaths and similar articles made wholly or partly of goods of that kind, account not being taken of accessories of other materials.

06.01	292.6 (1)	Bulbs, tubers, tuberous roots, corms, crowns and rhizomes, dormant, in growth or in flower.
06.02	292.6 (9)	Other live plants, including trees, shrubs, bushes, roots, cuttings and slips.
06.03	292.7 (1)	Cut flowers and flower buds of a kind suitable for bouquets or for ornamental purposes, fresh, dried, dyed, bleached, impregnated or otherwise prepared.
06.04	292.7 (2)	Foliage, branches and other parts (other than flowers or buds) of trees, shrubs, bushes and other plants, and mosses, lichens and grasses, being goods of a kind suitable for bouquets or ornamental purposes, fresh, dried, dyed, bleached, impregnated or otherwise prepared.

#### Chapter 7

**Edible vegetables and certain roots and tubers.**

##### Note.

In headings Nos. 07.01, 07.02 and 07.03, the word "vegetables" is to be taken to include edible mushrooms, truffles, olives, capers, tomatoes, potatoes, salad beetroot, cucumbers, gherkins, marrows, pumpkins, aubergines, sweet peppers, fennel, parsley, chervil, tarragon, cress, sweet marjoram (*Majorana hortensis* or *Origanum majorana*), horse-radish and garlic.

Heading No. 07.04 covers all dried, dehydrated or evaporated vegetables of the kinds falling within headings Nos. 07.01 to 07.03, other than:

- (a) Dried leguminous vegetables, shelled (heading No. 07.05);
- (b) Ground sweet peppers (heading No. 09.04);
- (c) Flours of the dried leguminous vegetables of heading No. 07.05 (heading No. 11.03);
- (d) Flour, meal and flakes of potato (heading No. 11.05).

07.01		Vegetables, fresh or chilled.
	054.1	A. Potatoes.
	054.4	B. Tomatoes.
	054.5	C. Other.
07.02	054.6 (1)	Vegetables (whether or not cooked), preserved by freezing.
07.03	054.6 (2)	Vegetables provisionally preserved in brine, in sulphur water or in other preservative solutions, but not specially prepared for immediate consumption.
07.04	055.1	Dried, dehydrated or evaporated vegetables, whole, cut, sliced, broken or in powder, but not further prepared.
07.05	054.2	Dried leguminous vegetables, shelled, whether or not skinned or split.
07.06	054.8 (1)	Manioc, arrowroot, salep, Jerusalem artichokes, sweet potatoes and other similar roots and tubers with high starch or inulin content, fresh or dried, whole or sliced; sago pith.

#### Chapter 8

**Edible fruit and nuts; peel of melons or citrus fruit.**

##### Notes.

1. — This Chapter does not cover inedible nuts or fruits.
2. — The word "fresh" is to be taken to extend to goods which have been chilled.

08.01		Dates, bananas, coconuts, Brazil nuts, cashew nuts, pineapples, avocados, mangoes, guavas and mangosteens, fresh or dried, shelled or not.
	051.3	A. Bananas, fresh.
	051.7 (1)	B. Coconuts, Brazil nuts and cashew nuts, fresh or dried.
	051.9 (5)	C. Other fresh fruit.
	052.0 (1)	D. Other dried fruit.
08.02		Citrus fruit, fresh or dried.
	051.1	A. Oranges, tangerines, mandarines and clementines.
	051.2	B. Other.
08.03		Figs, fresh or dried.
	051.9 (1)	A. Fresh.
	052.0 (2)	B. Dried.
08.04		Grapes, fresh or dried.
	051.5	A. Fresh.
	052.0 (3)	B. Dried.

08.05	051.7 (2)	Nuts other than those falling within heading No. 08.01, fresh or dried, shelled or not.
08.06		Apples, pears and quinces, fresh.
	051.4	A. Apples.
	051.9 (2)	B. Pears and quinces.
08.07	051.9 (3)	Stone fruit, fresh.
08.08	051.9 (4)	Berries, fresh.
08.09	051.9 (9)	Other fruit, fresh.
08.10	052.6 (1)	Fruit (whether or not cooked), preserved by freezing, not containing added sugar.
08.11	052.6 (2)	Fruit provisionally preserved (for example, by sulphur dioxide gas, in brine, in sulphur water or in other preservative solutions), but unsuitable in that state for immediate consumption.
08.12	052.6 (9)	Fruit, dried, other than that falling within heading No. 08.01, 08.02, 08.03, 08.04 or 08.05.
08.13	052.6 (4)	Peel of melons and citrus fruit, fresh, frozen, dried, or provisionally preserved in brine, in sulphur water or in other preservative solutions.

#### Chapter 9

#### Coffee, tea, maté and spices.

#### Notes.

1. — Mixtures of the products of headings Nos. 09.04 to 09.10 are to be classified as follows :
- (a) Mixtures of two or more of the products falling within the same heading are to be classified in that heading;
- (b) Mixtures of two or more of the products falling within different headings are to be classified under heading No. 09.10.

The addition of other substances to the products of headings Nos. 09.04 to 09.10 (or to the mixtures referred to in paragraphs (a) or (b) above) shall not affect their classification provided that the resulting mixtures retain the essential character of the goods falling in those headings. Otherwise such mixtures are not classified in this Chapter; those constituting mixed condiments or mixed seasonings are classified in heading No. 21.04.

2. — This Chapter does not cover :

- (a) Sweet peppers, unground (Chapter 7); or
- (b) Cubeb pepper (*Piper cubeba*) and other products of heading No. 12.07.

09.01		Coffee, whether or not roasted or freed of caffeine; coffee husks and skins; coffee substitutes containing coffee in any proportion.
	071.1	A. Coffee and coffee substitutes containing coffee.
	081.9 (1)	B. Coffee husks and skins.

09.02	074.1	Tea.
09.03	074.2	Maté.
09.04	075.1	Pepper of the genus "Piper"; pimento of the genus "Capsicum" or the genus "Pimenta".
09.05	075.2 (1)	Vanilla.
09.06	075.2 (2)	Cinnamon and cinnamon-tree flowers.
09.07	075.2 (3)	Cloves (whole fruit, cloves and stems).
09.08	075.2 (4)	Nutmeg, mace and cardamoms.
09.09	075.2 (5)	Seeds of anise, badian, fennel, coriander, cumin, caraway and juniper.
09.10	075.2 (9)	Thyme, saffron and bay leaves; other spices.

#### Chapter 10

#### Cereals.

#### Note.

Headings in this Chapter, except heading No. 10.06, are to be taken not to apply to grains which have been ground to remove the husk or pericarp or otherwise worked. Heading No. 10.06 is to be taken to apply to unworked rice and also rice, husked, glazed, polished or broken, but not otherwise worked.

10.01	041.9	Wheat and meslin (mixed wheat and rye).
10.02	045.1	Rye.
10.03	043.9	Barley.
10.04	045.2	Oats.
10.05	044.9	Maize.
10.06		Rice.
	042.1	A. In the husk or husked but not further prepared.
	042.2	B. Other.
10.07	045.9	Buckwheat, millet, canary seed and grain sorghum; other cereals.

## Chapter 11

### Products of the milling industry; malt and starches; gluten; inulin.

#### Notes.

1. — This Chapter does not cover :
  - (a) Roasted malt put up as coffee substitutes (heading No. 09.01 or 21.01);
  - (b) Flours and meal prepared for use as infant food or for dietetic or culinary purposes of heading No. 19.02;
  - (c) Corn flakes and other products falling within heading No. 19.05;
  - (d) Pharmaceutical products (Chapter 30); or
  - (e) Starches having the character of perfumery, cosmetics or toilet preparations falling within heading No. 33.06.
2. — (A) Products from the milling of the cereals listed in the table below fall within this Chapter if they have, by weight on the dry product :
  - (a) a starch content (determined by the modified Ewers polarimetric method) exceeding that indicated in Column (2); and
  - (b) an ash content (after deduction of any added minerals) not exceeding that indicated in Column (3).
 Otherwise, they fall to be classified in heading No. 23.02.
- (B) Products falling within this Chapter under the above provisions shall be classified in heading No. 11.01 (cereal flours) if the percentage passing through a silk gauze or man-made textile sieve with the aperture indicated in Column (4) or (5) is not less, by weight, than that shown against the cereal concerned.

Otherwise, they fall to be classified in heading No. 11.02.

Cereal (1)	Starch content (2)	Ash content (3)	Rate of passage through a sieve with an aperture of	
			315 microns (4)	500 microns (5)
Wheat and rye .....	45 %	2.5 %	80 %	—
Barley .....	45 %	3 %	80 %	—
Oats .....	45 %	5 %	80 %	—
Maize and sorghum .....	45 %	2 %	—	90 %
Rice .....	45 %	1.5 %	80 %	—
Buckwheat .....	45 %	4 %	80 %	—

#### 11.01 Cereal flours.

- 046.0 (1) A. Of wheat or of meslin.  
047.0 (1) B. Other.

#### 11.02 Cereal groats and cereal meal; other worked cereal grains (for example, rolled, flaked, polished, pearled or kibbled, but not further prepared), except husked, glazed, polished or broken rice; germ of cereals, whole, rolled, flaked or ground.

- 046.0 (2) A. Groats and meal of wheat or of meslin.  
047.0 (2) B. Cereal groats and meal (other than of wheat or of meslin).  
048.1 (1) C. Other worked cereal grains (for example, rolled, flaked, polished, pearled or kibbled, but not further prepared); germ of cereals, whole, rolled, flaked or ground.

- 11.03 055.4 (1) Flours of the leguminous vegetables falling within heading No. 07.05.  
11.04 055.4 (2) Flours of the fruits falling within any heading in Chapter 8.  
11.05 055.4 (3) Flour, meal and flakes of potato.  
11.06 055.4 (4) Flour and meal of sago and of manioc, arrowroot, salep and other roots and tubers falling within heading No. 07.06.  
11.07 048.2 Malt, roasted or not.  
11.08 099.5 (1) Starches; inulin.  
11.09 099.5 (2) Wheat gluten, whether or not dried.

## Chapter 12

### Oil seeds and oleaginous fruit; miscellaneous grains, seeds and fruit; industrial and medical plants; straw and fodder.

#### Notes.

1. — Heading No. 12.01 is to be taken to apply, *inter alia*, to ground-nuts, soya beans, mustard seeds, oil poppy seeds, poppy seeds and copra. It is to be taken not to apply to coconuts or other products of heading No. 08.01 or to olives (Chapter 7 or Chapter 20).
2. — For the purposes of heading No. 12.03, beet seeds, grass and other herbage seeds, seeds of ornamental flowers, vegetable seeds, seeds of forest trees, seeds of fruit trees, seeds of vetches and of lupines are to be regarded as seeds of a kind used for sowing.  
Heading No. 12.03 is, however, to be taken not to apply to the following even if for sowing :
  - (a) Leguminous vegetables (Chapter 7);
  - (b) Spices and other products of Chapter 9;
  - (c) Cereals (Chapter 10); or
  - (d) Products falling within heading No. 12.01 or 12.07.
3. — Heading No. 12.07 is to be taken to apply, *inter alia*, to the following plants or parts thereof : basil, borage, hyssop, all species of mint, rosemary, rue, sage and wormwood.  
Heading No. 12.07 is, however, to be taken not to apply to :
  - (a) Oil seeds and oleaginous fruit (heading No. 12.01);
  - (b) Medicaments falling within Chapter 30;
  - (c) Perfumery or toilet preparations falling within Chapter 33; or
  - (d) Disinfectants, insecticides, fungicides, weed-killers or similar products falling within heading No. 38.11.

#### 12.01 Oil seeds and oleaginous fruit, whole or broken.

- 221.1 A. Ground-nuts.  
221.2 B. Copra.  
221.3 C. Palm nuts and kernels.  
221.4 D. Soya beans.  
221.5 E. Linseed.  
221.6 F. Cotton seeds.  
221.7 G. Castor oil seeds.  
221.8 H. Other.

12.02	221.9	Flours or meals of oil seeds or oleaginous fruit, non-defatted, (excluding mustard flour).
12.03	292.5	Seeds, fruit and spores, of a kind used for sowing.
12.04	054.8 (3)	Sugar beet, whole or sliced, fresh, dried or powdered; sugar cane.
12.05	054.8 (3)	Chicory roots, fresh or dried, whole or cut, unroasted.
12.06	054.8 (4)	Hop cones and lupulin.
12.07	292.4	Plants and parts (including seeds and fruit) of trees, bushes, shrubs or other plants, being goods of a kind used primarily in perfumery, in pharmacy, or for insecticidal, fungicidal or similar purposes, fresh or dried, whole, cut, crushed, ground or powdered.
12.08	054.8 (9)	Locust beans, fresh or dried, whether or not kibbled or ground, but not further prepared; fruit kernels and other vegetable products of a kind used primarily for human food, not falling within any other heading.
12.09	081.1 (1)	Cereal straw and husks, unprepared, or chopped but not otherwise prepared.
12.10	081.1 (3)	Mangolds, swedes, fodder roots; hay, lucerne, clover, sainfoin, forage kale, lupines, vetches and similar forage products.

### Chapter 13

**Raw vegetable materials of a kind suitable for use in dyeing or in tanning:  
lacs; gums, resins and other vegetable saps and extracts.**

**Note.**

Heading No. 13.03 is to be taken to apply, *inter alia*, to liquorice extract and extract of pyrethrum, extract of hops, extract of aloes and opium. The heading is to be taken not to apply to:

- (a) Liquorice extract containing more than 10 % by weight of sucrose or when put up as confectionery (heading No. 17.04);
- (b) Malt extract (heading No. 19.01);
- (c) Extracts of coffee, tea or maté (heading No. 21.02);
- (d) Alcoholic saps and extracts constituting beverages, and compound alcoholic preparations (known as "concentrated extracts") for the manufacture of beverages (Chapter 22);
- (e) Camphor, glycyrrhizin and other products of headings Nos. 29.13 and 29.41;
- (f) Medicaments falling within heading No. 30.03 or blood-grouping reagents (heading No. 30.05);
- (g) Tanning or dyeing extracts (heading No. 32.01 or 32.04);
- (h) Essential oils, concretes, absolutes and resinoids (heading No. 33.01) or aqueous distillates and aqueous solutions of essential oils (heading No. 33.05); or
- (i) Rubber, balata, gutta-percha or similar natural gums (heading No. 40.01).

13.01	292.1	Raw vegetable materials of a kind used primarily in dyeing or in tanning.
13.02	292.2	Shellac, seed lac, stick lac and other lacs; natural gums, resins, gum-resins and balsams.
13.03	292.9 (1)	Vegetable saps and extracts; pectic substances, pectinates and pectates; agar-agar and other mucilages and thickeners, derived from vegetable products.

### Chapter 14

**Vegetable plaiting and carving materials:  
vegetable products not elsewhere specified or included.**

**Notes.**

- 1. — This Chapter does not cover the following products which are to be classified in Section XI: vegetable materials or fibres of vegetable materials, of a kind used primarily in the manufacture of textiles, however prepared, or other vegetable materials which have undergone treatment so as to render them suitable for use only as textile materials.
- 2. — Heading No. 14.01 is to be taken to apply, *inter alia*, to split osier, reeds, bamboos and the like, to rattan cores and to drawn or split rattans. The heading is to be taken not to apply to chipwood (heading No. 44.09).
- 3. — Heading No. 14.02 is to be taken not to apply to wood wool (heading No. 44.12).
- 4. — Heading No. 14.03 is to be taken not to apply to prepared knots or tufts for broom or brush making (heading No. 96.03).

14.01	292.3	Vegetable materials of a kind used primarily for plaiting (for example, cereal straw, cleaned, bleached or dyed, osier, reeds, rushes, rattans, bamboos, raffia and lime bark).
14.02	292.9 (2)	Vegetable materials, whether or not put up on a layer or between two layers of other material, of a kind used primarily as stuffing or as padding (for example, kapok, vegetable hair and eel-grass).
14.03	292.9 (3)	Vegetable materials of a kind used primarily in brushes or in brooms (for example, sorgho, piassava, couch-grass and istle), whether or not in bundles or hanks.
14.04	292.9 (4)	Hard seeds, pips, hulls and nuts, of a kind used for carving (for example, corozo and dom).
14.05	292.9 (9)	Vegetable products not elsewhere specified or included.

### Section III

#### ANIMAL AND VEGETABLE FATS AND OILS AND THEIR CLEAVAGE PRODUCTS; PREPARED EDIBLE FATS; ANIMAL AND VEGETABLE WAXES

##### Chapter 15

**Animal and vegetable fats and oils and their cleavage products;  
prepared edible fats; animal and vegetable waxes.**

##### Notes.

1. — This Chapter does not cover :
  - (a) Pig fat or poultry fat of heading No. 02.05;
  - (b) Cocoa butter (fat or oil) (heading No. 18.04);
  - (c) Greaves (heading No. 23.01) and residues of heading No. 23.04;
  - (d) Fatty acids in an isolated state, prepared waxes, medicaments, paints, varnishes, soap, perfumery, cosmetics or toilet preparations, sulphonated oils or other goods falling within any heading in Section VI; or
  - (e) Factice derived from oils (heading No. 40.02).
2. — Soapstocks, oil foots and dregs, stearin, wool grease and glycerol residues are to be taken to fall in heading No. 15.17.

15.01	091.3	Lard, other pig fat and poultry fat, rendered or solvent-extracted.
15.02	411.3 (2)	Fats of bovine cattle, sheep or goats, unrendered; rendered or solvent-extracted fats (including "premier jus") obtained from those unrendered fats.
15.03	411.3 (3)	Lard stearin, oleostearin and tallow stearin; lard oil, oleo-oil and tallow oil, not emulsified or mixed or prepared in any way.
15.04	411.1	Fats and oils, of fish and marine mammals, whether or not refined.
15.05	411.3 (4)	Wool grease and fatty substances derived therefrom (including lanolin).
15.06	411.3 (9)	Other animal oils and fats (including neat's-foot oil and fats from bones or waste).
15.07		Fixed vegetable oils, fluid or solid, crude, refined or purified.
	421.2	A. Soya bean oil.
	421.3	B. Cotton seed oil.
	421.4	C. Ground-nut oil.
	421.5	D. Olive oil.
	421.6	E. Sunflower seed oil.
	421.7	F. Rape oil, colza oil and mustard oil.
	422.1	G. Linseed oil.
	422.2	H. Palm oil.
	422.3	K. Coconut (copra) oil.
	422.4	L. Palm kernel oil.
	422.5	M. Castor oil.
	422.9	N. Other.

15.08	431.1	Animal and vegetable oils, boiled, oxidised, dehydrated, sulphurised, blown or polymerised by heat in vacuum or in inert gas, or otherwise modified.
15.09	411.3 (5)	Degras.
15.10		Fatty acids; acid oils from refining; fatty alcohols.
	431.3 (1)	A. Fatty acids; acid oils from refining.
	512.2 (5)	B. Fatty alcohols.
15.11	512.2 (6)	Glycerol and glycerol lyes.
15.12	431.2	Animal or vegetable oils and fats, wholly or partly hydrogenated, or solidified or hardened by any other process, whether or not refined, but not further prepared.
15.13	091.4	Margarine, imitation lard and other prepared edible fats.
15.14	431.4 (1)	Spermaceti, crude, pressed or refined, whether or not coloured.
15.15	431.4 (2)	Beeswax and other insect waxes, whether or not coloured.
15.16	431.4 (3)	Vegetable waxes, whether or not coloured.
15.17	431.3 (2)	Residues resulting from the treatment of fatty substances or animal or vegetable waxes.

### Section IV

#### PREPARED FOODSTUFFS; BEVERAGES, SPIRITS AND VINEGAR; TOBACCO

##### Chapter 16

**Preparations of meat, of fish, of crustaceans or molluscs.**

##### Note.

This Chapter does not cover meat, meat offal, fish, crustaceans or molluscs, prepared or preserved by the processes specified in Chapters 2 and 3.

16.01	012.4	Sausages and the like, of meat, meat offal or animal blood.
16.02	012.5	Other prepared or preserved meat or meat offal.
16.03	012.3	Meat extracts and meat juices; fish extracts.
16.04	032.9 (1)	Prepared or preserved fish, including caviar and caviar substitutes.
16.05	032.9 (2)	Crustaceans and molluscs, prepared or preserved.

## Chapter 17

## Sugars and sugar confectionery.

## Notes.

1. — This Chapter does not cover:

- (a) Sugar confectionery containing cocoa (heading No. 18.06);
- (b) Chemically pure sugars (other than sucrose, glucose and lactose) and other products of heading No. 29.43; or
- (c) Medicaments and other products of Chapter 30.

2. — Chemically pure sucrose, whatever its origin, is to be classified in heading No. 17.01.

17.01		Beet sugar and cane sugar, solid.
	001.1	A. Raw sugars.
	001.2	B. Other.
17.02	001.3	Other sugars; sugar syrups; artificial honey (whether or not mixed with natural honey); caramel.
17.03	001.5	Molasses, whether or not decolourised.
17.04	002.9 (1)	Sugar confectionery, not containing cocoa.
17.05	002.9 (2)	Flavoured or coloured sugars, syrups and molasses, but not including fruit juices containing added sugar in any proportion.

## Chapter 18

## Cocoa and cocoa preparations.

## Notes.

1. — This Chapter does not cover the preparations described in heading No. 19.02, 19.08, 22.02, 22.09 or 30.03 containing cocoa or chocolate.
2. — Heading No. 18.06 includes sugar confectionery containing cocoa and, subject to Note 1 of this Chapter, other food preparations containing cocoa.

18.01	071.1	Cocoa beans, whole or broken, raw or roasted.
18.02	001.9 (1)	Cocoa shells, husks, skins and waste.
18.03	071.2 (1)	Cocoa paste (in bulk or in block), whether or not defatted.
18.04	071.2 (2)	Cocoa butter (fat or oil).
18.05	071.3	Cocoa powder, unsweetened.
18.06	071.6	Chocolate and other food preparations containing cocoa.

## Chapter 19

## Preparations of cereals, flour or starch; pastrycooks' products.

## Notes.

1. — This Chapter does not cover:

- (a) Preparations of flour, starch or malt extract, of a kind used as infant food or for dietetic or culinary purposes, containing 50 % or more by weight of cocoa (heading No. 18.06);
- (b) Biscuits or other articles made from flour or from starch, specially prepared for use as animal feeding stuffs (heading No. 23.07); or
- (c) Medicaments and other products of Chapter 30.

2. — In this Chapter the expression "flour" includes the flour of fruits or of vegetables, and products of such flour are to be classified with similar products of cereal flour.

19.01	048.8 (1)	Malt extract.
19.02	048.8 (2)	Preparations of flour, meal, starch or malt extract, of a kind used as infant food or for dietetic or culinary purposes, containing less than 50 % by weight of cocoa.
19.03	048.3	Macaroni, spaghetti and similar products.
19.04	055.4 (1)	Tapioca and sago; tapioca and sago substitutes obtained from potato or other starches.
19.05	048.1 (2)	Prepared foods obtained by the swelling or roasting of cereals or cereal products (puffed rice, corn flakes and similar products).
19.06	048.8 (3)	Communion wafers, empty cachets of a kind suitable for pharmaceutical use, sealing wafers, rice paper and similar products.
19.07	048.4 (1)	Bread, ships' biscuits and other ordinary bakers' wares, not containing added sugar, honey, eggs, fats, cheese or fruit.
19.08	048.4 (2)	Pastry, biscuits, cakes and other fine bakers' wares, whether or not containing cocoa in any proportion.

## Chapter 20

### Preparations of vegetables, fruit or other parts of plants.

#### Notes.

1. — This Chapter does not cover :
  - (a) Vegetables or fruit, prepared or preserved by the processes specified in Chapters 7 and 8; or
  - (b) Fruit jellies, fruit pastes or the like in the form of sugar confectionery (heading No. 17.04) or chocolate confectionery (heading No. 18.06).
2. — The vegetables of headings Nos. 20.01 and 20.02 are those which fall in headings Nos. 07.01 to 07.05 when imported in the states provided for in those headings.
3. — Edible plants, parts of plants and roots of plants conserved in syrup (for example, ginger and angelica) are to be classified with the preserved fruit falling under heading No. 20.06; roasted ground-nuts are also to be classified in heading No. 20.06.
4. — Tomato juice the dry weight content of which is 7 % or more is to be classified under heading No. 20.02.

20.01	055.5 (1)	Vegetables and fruit, prepared or preserved by vinegar or acetic acid, with or without sugar, whether or not containing salt, spices or mustard.
20.02	055.5 (2)	Vegetables prepared or preserved otherwise than by vinegar or acetic acid.
20.03	053.6 (2)	Fruit preserved by freezing, containing added sugar.
20.04	053.2	Fruit, fruit-peel and parts of plants, preserved by sugar (drained, glacé or crystallised).
20.05	053.3	Jams, fruit jellies, marmalades, fruit purée and fruit pastes, being cooked preparations, whether or not containing added sugar.
20.06	053.3	Fruit otherwise prepared or preserved, whether or not containing added sugar or spirit.
20.07	053.5	Fruit juices (including grape must) and vegetable juices, whether or not containing added sugar, but unfermented and not containing spirit.

## Chapter 21

### Miscellaneous edible preparations.

#### Notes.

1. — This Chapter does not cover :
  - (a) Mixed vegetables of heading No. 07.04;
  - (b) Roasted coffee substitutes containing coffee in any proportion (heading No. 09.01);

(c) Spices and other products of headings Nos. 09.04 to 09.10; or

(d) Yeast put up as a medicament and other products of heading No. 30.03.

2. — Extracts of the substitutes referred to in Note 1 (b) above are to be classified in heading No. 21.02.
3. — For the purposes of heading No. 21.05, the expression "homogenised composite food preparations" means preparations of a kind used as infant food or for dietetic purposes, consisting of a finely homogenised mixture of two or more basic ingredients such as meat (including meat offal), fish, vegetables and fruit. For the application of this definition, no account is to be taken of small quantities of any ingredients which may be added to the mixture for seasoning, preservation or other purposes. Such preparations may contain a small quantity of visible pieces of ingredients other than meat, meat offal or fish.

21.01	099.0 (1)	Roasted chicory and other roasted coffee substitutes; extracts, essences and concentrates thereof.
21.02		Extracts, essences or concentrates, of coffee, tea or maté; preparations with a basis of those extracts, essences or concentrates.
	071.3	A. Extracts, essences or concentrates, of coffee, and preparations with a basis of those extracts, essences or concentrates.
	099.0 (2)	B. Other.
21.03	099.0 (3)	Mustard flour and prepared mustard.
21.04	099.0 (4)	Sauces; mixed condiments and mixed seasonings.
21.05	099.0 (5)	Soups and broths, in liquid, solid or powder form; homogenised composite food preparations.
21.06	099.0 (6)	Natural yeasts (active or inactive); prepared baking powders.
21.07	099.0 (9)	Food preparations not elsewhere specified or included.

## Chapter 22

### Beverages, spirits and vinegar.

#### Notes.

1. — This Chapter does not cover :
  - (a) Sea water (heading No. 25.01);
  - (b) Distilled and conductivity water and water of similar purity (heading No. 28.58);
  - (c) Acetic acid of a concentration exceeding 10 % by weight of acetic acid (heading No. 29.14);
  - (d) Medicaments of heading No. 30.03; or
  - (e) Perfumery or toilet preparations (Chapter 33).
2. — For the purposes of headings Nos. 22.08 and 22.09, the alcoholic strength is to be taken to be that shown on test by Gay Lussac's hydrometer at a temperature of 15° C.

22.01	111.8 (1)	Waters, including spa waters and aerated waters; ice and snow.
22.02	111.8 (2)	Lemonade, flavoured spa waters and flavoured aerated waters, and other non-alcoholic beverages, not including fruit and vegetable juices falling within heading No. 20.07.
22.03	112.2	Beer made from malt.
22.04	113.1 (1)	Grape must, in fermentation or with fermentation arrested otherwise than by the addition of alcohol.
22.05	112.1 (3)	Wine of fresh grapes; grape must with fermentation arrested by the addition of alcohol.
22.06	112.1 (5)	Vermouths, and other wines of fresh grapes flavoured with aromatic extracts.
22.07	112.2	Other fermented beverages (for example, cider, perry and mead).
22.08	212.2 (4)	Ethyl alcohol or neutral spirits, undenatured, of a strength of 80° or higher; denatured spirits (including ethyl alcohol and neutral spirits) of any strength.
22.09	112.4	Spirits (other than those of heading No. 22.08); liqueurs and other spirituous beverages; compound alcoholic preparations (known as "concentrated extracts") for the manufacture of beverages.
22.10	099.8 (7)	Vinegar and substitutes for vinegar.

#### Chapter 23

Residues and waste from the food industries; prepared animal fodder.

23.01	081.4	Flours and meals, of meat, offals, fish, crustaceans or molluscs, unfit for human consumption; greaves.
23.02	081.2	Bran, sharps and other residues derived from the sifting, milling or working of cereals or of leguminous vegetables.
23.03	081.8 (3)	Beet-pulp, bagasse and other waste of sugar manufacture; brewing and distilling dregs and waste; residues of starch manufacture and similar residues.
23.04	081.2	Oil-cake and other residues (except dregs) resulting from the extraction of vegetable oils.

23.05	081.8 (4)	Wine lees; argol.
23.06	081.1 (9)	Products of vegetable origin of a kind used for animal food, not elsewhere specified or included.
23.07	081.8 (8)	Sweetened forage; other preparations of a kind used in animal feeding.

#### Chapter 24

##### Tobacco.

24.01	121.8	Unmanufactured tobacco; tobacco refuse.
24.02		Manufactured tobacco; tobacco extracts and essences.
	122.1	A. Cigars and cheroots.
	122.2	B. Cigarettes.
	122.3	C. Other.

#### Section V

##### MINERAL PRODUCTS

#### Chapter 25

Salt; sulphur; earths and stone; plastering materials, lime and cement.

#### Notes.

- Except where the context otherwise requires, the headings of this Chapter are to be taken to apply only to goods which are in the crude state, or which have been washed (even with chemical substances eliminating the impurities without changing the structure of the product), crushed, ground, powdered, levigated, sifted, screened, concentrated by flotation, magnetic separation or other mechanical or physical processes (not including crystallisation) but not calcined or subjected to any further process other than a process specially mentioned in any heading in respect of the goods described therein.
- This Chapter does not cover :
  - Sublimed sulphur, precipitated sulphur or colloidal sulphur (heading No. 28.02);
  - Ferrous earth colours containing 70 % or more by weight of combined iron evaluated as  $Fe_2O_3$  (heading No. 28.23);
  - Medicaments and other products of Chapter 30;
  - Perfumery, cosmetics or toilet preparations of heading No. 33.06;
  - Road and paving setts, curbs and flagstones (heading No. 68.01), mosaic cubes (heading No. 68.02) and roofing, facing and damp course slates (heading No. 68.03);

- (f) Precious or semi-precious stones (heading No. 71.02);  
 (g) Cultured sodium chloride crystals (other than optical elements) weighing not less than 2.5 g each, of heading No. 38.19; optical elements of sodium chloride (heading No. 90.01); or  
 (h) Writing or drawing chalks, tailors' or billiards chalks (heading No. 98.05).

25.01	276.3	Common salt (including rock salt, sea salt and table salt); pure sodium chloride; salt liquors; sea water.
25.02	274.2	Unroasted iron pyrites.
25.03	274.1	Sulphur of all kinds, other than sublimed sulphur, precipitated sulphur and colloidal sulphur.
25.04	276.3 (2)	Natural graphite.
25.05	273.3	Natural sands of all kinds, whether or not coloured, other than metal-bearing sands falling within heading No. 26.01.
25.06	276.5 (1)	Quartz (other than natural sands); quartzite, including quartzite not further worked than roughly split, roughly squared or squared by sawing.
25.07	276.2 (1)	Clay (for example, kaolin and bentonite), andalusite, kyanite and sillimanite, whether or not calcined, but not including expanded clays falling within heading No. 68.07; mullite; chamotte and dinas earths.
25.08	276.9 (1)	Chalk.
25.09	276.9 (2)	Earth colours, whether or not calcined or mixed together; natural micaceous iron oxides.
25.10	271.3	Natural calcium phosphates, natural aluminium calcium phosphates, apatite and phosphatic chalk.
25.11	276.9 (3)	Natural barium sulphate (barytes); natural barium carbonate (witherite), whether or not calcined, other than barium oxide.
25.12	275.2 (2)	Siliceous fossil meals and similar siliceous earths (for example, kieselguhr, tripolite or diatomite), whether or not calcined, of an apparent specific gravity of 1 or less.
25.13	275.2 (3)	Pumice stone; emery; natural corundum, natural garnet and other natural abrasives, whether or not heat-treated.
25.14	273.1 (1)	Slate, including slate not further worked than roughly split, roughly squared or squared by sawing.
25.15	273.1 (2)	Marble, travertine, ecaussine and other calcareous monumental and building stone of an apparent specific gravity of 2.5 or more and alabaster, including such stone not further worked than roughly split, roughly squared or squared by sawing.

25.16	273.1 (2)	Granite, porphyry, basalt, sandstone and other monumental and building stone, including such stone not further worked than roughly split, roughly squared or squared by sawing.
25.17	273.4	Pebbles and crushed or broken stone (whether or not heat-treated), gravel, macadam and tarred macadam, of a kind commonly used for concrete aggregates, for road metalling or for railway or other ballast; flint and shingle, whether or not heat-treated; granules and chippings (whether or not heat-treated) and powder of stones falling within heading No. 25.15 or 25.16.
25.18	276.2 (3)	Dolomite, whether or not calcined, including dolomite not further worked than roughly split, roughly squared or squared by sawing; agglomerated dolomite (including tarred dolomite).
25.19	276.2 (4)	Natural magnesium carbonate (magnesite), whether or not calcined, other than magnesium oxide.
25.20	273.2 (1)	Gypsum; anhydrite; calcined gypsum, and plasters with a basis of calcium sulphate, whether or not coloured, but not including plasters specially prepared for use in dentistry.
25.21	273.2 (2)	Limestone flux and calcareous stone, commonly used for the manufacture of lime or cement.
25.22	461.1	Quicklime, slaked lime and hydraulic lime, other than calcium oxide and hydroxide.
25.23	661.2	Portland cement, ciment fondu, slag cement, supersulphate cement and similar hydraulic cements, whether or not coloured or in the form of clinker.
25.24	276.4	Asbestos.
25.25	276.9 (4)	Meerschäum (whether or not in polished pieces) and amber; agglomerated meerschäum and agglomerated amber, in plates, rods, sticks or similar forms, not worked after moulding; jet.
25.26	276.5 (2)	Mica, including splittings; mica waste.
25.27	276.9 (5)	Natural steatite, including natural steatite not further worked than roughly split, roughly squared or squared by sawing; talc.
25.28	276.5 (3)	Natural cryolite and natural chiolite.
25.29	276.9 (6)	Natural arsenic sulphides.
25.30	276.9 (7)	Crude natural borates and concentrates thereof (calcined or not), but not including borates separated from natural brine; crude natural boric acid containing not more than 85 % of $H_2BO_3$ calculated on the dry weight.
25.31	276.5 (4)	Felspar, leucite, nepheline and nepheline syenite; fluorspar.
25.32	276.9 (9)	Strontianite (whether or not calcined), other than strontium oxide; mineral substances not elsewhere specified or included; broken pottery.

## Chapter 26

## Metallic ores, slag and ash.

## Notes.

1. — This Chapter does not cover :
- (a) Slag and similar industrial waste prepared as macadam (heading No. 25.17);
  - (b) Natural magnesium carbonate (magnesite), whether or not calcined (heading No. 25.19);
  - (c) Basic slag of Chapter 31;
  - (d) Slag wool, rock wool or similar mineral wools (heading No. 68.07);
  - (e) Goldsmiths', silversmiths' and jewellers' sweepings, residues, lemelis and other waste and scrap, of precious metal (heading No. 71.11); or
  - (f) Copper, nickel or cobalt mattes produced by any process of smelting (Section XV).
2. — For the purposes of heading No. 26.01, the term "metallic ores" means minerals of mineralogical species actually used in the metallurgical industry for the extraction of mercury, of the metals of heading No. 28.50 or of the metals of Section XIV or XV, even if they are intended for non-metallurgical purposes. The heading does not, however, include minerals which have been submitted to processes not normal to the metallurgical industry.
3. — Heading No. 26.02 is to be taken to apply only to ash and residues of a kind used in industry either for the extraction of metals or as a basis for the manufacture of chemical compounds of metals.

## 26.01

## Metallic ores and concentrates and roasted iron pyrites.

281.3	A. Iron ore and concentrates (except roasted iron pyrites).
281.4	B. Roasted iron pyrites.
281.1 (1)	C. Copper ore and concentrates.
281.2 (1)	D. Nickel ore and concentrates.
281.3	E. Bauxite and concentrates.
281.4	F. Lead ore and concentrates.
281.5	G. Zinc ore and concentrates.
281.6	H. Tin ore and concentrates.
281.7	K. Manganese ore and concentrates.
281.9 (1)	L. Chromium ore and concentrates.
281.9 (2)	M. Tungsten ore and concentrates.
281.9 (3)	N. Ores and concentrates of titanium, vanadium, molybdenum, tantalum and zirconium.
281.9 (9)	P. Base metal ores and concentrates (other than those falling within sub-headings A to N and H).
281.8 (1)	Q. Ores and concentrates of silver, platinum and other metals of the platinum group.
281.9	R. Ores and concentrates of uranium and thorium.
1.1.2	S. Gold ore.

26.02 276.6 (1) Slag, dross, scalings and similar waste from the manufacture of iron or steel.

26.03 284.0 (1) Ash and residues (other than from the manufacture of iron or steel), containing metals or metallic compounds.

26.04 276.6 (2) Other slag and ash, including kelp.

## Chapter 27

Mineral fuels, mineral oils and products of their distillation;  
bituminous substances; mineral waxes.

## Notes.

1. — This Chapter does not cover :
- (a) Separate chemically defined organic compounds, other than chemically pure methane and propane which are to be classified in heading No. 27.11;
  - (b) Medicaments falling within heading No. 30.03; or
  - (c) Mixed unsaturated hydrocarbons falling within heading No. 33.01, 33.02, 33.04 or 35.07.
2. — Heading No. 27.07 is to be taken to include products similar to those obtained by the distillation of high temperature coal tar but which are obtained by the distillation of low temperature coal tar or other mineral tars, by processing petroleum or by any other process, provided that the weight of the aromatic constituents exceeds that of the non-aromatic constituents.
3. — References in heading No. 27.10 to petroleum oils and oils obtained from bituminous minerals are to be taken to include not only petroleum oils and oils obtained from bituminous minerals but also similar oils, as well as those consisting of mixed unsaturated hydrocarbons, obtained by any process, provided that the weight of the non-aromatic constituents exceeds that of the aromatic constituents.
4. — Heading No. 27.13 is to be taken to include not only paraffin wax and the other products specified therein, but also similar products obtained by synthesis or by other processes.

## 27.01

## Coal; briquettes, ovoids and similar solid fuels manufactured from coal.

321.4	A. Coal.
321.5	B. Other.
27.02 321.6	Lignite, whether or not agglomerated.
27.03 321.7	Peat (including peat litter), whether or not agglomerated.
27.04 321.8	Coke and semi-coke of coal, of lignite or of peat.
27.05 513.2 (8)	Retort carbon.
27.05bis 341.3	Coal gas, water gas, producer gas and similar gases. (Optional heading).
27.06 321.1	Tar distilled from coal, from lignite or from peat, and other mineral tars, including partially distilled tars and blends of pitch with creosote oils or with other coal tar distillation products.
27.07 321.4	Oils and other products of the distillation of high temperature coal tar; similar products as defined in Note 2 to this Chapter.
27.08	Pitch and pitch coke, obtained from coal tar or from other mineral tars.
322.9 (2)	A. Pitch.
322.9 (3)	B. Pitch coke.

27.09	321.0 (1)	Petroleum oils and oils obtained from bituminous minerals, crude.
27.10		Petroleum oils and oils obtained from bituminous minerals, other than crude; preparations not elsewhere specified or included, containing not less than 70 % by weight of petroleum oils or of oils obtained from bituminous minerals, these oils being the basic constituents of the preparations.
	321.0 (2)	A. Partly refined petroleum, including topped crudes.
	322.1	B. Motor spirit.
	322.2	C. Kerosene (including jet fuel) and white spirit.
	322.3	D. Distillate fuels.
	322.4	E. Residual fuel oils.
	322.5 (1)	F. Lubricating oils and greases.
	322.9 (1)	G. Other.
27.11	341.1	Petroleum gases and other gaseous hydrocarbons.
27.12	322.6 (1)	Petroleum jelly.
27.13	322.6 (2)	Paraffin wax, micro-crystalline wax, slack wax, ozokerite, lignite wax, peat wax and other mineral waxes, whether or not coloured.
27.14		Petroleum bitumen, petroleum coke and other residues of petroleum oils or of oils obtained from bituminous minerals.
	322.9 (4)	A. Petroleum coke.
	322.9 (5)	B. Other.
27.15	276.1	Bitumen and asphalt, natural; bituminous shale, asphaltic rock and tar sands.
27.16	322.9 (6)	Bituminous mixtures based on natural asphalt, on natural bitumen, on petroleum bitumen, on mineral tar or on mineral tar pitch (for example, bituminous mastics, cut-backs).
27.17	351.0	Electric current. (Optional heading).

## Section VI

### PRODUCTS OF THE CHEMICAL AND ALLIED INDUSTRIES

#### Notes.

- (a) Goods (other than radio-active ores) answering to a description in heading No. 28.50 or 28.51 are to be classified in those headings and in no other heading of the Nomenclature.  
(b) Subject to paragraph (a) above, goods answering to a description in heading No. 28.49 or 28.52 are to be classified in those headings and in no other heading of this Section.
- Subject to Note 1 above, goods classifiable within heading No. 30.03, 30.04, 30.05, 32.09, 33.06, 35.06, 37.08 or 38.11 by reason of being put up in measured doses or for sale by retail are to be classified in those headings and in no other heading of the Nomenclature.

## Chapter 28

### Inorganic chemicals; organic and inorganic compounds of precious metals, of rare earth metals, of radio-active elements and of isotopes.

#### Notes.

- Except where their context or these Notes otherwise require, the headings of this Chapter are to be taken to apply only to :  
(a) Separate chemical elements and separate chemically defined compounds, whether or not containing impurities;  
(b) Products mentioned in (a) above dissolved in water;  
(c) Products mentioned in (a) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for some types of use rather than for general use;  
(d) The products mentioned in (a), (b) or (c) above with an added stabiliser necessary for their preservation or transport;  
(e) The products mentioned in (a), (b), (c) or (d) above with an added anti-dusting agent or a colouring substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for some types of use rather than for general use.
- In addition to dithionites stabilised with organic substances and to sulphonylates (heading No. 28.36), carbonates and percarbonates of inorganic bases (heading No. 28.42), cyanides and complex cyanides of inorganic bases (heading No. 28.43), fulminates, cyanates and thiocyanates, of inorganic bases (heading No. 28.44), organic products included in headings Nos. 28.49 to 28.52 and metal and non-metal carbides (heading No. 28.56), only the following compounds of carbon are also to be classified in the present Chapter :  
(a) Oxides of carbon; hydrocyanic, fulminic, isocyanic, thiocyanic and other simple or complex cyanogen acids (heading No. 28.13);  
(b) Oxyhalides of carbon (heading No. 28.14);  
(c) Carbon disulphide (heading No. 28.15);  
(d) Thiocarbonates, selenocarbonates, tellurocarbonates, selenocyanates, tellurocyanates, tetrathiocyanatodiamminochromates (reineckates) and other complex cyanates, of inorganic bases (heading No. 28.48);  
(e) Solid hydrogen peroxide (heading No. 28.54), carbon oxysulphide, thiocarbonyl halides, cyanogen, cyanogen halides and cyanamide and its metallic derivatives (heading No. 28.58) other than calcium cyanamide containing not more than 25 % by weight of nitrogen, calculated on the dry anhydrous product (Chapter 31).
- This Chapter does not cover :  
(a) Sodium chloride or other mineral products falling within Section V;  
(b) Organo-inorganic compounds other than those mentioned in Note 2 above;  
(c) Products mentioned in Note 1, 2, 3 or 4 of Chapter 31;  
(d) Inorganic products of a kind used as luminophores, falling within heading No. 32.07;  
(e) Artificial graphite (heading No. 38.01); products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades, of heading No. 38.17; ink removers put up in packings for sale by retail, of heading No. 38.19; cultured crystals (other than optical elements) weighing not less than 2.5 g each, of magnesium oxide or of the halides of the alkali or of the alkaline-earth metals, of heading No. 38.19;  
(f) Precious or semi-precious stones (natural, synthetic or reconstructed) or dust or powder of such stones (headings Nos. 71.02 to 71.04), and precious metals falling within Chapter 71;  
(g) The metals, whether or not chemically pure, falling within any heading of Section XV; or  
(h) Optical elements, for example, of magnesium oxide or of the halides of the alkali or of the alkaline-earth metals (heading No. 90.01).
- Chemically defined complex acids consisting of a non-metal acid falling within sub-Chapter II and a metallic acid falling within sub-Chapter IV are to be classified in heading No. 28.13.
- Headings Nos. 28.29 to 28.48 inclusive are to be taken to apply only to metallic or ammonium salts or peroxy salts.  
Except where the context otherwise requires, double or complex salts are to be classified in heading No. 28.48.

6. — Heading No. 28.50 is to be taken to apply only to :

- (a) The following fissile chemical elements and isotopes : natural uranium and uranium isotopes 233 and 235, plutonium and plutonium isotopes;
- (b) The following radio-active chemical elements : technetium, promethium, polonium, astatine, radon, francium, radium, actinium, protactinium, neptunium, americium and other elements of higher atomic number;
- (c) All other radio-active isotopes, natural or artificial, including those of the precious metals and of the base metals of Sections XIV and XV;
- (d) Compounds, inorganic or organic, of these elements or isotopes, whether or not chemically defined and whether or not mixed together;
- (e) Alloys (other than ferro-uranium), dispersions and cermets, containing any of these elements or isotopes or their inorganic or organic compounds;
- (f) Nuclear reactor cartridges, spent or irradiated.

The term "isotopes" mentioned above and in headings Nos. 28.50 and 28.51 includes "enriched isotopes", but does not include chemical elements which occur in nature as pure isotopes nor uranium depleted in U 235.

7. — Heading No. 28.55 is to be taken to include ferro-phosphorus containing 15 % or more by weight of phosphorus and phosphor copper containing more than 8 % by weight of phosphorus.

8. — Chemical elements (for example, silicon and selenium) doped for use in electronics are to be classified in the present Chapter, provided that they are in forms unworked as drawn, or in the form of cylinders or rods. When cut in the form of discs, wafers or similar forms, they fall in heading No. 38.19.

#### I. — CHEMICAL ELEMENTS

28.01 Halogens (fluorine, chlorine, bromine and iodine).

- 512.2 (1) A. Chlorine.
- 512.2 (2) B. Other.

28.02 512.2 (3) Sulphur, sublimed or precipitated; colloidal sulphur.

28.03 512.2 (7) Carbon (including carbon black).

28.04 Hydrogen, rare gases and other non-metals.

- 512.1 (1) A. Oxygen.
- 512.1 (2) B. Nitrogen.
- 512.1 (3) C. Hydrogen and rare gases.
- 512.2 (4) D. Other.

28.05 Alkali and alkaline-earth metals; rare earth metals, yttrium and scandium and intermixtures or interalloys thereof; mercury.

- 512.2 (5) A. Mercury.
- 512.2 (6) B. Other.

#### II. — INORGANIC ACIDS AND OXYGEN COMPOUNDS OF NON-METALS

28.06 512.3 (1) Hydrochloric acid and chlorosulphuric acid.

28.07 512.3 (2) Sulphur dioxide.

28.08 512.3 (3) Sulphuric acid; oleum.

28.09 512.3 (4) Nitric acid; sulphonitric acids.

28.10 512.3 (5) Phosphorus pentoxide and phosphoric acids (meta-, ortho- and pyro-).

28.11 512.3 (6) Arsenic trioxide, arsenic pentoxide and acids of arsenic.

28.12 512.3 (7) Boric oxide and boric acid.

28.13 512.3 (8) Other inorganic acids and oxygen compounds of non-metals (excluding water).

#### III. — HALOGEN AND SULPHUR COMPOUNDS OF NON-METALS

28.14 512.4 (1) Halides, oxyhalides and other halogen compounds of non-metals.

28.15 512.4 (2) Sulphides of non-metals; phosphorus trisulphide.

#### IV. — INORGANIC BASES AND METALLIC OXIDES, HYDROXIDES AND PEROXIDES

28.16 512.6 (1) Ammonia, anhydrous or in aqueous solution.

28.17 Sodium hydroxide (caustic soda); potassium hydroxide (caustic potash); peroxides of sodium or potassium.

- 512.6 (2) A. Sodium hydroxide (caustic soda).
- 512.6 (3) B. Other.

28.18 512.6 (4) Oxides, hydroxides and peroxides, of strontium, barium or magnesium.

28.19 512.5 (1) Zinc oxide and zinc peroxide.

28.20 Aluminium oxide and hydroxide; artificial corundum.

- 512.6 (5) A. Aluminium oxide and hydroxide.
- 512.6 (6) B. Artificial corundum.

28.21 512.6 (7) Chromium oxides and hydroxides.

28.22 512.5 (2) Manganese oxides.

28.23 512.5 (3) Iron oxides and hydroxides; earth colours containing 70 % or more by weight of combined iron evaluated as  $Fe_2O_3$ .

28.24 512.5 (4) Cobalt oxides and hydroxides.

28.25 512.5 (5) Titanium oxides.

28.26 512.6 (8) Tin oxides (stannous oxide and stannic oxide).

28.27 512.5 (6) Lead oxides; red lead and orange lead.

28.28 513.6 (9) Hydrazine and hydroxylamine and their inorganic salts; other inorganic bases and metallic oxides, hydroxides and peroxides.

V. — METALLIC SALTS AND PEROXSALTS, OF INORGANIC ACIDS

28.29 514.1 (1) Fluorides; fluorosilicates, fluoroborates and other complex fluorine salts.

28.30 514.1 (2) Chlorides and oxychlorides.

28.31 514.1 (3) Chlorites and hypochlorites.

28.32 514.1 (4) Chlorates and perchlorates.

28.33 514.1 (5) Bromides, oxybromides, bromates and perbromates, and hypobromites.

28.34 514.1 (6) Iodides, oxyiodides, iodates and periodates.

28.35 514.2 (1) Sulphides; polysulphides.

28.36 514.2 (2) Dithionites, including those stabilised with organic substances; sulphonylates.

28.37 514.2 (3) Sulphites and thiosulphates.

28.38 514.2 (4) Sulphates (including alums) and persulphates.

28.39 514.2 (5) Nitrites and nitrates.

28.40 514.2 (6) Phosphites, hypophosphites and phosphates.

28.41 514.2 (7) Arsenites and arsenates.

28.42 Carbonates and percarbonates; commercial ammonium carbonate containing ammonium carbamate.

514.2 (8) A. Sodium carbonate neutral.

514.2 (9) B. Other.

28.43 514.3 (1) Cyanides and complex cyanides.

28.44 514.3 (2) Fulminates, cyanates and thiocyanates.

28.45 514.3 (3) Silicates; commercial sodium and potassium silicates.

28.46 514.3 (4) Borates and perborates.

28.47 514.3 (5) Salts of metallic acids (for example, chromates, permanganates, stannates).

28.48 514.3 (6) Other salts and peroxysalts of inorganic acids, but not including azides.

VI. — MISCELLANEOUS

28.49 514.3 (7) Colloidal precious metals; amalgams of precious metals; salts and other compounds, inorganic or organic, of precious metals, including albuminates, proteinates, tannates and similar compounds, whether or not chemically defined.

28.50 515.1 Fissile chemical elements and isotopes; other radio-active chemical elements and radio-active isotopes; compounds, inorganic or organic, of such elements or isotopes, whether or not chemically defined; alloys, dispersions and cermets, containing any of these elements, isotopes or compounds.

28.51 515.2 Isotopes and their compounds, inorganic or organic, whether or not chemically defined, other than isotopes and compounds falling within heading No. 28.50.

28.52 515.3 Compounds, inorganic or organic, of thorium, of uranium depleted in U 235, of rare earth metals, of yttrium or of scandium, whether or not mixed together.

28.53 514.9 (1) Liquid air (whether or not rare gases have been removed); compressed air.

28.54 514.9 (2) Hydrogen peroxide (including solid hydrogen peroxide).

28.55 514.9 (3) Phosphides.

28.56 Carbides (for example, silicon carbide, boron carbide, metal carbides).

514.9 (4) A. Calcium carbide.

514.9 (5) B. Other.

28.57 514.9 (6) Hydrides, nitrides and azides, silicides and borides.

28.58 514.9 (9) Other inorganic compounds (including distilled and conductivity water and water of similar purity); amalgams, except amalgams of precious metals.

Chapter 29

Organic chemicals.

Notes.

1. — Except where the context otherwise requires, the headings of this Chapter are to be taken to apply only to :

- Separate chemically defined organic compounds, whether or not containing impurities;
- Mixtures of two or more isomers of the same organic compound (whether or not containing impurities), except mixtures of acyclic hydrocarbon isomers (other than stereoisomers), whether or not saturated (Chapter 27);
- The products of headings Nos. 29.38 to 29.42 inclusive, or the sugar ethers and sugar esters, and their salts, of heading No. 29.43, or the products of heading No. 29.44, whether or not chemically defined;

- (d) Products mentioned in (a), (b) or (c) above dissolved in water;
- (e) Products mentioned in (a), (b) or (c) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for some types of use rather than for general use;
- (f) The products mentioned in (a), (b), (c), (d) or (e) above with an added stabiliser necessary for their preservation or transport;
- (g) The products mentioned in (a), (b), (c), (d), (e) or (f) above with an added anti-dusting agent or a colouring or odouriferous substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for some types of use rather than for general use;
- (h) Diazonium salts, arylides used as couplers for these salts, and fast bases for azoic dyes, diluted to standard strengths.
2. — This Chapter does not cover:
- (a) Goods falling within heading No. 15.04 or glycerol (heading No. 15.11);
- (b) Ethyl alcohol (heading No. 22.08 or 22.09);
- (c) Methane and propane (heading No. 27.11);
- (d) The compounds of carbon mentioned in Note 2 of Chapter 28;
- (e) Urea (heading No. 31.02 or 31.05 as the case may be);
- (f) Colouring matter of vegetable or animal origin (heading No. 32.04); synthetic organic dyestuffs (including pigment dyestuffs), synthetic organic products of a kind used as luminophores and products of the kind known as optical bleaching agents substantive to the fibre and natural indigo (heading No. 32.05) and dyes or other colouring matter put up in forms or packings of a kind sold by retail (heading No. 32.09);
- (g) Metaldehyde, hexamethylenetetramine and similar substances put up in forms (for example, tablets, sticks or similar forms) for use as fuels, and liquid fuels of a kind used in mechanical lighters in containers of a capacity not exceeding 300 cm<sup>3</sup> (heading No. 36.08);
- (h) Products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades, of heading No. 38.17; ink removers put up in packings for sale by retail, of heading No. 38.19; or
- (i) Optical elements, for example, of ethylenediamine tartrate (heading No. 90.01).
3. — Goods which could be included in two or more of the headings of this Chapter are to be classified in the latest of those headings.
4. — In headings Nos. 29.03 to 29.05, 29.07 to 29.10 and 29.12 to 29.21 inclusive, any reference to halogenated, sulphonated, nitrated or nitrosated derivatives is to be taken to include a reference to any combinations of these derivatives (for example, sulphohalogenated, nitrohalogenated, nitrosulphonated and nitrosulphohalogenated derivatives).
- Nitro and nitroso groups are not to be taken as nitrogen-functions for the purpose of heading No. 29.30.
5. — (a) The esters of acid-function organic compounds falling within sub-Chapters I to VII with organic compounds of these sub-Chapters are to be classified with that compound which is classified in the heading placed last in the sub-Chapters.
- (b) Esters of ethyl alcohol or glycerol with acid-function organic compounds of sub-Chapters I to VII are to be classified with the corresponding acid-function compounds.
- (c) The salts of the esters referred to in paragraph (a) or (b) above with inorganic bases are to be classified with the corresponding esters.
- (d) The salts of other acid- or phenol-function organic compounds falling within sub-Chapters I to VII with inorganic bases are to be classified with the corresponding acid- or phenol-function organic compounds.
- (e) Halides of carboxylic acids are to be classified with the corresponding acids.
6. — The compounds of headings Nos. 29.31 to 29.34 are organic compounds the molecules of which contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other non-metals or of metals (such as sulphur, arsenic, mercury or lead) directly linked to carbon atoms.
- Heading No. 29.31 (organo-sulphur compounds) and heading No. 29.34 (other organo-inorganic compounds) are to be taken not to include sulphonated or halogenated derivatives (including compound derivatives) which, apart from hydrogen, oxygen and nitrogen, only have directly linked to carbon the atoms of sulphur and of halogens which give them their nature of sulphonated or halogenated derivatives (or compound derivatives).
7. — Heading No. 29.35 (heterocyclic compounds) is to be taken not to include internal ethers, internal hemiacetals, methylene ethers of orthodihydric phenols, epoxides with three or four member rings, cyclic acetals, cyclic polymers of aldehydes, of thioaldehydes or of aldimines, anhydrides of polybasic acids, cyclic esters of polyhydric alcohols with polybasic acids, cyclic ureides and cyclic thioureides, imides of polybasic acids, hexamethylenetetramine and trimethylenetrinitramine.

I. — HYDROCARBONS AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES

29.01 Hydrocarbons.

- 512.1 (1) A. Styrene.
- 512.1 (2) B. Other.

29.02 512.1 (3) Halogenated derivatives of hydrocarbons.

29.03 512.1 (4) Sulphonated, nitrated or nitrosated derivatives of hydrocarbons.

II. — ALCOHOLS AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES

29.04 Acyclic alcohols and their halogenated, sulphonated, nitrated or nitrosated derivatives.

- 512.2 (1) A. Methanol (methyl alcohol).
- 512.2 (2) B. Other.

29.05 512.2 (3) Cyclic alcohols and their halogenated, sulphonated, nitrated or nitrosated derivatives.

III. — PHENOLS, PHENOL-ALCOHOLS, AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES

29.06 512.2 (7) Phenols and phenol-alcohols.

29.07 512.2 (8) Halogenated, sulphonated, nitrated or nitrosated derivatives of phenols or phenol-alcohols.

IV. — ETHERS, ALCOHOL PEROXIDES, ETHER PEROXIDES, EPOXIDES WITH A THREE OR FOUR MEMBER RING, ACETALS AND HEMIACETALS, AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES

29.08 512.3 (1) Ethers, ether-alcohols, ether-phenols, ether-alcohol-phenols, alcohol peroxides and ether peroxides, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.09 512.3 (2) Epoxides, epoxyalcohols, epoxyphenols and epoxyethers, with a three or four member ring, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.10 512.3 (3) Acetals and hemiacetals and single or complex oxygen-function acetals and hemiacetals, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

V. — ALDEHYDE-FUNCTION COMPOUNDS

29.11 512.4 (1) Aldehydes, aldehyde-alcohols, aldehyde-ethers, aldehyde-phenols and other single or complex oxygen-function aldehydes; cyclic polymers of aldehydes; paraformaldehyde.

29.12 512.4 (2) Halogenated, sulphonated, nitrated or nitrosated derivatives of products falling within heading No. 29.11.

VI. — KETONE-FUNCTION COMPOUNDS AND QUINONE-FUNCTION COMPOUNDS

29.13 512.4 (3) Ketones, ketone-alcohols, ketone-phenols, ketone-aldehydes, quinones, quinone-alcohols, quinone-phenols, quinone-aldehydes and other single or complex oxygen-function ketones and quinones, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

VII. — CARBOXYLIC ACIDS, AND THEIR ANHYDRIDES, HALIDES, PEROXIDES AND PERACIDS, AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES

29.14 512.5 (1) Monocarboxylic acids and their anhydrides, halides, peroxides and peracids, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.15 512.5 (2) Polycarboxylic acids and their anhydrides, halides, peroxides and peracids, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.16 512.5 (3) Carboxylic acids with alcohol, phenol, aldehyde or ketone function and other single or complex oxygen-function carboxylic acids and their anhydrides, halides, peroxides and peracids, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

VIII. — INORGANIC ESTERS AND THEIR SALTS, AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES

29.17 512.6 (1) Sulphuric esters and their salts, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.18 512.6 (2) Nitrous and nitric esters, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.19 512.6 (3) Phosphoric esters and their salts, including lactophosphates, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.20 512.6 (4) Carbonic esters and their salts, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

29.21 512.6 (5) Other esters of mineral acids (excluding halides) and their salts, and their halogenated, sulphonated, nitrated or nitrosated derivatives.

IX. — NITROGEN-FUNCTION COMPOUNDS

29.22 512.7 (1) Amine-function compounds.

29.23 512.7 (2) Single or complex oxygen-function amino-compounds.

29.24 512.7 (3) Quaternary ammonium salts and hydroxides; lecithins and other phospho-aminolipins.

29.25 512.7 (4) Carboxamide-function compounds; amide-function compounds of carbonic acid.

29.26 512.7 (5) Carboxyimide-function compounds (including ortho-benzoic sulphimide and its salts) and imine-function compounds (including hexamethylene-tetramine and trimethylenetrinitramine).

29.27 512.7 (6) Nitrile-function compounds.

29.28 512.7 (7) Diazo-, azo- and azoxy-compounds.

29.29 512.7 (8) Organic derivatives of hydrazine or of hydroxylamine.

29.30 512.7 (9) Compounds with other nitrogen-functions.

X. — ORGANO-INORGANIC COMPOUNDS AND HETEROCYCLIC COMPOUNDS

29.31 512.8 (1) Organo-sulphur compounds.

29.32 512.8 (2) Organo-arsenic compounds.

29.33 512.8 (3) Organo-mercury compounds.

29.34 512.8 (4) Other organo-inorganic compounds.

29.35 512.8 (5) Heterocyclic compounds; nucleic acids.

29.36 512.8 (6) Sulphonamides.

29.37 512.8 (7) Sultones and sultams.

XI. — PROVITAMINS, VITAMINS, HORMONES AND ENZYMES, NATURAL OR REPRODUCED BY SYNTHESIS

29.38 541.1 Provitamins and vitamins, natural or reproduced by synthesis (including natural concentrates), derivatives thereof used primarily as vitamins, and intermixtures of the foregoing, whether or not in any solvent.

29.39 541.2 Hormones, natural or reproduced by synthesis; derivatives thereof, used primarily as hormones; other steroids used primarily as hormones.

29.40 512.9 (1) Enzymes.

XII. — GLYCOSIDES AND VEGETABLE ALKALOIDS, NATURAL OR REPRODUCED BY SYNTHESIS, AND THEIR SALTS, ETHERS, ESTERS AND OTHER DERIVATIVES		
29.41	541.6 (1)	Glycosides, natural or reproduced by synthesis, and their salts, ethers, esters and other derivatives.
29.42	541.4	Vegetable alkaloids, natural or reproduced by synthesis, and their salts, ethers, esters and other derivatives.
XIII. — OTHER ORGANIC COMPOUNDS		
29.43	512.9 (2)	Sugars, chemically pure, other than sucrose, glucose and lactose; sugar ethers and sugar esters, and their salts, other than products of headings Nos. 29.39, 29.41 and 29.42.
29.44	541.3	Antibiotics.
29.45	512.9 (9)	Other organic compounds.

#### Chapter 30

#### Pharmaceutical products.

##### Notes.

1. — For the purposes of heading No. 30.03, "medicaments" means goods (other than foods or beverages such as dietetic, diabetic or fortified foods, tonic beverages, xpa water) not falling within heading No. 30.02 or 30.04 which are either:
- Products comprising two or more constituents which have been mixed or compounded together for therapeutic or prophylactic uses; or
  - Unmixed products suitable for such uses put up in measured doses or in forms or in packings of a kind sold by retail for therapeutic or prophylactic purposes.

For the purposes of these provisions and of Note 3 (d) to this Chapter, the following are to be treated:

- As unmixed products:
    - Unmixed products dissolved in water;
    - All goods falling in Chapter 28 or 29; and
    - Simple vegetable extracts falling in heading No. 13.03, merely standardised or dissolved in any solvent;
  - As products which have been mixed:
    - Colloidal solutions and suspensions (other than colloidal sulphur);
    - Vegetable extracts obtained by the treatment of mixtures of vegetable materials; and
    - Salts and concentrates obtained by evaporating natural mineral waters.
2. — The heading of this Chapter are to be taken not to apply to:
- Aqueous distillates and aqueous solutions of essential oils, suitable for medicinal uses (heading No. 33.05);
  - Dentifrices of all kinds, including those having therapeutic or prophylactic properties, which are to be considered as falling within heading No. 33.06; or
  - Soap or other products of heading No. 34.01 containing added medicaments.

3. — Heading No. 30.05 is to be taken to apply, and to apply only, to:

- Sterile surgical catgut and similar sterile suture materials;
- Sterile laminaria and sterile laminaria tents;
- Sterile absorbable surgical haemostatics;
- Opacifying preparations for X-ray examinations and diagnostic reagents (excluding those of heading No. 30.02) designed to be administered to the patient, being unmixed products put up in measured doses or products consisting of two or more products which have been mixed or compounded together for such uses;
- Blood-grouping reagents;
- Dental cements and other dental fillings; and
- First-aid boxes and kits.

30.01	541.6 (2)	Organo-therapeutic glands or other organs, dried, whether or not powdered; organo-therapeutic extracts of glands or other organs or of their secretions; other animal substances prepared for therapeutic or prophylactic uses, not elsewhere specified or included.
30.02	541.6 (3)	Antisera; microbial vaccines, toxins, microbial cultures (including ferments but excluding yeasts) and similar products.
30.03	541.7	Medicaments (including veterinary medicaments).
30.04	541.9 (1)	Wadding, gauze, bandages and similar articles (for example, dressings, adhesive plasters, poultices), impregnated or coated with pharmaceutical substances or put up in retail packings for medical or surgical purposes, other than goods specified in Note 3 to this Chapter.
30.05	541.9 (9)	Other pharmaceutical goods.

#### Chapter 31

#### Fertilisers.

##### Notes.

1. — Heading No. 31.02 is to be taken to apply, and to apply only, to the following goods, provided that they are not put up in the forms or packings described in heading No. 31.05:

(A) Goods which answer to one or other of the descriptions given below:

- Sodium nitrate containing not more than 16.3 % by weight of nitrogen;
- Ammonium nitrate, whether or not pure;
- Ammonium sulphonitrate, whether or not pure;
- Ammonium sulphate, whether or not pure;
- Calcium nitrate containing not more than 16 % by weight of nitrogen;
- Calcium nitrate-magnesium nitrate, whether or not pure;
- Calcium cyanamide containing not more than 25 % by weight of nitrogen, whether or not treated with oil;
- Urea, whether or not pure.

(B) Fertilisers consisting of any of the goods described in (A) above, but without quantitative criteria, mixed together.

(C) Fertilisers consisting of ammonium chloride or of any of the goods described in (A) or (B) above, but without quantitative criteria, mixed with chalk, gypsum or other inorganic non-fertilising substances.

- (D) Liquid fertilisers consisting of the goods of sub-paragraphs 1 (A) (ii) or (viii) above, or of mixtures of those goods, in an aqueous or liquid ammonia solution.
2. — Heading No. 31.03 is to be taken to apply, and to apply only, to the following goods, provided that they are not put up in the forms or packings described in heading No. 31.05 :
- (A) Goods which answer to one or other of the descriptions given below :
- Basic slag;
  - Disintegrated (calcined) calcium phosphates (thermophosphates and fused phosphates) and calcined natural aluminium calcium phosphates;
  - Superphosphates (single, double or triple);
  - Calcium hydrogen phosphate containing not less than 0.2 % by weight of fluorine.
- (B) Fertilisers consisting of any of the goods described in (A) above, but without quantitative criteria, mixed together.
- (C) Fertilisers consisting of any of the goods described in (A) or (B) above, but without quantitative criteria, mixed with chalk, gypsum or other inorganic non-fertilising substances.
3. — Heading No. 31.04 is to be taken to apply, and to apply only, to the following goods, provided that they are not put up in the forms or packings described in heading No. 31.05 :
- (A) Goods which answer to one or other of the descriptions given below :
- Crude natural potassium salts (for example, carnallite, kainite and sylvinit);
  - Crude potassium salts obtained by the treatment of residues of beet molasses;
  - Potassium chloride, whether or not pure, except as provided in Note 6 (c) below;
  - Potassium sulphate containing not more than 52 % by weight of  $K_2O$ ;
  - Magnesium sulphate-potassium sulphate containing not more than 30 % by weight of  $K_2O$ .
- (B) Fertilisers consisting of any of the goods described in (A) above, but without quantitative criteria, mixed together.
4. — Monoammonium and diammonium orthophosphates, whether or not pure, and mixtures thereof, are to be classified in heading No. 31.05.
5. — For the purposes of the quantitative criteria specified in Notes 1 (A), 2 (A) and 3 (A) above, the calculation is to be made on the dry anhydrous product.
6. — This Chapter does not cover :
- Animal blood of heading No. 05.15;
  - Separate chemically defined compounds (other than those answering to the descriptions in Note 1 (A), 2 (A), 3 (A) or 4 above); or
  - Cultured potassium chloride crystals (other than optical elements) weighing not less than 2.5 g each, of heading No. 38.19; optical elements of potassium chloride (heading No. 90.01).

31.01	271.1	Guano and other natural animal or vegetable fertilisers, whether or not mixed together, but not chemically treated.
31.02		Mineral or chemical fertilisers, nitrogenous.
	271.2	A. Sodium nitrate, natural.
	561.1	B. Other.
31.03		Mineral or chemical fertilisers, phosphatic.
	561.2 (1)	A. Basic slag.
	561.2 (9)	B. Other.

31.04		Mineral or chemical fertilisers, potassic.
	271.4	A. Potassium salts, crude natural.
	561.3	B. Other.
31.05	561.9	Other fertilisers; goods of the present Chapter in tablets, lozenges and similar prepared forms or in packings of a gross weight not exceeding 10 kg.

## Chapter 32

**Tanning and dyeing extracts; tannins and their derivatives; dyes, colours, paints and varnishes; putty, fillers and stoppings; inks.**

### Notes.

- This Chapter does not cover :
  - Separate chemically defined elements and compounds (except those falling within heading No. 32.04 or 32.05, inorganic products of a kind used as luminophores (heading No. 32.07), and also dyes or other colouring matter in forms or packings of a kind sold by retail falling within heading No. 32.09); or
  - Tannates and other tannin derivatives of products falling within headings Nos. 29.38 to 29.42, 29.44 or 35.01 to 35.04.
- Heading No. 32.05 is to be taken to include mixtures of stabilised diazonium salts and coupling compounds for the production of insoluble azoic dyestuffs on the fibre.
- Headings Nos. 32.05, 32.06 and 32.07 are to be taken to apply also to preparations based on, respectively, synthetic organic dyestuffs (including pigment dyestuffs), colour lakes and other colouring matter, of a kind used for colouring in the mass artificial plastics, rubber or similar materials or as ingredients in preparations for printing textiles. The headings are not to be applied, however, to prepared pigments falling within heading No. 32.09.
- Heading No. 32.09 is to be taken to include solutions (other than collodions) consisting of any of the products specified in headings Nos. 39.01 to 39.06 in volatile organic solvents if, and only if, the weight of the solvent exceeds 50 % of the weight of the solution.
- The expression "colouring matter" in this Chapter does not include products of a kind used as extenders in oil paints, whether or not they are also suitable for colouring distempers.
- The expression "stamping foils" in heading No. 32.09 is to be taken to apply only to products of a kind used for printing, for example, book covers or hat bands, and consisting of :
  - Thin sheets composed of metallic powder (including powder of precious metal), or pigment, agglomerated with glue, gelatin or other binder; or
  - Metal (for example, gold or aluminium) or pigment, deposited on paper, artificial plastic material or other support.

32.01	532.4	Tanning extracts of vegetable origin.
32.02	532.5	Tannins (tannic acids), including water-extracted gall-nut tannin, and their salts, ethers, esters and other derivatives.
32.03	532.3	Synthetic organic tanning substances, and inorganic tanning substances; tanning preparations, whether or not containing natural tanning materials; enzymatic preparations for pre-tanning (for example, of enzymatic, pancreatic, or bacterial origin).

32.04	532.1	Colouring matter of vegetable origin (including dyewood extract and other vegetable dyeing extracts, but excluding indigo) or of animal origin.
32.05	531.9 (1)	Synthetic organic dyestuffs (including pigment dyestuffs); synthetic organic products of a kind used as luminophores; products of the kind known as optical bleaching agents, substantive to the fibre; natural indigo.
32.06	531.9 (2)	Colour lakes.
32.07	532.1	Other colouring matter; inorganic products of a kind used as luminophores.
32.08	532.2 (1)	Prepared pigments, prepared opacifiers and prepared colours, vitrifiable enamels and glazes, liquid lustres and similar products, of the kind used in the ceramic, enamelling and glass industries; engobes (slips); glass frit and other glass, in the form of powder, granules or flakes.
32.09	532.3 (2)	Varnishes and lacquers; distempers; prepared water pigments of the kind used for finishing leather; paints and enamels; pigments in linseed oil, white spirit, spirits of turpentine, varnish or other paint or enamel media; stamping foils; dyes or other colouring matter in forms or packings of a kind sold by retail.
32.10	532.3 (3)	Artists', students' and signboard painters' colours, modifying tints, amusement colours and the like, in tablets, tubes, jars, bottles, pans or in similar forms or packings, including such colours in sets or outfits, with or without brushes, palettes or other accessories.
32.11	532.3 (4)	Prepared driers.
32.12	532.3 (5)	Glaziers' putty; grafting putty; painters' fillings; non-refractory surfacing preparations; stopping, sealing and similar mastics, including resin mastics and cements.
32.13		Writing ink, printing ink and other inks.
	532.2	A. Printing ink.
	532.3 (1)	B. Other.

#### Chapter 33

**Essential oils and resinoids; perfumery, cosmetics and toilet preparations.**

#### Notes.

1. — This Chapter does not cover :
  - (a) Compound alcoholic preparations (known as "concentrated extracts"), for the manufacture of beverages, of heading No. 22.09;
  - (b) Soap and other products falling within heading No. 34.01; or
  - (c) Spirits of turpentine or other products falling within heading No. 38.07.

2. — Heading No. 33.06 is to be taken to apply, *inter alia*, to :

- (a) Prepared room deodorisers, whether or not perfumed;
- (b) Products, whether or not mixed (other than those of heading No. 33.05), suitable for use as perfumery, cosmetics or toilet preparations or as room deodorisers, put up in packings of a kind sold by retail for such use.

33.01	331.1	Essential oils (terpeneless or not); concretes and absolutes; resinoids.
33.02	331.2 (1)	Terpenic by-products of the deterpenation of essential oils.
33.03	331.2 (2)	Concentrates of essential oils in fats, in fixed oils, or in waxes or the like, obtained by cold absorption or by maceration.
33.04	331.2 (3)	Mixtures of two or more odoriferous substances (natural or artificial) and mixtures (including alcoholic solutions) with a basis of one or more of these substances, of a kind used as raw materials in the perfumery, food, drink or other industries.
33.05	331.2 (4)	Aqueous distillates and aqueous solutions of essential oils, including such products suitable for medicinal uses.
33.06	332.9	Perfumery, cosmetics and toilet preparations.

#### Chapter 34

**Soap, organic surface-active agents, washing preparations, lubricating preparations, artificial waxes, prepared waxes, polishing and scouring preparations, candles and similar articles, modelling pastes and "dental waxes".**

#### Notes.

1. — This Chapter does not cover :
  - (a) Separate chemically defined compounds; or
  - (b) Dentifrices, shaving creams or shampoos containing soap or organic surface-active agents (heading No. 33.06).
2. — For the purposes of heading No. 34.01, the expression "soap" is to be taken to apply only to soap soluble in water. Soap and the other products falling within heading No. 34.01 may contain added substances (for example, disinfectants, abrasive powders, fillers or medicaments). Products containing abrasive powders remain classified in heading No. 34.01 only if in the form of bars, cakes or moulded pieces or shapes. In other forms they are to be classified in heading No. 34.05 as "scouring powders and similar preparations".
3. — The reference in heading No. 34.03 to petroleum oils and oils obtained from bituminous minerals is to be taken to apply to the products defined in Note 3 of Chapter 27.
4. — In heading No. 34.04 the expression "prepared waxes, not emulsified or containing solvents" is to be taken to apply only to :
  - (A) Mixtures of animal waxes, mixtures of vegetable waxes or mixtures of artificial waxes;
  - (B) Mixtures of different classes of waxes (animal, vegetable, mineral or artificial); and

(C) Mixtures of waxy consistency not emulsified or containing solvents, with a basis of one or more waxes, and containing fats, resins, mineral substances or other materials.

The heading is to be taken not to apply to :

- (a) Waxes falling within heading No. 27.13; or  
(b) Separate animal waxes and separate vegetable waxes, merely coloured.

34.01	354.1	Soap; organic surface-active products and preparations for use as soap, in the form of bars, cakes or moulded pieces or shapes, whether or not combined with soap.
34.02	354.2	Organic surface-active agents; surface-active preparations and washing preparations, whether or not containing soap.
34.03	332.5 (2)	Lubricating preparations, and preparations of a kind used for oil or grease treatment of textiles, leather or other materials, but not including preparations containing 70 % or more by weight of petroleum oils or of oils obtained from bituminous minerals.
34.04	399.7 (1)	Artificial waxes (including water-soluble waxes); prepared waxes, not emulsified or containing solvents.
34.05	354.3	Polishes and creams, for footwear, furniture or floors, metal polishes, scouring powders and similar preparations, but excluding prepared waxes falling within heading No. 34.04.
34.06	399.3 (1)	Candles, tapers, night-lights and the like.
34.07	399.9 (1)	Modelling pastes (including those put up for children's amusement and assorted modelling pastes); preparations of a kind known as "dental wax" or as "dental impression compounds", in plates, horseshoe shapes, sticks and similar forms.

#### Chapter 35

##### Albuminoid substances; glues.

##### Notes.

1. — This Chapter does not cover :  
(a) Protein substances put up as medicaments (heading No. 30.03); or  
(b) Gelatin postcards and other products of the printing industry (Chapter 49).
2. — For the purposes of heading No. 35.05, the term "dextrins" is to be taken to apply to starch degradation products with a reducing sugar content, expressed as dextrose on the dry substance, not exceeding 10 %.
- Such products with a reducing sugar content exceeding 10 % fall in heading No. 17.02.

35.01	399.5 (3)	Casein, caseinates and other casein derivatives; casein glues.
35.02	399.5 (4)	Albumins, albuminates and other albumin derivatives.
35.03	399.5 (5)	Gelatin (including gelatin in rectangles, whether or not coloured or surface-worked) and gelatin derivatives; glues derived from bones, hides, nerves, tendons or from similar products, and fish glues; isinglass.

35.04	399.5 (6)	Peptones and other protein substances and their derivatives; hide powder, whether or not chromed.
35.05	399.5 (7)	Dextrins and dextrin glues; soluble or roasted starches; starch glues.
35.06	399.5 (9)	Prepared glues not elsewhere specified or included; products suitable for use as glues put up for sale by retail as glues in packages not exceeding a net weight of 1 kg.

#### Chapter 36

##### Explosives; pyrotechnic products; matches; pyrophoric alloys; certain combustible preparations.

##### Notes.

1. — This Chapter does not cover separate chemically defined compounds other than those described in Note 2 (a) or (b) below.
2. — Heading No. 36.08 is to be taken to apply only to :  
(a) Metaldehyde, hexamethylenetetramine and similar substances, put up in forms (for example, tablets, sticks or similar forms) for use as fuels; fuels with a basis of alcohol, and similar prepared fuels, in solid or semi-solid form;  
(b) Liquid fuels (for example, petrol) of a kind used in mechanical lighters, in containers of a capacity not exceeding 300 cm<sup>3</sup>; and  
(c) Resin torches, firelighters and the like.

36.01	571.1 (1)	Propellent powders.
36.02	571.1 (2)	Prepared explosives, other than propellent powders.
36.03	571.2 (1)	Mining, blasting and safety fuses.
36.04	571.2 (2)	Percussion and detonating caps; igniters; detonators.
36.05	571.3	Pyrotechnic articles (for example, fireworks, railway fog signals, amorces, rain rockets).
36.06	399.3 (2)	Matches (excluding Bengal matches).
36.07	399.9 (3)	Ferro-cerium and other pyrophoric alloys in all forms.
36.08	399.3 (3)	Other combustible preparations and products.

## Chapter 37

## Photographic and cinematographic goods.

## Notes.

1. — This Chapter does not cover waste or scrap materials.
2. — Heading No. 37.08 is to be taken to apply only to :
- (a) Chemical products mixed or compounded for photographic uses (for example, sensitised emulsions, developers and fixers); and
- (b) Unmixed substances suitable for such uses and put up in measured portions or put up for sale by retail in a form ready for use.
- The heading does not apply to photographic pastes or gums, varnishes or similar products.

37.01	862.4 (1)	Photographic plates and film in the flat, sensitised, unexposed, of any material other than paper, paperboard or cloth.
37.02	862.4 (2)	Film in rolls, sensitised, unexposed, perforated or not.
37.03	862.4 (3)	Sensitised paper, paperboard and cloth, unexposed or exposed but not developed.
37.04	862.4 (4)	Sensitised plates and film, exposed but not developed, negative or positive.
37.05	862.4 (5)	Plates, unperforated film and perforated film (other than cinematograph film), exposed and developed, negative or positive.
37.06	863.9 (1)	Cinematograph film, exposed and developed, consisting only of sound track, negative or positive.
37.07	863.9 (9)	Other cinematograph film, exposed and developed, whether or not incorporating sound track, negative or positive.
37.08	862.3	Chemical products and flash light materials, of a kind and in a form suitable for use in photography.

## Chapter 38

## Miscellaneous chemical products.

## Notes.

1. — This Chapter does not cover :
- (a) Separate chemically defined elements or compounds with the exception of the following :
- (1) Artificial graphite (heading No. 38.01);
- (2) Disinfectants, insecticides, fungicides, weed-killers, anti-sprouting products, rat poisons and similar products put up as described in heading No. 38.11;
- (3) Products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades (heading No. 38.17);
- (4) Products specified in Note 2 (a), 2 (c), 2 (d) or 2 (f) below.
- (b) Mixtures of chemicals and foodstuffs of a kind used in the preparation of human foodstuffs (generally, heading No. 21.07).
- (c) Medicaments (heading No. 30.03).
2. — Heading No. 38.19 is to be taken to include the following goods which are to be taken not to fall within any other heading of the Nomenclature :
- (a) Cultured crystals (other than optical elements) weighing not less than 2.5 g each, of magnesium oxide or of the halides of the alkali or of the alkaline-earth metals;
- (b) Fusel oil;
- (c) Ink removers put up in packings for sale by retail;
- (d) Stencil correctors put up in packings for sale by retail;
- (e) Ceramic firing testers, fusible (for example, Seger cones);
- (f) Plasters specially prepared for use in dentistry; and
- (g) Chemical elements of Chapter 28 (for example, silicon and selenium) doped for use in electronics, in the form of discs, wafers or similar forms, polished or not, whether or not coated with a uniform epitaxial layer.

38.01	599.7 (2)	Artificial graphite; colloidal graphite, other than suspensions in oil.
38.02	599.7 (3)	Animal black (for example, bone black and ivory black), including spent animal black.
38.03	599.9 (2)	Activated carbon (decolourising, depolarising or adsorbent); activated diatomite, activated clay, activated bauxite and other activated natural mineral products.
38.04	521.3	Ammoniacal gas liquors and spent oxide produced in coal gas purification.
38.05	599.6 (1)	Tall oil.
38.06	599.6 (2)	Concentrated sulphite lye.
38.07	599.6 (3)	Spirits of turpentine (gum, wood and sulphate) and other terpenic solvents produced by the distillation or other treatment of coniferous woods; crude dipentene; sulphite turpentine; pine oil (excluding "pine oils" not rich in terpineol).
38.08	599.6 (4)	Rosin and resin acids, and derivatives thereof other than ester gums included in heading No. 39.05; rosin spirit and rosin oils.

38.09	599.6 (5)	Wood tar; wood tar oils (other than the composite solvents and thinners falling within heading No. 38.18); wood creosote; wood naphtha; acetone oil.
38.10	599.6 (6)	Vegetable pitch of all kinds; brewers' pitch and similar compounds based on rosin or on vegetable pitch; foundry core binders based on natural resinous products.
38.11	599.2	Disinfectants, insecticides, fungicides, weed-killers, anti-sprouting products, rat poisons and similar products, put up in forms or packings for sale by retail or as preparations or as articles (for example, sulphur-treated bands, wicks and candles, fly-papers).
38.12	599.7 (4)	Prepared glazings, prepared dressings and prepared mordants, of a kind used in the textile, paper, leather or like industries.
38.13	599.9 (4)	Pickling preparations for metal surfaces; fluxes and other auxiliary preparations for soldering, brazing or welding; soldering, brazing or welding powders and pastes consisting of metal and other materials; preparations of a kind used as cores or coatings for welding rods and electrodes.
38.14	599.7 (5)	Anti-knock preparations, oxidation inhibitors, gum inhibitors, viscosity improvers, anti-corrosive preparations and similar prepared additives for mineral oils.
38.15	599.7 (6)	Prepared rubber accelerators.
38.16	599.7 (7)	Prepared culture media for development of micro-organisms.
38.17	599.7 (8)	Preparations and charges for fire-extinguishers; charged fire-extinguishing grenades.
38.18	599.9 (5)	Composite solvents and thinners for varnishes and similar products.
38.19		Chemical products and preparations of the chemical or allied industries (including those consisting of mixtures of natural products), not elsewhere specified or included; residual products of the chemical or allied industries, not elsewhere specified or included.
599.9 (9)		A. Products and preparations, other than those of sub-heading B.
642.3 (2)		B. Refractory cements or mortars.

## Section VII

### ARTIFICIAL RESINS AND PLASTIC MATERIALS, CELLULOSE ESTERS AND ETHERS, AND ARTICLES THEREOF; RUBBER, SYNTHETIC RUBBER, FACTICE, AND ARTICLES THEREOF

#### Chapter 39

#### Artificial resins and plastic materials, cellulose esters and ethers; articles thereof.

#### Notes.

##### 1. — This Chapter does not cover :

- (a) Stamping foils of heading No. 32.09;
- (b) Artificial waxes (heading No. 34.04);
- (c) Synthetic rubber, as defined for the purposes of Chapter 40, or articles thereof;
- (d) Saddlery or harness (heading No. 42.01) or travel goods, handbags or other receptacles falling within heading No. 42.02;
- (e) Platts, wickerwork or other articles falling within Chapter 46;
- (f) Goods falling within Section XI (textiles and textile articles);
- (g) Footwear, headgear, umbrellas, sunshades, walking-sticks, whips, riding-crops, fans or parts thereof or other articles falling within Section XII;
- (h) Imitation jewellery falling within heading No. 71.16;
- (i) Articles falling within Section XVI (machines and mechanical or electrical appliances);
- (k) Parts of aircraft or vehicles falling within Section XVII;
- (l) Optical elements of artificial plastics, spectacle frames, drawing instruments or other articles falling within Chapter 90;
- (m) Articles falling within Chapter 91 (for example, clock or watch cases);
- (n) Musical instruments or parts thereof or other articles falling within Chapter 92;
- (o) Furniture and other articles of Chapter 94;
- (p) Brushes or other articles falling within Chapter 96;
- (q) Articles falling within Chapter 97 (for example, toys, games and sports requisites); or
- (r) Buttons, slide fasteners, combs, mouthpieces or stems for smoking pipes, cigarette-holders or the like, parts of vacuum flasks or the like, pens, propelling pencils or other articles falling within Chapter 98.

##### 2. — Headings Nos. 39.01 and 39.02 are to be taken to apply only to goods of a kind produced by chemical synthesis answering to one of the following descriptions :

- (a) Artificial plastics including artificial resins;
- (b) Silicones;
- (c) Resols, liquid polyisobutylene, and similar artificial polycondensation or polymerisation products.

##### 3. — Headings Nos. 39.01 to 39.06 are to be taken to apply to materials in the following forms only :

- (a) Liquid or pasty (including emulsions, dispersions and solutions);
- (b) Blocks, lumps, powders (including moulding powders), granules, flakes and similar bulk forms;
- (c) Monofil of which any cross-sectional dimension exceeds 1 mm; seamless tubes, rods, sticks and profile shapes, whether or not surface-worked but not otherwise worked;

- (d) Plates, sheets, film, foil and strip (other than that classified in heading No. 51.02 by the application of Note 4 to Chapter 51), whether or not printed or otherwise surface-worked, uncut or cut into rectangles but not further worked (even if, when so cut, they become articles ready for use);
- (e) Waste and scrap.

39.01	581.1	Condensation, polycondensation and polyaddition products, whether or not modified or polymerised, and whether or not linear (for example, phenoplasts, aminoplasts, alkyds, polyallyl esters and other unsaturated polyesters, silicones).
39.02	581.2	Polymerisation and copolymerisation products (for example, polyethylene, polytetrahaloethylenes, polyisobutylene, polystyrene, polyvinyl chloride, polyvinyl acetate, polyvinyl chloroacetate and other polyvinyl derivatives, polyacrylic and polymethacrylic derivatives, coumarone-indene resins).
39.03		Regenerated cellulose; cellulose nitrate, cellulose acetate and other cellulose esters, cellulose ethers and other chemical derivatives of cellulose, plasticised or not (for example, collodions, celluloid); vulcanised fibre.
	581.3 (1)	A. Vulcanised fibre.
	581.3 (2)	B. Other.
39.04	581.3 (1)	Hardened proteins (for example, hardened casein and hardened gelatin).
39.05	581.3 (2)	Natural resins modified by fusion (run gums); artificial resins obtained by esterification of natural resins or of resinic acids (ester gums); chemical derivatives of natural rubber (for example, chlorinated rubber, rubber hydrochloride, oxidised rubber, cyclised rubber).
39.06	581.3 (9)	Other high polymers, artificial resins and artificial plastic materials, including alginic acid, its salts and esters; linexyn.
39.07	593.0	Articles of materials of the kinds described in headings Nos. 39.01 to 39.06.

## Chapter 40

### Rubber, synthetic rubber, factice, and articles thereof.

#### Notes.

- Except where the context otherwise requires, throughout this Nomenclature the expression "rubber" means the following products, whether or not vulcanised or hardened: natural rubber, balata, gutta-percha and similar natural gums, synthetic rubber, and factice derived from oils, and such substances reclaimed.
- This Chapter does not cover the following products of rubber and textiles, which fall generally within Section XI:
  - Knitted or crocheted fabric or articles thereof, elastic or rubberised (other than transmission, conveyor and elevator belts or belting, of rubberised knitted or crocheted fabric, of heading No. 40.10); other elastic fabric or articles thereof;
  - Textile hosepipe and similar textile tubing, internally coated or lined with rubber (heading No. 59.15);

- (c) Woven textile fabrics (other than the goods of heading No. 40.10) impregnated, coated, covered or laminated with rubber:

(i) Weighing not more than 1,500 g/m<sup>2</sup>; or

(ii) Weighing more than 1,500 g/m<sup>2</sup> and containing more than 50 % by weight of textile material;

and articles of those fabrics;

- (d) Felt impregnated or coated with rubber and containing more than 50 % by weight of textile material, and articles thereof;

- (e) Bonded fibre fabrics and similar bonded yarn fabrics, impregnated or coated with rubber, or in which rubber forms the bonding substance, irrespective of their weight per square metre, and articles thereof;

- (f) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square metre, and articles thereof.

However, plates, sheets and strip, of expanded, foam or sponge rubber, combined with textile fabric, and articles thereof, are to be classified in Chapter 40 provided that the textile fabric is present merely for reinforcing purposes.

3. — The following are also not covered by this Chapter:

(a) Footwear or parts thereof falling within Chapter 64;

(b) Headgear or parts thereof (including bathing caps) falling within Chapter 65;

(c) Mechanical or electrical appliances or parts thereof (including electrical goods of all kinds), of hardened rubber, falling within Section XVI;

(d) Articles falling within Chapter 90, 92, 94 or 96;

(e) Articles falling within Chapter 97 (other than sports gloves and goods falling within heading No. 40.11); or

(f) Buttons, combs, smoking pipe stems, pens or other articles falling within Chapter 98.

4. — In Note 1 to this Chapter and in headings Nos. 40.02, 40.05 and 40.06, the expression "synthetic rubber" is to be taken to apply to:

(a) Unsaturated synthetic substances which can be irreversibly transformed into non-thermoplastic substances by vulcanisation with sulphur and which, when so vulcanised as well as may be (without the addition of any substances such as plasticisers, fillers or reinforcing agents not necessary for the cross-linking), can produce substances which, at a temperature between 18° and 29° C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length.

Such substances include *cis*-polyisoprene (IR), polybutadiene (BR), polychlorobutadiene (CR), polybutadiene-styrene (SBR), polychlorobutadiene-acrylonitrile (NCR), polybutadiene-acrylonitrile (NBR) and butyl rubber (IIR);

(b) Thioplasts (TM); and

(c) Natural rubber modified by grafting or mixing with artificial plastic material, depolymerised natural rubber, and mixtures of unsaturated synthetic substances with saturated synthetic high polymers, provided that all the above-mentioned products comply with the requirements concerning vulcanisation, elongation and recovery in (a) above.

5. — Headings Nos. 40.01 and 40.02 are to be taken not to apply to:

(a) Natural or synthetic rubber latex (including pre-vulcanised rubber latex) compounded with vulcanising agents or accelerators, fillers or reinforcing agents, plasticisers, colouring matter (other than colouring matter added solely for the purpose of identification), or with any other substance; however, latex merely stabilised or concentrated, and thermosensitive and electro-positive latex are to be classified in heading No. 40.01 or 40.02 as the case may be;

(b) Rubber which has been compounded with carbon black (with or without the addition of mineral oil) or with silica (with or without the addition of mineral oil) before coagulation or with any substance after coagulation; or

(c) Mixtures of any of the products specified in Note 1 to the present Chapter, whether or not compounded with any other substance.

6. — Thread wholly of vulcanised rubber, of any cross-section of which any dimension exceeds 5 mm, is to be classified as strip, rod or profile shape, falling within heading No. 40.08.
7. — Heading No. 40.10 is to be taken to include transmission, conveyor or elevator belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated or coated with rubber.

8. — For the purpose of heading No. 40.06, pre-vulcanised rubber latex is to be deemed to be unvulcanised rubber latex.

For the purposes of headings Nos. 40.07 to 40.14, balata, gutta-percha and similar natural gums, and factice derived from oils, and such substances reclaimed, are to be deemed to be vulcanised rubber whether or not they have been vulcanised.

9. — In headings Nos. 40.05, 40.08 and 40.15, the expressions "plates", "sheets" and "strip" are to be taken to apply, and to apply only, to plates, sheets and strip, whether or not printed or otherwise surface-worked but not cut to shape or otherwise worked, and rectangular articles cut therefrom not further worked.

In heading No. 40.08 the expressions "rods" and "profile shapes" and in heading No. 40.15 the expressions "rods", "profile shapes" and "tubes" are to be taken to apply, and to apply only, to such products, whether or not cut to length or surface-worked but not otherwise worked.

#### I. — RAW RUBBER

- |       |       |   |
|-------|-------|---|
| 40.01 | 231.1 | Natural rubber latex, whether or not with added synthetic rubber latex; pre-vulcanised natural rubber latex; natural rubber, balata, gutta-percha and similar natural gums. |
| 40.02 | 231.2 | Synthetic rubber latex; pre-vulcanised synthetic rubber latex; synthetic rubber; factice derived from oils.   |
| 40.03 | 231.3 | Reclaimed rubber.   |
| 40.04 | 231.4 | Waste and parings of unhardened rubber; scrap of unhardened rubber, fit only for the recovery of rubber; powder obtained from waste or scrap of unhardened rubber.          |

#### II. — UNVULCANISED RUBBER

- |       |           |   |
|-------|-----------|---|
| 40.05 | 621.6 (1) | Plates, sheets and strip, of unvulcanised natural or synthetic rubber, other than smoked sheets and crepe sheets of heading No. 40.01 or 40.02; granules of unvulcanised natural or synthetic rubber compounded ready for vulcanisation; unvulcanised natural or synthetic rubber, compounded before or after coagulation either with carbon black (with or without the addition of mineral oil) or with silica (with or without the addition of mineral oil), in any form, of a kind known as masterbatch. |
| 40.06 | 621.6 (2) | Unvulcanised natural or synthetic rubber, including rubber latex, in other forms or states (for example, rods, tubes and profile shapes, solutions and dispersions); articles of unvulcanised natural or synthetic rubber (for example, coated or impregnated textile thread; rings and discs).   |

#### III. — ARTICLES OF UNHARDENED VULCANISED RUBBER

- |       |           |   |
|-------|-----------|---|
| 40.07 | 621.6 (3) | Vulcanised rubber thread and cord, whether or not textile covered, and textile thread covered or impregnated with vulcanised rubber.  |
| 40.08 | 621.6 (4) | Plates, sheets, strip, rods and profile shapes, of unhardened vulcanised rubber.  |
| 40.09 | 621.6 (5) | Piping and tubing, of unhardened vulcanised rubber.   |
| 40.10 | 629.4     | Transmission, conveyor or elevator belts or belting, of vulcanised rubber.  |
| 40.11 | 629.1     | Rubber tyres, tyre cases, interchangeable tyre treads, inner tubes and tyre flaps, for wheels of all kinds.                           |
| 40.12 | 629.3     | Hygienic and pharmaceutical articles (including teats), of unhardened vulcanised rubber, with or without fittings of hardened rubber. |
| 40.13 | 841.6     | Articles of apparel and clothing accessories (including gloves), for all purposes, of unhardened vulcanised rubber.                   |
| 40.14 | 629.9 (6) | Other articles of unhardened vulcanised rubber.   |

#### IV. — HARDENED RUBBER (EBONITE AND VULCANITE); ARTICLES MADE THEREOF

- |       |           |  |
|-------|-----------|--|
| 40.15 | 621.6 (6) | Hardened rubber (ebonite and vulcanite), in bulk, plates, sheets, strip, rods, profile shapes or tubes; scrap, waste and powder, of hardened rubber. |
| 40.16 | 629.9 (9) | Articles of hardened rubber (ebonite and vulcanite).   |

#### Section VIII

#### RAW HIDES AND SKINS, LEATHER, FURSKINS AND ARTICLES THEREOF; SADDLERY AND HARNESS; TRAVEL GOODS, HANDBAGS AND SIMILAR CONTAINERS; ARTICLES OF CUT (OTHER THAN SILK-WORM GUT)

#### Chapter 41

#### Raw hides and skins (other than furskins) and leather.

#### Notes.

1. — This Chapter does not cover :

- (a) Parings or similar waste, of raw hides or skins (heading No. 05.05 or 05.06);
- (b) Birdskins or parts of birdskins, with their feathers or down, falling within heading No. 05.07 or 67.01; or
- (c) Hides or skins, with the hair on, raw, tanned or dressed (Chapter 43); the following are, however, to be classified in heading No. 41.01, namely, raw hides or skins with the hair on, of bovine cattle (including buffalo), of equine animals, of sheep and lambs (except Persian, Astrakhan, Caracul and similar lambs, Indian, Chinese, Mongolian and Tibetan lambs), of goats and kids (except Yemen, Mongolian and Tibetan goats and kids), of swine (including peccary), of reindeer, of chamois, of gazelle, of deer, of elk, of roebucks or of dogs.

2. — Throughout the Nomenclature the expression "composition leather" is to be taken to mean only substances of the kind referred to in heading No. 41.10.

41.01		Raw hides and skins (fresh, salted, dried, pickled or limed), whether or not split, including sheepskins in the wool.
211.1		A. Bovine and equine hides, other than calf skins.
211.2		B. Calf skins.
211.4		C. Goat skins and kid skins.
211.6		D. Sheep and lamb skins with the wool on.
211.7		E. Sheep and lamb skins without the wool.
211.9		F. Other.
41.02		Bovine cattle leather (including buffalo leather) and equine leather, except leather falling within heading No. 41.06, 41.07 or 41.08.
611.3		A. Calf leather.
611.4		B. Other.
41.03	611.9 (1)	Sheep and lamb skin leather, except leather falling within heading No. 41.06, 41.07 or 41.08.
41.04	611.9 (2)	Goat and kid skin leather, except leather falling within heading No. 41.06, 41.07 or 41.08.
41.05	611.9 (9)	Other kinds of leather, except leather falling within heading No. 41.06, 41.07 or 41.08.
41.06	611.9 (3)	Chamois-dressed leather.
41.07	611.9 (4)	Parchment-dressed leather.
41.08	611.9 (5)	Patent leather and imitation patent leather; metallised leather.
41.09	211.8	Parings and other waste, of leather or of composition or parchment-dressed leather, not suitable for the manufacture of articles of leather; leather dust, powder and flour.
41.10	611.2	Composition leather with a basis of leather or leather fibre, in slabs, in sheets or in rolls.

## Chapter 42

Articles of leather; saddlery and harness; travel goods, handbags and similar containers; articles of animal gut (other than silk-worm gut).

### Notes.

1. — This Chapter does not cover :

- (a) Sterile surgical catgut and similar sterile suture materials (heading No. 30.05);
- (b) Articles of apparel and clothing accessories (except gloves), lined with fur or artificial fur or to which fur or artificial fur is attached on the outside except as mere trimming (heading No. 43.03 or 43.04);
- (c) String or net bags of Section XI;
- (d) Articles falling within Chapter 64;
- (e) Headgear or parts thereof falling within Chapter 65;
- (f) Whips, riding-crops or other articles of heading No. 66.02;
- (g) Strings, skins for drums and the like, and other parts of musical instruments (heading No. 92.09 or 92.10);
- (h) Furniture or parts of furniture (Chapter 94);
- (i) Articles falling within Chapter 97 (for example, toys, games and sports requisites); or
- (k) Buttons, studs, cuff-links, press-fasteners, including snap-fasteners and press-studs, and blanks and parts of such articles, falling within heading No. 98.01 or Chapter 71.

2. — For the purposes of heading No. 42.03, the expression "articles of apparel and clothing accessories" is to be taken to apply, *inter alia*, to gloves (including sports gloves), aprons and other protective clothing, braces, belts, bandollers and wrist straps, including watch straps.

42.01	612.2	Saddlery and harness, of any material (for example, saddles, harness, collars, traces, knee-pads and boots), for any kind of animal.
42.02	631.8	Travel goods (for example, trunks, suit-cases, hat-boxes, travelling-bags, rucksacks), shopping-bags, handbags, satchels, brief-cases, wallets, purses, toilet-cases, tool-cases, tobacco-pouches, sheaths, cases, boxes (for example, for arms, musical instruments, binoculars, jewellery, bottles, collars, footwear, brushes) and similar containers, of leather or of composition leather, of vulcanised fibre, of artificial plastic sheeting, of paperboard or of textile fabric.
42.03	841.3	Articles of apparel and clothing accessories, of leather or of composition leather.
42.04	612.1	Articles of leather or of composition leather of a kind used in machinery or mechanical appliances or for industrial purposes.
42.05	612.9	Other articles of leather or of composition leather.
42.06	299.9 (1)	Articles made from gut (other than silk-worm gut), from goldbeater's skin, from bladders or from tendons.

## Chapter 43

### Furskins and artificial fur; manufactures thereof.

#### Notes.

1. — Throughout the Nomenclature references to furskins, other than to raw furskins of heading No. 43.01, are to be taken to apply to hides or skins of all animals which have been tanned or dressed with the hair on.
2. — This Chapter does not cover :
  - (a) Birdskins or parts of birdskins, with their feathers or down, falling within heading No. 05.07 or 67.01;
  - (b) Raw hides or skins, with the hair on, of a kind falling within Chapter 41 (see Note 1 (c) to that Chapter);
  - (c) Gloves consisting of leather and furskin or of leather and artificial fur (heading No. 42.03);
  - (d) Articles falling within Chapter 64;
  - (e) Headgear or parts thereof falling within Chapter 65; or
  - (f) Articles falling within Chapter 97 (for example, toys, games and sports requisites).
3. — For the purposes of heading No. 43.02, the expression "plates, crosses and similar forms" means furskins or parts thereof (excluding "dropped" skins) sewn together in rectangles, crosses or trapeziums, without the addition of other materials. Other assembled skins ready for immediate use (or requiring only cutting to become ready for use), and skins or parts of skins sewn together in the form of garments or parts or accessories of garments or of other articles fall within heading No. 43.03.
4. — Articles of apparel and clothing accessories (except those excluded by Note 2) lined with furskin or artificial fur or to which furskin or artificial fur is attached on the outside except as mere trimming are to be classified under heading No. 43.03 or 43.04 as the case may be.
5. — Throughout the Nomenclature the expression "artificial fur" means any imitation of furskin consisting of wool, hair or other fibres gummed or sewn on to leather, woven fabric or other materials, but does not include imitation furskins obtained by weaving (heading No. 58.04, for example).

43.01	212.0	Raw furskins.
43.02	613.0	Furskins, tanned or dressed, including furskins assembled in plates, crosses and similar forms; pieces or cuttings, of furskin, tanned or dressed, including heads, paws, tails and the like (not being fabricated).
43.03	342.0 (1)	Articles of furskin.
43.04	342.0 (2)	Artificial fur and articles made thereof.

## Section IX

### WOOD AND ARTICLES OF WOOD; WOOD CHARCOAL; CORK AND ARTICLES OF CORK; MANUFACTURES OF STRAW, OF ESPARTO AND OF OTHER PLAITING MATERIALS; BASKETWARE AND WICKERWORK

## Chapter 44

### Wood and articles of wood; wood charcoal.

#### Notes.

1. — This Chapter does not cover :
  - (a) Wood of a kind used primarily in perfumery, in pharmacy, or for insecticidal, fungicidal or similar purposes (heading No. 12.07);
  - (b) Wood of a kind used primarily in dyeing or in tanning (heading No. 13.01);
  - (c) Activated charcoal (heading No. 38.03);
  - (d) Articles falling within Chapter 46;
  - (e) Footwear or parts thereof falling within Chapter 64;
  - (f) Goods falling within Chapter 66 (for example, umbrellas and walking-sticks and parts thereof);
  - (g) Goods falling within heading No. 68.09;
  - (h) Imitation jewellery falling within heading No. 71.16;
  - (i) Goods falling within Section XVII (for example, wheelwrights' wares);
  - (k) Goods falling within Chapter 91 (for example, clocks and clock cases);
  - (l) Musical instruments or parts thereof (Chapter 92);
  - (m) Parts of firearms (heading No. 93.06);
  - (n) Furniture or parts thereof falling within Chapter 94;
  - (o) Articles falling within Chapter 97 (for example, toys, games and sports requisites); or
  - (p) Smoking pipes or the like or parts thereof, buttons, pencils or other articles falling within Chapter 98.
2. — In this Chapter, the expression "improved wood" means wood which has been subjected to chemical or physical treatment (being, in the case of layers bonded together, treatment in excess of that needed to ensure a good bond), and which has thereby acquired increased density or hardness together with improved mechanical strength or resistance to chemical or electrical agencies.
3. — Headings Nos. 44.19 to 44.28 are to be taken to apply to articles of the respective descriptions of plywood, cellular wood, "improved" wood or reconstituted wood as they apply to such articles of wood.
4. — Heading No. 44.25 shall be taken not to apply to tools in which metal parts form the blade, working edge, working surface or other working part.

44.01	241.1	Fuel wood, in logs, in billets, in twigs or in faggots; wood waste, including sawdust.
44.02	241.2	Wood charcoal (including shell and nut charcoal), agglomerated or not.

44.03		Wood in the rough, whether or not stripped of its bark or merely roughed down.
	242.1	A. Pulp wood.
	242.2 (1)	B. Sawlogs and veneer logs, of coniferous species.
	242.3 (1)	C. Sawlogs and veneer logs, of non-coniferous species.
	242.4	D. Pit-props.
	242.9	E. Other.
44.04		Wood, roughly squared or half-squared, but not further manufactured.
	242.2 (2)	A. Of coniferous species.
	242.3 (2)	B. Other.
44.05		Wood sawn lengthwise, sliced or peeled, but not further prepared, of a thickness exceeding 5 mm.
	242.2 (1)	A. Of coniferous species.
	242.3 (1)	B. Other.
44.06	421.8 (1)	Wood paving blocks.
44.07	242.1	Railway or tramway sleepers of wood.
44.08	421.8 (2)	Riven staves of wood, not further prepared than sawn on one principal surface; sawn staves of wood, of which at least one principal surface has been cylindrically sawn, not further prepared than sawn.
44.09	421.8 (3)	Hoopwood; split poles; piles, pickets and stakes of wood, pointed but not sawn lengthwise; chipwood; pulpwood in chips or particles; wood shavings of a kind suitable for use in the manufacture of vinegar or for the clarification of liquids.
44.10	421.8 (4)	Wooden sticks, roughly trimmed but not turned, bent nor otherwise worked, suitable for the manufacture of walking-sticks, whips, golf club shafts, umbrella handles, tool handles or the like.
44.11	421.8 (5)	Drawn wood; match splints; wooden pegs or pins for footwear.
44.12	421.8 (6)	Wood wool and wood flour.
44.13		Wood (including blocks, strips and friezes for parquet or wood block flooring, not assembled), planed, tongued, grooved, rebated, chamfered, V-jointed, centre V-jointed, beaded, centre-beaded or the like, but not further manufactured.
	242.2 (2)	A. Of coniferous species.
	242.3 (2)	B. Other.
44.14	421.1	Wood sawn lengthwise, sliced or peeled but not further prepared, of a thickness not exceeding 5 mm; veneer sheets and sheets for plywood, of a thickness not exceeding 5 mm.
44.15	421.2 (1)	Plywood, blockboard, laminboard, battenboard and similar laminated wood products (including veneered panels and sheets); inlaid wood and wood marquetry.

44.16	421.2 (2)	Cellular wood panels, whether or not faced with base metal.
44.17	421.4 (1)	"Improved" wood, in sheets, blocks or the like.
44.18	421.4 (2)	Reconstituted wood, being wood shavings, wood chips, sawdust, wood flour or other ligneous waste agglomerated with natural or artificial resins or other organic binding substances, in sheets, blocks or the like.
44.19	421.5 (7)	Wooden beadings and mouldings, including moulded skirting and other moulded boards.
44.20	421.7 (1)	Wooden picture frames, photograph frames, mirror frames and the like.
44.21	421.3	Complete wooden packing cases, boxes, crates, drums and similar packings.
44.22	422.2	Casks, barrels, vats, tubs, buckets and other coopers' products and parts thereof, of wood, other than staves falling within heading No. 44.08.
44.23	422.4	Builders' carpentry and joinery (including prefabricated and sectional buildings and assembled parquet flooring panels).
44.24	422.7 (2)	Household utensils of wood.
44.25	422.8 (1)	Wooden tools, tool bodies, tool handles, broom and brush bodies and handles; boot and shoe lasts and trees, of wood.
44.26	422.8 (2)	Spools, cops, bobbins, sewing thread reels and the like, of turned wood.
44.27	422.7 (3)	Standard lamps, table lamps and other lighting fittings, of wood; articles of furniture, of wood, not falling within Chapter 94; caskets, cigarette boxes, trays, fruit bowls, ornaments and other fancy articles, of wood; cases for cutlery, for drawing instruments or for violins, and similar receptacles, of wood; articles of wood for personal use or adornment, of a kind normally carried in the pocket, in the handbag or on the person; parts of the foregoing articles, of wood.
44.28	421.8 (9)	Other articles of wood.

## Chapter 45

### Cork and articles of cork.

#### Notes.

1. — This Chapter does not cover :
  - (a) Footwear or parts of footwear falling within Chapter 64;
  - (b) Headgear or parts of headgear falling within Chapter 65; or
  - (c) Articles falling within Chapter 97 (for example, toys, games and sports requisites).
2. — Natural cork roughly squared or deprived of the outer bark is to be taken to fall within heading No. 45.02 and not within heading No. 45.01.

45.01	244.9 (1)	Natural cork, unworked, crushed, granulated or ground; waste cork.
45.02	244.9 (2)	Natural cork in blocks, plates, sheets or strips (including cubes or square slabs, cut to size for corks or stoppers).
45.03	633.0 (1)	Articles of natural cork.
45.04	523.9 (2)	Agglomerated cork (being cork agglomerated with or without a binding substance) and articles of agglomerated cork.

## Chapter 46

### Manufactures of straw, of esparto and of other plaiting materials; basketware and wickerwork.

#### Notes.

1. — In this Chapter the expression "plaiting materials" includes straw, osier or willow, bamboos, rushes, reeds, strips of wood, strips of vegetable fibre or bark, unspun textile fibres, monofil and strip of artificial plastic materials or strips of paper, but not strips of leather, of composition leather or of felt, human hair, horsehair, textile rovings or yarns, or monofil or strip of Chapter 51.
2. — This Chapter does not cover :
  - (a) Twine, cordage, ropes or cables, plaited or not (heading No. 59.04);
  - (b) Footwear or headgear or parts thereof falling within Chapter 64 or 65;
  - (c) Vehicles and bodies for vehicles, of basketware (Chapter 87); or
  - (d) Furniture or parts thereof (Chapter 94).
3. — For the purposes of heading No. 46.02, "plaiting materials bound together in parallel strands" means "plaiting materials" placed side by side and bound together, in the form of sheets, whether the binding materials are of spun textile fibre or not.

46.01	899.2 (1)	Plaits and similar products of plaiting materials, for all uses, whether or not assembled into strips.
46.02	657.8	Plaiting materials bound together in parallel strands or woven, in sheet form, including matting, mats and screens; straw envelopes for bottles.
46.03	899.2 (2)	Basketwork, wickerwork and other articles of plaiting materials, made directly to shape; articles made up from goods falling within heading No. 46.01 or 46.02; articles of loofah.

## Section X

### PAPER-MAKING MATERIAL; PAPER AND PAPERBOARD AND ARTICLES THEREOF

## Chapter 47

### Paper-making material.

47.01		Pulp derived by mechanical or chemical means from any fibrous vegetable material.
	251.2	A. Mechanical wood pulp.
	251.5	B. Pulp other than wood pulp.
	251.6	C. Chemical wood pulp, dissolving grades.
	251.7 (1)	D. Soda wood pulp and sulphate wood pulp, unbleached.
	251.7 (2)	E. Soda wood pulp and sulphate wood pulp, bleached (other than dissolving grades).
	251.8 (1)	F. Sulphite wood pulp, unbleached.
	251.8 (2)	G. Sulphite wood pulp, bleached (other than dissolving grades).
	251.9	H. Semi-chemical wood pulp.
47.02	251.1	Waste paper and paperboard; scrap articles of paper or of paperboard, fit only for use in paper-making.

## Chapter 48

### Paper and paperboard; articles of paper pulp, of paper or of paperboard.

#### Notes.

1. — This Chapter does not cover :
  - (a) Stamping foils of heading No. 32.09;
  - (b) Perfume and cosmetic papers (heading No. 33.06);
  - (c) Soap papers (heading No. 34.01), paper impregnated or coated with detergent (heading No. 34.02) and cellulose wadding impregnated with polishes, creams or similar preparations (heading No. 34.03);
  - (d) Paper or paperboard, sensitised (heading No. 37.03);
  - (e) Paper-reinforced stratified artificial plastic sheeting (headings Nos. 39.01 to 39.06), or vulcanised fibre (heading No. 39.03), or articles of such materials (heading No. 39.07);
  - (f) Goods falling within heading No. 42.02 (for example, travel goods);
  - (g) Articles falling within any heading in Chapter 46 (manufactures of plaiting material);
  - (h) Paper yarn or textile articles of paper yarn (Section XI);
  - (i) Abrasive paper (heading No. 68.06) or paper-backed mica splittings (heading No. 68.15) (paper coated with mica powder is, however, to be classified in heading No. 48.07);
  - (k) Metal foil backed with paper or paperboard (Section XV);
  - (l) Perforated paper or paperboard for musical instruments (heading No. 92.10); or
  - (m) Goods falling within any heading in Chapter 97 (for example, toys, games and sports requisites) or Chapter 98 (for example, buttons).
2. — Subject to the provisions of Note 3, headings Nos. 48.01 and 48.02 are to be taken to include paper and paperboard which have been subjected to calendering, super-calendering, glazing or similar finishing, including false water-marking, and also to paper and paperboard coloured or marbled throughout the mass by any method. They do not apply to paper or paperboard which has been further processed, for example, by coating or impregnation.
3. — Paper or paperboard answering to a description in two or more of the headings Nos. 48.01 to 48.07 is to be classified under that one of such headings which occurs latest in the Nomenclature.
4. — Headings Nos. 48.01 to 48.07 are to be taken not to apply to paper, paperboard or cellulose wadding :
  - (a) In strips or rolls of a width not exceeding 15 cm; or
  - (b) In rectangular sheets (unfolded if necessary) of which no side exceeds 36 cm; or
  - (c) Cut into shapes other than rectangular shapes.

Except that hand-made paper in any size or shape as made directly and having all its edges deckled remains classified, subject to the provisions of Note 3, within heading No. 48.02.
5. — For the purposes of heading No. 48.11, "wallpaper and linocrusta" are to be taken to apply only to :
  - (a) Paper in rolls, suitable for wall or ceiling decoration, being :
    - (i) Paper with one or with two margins, with or without guide marks; or
    - (ii) Paper without margins, surface-coloured or design-printed, coated or embossed, of a width not exceeding 60 cm;
  - (b) Borders, friezes and corners of paper, of a kind used for wall or ceiling decoration.
6. — Heading No. 48.15 is to be taken to apply, *inter alia*, to paper wool, paper strip (whether or not folded or coated) of a kind used for plaiting, and to toilet paper in rolls or packets, but not to the articles mentioned in Note 7.

7. — Heading No. 48.21 is to be taken to apply, *inter alia*, to cards for statistical machines, perforated paper and paperboard cards for Jacquard and similar machines, paper lace, shelf edging, paper tablecloths, serviettes and handkerchiefs, paper gaskets, moulded or pressed goods of wood pulp, and dress patterns.
8. — Paper, paperboard and cellulose wadding, and articles thereof, printed with characters or pictures which are not merely incidental to the primary use of the goods are regarded as printed matter falling within Chapter 49.

#### 1. — PAPER AND PAPERBOARD, IN ROLLS OR IN SHEETS

- |           |   |
|-----------|---|
| 48.01     | Paper and paperboard (including cellulose wadding), machine-made, in rolls or sheets.   |
| 641.1     | A. Newsprint.   |
| 641.2 (1) | B. Printing and writing paper.  |
| 641.3     | C. Kraft paper and kraft paperboard.  |
| 641.4     | D. Cigarette paper.   |
| 641.5     | E. Other.   |
| 48.02     | 641.7 Hand-made paper and paperboard.   |
| 48.03     | 641.9 (1) Parchment or greaseproof paper and paperboard, and imitations thereof, and glazed transparent paper, in rolls or sheets.  |
| 48.04     | 641.9 (2) Composite paper or paperboard (made by sticking flat layers together with an adhesive), not surface-coated or impregnated, whether or not internally reinforced, in rolls or sheets.                  |
| 48.05     | 641.9 (3) Paper and paperboard, corrugated (with or without flat surface sheets), creped, crinkled, embossed or perforated, in rolls or sheets.   |
| 48.06     | 641.9 (4) Paper and paperboard, ruled, lined or squared, but not otherwise printed, in rolls or sheets.   |
| 48.07     | Paper and paperboard, impregnated, coated, surface-coloured, surface-decorated or printed (not being merely ruled, lined or squared and not constituting printed matter within Chapter 49), in rolls or sheets. |
| 641.2 (2) | A. Printing and writing paper.  |
| 641.9 (5) | B. Other.   |
| 48.08     | 641.9 (6) Filter blocks, slabs and plates, of paper pulp.   |
| 48.09     | 641.6 Building board of wood pulp or of vegetable fibre, whether or not bonded with natural or artificial resins or with similar binders.   |

II. — PAPER AND PAPERBOARD CUT TO SIZE OR SHAPE  
AND ARTICLES OF PAPER OR PAPERBOARD

48.10	642.9 (1)	Cigarette paper, cut to size, whether or not in the form of booklets or tubes.
48.11	641.9 (7)	Wallpaper and lincrusta; window transparencies of paper.
48.12	657.4 (1)	Floor coverings prepared on a base of paper or of paperboard, whether or not cut to size, with or without a coating of linoleum compound.
48.13	642.9 (2)	Carbon and other copying papers (including duplicator stencils) and transfer papers, cut to size, whether or not put up in boxes.
48.14	642.2	Writing blocks, envelopes, letter cards, plain postcards, correspondence cards; boxes, pouches, wallets and writing compendiums, of paper or paperboard, containing only an assortment of paper stationery.
48.15	642.9 (3)	Other paper and paperboard, cut to size or shape.
48.16	642.1 (1)	Boxes, bags and other packing containers, of paper or paperboard.
48.17	642.1 (2)	Box files, letter trays, storage boxes and similar articles, of paper or paperboard, of a kind commonly used in offices, shops and the like.
48.18	642.3	Registers, exercise books, note books, memorandum blocks, order books, receipt books, diaries, blotting-pads, binders (loose-leaf or other), file covers and other stationery of paper or paperboard; sample and other albums and book covers, of paper or paperboard.
48.19	892.9 (1)	Paper or paperboard labels, whether or not printed or gummed.
48.20	642.9 (4)	Bobbins, spools, cops and similar supports of paper pulp, paper or paperboard (whether or not perforated or hardened).
48.21	642.9 (9)	Other articles of paper pulp, paper, paperboard or cellulose wadding.

Chapter 49

Printed books, newspapers, pictures and other products  
of the printing industry; manuscripts, typescripts and plans.

Notes.

1. — This Chapter does not cover :
  - (a) Paper, paperboard, or cellulose wadding, or articles thereof, in which printing is merely incidental to their primary use (Chapter 48);
  - (b) Playing cards or other goods falling within any heading in Chapter 97; or
  - (c) Original engravings, prints or lithographs (heading No. 99.02), postage, revenue or similar stamps falling within heading No. 99.04, antiques of an age exceeding one hundred years or other articles falling within any heading in Chapter 99.

2. — Newspapers, journals and periodicals which are bound otherwise than in paper, and sets of newspapers, journals or periodicals comprising more than one number under a single cover are to be treated as falling within heading No. 49.01 and not within heading No. 49.02.
3. — Heading No. 49.01 is to be extended to apply to :
  - (a) A collection of printed reproductions of, for example, works of art or drawings, with a relative text, put up with numbered pages in a form suitable for binding into one or more volumes;
  - (b) A pictorial supplement accompanying, and subsidiary to, a bound volume; and
  - (c) Printed parts of books or booklets, in the form of assembled or separate sheets or signatures, constituting the whole or a part of a complete work and designed for binding.
 However, printed pictures or illustrations not bearing a text, whether in the form of signatures or separate sheets, fall in heading No. 49.11.
4. — Headings Nos. 49.01 and 49.02 are to be taken not to apply to publications issued for advertising purposes by or for an advertiser named therein, or to publications which are primarily devoted to advertising (including tourist propaganda). Such publications are to be taken as falling within heading No. 49.11.
5. — For the purposes of heading No. 49.03, the expression "children's picture books" means books for children in which the pictures form the principal interest and the text is subsidiary.
6. — For the purposes of heading No. 49.06, the expression "manuscripts and typescripts" is to be taken to extend to carbon copies or copies on sensitised paper of manuscripts and typescripts. References in this Chapter to printed matter of any kind include references to any matter of that kind which is reproduced by means of a duplicating machine.
7. — For the purposes of heading No. 49.09, the expression "picture postcards" means cards consisting essentially of an illustration and bearing printed indications of their use.

49.01	892.1 (1)	Printed books, booklets, brochures, pamphlets and leaflets.
49.02	892.2	Newspapers, journals and periodicals, whether or not illustrated.
49.03	892.1 (2)	Children's picture books and painting books.
49.04	892.3	Music, printed or in manuscript, whether or not bound or illustrated.
49.05	892.1 (3)	Maps and hydrographic and similar charts of all kinds, including atlases, wall maps and topographical plans, printed; printed globes (terrestrial or celestial).
49.06	892.9 (2)	Plans and drawings, for industrial, architectural, engineering, commercial or similar purposes, whether original or reproductions on sensitised paper; manuscripts and typescripts.
49.07	892.9 (3)	Unused postage, revenue and similar stamps of current or new issue in the country to which they are destined; stamp-impressed paper; banknotes, stock, share and bond certificates and similar documents of title; cheque books.
49.08	892.4 (1)	Transfers (Decalcomanias).
49.09	892.4 (2)	Picture postcards, Christmas and other picture greeting cards, printed by any process, with or without trimmings.

49.10 892.3 (4) Calendars of any kind, of paper or paperboard, including calendar blocks.

49.11 892.3 (9) Other printed matter, including printed pictures and photographs.

## Section XI

### TEXTILES AND TEXTILE ARTICLES

#### Notes.

1. — This Section does not cover :

- (a) Animal brush making bristles or hair (heading No. 05.02); horsehair or horsehair waste (heading No. 05.03);
- (b) Human hair or articles of human hair (heading No. 05.01, 67.03 or 67.04), except straining cloth of a kind commonly used in oil presses and the like (heading No. 59.17);
- (c) Vegetable materials falling within Chapter 14;
- (d) Asbestos of heading No. 25.24 or articles of asbestos and other products of heading No. 68.13 or 68.14;
- (e) Articles falling within heading No. 30.04 or 30.05 (for example, wadding, gauze, bandages and similar articles for medical or surgical purposes, sterile surgical suture materials);
- (f) Sensitised textile fabric (heading No. 37.03);
- (g) Monofil of which any cross-sectional dimension exceeds 1 mm and strip (artificial straw and the like) of a width exceeding 5 mm, of artificial plastic material (Chapter 39) or plaits or fabrics of such monofil or strip (Chapter 46);
- (h) Woven textile fabrics, felt, bonded fibre fabrics or similar bonded yarn fabrics, impregnated, coated, covered or laminated with rubber, and articles thereof, falling within Chapter 40;
- (i) Skins with their wool on (Chapter 41 or 43) or articles of furakin, artificial fur or articles thereof, falling within heading No. 43.03 or 43.04;
- (k) Articles of textile materials falling within heading No. 42.01 or 42.02;
- (l) Products and articles of Chapter 48 (for example, cellulose wadding);
- (m) Footwear or parts of footwear, gaiters or leggings or similar articles classified in Chapter 64;
- (n) Headgear or parts thereof falling within Chapter 65;
- (o) Hair nets (heading No. 65.05 or 67.04, as the case may be);
- (p) Goods falling within Chapter 67;
- (q) Abrasive-coated threads, cords or fabric (heading No. 68.06);
- (r) Glass fibre or articles of glass fibre, other than embroidery with glass thread on a visible ground of fabric (Chapter 70);
- (s) Articles falling within Chapter 94 (furniture and bedding); or
- (t) Articles falling within Chapter 97 (for example, toys, games and sports requisites).

2. — (A) Goods classifiable in any heading in Chapters 50 to 57 and of a mixture of two or more different textile materials are to be classified according to the following rules :

- (a) Goods containing more than 10 % by weight of silk, noil or other waste silk or any combination thereof are to be classified in Chapter 50, and, for the purposes of classification in that Chapter, as if consisting wholly of that one of those materials which predominates in weight;
- (b) All other goods are to be classified as if consisting wholly of that one textile material which predominates in weight over any other single textile material.

(B) For the purposes of the above rules :

- (a) Metallised yarn shall be treated as a single textile material and its weight shall be taken as the aggregate of the weight of the textile and metal components, and, for the classification of woven fabrics, metal thread is to be regarded as a textile material;
- (b) Where a heading in question refers to goods of different textile materials (for example, silk and waste silk or carded sheep's or lambs' wool and combed sheep's or lambs' wool), all those materials shall be treated as being one and the same;
- (c) Except as provided in (B) (a), the weight of constituents other than textile materials is not to be included in the weight of the goods.

(C) The provisions of paragraphs (A) and (B) above are to be applied also to the yarns referred to in Notes 3 and 4 below.

3. — (A) For the purposes of this Section, and subject to the exceptions in paragraph (B) below, yarns (single, multiple or cabled) of the following descriptions are to be treated as "twine, cordage, ropes and cables" :

- (a) Of silk, noil or other waste silk, of a weight exceeding 2 g/m (18,000 denier);
- (b) Of man-made fibres (including yarn of two or more monofil of Chapter 51), of a weight exceeding 1 g/m (9,000 denier);
- (c) Of true hemp or flax :
  - (i) Polished or glazed, of which the length per kilogram, multiplied by the number of constituent strands, is less than 7,000 m;
  - (ii) Not polished or glazed and of a weight exceeding 2 g/m;
- (d) Of coir, consisting of three or more plies;
- (e) Of other vegetable fibres, of a weight exceeding 2 g/m; or
- (f) Reinforced with metal.

(B) Exceptions :

- (a) Yarn of sheep's or lambs' wool or other animal hair and paper yarn, other than yarn reinforced with metal;
- (b) Continuous filament tow for the manufacture of man-made fibres (discontinuous), and multifilament yarn without twist or with a twist of less than 5 turns per metre;
- (c) Silk worm gut, imitation catgut of silk or of man-made fibres, and monofil of Chapter 51;
- (d) Metallised yarn, not being yarn reinforced with metal; and
- (e) Chenille yarn and gimped yarn.

4. — (A) For the purposes of Chapters 50, 51, 53, 54, 55 and 56, the expression "put up for retail sale" in relation to yarn means, subject to the exceptions in paragraph (B) below, yarn put up :

- (a) In balls or on cards, reels, tubes or similar supports, of a weight (including support) not exceeding :
  - (i) 200 g in the case of flax and ramie;
  - (ii) 85 g in the case of silk, noil or other waste silk, and man-made fibres (continuous); or
  - (iii) 125 g in other cases;
- (b) In hanks or skeins of a weight not exceeding :
  - (i) 85 g in the case of silk, noil or other waste silk, and man-made fibres (continuous); or
  - (ii) 125 g in other cases;
- (c) In hanks or skeins comprising several smaller hanks or skeins separated by dividing threads which render them independent one of the other, each of uniform weight not exceeding :
  - (i) 85 g in the case of silk, noil or other waste silk, and man-made fibres (continuous); or
  - (ii) 125 g in other cases.

(B) Exceptions :

(a) Single yarn of any textile material, except :

- (i) Single yarn of sheep's or lambs' wool or of fine animal hair, unbleached; and
- (ii) Single yarn of sheep's or lambs' wool or of fine animal hair, bleached, dyed or printed, of a length less than 2,000 m/kg;

(b) Multiple or cabled yarn, unbleached :

- (i) Of silk, noil or other waste silk, however put up; or

- (ii) Of other textile material except sheep's or lambs' wool or fine animal hair, in hanks or skeins;

(c) Multiple or cabled yarn of silk, noil or other waste silk, bleached, dyed or printed, of a length not less than 75,000 m/kg, measured multiple; and

(d) Single, multiple or cabled yarn of any textile material :

- (i) In cross-reeled hanks or skeins; or

- (ii) Put up on supports or in some other manner indicating its use in the textile industry (for example, on cops, twisting mill tubes, pins, conical bobbins or spindles, or reeled in the form of cocoons for embroidery looms).

5. — (a) For the purposes of heading No. 55.07, "gauze" means a fabric with a warp composed wholly or in part of standing or ground threads and crossing or doup threads which cross the standing or ground threads making a half turn, a complete turn or more to form loops through which weft threads pass.

(b) For the purposes of heading No. 58.08, "plain" means consisting solely of a single series of regular meshes of the same shape or size without any pattern or filling-in of the meshes. In applying this definition no account is to be taken of any minor open spaces which are inherent in the formation of the meshes.

6. — For the purposes of this Section, the expression "made up" means :

(a) Cut otherwise than into rectangles;

(b) Made and finished by weaving and ready for use (or merely needing separation by cutting dividing threads) and not requiring sewing or further fabrication (for example, certain dusters, towels, table cloths, scarf squares and blankets);

(c) Hemmed or with rolled edges (except fabrics in the piece which have been cut from wider pieces and hemmed or rolled merely to prevent unravelling), or with a knotted fringe at any of the edges;

(d) Cut to size and having undergone a process of drawn thread work;

(e) Assembled by sewing, gumming or otherwise (other than piece goods consisting of two or more lengths of identical material joined end to end and piece goods composed of two or more fabrics assembled in layers, whether or not padded).

7. — The headings of Chapters 50 to 57 and, except where the context otherwise requires, the headings of Chapters 58 to 60, are to be taken not to apply to goods made up within the meaning of Note 6 above. Chapters 50 to 57 are to be taken not to apply to goods falling within Chapter 58 or 59.

Chapter 50

Silk and waste silk.

50.01	261.1	Silk-worm cocoons suitable for reeling.
50.02	261.2	Raw silk (not thrown).
50.03	261.3	Silk waste (including cocoons unsuitable for reeling, silk noils and pulled or garnetted rags).

50.04	651.1 (1)	Silk yarn, other than yarn of noil or other waste silk, not put up for retail sale.
50.05	651.1 (2)	Yarn spun from silk waste other than noil, not put up for retail sale.
50.06	651.1 (3)	Yarn spun from noil silk, not put up for retail sale.
50.07	651.1 (4)	Silk yarn and yarn spun from noil or other waste silk, put up for retail sale.
50.08	651.1 (5)	Silk-worm gut; imitation catgut of silk.
50.09	651.1 (1)	Woven fabrics of silk or of waste silk other than noil.
50.10	651.1 (2)	Woven fabrics of noil silk.

Chapter 51

Man-made fibres (continuous).

Notes.

1. — Throughout the Nomenclature, the term "man-made fibres" means fibres or filaments of organic polymers produced by manufacturing processes, either :

(a) By polymerisation or condensation of organic monomers, for example, polyamides, polyesters, polyurethanes and polyvinyl derivatives; or

(b) By chemical transformation of natural organic polymers (such as cellulose, casein, proteins and algae), for example, viscose rayon, cuprammonium rayon (cupra), cellulose acetate and alginates.

2. — Heading No. 51.01 is to be taken not to apply to continuous filament tow of man-made fibres falling within Chapter 56.

3. — The expression "yarn of man-made fibres (continuous)" is to be taken not to apply to yarn (known as "ruptured filament yarn") of which the majority of the filaments have been ruptured by passage through rollers or other devices (Chapter 56).

4. — Monofil of man-made fibre materials of which no cross-sectional dimension exceeds 1 mm is to be classified in heading No. 51.01 when of a weight less than 6.6 mg/m (60 denier) and in heading No. 51.02 in other cases. Monofil of which any cross-sectional dimension exceeds 1 mm is to be classified in Chapter 39.

Strip (artificial straw and the like) of man-made fibre materials is to be classified in heading No. 51.02 when of a width not exceeding 5 mm and in Chapter 39 in other cases.

51.01 Yarn of man-made fibres (continuous), not put up for retail sale.

651.5 (1)	A. Of synthetic fibres.
651.7 (1)	B. Of regenerated fibres.

51.02		Monofil, strip (artificial straw and the like) and imitation catgut, of man-made fibre materials.
	651.6 (3)	A. Of synthetic fibre materials.
	651.7 (2)	B. Of regenerated fibre materials.
51.03		Yarn of man-made fibres (continuous), put up for retail sale.
	651.6 (3)	A. Of synthetic fibres.
	651.7 (2)	B. Of regenerated fibres.
51.04		Woven fabrics of man-made fibres (continuous), including woven fabrics of monofil or strip of heading No. 51.01 or 51.02.
	651.6 (1)	A. Of synthetic fibres.
	651.7 (1)	B. Of regenerated fibres.

## Chapter 52

### Metallised textiles.

52.01	651.9 (1)	Metallised yarn, being textile yarn spun with metal or covered with metal by any process.
52.02	653.8 (1)	Woven fabrics of metal thread or of metallised yarn, of a kind used in articles of apparel, as furnishing fabrics or the like.

## Chapter 53

### Wool and other animal hair.

#### Note.

The expression "fine animal hair" means hair of alpaca, llama, vicuna, yak, camel, Angora, Tibetan, Kashmir and similar goats (but not common goats), rabbit (including Angora rabbit), hare, beaver, nutria and musk rat.

53.01		Sheep's or lambs' wool, not carded or combed.
	262.1	A. Greasy or fleece-washed.
	262.2	B. Other.

53.02		Other animal hair (fine or coarse), not carded or combed.
	262.3	A. Fine hair.
	262.3 (9)	B. Coarse hair.
53.03	262.9	Waste of sheep's or lambs' wool or of other animal hair (fine or coarse), not pulled or garnetted.
53.04	262.6	Waste of sheep's or lambs' wool or of other animal hair (fine or coarse), pulled or garnetted (including pulled or garnetted rags).
53.05		Sheep's or lambs' wool or other animal hair (fine or coarse), carded or combed.
	262.7	A. Wool and other animal hair, carded or combed, other than wool tops.
	262.8	B. Wool tops.
53.06	651.2 (1)	Yarn of carded sheep's or lambs' wool (woollen yarn), not put up for retail sale.
53.07	651.2 (2)	Yarn of combed sheep's or lambs' wool (worsted yarn), not put up for retail sale.
53.08	651.2 (3)	Yarn of fine animal hair (carded or combed), not put up for retail sale.
53.09	651.2 (4)	Yarn of horsehair or of other coarse animal hair, not put up for retail sale.
53.10	651.2 (5)	Yarn of sheep's or lambs' wool, of horsehair or of other animal hair (fine or coarse), put up for retail sale.
53.11	651.2 (1)	Woven fabrics of sheep's or lambs' wool or of fine animal hair.
53.12	651.3 (2)	Woven fabrics of coarse animal hair other than horsehair.
53.13	651.3 (3)	Woven fabrics of horsehair.

## Chapter 54

### Flax and ramie.

54.01	263.1	Flax, raw or processed but not spun; flax tow and waste (including pulled or garnetted rags).
54.02	263.2	Ramie, raw or processed but not spun; ramie noils and waste (including pulled or garnetted rags).
54.03	651.5 (1)	Flax or ramie yarn, not put up for retail sale.
54.04	651.5 (2)	Flax or ramie yarn, put up for retail sale.
54.05	651.5 (3)	Woven fabrics of flax or of ramie.

## Chapter 55

## Cotton.

55.01	263.1	Cotton, not carded or combed.
55.02	263.3	Cotton linters.
55.03	263.3	Cotton waste (including pulled or garnetted rags), not carded or combed.
55.04	263.4	Cotton, carded or combed.
55.05		Cotton yarn, not put up for retail sale.
	651.3	A. Unbleached, not mercerised.
	651.4 (1)	B. Other.
55.06	651.4 (2)	Cotton yarn, put up for retail sale.
55.07		Cotton gauze.
	652.1 (1)	A. Unbleached, not mercerised.
	652.2 (1)	B. Other.
55.08		Terry towelling and similar terry fabrics, of cotton.
	652.1 (2)	A. Unbleached, not mercerised.
	652.2 (2)	B. Other.
55.09		Other woven fabrics of cotton.
	652.1 (3)	A. Unbleached, not mercerised.
	652.2 (3)	B. Other.

## Chapter 56

## Man-made fibres (discontinuous).

## Note.

Heading No. 56.02 is to be taken to apply only to continuous filament tow of man-made fibres, consisting of parallel filaments of a uniform length equal to the length of the tow, meeting the following specification:

- (a) Length of tow exceeding 2 m;
- (b) Twist less than 5 turns per metre;
- (c) Weight per filament less than 6.6 mg/m (60 denier);
- (d) In the case of filaments described in Note 1 (a) to Chapter 51, the tow must be drawn, that is to say, be incapable of being stretched by more than 100 % of its length;
- (e) Total weight of tow more than 2 g/m (18,000 denier).

Tow of a length not exceeding 2 m is to be classified in heading No. 56.01.

56.01		Man-made fibres (discontinuous), not carded, combed or otherwise prepared for spinning.
	266.2 (1)	A. Synthetic fibres.
	266.3 (1)	B. Regenerated fibres.
56.02		Continuous filament tow for the manufacture of man-made fibres (discontinuous).
	266.2 (2)	A. Of synthetic fibres.
	266.3 (2)	B. Of regenerated fibres.
56.03	266.4	Waste (including yarn waste and pulled or garnetted rags) of man-made fibres (continuous or discontinuous), not carded, combed or otherwise prepared for spinning.
56.04		Man-made fibres (discontinuous or waste), carded, combed or otherwise prepared for spinning.
	266.2 (3)	A. Synthetic fibres.
	266.3 (3)	B. Regenerated fibres.
56.05		Yarn of man-made fibres (discontinuous or waste), not put up for retail sale.
	651.4 (4)	A. Of synthetic fibres.
	651.7 (4)	B. Of regenerated fibres.
56.06		Yarn of man-made fibres (discontinuous or waste), put up for retail sale.
	651.4 (5)	A. Of synthetic fibres.
	651.7 (5)	B. Of regenerated fibres.
56.07		Woven fabrics of man-made fibres (discontinuous or waste).
	653.5 (2)	A. Of synthetic fibres.
	653.6 (2)	B. Of regenerated fibres.

## Chapter 57

## Other vegetable textile materials; paper yarn and woven fabrics of paper yarn.

57.01	265.2	True hemp ("Cannabis sativa"), raw or processed but not spun; tow and waste of true hemp (including pulled or garnetted rags or ropes).
57.02	265.3	Manila hemp (abaca) ("Musa textilis"), raw or processed but not spun; tow and waste of manila hemp (including pulled or garnetted rags or ropes).

57.03	264.0	Jute and other textile bast fibres not elsewhere specified or included, raw or processed but not spun; tow and waste thereof (including pulled or garnetted rags or ropes).
57.04		Other vegetable textile fibres, raw or processed but not spun; waste of such fibres (including pulled or garnetted rags or ropes).
	265.4	A. Sisal and other fibres of the agave family and waste of such fibres.
	265.8	B. Other.
57.05	651.5 (3)	Yarn of true hemp.
57.06	651.9 (2)	Yarn of jute or of other textile bast fibres of heading No. 57.03.
57.07	651.9 (3)	Yarn of other vegetable textile fibres.
57.08	651.9 (4)	Paper yarn.
57.09	653.3 (2)	Woven fabrics of true hemp.
57.10	653.4	Woven fabrics of jute or of other textile bast fibres of heading No. 57.03.
57.11	653.9 (4)	Woven fabrics of other vegetable textile fibres.
57.12	653.9 (5)	Woven fabrics of paper yarn.

#### Chapter 58

**Carpets, mats, matting and tapestries; pile and chenille fabrics; narrow fabrics; trimmings; tulle and other net fabrics; lace; embroidery.**

#### Notes.

1. — The headings of this Chapter are to be taken not to apply to coated or impregnated fabrics, elastic fabrics or elastic trimmings, machinery belting or other goods falling within Chapter 59. However, embroidery on any textile base falls within heading No. 58.10.
2. — In headings Nos. 58.01 and 58.02, the words "carpets" and "rugs" are to be taken to extend to similar articles having the characteristics of floor coverings but intended for use for other purposes. These headings are to be taken not to apply to felt carpets, which fall within Chapter 59.
3. — For the purposes of heading No. 58.05, the expression "narrow woven fabrics" means :
  - (a) Woven fabrics of a width not exceeding 30 cm, whether woven as such or cut from wider pieces, provided with selvages (woven, gummed or made otherwise) on both edges;
  - (b) Tubular woven fabrics of a flattened width not exceeding 30 cm; and
  - (c) Bias binding with folded edges, of a width when unfolded not exceeding 30 cm.
 Narrow woven fabrics in the form of fringes are to be treated as falling within heading No. 58.07.
4. — Heading No. 58.08 is to be taken not to apply to nets or netting in the piece made of twine, cordage or rope, which are to be taken as falling within heading No. 59.05.

5. — In heading No. 58.10, the expression "embroidery" means, *inter alia*, embroidery with metal or glass thread on a visible ground of textile fabric, and sewn appliqué work of sequins, beads or ornamental motifs of textile or other materials. The heading is to be taken not to apply to needlework tapestry (heading No. 58.03).

6. — The headings of this Chapter are to be taken to include goods of the descriptions specified therein when made of metal thread and of a kind used in apparel, as furnishings or the like.

58.01	657.5	Carpets, carpeting and rugs, knotted (made up or not).
58.02	657.6	Other carpets, carpeting, rugs, mats and matting, and "Kelem", "Schumacks" and "Karamanie" rugs and the like (made up or not).
58.03	657.7	Tapestries, hand-made, of the type Gobelins, Flanders, Aubusson, Beauvais and the like, and needle-worked tapestries (for example, petit point and cross stitch) made in panels and the like by hand.
58.04		Woven pile fabrics and chenille fabrics (other than terry towelling or similar terry fabrics of cotton falling within heading No. 55.08 and fabrics falling within heading No. 58.05).
	652.2 (1)	A. Of cotton.
	653.1 (3)	B. Of silk.
	653.2 (2)	C. Of wool or of fine animal hair.
	653.5 (3)	D. Of synthetic fibres.
	653.6 (3)	E. Of regenerated fibres.
	653.9 (6)	F. Other.
58.05	654.0 (1)	Narrow woven fabrics, and narrow fabrics (bolduc) consisting of warp without weft assembled by means of an adhesive, other than goods falling within heading No. 58.06.
58.06	654.0 (2)	Woven labels, badges and the like, not embroidered, in the piece, in strips or cut to shape or size.
58.07	654.0 (3)	Chenille yarn (including flock chenille yarn), gimped yarn (other than metallised yarn of heading No. 52.01 and gimped horsehair yarn); braids and ornamental trimmings in the piece; tassels, pompons and the like.
58.08	654.0 (4)	Tulle and other net fabrics (but not including woven, knitted or crocheted fabrics), plain.
58.09	654.0 (5)	Tulle and other net fabrics (but not including woven, knitted or crocheted fabrics), figured; hand or mechanically made lace, in the piece, in strips or in motifs.
58.10	654.0 (6)	Embroidery, in the piece, in strips or in motifs.

## Chapter 59

**Wadding and felt; twine, cordage, ropes and cables; special fabrics; impregnated and coated fabrics; textile articles of a kind suitable for industrial use.**

### Notes.

1. — For the purposes of this Chapter, the expression "textile fabric" is to be taken to apply only to the textile fabrics of Chapters 50 to 57 and headings Nos. 58.04 and 58.05, the braids and trimmings in the piece of heading No. 58.07, the tulle and other net fabrics of headings Nos. 58.08 and 58.09, lace of heading No. 58.09 and the knitted and crocheted fabrics of heading No. 60.01.

2. — (A) Heading No. 59.08 is to be taken to apply to textile fabrics impregnated, coated, covered or laminated with preparations of cellulose derivatives or of other artificial plastic materials whatever the weight per square metre and whatever the nature of the plastic material (compact, foam, sponge or expanded).

It does not, however, cover:

- (a) Fabrics in which the impregnation, coating or covering cannot be seen with the naked eye (usually Chapters 50 to 58 and 60); for the purpose of this provision, no account should be taken of any resulting change of colour;
- (b) Products which cannot, without fracturing, be bent manually around a cylinder of a diameter of 7 mm, at a temperature between 15° and 30° C (usually Chapter 39); or
- (c) Products in which the textile fabric is either completely embedded in artificial plastic material or coated or covered on both sides with such material (Chapter 39).

(B) Heading No. 59.12 does not apply to:

- (a) Fabrics in which the impregnation or coating cannot be seen with the naked eye (usually Chapters 50 to 58 and 60); for the purpose of this provision, no account should be taken of any resulting change of colour;
- (b) Fabrics painted with designs (other than painted canvas being theatrical scenery, studio back-cloths or the like);
- (c) Fabrics covered with flock, dust, powdered cork or the like and bearing designs resulting from these treatments; or
- (d) Fabrics finished with normal dressings having a basis of amylaceous or similar substances.

3. — In heading No. 59.11 the expression "rubberised textile fabrics" means:

- (a) Textile fabrics impregnated, coated, covered or laminated with rubber:
  - (i) Weighing not more than 1,500 g/m<sup>2</sup>; or
  - (ii) Weighing more than 1,500 g/m<sup>2</sup> and containing more than 50 % by weight of textile material;
- (b) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square metre; and
- (c) Plates, sheets and strip, of expanded, foam or sponge rubber, combined with textile fabric, other than those falling in Chapter 40 by virtue of the last paragraph of Note 2 to that Chapter.

4. — Heading No. 59.16 is to be taken not to apply to:

- (a) Transmission, conveyor or elevator belting of a thickness of less than 3 mm; or
- (b) Transmission, conveyor or elevator belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated or coated with rubber (heading No. 40.10).

5. — Heading No. 59.17 is to be taken to apply to the following goods which are to be taken as not falling within any other heading of Section XI:

- (a) Textile products (other than those having the character of the products of headings Nos. 59.14 to 59.16), the following only:
  - (i) Textile fabric, felt and felt-lined woven fabric, coated, covered or laminated with rubber, leather or other material, of a kind commonly used for card clothing, and similar fabric of a kind commonly used in machinery or plant;
  - (ii) Bolting cloth;
  - (iii) Straining cloth of a kind commonly used in oil presses and the like, of textile fibres or of human hair;
  - (iv) Woven textile felts, whether or not impregnated or coated, of a kind commonly used in paper-making or other machinery, tubular or endless with single or multiple warp and/or weft, or flat woven with multiple warp and/or weft;
  - (v) Textile fabrics reinforced with metal, of a kind commonly used in machinery or plant;
  - (vi) Textile fabrics of the metallised yarn falling within heading No. 52.01, of a kind commonly used in paper-making or other machinery;
  - (vii) Cords, braids and the like, whether or not coated, impregnated or reinforced with metal, of a kind commonly used in machinery or plant as packing or lubricating materials;
- (b) Textile articles (other than those of headings Nos. 59.14 to 59.16) of a kind commonly used in machinery or plant (for example, gaskets, washers, polishing discs and other machinery parts).

59.01	655.8 (1)	Wadding and articles of wadding; textile flock and dust and mill neps.
59.02	655.1	Felt and articles of felt, whether or not impregnated or coated.
59.03	655.4 (1)	Bonded fibre fabrics, similar bonded yarn fabrics, and articles of such fabrics, whether or not impregnated or coated.
59.04	655.6 (1)	Twine, cordage, ropes and cables, plaited or not.
59.05	655.6 (2)	Nets and netting made of twine, cordage or rope, and made up fishing nets of yarn, twine, cordage or rope.
59.06	655.6 (3)	Other articles made from yarn, twine, cordage, rope or cables, other than textile fabrics and articles made from such fabrics.
59.07	655.4 (2)	Textile fabrics coated with gum or amylaceous substances, of a kind used for the outer covers of books and the like; tracing cloth; prepared painting canvas; buckram and similar fabrics for hat foundations and similar uses.
59.08	655.4 (3)	Textile fabrics impregnated, coated, covered or laminated with preparations of cellulose derivatives or of other artificial plastic materials.
59.09	655.4 (4)	Textile fabrics coated or impregnated with oil or preparations with a basis of drying oil.

59.10	657.4 (2)	Linoleum and materials prepared on a textile base in a similar manner to linoleum, whether or not cut to shape or of a kind used as floor coverings; floor coverings consisting of a coating applied on a textile base, cut to shape or not.
59.11	655.4 (5)	Rubberised textile fabrics, other than rubberised knitted or crocheted goods.
59.12	655.4 (6)	Textile fabrics otherwise impregnated or coated; painted canvas being theatrical scenery, studio back-cloths or the like.
59.13	655.5	Elastic fabrics and trimmings (other than knitted or crocheted goods) consisting of textile materials combined with rubber threads.
59.14	655.8 (2)	Wicks, of woven, plaited or knitted textile materials, for lamps, stoves, lighters, candles and the like; tubular knitted gas-mantle fabric and incandescent gas mantles.
59.15	655.9 (1)	Textile hose-piping and similar tubing, with or without lining, armour or accessories of other materials.
59.16	655.9 (2)	Transmission, conveyor or elevator belts or belting, of textile material, whether or not strengthened with metal or other material.
59.17	655.8 (3)	Textile fabrics and textile articles, of a kind commonly used in machinery or plant.

#### Chapter 60

#### Knitted and crocheted goods.

##### Notes.

1. — This Chapter does not cover :
  - (a) Crochet lace of heading No. 58.09;
  - (b) Knitted or crocheted goods falling within Chapter 59;
  - (c) Corsets, corset-belts, suspender-belts, brassières, braces, suspenders, garters or the like (heading No. 61.09);
  - (d) Old clothing or other articles falling within heading No. 63.01; or
  - (e) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.19).
2. — Headings Nos. 60.02 to 60.06 are to be taken to apply to knitted or crocheted articles and to parts thereof :
  - (a) Knitted or crocheted directly to shape, whether imported as separate items or in the form of a number of items in the length;
  - (b) Made up, by sewing or otherwise.
3. — For the purposes of heading No. 60.06, knitted or crocheted articles are not considered to be elastic articles only by reason of their containing rubber thread or elastic forming merely a supporting band.
4. — The headings of this Chapter are to be taken to include goods of the descriptions specified therein when made of metal thread and of a kind used in apparel, as furnishings or the like.

##### 5. — For the purposes of this Chapter :

- (a) "Elastic" means consisting of textile materials combined with rubber threads; and
- (b) "Rubberised" means impregnated, coated, covered or laminated with rubber, or made with textile thread impregnated, coated or covered with rubber.

60.01	632.7	Knitted or crocheted fabric, not elastic nor rubberised.
60.02	841.4 (1)	Gloves, mittens and mitts, knitted or crocheted, not elastic nor rubberised.
60.03	841.4 (2)	Stockings, under stockings, socks, ankle-socks, sockettes and the like, knitted or crocheted, not elastic nor rubberised.
60.04	841.4 (3)	Under garments, knitted or crocheted, not elastic nor rubberised.
60.05	841.4 (4)	Outer garments and other articles, knitted or crocheted, not elastic nor rubberised.
60.06	841.4 (5)	Knitted or crocheted fabric and articles thereof, elastic or rubberised (including elastic knee-caps and elastic stockings).

#### Chapter 61

#### Articles of apparel and clothing accessories of textile fabric, other than knitted or crocheted goods.

##### Notes.

1. — The headings of this Chapter are to be taken to apply to articles of the kinds described therein only when made up of any textile fabric (including felt, bonded fibre fabric, braid or trimmings of heading No. 58.07, tulle or other net fabrics and lace) or of fabric of metal thread, but not including articles of knitted or crocheted material other than those falling within heading No. 61.09.
2. — The headings of this Chapter do not cover :
  - (a) Old clothing or other articles falling within heading No. 63.01; or
  - (b) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.19).
3. — For the purposes of headings Nos. 61.01 to 61.04 :
  - (a) Articles which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in heading No. 61.02 or 61.04 as the case may be;
  - (b) The expression "infants' garments" is to be taken to apply to :
    - (i) Garments for young children which are not identifiable as for wear exclusively by boys or by girls, and
    - (ii) Babies' napkins.
4. — Scarves and articles of the scarf type, square or approximately square, of which no side exceeds 60 cm are to be classified as handkerchiefs (heading No. 61.05).  
Handkerchiefs of which any side exceeds 60 cm are to be classified in heading No. 61.06.
5. — The headings of this Chapter are to be taken to apply to textile fabrics (other than knitted or crocheted fabric) cut to shape for making articles of this Chapter.  
Heading No. 61.09, however, also includes fabrics knitted or crocheted to shape for making articles classified in that heading, whether imported as separate items or in the form of a number of items in the length.

61.01	841.1 (1)	Men's and boys' outer garments.
61.02	841.1 (2)	Women's, girls' and infants' outer garments.
61.03	841.1 (3)	Men's and boys' under garments, including collars, shirt fronts and cuffs.
61.04	841.1 (4)	Women's, girls' and infants' under garments.
61.05	841.2 (1)	Handkerchiefs.
61.06	841.2 (2)	Shawls, scarves, mufflers, mantillas, veils and the like.
61.07	841.2 (3)	Ties, bow ties and cravats.
61.08	841.2 (4)	Collars, tuckers, fallals, bodice-fronts, jaboia, cuffs, flouncings, yokes and similar accessories and trimmings for women's and girls' garments.
61.09	841.2 (5)	Corsets, corset-belts, suspender-belts, brassières, braces, suspenders, garters and the like (including such articles of knitted or crocheted fabric), whether or not elastic.
61.10	841.2 (6)	Gloves, mittens, mitts, stockings, socks and sockettes, not being knitted or crocheted goods.
61.11	841.2 (9)	Made up accessories for articles of apparel (for example, dress shields, shoulder and other pads, belts, muffs, sleeve protectors, pockets).

#### Chapter 62

#### Other made up textile articles.

#### Notes.

1. — The headings of this Chapter are to be taken to apply to the articles of the kinds described therein only when made up of any textile fabric (other than felt and bonded fibre or similar bonded yarn fabrics) or of the braids or trimmings of heading No. 58.07, not being knitted or crocheted goods.
2. — The headings of this Chapter do not cover :
  - (a) Goods falling within Chapter 58, 59 or 61; or
  - (b) Old clothing or other articles falling within heading No. 63.01.

#### 62.01 Travelling rugs and blankets.

656.6 (1)	A. Of wool or of fine animal hair.
656.6 (2)	B. Of cotton.
656.6 (3)	C. Other.

62.02	656.9 (1)	Bed linen, table linen, toilet linen and kitchen linen; curtains and other furnishing articles.
62.03	656.1	Sacks and bags, of a kind used for the packing of goods.
62.04	656.2	Tarpaulins, sails, awnings, sunblinds, tents and camping goods.
62.05	656.9 (2)	Other made up textile articles (including dress patterns).

#### Chapter 63

#### Old clothing and other textile articles: rags.

63.01	267.8 (1)	Clothing, clothing accessories, travelling rugs and blankets, household linen and furnishing articles (other than articles falling within heading No. 58.01, 58.02 or 58.03), of textile materials, footwear and headgear of any material, showing signs of appreciable wear and imported in bulk or in bales, sacks or similar bulk packings.
63.02	267.8 (2)	Used or new rags, scrap twine, cordage, rope and cables and worn out articles of twine, cordage, rope or cables.

#### Section XII

#### FOOTWEAR, HEADGEAR, UMBRELLAS, SUNSHADES, WHIPS, RIDING-CROPS AND PARTS THEREOF; PREPARED FEATHERS AND ARTICLES MADE THEREWITH; ARTIFICIAL FLOWERS; ARTICLES OF HUMAN HAIR; FANS

#### Chapter 64

#### Footwear, gaiters and the like: parts of such articles.

#### Notes.

1. — This Chapter does not cover :
  - (a) Footwear, without applied soles, knitted or crocheted (heading No. 60.03) or of other textile fabric (except felt or bonded fibre or similar bonded yarn fabrics) (heading No. 62.05);
  - (b) Old footwear falling within heading No. 63.01;
  - (c) Articles of asbestos (heading No. 68.13);
  - (d) Orthopaedic footwear or other orthopaedic appliances, or parts thereof (heading No. 90.19); or
  - (e) Toys and skating boots with skates attached (Chapter 97).

2. — For the purposes of headings Nos. 64.05 and 64.06, the expression "parts" is to be taken not to include pegs, boot protectors, eyelets, boot hooks, buckles, ornaments, braid, laces, pompons or other trimmings (which are to be classified in their appropriate headings) or buttons or other goods falling within heading No. 98.01.
3. — For the purposes of heading No. 64.01, the expression "rubber or artificial plastic material" is to be taken to include any textile fabric coated or covered externally with one or both of those materials.

64.01	851.8 (1)	Footwear with outer soles and uppers of rubber or artificial plastic material.
64.02	851.8 (2)	Footwear with outer soles of leather or composition leather; footwear (other than footwear falling within heading No. 64.01) with outer soles of rubber or artificial plastic material.
64.03	851.8 (3)	Footwear with outer soles of wood or cork.
64.04	851.8 (4)	Footwear with outer soles of other materials.
64.05	812.2	Parts of footwear (including uppers, in-soles and screw-on heels) of any material except metal.
64.06	851.8 (5)	Gaiters, spats, leggings, puttees, cricket pads, shin-guards and similar articles, and parts thereof.

#### Chapter 65

#### Headgear and parts thereof.

##### Notes.

1. — This Chapter does not cover :
- (a) Old headgear falling within heading No. 63.01;
  - (b) Hair nets of human hair (heading No. 67.04);
  - (c) Asbestos headgear (heading No. 68.13); or
  - (d) Dolls' hats or other toy hats, or carnival articles of Chapter 97.
2. — Heading No. 65.02 is to be taken not to apply to hat-shapes made by sewing (other than hat-shapes made by the sewing in spirals of plaited or other strips).

65.01	855.7 (1)	Hat-forms, hat bodies and hoods of felt, neither blocked to shape nor with made brims; plateaux and manchons (including slit manchons), of felt.
65.02	855.7 (2)	Hat-shapes, plaited or made from plaited or other strips of any material, neither blocked to shape nor with made brims.

65.03	841.5 (1)	Felt hats and other felt headgear, being headgear made from the felt hoods and plateaux falling within heading No. 65.01, whether or not lined or trimmed.
65.04	841.5 (2)	Hats and other headgear, plaited or made from plaited or other strips of any material, whether or not lined or trimmed.
65.05	841.5 (3)	Hats and other headgear (including hair nets), knitted or crocheted, or made up from lace, felt or other textile fabric in the piece (but not from strips), whether or not lined or trimmed.
65.06	841.5 (9)	Other headgear, whether or not lined or trimmed.
65.07	841.5 (4)	Head-bands, linings, covers, hat foundations, hat frames (including spring frames for opera hats), peaks and chinstraps, for headgear.

#### Chapter 66

#### Umbrellas, sunshades, walking-sticks, whips, riding-crops and parts thereof.

##### Notes.

1. — This Chapter does not cover :
- (a) Measure walking-sticks or the like (heading No. 90.16);
  - (b) Firearm-sticks, sword-sticks, loaded walking-sticks or the like (Chapter 93); or
  - (c) Goods falling within Chapter 97 (for example, toy umbrellas and toy sunshades).
2. — Heading No. 66.03 is to be taken not to apply to parts, trimmings or accessories of textile material, nor to covers, tassels, thongs, umbrella cases or the like, of any material. Such goods imported with, but not fitted to, articles falling within heading No. 66.01 or 66.02 are to be classified separately and are not to be treated as forming part of those articles.

66.01	899.4 (1)	Umbrellas and sunshades (including walking-stick umbrellas, umbrella tents, and garden and similar umbrellas).
66.02	899.4 (2)	Walking-sticks (including climbing-sticks and seat-sticks), canes, whips, riding-crops and the like.
66.03	899.4 (3)	Parts, fittings, trimmings and accessories of articles falling within heading No. 66.01 or 66.02.

# Chapter 67

**Prepared feathers and down and articles made of feathers or of down;  
artificial flowers; articles of human hair; fans.**

## Notes.

1. — This Chapter does not cover :
  - (a) Straining cloth of human hair (heading No. 59.17);
  - (b) Floral motifs of lace, of embroidery or other textile fabric (Section XI);
  - (c) Footwear (Chapter 64);
  - (d) Headgear (Chapter 65);
  - (e) Feather dusters (heading No. 96.04), powder-puffs (heading No. 96.05) or hair sieves (heading No. 96.06); or
  - (f) Toys, sports requisites or carnival articles (Chapter 97).
2. — Heading No. 67.01 is to be taken not to apply to :
  - (a) Goods (for example, bedding) in which feathers or down constitute only filling or padding;
  - (b) Articles of apparel and accessories thereto in which feathers or down constitute no more than mere trimming or padding;
  - (c) Artificial flowers or foliage or parts thereof or made up articles of heading No. 67.02; or
  - (d) Fans (heading No. 67.05).
3. — Heading No. 67.02 is to be taken not to apply to :
  - (a) Articles of glass (Chapter 70);
  - (b) Artificial flowers, foliage or fruit of pottery, stone, metal, wood or other materials, obtained in one piece by moulding, forging, carving, stamping or other process, or consisting of parts assembled otherwise than by binding, gluing or similar methods.

67.01	809.9 (3)	Skins and other parts of birds with their feathers or down, feathers, parts of feathers, down, and articles thereof, (other than goods falling within heading No. 05.07 and worked quills and scapes).
67.02	809.9 (3)	Artificial flowers, foliage or fruit and parts thereof; articles made of artificial flowers, foliage or fruit.
67.03	809.9 (4)	Human hair, dressed, thinned, bleached or otherwise worked; wool or other animal hair prepared for use in making wigs and the like.
67.04	809.9 (5)	Wigs, false beards, hair pads, curls, switches and the like, of human or animal hair or of textiles; other articles of human hair (including hair nets).
67.05	809.9 (6)	Fans and hand screens, non-mechanical, of any material; frames and handles therefor and parts of such frames and handles, of any material.

# Section XIII

**ARTICLES OF STONE, OF PLASTER, OF CEMENT, OF ASBESTOS, OF MICA  
AND OF SIMILAR MATERIALS; CERAMIC PRODUCTS;  
GLASS AND GLASSWARE**

## Chapter 68

**Articles of stone, of plaster, of cement, of asbestos, of mica  
and of similar materials.**

## Notes.

1. — This Chapter does not cover :
  - (a) Goods falling within Chapter 25;
  - (b) Coated or impregnated paper falling within heading No. 48.07 (for example, paper coated with mica powder or graphite, bituminised or asphalted paper);
  - (c) Coated or impregnated textile fabric falling within Chapter 59 (for example, mica-coated fabric, bituminised or asphalted fabric);
  - (d) Articles falling within Chapter 71;
  - (e) Tools or parts of tools, falling within Chapter 82;
  - (f) Lithographic stones of heading No. 84.34;
  - (g) Electrical insulators (heading No. 85.25) or fittings of insulating material falling within heading No. 85.26;
  - (h) Dental burrs (heading No. 90.17);
  - (i) Goods falling within Chapter 91 (for example, clocks and clock cases);
  - (k) Articles falling within heading No. 95.07;
  - (l) Articles falling within Chapter 97 (for example, toys, games and sports requisites);
  - (m) Goods falling within heading No. 98.01 (for example, buttons), No. 98.05 (for example, slate pencils) or No. 98.06 (for example, drawing slates); or
  - (n) Works of art, collectors' pieces or antiques (Chapter 99).
2. — In heading No. 68.02 the expression "worked monumental or building stone" is to be taken to apply not only to the varieties of stone referred to in headings Nos. 25.15 and 25.16 but also to all other natural stone (for example, quartzite, flint, dolomite and steatite) similarly worked; it is, however, to be taken not to apply to slate.

68.01	681.3 (1)	Road and paving setts, curbs and flagstones, of natural stone (except slate).
68.02	681.3 (2)	Worked monumental or building stone, and articles thereof (including mosaic cubes), other than goods falling within heading No. 68.01 or within Chapter 69.
68.03	681.3 (3)	Worked slate and articles of slate, including articles of agglomerated slate.

68.04	663.1 (1)	Millstones, grindstones, grinding wheels and the like (including grinding, sharpening, polishing, trueing and cutting wheels, heads, discs and points), of natural stone (agglomerated or not), of agglomerated natural or artificial abrasives, or of pottery, with or without cores, shanks, sockets, axles and the like of other materials, but without frameworks; segments and other finished parts of such stones and wheels, of natural stone (agglomerated or not), of agglomerated natural or artificial abrasives, or of pottery.
68.05	663.1 (2)	Hand polishing stones, whetstones, oilstones, hones and the like, of natural stone, of agglomerated natural or artificial abrasives, or of pottery.
68.06	663.2	Natural or artificial abrasive powder or grain, on a base of woven fabric, of paper, of paperboard or of other materials, whether or not cut to shape or sewn or otherwise made up.
68.07	663.5	Slag wool, rock wool and similar mineral wools; exfoliated vermiculite, expanded clays, foamed slag and similar expanded mineral materials; mixtures and articles of heat-insulating, sound-insulating, or sound-absorbing mineral materials, other than those falling in heading No. 68.12 or 68.13 or in Chapter 69.
68.08	661.8 (1)	Articles of asphalt or of similar material (for example, of petroleum bitumen or coal tar pitch).
68.09	661.8 (2)	Panels, boards, tiles, blocks and similar articles of vegetable fibre, of wood fibre, of straw, of wood shavings or of wood waste (including sawdust), agglomerated with cement, plaster or with other mineral binding substances.
68.10	663.6 (1)	Articles of plastering material.
68.11	663.6 (2)	Articles of cement (including slag cement), of concrete or of artificial stone (including granulated marble agglomerated with cement), reinforced or not.
68.12	661.8 (3)	Articles of asbestos-cement, of cellulose fibre-cement or the like.
68.13	662.8 (1)	Fabricated asbestos and articles thereof (for example, asbestos board, thread and fabric; asbestos clothing, asbestos jointing), reinforced or not, other than goods falling within heading No. 68.14; mixtures with a basis of asbestos and mixtures with a basis of asbestos and magnesium carbonate, and articles of such mixtures.
68.14	663.8 (2)	Friction material (segments, discs, washers, strips, sheets, plates, rolls and the like) of a kind suitable for brakes, for clutches or the like, with a basis of asbestos, other mineral substances or of cellulose, whether or not combined with textile or other materials.
68.15	662.4	Worked mica and articles of mica, including bonded mica splittings on a support of paper or fabric (for example, micanite and micafolium).
68.16	663.6 (3)	Articles of stone or of other mineral substances (including articles of peat), not elsewhere specified or included.

## Chapter 69

### Ceramic products.

#### Notes.

- The headings of this Chapter are to be taken to apply only to ceramic products which have been fired after shaping. Headings Nos. 69.04 to 69.14 are to be taken to apply only to such products other than heat-insulating goods and refractory goods.
- This Chapter does not cover :
  - Goods falling within Chapter 71 (for example, imitation jewellery);
  - Cermets falling within heading No. 81.04;
  - Electrical insulators (heading No. 85.25) or fittings of insulating material falling within heading No. 85.26;
  - Artificial teeth (heading No. 90.19);
  - Goods falling within Chapter 91 (for example, clocks and clock cases);
  - Articles falling within Chapter 97 (for example, toys, games and sports requisites);
  - Smoking pipes, buttons or other articles falling within Chapter 98; or
  - Original statuary, collectors' pieces or antiques (Chapter 99).

#### I. — HEAT-INSULATING AND REFRACTORY GOODS

69.01	662.3 (1)	Heat-insulating bricks, blocks, tiles and other heat-insulating goods of siliceous fossil meals or of similar siliceous earths (for example, kieselguhr, tripolite or diatomite).
69.02	662.3 (2)	Refractory bricks, blocks, tiles and similar refractory constructional goods, other than goods falling within heading No. 69.01.
69.03	663.7	Other refractory goods (for example, retorts, crucibles, muffles, nozzles, plugs, supports, cupels, tubes, pipes, sheaths and rods), other than goods falling within heading No. 69.01.

#### II. — OTHER CERAMIC PRODUCTS

69.04	662.4 (1)	Building bricks (including flooring blocks, support or filler tiles and the like).
69.05	662.4 (2)	Roofing tiles, chimney-pots, cowls, chimney-liners, cornices and other constructional goods, including architectural ornaments.
69.06	662.4 (3)	Piping, conduits and guttering (including angles, bends and similar fittings).
69.07	662.4 (4)	Unglazed setts, flags and paving, hearth and wall tiles.
69.08	662.4 (5)	Glazed setts, flags and paving, hearth and wall tiles.

69.09	663.9 (1)	Laboratory, chemical or industrial wares; troughs, tubs and similar receptacles of a kind used in agriculture; pots, jars and similar articles of a kind commonly used for the conveyance or packing of goods.
69.10	812.2	Sinks, wash basins, bidets, water closet pans, urinals, baths and like sanitary fixtures.
69.11	666.4	Tableware and other articles of a kind commonly used for domestic or toilet purposes, of porcelain or china (including biscuit porcelain and parian).
69.12	666.5	Tableware and other articles of a kind commonly used for domestic or toilet purposes, of other kinds of pottery.
69.13	666.6	Statuettes and other ornaments, and articles of personal adornment; articles of furniture.
69.14	668.9 (2)	Other articles.

#### Chapter 70

#### Glass and glassware.

#### Notes.

- This Chapter does not cover :
  - Ceramic enamels (heading No. 32.08);
  - Goods falling within Chapter 71 (for example, imitation jewellery);
  - Electrical insulators (heading No. 85.25) or fittings of insulating material falling within heading No. 85.26;
  - Hypodermic syringes, artificial eyes, thermometers, barometers, hydrometers, optically worked optical elements or other articles falling within Chapter 90;
  - Toys, games, sports requisites, Christmas tree ornaments or other articles falling within Chapter 97 (excluding glass eyes without mechanisms for dolls or for other articles of Chapter 97); or
  - Buttons, fitted vacuum flasks, scent or similar sprays or other articles falling within Chapter 98.
- The reference in heading No. 70.07 to "cast, rolled, drawn or blown glass (including flashed or wired glass) cut to shape other than rectangular shape, or bent or otherwise worked (for example, edge worked or engraved), whether or not surface ground or polished" is to be taken to apply to articles made from such glass, provided they are not framed or fitted with other materials.
- For the purposes of heading No. 70.20, the expression "wool" means :
  - Mineral wools with a silica ( $\text{SiO}_2$ ) content not less than 60 % by weight;
  - Mineral wools with a silica ( $\text{SiO}_2$ ) content less than 60 % but with an alkaline oxide ( $\text{K}_2\text{O}$  and/or  $\text{Na}_2\text{O}$ ) content of more than 5 % by weight or a boric oxide ( $\text{B}_2\text{O}_3$ ) content of more than 2 % by weight.

Mineral wools which do not comply with the above specifications fall in heading No. 68.07.
- For the purposes of the Nomenclature, the expression "glass" is to be taken to extend to fused quartz and fused silica.

70.01	664.1 (1)	Waste glass (cullet); glass in the mass (excluding optical glass).
-------	-----------	--

70.02	664.1 (2)	Glass of the variety known as "enamel" glass, in the mass, rods and tubes.
70.03	664.1 (3)	Glass in balls, rods and tubes, unworked (not being optical glass).
70.04	664.5	Unworked cast or rolled glass (including flashed or wired glass), whether figured or not, in rectangles.
70.05	664.3	Unworked drawn or blown glass (including flashed glass), in rectangles.
70.06	664.4	Cast, rolled, drawn or blown glass (including flashed or wired glass), in rectangles, surface ground or polished, but not further worked.
70.07	664.9 (1)	Cast, rolled, drawn or blown glass (including flashed or wired glass) cut to shape other than rectangular shape, or bent or otherwise worked (for example, edge worked or engraved), whether or not surface ground or polished; multiple-walled insulating glass; leaded lights and the like.
70.08	664.7	Safety glass consisting of toughened or laminated glass, shaped or not.
70.09	664.8	Glass mirrors (including rear-view mirrors), unframed, framed or backed.
70.10	665.1 (1)	Carboys, bottles, jars, pots, tubular containers and similar containers, of glass, of a kind commonly used for the conveyance or packing of goods; stoppers and other closures, of glass.
70.11	664.9 (2)	Glass envelopes (including bulbs and tubes) for electric lamps, electronic valves or the like.
70.12	665.1 (2)	Glass inners for vacuum flasks or for other vacuum vessels.
70.13	665.2	Glassware (other than articles falling in heading No. 70.19) of a kind commonly used for table, kitchen, toilet or office purposes, for indoor decoration, or for similar uses.
70.14	812.4 (1)	Illuminating glassware, signalling glassware and optical elements of glass, not optically worked nor of optical glass.
70.15	664.9 (3)	Clock and watch glasses and similar glasses (including glass of a kind used for sunglasses but excluding glass suitable for corrective lenses), curved, bent, hollowed and the like; glass spheres and segments of spheres, of a kind used for the manufacture of clock and watch glasses and the like.
70.16	664.6	Bricks, tiles, slabs, paving blocks, squares and other articles of pressed or moulded glass, of a kind commonly used in building; multi-cellular glass in blocks, slabs, plates, panels and similar forms.
70.17	665.8 (1)	Laboratory, hygienic and pharmaceutical glassware, whether or not graduated or calibrated; glass ampoules.
70.18	664.2	Optical glass and elements of optical glass, other than optically worked elements; blanks for corrective spectacle lenses.

70.19	645.8 (2)	Glass beads, imitation pearls, imitation precious and semi-precious stones, fragments and chippings, and similar fancy or decorative glass smallwares, and articles of glassware made therefrom; glass cubes and small glass plates, whether or not on a backing, for mosaics and similar decorative purposes; artificial eyes of glass, including those for toys but excluding those for wear by humans; ornaments and other fancy articles of lamp-worked glass; glass grains (ballotini).
70.20		Glass fibre (including wool), yarns, fabrics, and articles made therefrom.
	651.8	A. Yarns.
	653.8	B. Fabrics.
	664.9 (4)	C. Other.
70.21	665.8 (9)	Other articles of glass.

#### Section XIV

### PEARLS, PRECIOUS AND SEMI-PRECIOUS STONES, PRECIOUS METALS, ROLLED PRECIOUS METALS, AND ARTICLES THEREOF; IMITATION JEWELLERY; COIN

#### Chapter 71

#### Pearls, precious and semi-precious stones, precious metals, rolled precious metals, and articles thereof; imitation jewellery.

#### Notes.

1. — Subject to Note 1 (a) to Section VI and except as provided below, all articles consisting wholly or partly :
  - (a) Of pearls or of precious or semi-precious stones (natural, synthetic or reconstructed), or
  - (b) Of precious metal or of rolled precious metal,
 are to be classified within this Chapter and not within any other Chapter.
2. — (a) Headings Nos. 71.12, 71.13 and 71.14 do not cover articles in which precious metal or rolled precious metal is present as minor constituents only, such as minor fittings or minor ornamentation (for example, monograms, ferrules and rims), and paragraph (b) of the foregoing Note does not apply to such articles (\*).
  - (b) Heading No. 71.15 does not cover articles containing precious metal or rolled precious metal (other than as minor constituents).
3. — This Chapter does not cover :
  - (a) Amalgams of precious metal, and colloidal precious metal (heading No. 28.49);
  - (b) Sterile surgical suture materials, dental fillings and other goods falling in Chapter 30;
  - (c) Goods falling in Chapter 32 (for example, lustres);
  - (d) Handbags and other articles falling within heading No. 42.02 or 42.03;
  - (e) Goods of heading No. 43.03 or 43.04;
  - (f) Goods falling within Section XI (textiles and textile articles);

(\*) The underlined portion of this Note constitutes an optional text.

- (g) Footwear (Chapter 64) and headgear (Chapter 65);
- (h) Umbrellas, walking-sticks and other articles falling within Chapter 66;
- (i) Fans and hand screens of heading No. 67.05;
- (k) Coin (Chapter 72 or 99);
- (l) Abrasive goods falling within headings Nos. 68.04, 68.05, 68.06 or Chapter 82, containing dust or powder of precious or semi-precious stones (natural or synthetic); goods of Chapter 82 with a working part of precious or semi-precious stones (natural, synthetic or reconstructed) on a support of base metal; machinery, mechanical appliances and electrical goods, and parts thereof, falling within Section XVI, not being such articles wholly of precious or semi-precious stones (natural, synthetic or reconstructed);
- (m) Goods falling within Chapter 90, 91 or 92 (scientific instruments, clocks and watches, or musical instruments);
- (n) Arms or parts thereof (Chapter 93);
- (o) Articles covered by Note 2 to Chapter 97;
- (p) Articles falling within headings of Chapter 98 other than headings Nos. 98.01 and 98.12; or

(q) Original sculptures and statuary (heading No. 99.03), collectors' pieces (heading No. 99.05) and antiques of an age exceeding one hundred years (heading No. 99.06), other than pearls or precious or semi-precious stones.

4. — (a) The expression "pearls" is to be taken to include cultured pearls.
- (b) The expression "precious metal" means silver, gold, platinum and other metals of the platinum group.
- (c) The expression "other metals of the platinum group" means iridium, osmium, palladium, rhodium and ruthenium.
5. — For the purposes of this Chapter, any alloy (including a sintered mixture) containing precious metal is to be treated as an alloy of precious metal if, and only if, any one precious metal constitutes as much as 2 %, by weight, of the alloy. Alloys of precious metal are to be classified according to the following rules :
  - (a) An alloy containing 2 % or more, by weight, of platinum is to be treated only as an alloy of platinum.
  - (b) An alloy containing 2 % or more, by weight, of gold but no platinum, or less than 2 %, by weight, of platinum, is to be treated only as an alloy of gold.
  - (c) Other alloys containing 2 % or more, by weight, of silver are to be treated as alloys of silver.
 For the purposes of this Note, metals of the platinum group are to be regarded as one metal and are to be treated as though they were platinum.
6. — Except where the context otherwise requires, any reference in these Notes or elsewhere in the Nomenclature to precious metal or to any particular precious metal is to be taken to include a reference to alloys treated as alloys of precious metal or of the particular metal in accordance with the rules in Note 5 above, but not to rolled precious metal or to base metal or non-metals coated or plated with precious metal.
7. — The expression "rolled precious metal" means material made with a base of metal upon one or more surfaces of which there is affixed by soldering, brazing, welding, hot-rolling or similar mechanical means a covering of precious metal. The expression is also to be taken to cover base metal inlaid with precious metal.
8. — For the purposes of heading No. 71.12, the expression "articles of jewellery" means :
  - (a) Any small objects of personal adornment (gem-set or not) (for example, rings, bracelets, necklaces, brooches, ear-rings, watch-chains, fobs, pendants, tie-pins, cuff-links, dress-studs, religious or other medals and insignia); and
  - (b) Articles of personal use of a kind normally carried in the pocket, in the handbag or on the person (such as cigarette cases, powder boxes, chain purses, cachou boxes).

9. — For the purposes of heading No. 71.13, the expression "articles of goldsmiths' or silversmiths' wares" includes such articles as ornaments, tableware, toilet-ware, smokers' requisites and other articles of household, office or religious use.

10. — For the purposes of heading No. 71.16, the expression "imitation jewellery" means articles of jewellery within the meaning of paragraph (a) of Note 8 above (but not including buttons, studs, cuff-links or other articles of heading No. 98.01 or dress combs, hair-slides or the like of heading No. 98.12), not incorporating pearls, precious or semi-precious stones (natural, synthetic or reconstructed) nor (except as plating or as minor constituents) precious metal or rolled precious metal, and composed:

- (a) Wholly or partly of base metal, whether or not plated with precious metal; or
- (b) Of at least two materials (for example, wood and glass, bone and amber, mother of pearl and artificial plastic material), no account being taken of materials (for example, necklace string) used only for assembly.

11. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

#### L — PEARLS AND PRECIOUS AND SEMI-PRECIOUS STONES

71.01 667.1 Pearls, unworked or worked, but not mounted, set or strung (except ungraded pearls temporarily strung for convenience of transport).

71.02 Precious and semi-precious stones, unworked, cut or otherwise worked, but not mounted, set or strung (except ungraded stones temporarily strung for convenience of transport).

- 275.1 A. Industrial diamonds.
- 667.2 B. Diamonds other than industrial diamonds.
- 667.3 C. Other.

71.03 667.4 Synthetic or reconstructed precious or semi-precious stones, unworked, cut or otherwise worked, but not mounted, set or strung (except ungraded stones temporarily strung for convenience of transport).

71.04 275.2 (1) Dust and powder of natural or synthetic precious or semi-precious stones.

#### II. — PRECIOUS METALS AND ROLLED PRECIOUS METALS, UNWROUGHT, UNWORKED OR SEMI-MANUFACTURED

71.05 681.1 (1) Silver, including silver gilt and platinum-plated silver, unwrought or semi-manufactured.

71.06 681.1 (2) Rolled silver, unworked or semi-manufactured.

71.07 Gold, including platinum-plated gold, unwrought or semi-manufactured.

- L.1.1 A. Gold bullion.
- L.1.3 B. Other.

71.08 L.1.4 Rolled gold on base metal or silver, unworked or semi-manufactured.

71.09 881.2 (1) Platinum and other metals of the platinum group, unwrought or semi-manufactured.

71.10 881.2 (2) Rolled platinum or other platinum group metals, on base metal or precious metal, unworked or semi-manufactured.

71.11 Goldsmiths', silversmiths' and jewellers' sweepings, residues, lemeis, and other waste and scrap, of precious metal.

- 285.9 (2) A. Of silver or of platinum or of other metals of the platinum group.
- L.1.5 B. Of gold.

#### III. — JEWELLERY, GOLDSMITHS' AND SILVERSMITHS' WARES AND OTHER ARTICLES

71.12 897.1 (1) Articles of jewellery and parts thereof, of precious metal or rolled precious metal.

71.13 897.1 (2) Articles of goldsmiths' or silversmiths' wares and parts thereof, of precious metal or rolled precious metal, other than goods falling within heading No. 71.12.

71.14 897.1 (3) Other articles of precious metal or rolled precious metal.

71.15 897.1 (4) Articles consisting of, or incorporating, pearls, precious or semi-precious stones (natural, synthetic or reconstructed).

71.16 897.2 Imitation jewellery.

#### Chapter 72

##### Coin.

Note.

This Chapter does not cover collectors' pieces (heading No. 99.05).

72.01 Coin.

- 961.9 A. Coin not being legal tender (other than gold coin).
- L.1.6 B. Gold coin.
- II. C. Other.

## Section XV

### BASE METALS AND ARTICLES OF BASE METAL

#### Notes.

#### 1. — This Section does not cover :

- (a) Prepared paints, inks or other products with a basis of metallic flakes or powder falling within heading No. 32.08, 32.09, 32.10 or 32.13;
- (b) Ferro-cerium or other pyrophoric alloys (heading No. 36.07);
- (c) Headgear or parts thereof falling within heading No. 65.06 or 65.07;
- (d) Umbrella frames and other goods of heading No. 66.03;
- (e) Goods falling within Chapter 71 (for example, precious metal alloys, rolled precious metal and imitation jewellery);
- (f) Articles falling within Section XVI (machinery, mechanical appliances and electrical goods);
- (g) Assembled railway or tramway track (heading No. 86.10) or other articles falling within Section XVII (vehicles, ships and boats, aircraft);
- (h) Instruments or apparatus of base metal of a kind falling within Section XVIII, including clock and watch springs;
- (i) Lead shot prepared for ammunition (heading No. 93.07) or other articles falling within Section XIX (arms and ammunition);
- (k) Articles falling within Chapter 94 (furniture and mattress supports);
- (l) Hand sieves (heading No. 96.06);
- (m) Articles falling within Chapter 97 (for example, toys, games and sports requisites); or
- (n) Buttons, pens, pencil-holders, pen nibs or other articles falling within Chapter 98.

#### 2. — Throughout the Nomenclature, the expression "parts of general use" means :

- (a) Goods described in headings Nos. 73.26, 73.25, 73.29, 73.31 and 73.32 and similar goods of other base metals;
  - (b) Springs and leaves for springs, of base metal, other than clock and watch springs (heading No. 91.11); and
  - (c) Goods described in headings Nos. 83.01, 83.02, 83.07, 83.09, 83.12 and 83.14.
- In Chapters 73 to 83 (but not in heading No. 73.29 or 74.13) references to parts of goods do not include references to parts of general use as defined above.

Subject to the preceding paragraph and to the Note to Chapter 83, the headings in Chapters 73 to 81 are to be taken not to apply to any goods falling within Chapter 82 or 83.

#### 3. — Classification of alloys (other than ferro-alloys and master alloys as defined in Chapters 73 and 74) :

- (a) An alloy of base metals containing more than 10 %, by weight, of nickel is to be classified as an alloy of nickel, except in the case of an alloy in which iron predominates by weight over each of the other metals.
- (b) Any other alloy of base metals is to be classified as an alloy of the metal which predominates by weight over each of the other metals.
- (c) An alloy composed of base metals of this Section and of elements not falling within this Section is to be treated as an alloy of base metals of this Section if the total weight of such metals equals or exceeds the total weight of the other elements present.
- (d) In this Section the term "alloy" is to be taken to include sintered mixtures of metal powders and heterogeneous intimate mixtures obtained by melting (other than cermets).

#### 4. — Unless the context otherwise requires, any reference in this Nomenclature to a base metal is to be taken to include a reference to alloys which, by virtue of Note 3 above, are to be classified as alloys of that metal.

#### 5. — Classification of Composite Articles :

Except where the headings otherwise require, articles of base metal (including articles of mixed materials treated as articles of base metal under the Interpretative Rules) containing two or more base metals are to be treated as articles of the base metal predominating by weight. For this purpose :

- (a) Iron and steel, or different kinds of iron or steel, are regarded as one and the same metal.
- (b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of Note 3, it is classified, and
- (c) A cermet of heading No. 81.04 is regarded as a single base metal.

#### 6. — For the purposes of this Section, the expression "waste and scrap" means waste and scrap metal fit only for the recovery of metal or for use in the manufacture of chemicals.

## Chapter 73

### Iron and steel and articles thereof.

#### Notes.

#### 1. — In this Chapter the following expressions have the meanings hereby assigned to them :

- (a) **Pig iron and cast iron** (heading No. 72.01) :  
A ferrous product containing, by weight, 1.9 % or more of carbon, and which may contain one or more of the following elements within the weight limits specified :  
less than 15 % phosphorus,  
not more than 8 % silicon,  
not more than 6 % manganese,  
not more than 30 % chromium,  
not more than 40 % tungsten, and  
an aggregate of not more than 10 % of other alloy elements (for example, nickel, copper, aluminium, titanium, vanadium, molybdenum).  
However, the ferrous alloys known as "non-distorting tool steels", containing, by weight, 1.9 % or more of carbon and having the characteristics of steel, are to be classified as steels, under their appropriate headings.
- (b) **Spiegeleisen** (heading No. 73.01) :  
A ferrous product containing, by weight, more than 6 % but not more than 30 % of manganese and otherwise conforming to the specification at (a) above.
- (c) **Ferro-alloys** (heading No. 73.02) :  
Alloys of iron (other than master alloys as defined in Note 1 to Chapter 74) which are not usefully malleable and are commonly used as raw material in the manufacture of ferrous metals and which contain, by weight, separately or together :  
more than 8 % of silicon, or  
more than 30 % of manganese, or  
more than 30 % of chromium, or  
more than 40 % of tungsten, or  
a total of more than 10 % of other alloy elements (aluminium, titanium, vanadium, copper, molybdenum, niobium or other elements, subject to a maximum content of 10 % in the case of copper),  
and which contain, by weight, not less than 4 % in the case of ferro-alloys containing silicon, not less than 8 % in the case of ferro-alloys containing manganese but no silicon or not less than 10 % in other cases, of the element iron.

(d) Alloy steel (heading No. 73.15) :

Steel containing, by weight, one or more elements in the following proportions :  
more than 2 % of manganese and silicon, taken together, or  
2.00 % or more of manganese, or  
2.00 % or more of silicon, or  
0.50 % or more of nickel, or  
0.50 % or more of chromium, or  
0.10 % or more of molybdenum, or  
0.10 % or more of vanadium, or  
0.30 % or more of tungsten, or  
0.30 % or more of cobalt, or  
0.30 % or more of aluminium, or  
0.40 % or more of copper, or  
0.10 % or more of lead, or  
0.12 % or more of phosphorus, or  
0.10 % or more of sulphur, or  
0.20 % or more of phosphorus and sulphur, taken together, or  
0.10 % or more of other elements, taken separately.

(e) High carbon steel (heading No. 73.15) :

Steel containing, by weight, not less than 0.60 % of carbon and having a content, by weight, less than 0.04 % of phosphorus and sulphur taken separately and less than 0.07 % of these elements taken together.

(f) Puddled bars and pilings (heading No. 73.06) :

Products for rolling, forging or re-melting obtained either :

(i) By shingling balls of puddled iron to remove the slag arising during puddling, or

(ii) By roughly welding together by means of hot-rolling, packets of scrap iron or steel or puddled iron.

(g) Ingots (heading No. 73.06) :

Products for rolling or forging obtained by casting into moulds.

(h) Blooms and billets (heading No. 73.07) :

Semi-finished products of rectangular section, of a cross-sectional area exceeding 1,225 mm<sup>2</sup> and of such dimensions that the thickness exceeds one quarter of the width.

(i) Slabs and sheet bars (including tinplate bars) (heading No. 73.07) :

Semi-finished products of rectangular section, of a thickness not less than 6 mm, of a width not less than 150 mm and of such dimensions that the thickness does not exceed one quarter of the width.

(k) Coils for re-rolling (heading No. 73.08) :

Coiled semi-finished hot-rolled products, of rectangular section, not less than 1.5 mm thick, of a width exceeding 500 mm and of a weight of not less than 500 kg. per piece.

(l) Universal plates (heading No. 73.09) :

Products of rectangular section, hot-rolled lengthwise in a closed box or universal mill, of a thickness exceeding 5 mm but not exceeding 100 mm, and of a width exceeding 150 mm but not exceeding 1,200 mm.

(m) Hoop and strip (heading No. 73.12) :

Rolled products with sheared or unsheared edges, of rectangular section, of a thickness not exceeding 6 mm, of a width not exceeding 500 mm and of such dimensions that the thickness does not exceed one tenth of the width, in straight strips, coils or flattened coils.

(n) Sheets and plates (heading No. 73.13) :

Rolled products (other than coils for re-rolling as defined in paragraph (k) above) of any thickness and, if in rectangles, of a width exceeding 500 mm.

Heading No. 73.13 is to be taken to apply, *inter alia*, to sheets or plates which have been cut to non-rectangular shape, perforated, corrugated, channelled, ribbed, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

(o) Wire (heading No. 73.14) :

Cold-drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 13 mm. In the case of headings Nos. 73.26 and 73.27, however, the term "wire" is deemed to include rolled products of the same dimensions.

(p) Bars and rods (including wire rod) (heading No. 73.10) :

Products of solid section which do not conform to the entirety of any of the definitions (h), (i), (k), (l), (m), (n) and (o) above, and which have cross-sections in the shape of circles, segments of circles, ovals, isosceles triangles, rectangles, hexagons, octagons or quadrilaterals with only two sides parallel and the other sides equal.

The expression also includes concrete reinforcing bars which apart from minor indentations, flanges, grooves or other deformations produced during the rolling process correspond to the above definition.

(q) Hollow mining drill steel (heading No. 73.10) :

Steel hollow bars of any cross-section, suitable for mining drills, of which the greatest external dimension exceeds 15 mm but does not exceed 50 mm, and of which the greatest internal dimension does not exceed one third of the greatest external dimension. Other steel hollow bars are to be treated as falling within heading No. 73.18.

(r) Angles, shapes and sections (heading No. 73.11) :

Products, other than those falling within heading No. 73.16, which do not conform to the entirety of any of the definitions (h), (i), (k), (l), (m), (n) and (o) above, and which do not have cross-sections in the form of circles, segments of circles, ovals, isosceles triangles, rectangles, hexagons, octagons or quadrilaterals with only two sides parallel and the other two sides equal, and which are not hollow.

2. — Headings Nos. 73.06 to 73.14 are to be taken not to apply to goods of alloy or high carbon steel (heading No. 73.15).

3. — Iron and steel products of the kind described in any of the headings Nos. 73.06 to 73.15 inclusive, clad with another ferrous metal, are to be classified as products of the ferrous metal predominating by weight.

4. — Iron obtained by electrolytic deposition is classified according to its form and dimensions with the corresponding products obtained by other processes.

5. — The expression "high-pressure hydro-electric conduits of steel" (heading No. 73.19) means riveted, welded or seamless circular steel tubes or pipes and bends therefor, of an internal diameter exceeding 400 mm and of a wall thickness exceeding 10.5 mm.

73.01	Pig iron, cast iron and spiegeleisen, in pigs, blocks, lumps and similar forms.
671.1	A. Spiegeleisen.
671.2	B. Other.
73.02	Ferro-alloys.
671.4	A. Ferro-manganese.
671.5	B. Other.
73.03	282.0 Waste and scrap metal of iron or steel.
73.04	671.3 (1) Shot and angular grit, of iron or steel, whether or not graded; wire pellets of iron or steel.
73.05	Iron or steel powders; sponge iron or steel.
671.3 (2)	A. Iron or steel powders.
671.3 (3)	B. Sponge iron or steel.
73.06	Puddled bars and pilings; ingots, blocks, lumps and similar forms, of iron or steel.
672.1	A. Puddled bars and pilings; blocks, lumps and similar forms.
672.3 (1)	B. Ingots.

73.07	672.5 (1)	Blooms, billets, slabs and sheet bars (including tinplate bars), of iron or steel; pieces roughly shaped by forging, of iron or steel.	674.3 (2)	S. Sheets and plates, less than 3 mm in thickness, not plated, coated or clad, of high carbon steel.
73.08	672.7 (1)	Iron or steel coils for re-rolling.	674.3 (3)	T. Sheets and plates, less than 3 mm in thickness, not plated, coated or clad, of alloy steel.
73.09	674.1 (4)	Universal plates of iron or steel.	674.5 (2)	U. Sheets and plates, less than 3 mm in thickness, plated, coated or clad, of high carbon steel.
73.10		Bars and rods (including wire rod), of iron or steel, hot-rolled, forged, extruded, cold-formed or cold-finished (including precision-made); hollow mining drill steel.	674.5 (3)	V. Sheets and plates, less than 3 mm in thickness, plated, coated or clad, of alloy steel.
	672.1 (1)	A. Wire rod.	675.5 (2)	W. Hoop and strip, of high carbon steel.
	672.2 (1)	B. Other.	675.5 (3)	X. Hoop and strip, of alloy steel.
73.11		Angles, shapes and sections, of iron or steel, hot-rolled, forged, extruded, cold-formed or cold-finished; sheet piling of iron or steel, whether or not drilled, punched or made from assembled elements.	677.5 (2)	Y. Wire of high carbon steel.
	672.4 (1)	A. Angles, shapes and sections, 80 mm or more; sheet piling.	677.5 (3)	Z. Wire of alloy steel.
	672.5 (1)	B. Other.		
73.12	675.5 (1)	Hoop and strip, of iron or steel, hot-rolled or cold-rolled.	73.16	Railway and tramway track construction material of iron or steel, the following: rails, check-rails, switch blades, crossings (or frogs), crossing pieces, point rods, rack rails, sleepers, fish-plates, chairs, chair wedges, sole plates (base plates), rail clips, bedplates, ties and other material specialised for joining or fixing rails.
73.13		Sheets and plates, of iron or steel, hot-rolled or cold-rolled.		
	674.1 (1)	A. More than 4.75 mm in thickness, other than tinned plates and sheets.	676.1	A. Rails.
	674.2 (1)	B. 3 mm or more but not more than 4.75 mm in thickness, other than tinned plates and sheets.	676.2	B. Other.
	674.3 (1)	C. Less than 3 mm in thickness, not plated, coated or clad.	73.17	678.1 Tubes and pipes, of cast iron.
	674.7	D. Tinned plates and sheets.	73.18	Tubes and pipes and blanks therefor, of iron (other than of cast iron) or steel, excluding high-pressure hydro-electric conduits.
	674.8 (1)	E. Less than 3 mm in thickness, plated, coated or clad (other than tinned plates and sheets).		
			672.9	A. Blanks for tubes and pipes.
			678.2	B. "Seamless" tubes and pipes.
			678.3	C. Other.
73.14	677.5 (1)	Iron or steel wire, whether or not coated, but not insulated.	73.19	678.4 High-pressure hydro-electric conduits of steel, whether or not reinforced.
73.15		Alloy steel and high carbon steel in the forms mentioned in headings Nos. 73.06 to 73.14.	73.20	678.5 Tube and pipe fittings (for example, joints, elbows, unions and flanges), of iron or steel.
	672.3 (2)	A. Ingots of high carbon steel.	73.21	691.1 Structures and parts of structures, (for example, hangars and other buildings, bridges and bridge-sections, lock-gates, towers, lattice masts, roofs, roofing frameworks, door and window frames, shutters, balustrades, pillars and columns), of iron or steel; plates, strip, rods, angles, shapes, sections, tubes and the like, prepared for use in structures, of iron or steel.
	672.3 (3)	B. Ingots of alloy steel.	73.22	692.1 (1) Reservoirs, tanks, vats and similar containers, for any material (other than compressed or liquefied gas), of iron or steel, of a capacity exceeding 300 l, whether or not lined or heat-insulated, but not fitted with mechanical or thermal equipment.
	672.5 (3)	C. Blooms, billets, slabs, sheet bars and roughly forged pieces, of high carbon steel.	73.23	692.2 (1) Casks, drums, cans, boxes and similar containers, of sheet or plate iron or steel, of a description commonly used for the conveyance or packing of goods.
	672.5 (3)	D. Blooms, billets, slabs, sheet bars and roughly forged pieces, of alloy steel.	73.24	692.3 (1) Containers, of iron or steel, for compressed or liquefied gas.
	672.7 (2)	E. Coils for re-rolling, of high carbon steel.	73.25	693.1 (1) Stranded wire, cables, cordage, ropes, plaited bands, slings and the like, of iron or steel wire, but excluding insulated electric cables.
	672.7 (3)	F. Coils for re-rolling, of alloy steel.	73.26	693.2 Barbed iron or steel wire; twisted hoop or single flat wire, barbed or not, and loosely twisted double wire, of kinds used for fencing, of iron or steel.
	673.1 (3)	G. Wire rod of high carbon steel.		
	673.1 (3)	H. Wire rod of alloy steel.		
	673.2 (2)	I. Bars and rods (excluding wire rod) and hollow mining drill steel, of high carbon steel.		
	673.2 (3)	J. Bars and rods (excluding wire rod) and hollow mining drill steel, of alloy steel.		
	673.4 (2)	K. Angles, shapes and sections, 80 mm or more, and sheet piling, of high carbon steel.		
	673.4 (3)	L. Angles, shapes and sections, 80 mm or more, and sheet piling, of alloy steel.		
	673.5 (2)	M. Angles, shapes and sections, less than 80 mm, of high carbon steel.		
	673.5 (3)	N. Angles, shapes and sections, less than 80 mm, of alloy steel.		
	674.1 (2)	O. Sheets and plates, more than 4.75 mm in thickness, and universal plates, of high carbon steel.		
	674.1 (3)	P. Sheets and plates, more than 4.75 mm in thickness, and universal plates, of alloy steel.		
	674.2 (2)	Q. Sheets and plates, 3 mm or more but not more than 4.75 mm in thickness, of high carbon steel.		
	674.2 (3)	R. Sheets and plates, 3 mm or more but not more than 4.75 mm in thickness, of alloy steel.		

## Chapter 74

## Copper and articles thereof.

## Notes.

1. — For the purposes of heading No. 74.02, the expression "master alloys" means alloys (except copper phosphide (phosphor copper) containing more than 8 % by weight of phosphorus) containing with other alloy elements more than 10 % by weight of copper, not usefully malleable and commonly used as raw material in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals.
- (Copper phosphide (phosphor copper) containing more than 8 % by weight of phosphorus falls within heading No. 28.55 and not within this Chapter).

2. — In this Chapter the following expressions have the meanings hereby assigned to them :

## (a) Wire (heading No. 74.03) :

Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

## (b) Wrought bars, rods, angles, shapes and sections (heading No. 74.03) :

Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products falling within other headings.

Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, wire-rod or tubes, are however to be taken to be unwrought copper of heading No. 74.01.

## (c) Wrought plates, sheets and strip (heading No. 74.04) :

Flat-surfaced, wrought products (rolled or not), of which the maximum cross-sectional dimension exceeds 6 mm, and of which the thickness exceeds 0.15 mm but does not exceed one tenth of the width.

Heading No. 74.04 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

3. — Heading No. 74.07 is to be taken to apply, *inter alia*, to tubes, pipes and hollow bars which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or flanged. Heading No. 74.08 is to be taken to apply, *inter alia*, to tube and pipe fittings which have been similarly treated.

## 74.01

Copper matte; unwrought copper (refined or not); copper waste and scrap.

- 288.1 (3) A. Copper matte.  
288.9 (3) B. Copper waste and scrap.  
682.1 (1) C. Unrefined copper.  
682.2 (2) D. Refined copper.

## 74.02

682.1 (3) Master alloys.

## 74.03

682.2 (1) Wrought bars, rods, angles, shapes and sections, of copper; copper wire.

## 74.04

682.2 (2) Wrought plates, sheets and strip, of copper.

73.27	688.3 (1)	Gauze, cloth, grill, netting, fencing, reinforcing fabric and similar materials, of iron or steel wire.
73.28	688.4 (1)	Expanded metal, of iron or steel.
73.29	688.3	Chain and parts thereof, of iron or steel.
73.30	688.4	Anchors and grapnels and parts thereof, of iron or steel.
73.31	688.1 (1)	Nails, tacks, staples, hook-nails, corrugated nails, spiked cramps, studs, spikes and drawing pins, of iron or steel, whether or not with heads of other materials, but not including such articles with heads of copper.
73.32	688.2 (1)	Bolts and nuts (including bolt ends and screw studs), whether or not threaded or tapped, and screws (including screw hooks and screw rings), of iron or steel; rivets, cotters, cotter-pins, washers and spring washers, of iron or steel.
73.33	688.5 (1)	Needles for hand sewing (including embroidery), hand carpet needles and hand knitting needles, bodkins, crochet hooks, and the like, and embroidery stilettes, of iron or steel.
73.34	688.6 (2)	Pins (excluding hatpins and other ornamental pins and drawing pins), hairpins and curling grips, of iron or steel.
73.35	688.6 (1)	Springs and leaves for springs, of iron or steel.
73.36	687.1 (1)	Stoves (including stoves with subsidiary boilers for central heating), ranges, cookers, grates, fires and other space heaters, gas-rings, plate warmers with burners, wash boilers with grates or other heating elements, and similar equipment, of a kind used for domestic purposes, not electrically operated, and parts thereof, of iron or steel.
73.37	612.1	Boilers (excluding boilers of heading No. 84.01) and radiators, for central heating, not electrically heated, and parts thereof, of iron or steel; air heaters and hot air distributors (including those which can also distribute cool or conditioned air), not electrically heated, incorporating a motor-driven fan or blower, and parts thereof, of iron or steel.
73.38		Articles of a kind commonly used for domestic purposes, sanitary ware for indoor use, and parts of such articles and ware, of iron or steel.
	687.2 (1)	A. Domestic articles and parts thereof.
	612.2	B. Sanitary ware for indoor use and parts thereof.
73.39	687.8 (1)	Iron or steel wool; pot scourers and scouring and polishing pads, gloves and the like, of iron or steel.
73.40		Other articles of iron or steel.
	679.1	A. Iron castings in the rough state.
	679.2	B. Steel castings in the rough state.
	679.3	C. Steel and iron forgings (including drop forgings) in the rough state.
	688.8 (1)	D. Other.

74.05	682.2 (3)	Copper foil (whether or not embossed, cut to shape, perforated, coated, printed, or backed with paper or other reinforcing material), of a thickness (excluding any backing) not exceeding 0.15 mm.
74.06	682.2 (4)	Copper powders and flakes.
74.07	682.2 (5)	Tubes and pipes and blanks therefor, of copper; hollow bars of copper.
74.08	682.2 (6)	Tube and pipe fittings (for example, joints, elbows, sockets and flanges), of copper.
74.09	682.1 (2)	Reservoirs, tanks, vats and similar containers, for any material (other than compressed or liquefied gas), of copper, of a capacity exceeding 300 l, whether or not lined or heat-insulated, but not fitted with mechanical or thermal equipment.
74.10	682.1 (2)	Stranded wire, cables, cordage, ropes, plaited bands and the like, of copper wire, but excluding insulated electric wires and cables.
74.11	682.2 (2)	Gauze, cloth, grill, netting, fencing, reinforcing fabric and similar materials (including endless bands), of copper wire.
74.12	682.4 (2)	Expanded metal, of copper.
74.13	686.5 (1)	Chain and parts thereof, of copper.
74.14	684.1 (3)	Nails, tacks, staples, hook-nails, spiked cramps, studs, spikes and drawing pins, of copper, or of iron or steel with heads of copper.
74.15	684.2 (2)	Bolts and nuts (including bolt ends and screw studs), whether or not threaded or tapped, and screws (including screw hooks and screw rings), of copper; rivets, cotters, cotter-pins, washers and spring washers, of copper.
74.16	686.5 (2)	Springs, of copper.
74.17	687.1 (3)	Cooking and heating apparatus of a kind used for domestic purposes, not electrically operated, and parts thereof, of copper.
74.18	687.2 (2)	Other articles of a kind commonly used for domestic purposes, sanitary ware for indoor use, and parts of such articles and ware, of copper.
74.19	686.9 (2)	Other articles of copper.

## Chapter 75

### Nickel and articles thereof.

#### Notes.

1. — In this Chapter the following expressions have the meanings hereby assigned to them:

(a) Wire (heading No. 75.02):

Rollled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

(b) Wrought bars, rods, angles, shapes and sections (heading No. 75.02):

Rollled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently machined (otherwise than by simple trimming or de-scaling).

(c) Wrought plates, sheets and strip (heading No. 75.03):

Flat-surfaced, wrought products (coiled or not), of which the maximum cross-sectional dimension exceeds 6 mm, and of which the thickness does not exceed one tenth of the width.

Heading No. 75.03 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

2. — Heading No. 75.04 is to be taken to apply, *inter alia*, to tubes, pipes, hollow bars and tube and pipe fittings which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned.

75.01		Nickel mattes, nickel speiss and other intermediate products of nickel metallurgy; unwrought nickel (excluding electro-plating anodes); nickel waste and scrap.
252.2 (2)	A.	Nickel mattes, nickel speiss and other intermediate products of nickel metallurgy.
284.9 (3)	B.	Nickel waste and scrap.
683.1	C.	Unwrought nickel.
75.02	682.2 (1)	Wrought bars, rods, angles, shapes and sections, of nickel; nickel wire.
75.03	682.2 (2)	Wrought plates, sheets and strip, of nickel; nickel foil; nickel powders and flakes.
75.04	682.2 (3)	Tubes and pipes and blanks therefor, of nickel; hollow bars, and tube and pipe fittings (for example, joints, elbows, sockets and flanges), of nickel.
75.05	682.2 (4)	Electro-plating anodes, of nickel, wrought or unwrought, including those produced by electrolysis.
75.06	686.9 (2)	Other articles of nickel.

## Chapter 76

### Aluminium and articles thereof.

#### Notes.

1. — In this Chapter the following expressions have the meanings hereby assigned to them :

(a) Wire (heading No. 76.02) :

Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

(b) Wrought bars, rods, angles, shapes and sections (heading No. 76.02) :

Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently machined (otherwise than by simple trimming or de-scaling).

(c) Wrought plates, sheets and strip (heading No. 76.03) :

Flat-surfaced, wrought products (coiled or not), of which the maximum cross-sectional dimension exceeds 6 mm, and of which the thickness exceeds 0.20 mm but does not exceed one tenth of the width.

Heading No. 76.03 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

2. — Heading No. 76.06 is to be taken to apply, *inter alia*, to tubes, pipes and hollow bars which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned. Heading No. 76.07 is to be taken to apply, *inter alia*, to tube and pipe fittings which have been similarly treated.

76.01		Unwrought aluminium; aluminium waste and scrap.
	284.0 (4)	A. Aluminium waste and scrap.
	684.1	B. Unwrought aluminium.
76.02	684.2 (1)	Wrought bars, rods, angles, shapes and sections, of aluminium; aluminium wire.
76.03	684.2 (2)	Wrought plates, sheets and strip, of aluminium.
76.04	684.2 (3)	Aluminium foil (whether or not embossed, cut to shape, perforated, coated, printed, or backed with paper or other reinforcing material), of a thickness (excluding any backing) not exceeding 0.20 mm.
76.05	684.2 (4)	Aluminium powders and flakes.
76.06	684.2 (5)	Tubes and pipes and blanks therefor, of aluminium; hollow bars of aluminium.
76.07	684.2 (6)	Tube and pipe fittings (for example, joints, elbows, sockets and flanges), of aluminium.

76.08	691.2	Structures and parts of structures, (for example, hangars and other buildings, bridges and bridge-sections, towers, lattice masts, roofs, roofing frameworks, door and window frames, balustrades, pillars and columns), of aluminium; plates, rods, angles, shapes, sections, tubes and the like, prepared for use in structures, of aluminium.
76.09	692.1 (2)	Reservoirs, tanks, vats and similar containers, for any material (other than compressed or liquefied gas), of aluminium, of a capacity exceeding 300 l, whether or not lined or heat-insulated, but not fitted with mechanical or thermal equipment.
76.10	692.2 (2)	Casks, drums, cans, boxes and similar containers (including rigid and collapsible tubular containers), of aluminium, of a description commonly used for the conveyance or packing of goods.
76.11	692.3 (2)	Containers, of aluminium, for compressed or liquefied gas.
76.12	693.1 (3)	Stranded wire, cables, cordage, ropes, plaited bands and the like, of aluminium wire, but excluding insulated electric wires and cables.
76.13	693.2 (3)	Gauze, cloth, grill, netting, reinforcing fabric and similar materials, of aluminium wire.
76.14	693.4 (3)	Expanded metal, of aluminium.
76.15	697.2 (3)	Articles of a kind commonly used for domestic purposes, sanitary ware for indoor use, and parts of such articles and ware, of aluminium.
76.16	698.9 (4)	Other articles of aluminium.

## Chapter 77

### Magnesium and beryllium and articles thereof.

77.01		Unwrought magnesium; magnesium waste (excluding shavings of uniform size) and scrap.
	384.0 (5)	A. Magnesium waste and scrap.
	689.3 (1)	B. Unwrought magnesium.
77.02	689.3 (2)	Wrought bars, rods, angles, shapes and sections, of magnesium; magnesium wire; wrought plates, sheets and strip, of magnesium; magnesium foil; raspings and shavings of uniform size, powders and flakes, of magnesium; tubes and pipes and blanks therefor, of magnesium; hollow bars of magnesium.
77.03	698.9 (5)	Other articles of magnesium.
77.04	699.3 (3)	Beryllium, unwrought or wrought, and articles of beryllium.

## Chapter 78

## Lead and articles thereof.

## Notes.

1. — In this Chapter the following expressions have the meanings hereby assigned to them :

(a) Wire (heading No. 78.02) :

Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

(b) Wrought bars, rods, angles, shapes and sections (heading No. 78.02) :

Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently machined (otherwise than by simple trimming or de-scaling).

(c) Wrought plates, sheets and strip (heading No. 78.03) :

Flat-surfaced, wrought products (coiled or not), of which the maximum cross-sectional dimension exceeds 6 mm, of which the thickness does not exceed one tenth of the width, and which are of a weight exceeding 1,700 g/m<sup>2</sup>.

Heading No. 78.03 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

2. — Heading No. 78.05 is to be taken to apply, *inter alia*, to tubes, pipes, hollow bars and tube and pipe fittings which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or flanged.

78.01		Unwrought lead (including argentiferous lead); lead waste and scrap.
284.9 (6)	A.	Lead waste and scrap.
685.1	B.	Unwrought lead.
78.02	685.2 (1)	Wrought bars, rods, angles, shapes and sections, of lead; lead wire.
78.03	685.2 (2)	Wrought plates, sheets and strip, of lead.
78.04	685.2 (3)	Lead foil (whether or not embossed, cut to shape, perforated, coated, printed, or backed with paper or other reinforcing material), of a weight (excluding any backing) not exceeding 1,700 g/m <sup>2</sup> ; lead powders and flakes.
78.05	685.2 (4)	Tubes and pipes and blanks therefor, of lead; hollow bars, and tube and pipe fittings (for example, joints, elbows, sockets, flanges and S-bends), of lead.
78.06	685.8 (6)	Other articles of lead.

## Chapter 79

## Zinc and articles thereof.

## Notes.

1. — In this Chapter the following expressions have the meanings hereby assigned to them :

(a) Wire (heading No. 79.02) :

Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

(b) Wrought bars, rods, angles, shapes and sections (heading No. 79.02) :

Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently machined (otherwise than by simple trimming or de-scaling).

(c) Wrought plates, sheets and strip (heading No. 79.03) :

Flat-surfaced, wrought products (coiled or not), of which the maximum cross-sectional dimension exceeds 6 mm, and of which the thickness does not exceed one tenth of the width.

Heading No. 79.03 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

2. — Heading No. 79.04 is to be taken to apply, *inter alia*, to tubes, pipes, hollow bars and tube and pipe fittings which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or flanged.

79.01		Unwrought zinc; zinc waste and scrap.
284.9 (7)	A.	Zinc waste and scrap.
686.1	B.	Unwrought zinc.
79.02	686.2 (1)	Wrought bars, rods, angles, shapes and sections, of zinc; zinc wire.
79.03		Wrought plates, sheets and strip, of zinc; zinc foil; zinc powders and flakes.
284.9 (8)	A.	Zinc dust (blue powder).
686.2 (2)	B.	Other.
79.04	686.2 (3)	Tubes and pipes and blanks therefor, of zinc; hollow bars, and tube and pipe fittings (for example, joints, elbows, sockets and flanges), of zinc.
79.05	691.3	Gutters, roof capping, skylight frames, and other fabricated building components, of zinc.
79.06	686.9 (7)	Other articles of zinc.

## Chapter 80

### Tin and articles thereof.

#### Notes.

1. — In this Chapter the following expressions have the meanings hereby assigned to them :

(a) Wire (heading No. 80.02) :

Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

(b) Wrought bars, rods, angles, shapes and sections (heading No. 80.02) :

Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently machined (otherwise than by simple trimming or de-scaling).

(c) Wrought plates, sheets and strip (heading No. 80.03) :

Flat-surfaced, wrought products (rolled or not), of which the maximum cross-sectional dimension exceeds 6 mm, of which the thickness does not exceed one tenth of the width, and which are of a weight exceeding 1 kg/m<sup>2</sup>.

Heading No. 80.03 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

2. — Heading No. 80.05 is to be taken to apply, *inter alia*, to tubes, pipes, hollow bars and tube and pipe fittings which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned.

80.01		Unwrought tin; tin waste and scrap.
	284.9 (9) 687.1	A. Tin waste and scrap. B. Unwrought tin.
80.02	687.2 (1)	Wrought bars, rods, angles, shapes and sections, of tin; tin wire.
80.03	687.2 (2)	Wrought plates, sheets and strip, of tin.
80.04	687.2 (3)	Tin foil (whether or not embossed, cut to shape, perforated, coated, printed, or backed with paper or other reinforcing material), of a weight (excluding any backing) not exceeding 1 kg/m <sup>2</sup> ; tin powders and flakes.
80.05	687.2 (4)	Tubes and pipes and blanks therefor, of tin; hollow bars, and tube and pipe fittings (for example, joints, elbows, sockets and flanges), of tin.
80.06	688.9 (8)	Other articles of tin.

## Chapter 81

### Other base metals employed in metallurgy and articles thereof.

#### Note.

Heading No. 81.04 is to be taken to apply only to the following base metals : bismuth, cadmium, cobalt, chromium, gallium, germanium, hafnium, indium, manganese, niobium (columbium), rhenium, antimony, titanium, thorium, thallium, uranium depleted in U 235, vanadium, zirconium. The heading also covers cobalt mattes, cobalt speiss and other intermediate products of cobalt metallurgy, and cermetes.

81.01	689.4 (1)	Tungsten (wolfram), unwrought or wrought, and articles thereof.
81.02	689.4 (2)	Molybdenum, unwrought or wrought, and articles thereof.
81.03	689.4 (3)	Tantalum, unwrought or wrought, and articles thereof.
81.04		Other base metals, unwrought or wrought, and articles thereof; cermetes, unwrought or wrought, and articles thereof.
	688.9 689.5	A. Uranium depleted in U 235 and thorium. B. Other.

## Chapter 82

### Tools, implements, cutlery, spoons and forks, of base metal; parts thereof.

#### Notes.

1. — Apart from blow lamps, portable forges, grinding wheels with frameworks, manicure and chiropody sets, and goods classified in headings Nos. 82.07 and 82.15, the present Chapter covers only articles with a blade, working edge, working surface or other working part of :

- Base metal;
- Metal carbides;
- Precious or semi-precious stones (natural, synthetic or reconstructed) on a support of base metal; or
- Abrasive materials on a support of base metal, provided that the articles have cutting teeth, flutes, grooves, or the like, of base metal, which retain their identity and function after the application of the abrasive.

2. — Parts of base metal of the articles falling in the headings of this Chapter are to be classified with the articles of which they are parts, except parts separately specified as such and tool-holders for hand tools (heading No. 84.48). However, parts of general use as defined in Note 2 to Section XV are in all cases excluded from this Chapter.

Cutting plates for electric hair clippers are to be classified in heading No. 82.13 and blades and heads for electric shavers are to be classified in heading No. 82.11.

3. — Sets (other than manicure or chiropody sets (heading No. 82.13)) comprising an assortment of tools, cutlery, spoons, forks or other articles of a kind falling within the different headings of this Chapter, fitted in cabinets, boxes, cases or the like, are to be classified as that one of the constituent articles which is chargeable with the highest rate of duty.

4. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

82.01	808.1	Hand tools, the following : spades, shovels, picks, hoes, forks and rakes; axes, bill hooks and similar hewing tools; scythes, sickles, hay knives, grass shears, timber wedges and other tools of a kind used in agriculture, horticulture or forestry.
82.02	808.2 (1)	Saws (non-mechanical) and blades for hand or machine saws (including toothless saw blades).
82.03	808.2 (2)	Hand tools, the following : pliers (including cutting pliers), pincers, tweezers, tinmen's snips, bolt croppers and the like; perforating punches; pipe cutters; spanners and wrenches (but not including tap wrenches); files and rasps.
82.04	808.2 (3)	Hand tools, including glaziers' diamonds, not falling within any other heading of this Chapter; blow lamps, anvils; vices and clamps, other than accessories for, and parts of, machine tools; portable forges; grinding wheels with frameworks (hand or pedal operated).
82.05	808.2 (4)	Interchangeable tools for hand tools, for machine tools or for power-operated hand tools (for example, for pressing, stamping, drilling, tapping, threading, boring, broaching, milling, cutting, turning, dressing, morticing or screw driving), including dies for wire drawing, extrusion dies for metal, and rock drilling bits.
82.06	808.2 (5)	Knives and cutting blades, for machines or for mechanical appliances.
82.07	808.2 (6)	Tool-tips and plates, sticks and the like for tool-tips, unmounted, of sintered metal carbides (for example, carbides of tungsten, molybdenum or vanadium).
82.08	719.4 (1)	Coffee-mills, mincers, juice-extractors and other mechanical appliances, of a weight not exceeding 10 kg and of a kind used for domestic purposes in the preparation, serving or conditioning of food or drink.
82.09	808.8 (1)	Knives with cutting blades, serrated or not (including pruning knives), other than knives falling within heading No. 82.06.
82.10	808.8 (2)	Knife blades.
82.11	808.8 (3)	Razors and razor blades (including razor blade blanks, whether or not in strips).
82.12	808.8 (4)	Scissors (including tailors' shears), and blades therefor.
82.13	808.8 (5)	Other articles of cutlery (for example, secateurs, hair clippers, butchers' cleavers, paper knives); manicure and chiropody sets and appliances (including nail files).

82.14 808.8 (6) Spoons, forks, fish-eaters, butter-knives, ladles, and similar kitchen or tableware.

82.15 808.8 (7) Handles of base metal for articles falling within heading No. 82.09, 82.13 or 82.14.

## Chapter 83

### Miscellaneous articles of base metal.

#### Note.

In this Chapter a reference to parts of articles is in no case to be taken as applying to cables, chains, nails, bolts, nuts, screws, springs or other articles of iron or steel of a kind described in heading No. 73.25, 73.29, 73.31, 73.32 or 73.35, nor to similar articles of other base metals (Chapters 74 to 81 inclusive).

83.01	808.1 (1)	Locks and padlocks (key, combination or electrically operated), and parts thereof, of base metal; frames incorporating locks, for handbags, trunks or the like, and parts of such frames, of base metal; keys for any of the foregoing articles, of base metal.
83.02	808.1 (2)	Base metal fittings and mountings of a kind suitable for furniture, doors, staircases, windows, blinds, coachwork, saddlery, trunks, caskets and the like (including automatic door closers); base metal hat-racks, hat-pegs, brackets and the like.
83.03	808.2	Safes, strong-boxes, armoured or reinforced strong-rooms, strong-room linings and strong-room doors, and cash and deed boxes and the like, of base metal.
83.04	808.1 (1)	Filing cabinets, racks, sorting boxes, paper trays, paper rests and similar office equipment, of base metal, other than office furniture falling within heading No. 94.03.
83.05	808.1 (2)	Fittings for loose-leaf binders, for files or for stationery books, of base metal; letter clips, paper clips, staples, indexing tags, and similar stationery goods, of base metal.
83.06	807.8 (2)	Statuettes and other ornaments of a kind used indoors, of base metal.
83.07	812.4 (2)	Lamps and lighting fittings, of base metal, and parts thereof, of base metal (excluding switches, electric lamp holders, electric lamps for vehicles, electric battery or magneto lamps, and other articles falling within Chapter 85 except heading No. 85.22).
83.08	808.8 (2)	Flexible tubing and piping, of base metal.

83.09	698.3 (2)	Clasps, frames with clasps for handbags and the like, buckles, buckle-clasps, hooks, eyes, eyelets, and the like, of base metal, of a kind commonly used for clothing, travel goods, handbags, or other textile or leather goods; tubular rivets and bifurcated rivets, of base metal.
83.10	698.3 (3)	Beads and spangles, of base metal.
83.11	698.3 (4)	Bells and gongs, non-electric, of base metal, and parts thereof of base metal.
83.12	697.9 (3)	Photograph, picture and similar frames, of base metal; mirrors of base metal.
83.13	698.3 (3)	Stoppers, crown corks, bottle caps, capsules, bung covers, seals and plombs, case corner protectors and other packing accessories, of base metal.
83.14	698.3 (6)	Sign-plates, name-plates, numbers, letters and other signs, of base metal.
83.15	698.3 (7)	Wire, rods, tubes, plates, electrodes and similar products, of base metal or of metal carbides, coated or cored with flux material, of a kind used for soldering, brazing, welding or deposition of metal or of metal carbides; wire and rods, of agglomerated base metal powder, used for metal spraying.

## Section XVI

### MACHINERY AND MECHANICAL APPLIANCES; ELECTRICAL EQUIPMENT; PARTS THEREOF

#### Notes.

#### 1. — This Section does not cover:

- Transmission, conveyor or elevator belts or belting, of artificial plastic material of Chapter 39, or of vulcanised rubber (heading No. 40.10); or other articles of a kind used on machinery, mechanical or electrical appliances, of unhardened vulcanised rubber (for example, washers) (heading No. 40.14);
- Articles of leather or of composition leather (heading No. 42.04) or of fur skin (heading No. 43.03), of a kind used in machinery or mechanical appliances or for industrial purposes;
- Bobbins, spools, cops, cones, cores, reels and similar supports, of any material (for example, Chapter 39, 40, 44 or 48 or Section XV);
- Perforated cards of paper or paperboard for Jacquard or similar machines, falling within heading No. 48.21;
- Transmission, conveyor or elevator belts of textile material (heading No. 59.16) or other articles of textile material of a kind commonly used in machinery or plant (heading No. 59.17);
- Precious or semi-precious stones (natural, synthetic or reconstructed) of heading No. 71.02 or 71.03, or articles wholly of such stones of heading No. 71.15;
- Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
- Endless belts of metal wire or strip (Section XV);
- Articles falling within Chapter 82 or 83;
- Vehicles, aircraft, ships or boats, of Section XVII;

(f) Articles falling within Chapter 90;

(m) Clocks, watches and other articles falling within Chapter 91;

(n) Interchangeable tools of heading No. 82.65 and brushes of a kind used as parts of machines of heading No. 96.02; similar interchangeable tools are to be classified according to the constituent material of their working part (for example, in Chapter 40, 42, 43, 45 or 59, or heading No. 88.04 or 69.09); or

(o) Articles falling within Chapter 97.

2. — Subject to Note 1 to this Section, Note 1 to Chapter 84 and to Note 1 to Chapter 85, parts of machines (not being parts of the articles described in headings Nos. 84.64, 85.23, 85.34, 85.35 and 85.27) are to be classified according to the following rules:

(a) Goods of a kind described in any of the headings of Chapters 84 and 85 (other than headings Nos. 84.65 and 85.28) are in all cases to be classified in their respective headings.

(b) Other parts, if suitable for use solely or principally with a particular kind of machine, or with a number of machines falling within the same heading (including a machine falling within heading No. 84.59 or 85.22) are to be classified with the machines of that kind. However, goods which are equally suitable for use principally with the goods of headings Nos. 85.13 and 85.15 are to be classified in heading No. 85.13.

(c) All other parts are to be classified in heading No. 84.65 or 85.28.

3. — Unless the headings otherwise require, composite machines consisting of two or more machines fitted together to form a whole and other machines adapted for the purpose of performing two or more complementary or alternative functions are to be classified as if consisting only of that component or as being that machine which performs the principal function.

4. — Motors and transmission, conveyor or elevator belts, for machinery or appliances to which they are fitted, or, if packed separately for convenience of transport, which are clearly intended to be fitted to or mounted on a common base with the machine or appliance with which they are imported, are to be classified under the same heading as such machinery or appliances.

5. — For the purposes of these Notes, the expression "machine" means any machine, apparatus or appliance of a kind falling within Section XVI.

## Chapter 84

### Boilers, machinery and mechanical appliances; parts thereof.

#### Notes.

#### 1. — This Chapter does not cover:

- Millstones, grindstones and other articles falling within Chapter 68;
- Appliances and machinery (for example, pumps) and parts thereof, of ceramic material (Chapter 69);
- Laboratory glassware of heading No. 70.17; machinery and appliances and parts thereof, of glass (heading No. 70.30 or 70.21);
- Articles falling within heading No. 73.36 or 73.37 and similar articles of other base metals (Chapters 74 to 81); or
- Tools for working in the hand of heading No. 85.05 or electro-mechanical domestic appliances of heading No. 85.06.

2. — Subject to the operation of Notes 3 and 4 to Section XVI, a machine or appliance which answers to a description in one or more of the headings Nos. 84.01 to 84.21 and at the same time to a description in one or other of the headings Nos. 84.22 to 84.60, is to be classified under the appropriate heading of the former group and not the latter.

Heading No. 84.17 is, however, to be taken not to apply to:

- Germination plant, incubators and brooders (heading No. 84.28);

<p>(b) Grain dampening machines (heading No. 84.29);</p> <p>(c) Diffusing apparatus for sugar juice extraction (heading No. 84.30);</p> <p>(d) Machinery for the heat-treatment of textile yarns, fabrics or made up textile articles (heading No. 84.40); or</p> <p>(e) Machinery or plant, designed for a mechanical operation, in which a change of temperature, even if necessary, is subsidiary.</p> <p>Heading No. 84.19 is to be taken not to apply to:</p> <p>(a) Sewing machines for closing bags or similar containers (heading No. 84.41); or</p> <p>(b) Office machinery of heading No. 84.54.</p>					
3.	(A)	For the purposes of heading No. 84.53, the expression "automatic data processing machines" means:			
	(a)	Digital machines having storages capable of storing not only the processing program or programs and the data to be processed but also a program for translating the formal programming language in which the programs are written into machine language. These machines must have a main storage which is directly accessible for the execution of a program and which has a capacity at least sufficient to store those parts of the processing and translating programs and the data immediately necessary for the current processing run. They must also be able themselves, on the basis of the instructions contained in the initial program, to modify, by logical decision, its execution during the processing run;			
	(b)	Analogue machines capable of simulating mathematical models and comprising at least: analogue elements, control elements and programming elements;			
	(c)	Hybrid machines consisting of either a digital machine with analogue elements or an analogue machine with digital elements.			
	(B)	Automatic data processing machines may be in the form of systems consisting of a variable number of separately-housed units. A unit is to be regarded as being a part of the complete system if it meets all the following conditions:			
	(a)	it is connectable to the central processing unit either directly or through one or more other units;			
	(b)	it is specifically designed as part of such a system (it must, in particular, unless it is a power supply unit, be able to accept or deliver data in a form (code or signals) which can be used by the system).			
		Such units imported separately are also to be classified in heading No. 84.53.			
4.		Heading No. 84.62 is to be taken to apply, <i>inter alia</i> , to polished steel balls, the maximum and minimum diameters of which do not differ from the nominal diameter by more than 1 % or by more than 0.05 mm, whichever is less. Other steel balls are to be classified under heading No. 73.40.			
5.		A machine which is used for more than one purpose is, for the purposes of classification, to be treated as if its principal purpose were its sole purpose.			
		Subject to Note 2 to this Chapter and Note 3 to Section XVI, a machine whose principal purpose is not described in any heading or for which no one purpose is the principal purpose is, unless the context otherwise requires, to be classified in heading No. 84.59. Heading No. 84.59 is also to be taken to cover machines for making rope or cable (for example, stranding, twisting or cabling machines) from metal wire, textile yarn or any other material or from a combination of such materials.			
84.01	711.1	Steam and other vapour generating boilers (excluding central heating hot water boilers capable also of producing low pressure steam); superheated water boilers.	84.04	711.3 (1)	Steam engines (including mobile engines, but not steam tractors falling within heading No. 87.01 or mechanically propelled road rollers) with self-contained boilers.
84.02	711.2	Auxiliary plant for use with boilers of heading No. 84.01 (for example, economisers, superheaters, soot removers, gas recoverers and the like); condensers for vapour engines and power units.	84.05	711.3 (2)	Steam and other vapour power units, not incorporating boilers.
84.03	719.1 (1)	Producer gas and water gas generators, with or without purifiers; acetylene gas generators (water process) and similar gas generators, with or without purifiers.	84.06		Internal combustion piston engines.
			711.4 (1)	A. Aircraft engines.	
			711.5	B. Other.	
			84.07	711.8 (1)	Hydraulic engines and motors (including water wheels and water turbines).
			84.08		Other engines and motors.
			711.4 (2)	A. Aircraft engines.	
			711.6	B. Gas turbines other than for aircraft.	
			711.8 (2)	C. Other.	
			84.09	718.4 (1)	Mechanically propelled road rollers.
			84.10	719.2 (1)	Pumps (including motor pumps and turbo pumps) for liquids, whether or not fitted with measuring devices; liquid elevators of bucket, chain, screw, band and similar kinds.
			84.11	719.2 (2)	Air pumps, vacuum pumps and air or gas compressors (including motor and turbo pumps and compressors, and free-piston generators for gas turbines); fans, blowers and the like.
			84.12	719.1 (2)	Air conditioning machines, self-contained, comprising a motor-driven fan and elements for changing the temperature and humidity of air.
			84.13	719.1 (3)	Furnace burners for liquid fuel (atomisers), for pulverised solid fuel or for gas; mechanical stokers, mechanical grates, mechanical ash dischargers and similar appliances.
			84.14	719.1 (4)	Industrial and laboratory furnaces and ovens, non-electric.
			84.15		Refrigerators and refrigerating equipment (electrical and other).
			719.1 (5)	A. Refrigerators and refrigerating equipment, other than domestic refrigerators.	
			719.4 (2)	B. Domestic refrigerators, non-electrical.	
			725.0 (1)	C. Domestic refrigerators, electrical.	
			84.16	719.6 (1)	Calendering and similar rolling machines (other than metal-working and metal-rolling machines and glass-working machines) and cylinders therefor.
			84.17		Machinery, plant and similar laboratory equipment, whether or not electrically heated, for the treatment of materials by a process involving a change of temperature such as heating, cooking, roasting, distilling, rectifying, sterilising, pasteurising, steaming, drying, evaporating, vapourising, condensing or cooling, not being machinery or plant of a kind used for domestic purposes; instantaneous or storage water heaters, non-electrical.

	719.1 (9) 719.4 (3)	A. Machinery, plant and equipment (other than that falling in sub-heading B). B. Domestic instantaneous or storage water heaters, non-electrical.			
84.18		Centrifuges; filtering and purifying machinery and apparatus (other than filter funnels, milk strainers and the like), for liquids or gases.		84.30	718.3 (9) Machinery, not falling within any other heading of this Chapter, of a kind used in the following food or drink industries: bakery, confectionery, chocolate manufacture, macaroni, ravioli or similar cereal food manufacture, the preparation of meat, fish, fruit or vegetables (including mincing or slicing machines), sugar manufacture or brewing.
	712.3 (1) 719.2 (3)	A. Cream separators. B. Other.		84.31	718.1 (1) Machinery for making or finishing cellulosic pulp, paper or paperboard.
84.19	719.6 (2)	Machinery for cleaning or drying bottles or other containers; machinery for filling, closing, sealing, capsuling or labelling bottles, cans, boxes, bags or other containers; other packing or wrapping machinery; machinery for aerating beverages; dish washing machines.		84.32	718.2 (1) Book-binding machinery, including book-sewing machines.
84.20	719.6 (3)	Weighing machinery (excluding balances of a sensitivity of 5 cg or better), including weight-operated counting and checking machines; weighing machine weights of all kinds.		84.33	718.1 (2) Paper or paperboard cutting machines of all kinds; other machinery for making up paper pulp, paper or paperboard.
84.21	718.6 (4)	Mechanical appliances (whether or not hand operated) for projecting, dispersing or spraying liquids or powders; fire extinguishers (charged or not); spray guns and similar appliances; steam or sand blasting machines and similar jet projecting machines.		84.34	718.2 (2) Machinery, apparatus and accessories for type-founding or type-setting; machinery, other than the machine-tools of heading No. 84.45, 84.46 or 84.47, for preparing or working printing blocks, plates or cylinders; printing type, impressed slugs and matrices, printing blocks, plates and cylinders; blocks, plates, cylinders and lithographic stones, prepared for printing purposes (for example, planed, grained or polished).
84.22	719.2 (1)	Lifting, handling, loading or unloading machinery, trolleys and conveyors (for example, lifts, hoists, winches, cranes, transporter cranes, jacks, pulley tackle, belt conveyors and teleferics), not being machinery falling within heading No. 84.23.		84.35	718.2 (9) Other printing machinery; machines for uses ancillary to printing.
84.23	718.4 (2)	Excavating, levelling, tamping, boring and extracting machinery, stationary or mobile, for earth, minerals or ores (for example, mechanical shovels, coal-cutters, excavators, scrapers, levellers and bulldozers); pile-drivers; snow-ploughs, not self-propelled (including snow-plough attachments).		84.36	717.1 (1) Machines for extruding man-made textiles; machines of a kind used for processing natural or man-made textile fibres; textile spinning and twisting machines; textile doubling, throwing and reeling (including weft-winding) machines.
84.24	712.1	Agricultural and horticultural machinery for soil preparation or cultivation (for example, ploughs, harrows, cultivators, seed and fertiliser distributors); lawn and sports ground rollers.		84.37	717.1 (2) Weaving machines, knitting machines and machines for making gimped yarn, tulle, lace, embroidery, trimmings, braid or net; machines for preparing yarns for use on such machines, including warping and warp sizing machines.
84.25	712.2	Harvesting and threshing machinery; straw and fodder presses; hay or grass mowers; winnowing and similar cleaning machines for seed, grain or leguminous vegetables and egg-grading and other grading machines for agricultural produce (other than those of a kind used in the bread grain milling industry falling within heading No. 84.29).		84.38	717.1 (3) Auxiliary machinery for use with machines of heading No. 84.37 (for example, dobbies, Jacquards, automatic stop motions and shuttle changing mechanisms); parts and accessories suitable for use solely or principally with the machines of the present heading or with machines falling within heading No. 84.36 or 84.37 (for example, spindles and spindle flyers, card clothing, combs, extruding nipples, shuttles, healds and heald-lifters and hosiery needles).
84.26	712.5 (9)	Dairy machinery (including milking machines).		84.39	717.1 (4) Machinery for the manufacture or finishing of felt in the piece or in shapes, including felt-hat making machines and hat-making blocks.
84.27	712.9 (1)	Presses, crushers and other machinery, of a kind used in wine-making, cider-making, fruit juice preparation or the like.		84.40	Machinery for washing, cleaning, drying, bleaching, dyeing, dressing, finishing or coating textile yarns, fabrics or made-up textile articles (including laundry and dry-cleaning machinery); fabric folding, reeling or cutting machines; machines of a kind used in the manufacture of linoleum or other floor coverings for applying the paste to the base fabric or other support; machines of a type used for printing a repetitive design, repetitive words or overall colour on textiles, leather, wallpaper, wrapping paper, linoleum or other materials, and engraved or etched plates, blocks or rollers therefor.
84.28	712.9 (9)	Other agricultural, horticultural, poultry-keeping and bee-keeping machinery; germination plant fitted with mechanical or thermal equipment; poultry incubators and brooders.			
84.29	718.3 (1)	Machinery of a kind used in the bread grain milling industry, and other machinery (other than farm type machinery) for the working of cereals or dried leguminous vegetables.		717.1 (5) 725.8 (2)	A. Machinery and machines, other than those falling in sub-heading B. B. Domestic washing machines.

84.41	717.3	Sewing machines; furniture specially designed for sewing machines; sewing machine needles.	84.56	719.5 (1)	Machinery for sorting, screening, separating, washing, crushing, grinding or mixing earth, stone, ores or other mineral substances, in solid (including powder and paste) form; machinery for agglomerating, moulding or shaping solid mineral fuels, ceramic paste, unhardened cements, plastering materials or other mineral products in powder or paste form; machines for forming foundry moulds of sand.
84.42	717.3	Machinery (other than sewing machines) for preparing, tanning or working hides, skins or leather (including boot and shoe machinery).	84.57	719.5 (2)	Glass-working machines (other than machines for working glass in the cold); machines for assembling electric filament and discharge lamps and electronic and similar tubes and valves.
84.43	715.2 (1)	Converters, ladles, ingot moulds and casting machines, of a kind used in metallurgy and in metal foundries.	84.58	719.6 (3)	Automatic vending machines (for example, stamp, cigarette, chocolate and food machines), not being games of skill or chance.
84.44	715.2 (2)	Rolling mills and rolls therefor.	84.59		Machines and mechanical appliances, having individual functions, not falling within any other heading of this Chapter.
84.45	715.1	Machine-tools for working metal or metal carbides, not being machines falling within heading No. 84.49 or 84.50.	711.7		A. Nuclear reactors.
84.46	719.5 (1)	Machine-tools for working stone, ceramics, concrete, asbestos-cement and like mineral materials or for working glass in the cold, other than machines falling within heading No. 84.49.	719.5		B. Other.
84.47	719.5 (2)	Machine-tools for working wood, cork, bone, ebonite (vulcanite), hard artificial plastic materials or other hard carving materials, other than machines falling within heading No. 84.49.	84.60	719.9 (1)	Moulding boxes for metal foundry; moulds of a type used for metal (other than ingot moulds), for metal carbides, for glass, for mineral materials (for example, ceramic pastes, concrete or cement) or for rubber or artificial plastic materials.
84.48	719.5 (4)	Accessories and parts suitable for use solely or principally with the machines falling within headings Nos. 84.45 to 84.47, including work and tool holders, self-opening dieheads, dividing heads and other appliances for machine-tools; tool holders for any type of tool or machine-tool for working in the hand.	84.61	719.9 (2)	Taps, cocks, valves and similar appliances, for pipes, boiler shells, tanks, vats and the like, including pressure reducing valves and thermostatically controlled valves.
84.49	719.5 (3)	Tools for working in the hand, pneumatic or with self-contained non-electric motor.	84.62	719.7	Ball, roller or needle roller bearings.
84.50	715.2 (3)	Gas-operated welding, brazing, cutting and surface tempering appliances.	84.63	719.9 (3)	Transmission shafts, cranks, bearing housings, plain shaft bearings, gears and gearing (including friction gears and gear-boxes and other variable speed gears), flywheels, pulleys and pulley blocks, clutches and shaft couplings.
84.51	714.1	Typewriters, other than typewriters incorporating calculating mechanisms; cheque-writing machines.	84.64	719.9 (4)	Gaskets and similar joints of metal sheeting combined with other material (for example, asbestos, felt and paperboard) or of laminated metal foil; sets or assortments of gaskets and similar joints, dissimilar in composition, for engines, pipes, tubes and the like, put up in pouches, envelopes or similar packings.
84.52	714.2	Calculating machines; accounting machines, cash registers, postage-franking machines, ticket-issuing machines and similar machines, incorporating a calculating device.	84.65	719.9 (9)	Machinery parts, not containing electrical connectors, insulators, coils, contacts or other electrical features and not falling within any other heading in this Chapter.
84.53	714.3	Automatic data processing machines and units thereof; magnetic or optical readers, machines for transcribing data onto data media in coded form and machines for processing such data, not elsewhere specified or included.			
84.54	714.9 (1)	Other office machines (for example, hectograph or stencil duplicating machines, addressing machines, coin-sorting machines, coin-counting and wrapping machines, pencil-sharpening machines, perforating and stapling machines).			
84.55	714.9 (2)	Parts and accessories (other than covers, carrying cases and the like) suitable for use solely or principally with machines of a kind falling within heading No. 84.51, 84.52, 84.53 or 84.54.			

# Chapter 85

## Electrical machinery and equipment; parts thereof.

### Notes.

#### 1. — This Chapter does not cover :

- (a) Electrically warmed blankets, bed pads, foot-muffs and the like; electrically warmed clothing, footwear and ear pads and other electrically warmed articles worn on or about the person;
- (b) Articles of glass of heading No. 70.11; or
- (c) Electrically heated furniture of Chapter 94.

#### 2. — Heading No. 85.01 is to be taken not to apply to goods described in heading No. 85.08, 85.09 or 85.21, other than metal tank mercury arc rectifiers which remain classified in heading No. 85.01.

#### 3. — Heading No. 85.06 is to be taken to apply only to the following electro-mechanical machines of types commonly used for domestic purposes :

- (a) Vacuum cleaners, floor polishers, food grinders and mixers, fruit juice extractors and fans, of any weight;
  - (b) Other machines provided the weight of such other machines does not exceed 20 kg.
- The heading does not, however, apply to dish washing machines (heading No. 84.19), centrifugal and other clothes washing machines (heading No. 84.18 or 84.40), roller and other ironing machines (heading No. 84.16 or 84.40), sewing machines (heading No. 84.41) or to electro-thermic appliances (heading No. 85.12).

#### 4. — For the purposes of heading No. 85.19, "printed circuits" are to be taken to be circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semi-conductor elements).

The term "printed circuits" does not cover circuits combined with elements other than those obtained during the printing process. Printed circuits may, however, be fitted with non-printed connecting elements.

Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading No. 85.21.

#### 5. — For the purposes of heading No. 85.21 :

- (A) "Diodes, transistors and similar semi-conductor devices" are to be taken to be those devices the operation of which depends on variations in resistivity on the application of an electric field;
- (B) "Electronic microcircuits" are to be taken to be :
  - (a) Microassemblies of the "fagot" module, moulded module, micromodule and similar types, consisting of discrete, active or both active and passive miniaturised components which are combined and interconnected;
  - (b) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semi-conductor material (doped silicon, for example) and are inseparably associated;
  - (c) Hybrid integrated circuits in which passive and active elements, some obtained by thin- or thick-film technology (resistors, capacitors, interconnections, etc.), others by semi-conductor technology (diodes, transistors, monolithic integrated circuits, etc.), are combined, to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include miniaturised discrete components.

For the classification of the articles defined in this Note, heading No. 85.21 shall take precedence over any other heading in the Nomenclature which might cover them by reference to, in particular, their function.

85.01	722.1	Electrical goods of the following descriptions : generators, motors, converters (rotary or static), transformers, rectifiers and rectifying apparatus, inductors.
85.02	729.9 (1)	Electro-magnets; permanent magnets and articles of special materials for permanent magnets, being blanks of such magnets; electro-magnetic and permanent magnet chucks, clamps, vices and similar work holders; electro-magnetic clutches and couplings; electro-magnetic brakes; electro-magnetic lifting heads.
85.03	729.1 (1)	Primary cells and primary batteries.
85.04	729.1 (2)	Electric accumulators.
85.05	729.6	Tools for working in the hand, with self-contained electric motor.
85.06	725.0 (3)	Electro-mechanical domestic appliances, with self-contained electric motor.
85.07	725.0 (4)	Shavers and hair clippers, with self-contained electric motor.
85.08	729.4 (1)	Electrical starting and ignition equipment for internal combustion engines (including ignition magnetos, magneto-dynamos, ignition coils, starter motors, sparking plugs and glow plugs); generators (dynamos and alternators) and cut-outs for use in conjunction with such engines.
85.09	729.4 (2)	Electrical lighting and signalling equipment and electrical windscreen wipers, defrosters and demisters, for cycles or motor vehicles.
85.10	812.4 (3)	Portable electric battery and magneto lamps, other than lamps falling within heading No. 85.09.
85.11	729.9 (2)	Industrial and laboratory electric furnaces, ovens and induction and dielectric heating equipment; electric welding, brazing and soldering machines and apparatus and similar electric machines and apparatus for cutting.
85.12	725.0 (5)	Electric instantaneous or storage water heaters and immersion heaters; electric soil heating apparatus and electric space heating apparatus; electric hair dressing appliances (for example, hair dryers, hair curlers, curling tong heaters) and electric smoothing irons; electro-thermic domestic appliances; electric heating resistors, other than those of carbon.
85.13	724.9 (1)	Electrical line telephonic and telegraphic apparatus (including such apparatus for carrier-current line systems).
85.14	724.9 (2)	Microphones and stands therefor; loudspeakers; audio-frequency electric amplifiers.

85.15		Radiotelegraphic and radiotelephonic transmission and reception apparatus; radio-broadcasting and television transmission and reception apparatus (including receivers incorporating sound recorders or reproducers) and television cameras; radio navigational aid apparatus, radar apparatus and radio remote control apparatus.
	724.1	A. Television broadcast receivers, whether or not combined with gramophones or radio.
	724.2	B. Radio broadcast receivers, whether or not combined with gramophones.
	724.9 (9)	C. Other.
85.16	729.9 (3)	Electric traffic control equipment for railways, roads or inland waterways and equipment used for similar purposes in port installations or upon airfields.
85.17	729.9 (4)	Electric sound or visual signalling apparatus (such as bells, sirens, indicator panels, burglar and fire alarms), other than those of heading No. 85.09 or 85.16.
85.18	729.9 (5)	Electrical capacitors, fixed or variable.
85.19	722.2	Electrical apparatus for making and breaking electrical circuits, for the protection of electrical circuits, or for making connections to or in electrical circuits (for example, switches, relays, fuses, lightning arresters, surge suppressors, plugs, lampholders and junction boxes); resistors, fixed or variable (including potentiometers), other than heating resistors; printed circuits; switchboards (other than telephone switchboards) and control panels.
85.20	729.2	Electric filament lamps and electric discharge lamps (including infra-red and ultra-violet lamps); arc-lamps; electrically ignited photographic flashbulbs.
85.21	729.3	Thermionic, cold cathode and photo-cathode valves and tubes (including vapour or gas filled valves and tubes, cathode-ray tubes, television camera tubes and mercury arc rectifying valves and tubes); photocells; mounted piezo-electric crystals; diodes, transistors and similar semiconductor devices; electronic microcircuits.
85.22		Electrical appliances and apparatus, having individual functions, not falling within any other heading of this Chapter.
	729.7	A. Particle accelerators.
	729.9 (9)	B. Other.
85.23	723.1	Insulated (including enamelled or anodised) electric wire, cable, bars, strip and the like (including co-axial cable), whether or not fitted with connectors.

85.24	729.9 (6)	Carbon brushes, arc-lamp carbons, battery carbons, carbon electrodes and other carbon articles of a kind used for electrical purposes.
85.25	722.2 (1)	Insulators of any material.
85.26	722.2 (2)	Insulating fittings for electrical machines, appliances or equipment, being fittings wholly of insulating material apart from any minor components of metal incorporated during moulding solely for purposes of assembly, but not including insulators falling within heading No. 85.25.
85.27	722.2 (3)	Electrical conduit tubing and joints therefor, of base metal lined with insulating material.
85.28	729.9 (5)	Electrical parts of machinery and apparatus, not being goods falling within any of the preceding headings of this Chapter.

#### Section XVII

#### VEHICLES, AIRCRAFT, AND PARTS THEREOF; VESSELS AND CERTAIN ASSOCIATED TRANSPORT EQUIPMENT

##### Notes.

- This Section does not cover articles falling within heading No. 97.01, 97.03 or 97.08, or bobslighs, toboggans and the like falling within heading No. 97.06.
- Throughout this Section the expressions "parts" and "parts and accessories" are to be taken not to apply to the following articles, whether or not they are identifiable as for the goods of this Section:
  - Joint, washers and the like (classified according to their constituent material or in heading No. 84.64);
  - Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
  - Articles falling within Chapter 82 (tools);
  - Articles falling within heading No. 83.11;
  - Machines and mechanical appliances and other articles falling within headings Nos. 84.01 to 84.59, 84.61 or 84.62 and parts of engines and motors falling within heading No. 84.63;
  - Electrical machinery and equipment (Chapter 85);
  - Articles falling within Chapter 90;
  - Clocks (Chapter 91);
  - Arms (Chapter 93);
  - Brushes of a kind used as parts of vehicles (heading No. 96.02).
- References in Chapters 86 to 88 to parts or accessories are to be taken not to apply to parts or accessories which are not suitable for use solely or principally with the articles of those Chapters. A part or accessory which answers to a description in two or more of the headings of those Chapters is to be classified under that heading which corresponds to the principal use of that part or accessory.
- Flying machines specially constructed so that they can also be used as road vehicles are classified as flying machines. Amphibious motor vehicles are classified as motor vehicles.

5. — Air-cushion vehicles are to be classified within this Section with the vehicles to which they are most akin as follows :
- (a) In Chapter 86 if designed to travel on a guide-track (hovertrains);
  - (b) In Chapter 87 if designed to travel over land or over both land and water;
  - (c) In Chapter 89 if designed to travel over water, whether or not able to land on beaches or landing-stages or also able to travel over ice.

Parts and accessories of air-cushion vehicles are to be classified in the same way as those of vehicles falling within the heading in which the air-cushion vehicles are classified under the above provisions.

Hovertrain track fixtures and fittings are to be classified as railway track fixtures and fittings, and traffic control equipment for hovertrain transport systems as traffic control equipment for railways.

#### Chapter 86

**Railway and tramway locomotives, rolling-stock and parts thereof; railway and tramway track fixtures and fittings; traffic signalling equipment of all kinds (not electrically powered).**

##### Notes.

1. — This Chapter does not cover :
  - (a) Railway or tramway sleepers of wood or of concrete, or concrete guide-track sections for hovertrains (heading No. 44.07 or 68.11);
  - (b) Railway or tramway track construction material of iron or steel falling within heading No. 73.16; or
  - (c) Electrically powered signalling apparatus falling within heading No. 85.16.
2. — Heading No. 86.09 is to be taken to apply, *inter alia*, to :
  - (a) Axles, wheels, metal tyres, hoops and hubs and other parts of wheels;
  - (b) Frames, underframes and bogies;
  - (c) Axle boxes; brake gear;
  - (d) Buffers for rolling-stock; coupling gear and corridor connections;
  - (e) Coachwork.
3. — Subject to the provisions of Note 1 above, heading No. 86.10 is to be taken to apply, *inter alia*, to :
  - (a) Assembled track, turntables, platform buffers, loading gauges;
  - (b) Semaphores, mechanical signal discs, level crossing control gear, signal and point controls, whether or not they are fitted for electric lighting.

86.01	731.1	Steam rail locomotives and tenders.
86.02	731.2	Electric rail locomotives, battery operated or powered from an external source of electricity.
86.03	731.3	Other rail locomotives.
86.04	731.4	Mechanically propelled railway and tramway coaches, vans and trucks, and mechanically propelled track inspection trolleys.
86.05	731.5	Railway and tramway passenger coaches and luggage vans; hospital coaches, prison coaches, testing coaches, travelling post office coaches and other special purpose railway coaches.

86.06	731.6 (1)	Railway and tramway rolling-stock, the following : workshops, cranes and other service vehicles.
86.07	731.6 (2)	Railway and tramway goods vans, goods wagons and trucks.
86.08	731.6 (3)	Containers specially designed and equipped for carriage by one or more modes of transport.
86.09	731.7	Parts of railway and tramway locomotives and rolling-stock.
86.10	719.6 (6)	Railway and tramway track fixtures and fittings; mechanical equipment, not electrically powered, for signalling to or controlling road, rail or other vehicles, ships or aircraft; parts of the foregoing fixtures, fittings or equipment.

#### Chapter 87

**Vehicles, other than railway or tramway rolling-stock, and parts thereof.**

##### Notes.

*English text only :* The headings of this Chapter are to be taken not to apply to railway or tramway rolling-stock designed solely for running on rails.

1. — For the purposes of this Chapter, tractors are deemed to be vehicles constructed essentially for hauling or pushing another vehicle, appliance or load, whether or not they contain subsidiary provision for the transport, in connection with the main use of the tractor, of tools, seeds, fertilisers or other goods.
2. — Motor chassis fitted with cabs are to be treated as falling within heading No. 87.02 and not within heading No. 87.04.
3. — Headings Nos. 87.10 and 87.14 are to be taken not to apply to children's cycles which are not fitted with ball bearings nor to children's cycles which, though fitted with ball bearings, are not constructed in the normal form of adults' cycles. Such children's cycles are to be treated as falling within heading No. 97.01.

87.01		Tractors (other than those falling within heading No. 87.07), whether or not fitted with power take-offs, winches or pulleys.
	712.5	A. Tractors other than those of sub-heading B.
	722.5	B. Road tractors for semi-trailers.
87.02		Motor vehicles for the transport of persons, goods or materials (including sports motor vehicles, other than those of heading No. 87.09).
	732.1	A. Motor cars not including public-service type vehicles.
	732.2	B. Public-service type passenger vehicles (for example, motor buses, coaches).
	732.3	C. Other.
87.03	732.4	Special purpose motor lorries and vans (such as breakdown lorries, fire-engines, fire-escapes, road sweeper lorries, snow-ploughs, spraying lorries, crane lorries, searchlight lorries, mobile workshops and mobile radiological units), but not including the motor vehicles of heading No. 87.02.

87.04		Chassis fitted with engines, for the motor vehicles falling within heading No. 87.01, 87.02 or 87.03.
	732.8 732.7	A. Chassis of the kind used for the vehicles of heading No. 87.02, sub-heading A. B. Other.
87.05	732.8 (1)	Bodies (including cabs), for the motor vehicles falling within heading No. 87.01, 87.02 or 87.03.
87.06	732.8 (9)	Parts and accessories of the motor vehicles falling within heading No. 87.01, 87.02 or 87.03.
87.07	719.3 (2)	Works trucks, mechanically propelled, of the types used in factories, warehouses, dock areas or airports for short distance transport or handling of goods (for example, platform trucks, fork-lift trucks and straddle carriers); tractors of the type used on railway station platforms; parts of the foregoing vehicles.
87.08	951.0 (1)	Tanks and other armoured fighting vehicles, motorised, whether or not fitted with weapons, and parts of such vehicles.
87.09	732.9 (1)	Motor-cycles, auto-cycles and cycles fitted with an auxiliary motor, with or without side-cars; side-cars of all kinds.
87.10	733.1 (1)	Cycles (including delivery tricycles), not motorised.
87.11	733.4	Invalid carriages, fitted with means of mechanical propulsion (motorised or not).
87.12		Parts and accessories of articles falling within heading No. 87.09, 87.10 or 87.11.
	732.9 (2) 733.1 (2)	A. Suitable for use solely with the articles falling within heading No. 87.09. B. Other.
87.13	994.1	Baby carriages and invalid carriages (other than motorised or otherwise mechanically propelled) and parts thereof.
87.14	733.2	Other vehicles (including trailers), not mechanically propelled, and parts thereof.

#### Chapter 88

**Aircraft and parts thereof; parachutes; catapults  
and similar aircraft launching gear; ground flying trainers.**

88.01	734.9 (1)	Balloons and airships.
88.02	734.1	Flying machines, gliders and kites; rotochutes.

88.03	734.9 (2)	Parts of goods falling in heading No. 88.01 or 88.02.
88.04	899.9 (8)	Parachutes and parts thereof and accessories thereto.
88.05	899.9 (9)	Catapults and similar aircraft launching gear; ground flying trainers; parts of any of the foregoing articles.

#### Chapter 89

#### **Ships, boats and floating structures.**

#### Note.

A hull, unfinished or incomplete vessel, assembled, unassembled or disassembled, or a complete vessel unassembled or disassembled, is to be classified within heading No. 89.01 if it does not have the essential character of a vessel of a particular kind.

89.01		Ships, boats and other vessels not falling within any of the following headings of this Chapter.
	735.1 735.2	A. Warships of all kinds. B. Other.
89.02	735.9 (1)	Vessels specially designed for towing (tugs) or pushing other vessels.
89.03	735.9 (2)	Light-vessels, fire-floats, dredgers of all kinds, floating cranes, and other vessels the navigability of which is subsidiary to their main function; floating docks.
89.04	735.8	Ships, boats and other vessels for breaking up.
89.05	735.9 (3)	Floating structures other than vessels (for example, coffer-dams, landing stages, buoys and beacons).

# Section XVIII

## OPTICAL, PHOTOGRAPHIC, CINEMATOGRAPHIC, MEASURING, CHECKING, PRECISION, MEDICAL AND SURGICAL INSTRUMENTS AND APPARATUS; CLOCKS AND WATCHES; MUSICAL INSTRUMENTS; SOUND RECORDERS AND REPRODUCERS; TELEVISION IMAGE AND SOUND RECORDERS AND REPRODUCERS, MAGNETIC; PARTS THEREOF

### Chapter 90

#### Optical, photographic, cinematographic, measuring, checking, precision, medical and surgical instruments and apparatus; parts thereof.

#### Notes.

##### 1. — This Chapter does not cover :

- (a) Articles of a kind used in machines, appliances, instruments or apparatus, of unhardened vulcanised rubber, falling within heading No. 40.14, of leather or of composition leather, falling within heading No. 42.04, or of textile material (heading No. 59.17);
- (b) Refractory goods of heading No. 69.03; laboratory, chemical or industrial wares of heading No. 69.09;
- (c) Glass mirrors, not optically worked, falling within heading No. 70.09, and mirrors of base metal or of precious metal, not being optical elements, falling within heading No. 83.12 or Chapter 71;
- (d) Goods falling within heading No. 70.07, 70.11, 70.14, 70.15, 70.17 or 70.18;
- (e) Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV) or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
- (f) Pumps incorporating measuring devices, of heading No. 84.10; weight-operated counting and checking machinery, and separately imported weights for balances (heading No. 84.20); lifting and handling machinery of heading No. 84.22; fittings for adjusting work or tools on machine-tools, of heading No. 84.48, including fittings with optical devices for reading the scale (for example, "optical" dividing heads) but not those which are in themselves essentially optical instruments (for example, alignment telescopes); valves and other appliances of heading No. 84.61;
- (g) Searchlights and spotlights, of a kind used on motor vehicles, of heading No. 85.09, and radio navigational aid or radar apparatus of heading No. 85.15;
- (h) Cinematographic sound recorders, reproducers and re-recorders, operating solely by a magnetic process (heading No. 92.11); magnetic sound-heads (heading No. 92.13);
- (i) Articles of Chapter 97;
- (j) Capacity measures, which are to be classified according to the material of which they are made; or
- (k) Spools, reels or similar supports (which are to be classified according to their constituent material, for example, in heading No. 39.07 or Section XV).

##### 2. — Subject to Note 1 above, parts or accessories which are suitable for use solely or principally with machines, appliances, instruments or apparatus falling within any heading of this Chapter are to be classified as follows :

- (a) Parts or accessories constituting in themselves machines, appliances, instruments or apparatus (including optical elements of heading No. 90.01 or 90.02) of any particular heading of the present Chapter or of Chapter 84, 85 or 91 (other than headings Nos. 84.65 and 85.28) are to be classified in that heading;

- (b) Other parts or accessories are to be classified in heading No. 90.29 if they answer to the terms of that heading; otherwise they are to be classified in the heading appropriate to the machine, appliance, instrument or apparatus itself.

##### 3. — Heading No. 90.05 is to be taken not to apply to astronomical telescopes of a kind unsuitable for terrestrial observation (heading No. 90.06), or to telescopic sights for fitting to firearms, periscopic telescopes for fitting to submarines or tanks, or to telescopes for machines, appliances, instruments or apparatus of this Chapter; such telescopic sights and telescopes are to be classified in heading No. 90.13.

##### 4. — Measuring or checking optical instruments, appliances or machines which, but for this Note, could be classified both in heading No. 90.13 and in heading No. 90.16, are to be classified in heading No. 90.16.

##### 5. — Heading No. 90.28 is to be taken to apply, and apply only, to :

- (a) Instruments or apparatus for measuring or checking electrical quantities;
- (b) Machines, appliances, instruments or apparatus of a kind described in heading No. 90.14, 90.15, 90.16, 90.22, 90.23, 90.24, 90.25 or 90.27 (other than stroboscopes), the operation of which depends on an electrical phenomenon which varies according to the factor to be ascertained or automatically controlled;
- (c) Instruments or apparatus for measuring or detecting alpha, beta, gamma, X-ray, cosmic or similar radiations; and
- (d) Automatic regulators of electrical quantities, and instruments or apparatus for automatically controlling non-electrical quantities the operation of which depends on an electrical phenomenon varying according to the factor to be controlled.

##### 6. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

90.01	841.1 (1)	Lenses, prisms, mirrors and other optical elements, of any material, unmounted, other than such elements of glass not optically worked; sheets or plates, of polarising material.
90.02	841.1 (2)	Lenses, prisms, mirrors and other optical elements, of any material, mounted, being parts of or fittings for instruments or apparatus, other than such elements of glass not optically worked.
90.03	841.2 (1)	Frames and mountings, and parts thereof, for spectacles, pince-nez, lorgnettes, goggles and the like.
90.04	841.2 (2)	Spectacles, pince-nez, lorgnettes, goggles and the like, corrective, protective or other.
90.05	841.3 (1)	Refracting telescopes (monocular and binocular), prismatic or not.
90.06	841.3 (2)	Astronomical instruments (for example, reflecting telescopes, transit instruments and equatorial telescopes), and mountings therefor, but not including instruments for radio-astronomy.
90.07	841.4	Photographic cameras; photographic flashlight apparatus.
90.08	841.5	Cinematographic cameras, projectors, sound recorders and sound reproducers; any combination of these articles.

90.09	861.6 (1)	Image projectors (other than cinematographic projectors); photographic (except cinematographic) enlargers and reducers.
90.10	861.6 (9)	Apparatus and equipment of a kind used in photographic or cinematographic laboratories, not falling within any other heading in this Chapter; photo-copying apparatus (whether incorporating an optical system or of the contact type) and thermo-copying apparatus; screens for projectors.
90.11	861.2 (3)	Microscopes and diffraction apparatus, electron and proton.
90.12	861.2 (4)	Compound optical microscopes, whether or not provided with means for photographing or projecting the image.
90.13	861.5 (9)	Optical appliances and instruments (but not including lighting appliances other than searchlights or spotlights), not falling within any other heading of this Chapter.
90.14	861.5 (1)	Surveying (including photogrammetrical surveying), hydrographic, navigational, meteorological, hydrological and geophysical instruments; compasses; rangefinders.
90.15	861.8 (2)	Balances of a sensitivity of 5 cg or better, with or without their weights.
90.16	861.9 (2)	Drawing, marking-out and mathematical calculating instruments, drafting machines, pantographs, slide rules, disc calculators and the like; measuring or checking instruments, appliances and machines, not falling within any other heading of this Chapter (for example, micrometers, callipers, gauges, measuring rods, balancing machines); profile projectors.
90.17		Medical, dental, surgical and veterinary instruments and appliances (including electro-medical apparatus and ophthalmic instruments).
	726.1	A. Electro-medical apparatus.
	861.7 (1)	B. Other.
90.18	861.7 (2)	Mechano-therapy appliances; massage apparatus; psychological aptitude-testing apparatus; artificial respiration, ozone therapy, oxygen therapy, aerosol therapy or similar apparatus; breathing appliances (including gas masks and similar respirators).
90.19		Orthopaedic appliances, surgical belts, trusses and the like; splints and other fracture appliances; artificial limbs, eyes, teeth and other artificial parts of the body; hearing aids and other appliances which are worn or carried, or implanted in the body, to compensate for a defect or disability.
	899.6 (1)	A. Hearing aids.
	899.6 (2)	B. Other.

90.20	726.3	Apparatus based on the use of X-rays or of the radiations from radioactive substances (including radiography and radiotherapy apparatus); X-ray generators; X-ray tubes; X-ray screens; X-ray high tension generators; X-ray control panels and desks; X-ray examination or treatment tables, chairs and the like.
90.21	861.8 (4)	Instruments, apparatus or models, designed solely for demonstrational purposes (for example, in education or exhibition), unsuitable for other uses.
90.22	861.9 (5)	Machines and appliances for testing mechanically the hardness, strength, compressibility, elasticity and the like properties of industrial materials (for example, metals, wood, textiles, paper or plastics).
90.23	861.9 (6)	Hydrometers and similar instruments; thermometers, pyrometers, barometers, hygrometers, psychrometers, recording or not; any combination of these instruments.
90.24	861.9 (7)	Instruments and apparatus for measuring, checking or automatically controlling the flow, depth, pressure or other variables of liquids or gases, or for automatically controlling temperature, (for example, pressure gauges, thermostats, level gauges, flow meters, heat meters, automatic oven-draught regulators), not being articles falling within heading No. 90.14.
90.25	861.9 (8)	Instruments and apparatus for physical or chemical analysis (such as polarimeters, refractometers, spectrometers, gas analysis apparatus); instruments and apparatus for measuring or checking viscosity, porosity, expansion, surface tension or the like (such as viscometers, porosimeters, expansion meters); instruments and apparatus for measuring or checking quantities of heat, light or sound (such as photometers (including exposure meters), calorimeters); microtomes.
90.26		Gas, liquid and electricity supply or production meters; calibrating meters therefor.
	729.5 (1)	A. Electricity supply meters.
	861.6 (1)	B. Other.
90.27	861.5 (2)	Revolution counters, production counters, taximeters, mileometers, pedometers and the like, speed indicators (including magnetic speed indicators) and tachometers (other than articles falling within heading No. 90.14); stroboscopes.
90.28	729.5 (2)	Electrical measuring, checking, analysing or automatically controlling instruments and apparatus.
90.29	861.9 (9)	Parts or accessories suitable for use solely or principally with one or more of the articles falling within heading No. 90.23, 90.24, 90.26, 90.27 or 90.28.

## Chapter 91

## Clocks and watches and parts thereof.

## Notes.

1. — For the purposes of headings Nos. 91.02 and 91.07, the expression "watch movements" means movements regulated by a balance-wheel and hairspring or by any other system capable of determining intervals of time, not exceeding 12 mm in thickness when measured with the plate, the bridges and any additional outer plates.
2. — Headings Nos. 91.07 and 91.08 are to be taken not to apply to spring-operated or weight-operated motors not fitted, nor adapted to be fitted, with escapements (heading No. 84.08).
3. — This Chapter does not cover parts of general use as defined in Note 2 to Section XV, of base metal (Section XV), nor similar goods of artificial plastic materials (which are generally classified in heading No. 39.07). The Chapter also excludes weights, clock or watch glasses, watch chains or straps, parts of electrical equipment, ball bearings or bearing balls. Clock and watch springs are to be classified as clock or watch parts (heading No. 91.11).
4. — Except as provided in Notes 2 and 3, movements and other parts suitable for use both in clocks or watches and in other articles (for example, precision instruments) are to be taken as falling within this Chapter and not within any other Chapter.
5. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

91.01	864.1 (1)	Pocket-watches, wrist-watches and other watches, including stop-watches.
91.02	864.1 (2)	Clocks with watch movements (excluding clocks of heading No. 91.03).
91.03	864.2 (1)	Instrument panel clocks and clocks of a similar type, for vehicles, aircraft or vessels.
91.04	864.2 (2)	Other clocks.
91.05	864.2 (3)	Time of day recording apparatus; apparatus with clock or watch movement (including secondary movement) or with synchronous motor, for measuring, recording or otherwise indicating intervals of time.
91.06	864.2 (4)	Time switches with clock or watch movement (including secondary movement) or with synchronous motor.
91.07	864.1 (3)	Watch movements (including stop-watch movements), assembled.
91.08	864.2 (5)	Clock movements, assembled.
91.09	864.1 (4)	Watch cases and parts of watch cases.
91.10	864.2 (6)	Clock cases and cases of a similar type for other goods of this Chapter, and parts thereof.
91.11	864.2 (9)	Other clock and watch parts.

## Chapter 92

## Musical instruments; sound recorders and reproducers; television image and sound recorders and reproducers, magnetic; parts and accessories of such articles.

## Notes.

1. — This Chapter does not cover :
  - (a) Film wholly or partly sensitised for photographic or photo-electric recording or such film exposed, whether or not developed (Chapter 37);
  - (b) Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
  - (c) Microphones, amplifiers, loud-speakers, head-phones, switches, stroboscopes and other accessory instruments, apparatus or equipment falling within Chapter 85 or 90, for use with but not incorporated in or housed in the same cabinet as instruments of the present Chapter; sound recorders or reproducers combined with a radio or television receiver (heading No. 85.15);
  - (d) Brushes (for cleaning musical instruments) falling within heading No. 96.02;
  - (e) Toy instruments (heading No. 97.03);
  - (f) Collectors' pieces or antiques (heading No. 99.05 or 99.06); or
  - (g) Spools, reels or similar supports (which are to be classified according to their constituent material, for example, in heading No. 39.07 or Section XV).
2. — Bows and sticks and similar devices used in playing the musical instruments of headings Nos. 92.02 and 92.06 imported with such instruments in numbers normal thereto and clearly intended for use therewith, are to be classified in the same heading as the relative instruments. Perforated music rolls (heading No. 92.10) and gramophone records and the like (heading No. 92.12) imported with an instrument are to be treated as separate articles and not as forming a part of such instrument.
3. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

92.01	891.4 (1)	Pianos (including automatic pianos, whether or not with keyboards); harpsichords and other keyboard stringed instruments; harps but not including aeolian harps.
92.02	891.4 (2)	Other string musical instruments.
92.03	891.5 (1)	Pipe and reed organs, including harmoniums and the like.
92.04	891.8 (2)	Accordions, concertinas and similar musical instruments; mouth organs.
92.05	891.8 (3)	Other wind musical instruments.
92.06	891.8 (4)	Percussion musical instruments (for example, drums, xylophones, cymbals, castanets).

92.07	901.8 (3)	Electro-magnetic, electrostatic, electronic and similar musical instruments (for example, pianos, organs, accordions).
92.08	901.8 (9)	Musical instruments not falling within any other heading of this Chapter (for example, fairground organs, mechanical street organs, musical boxes, musical saws); mechanical singing birds; decoy calls and effects of all kinds; mouth-blown sound signalling instruments (for example, whistles and boatswains' pipes).
92.09	901.4 (3)	Musical instrument strings.
92.10	901.8	Parts and accessories of musical instruments (other than strings), including perforated music rolls and mechanisms for musical boxes; metronomes, tuning forks and pitch pipes of all kinds.
92.11	901.1 (1)	Gramophones, dictating machines and other sound recorders and reproducers, including record-players and tape decks, with or without sound-heads; television image and sound recorders and reproducers, magnetic.
92.12	901.2	Gramophone records and other sound or similar recordings; matrices for the production of records, prepared record blanks, film for mechanical sound recording, prepared tapes, wires, strips and like articles of a kind commonly used for sound or similar recording.
92.13	901.1 (2)	Other parts and accessories of apparatus falling within heading No. 92.11.

### Section XIX

## ARMS AND AMMUNITION; PARTS THEREOF

### Chapter 93

#### Arms and ammunition; parts thereof.

#### Notes.

1. — This Chapter does not cover :
  - (a) Goods falling within Chapter 36 (for example, percussion caps, detonators, signalling flares);
  - (b) Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
  - (c) Armoured fighting vehicles (heading No. 87.08);
  - (d) Telescopic sights and other optical devices suitable for use with arms, unless mounted on a firearm or imported with the firearm on which they are designed to be mounted (Chapter 90);
  - (e) Bows, arrows, fencing foils or toys falling within Chapter 97; or
  - (f) Collectors' pieces or antiques (heading No. 99.05 or 99.06).
2. — In heading No. 93.07, the reference to "parts thereof" is to be taken not to include radio or radar apparatus of heading No. 85.15.

3. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

93.01	901.8 (4)	Side-arms (for example, swords, cutlasses and bayonets) and parts thereof and scabbards and sheaths therefor.
93.02	901.8 (5)	Revolvers and pistols, being firearms.
93.03	901.8 (2)	Artillery weapons, machine-guns, sub-machine-guns and other military firearms and projectors (other than revolvers and pistols).
93.04	904.3 (1)	Other firearms, including Very light pistols, pistols and revolvers for firing blank ammunition only, line-throwing guns and the like.
93.05	904.3 (2)	Arms of other descriptions, including air, spring and similar pistols, rifles and guns.
93.06		Parts of arms, including gun barrel blanks, but not including parts of side-arms.
	904.3 (3)	A. Parts of arms falling within heading No. 93.04 or 93.05.
	901.8 (3)	B. Other.
93.07		Bombs, grenades, torpedoes, mines, guided weapons and missiles and similar munitions of war, and parts thereof; ammunition and parts thereof, including cartridge wads; lead shot prepared for ammunition.
	971.4	A. Sporting ammunition.
	901.8 (6)	B. Other.

## Section XX

### MISCELLANEOUS MANUFACTURED ARTICLES

#### Chapter 94

**Furniture and parts thereof; bedding, mattresses, mattress supports, cushions and similar stuffed furnishings.**

#### Notes.

1. — This Chapter does not cover :

- (a) Pneumatic or water mattresses, pillows or cushions, falling within Chapter 39, 40 or 62;
- (b) Standard lamps, table lamps, wall lamp brackets and other lighting fittings; these are classified according to the constituent material (for example, in heading No. 44.27, 70.14 or 83.07);
- (c) Articles of stone, ceramic or any other material referred to in Chapter 68 or 69, used as seats, tables or columns, of the kind used in parks, gardens or vestibules (Chapter 68 or 69);
- (d) Mirrors designed for placing on the floor or ground (for example, cheval-glasses (swing-mirrors)) falling within heading No. 70.09;
- (e) Parts of general use as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07); and safes falling within heading No. 83.03;
- (f) Furniture specially designed as parts of refrigerators of heading No. 84.15; furniture specially designed for sewing machines (heading No. 84.41);
- (g) Furniture specially designed as parts of radio-gramophones, wireless sets or television sets (heading No. 85.15);
- (h) Dentists' spittoons falling within heading No. 90.17;
- (i) Goods falling within Chapter 91 (for example, clocks and clock cases);
- (k) Furniture specially designed as parts of gramophones, of dictating machines or of other sound reproducers or recorders, falling within heading No. 92.13; or
- (l) Toy furniture (heading No. 97.03), billiard tables and other furniture specially constructed for games (heading No. 97.04) or for conjuring tricks (heading No. 97.05).

2. — The articles (other than parts) referred to in headings Nos. 94.01, 94.02 and 94.03 are to be classified in those headings only if they are designed for placing on the floor or ground.

This provision is, however, to be taken not to apply to the following which are still to be classified in the above-mentioned headings even if they are designed to be hung, to be fixed to the wall or to stand one on the other :

- (a) Kitchen cabinets and similar cupboards;
- (b) Seats and beds;
- (c) Unit bookcases and similar unit furniture.

3. — (a) In this Chapter references to parts of goods do not include references to sheets (whether or not cut to shape but not combined with other parts) of glass (including mirrors) or of marble or other stone.

- (b) Goods described in heading No. 94.04, imported separately, are not to be classified in heading No. 94.01, 94.02 or 94.03 as parts of goods.

94.01	821.0 (1)	Chairs and other seats (other than those falling within heading No. 94.02), whether or not convertible into beds, and parts thereof.
94.02	821.0 (2)	Medical, dental, surgical or veterinary furniture (for example, operating tables, hospital beds with mechanical fittings); dentists' and similar chairs with mechanical elevating, rotating or reclining movements; parts of the foregoing articles.

94.03 821.0 (9) Other furniture and parts thereof.

94.04 821.0 (3) Mattress supports; articles of bedding or similar furnishing fitted with springs or stuffed or internally fitted with any material or of expanded, foam or sponge rubber or expanded, foam or sponge artificial plastic material, whether or not covered (for example, mattresses, quilts, eiderdowns, cushions, pouffes and pillows).

#### Chapter 95

**Articles and manufactures of carving or moulding material.**

#### Note.

This Chapter does not cover :

- (a) Articles falling within Chapter 66 (for example, parts of umbrellas, walking-sticks);
- (b) Fans or hand screens, non-mechanical (heading No. 67.05);
- (c) Articles falling within Chapter 71 (for example, imitation jewellery);
- (d) Cutlery or other articles falling within Chapter 82 with handles or other parts of carving or moulding materials; the headings of the present Chapter apply, however, to separately imported handles or other parts of such articles;
- (e) Articles falling within Chapter 90 (for example, spectacle frames);
- (f) Articles falling within Chapter 91 (for example, clock or watch cases);
- (g) Articles falling within Chapter 92 (for example, musical instruments and parts thereof);
- (h) Articles falling within Chapter 93 (arms and parts thereof);
- (i) Articles falling within Chapter 94 (furniture and parts thereof);
- (k) Brushes, powder puffs or other articles falling within Chapter 96;
- (l) Articles falling within Chapter 97 (toys, games and sports requisites);
- (m) Articles falling within Chapter 98 (for example, buttons, cuff-links, smoking pipes, combs); or
- (n) Collectors' pieces or antiques (Chapter 99).

95.01 899.1 (1) Worked tortoise-shell and articles of tortoise-shell.

95.02 899.1 (2) Worked mother of pearl and articles of mother of pearl.

95.03 899.1 (3) Worked ivory and articles of ivory.

95.04 899.1 (4) Worked bone (excluding whalebone) and articles of bone (excluding whalebone).

95.05 899.1 (5) Worked horn, coral (natural or agglomerated) and other animal carving material, and articles of horn, coral (natural or agglomerated) or of other animal carving material.

95.06 899.1 (6) Worked vegetable carving material (for example, corozo) and articles of vegetable carving material.

95.07	899.1 (7)	Worked jet (and mineral substitutes for jet), amber, meerschaum, agglomerated amber and agglomerated meerschaum, and articles of those substances.
95.08	899.1 (8)	Moulded or carved articles of wax, of stearin, of natural gums or natural resins (for example, copal or rosin) or of modelling pastes, and other moulded or carved articles not elsewhere specified or included; worked, unhardened gelatin (except gelatin falling within heading No. 35.03) and articles of unhardened gelatin.

## Chapter 96

### Brooms, brushes, feather dusters, powder-puffs and sieves.

#### Notes.

1. — This Chapter does not cover :
  - (a) Articles falling within Chapter 71;
  - (b) Brushes of a kind specialised for use in dentistry or for medical, surgical or veterinary purposes, falling within heading No. 90.17; or
  - (c) Toys (Chapter 97).
2. — In heading No. 96.03, the expression "prepared knots and tufts for broom or brush making" is to be taken to apply only to unmounted knots and tufts of animal hair, vegetable fibre or other material, which are ready for incorporation without division in brooms or brushes, or which require only such further minor processes as glueing or coating the tufts, or trimming to shape at the top, to render them ready for such incorporation.

96.01	899.2 (3)	Brooms and brushes, consisting of twigs or other vegetable materials merely bound together and not mounted in a head (for example, besoms and whisks), with or without handles.
96.02	899.2 (4)	Other brooms and brushes (including brushes of a kind used as parts of machines); paint rollers; squeegees (other than roller squeegees) and mops.
96.03	899.2 (5)	Prepared knots and tufts for broom or brush making.
96.04	899.2 (6)	Feather dusters.
96.05	899.2 (11)	Powder-puffs and pads for applying cosmetics or toilet preparations, of any material.
96.06	899.2 (7)	Hand sieves and hand riddles, of any material.

## Chapter 97

### Toys, games and sports requisites; parts thereof.

#### Notes.

1. — This Chapter does not cover :
  - (a) Christmas tree candles (heading No. 34.06);
  - (b) Fireworks or other pyrotechnic articles falling within heading No. 36.05;
  - (c) Yarns, monofil, cords or gut and the like for fishing, cut to length but not made up into fishing lines, falling within Chapter 39, heading No. 42.06 or Section XI;
  - (d) Sports bags or other containers of heading No. 42.02 or 43.03;
  - (e) Sports clothing or fancy dress, of textiles, falling within Chapter 60 or 61;
  - (f) Textile flags or bunting, or sails for boats or land craft, falling within Chapter 62;
  - (g) Sports footwear (other than skating boots with skates attached), cricket pads, shin-guards or the like, falling within Chapter 64, or sports headgear falling within Chapter 65;
  - (h) Climbing sticks, whips, riding crops or the like (heading No. 66.02), or parts thereof (heading No. 66.03);
  - (i) Unmounted glass eyes for dolls or other toys, falling within heading No. 70.19;
  - (k) Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
  - (l) Articles falling within heading No. 83.11;
  - (m) Sports vehicles (other than bob-sleighs, toboggans and the like) falling within Section XVII;
  - (n) Children's cycles fitted with ball bearings and in the normal form of adults' cycles (heading No. 87.10);
  - (o) Sports craft such as canoes and skiffs (Chapter 89), or their means of propulsion (Chapter 44 for such articles made of wood);
  - (p) Spectacles, goggles and the like, for sports and outdoor games (heading No. 90.04);
  - (q) Decoy calls and whistles (heading No. 92.08);
  - (r) Arms or other articles of Chapter 93; or
  - (s) Racket strings, tents or other camping goods, or gloves (classified, in general, according to the material of which they are made).
2. — The headings of this Chapter are to be taken to include articles in which pearls, precious or semi-precious stones (natural, synthetic or reconstructed), precious metals or rolled precious metals constitute only minor constituents.
3. — In heading No. 97.02 the term "dolls" is to be taken to apply only to such articles as are representations of human beings.
4. — Subject to Note 1 above, parts and accessories which are suitable for use solely or principally with articles falling within any heading of this Chapter are to be classified with those articles.

97.01	894.2 (1)	Wheeled toys designed to be ridden by children (for example, toy bicycles and tricycles and pedal motor cars); dolls' prams and dolls' push chairs.
97.02	894.2 (2)	Dolls.
97.03	894.2 (3)	Other toys; working models of a kind used for recreational purposes.

97.04	894.2 (1)	Equipment for parlour, table and funfair games for adults or children (including billiard tables and pintables and table-tennis requisites).
97.05	894.3 (5)	Carnival articles; entertainment articles (for example, conjuring tricks and novelty jokes); Christmas tree decorations and similar articles for Christmas festivities (for example, artificial Christmas trees, Christmas stockings, imitation yule logs, Nativity scenes and figures therefor).
97.06	894.4 (2)	Appliances, apparatus, accessories and requisites for gymnastics or athletics, or for sports and outdoor games (other than articles falling within heading No. 97.04).
97.07	894.4 (1)	Fish-hooks, line fishing rods and tackle; fish landing nets and butterfly nets; decoy "birds", lark mirrors and similar hunting or shooting requisites.
97.08	894.5	Roundabouts, swings, shooting galleries and other fairground amusements; travelling circuses, travelling menageries and travelling theatres.

#### Chapter 98

#### Miscellaneous manufactured articles.

#### Notes.

#### 1. — This Chapter does not cover :

- (a) Eyebrow and other cosmetic pencils (heading No. 33.06);
- (b) Buttons, studs, cuff-links or other articles of a kind described in heading No. 98.01 or 98.12, if made wholly or partly of precious metal or rolled precious metal (subject to the provisions of Note 2 (a) to Chapter 71) or if containing pearls or precious or semi-precious stones (natural, synthetic or reconstructed) (Chapter 71);
- (c) Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of artificial plastic materials (which are generally classified in heading No. 39.07);
- (d) Mathematical drawing pens (heading No. 90.16); or
- (e) Toys falling within Chapter 97.

#### 2. — Subject to Note 1 above, the headings in this Chapter are to be taken to apply to goods of the kind described whether or not composed wholly or partly of precious metal or rolled precious metal or of pearls or precious or semi-precious stones (natural, synthetic or reconstructed).

#### 3. — Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

98.01	899.5 (2)	Buttons and button moulds, studs, cuff-links, and press-fasteners, including snap-fasteners and press-studs; blanks and parts of such articles.
98.02	899.5 (3)	Slide fasteners and parts thereof.
98.03	899.2 (1)	Fountain pens, stylograph pens and pencils (including ball point pens and pencils) and other pens, pen-holders, pencil-holders and similar holders, propelling pencils and sliding pencils; parts and fittings thereof, other than those falling within heading No. 98.04 or 98.05.

98.04	899.2 (2)	Pen nibs and nib points.
98.05	899.2 (3)	Pencils (other than pencils of heading No. 98.03), pencil leads, slate pencils, crayons and pastels, drawing charcoals and writing and drawing chalks; tailors' and billiards chalks.
98.06	899.9 (2)	Slates and boards, with writing or drawing surfaces, whether framed or not.
98.07	899.9 (3)	Date, sealing or numbering stamps, and the like (including devices for printing or embossing labels), designed for operating in the hand; hand-operated composing sticks and hand printing sets incorporating such composing sticks.
98.08	899.9 (4)	Typewriter and similar ribbons, whether or not on spools; ink-pads, with or without boxes.
98.09	899.9 (5)	Sealing wax (including bottle-sealing wax) in sticks, cakes or similar forms; copying pastes with a basis of gelatin, whether or not on a paper or textile backing.
98.10	899.2 (4)	Mechanical lighters and similar lighters, including chemical and electrical lighters, and parts thereof, excluding flints and wicks.
98.11	899.2 (5)	Smoking pipes; pipe bowls, stems and other parts of smoking pipes (including roughly shaped blocks of wood or root); cigar and cigarette holders and parts thereof.
98.12	899.5 (4)	Combs, hair-slides and the like.
98.13	899.5 (5)	Corset busks and similar supports for articles of apparel or clothing accessories.
98.14	899.5 (6)	Scent and similar sprays of a kind used for toilet purposes, and mounts and heads thereof.
98.15	899.9 (7)	Vacuum flasks and other vacuum vessels, complete with cases; parts thereof, other than glass inners.
98.16	899.5 (7)	Tailors' dummies and other lay figures; automata and other animated displays of a kind used for shop window dressing.

## Section XXI

### WORKS OF ART, COLLECTORS' PIECES, AND ANTIQUES

#### Chapter 99

#### Works of art, collectors' pieces, and antiques.

##### Notes.

1. — This Chapter does not cover :
  - (a) Unused postage, revenue or similar stamps of current or new issue in the country to which they are destined (heading No. 49.07);
  - (b) Theatrical scenery, studio back-cloth or the like, of painted canvas (heading No. 59.12); or
  - (c) Pearls or precious or semi-precious stones (heading No. 71.01 or 71.02).
2. — For the purposes of heading No. 99.02, the expression "original engravings, prints and lithographs" means impressions produced directly, in black and white or in colour, of one or of several plates wholly executed by hand by the artist, irrespective of the process or of the material employed by him, but not including any mechanical or photomechanical process.
3. — Heading No. 99.03, is to be taken not to apply to mass-produced reproductions or works of conventional craftsmanship of a commercial character.
4. — (a) Subject to Notes 1 to 3 above articles falling within headings of this Chapter are to be classified in whichever of those headings is appropriate and not in any other heading of the Nomenclature.  
 (b) Heading No. 99.06 is to be taken not to apply to articles falling within any of the preceding headings of this Chapter.
5. — Frames around paintings, drawings, pastels, engravings, prints or lithographs are to be treated as forming part of those articles, provided they are of a kind and of a value normal to those articles.

99.01	896.9 (1)	Paintings, drawings and pastels, executed entirely by hand, (other than industrial drawings falling within heading No. 49.06 and other than hand-painted or hand-decorated manufactured articles).
99.02	896.9 (2)	Original engravings, prints and lithographs.
99.03	896.9 (3)	Original sculptures and statuary, in any material.
99.04	896.9 (4)	Postage, revenue and similar stamps (including stamp-postmarks and franked envelopes, letter-cards and the like), used, or if unused not of current or new issue in the country to which they are destined.
99.05	896.9 (5)	Collections and collectors' pieces of zoological, botanical, mineralogical, anatomical, historical, archaeological, paleontological, ethnographic or numismatic interest.
99.06	896.9 (6)	Antiques of an age exceeding one hundred years.

## Chapter XIV

### INDUSTRIAL PRODUCT SECTORS

#### Introduction

Industrial products are defined in this report as all products provided for in chapters 25 through 99 of the Brussels Tariff Nomenclature. <sup>1/</sup> The industrial products have been grouped into 23 sectors for the purpose of discussing in detail the applicable tariffs, nontariff trade barriers, and the direction of major trade flows.

The format followed for the presentation for each sector includes an examination of MFN tariffs of the United States, Canada, Japan, the European Community (of six), and the United Kingdom, the sector's trade importance and trade network, the trade composition, trade-agreement concessions which have taken place, and an account of the complaints submitted to the Commission concerning trade barriers affecting products in the sector. Tariff and trade data for the most significant subsectors in each sector are discussed in the same way.

The industrial sectors are numbered according to the order of their importance in total OECD export trade in industrial products in 1969, as follows:

- I-1. Nonelectrical machinery
- I-2. Transport equipment
- I-3. Ores, metals and metal manufactures
- I-4. Chemicals
- I-5. Textiles
- I-6. Electrical machinery
- I-7. Pulp, paper and paperboard, and manufactures
- I-8. Coal, petroleum, natural gas and certain derived products
- I-9. Mineral products and fertilizers

---

<sup>1/</sup> See the appendix to chapter XIII.

- I-10. Professional, scientific and controlling instruments, clocks, and watches
- I-11. Wood and cork and manufactures
- I-12. Precious stones, precious metals and manufactures
- I-13. Rubber and rubber manufactures
- I-14. Raw hides and skins, leather and furskins, and manufactures
- I-15. Footwear and travel goods
- I-16. Musical instruments, sound recording or reproduction apparatus
- I-17. Firearms, ammunition, tanks and other armored fighting vehicles
- I-18. Furniture
- I-19. Toys and sporting goods
- I-20. Photographic and cinematographic supplies
- I-21. Works of art and collectors' pieces
- I-22. Office and stationery supplies
- I-23. Manufactured articles not elsewhere specified

Sectors I-1 through I-4 are found in volume 8, sectors I-5 through I-10 in volume 9, and sectors I-11 through I-23 in volume 10. A comparison of tariffs among sectors is found in chapter IV.

Some general observations on the interpretation of the data presented in the sectors is found in chapter XIII.

## NONELECTRICAL MACHINERY

Nonelectrical machinery includes all machinery not directly powered by electricity. The principal types are machinery for generating power, for construction and mining, for offices, for producing textiles, for heating and cooling, for metalworking, and for agriculture. The sector does not include appliances and machinery of ceramics or glass, nor does it cover transport equipment.<sup>1/</sup>

### MFN tariffs

World MFN imports of nonelectrical machinery face average tariffs not significantly at variance with those for industrial products taken as a whole (see chart I-1-A). The arithmetic averages range from 6.2 to 14 percent ad valorem; the weighted averages from 5 to 12 percent. For all products (combined free and dutiable), the European Community has the lowest arithmetic average tariff (6.2 percent) and Japan the highest (10.8 percent). The lowest weighted average is held by the United States (5 percent), followed by Canada (6.5 percent); and Japan again has the highest average (12 percent). For dutiable products only, Canada has the highest arithmetic average (14 percent) and the second highest weighted average (11.2 percent). The substantial importation of MFN duty-free goods into Canada causes Canada's averages on all products to be significantly below her averages for dutiable imports alone.

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 84.01-.65; 73.36-.37; 86.10 and 87.07. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-1-A. -- Average MFN tariff rates on nonelectrical machinery  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on most Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of tariff provisions by duty level is shown in table I-1-A. The largest portion of rate provisions are in the bracket of 5.1-10 percent ad valorem for all countries except Canada, where 46

Table I-1-A.--Distribution, by duty level, of MFN tariff provisions for nonelectrical machinery

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	45.8	9.2	-	-	2.0
0.1-5.0 percent----	1.3	33.8	2.1	32.4	4.0
5.1-10.0 percent----	17.9	46.7	56.3	62.9	74.3
10.1-15.0 percent----	12.2	5.8	39.0	4.8	14.9
15.1-20.0 percent----	22.7	2.1	.6	-	4.1
20.1-25.0 percent----	-	1.7	1.5	-	1.0
25.1-30.0 percent----	.2	.4	.6	-	-
30.1-40.0 percent----	-	.4	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

percent of the rate provisions are free. Tariffs of the United States, Canada and the United Kingdom contain MFN duty-free provisions for non-electrical machinery; those of Japan and the European Community do not. The rates of Canada and Japan range into the 25.1-30 percent ad valorem bracket; the United States has one item with an ad valorem equivalent of 30.5 percent. The Community has no rates above 15 percent.

Imports of nonelectrical machinery receiving preferential tariff treatment are significant for most of the major countries. Such treatment is accorded 20 percent of entries into the United Kingdom, 11 percent into the United States, 4.3 percent into Canada, and intra-EC shipments greatly exceed imports from outside countries. The bulk of MFN imports by all the major countries enter at rates of less than 10 percent; Japan and the United Kingdom are the only countries with a significant portion of their imports dutiable at higher rates (table I-1-B). Only Canada and the United States have duty-free MFN imports, a substantial 42 percent and 12 percent of total imports, respectively.

Table I-1-B.--Distribution, by duty level, of MFN imports of nonelectrical machinery

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	42.0	11.8	-	-	-
0.1-5.0 percent----	.2	51.7	0.8	26.8	1.3
5.1-10.0 percent---	43.3	35.0	55.2	63.2	72.8
10.1-15.0 percent--	6.0	1.3	31.5	10.2	25.7
15.1-20.0 percent--	8.4	.2	2.5	-	.1
20.1-25.0 percent--	-	-	10.0	-	-
25.1-30.0 percent--	-	-	.1	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Canada has the most detailed tariff schedule for nonelectrical machinery with 638 tariff lines, while the United Kingdom has the least, with 94 lines. Japan has 337 lines; the United States, 235 lines; and the European Community, 211 lines. However, the multiple dispersion of U.S. and Canadian tariff items into the BTN format overstates the detail of the tariff schedules of these two countries. An adjustment for this problem yields a more accurate item count of 180 items for the United States and 244 items for Canada.

### Trade importance

Nonelectrical machinery is one of the most important industrial sectors, ranking first in OECD exports and third in imports. The sector accounts for about 11 percent of OECD industrial exports and 12 percent of industrial imports. For the United States, the sector is the second

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

most important in exports. It ranked fourth in 1969 U.S. imports, but rose to third in 1970.

Imports by the GATT tariff study countries were valued at \$10.7 billion in 1967, and \$16.9 billion in 1970. Intra-EC shipments were an additional \$3.1 billion in 1967 and \$5.3 billion in 1970. OECD 1969 imports were \$19 billion (including \$4.2 billion of intra-EC shipments) and exports were \$27.7 billion (see chart I-1-B).

### Trade network

The five major countries account for almost 90 percent of OECD exports and about 80 percent of imports. Half of OECD exports go to the five major

Chart I-1-C. -- United States trade in nonelectrical machinery, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

countries; one-fourth to LDC's. Over 85 percent of OECD imports are supplied by the five major countries.

One-third of U.S. exports go to less developed countries (chart I-1-C), where substantially higher tariffs and other trade barriers generally are encountered. Canada is the principal developed market for U.S. products, followed by the European Community. The United States takes most of Canada's exports. Japan ships half of its exports to LDC's, 20 percent to the United States, and only 8 percent to the Community. Intra-EC exports are equal to more than half of the Community's shipments to outside markets. LDC's take about one-third of the EC's outside exports; 10 percent go to the United States, and about 8 percent to the United Kingdom. The United Kingdom ships over 40 percent of its products

to IDC's and other non-OECD countries. The Community is the principal developed market for the United Kingdom (see table I-1-C).

Nonelectrical machinery ranks second in industrial imports for Canada and the United Kingdom, third for the United States, fourth for the Community, and fifth for Japan. United States imports of nonelectrical machinery were valued at \$1.8 billion in 1967, \$2.5 billion in 1969, and \$3.5 billion in 1971. The European Community and Canada each supply about one-third of U.S. imports; the United Kingdom and Japan each about one-eighth (chart I-1-C). The United States is the source of over four-fifths of Canada's imports and over half of Japan's. Almost 40 percent of imports

into the European Community from outside sources come from the United States, but the total Community imports from all external sources are only three-fourths as large as intra-Community shipments. The Community is the chief source of United Kingdom imports, followed by the United States. Japan is not a significant supplier to any major country except the United States (see table I-1-D).

#### Trade composition

Nonelectrical machinery trade is divided into 13 subsectors, of which power-generating machinery is the largest in both exports and imports, (about 15 percent of each), followed by office machines. The relative importance of the 13 subsectors is shown in chart I-1-D.

#### Trade-agreement concessions

For all of the five major countries, except Japan, average tariff levels on January 1, 1972, for nonelectrical machinery were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the following tabulation, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 9.6 percent.

United Kingdom	20.3	9.3
Japan	15.4	12.0
Canada	21.2	7.6

Concessions under the GATT have been made on all MFN provisions for nonelectrical machinery in the tariff schedules of the United States and the United Kingdom, as well as on 97 percent of the provisions (covering virtually all nonelectrical machinery trade) in the Community's Common External Tariff. Only 71 percent of Canada's provisions, covering about three-fourths of Canadian imports are under the GATT, and Canada's coverage drops as low as 51 percent in some categories of nonelectrical machinery. Japan's GATT concessions cover about 84 percent of her provisions and trade, with the lowest coverage among the specific categories of machinery being 60 percent.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on nonelectrical machinery negotiated under the GATT. The number of such concessions totaled 1,143, of which 743 reflected rates higher than the autonomous rate established in the CXT, 44 were at the CXT rate, and 356 were below the CXT rate.

### Trade complaints

Given the large trade in nonelectrical machinery, and the diversity of products and trade patterns involved, it is not surprising that complaints submitted to the Tariff Commission by manufacturers and traders of this equipment should cover virtually the complete array of policies and practices (both governmental and private) which in recent years have come to be characterized as constituting barriers to trade. The complaints involved almost every developed country (including the United States), all of the more important less developed countries, all nations in Latin America except three of the smallest, and many LDC's in Africa. Japan was the single country drawing the largest number of complaints (74) but the total of complaints against individual EC member states and the Community as a group was greater than those against Japan. Among the LDC's the greatest number of complaints were against Argentina (27), Brazil (26), Mexico (16) and Colombia (16). The complaints are summarized under major topic headings in the paragraphs below:

Import duties.--U.S. manufacturers complained of the height of Canadian duties on core drilling equipment, diamond drilling bits and tools, oil and gas processing equipment, loaders, mixing gears, paper machinery, and air conditioning and refrigeration equipment; of duties levied by the European Community on refrigeration compressors, conveyor dryers for textiles, furnaces, agricultural machinery, paper machinery and replacement parts for heating equipment; of Japanese rates on computers and advanced electronic equipment and agricultural machinery; and of the U.S. duty on cash registers and parts. Several of the duties complained against are

between 5 and 10 percent ad valorem. The Canadian duties are chiefly between 10 and 25 percent ad valorem and the Japanese duties on computers (prior to the 1972 unilateral reductions) were 15 and 25 percent ad valorem.

Most complaints against Canadian duties also mentioned the discriminatory effect of the preferential treatment accorded Canadian imports from members of the British Commonwealth. Several of the complainants against the Community stated that, in addition to being disadvantaged by the EC tariff, their competitive position in the EC market was further worsened by duty-free treatment accorded intra-EC imports. A manufacturer of chain saws protested against the duty of  $47\frac{1}{2}$  percent ad valorem encountered by his products in Australia and the preferential treatment given his British Commonwealth competitors in the Australian market. A similar complaint was made against the Australian duty of  $33\frac{1}{3}$  percent ad valorem on computer terminal equipment and 38 percent on diamond core drills and tools. Commonwealth preferences were characterized by a producer of steam-generating equipment as a moderate hindrance to his ability to compete in the markets of Australia, South Africa, India and Singapore. Some of the respondents complaining against these tariffs estimated that if the tariffs were removed their sales in the market involved would increase by significant amounts ranging from \$100,000 to \$500,000 annually.

Several complaints were made against LDC tariffs, which customarily are considerably higher than tariffs of the developed countries. LDC tariffs are frequently combined with surcharges and other fees which the complainant did not distinguish. Illustrative is the Argentine charge on

typewriters equal to 140 percent of the c.i.f. value, import fees of 90 percent on agricultural equipment entering Argentina, and a 35-percent duty on drilling equipment imported into Mexico.

The discriminatory tariff treatment for U.S. exports which results from formation of regional trading blocs, such as the European Community, the European Free Trade Association and the Latin American Free Trade Association, were the subject of several complaints. The refusal of the United States to grant MFN treatment to Eastern bloc countries is reported by a U.S. trade association as a hindrance to U.S. exports to that region.

Subsidies and other governmental aids.--Among the numerous practices and policies complained of to the Commission in the nonelectrical machinery sector, subsidies and other governmental aids drew the largest number of objections. Japan was the nation most often mentioned in complaints in this area. U.S. producers of nonelectrical machinery reported that the Japanese industry receives tax incentives to export and to engage in research and development, and that Japanese exports are also encouraged by government assistance in foreign market research and advertising operations. Low-cost export financing schemes and insurance at less than commercial rates against losses due to foreign tariff increases and default of foreign borrowers are also said to be available to Japanese exporters. Also the subject of complaints was assistance which the Japanese External Trade Organization gives to Japanese exporters through financing travel abroad to design products for export, underwriting the cost of overseas exhibitions, and covering attorneys' fees when Japanese nationals are involved in trade disputes abroad. The organization also

undertakes market research for Japanese products, advertises Japanese goods abroad, and engages in other activities to promote Japanese exports.

U.S. producers complained that Japanese investment in less developed countries is encouraged by allowing the untaxed accumulation of a fund equal to 50 percent of investment in such countries as a reserve against investment loss; while on the domestic side an implicit guarantee of the debt position of major Japanese corporations and their consequent heavy use of debt financing creates a competitive advantage for Japanese companies. Special loans at low rates are channeled by the Japan Development Bank to sectors considered important for industrial growth. A comprehensive program directed by the Ministry of International Trade and Industry (MITI) to restructure the Japanese computer industry includes support of a rental company made up of the six major computer companies in Japan, plus other aids. A MITI plan which includes, inter alia, tax exemptions and government loans is also being implemented in the electronics field.

U.S. producers report that France encourages the production and exportation of nonelectrical machinery in various ways. Low interest loans for export production are available from the government, as is concessionary financing of exports. The tax system allows the build-up of exceptional reserve accounts which provide interest and tax-free working capital. There are also tax incentives to export. More generally directed subsidies are available for certain business expansion costs, start-up costs, and research and development. The French government, through a program

which includes subsidies and encouragement of mergers, is restructuring the French computer industry.

Complaints were made that the United Kingdom provides concessionary financing of exports and special tax relief to exporters, and that direct and indirect subsidies for business expansion, start-up costs, and research and development are granted. The government, through subsidies and the promotion of mergers, is assisting the development of the computer industry in the United Kingdom.

United States businessmen complained that in Sweden the tax system allows the accumulation of exceptional reserve accounts which provide interest and tax-free working capital; that there are tax incentives to exports; and that research and development are subsidized, as are certain expansion and start-up costs. Low interest loans by the Swedish Government for export production were reported. West Germany is said to provide subsidies and low interest loans to export production and concessionary financing for exports.

Numerous other complaints were received against governmental policies said to aid exports from Argentina, Colombia, Peru, Venezuela, countries of the European Community and the European Free Trade Association, the Communist bloc countries, and many nations of Africa and the Far East. U.S. traders report that Canada, Ireland, Italy, the Netherlands, New Zealand, Norway, South Africa, Spain, Switzerland, Venezuela, and Australia offer some form of tax relief geared to export performance.

Quantitative limitations and licensing.--Complaints against quantitative restrictions, embargoes and licensing practices made up the second

largest category of objections. Numerous complaints were received from U.S. producers and from other sources concerning Japanese restrictions on nonelectrical machinery, especially electronic computers. Japan's Automatic Import Quota System, which became inoperative in 1972, was frequently mentioned. Quotas reportedly imposed by Malaysia, Korea, Cyprus, Australia, Mexico, Peru and several Western European countries were the objects of further complaints. One industry association complained of European quantitative restrictions applied discriminatorily against Japanese products. It was felt that such restrictions encouraged the Japanese to concentrate on the United States market causing problems for industries in this country.

Many U.S. producers reported encountering embargoes on their products, chiefly in IDC's. Most frequently, complainants mentioned that they were unable to ship their goods to certain countries if similar products were manufactured locally, and many respondents indicated that denial of an import license was based on the fact that a local substitute for the product was available. Mexico and Brazil were the countries most frequently mentioned as imposing such embargoes; however complaints were also received about Chile, Venezuela, Argentina, Colombia, Ecuador, South Africa, France, Yugoslavia and Japan. One industry association complained of embargoes imposed by Japan on computers. Discriminatory embargoes against Japan are allegedly in effect in Italy.

The Japanese licensing requirements, especially for computers and other electronic products, were the subject of several complaints. It was reported that Japanese officials contact end users named on the license

to discourage the purchase of an imported product, and U.S. producers reported difficulty in obtaining licenses. In some cases import licenses are granted in Japan only for prototypes, and even then only if the foreign producer agrees to license production of the product to a Japanese firm. A large number of producers and shippers complained of the complicated, difficult, lengthy, and costly procedure of obtaining import licenses in LDC's.

Two U.S. producers complained about U.S. export licensing requirements for shipments of certain nonelectrical machinery to Communist countries, and others felt that U.S. export control regulations restraining trade with most Communist countries were barriers to their trade in products considered to be of strategic importance. Japanese "voluntary export restraints" on certain products in the nonelectrical machinery area were considered an impediment to trade by an importers' association.

Standards.---Most of the problems in the area of industrial, health and safety standards were related to what was perceived by the complainant to be discriminatory administration of the standards. Requirements that the products in question be tested for conformity to national standards in the country of importation were reported in effect in the Netherlands, Austria, Canada, the United Kingdom, France, West Germany, Italy, Denmark, Finland, Norway, Sweden, the United States, and the European Community. In Switzerland, approval for imported equipment was allegedly difficult to obtain. Some U.S. producers have experienced difficulties in France, Belgium, Luxembourg, and East and West Germany, where they reported that interpretation of standards was left to local inspectors rather than a central body.

Complaints were made by U.S. producers about industrial, health, and safety standards being too strict in the Netherlands for gas burners and in West Germany for oil burners. A few complaints were also made against the United States that foreign products must often be tested to meet specifications set by U.S. industrial or professional associations and that administration of such standards discriminates against foreign products. The American Society of Mechanical Engineers seal of approval for the design and construction of pressure vessels, which is required in many states and municipalities, was the object of a complaint that this seal was available only on occasion outside North America, and that even when it was available substantial costs and delays were involved. <sup>1/</sup>

The multipartite accord on standards for electronic products undertaken by France, West Germany, the United Kingdom and other European countries, without participation of the United States, evoked fears that U.S. trade in this area would be seriously harmed. Other activities of the European Committee for Coordination of Standards (CEN), in which the United States does not participate, may hamper U.S. exports of other nonelectrical machinery when and if a European standards code is implemented for them. West German (DIN) safety standards for welding equipment were reported by a U.S. producer as a barrier to his exports because they were not identical to U.S. standards. Electrical appliances falling under the West German high frequency law were reported to require official approval of the government. A U.S. producer complained that certain machines and

---

<sup>1/</sup> Recent action against ASME under the Antitrust Laws has resulted in the future availability of the ASME seal to foreign producers.

appliances imported into Brazil are required to be produced in accordance with ILO safety standards, and that a certificate issued by a competent authority and stating that the goods were so produced is required. High U.S. environmental standards for heating equipment are feared by one U.S. producer to be detrimental to his competitive position in world markets.

One complaint was received from a U.S. producer criticizing the EC for using the metric system while another domestic producer was unhappy about the United States not using the metric system. Both felt that the lack of a uniform system hindered U.S. exports. Another U.S. producer was displeased that requirements for marking in the United States were not in metric units while marking in metric units was required outside the United States.

Government procurement, state trading.--Trade in nonelectrical machinery was reported to suffer from the "buy-national" policies or practices of Spain, Japan, the United States, countries of the European Community (especially France and West Germany), countries of the European Free Trade Association (especially the United Kingdom), and Communist bloc countries. U.S. producers complained that in the Netherlands certain domestic companies are allocated specific portions of all public procurement of computers. An importers association complained of the U.S. Defense Department specification that certain items must be purchased from particular United States firms, and another complaint was received that Nippon Telephone and Telegraph, a Japanese government agency, would buy only Japanese equipment.

The usual complaints that accompany state trading were reported for nonelectrical machinery in several IDC's and Eastern European countries.

Customs valuation and customs administrative procedures.--Valuation on a c.i.f. basis for customs purposes is considered by some nonelectrical machinery producers as a barrier to U.S. exports. Japan, the EC, EFTA, the Communist Bloc, and numerous other countries use this form of valuation. Objections were also raised against New Zealand, South Africa, Australia, and some other British Commonwealth countries which impose tariffs on the current market value in the country of exportation, not the f.o.b. value. A U.S. importer felt that U.S. valuation practices were not consistent from port to port. The use by Japan, the United Kingdom and Italy of uplifts of 3 to 5 percent of the invoice value on intercompany transactions in order to offset alleged preferential pricing in non-arm's-length transactions was criticized by a few exporters to those countries. Complaints were also made against the "abnormal price system" in Spain under which, by alleging "abnormal prices," the government can suspend imports of the goods in question until an investigation is completed.

For so long as imported goods are classified for duty purposes, importers probably will feel that customs officials act arbitrarily in performing this function. Complaints of arbitrary classifications were made against the United States (papermaking machinery), Canada (machinery parts), Japan (air conditioning equipment) and countries of the EC, EFTA, and Communist Bloc (various products).

The burden of documentation is considered by a number of international traders as excessive. The United States, Brazil, Italy, Spain, New

Zealand, South Africa, Australia, Zambia and many Latin American countries were criticized for requiring a special customs invoice in addition to normal commercial invoices. It was reported that in Japan forms must be submitted showing the distribution network in Japan, the price at each stage until the final purchaser and the names and commissions of all middlemen. Documentation requirements for U.S. export control regulations, for claiming duty drawback if goods are re-exported, and for AID shipments were mentioned as being too detailed and overly burdensome. The lack of uniform commodity descriptions among nations was also felt to hamper trade.

Consular fees and formalities of numerous LDC's were the subject of complaints by several American firms. Administrative difficulties with customs procedures were frequently mentioned in nontariff barrier complaints. Heavy customs penalties were reportedly imposed by Brazil and Chile when goods erroneously shipped to those countries were re-exported. Brazil was singled out for a complaint on unreasonable penalties for typographical and insignificant invoice errors. Importers also complained of delays by U.S. Customs in answering advance inquiries about duty rates for specific products, delays in completing appraisement of merchandise and duplication of requests for information at different ports of entry.

Restrictive business practices.--A number of business practices in Europe and Japan are considered by U.S. businessmen as hindrances to trade. Dual pricing systems where the same products are sold at lower prices in export markets than in the protected home markets were reportedly in effect in France, West Germany, Italy, Japan, Sweden, Switzerland and the

United Kingdom. The existence of cartels to promote exports was mentioned as a barrier in West Germany, Japan and the United Kingdom. One industry association expressed the opinion that private arrangements were in effect limiting Japanese exports to European countries.

Discriminatory credit restrictions.--Credit restrictions which hamper international trade were reported for several countries. Two associations of U.S. producers of nonelectrical equipment criticized the "standard method of settlement" used in Japan. A U.S. company indicated that its export operations were hampered by an AID regulation which allows loans to less developed countries only when over 50 percent of the products purchased therewith are of U.S. origin. Complaints were also made on limits on U.S. Export-Import Bank financing to Eastern European countries.

Another U.S. company reported that its subsidiaries in the European Community were not able to borrow money at the favorable rates available to European Community corporations and that banking services were better for Community companies than for U.S. firms operating in the European Community. A U.S. trade association complained that Portugal does not permit interest on import financing loans to be paid in dollars. This trade association also mentioned that the governments of Argentina and the Philippines control the letters of credit necessary to import anything into those countries. One U.S. producer complained that the prohibition against local retail financing in Argentina limited his ability to sell in that market.

Investment controls.--A number of U.S. trade associations object to Japanese controls on foreign investment. Particular emphasis was placed on restrictions against the establishment of sales and service branches for electronic data processing equipment. A complaint was also made against United States controls on foreign direct investment by American firms.

Exchange controls.--Exchange restrictions were notified for the following countries: Greece, India, Pakistan, the Philippines, Spain, Turkey, Brazil, Argentina, Japan, the United Kingdom, the EC and Yugoslavia. A 180-day delay in converting local currency to dollars was reportedly in effect in the Philippines. In India a company's imports for marketing purposes are, according to a U.S. trade association, limited to its ability to earn the foreign exchange necessary to pay for them. It was also reported that Chile, Colombia, Taiwan and Japan control profit and/or royalty remittances of branches and subsidiaries of U.S. firms operating within their borders.

Border tax adjustments.--Many U.S. producers felt that their sales in all countries of the European Community plus Portugal, Switzerland, Austria, Japan, Denmark, Finland, Norway, and Sweden were hindered by border adjustments for indirect taxes. Complaints were received about adjustments for sales taxes, value added taxes and cascade taxes.

Shipping practices.--A number of complaints were received from exporters of nonelectrical machinery alleging freight rate discrimination against their exports. Exporters indicated that freight rates for exactly the same products were higher from the United States to foreign ports than

from those ports to the United States. Italy was the only country specifically mentioned in this regard. One U.S. producer felt that high internal transportation charges in the United States and expensive port charges at U.S. ports limited the company's export possibilities.

Local content requirements.--A U.S. producer of steam-generating equipment complained that Argentina requires that 50 percent of fossil fueled steam-generating equipment be produced locally. India, according to a U.S. trade association, insists that manufacturing, research and other functions related to the production of business equipment to be sold in India be carried out in India.

Miscellaneous practices.--The prior import deposit requirements of several IDC's drew complaints from numerous exporters, as did port and statistical taxes, stamp taxes, special import taxes and "equalization" taxes applied in a substantial number of countries, and a "compensatory tax" temporarily levied by the European Community.

In the Commission's survey, respondents were requested to give their assessment of the restrictive trade effect of the barriers they reported by indicating whether trade in the affected products would show a "small," "moderate," or "significant" increase if the barrier were removed and, if possible, to estimate a dollar value for the increase. The fact that only a few respondents in a sector as large and important as nonelectrical machinery gave such assessments illustrates the difficulties encountered in measuring the actual impact or significance of the vast majority of governmental policies and nontariff measures which businessmen feel adversely affect their competitive position in trade. Of the assessments

received, a minor number estimated only a "small" trade increase would occur if the barriers were removed, and the remainder were about equally divided between "moderate" and "significant." Most respondents submitting such estimates reported their products faced multiple obstacles in trade, both in a single country and among several countries, and the estimates represented the cumulative effect of removal of all barriers impinging on the product. Estimates as high as \$2 million annually were given by companies for the expected increase in their trade in a product or a group of closely related products. The estimated dollar value increases most frequently characterized as "moderate" were equivalent to 10 to 50 percent of present trade. The relatively small number of dollar value estimates received in the nonelectrical machinery area totaled \$21 million.

#### Power-Generating Machinery

Power-generating machinery includes internal combustion engines, aircraft engines, steam power units, steam boilers, and gas generators. <sup>1/</sup>

#### MFN tariffs

Among the five major countries, the United States and Canada have the lowest arithmetic tariff averages (5.6 and 5.7 percent ad valorem respectively) for total MFN imports of power-generating machinery, but Canada's weighted average (1.9 percent) is less than half the U.S. level. The

---

<sup>1/</sup> For specific coverage of this subsector see BTN headings 84.01-.08.

Chart I-1-E. -- Average MFN tariff rates on power-generating machinery  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1973 on most Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

very low Canadian weighted average reflects the high portion (85 percent) of Canada's imports which are duty free on an MFN basis. The duty-free Canadian imports are largely automobile engines, shipped under the U.S.-Canadian Automotive Products Agreement. Such shipments into the United States are duty free on a preferential, rather than MFN, basis. If Canadian automotive products were also included in the U.S. weighted average, it would be only slightly above the Canadian. Japan has the highest total trade averages (13.3 percent ad valorem for the arithmetic and 13.6 percent for the weighted). Except for Canada, with her substantial

MFN duty-free entries, the tariff averages for dutiable imports alone are not significantly higher than the averages calculated for total MFN imports for any of the major countries (see chart I-1-E).

Virtually all imports into Canada and Japan and shipments into the Community from external countries are accorded MFN treatment. Thirty-seven percent of U.S. imports are given preferential duty-free treatment under the U.S.-Canadian Automotive Products Agreement. One-fourth of the United Kingdom's imports receive preferential treatment under the Commonwealth and EFTA agreements.

United States and Canadian MFN tariff provisions are chiefly under 5 percent ad valorem; those for the Community and the United Kingdom are principally in the 5.1-10 percent ad valorem bracket, and the Japanese principally in the 10.1-15 percent bracket (see table I-1-E). In terms of MFN imports of power-generating machinery, 85 percent of shipments into

Table I-1-E.--Distribution, by duty level, of MFN tariff provisions for power-generating machinery

Note.--Due to rounding, figures may not add to 100 percent.

Canada exhibits the most complex tariff schedule for power-generating machinery, with 103 tariff lines; the United Kingdom has the simplest, only 12 lines. Schedules for Japan have 43 lines; for the EC, 29 lines; and for the United States, 23 lines.

#### Trade importance

Power-generating machinery accounts for about 15 percent of OECD trade in nonelectrical machinery. OECD exports totaled \$4 billion in 1969, imports were \$2.9 billion (chart I-1-F). Among the 119 industrial subsectors, power-generating machinery ranks ninth in value of aggregate imports of the GATT tariff study countries. For Canada it is the second most important subsector in imports. For the United States, the rank is 13.

Chart I-1-F. -- OECD trade in power-generating machinery, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

United States imports amounted to \$603 million in 1969, and increased to \$953 million in 1971. Internal combustion piston engines are the most important type of power-generating machinery in imports of the United States, Canada, and the Community. These engines are also the most important item in the broader category of nonelectrical machinery. United States imports of internal combustion engines are valued at \$531 million, Canadian imports at \$493 million, and Community imports at \$193 million.

### Trade network

The five major countries account for over 90 percent of OECD exports and about 84 percent of imports (tables I-1-G and H). The largest supplier to the world is the United States, accounting for about one-fourth of OECD exports, followed by the EC and the United Kingdom. The principal importing countries (excluding intra-EC imports) are Canada and the United States, followed by the Community. Japan is, of the five, the least important both as an importer and an exporter of power-generating machinery. Non-OECD countries receive almost half of EC external exports, and one-third of exports by the United States and the United Kingdom. The remainder of U.S. exports go chiefly to Canada (29.5 percent) and the EC (14.5 percent). Over half of U.S. imports come from Canada, about one-fourth from the United Kingdom, and about one-tenth from the Community.

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Intra-EC shipments are only slightly less than EC receipts from outside sources, about 40 percent of which are supplied by the United Kingdom and a somewhat smaller amount by the United States. The United States is the principal supplier of imports by Canada and Japan. Among the five countries, the largest volume of two-way trade flows between the United States and Canada, reflecting the importance of the Automotive Products Agreement in force between the two countries. (For a fuller discussion of the U.S.-Canadian Automotive Products Agreement, see the sector on transport equipment.)

Trade flows among the five countries are generally in the direction of countries having lower tariffs. The principal importers, Canada and

the United States, have low tariff averages compared with Japan, which has the highest averages and is the least important importer. Intra-EC shipments, which move duty free, are very large. Imports into the Community from outside sources are just below MFN imports into the United States, while average tariff levels for the EC range just above the average levels for the United States.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, except Japan, average tariff levels for power-generating machinery are substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. Japan, in November 1972, made unilateral 20 percent reductions in all of its rates on power-generating machinery, thereby reducing the Japanese average level to about 11 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	33.2	4.2
European Community	14.3	6.8
United Kingdom	21.7	8.4
Japan	15.6	13.6
Canada	22.8	5.7

All MFN provisions for power-generating machinery in the tariff schedules of the United States, the European Community, and the United Kingdom have been the subject of GATT concessions. In the Canadian schedule, only 66 percent of the provisions, covering 32 percent of MFN imports, have GATT concessions; and in the Japanese schedule, between 60 and 70 percent of the provisions, covering 93 to 97 percent of MFN imports. All of the EC member state national tariffs prior to adoption of the Common

External Tariff contained concessions under the GATT. Of 155 concessions in the national tariffs, 93 were at rates above the CXT autonomous rates, 9 at the CXT rate, and 53 below the CXT rate.

Tariffs on internal combustion piston engines, the largest trade item in this subsector, have been reduced in trade-agreement concessions by all five major countries (see table I-1-I). About 46 percent of U.S. imports in 1970 were products of Canada duty free under the preferential Automotive Products Agreement. Reductions in U.S. MFN rates ranged from about 86

Table I-1-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on internal combustion piston engines and parts

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free 10%-35%  35%	Free 3%-10%  10%	Free <sup>2/</sup> Free <sup>5/</sup> <sup>3/</sup>  5%	(660.40 660.42, .44, .50, .52, .54 680.70 (pt.))
Canada-----	27.5% 27.5%	17.5% 7.5%	12.5% <sup>4/</sup> 7.5% <sup>4/</sup>	(43824-1 43825-1; 43826-1
European Community--	10%-22%	10%-22%	4%-11% <sup>5/</sup>	84.06
United Kingdom-----	20%	22%, 24%	7.5%; 14%	84.06
Japan-----	15%-30%	15%-30%	7.5%-15%; 30%	84.061; 84.062

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> About 5 percent of U.S. imports in 1970 represented engines for tractors or other agricultural machinery statutorily duty free.

<sup>3/</sup> Over 99 percent of U.S. imports not a product of Canada are dutiable at 4 percent or 5 percent ad valorem. Products of Canada covered by the Automotive Products Agreement, representing 46 percent of U.S. imports, are preferentially free of duty.

<sup>4/</sup> Duty-free treatment is accorded to imports from the United States covered by the Automotive Products Agreement and entered by qualified Canadian automotive producers.

<sup>5/</sup> Duties are suspended on engines and engine parts for aircraft imported duty free or built within the EC.

Note.--Average MFN tariffs on all internal combustion engines and parts are:

	Arithmetic	Weighted
United States-----	3.3	3.4
Canada-----	5.1	1.3
EC-----	8.4	8.3
United Kingdom -----	10.8	10.1
Japan-----	14.4	11.1

percent to 100 percent 1/ below statutory levels. Canadian imports of automotive engines by companies meeting certain criteria are free of duty under the Automotive Products Agreements. For all other shipments of internal combustion engines into Canada, reductions in Canadian tariffs from statutory levels amount to 54 percent, or 73 percent.

The Community's autonomous rates have been reduced by amounts ranging from 15 percent to 61 percent. (The EC duty on engines to be fitted in aircraft imported duty free or built within the Community has been temporarily suspended for the past several years.) The United Kingdom rate has been reduced by 30 percent. Japanese tariffs on engines and parts of engines for motor vehicles and aircraft, which account for about 30 percent of the value of Japanese imports of power-generating machinery, have not been reduced by trade concessions; however the Japanese rates on other internal combustion engines have been cut by 50 percent. In 1972, Japan unilaterally reduced its rates on power-generating machinery by 20 percent.

---

1/ One tariff class covering parts and accounting for an insignificant portion of total imports became duty free from the pre-Kennedy Round rate of 3 percent ad valorem.

Construction and Mining Machinery and Handling Equipment

Construction and mining machinery and handling equipment includes excavating, levelling, boring, and extracting machines; road-building equipment; cranes; fork-lift trucks and other lifting and loading machinery; and conveyors. <sup>1/</sup>

MFN tariffs

There are less than 5 percentage points difference among the five major country MFN average tariffs for total imports of construction and mining machinery and handling equipment. The averages range from 3.9 percent

Chart I-1-G. -- Average MFN tariff rates on construction, mining, and handling equipment  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on most Japanese rates in this sector.

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Canadian provisions are duty free, Canada's duties go as high as 20 percent (table I-1-J). For each of the major countries except the United States, the largest percentage of imports enter in the 5.1-10 percent rate range. Over one-third of the Community's imports pay a duty of 11 percent (table I-1-K).

### Trade importance

The construction, mining, and handling equipment subsector is the second most important category of nonelectrical machinery exported by OECD countries, and the third largest in value of OECD imports. OECD 1969 exports totaled \$3.3 billion; imports were \$2 billion (chart I-1-H). In U.S. exports, this equipment (\$1.2 billion in 1969) is also the

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

second largest category of nonelectrical machinery, but is outranked by five other types of machinery in U.S. imports, which in 1971 were valued at \$152 million. Among the 119 industrial subsectors, construction, mining and handling equipment ranks 25th in value of total imports by the GATT tariff study countries, but is much less important in U.S. imports, ranking 65th in value.

### Trade network

The United States is by far the largest exporter, shipping \$1.2 billion in 1969. Two-fifths of U.S. shipments go to LDC's; about one-fourth to Canada, and 14 percent to the European Community. Total EC exports were \$694 million to outside countries, and \$438 million to other

### Trade-agreement concessions

Reductions in average duty levels on construction, mining and handling equipment made by the five major countries since their pre-trade-agreement base dates are shown below. The reductions reflect principally trade-agreement concessions. Prior to adoption of the Community's CXT, 95 GATT concessions had been made in member state national tariffs; 51 of the concessions were at rates higher than the new CXT rate. Japan's tariff rates in this subsector were unilaterally reduced in November 1972, and

calculations based on the new lower level would show an average of about 6 percent ad valorem for Japan.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	35.0	5.0
European Community	14.4	8.1
United Kingdom	20.0	7.6
Japan	15.0	7.5
Canada	17.7	5.7

Of the five major countries, only Canada has not made GATT concessions on all MFN tariff provisions for this equipment. GATT concessions cover between 51 and 57 percent of the Canadian provisions and about 66 percent of Canadian imports. Specific reductions are shown in table I-1-N for excavating, levelling, boring, and extracting machinery and in table I-1-O for lifting, handling, and loading machinery, and conveyors.

Table I-1-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on excavating, levelling, boring, and extracting machinery

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

### Office Machines

Office machines include typewriters, calculating machines, cash registers, ticket-issuing machines, statistical and accounting machines, automatic data processing equipment, and hectograph and stencil duplicating machines. <sup>1/</sup>

### MFN tariffs

Average MFN tariffs on office machines imported into the five major countries range from 4 percent ad valorem (the U.S. weighted average on total imports) to 16.4 percent (the Japanese weighted average prior to

---

<sup>1/</sup> For the specific coverage of this subsector see BTN headings 84.51-.55.

the unilateral Japanese reductions made in 1972). Averages for Canada, the Community and the United Kingdom on total trade are clustered between 6.8 and 10.1 percent ad valorem. The dutiable-product averages however are higher for Canada (arithmetic, 12.7 percent; weighted, 10.9 percent) (see chart I-1-I).

Chart I-1-I. -- Average MFN tariff rates on office machines  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on most Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

All imports by the United States and Japan, and shipments into the Community from external countries, are on an MFN basis; 95 percent of Canada's imports and 92 percent of imports by the United Kingdom also receive MFN treatment.

Canada and the United States have duty-free provisions for office machines; there are none in the tariffs of Japan, the Community and the United Kingdom. The larger part of the provisions of all the major countries except Canada are in the 5.1-10 percent ad valorem range (table I-1-P). About one-third of Canada's provisions are duty free and another third in the 5.1-10 percent range. The United States, Japan, the

Note.--Due to rounding, figures may not add to 100 percent.

Community and the United Kingdom do not have tariffs above 15 percent ad valorem. One-fourth of Canada's tariff provisions are in the range of 15.1-20 percent; and about 14 percent of Japan's tariffs (prior to the 1972 unilateral reductions) are in the range of 20.1-25 percent.

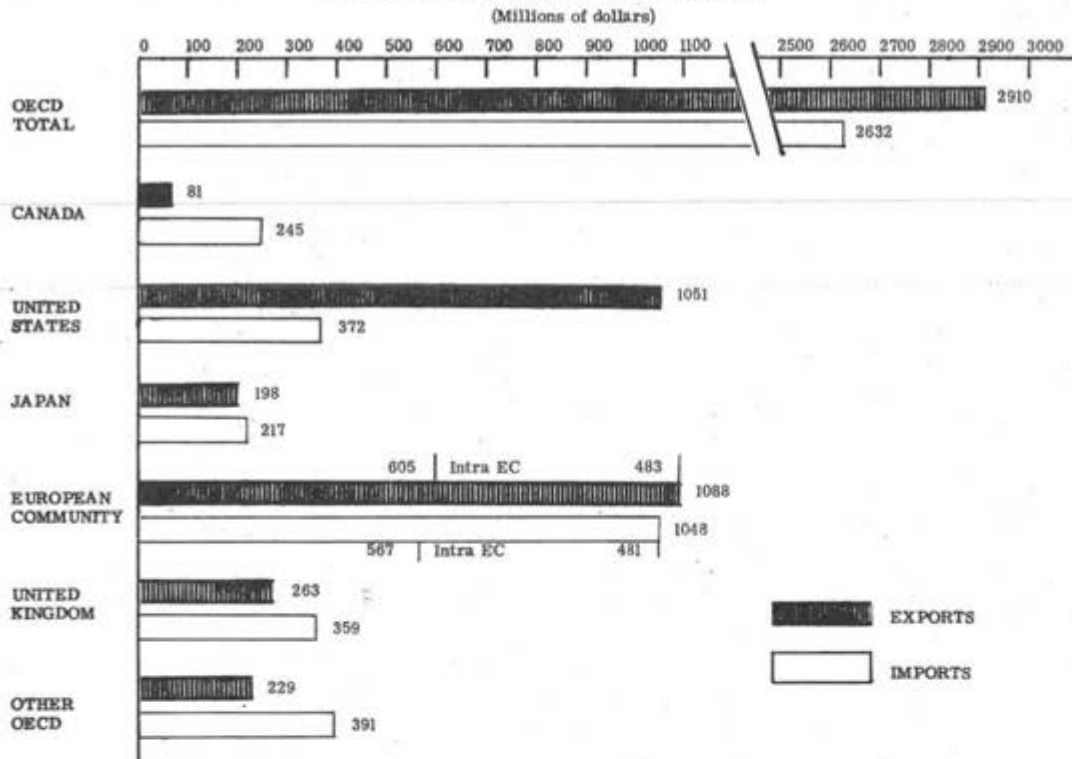

In terms of imports, 27 percent of U.S. entries are duty free and an additional 36 percent enter at rates of 5 percent ad valorem or less. About three-fourths of Canadian and Community imports and slightly more than half of United Kingdom imports enter in the 5.1-10 percent ad valorem bracket. Thirty-five percent of Japan's imports are in the 20.1-25 percent bracket (see table I-1-Q).

Canada and Japan exhibit the most complex tariff structures for office machines with 39 and 36 lines, respectively. Schedules for the United States have 20 lines; the European Community, 13 lines; and the United Kingdom, 12 lines.

#### Trade importance

OECD exports of office machines totaled \$2.9 billion in 1969, about 10 percent of OECD export trade in all nonelectrical machinery. Imports were \$2.6 billion, or about 14 percent of total import trade in the nonelectrical machinery sector (chart I-1-J). This is the second largest category of OECD imports of nonelectrical machinery, and ranks 12th in value of imports among the 119 industrial product categories. United States exports in 1969 were just over \$1 billion, when imports were valued at \$372 million. United States imports in 1971 were valued at \$327 million. In MFN imports of the other countries, office machines are the 3rd

Chart I-1-J. -- OECD trade in office machines, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

largest, among the 119 industrial categories, for the United Kingdom, 8th for Canada, 10th for Japan, and 13th for the Community.

#### Trade network

The five major countries account for over 90 percent of exports and about 85 percent of imports. The United States, the largest exporter, is the origin of over one-third of OECD export shipments. The European Community is the largest importer, with entries from outside sources valued at \$567 million (intra-EC imports were an additional \$481 million). The United States ships over one-third of its exports to the Community, and

amounts ranging from 12 to 17 percent of the total go to Canada, the United Kingdom, the LDC's as a group, and Japan (see table I-1-R). The United States supplies half of the United Kingdom's imports, over 60 percent of Japan's, a like portion of the Community's entries from outside countries, and over 80 percent of entries into Canada (table I-1-S). Canada, Japan, and the United Kingdom are net importers of office machines; the United States and the Community are net exporters.

Within the category of office machines, of greatest importance in terms of value of U.S. imports are BTN headings 84.51, typewriters, and 84.52, calculating machines, accounting machines, cash registers, ticket-issuing machines, and similar machines incorporating a calculating device. Imports of both of these categories have been increasing and reached \$88

million in typewriters and \$214 million in calculating and accounting machines in 1971. The United States is a net importer of typewriters. A probable factor in this negative balance is the recent merging of principal American producers with firms in the European Community. The United States is a net exporter in accounting, calculating and similar machines on the whole, but shows small deficits in its balance of trade in this equipment with the European Community and Japan.

Tariffs appear to affect, at least to some extent, the direction of trade flows of office machines as a whole. The European Community, the principal importer, has relatively low tariff averages (but not the lowest), while Japan, the least significant importer of the five major countries, has the highest tariff averages. The important trade flows in accounting and

calculating machines and in typewriters among the five major countries show a direction toward the market having the lower tariff averages. Trade between the Community and the United States in accounting and calculating machines totals \$91 million, with a net deficit of \$25 million for the United States. The direction of flow is toward the United States, where averages of 5.4 (arithmetic) and 5.3 (weighted) percent ad valorem prevail, compared to 7.6 and 8.5 percent for the Community. Similarly, in the case of the greatest amount of two-way trade in typewriters, the EC sells about \$20 million more of typewriters to the United States than it purchases there. The direction of flow is toward the United States, having tariff averages for typewriters of 3.2 and 0 percent ad valorem, compared to 5.8 and 6.5 percent for the Community.

#### Trade-agreement concessions

Except for Japan, average tariffs of the major countries on January 1, 1972 were significantly lower than the average levels on pre-trade-agreement base dates. As the following tabulation shows, the largest drop, almost 26 percentage points, was in the U.S. tariff. GATT concessions cover all U.S., EC, and United Kingdom MFN provisions; 69 percent of Canada's provisions (89 percent of imports); and 86 percent of Japan's provisions (but only 65 percent of imports).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	29.6	4.0
European Community	12.1	7.0
United Kingdom	20.0	10.1
Japan	14.9	16.4
Canada	21.1	8.5

Eighty-seven GATT concessions were made in EC member state national tariffs prior to adoption of the Common External Tariff, and 57 of these were at rates higher than the new CXT rate. Japan's average at the beginning of 1972 was slightly higher than its 1954 level, reflecting chiefly the higher protective duties imposed in the interim on computers and certain other automatic data processing equipment. The Japanese average level calculated from rates in effect after the unilateral reductions made in 1972 would be slightly below the level on the pre-trade-agreement base date.

All of the countries under study have granted some concessions on their tariffs dealing with calculating and accounting machines (table I-1-T), and on typewriters and parts (table I-1-U). For calculators,

Table I-1-T.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on calculating and accounting machines

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Rates shown are official MFN rates, presently superseded by temporary rates of 5 percent and 15 percent. Temporary rates are subject to possible renewal in February, 1974.

<sup>3/</sup> The United Kingdom tariff rate is the greater of a specific or an ad valorem rate; only the latter is listed here.

<sup>4/</sup> The Japanese tariff on electric typewriters was not reduced in the Kennedy Round.

typewriters not incorporating a calculating device has been bound in the GATT, other typewriters and parts have undergone 79 to 84 percent rate reductions.

Following discussions with the United States in early 1972, Japan reduced its duties on certain types of digital electronic computers from 15 percent to 13-1/3 percent ad valorem, and on peripheral apparatus of digital-type electronic computers from 25 percent to 22-1/2 percent ad valorem.

#### Textile and Leather Machinery

Textile and leather machinery include spinning, weaving and knitting machines, textile extruding machines, machines for washing, cleaning, dyeing or coating textile yarns, fabrics, and articles, sewing machines and accessories for these and similar machines, and machinery for preparing, tanning or working hides, skins or leather (including boot and shoe machinery). <sup>1/</sup>

#### MFN tariffs

In terms of total MFN imports, the arithmetic and weighted average tariffs of all five of the major countries for textile and leather machinery are within the relatively narrow range of 5.5 to 9.6 percent ad valorem (chart I-1-K). Average tariffs for dutiable products alone do not differ significantly except in the case of Canada, where they increase substantially

---

<sup>1/</sup> For specific coverage of this subsector see BTN headings 84.36-.42.

to 15.1 percent ad valorem for the arithmetic average and 14.8 percent for the weighted. The European Community has the lowest averages.

One-fourth of imports into the United Kingdom and about 6 percent of Canadian imports are accorded preferential tariff treatment. Intra-EC imports exceed EC entries from outside countries, but none of the imports from outside countries receive preferential treatment. There are no preferential imports into either the United States or Japan.

Tariff provisions of the United States cover the widest range, going from free up into the 20.1-25 percent ad valorem bracket. About one-fourth of U.S. rates are between 6 and 7 percent ad valorem. Almost 40 percent

Chart I-1-K. -- Average MFN tariff rates on textile and leather machinery  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on most Japanese rates in this sector.

of Canadian tariff provisions are duty free, but about a third are between 17 and 20 percent ad valorem. Half of the Community's rates are at 5 percent ad valorem; Japan and the United Kingdom have their provisions concentrated in the 5.1-10 percent bracket (see table I-1-V). In all five countries, imports of textile and leather machinery are heaviest in the lower rate brackets. Over half of Canada's imports enter duty free and about a third of U.S. imports pay duties of 5 percent or less (see table I-1-W).

### Trade importance

OECD countries exported \$2.8 billion of textile and leather machinery in 1969, and imported \$1.6 billion (chart I-1-L). Accounting for 10 percent of OECD exports of nonelectrical machinery, and only a slightly smaller portion of imports, this is the fourth largest category of nonelectrical machinery in OECD trade. This subsector is the third largest category in U.S. imports, which have increased from \$224 million in 1967 to \$507 million in 1971.

### Trade network

The European Community is by far the major exporter of textile and leather machinery, shipping \$1 billion to outside countries, a greater

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

amount than exports of the four other major countries combined. The United Kingdom shipped \$352 million; Japan, \$286 million; and the United States, \$262 million. Excluding intra-EC shipments, almost 60 percent of total OECD exports go to non-OECD countries and the smaller OECD countries (table I-1-X). The United States is the principal importer among the five major countries, followed by the Community (see table I-1-Y). Canada and the United States are net importers in their balances of trade in this machinery, while the EC, Japan and the United Kingdom have significant positive trade balances. Among the five countries, the largest two-way volume of trade is between the European Community and the United States

in yarn-producing machines and knitting machines and parts. The total trade between the two countries in this machinery amounts to \$133 million, and shows a U.S. net deficit of \$77 million.

#### Trade-agreement concessions

Average tariff levels of all the major countries have been significantly reduced through trade-agreement concessions, as shown in the tabulation below. Japan's tariff has been reduced by slightly less than 50 percent; greater reductions are found in tariffs of the other countries. EC member state national tariffs prior to adoption of the CXT contained 124 GATT concessions on textile and leather machinery, 80 of which were at rates higher than the CXT rate.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	39.2	7.2
European Community	12.2	5.5
United Kingdom	20.1	8.5
Japan	14.7	7.9
Canada	23.2	9.1

Concessions under the GATT cover all MFN tariff provisions on textile and leather machinery in schedules of the United States and the United Kingdom. In the Community's schedule, 96 percent of the provisions and 97 percent of the trade are covered; in Japan's schedule, the coverage is 95 percent (provisions and trade); and in the Canadian schedule the coverage is 84 percent of the MFN provisions and 99 percent of the trade.

Trade-agreement concessions in major country tariffs dealing with machines for producing yarn and knitting machines and knitting machine needles are shown in tables I-1-Z and I-1-AA. On imports of yarn-producing machines, overall reductions since pre-trade-agreement base dates have been as follows: The United States, 82.5 to 87.5 percent; Canada 100 percent; United Kingdom, 62.5 percent; the European Community, 54.5 percent; and Japan, 50 percent. On imports of knitting machines and knitting machine needles, similar reductions are in effect. Overall reductions by the United States ranged from 50 to 85 percent; Canada's were 100 percent; the United Kingdom reduced rates by 49 to 62.5 percent, the EC by 53.8 to 64.2 percent, and Japan by 50 percent.

Table I-1-Z.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on knitting machines and knitting machine needles

valorem. About 70 percent of U.S. imports pay duties of 5 percent or less, as do 47 percent of shipments into the Community. The major part of Japan's imports enter in the 10.1-15 percent ad valorem bracket (table I-1-CC).

Chart I-1-N. -- OECD trade in heating and cooling equipment

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade importance

Heating and cooling equipment, with total OECD exports in 1969 of \$2.3 billion and imports of \$1.3 billion, is the fifth largest category in OECD nonelectrical machinery trade. It is the fourth largest in U.S. exports (\$539 million in 1969) but considerably less important in U.S. imports, which amounted to \$108 million in 1969 and \$125 million in 1971.

Among the 119 categories of industrial products, heating and cooling equipment is considerably less important in U.S. import trade than in imports of the other major countries (chart I-1-N).

### Trade network

Only one-fifth of exports of heating and cooling equipment by the five major countries are shipped to each other. Country of destination data are unavailable for 9 percent of Canadian exports, 5 percent of U.S. exports, 9 percent of EC exports, and 5 percent of United Kingdom exports. Of the remaining exports of these nations, the chief market is found in the non-OECD countries as a group (principally LDC's), which took over half of EC, U.S., and United Kingdom known exports and 86 percent of exports from Japan. Canada is the only important developed market for U.S. exports. Trans-oceanic trade among the five major countries is very small (see tables I-1-DD and EE).

Trade-agreement concessions

Average tariff levels on January 1, 1972 for each of the major countries except Japan were 50 percent or more below levels on the pre-trade-agreement base dates, as is illustrated in the tabulation below:

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	35.8	5.5
European Community	13.9	6.2
United Kingdom	18.9	7.9
Japan	15.0	12.4
Canada	29.4	13.6

Although most Japanese rates on heating and cooling equipment have been reduced by 50 percent in concessions under the GATT, the principal trade items were only bound at the statutory rate (chiefly 15 percent ad valorem).

Canada has made GATT concessions on 88 percent of its MFN provisions on heating and cooling equipment, covering 93 percent of Canadian trade; Japan's concessions cover 77 percent of its provisions (78 percent of trade); all MFN provisions in the three other major tariffs are under GATT concessions. All of the EC member states had made tariff concessions on heating and cooling equipment before they changed to the Common External Tariff. Twenty-nine of the 36 concession rates contained in the member state schedules were higher than rates established in the CXT. Table I-1-FF shows concessions which have been made in the major country tariffs on refrigerators and refrigerating equipment.

Table I-1-FF.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on refrigerators and refrigerating equipment

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%	10.5%	5%	661.35
European Community--	13%	10%	4.5%-5%	84.15
Canada-----	30%-40%	20%	20% <sup>2/</sup>	41505-1; 41506-1; 41507-1
United Kingdom-----	20%	12%-14%	7.5%	84.15
Japan-----	15%	15%-20%	7.5%-15%	84.15

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Rate shown is the official MFN rate, presently superseded by a temporary rate of 15 percent. The temporary rate is subject to possible renewal in February, 1974.

### Agricultural Machinery and Appliances

Agricultural machinery and appliances include harvesting and threshing machines, hay mowers, plows and cultivators, dairy machinery, sorting and grading machinery for agricultural products, presses for wine-making, etc., and poultry-keeping and bee-keeping equipment. This subsector does not include agricultural tractors or other motorized farm vehicles. <sup>1/</sup>

#### MFN tariffs

For total MFN imports of agricultural machinery and appliances, the United States holds the lowest tariff averages, 2.6 percent ad valorem on

Chart I-1-O. -- Average MFN tariff rates on agricultural machinery and appliances  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 84.24-.28.

an arithmetic basis and zero on a weighted basis; Canada's averages were only slightly higher, 4.6 and 1.4, respectively. The highest averages on total imports are held by the United Kingdom, 7.9 percent and 10.2 percent. With respect to dutiable MFN imports, however, the EC has the lowest average tariffs (5.1 percent and 4.7 percent) and Canada the highest (13.3 percent and 11.8 percent). Average U.S. rates for dutiable imports are 7.0 and 7.4 percent (see chart I-1-0).

MFN tariff treatment is accorded to all imports into the United States and Japan, to virtually all Canadian imports, and to all shipments into the Community from external countries. Almost one-third of imports into the United Kingdom are given preferential treatment.

For both Canada and the United States, about two-thirds of the tariff provisions for agricultural machinery and appliances are duty free. All of Japan's provisions are in the 5.1-10 percent ad valorem bracket, as are 85 percent of the United Kingdom's provisions. In the Community's tariff, 60 percent of the provisions are under 5 percent ad valorem, the remainder are in the 5.1-10 percent bracket (see table I-1-GG). Virtually all

Table I-1-GG.--Distribution, by duty level, of MFN tariff provisions for agricultural machinery and appliances

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Table I-1-HH.--Distribution, by duty level, of MFN imports of agricultural machinery and appliances

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom
Free-----	87.9	99.5	-	-	-
0.1-5.0 percent----	-	-	-	89.9	-
5.1-10.0 percent----	8.7	.5	100.0	10.1	34.1
10.1-15.0 percent--	.8	-	-	-	65.9
15.1-20.0 percent--	2.6	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

United States imports and almost 90 percent of Canadian imports are duty free. About 90 percent of the Community's imports enter at rates of less than 5 percent, two-thirds of shipments into the United Kingdom pay a duty of 12 percent (see table I-1-HH).

In all of the five major tariffs, provisions for agricultural machinery and appliances are limited to a few line items.

#### Trade importance

In 1969, exports of agricultural machinery and appliances by OECD countries were valued at \$991 million; imports at \$810 million (chart I-1-P). Among the 119 industrial product categories, this machinery ranks a low 50th in total industrial imports of the GATT tariff study countries. It is more important for the United States and Canada, where it ranks 22nd and 24th respectively. In terms of U.S. duty-free imports in the industrial sector, it is the seventh largest category of products. U.S. imports were \$190 million in 1969, by 1971 they had dropped slightly to \$184 million.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The United States is both the largest exporter and importer of agricultural machinery and appliances, trading chiefly with Canada. Almost one-fourth of U.S. exports go to IDC's. The European Community's shipments to outside countries (\$202 million) are almost as large as U.S. exports; intra-EC exports are only slightly less. Transatlantic trade is small. For Japan, where the agricultural sector of the economy is less important, trade is negligible (see tables I-1-II and JJ). U.S. imports are chiefly in the category of harvesting and threshing machinery, hay and grass mowers, and grading and sorting machines.

### Trade-agreement concessions

All of the five major countries have granted trade-agreement concessions on tariffs dealing with agricultural machinery. Changes in average duty levels since pre-trade-agreement base dates are shown in the following tabulation:

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	0.2	0.0
European Community	11.1	4.7
United Kingdom	15.0	10.2
Japan	15.0	7.5
Canada	10.8	4.6

Four of the five major countries have bound all of their MFN provisions on agricultural machinery under the GATT. In the Canadian tariff, 92 to 97 percent of the MFN provisions, covering over 96 percent of imports, are covered by GATT concessions. There were 49 GATT concessions on agricultural machinery in EC member state national tariffs prior to their adoption of the CXT, all but 9 of which were at rates above the CXT rates.

Concessions in each country's principal tariff provisions for agricultural machinery are shown in table I-1-KK. In the case of the United States and Canada, the preponderance of imports are duty free by statute, but the duty-free status has been bound under the GATT.

Reductions through trade-agreement concessions on the remaining classes were by 66 or 84 percent by the United States and 57 percent by Canada. Aggregate reductions from the autonomous rates of the EC ranged from 50 percent to 59 percent, those for the United Kingdom ranged from 38 percent to 60 percent below statutory levels, and for Japan, 50 percent.

Prior to adoption of the EC's Common External Tariff, EC member state national tariffs contained 49 GATT concessions on agricultural machinery, most of which were at higher rates than those established in the CXT.

Table I-1-KK.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on agricultural machinery and appliances

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free; 30%; 35%	Free; 20%; 11.5%	Free; 10%; 5.5% <sup>2/</sup>	666.00; .10; .2550
Canada-----	Free; 15%; 35%	Free; 15%	Free; 15% <sup>3/</sup>	40900-1 through 40920-1; 40924-1 through 40928-1; 42732-1
European Community--	11%	11%	4.5%	(84.24; 84.25
	11%	11%	5.5%	(84.26
	12%	12%	6%; 5%	(84.27; 84.28
United Kingdom-----	15%	9.25%-17.5%	6%-9.25%	84.24-28
Japan-----	15%	15%	7.5%	84.24-28

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> In 1970, about 99 percent of imports was included in tariff item 666.00, which is duty-free by statute and bound free in the GATT.

<sup>3/</sup> All concessions were made prior to the Kennedy Round. Most tariff classes (13 of the 15 classes representing about five-sixths of Canadian imports in 1970) are free of duty by statute.

#### Miscellaneous Nonelectrical Machinery

The remaining categories of nonelectrical machinery, which will not be discussed in detail, are metal-working machinery, pumps, machine tools, bookbinding machinery, pulp and paper machinery, "other" nonspecified

types of machinery, and parts and accessories. The relative world trade importance of these categories can be seen in chart I-1-D at the beginning of the discussion of nonelectrical machinery.

U.S. trade has been as follows (in millions of dollars):

	Exports (1969)	Imports (1969) (1970)	
Metal-working machinery---	343	182	106
Machine tools-----	204	75	71
Pumps-----	529	86	144
Pulp and paper machinery--	64	47	43
Bookbinding machinery-----	124	68	66
"Other" nonspecified machinery-----	679	186	449
Parts and accessories-----	435	147	199

For each of these categories and for each of the five major countries, there are listed in table I-1-LL arithmetic and weighted average MFN rates of duty for total imports, and the highest duty bracket in which provisions of each of the five tariffs fall. In a simple count of "highest" and "lowest" rankings in the data in this table (i.e., highest/lowest arithmetic average, weighted average, etc.), Canada has the largest number of "highest" rankings (10 out of a possible 21) followed by Japan (8). The EC had the largest number of "lowest" rankings (11 out of a possible 21), followed by the United States (9). Six of Canada's "highest" rankings were rate-bracket rankings; whereas all but one of Japan's "highest" rankings were average tariff levels.

Table I-1-LL.--Average MFN tariff rates on miscellaneous types of nonelectrical machinery, and the highest rate bracket in which provisions of the major tariffs fall

(Percent ad valorem)

## Industrial Sector I-2

## TRANSPORT EQUIPMENT

Transport equipment includes automobiles, tractors, trucks, motorcycles, and other motor vehicles. The sector also covers all types of railway vehicles and parts and railway rolling stock; aircraft and gliders; ships and boats; nonmotorized road vehicles, such as trailers; bicycles; invalid carriages (motorized and nonmotorized); and special purpose vehicles. <sup>1/</sup>

MFN tariffs

World MFN imports of transport equipment meet average tariff rates very similar to those for industrial products taken as a whole. The arithmetic averages range from 7.4 to 11.3 percent ad valorem for all products (dutiabable and free products combined) and 7.8 to 15.1 percent for dutiable products alone; the weighted averages span from 2.2 to 12.2 percent for all products, 4.1 to 12.8 percent for dutiable products (see chart I-2-A). The United States has the lowest arithmetic average for all products (7.4 percent); Japan the highest, at 11.3 percent. The lowest weighted average for all products is held by Canada (2.2 percent), while Japan again holds the highest at 12.2 percent. For dutiable products only, Canada has the highest arithmetic average (15.1 percent) and also the second highest weighted average (12.5 percent). Canadian averages for all products are well below its averages for solely dutiable products as a consequence of the substantial importation of MFN duty-free goods into Canada (80 percent of the total Canadian imports of transport

---

<sup>1/</sup> For the specific coverage of this sector see BTN headings 86.01-.09; 87.01-.06; 87.09-.12; 87.14; 88.01-.03; 89.01-.05.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-2-A. -- Average MFN tariff rates on transport equipment  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 37 percent) made in 1971 and 1972 on Japanese rates in this sector.

the United Kingdom have the greatest portion of their rate provisions in the 5.1-10 percent ad valorem category; over 45 percent of Japanese provisions are in the 10.1-15 percent range. <sup>1/</sup> The United States has its greatest concentration of rate provisions in the 0.1-5 percent bracket, while Canada has its heaviest allotment (40.3 percent) under duty-free rate provisions. The tariffs of the five major countries all contain duty-free provisions for transport equipment. The United Kingdom, the European Community and Canada have some rates in the 20.1-25 percent range; and about one percent of Japan's rates are in the 25.1-30 percent range. <sup>1/</sup> The United States has no rates above 20 percent.

Imports of transport equipment which receive preferential tariff treatment are significant only for the United States (31 percent of total imports of transport equipment, and all of which are Canadian products under the Automotive Products Agreement) and the United Kingdom (13 percent of total imports). Intra-European Community shipments, however, which move duty free, are three times as great as European Community imports from outside sources. The majority of MFN imports by all the major countries enter at rates of 15 percent or below (table I-2-B). All the major countries have a noteworthy portion of duty-free MFN imports, but Canada dwarfs the performance of the other nations with almost 83 percent of its MFN imports of transport equipment entering duty free. This large portion reflects the operation of the U.S.-Canadian Automotive Products Agreement. Products covered by that Agreement are imported by Canada free

---

<sup>1/</sup> Temporary reductions of approximately 40 percent below these rates have been made by Japan.

Table I-2-B.--Distribution, by duty level, of MFN imports of transport equipment

(In percent)

Note.--Due to rounding, figures may not add to 100 percent.

of duty, regardless of source. U.S. imports of Canadian automotive products under the Agreement are duty free on a preferential basis (and hence are not included in tables I-2-A and B). Eighty-seven percent of U.S. imports enter in the 0.1-5 percent ad valorem bracket. Two-fifths of Community MFN imports also are in the 0.1-5 percent bracket, and most of the remainder are assessed duties between 5.1 and 15 percent. About half of Japan's imports fall in the 5.1-10 percent bracket; about half of United Kingdom imports enter at 10.1-15 percent. Only Japan has a significant amount of its imports at rates higher than 15 percent.

The most detailed tariff schedule for transport equipment belongs to Canada with 104 lines; the least detailed is the United Kingdom's with 54 lines. The United States has 57 lines; Japan, 92 lines; and the European Community, 65 lines.

#### Trade importance

Transport equipment is among the most important industrial sectors, ranking second in 1969 OECD exports, and fourth in imports for the

same year. Almost 17 percent of OECD industrial exports and about 12 percent of industrial imports are accounted for by this sector. Transport equipment ranked first in both United States exports and imports in 1969 and 1970.

The value of imports of transport equipment by the GATT tariff study countries was \$9.7 billion in 1967, and \$15.5 billion in 1970. Shipments by EC members among themselves amounted to an additional \$2.2 billion in 1967 and \$4.7 billion in 1970. OECD 1969 imports were \$18.4 billion (including \$3.9 billion of intra-EC shipments) and exports were \$27.1 billion (see chart I-2-B).

Chart I-2-B . -- OECD trade in transportation equipment, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Trade network

In the transport equipment sector, the five major countries account for a majority of the world's trade. To these nations can be traced about 94 percent of OECD exports of transport equipment and 82 percent of imports. Over half of OECD exports go to the five major countries. Almost one-fourth of OECD exports of transport equipment go to LDC's. Nearly 94 percent of OECD imports have their suppliers in the five major countries.

Country of destination data are unavailable for 11.6 percent of U.S. exports. Of those exports accounted for, about one-fourth of U.S. exports go to less developed countries (chart I-2-C), although among these countries heavier tariffs generally prevail and other trade barriers are common. Not surprisingly, Canada is the principal developed market for U.S. transport equipment (probably in large part because of the U.S.-Canadian Automotive Products Agreement), followed distantly by the European Community. The United States takes almost all of Canada's exports. Japan sends over half of its exports to LDC's. The United States receives about one-fifth of Japanese exports of transport equipment, and 5 percent go to the United Kingdom. Intra-EC exports are equal to about two-thirds of the Community's shipments to outside markets. Over 28 percent of the EC's outside exports go to LDC's; nearly 26 percent go to the United States, and about 8 percent to the United Kingdom. Among the five major countries, the principal markets for the United Kingdom's exports are the European Community and the United States. Nearly half of the United Kingdom's transport equipment exports are sent to LDC's and other non-OECD countries (see table I-2-C).

Chart I-2- C. -- United States trade in transport equipment, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Transport equipment ranks first in industrial imports for Canada and the United States, seventh for the Community and Japan, and ninth for the United Kingdom in 1970. Total U.S. imports of transport equipment were valued at \$2.8 billion in 1967, \$5.3 billion in 1969, and \$8.0 billion in 1971. Canada supplies almost 60 percent of these U.S. imports; the Community supplies nearly one-fourth (table I-2-D). Japan and the United Kingdom supply 10 percent and 6 percent, respectively, of U.S. imports. The United States is the source of over 90 percent of Canada's imports and over two-thirds of Japan's. The United States

is the principal outside supplier of the European Community. However, total EC imports from all external sources were only one-third as large as intra-Community shipments. The United Kingdom receives the largest portion of its imports of transport equipment from the United States, followed by the Community. Japan is not a significant source for any major country except the United States.

#### Trade composition

Transport equipment trade is divided into four subsectors, of which motor vehicles is the largest both in imports and exports (79 and 70 percent respectively), followed distantly by aircraft. The relative importance of the four subsectors is shown in chart I-2-D.

#### Trade-agreement concessions

For all of the five major countries the average tariffs for transport equipment as of January 1, 1972, were at levels substantially below

Chart I-2-D. -- OECD trade in transport equipment, by type, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

those based on pre-trade-agreement rates. These rates generally mirror concessions granted in trade negotiations. In the tariff levels compared in the following tables, the figures given are weighted average duties, except for the Canadian figure which is an arithmetic average. The Japanese tariff rates in this sector were unilaterally reduced in 1972 to levels below those shown. Calculations based on Japan's new reduced rates would show an average level of about 7.7 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	13.8	3.8
European Community	15.7	7.1
United Kingdom	27.1	8.7
Japan	21.6	12.2
Canada	26.8	9.0

Concessions under the GATT have been made on all MFN provisions for transport equipment in the tariff schedules of the United States and the Community. Similarly, concessions have also been made on 92 percent of the Japanese tariff provisions covering nearly all transport equipment made. Only 68 percent of Canada's provisions, covering about one-fourth of Canadian imports, are under the GATT. Eighty-four percent of the United Kingdom's tariff provisions, covering 94 percent of United Kingdom imports, are the subjects of concessions under GATT.

Tariff schedules of the EC member states prior to adoption of the Community's Common External Tariff, contained concessions on transport equipment in their national tariffs which had been negotiated under

the GATT. Such concessions numbered 185, of which 103 reflected rates higher than the autonomous rate established in the CXT rate, and 75 were below the CXT rate.

#### Trade complaints

Producers, traders and trade associations dealing in transport equipment submitted complaints to the Tariff Commission covering nearly every kind of trade barrier. Countries of Western Europe, Japan, the United States, and almost every other developed nation were cited in these complaints, as were most of the less developed countries. One-third of the complaints were against developed countries. Japan was the single country incurring the greatest number of complaints (39); the United States drew the second largest number (38). However, the total of 117 complaints against individual member states of the European Community and the EC as a group and the total of 71 against EFTA countries far exceeded those against Japan or the United States. Among LDC's, the most complaints were registered against Argentina (21), Greece (21), Chile (15), Spain (15) and Turkey (15).

By far, the largest number of complaints submitted to the Commission dealt with nontariff charges on imports--excise taxes, port and statistical taxes, sales taxes, and border tax adjustments. Complaints against import duties ranked second. The third largest number was against embargoes, quantitative restrictions and licensing requirements; and the fourth concerned subsidies and other governmental aids. Summarization of the principal complaints under the major topic headings follows.

Excise taxes, registration fees, consumption taxes, and special taxes and fees.--Automobiles can probably be classed as one of the favorite

subjects of taxation throughout the world. A great variety of reasons underlie the taxation, from supporting highway construction to curbing luxury expenditures of scarce foreign exchange. Automobile producers quite naturally consider these levies as restraints upon their markets; the charges become doubly onerous to a producer when, for whatever reason, they are applied in a discriminatory manner among suppliers. Many excise taxes and fees are considered by U.S. automobile producers to be discriminatory and obstacles to trade. Japan's tax based on the size of a vehicle's wheelbase discriminates against larger cars most commonly produced in the United States. Similar excise taxes exist in the Dominican Republic and South Africa.

Discriminatory registration fees based on weight, engine size or number of cylinders were complained of in Argentina, Denmark, Greece, New Zealand, Norway, South Africa, Sweden, and Thailand. However, most registration fee complaints dealt with the practice of Commonwealth nations of granting lower rates to other Commonwealth members. France and Mexico were also the subject of complaints with regard to registration taxes.

Road use taxes in Austria, Belgium, Luxembourg, France, West Germany, Italy, and the Netherlands are felt to discriminate against U.S. cars for these taxes also are based on weight, engine size, or number of cylinders. A road tax based on horsepower is imposed in Switzerland. Japan uses a similar annual road tax to raise revenue for highway construction and finance urban transportation facilities. A Korean automotive tax uses the weight or engine size as a basis for its

Other discriminatory taxes about which complaints were received include an annual property tax based on engine size in Israel and government controlled insurance based on horsepower in France and Switzerland.

Nondiscriminatory registration fees are also considered a hindrance to trade. Illustrative of these complaints is the automobile registration fee in Greece which ranges from 19,500 to 100,000 drachmas. Most nations of Western Europe, Latin America and some Asian countries were the objects of similar complaints in this regard.

Consumption taxes like that of Tunisia where the rate is 36.65 percent received complaints. Mexico, Angola, Korea, Syria, Antigua, French Somaliland, and the Netherlands all levy similar taxes about which U.S. producers protested. Road taxes in Iceland and Chile were also cited as trade barriers.

Of the many practices about which complaints were received in the transport equipment sector, "special" or "additional" taxes applicable to motor vehicles drew the greatest number of objections. Some nations have a number of such taxes, such as Portuguese Timor, cited as imposing a municipal tax of 20 percent on the duty, a bridge tax of 21.90 escudos per ton and an industrial contributions tax of 3 percent of the invoice value.

"Special" and "additional" taxes seem to be the particular domain of LDC's. Automobile exporters complained that Iran levies a tax of 40 cents per metric ton on imported surface cargo and 20 cents per kilogram on air cargo. Yemen places a 3 percent additional tax on motor vehicles.

Korea charges an additional duty on all vehicles except those considered special purpose vehicles. The Central African Republic collects an additional tax of 5-15 percent. Other targets of complaints were Jordan, Panama, Paraguay, French Guiana, Martinique, Guyana, Morocco, Mauritius, and New Caledonia.

"Defense" taxes also caused many objections. Taiwan imposes a defense tax of 30 percent of the duty; Iraq and Syria were mentioned as levying a defense tax of 15 percent of the import duty and similar taxes in Yemen, Pakistan and Guyana were noted. Israel was reported to assess a large defense tax.

Luxury taxes in Spain, Greece, Afghanistan, Liberia, and Algeria caused protest. The tax in Peru ranges from 7-90 percent, depending on the value of the automobile. One complainant felt the Chilean luxury tax to be exorbitantly high.

Business taxes in Thailand and Iran were the object of protest. Municipal taxes were reported as trade barriers in Ethiopia, Thailand, Lebanon and Iran. Development taxes, according to a complaint, constitute a hindrance to trade in Angola, Egypt and Upper Volta.

Other kinds of taxes complained of are social welfare taxes, exchange equalization taxes, special vehicle taxes, and price support taxes. The Bahamas assesses a 7.5 percent emergency tax. A tax on ocean freight charges in Argentina was the subject of complaint. An industrial products tax and a merchandise circulation tax are levied in Brazil; in Jordan, an examination tax, a stadium tax and a Jordan University tax were subjects of complaints.

Many U.S. manufacturers of transport equipment, especially of motor vehicles and parts, complained of foreign port and statistical taxes. Again, LDC's were the major offenders in this area. An American producer complained that in Afghanistan a fee of 2 percent of the invoice value is collected for handling and administrative costs. The Somali Republic levies a statistical tax of 8 percent of the c.i.f. value. Statistical taxes in Peru and Egypt were also protested. Several nations were cited for port health taxes. Peru demands a freight tax of 4 percent of the ocean freight charges; Yugoslavia requires a customs handling charge of 1 percent of the dutiable value. It is reported that Uruguay asks a port charge of 12 percent of the c.i.f. value. A harbor construction tax in Taiwan is levied at 3.75 percent of the duty paid value. Complaints also included a wharfage fee in Swaziland of 1.35 percent.

The developed countries received a few complaints in regard to these taxes. Switzerland's statistical tax of 3 percent of the duty was felt to be a trade barrier, as was the statistical and administrative tax of Italy. A large U.S. automotive concern protested a 10 percent surcharge in Denmark.

Import surcharges and surtaxes were also a principal complaint. The Sudan, Nigeria, Nepal, Guatemala, Honduras, Mexico, and several other African and Latin American nations were mentioned as imposing surcharges and surtaxes ranging from 3 to 30 percent.

Sales taxes.--Many complaints were received on the subject of foreign sales taxes imposed on motor vehicles. Colombia places a 15 percent sales tax on the retail value of vehicles; Japan has a 3 percent tax on the actual purchase price; and Australia has a tax of 27.5 percent on cars and 15 percent on commercial vehicles calculated on the duty-paid value increased by 20 percent. The purchase tax on passenger cars in the United Kingdom is 36.7 percent on the wholesale value. Also mentioned in regard to sales taxes as a trade barrier were the United States, Denmark, Iceland, Portugal, and Canada.

Several complaints were made against sales taxes on transport equipment in LDC's, which frequently are higher than in the developed countries. In Ghana, cars are taxed at the rate of 10-200 percent, according to their value; commercial vehicles from 10-33.3 percent. It was stated that Mozambique's purchase tax varies from 20-150 percent of the vehicle's c.i.f. value. The tax on the duty-paid value of motor vehicles in the Philippines ranges from 100-200 percent. Purchase taxes in Nicaragua, Mexico, Honduras, Haiti, Chile, and Cambodia were also the subject of complaints.

Border tax adjustments.--U.S. automotive producers complained of the burden of foreign border tax adjustments. The turnover and value-added taxes imposed in Western Europe cover most goods and services, and are uniform percentage taxes on both domestic and imported goods. However, U.S. transport equipment manufacturers find these taxes a

hindrance to trade. Italy levies a 12 percent value added tax; a 14 percent value added tax on a product's c.i.f. duty paid value is applied in the Netherlands; France imposes a 33.3 percent value added tax on some cars and car chassis and 23 percent on others; Belgium and Luxembourg have a 25 percent value added tax on cars and 18 percent tax on all other transport products. Value added taxes were also mentioned as problems in West Germany, Denmark, and Norway. Turnover taxes were the subject of complaints in Greece, Austria and Finland. LDC's were also noted as imposing difficult border tax adjustments. Specifically noted were Ethiopia, Tunisia, Morocco, and Laos.

Import duties.--U.S. producers complained of the import duties imposed on automobiles, buses, trucks, and parts by most of the world's LDC's and several developed nations (e.g., Norway and Australia). The second greatest number of complaints on a single type of trade barrier was against import duties. The United Kingdom's duty on trucks was felt to be excessively high--22 percent of the c.i.f. value.

Most complaints on Canadian duties were made in regard to ships and boats. One U.S. manufacturer felt he is rendered completely uncompetitive by the 31 percent Canadian duty on sailing boats. Exceptionally high Canadian duties were complained of with respect to pleasure boats, such as a 17.5 percent duty on motor boats. Marine manufacturers also mentioned extremely high import duties in Latin America, and a complaint was made that the 50 percent U.S. import duty on repairs to U.S. ships while abroad is detrimental.

U.S. aircraft producers complained about the high duties levied on their manufactures by foreign countries. France, Italy and Japan were specifically mentioned as assessing significantly high duties. In the United Kingdom, it was reported that duties on aircraft were high but can be waived if the imported aircraft is not competitive with any British product. Argentina, Mexico and Brazil were also noted as imposing 17-50 percent duties on general aviation aircraft.

Many complaints involved the discriminatory effect of the British Commonwealth preference system, especially with regard to the motor vehicle industry. The Commonwealth preferential policy was described as causing significant disadvantage to U.S. manufacturers. In addition, several of the complainants related that they are disadvantaged not only by the European Community's external tariff, but also by the fact that no tariffs are applicable on trade between EC countries. Israel, Turkey, Greece, Spain, and Malta were all mentioned as favoring the EC in their tariff structure. Several African and a few South American countries, many of which were former colonies of EC nations and have associate status in the Community, were pointed out as having a preferential duty structure for EC goods.

The discriminatory tariff treatment given to U.S. exports resulting from the European Free Trade Association was the subject of several complaints. Again the U.S. competitive position in automotive products is alleged to be disadvantaged not only by the EFTA external tariffs but the preferential treatment given intra-EFTA imports. The Latin

American Free Trade Association was the target of complaints similar to those lodged against the EC and EFTA. Preferential treatment on motor vehicles is also said to be given to India by Nepal, to France by Tunisia and to Portugal by Mozambique.

Aircraft manufacturers also complained of discriminatory duties because of British Commonwealth preferences, EC preferential agreements, especially with EFTA neutrals, and the lack of U.S. extension of most favored nation treatment to the nations of Eastern Europe.

Quantitative limitations and embargoes.--Many complaints were received concerning quotas, especially on motor vehicles and parts. It was alleged that quotas are used to protect the local transport equipment industry in Japan and most of Western Europe. Quotas on automotive parts were reported to exist in India, the Philippines and Yugoslavia. Quotas imposed by the Dominican Republic, Iran, Ireland, Israel, Jordan, Korea, Malaysia, Morocco, Portugal, South Africa, Spain, Turkey, and Uganda were mentioned also in complaints.

Embargoes were widely complained of by several U.S. producers. Argentina was cited as imposing an embargo on motor cars. Brazil was reported as embargoing passenger vehicles valued over \$3,500 or over 1600 kilograms in weight. Used cars are embargoed by Canada. Many IDC's, especially Chile, Egypt, Indonesia, Iraq, Jamaica, and Senegal were mentioned by U.S. producers in their complaints on embargoes against motor vehicles. Discriminatory embargoes against Japan were reported to be in effect in Italy. Embargoes on trucks and buses were reported in Indonesia and Mexico.

Complaints were made against the U.S. embargo on foreign vessels in U.S. coastal trade. U.S. producers of aircraft complained of embargoes against their products in France and Colombia. An embargo exists against importation of used aircraft into Canada.

Licensing practices.--Many U.S. producers of transport equipment reported difficulty in obtaining import licenses. A large number of the complaints described procedures to obtain an import license in LDC's as complicated, lengthy and expensive. Mentioned specifically by U.S. automotive manufacturers as trade barriers were licensing requirements of Brazil, Burma, the Central African Customs Union, Colombia, Ghana, India, Jordan, Korea, Mexico, Morocco, and Spain. However, some developed nations were mentioned in this regard also (e.g., Italy, Japan, Sweden, and Switzerland). Licensing practices of Norway for ships and boats were also alleged to be a trade barrier. Difficulties with licensing procedures for importing aircraft are cited as existing in Japan, South Africa, Mexico, and Colombia.

Local content requirements.--According to U.S. automobile manufacturers, New Zealand, Uruguay and Australia have imposed mandatory restrictions on imported vehicles to insure local content. Local content regulations in Argentina, Brazil, Chile, Mexico, Peru, Portugal, South Africa, Switzerland, and Venezuela are deemed trade barriers by U.S. producers, especially for knocked down components assembled abroad. Tractors imported into Israel require a certain percentage of local content. Such content requirements also are reported to exist for aircraft.

U.S. producers stated that Japan insists on the purchase by importers of aircraft of a proportional amount of national-made aircraft. The same requirement is said to prevail in Mexico.

Export controls.--U.S. motor vehicle exporters complained of the embargo on U.S. exports destined for Southern Rhodesia, and hydrofoil producers complained that they were unable to obtain export licenses for trade in technical data on hydrofoils to be shipped to certain countries, such as Colombia, Argentina, Brazil, Kuwait, Saudi Arabia, and Morocco.

U.S. aircraft manufacturers consider the Foreign Assets Control Regulations under the Trading with the Enemy Act as difficult trade barriers. Similarly, the U.S. government was noted as being unwilling to allow national industries to furnish military aircraft to South Africa, Portugal, Romania, and other countries. Furthermore, some U.S. aircraft producers states that a barrier exists in the fact that goods on the U.S. munitions list may not be exported. They feel that many products on this list are improperly labelled as munitions. Finally, U.S. importers of goods in the transport equipment sector from Japan objected to "voluntary export control" programs instituted by Japan "in order to deter possible unilateral action by the United States."

Subsidies and other governmental aids.--All major trading countries and some developing countries give substantial direct or indirect assistance to domestic producers in the transport equipment sector.

Aid to the shipbuilding and aircraft industries in developed countries is usually allied to maintaining a national defense production base. U.S. producers, particularly of ships and aircraft, frequently mentioned subsidies given by foreign governments to their national industries as a barrier to trade. The United Kingdom, especially with regard to the aircraft industry, drew the largest number of such complaints, followed by France. One of the most common types of governmental assistance complained of were national maritime subsidies to American or British ship-owners for the purchase of vessels constructed in national yards, and similar subsidies in France and the United Kingdom to provide for purchase of domestically produced aircraft.

U.S. producers charged that the United Kingdom, France and Japan maintain concessionary financing systems for their exporting companies which amount to export subsidies. One U.S. producer noted that low-interest medium term loans, not available to U.S. manufacturers, are frequently available to their foreign competitors. Some financing plans are reported to supply low-cost funds for capital goods. U.S. manufacturers also point to low-cost borrowing and extraordinary depreciation allowances as the genesis of Japan's growing shipbuilding industry. It was reported that funds for export customers financing are excused from the usual United Kingdom credit curbs, and the resulting negotiated loans are then immediately rediscounted at the current rate.

Complaints were also lodged against government financing for business expansion and start-up costs. Until 1970, the British government was reported to have funded programs which provided up to 60 percent

of the backing for start-up of new facilities by experienced manufacturers. One U.S. producer observed that the current aircraft programs in Europe are underwritten by the governments of France, West Germany, the Netherlands, and Spain.

Other kinds of subsidy systems were also noted. Complainants observed that the embassies of certain nations actively promote sales campaigns for military and commercial sales of their domestic products. It was reported that former British colonies and members of the Commonwealth receive long-term financing in the form of aid and subsidized maintenance service which assist the British in making aircraft sales. France is said to have a similar arrangement with Air Afrique. Both France and Japan were mentioned as maintaining concessionary lending programs for manufacturers wishing to establish export sales offices abroad.

Some countries (e.g., Canada, France, Italy, Japan, United Kingdom), according to U.S. producers, provide income tax relief for their corporations geared to export performance and foreign investment. For example, one major aircraft manufacturer stated that the United Kingdom grants tax rebates up to 1.5 percent of the purchase price on all export sales of aircraft. Greece is said to aid exports through a system of direct tax rebates. Australia, Ireland, Japan and others are reported to reduce the domestic income tax liabilities of exporting taxpayers.

Intercompany pricing rules, special export credits, accelerated depreciation of export production assets, tax incentives to local content and offsetting tax relief for a domestic company during the initial

stages of a new foreign enterprise also have been indicated by U.S. producers as trade barriers. Also mentioned was the fact that tax regulations and accounting practices in Europe and Japan allow the accumulation of large pre-tax reserves, which become a source of interest-free working capital.

It has been noted by some U.S. transport equipment manufacturers that although the United States government substantially underwrites research and development for military and medical application, other governments inject considerable amounts of money into development of products for commercial sales. Japan especially was mentioned in this regard. The dramatic results of government financed R&D in generating a modern and efficient Japanese shipbuilding industry were particularly cited.

Government procurement practices and government monopolies and franchises were also mentioned, as were laws and practices in this area which discourage imports. For instance, one U.S. aircraft producer complained that if planes are produced domestically, most nations urge local customers to use the domestic product. The same complainant cited government regulations and agreements on routing, frequency, capacity, landing, fares, and charter services as often adversely affecting U.S. airplane sales.

Customs valuation and administrative procedures.--Relatively few complaints were voiced in this area. Complaints of arbitrary and disadvantageous classification of imported goods for tariff purposes

were made against Japan and Portugal. Valuation on a c.i.f. basis for customs purposes was deemed discriminatory to their products by some U.S. manufacturers of transport equipment, although most nations of the world employ this system. Additional complaints about valuation dealt with the uncertainty created by the practices of certain governments. In the United States, automobiles are on the "final list" with the result that duties are collected on either the foreign or the export value, depending upon which is higher. A U.S. producers association complained that in Australia the duty may be assessed on either the sales price or duty paid value, whichever is higher.

Other practices related to valuation were considered by U.S. manufacturers of transport equipment as barriers to trade. For example, it was objected that in Greece used cars are valued for customs purposes at new car prices. Complaints were raised against Japan for "uplifts" in customs value for non-arms length transactions to include middlemen's commissions in the exporting country, even if none were charged. All countries using the Brussels valuation system deal with such transactions by an "uplift" of the transaction value, but complaints were made only against Japan. A similar practice is followed in U.S. customs valuations procedures.

Documentation requirements were considered unreasonable by a number of U.S. producers. Documenting exported items for customs clearance abroad, according to one U.S. manufacturer, requires undue expense for his corporation. Complaints have been lodged about the necessity in

some nations, like Brazil, to give advanced indications of shipping weight within a 5-percent tolerance. It was reported that Japan requires forms illustrating the distribution network in Japan, the price at each stage up to and including the final purchase, and the names and commissions of all middlemen. Also mentioned was the documentation necessary for compliance with the U.S. export control regulations; it was felt that these regulations required an unnecessary amount of detail and compliance. The lack of uniform commodity descriptions among nations was also generally felt to hinder trade.

Regulations on samples and returned goods were the cause of some complaints. Some nations were said to insist that airplane replacement parts imported abroad pay duty even though they have been delivered pursuant to warranty obligations. Consular formalities were found to hinder trade by some U.S. transport equipment producers. One complainant stated that in some nations it is almost impossible to get a duty refund when due.

Standards.--Complainants in this area were concerned with what they perceived to be discriminatory industrial and safety standards. U.S. manufacturers of passenger vehicles claim export sales are injured by the fact that national differences in these standards make it necessary to redesign models for overseas sales. For example, cars used in Athens are reported to be limited to a certain length and horsepower which makes U.S. vehicles manufactured for the U.S. market unacceptable. The United States was mentioned by importers as being overly stringent in standards for motor vehicles and fire-fighting equipment.

U.S. aircraft producers complained that United Kingdom standards are not appropriate to U.S. production methods. Also airworthiness certificates in the United Kingdom are said to be difficult and expensive to obtain. Aircraft certification difficulties were also reported in France. Standards against noise pollution in West Germany and Switzerland prohibit the operation of some American high power and weight aircraft. U.S. aircraft manufacturers also fear that the enlarged Common Market of nine will adopt common aircraft standards to the detriment of U.S. exports.

Consular Fees.--All the complaints concerning consular fees were against LDC's. The consular fee in Uruguay is 12 percent of the f.o.b. value. A twenty dollar consular fee is collected by the Philippines. Charges from 2-8 percent in Haiti, Paraguay, Nicaragua and Honduras were protested by one U.S. trade association. Also mentioned in complaints on consular fees were India, Chile, Venezuela, Afghanistan and Angola.

Prior Import Deposits.--Several complaints against prior import deposit requirements in LDC's were made. Tunisia requires a two months deposit with the Central Bank of 100 percent of the value of cars, or 25 percent of the value of commercial vehicles. A deposit of 40 percent of the c.i.f. value for 180 days is required in Argentina, and a deposit of 100 percent of the c.i.f. value in Burundi. Forty percent of the f.o.b. value for three months were noted as the terms of the import deposit in the Dominican Republic. Similar observations were

made by U.S. producers concerning Ecuador, Ethiopia, Chile, Paraguay, the Philippines, and Iran. Greece and Israel were also mentioned as imposing heavy import deposits.

Shipping practices.--According to some U.S. producers, shipping rates outbound from the United States are significantly higher than inbound and therefore discriminatory to U.S. trade. The control of much of the shipping fleet by conferences is felt to intensify the move toward higher shipping costs and discrimination. Aircraft manufacturers complained that the U.S. requirement that all goods financed by the U.S. government must be transported on U.S. vessels was detrimental to their trade since U.S. shipping costs are usually high. The general feeling was expressed that all U.S. transport costs, but especially shipping costs, are high enough to hinder U.S. trade.

Miscellaneous practices.--A number of U.S. producers complained of exchange controls, discriminatory bilateral agreements, minimum and maximum price controls and restrictive business practices. Also mentioned were discriminatory credit restraints, and currency devaluations.

Respondents to the Tariff Commission survey who submitted estimates of the trade importance of barriers complained of in the transport equipment sector; overwhelmingly felt that a "small" trade increase would occur with the removal of the barriers. The rest were divided between "significant" and "moderate" with about two "significant" estimates for every "moderate." Most of these estimates were usually given on the stipulation that these estimates represented the total effect of the removal of all the multiple obstacles which hinder the

trade of the product. Estimates as high as \$1 million were submitted as the expected increase in a product's trade. The small number of dollar value estimates received in the transport equipment area totaled nearly \$9 million.

#### Motor Vehicles

Motor vehicles include automobiles, trucks, buses, tractors, motorcycles, and parts and accessories of such vehicles. 1/

#### MFN tariffs

In regard to total MFN imports of motor vehicles within the group of five major countries, the United States and Canada have the lowest arithmetic average tariffs, 6.1 and 7.3 percent ad valorem respectively (see chart I-2-E). Canada's weighted average (1.5 percent) is less than half the U.S. level. The very low Canadian weighted average is a direct result of the U.S.-Canadian Automotive Products Agreement implemented in 1965 to provide duty-free trade between the United States and Canada in certain motor vehicles and original automotive equipment parts. Canada extended the duty-free treatment provided in the agreement to imports from all sources on an MFN basis, whereas similar shipments into the United States are duty free only to Canada on a preferential basis. Imports into Canada which are eligible for the duty-free treatment specified in the agreement (and extended by Canada on an MFN basis to non-U.S. sources) must be for the account of a bona fide Canadian vehicle

1/ For specific coverage of this subsector see BTN headings 87.01-.06; 87.09; 87.12.

Chart I-2-E. -- Average MFN tariff rates on motor vehicles  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

manufacturer licensed under the terms of the Vehicle Tariff Order of 1965. The United States grants duty-free treatment to imports of Canadian vehicles by either manufacturers or individuals; automotive parts, however, may be entered free only by automobile manufacturers for use as original equipment in their production. The obvious consequence of this arrangement has been a large volume of duty-free Canada-U.S. motor vehicle trade. If the United States preferential imports from Canada were included in calculating the average U.S. tariff level, the U.S. weighted average would be approximately 1.7 percent.

Japan has the highest tariff averages for total trade (14 percent ad valorem arithmetic and 16.9 percent weighted). <sup>1/</sup> Japan, the Community and the United Kingdom have no duty-free tariff provisions for motor vehicles; consequently, their tariff averages for all products and dutiable products alone are identical. Canada's tariff averages, due to her large duty-free MFN trade volume, change drastically between the two categories; the MFN averages of the United States vary only slightly.

Virtually the entire amount of imports into Canada and Japan and EC imports from external countries are accorded MFN treatment, although intra-EC duty-free imports are almost five times as great as imports from outside sources. Over half of U.S. imports of motor vehicles in 1971 entered under the preferential duty-free treatment accorded to Canada by the U.S.-Canadian Automotive Products Agreement. One-eighth of the United Kingdom's imports receive preferential treatment under the Commonwealth and EFTA agreements.

Half of Canada's MFN tariff provisions for motor vehicles are duty free, and over half of United States MFN provisions are 5 percent ad valorem or below; for the Community, two-fifths of tariff provisions are between 5.1 and 10 percent ad valorem; 60 percent of Japan's provisions and one-third of the United Kingdom's provisions are in the 10.0-15 percent bracket (see table I-2-E). Over seven-eighths of Canadian imports of motor vehicles are duty free (table I-2-F). Ninety-six percent of United States MFN imports are assessed at rates of 5 percent

---

<sup>1/</sup> These Japanese averages are calculated from rates in effect prior to the unilateral reductions made by Japan in 1972. Considering the 1972 reductions, the Japanese rates would be approximately 9.4 percent (arithmetic) and 7.6 percent (weighted).

ad valorem or below. Over three-quarters of Japan's imports of motor vehicles enter at rates between 5.1-20 percent ad valorem but nearly one-fourth enters in the 25.1-30 percent ad valorem range. <sup>1/</sup> The United Kingdom and the Community both assess the largest portion of their entries in the 10.1-15 percent bracket.

The tariff schedule for motor vehicles having the greatest complexity is Canada's with 84 lines. The United Kingdom and the Community have the

---

<sup>1/</sup> Japanese rates in this bracket have been unilaterally reduced to a level of approximately 11.3-13.5 percent ad valorem.

simplest with only 21 and 22 lines respectively. The U.S. schedule has 28 lines, while that of Japan has 46.

### Trade importance

Motor vehicles account for about 70 percent of OECD exports and 79 percent of imports in transport equipment. OECD exports totaled \$19 billion in 1969, imports equaled \$14.5 billion (chart I-2-F). Motor vehicles rank second among the 119 industrial subsectors in value of MFN imports of the GATT tariff study countries. For the United States and Canada, it is the most important subsector in total imports. U.S. imports amounted to almost \$5 billion in 1969, growing to \$7.6 billion in 1971. The most important type of motor

Chart I-2-F -- OECD trade in motor vehicles, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

vehicle in imports of Canada and the United States is motor vehicles for the transport of persons, goods or materials (excluding motorcycles, etc.) (BTN 87.02). Canadian imports of such motor vehicles were valued at \$1.2 billion; United States MFN imports at \$0.9 billion in 1967 and preferential imports from Canada at an additional \$1 billion.

### Trade network

About 97 percent of 1969 OECD exports and 85 percent of imports of motor vehicles are accounted for by the five major countries (tables I-2-G and H). The largest supplier to the world is the European Community, accounting for over 40 percent of OECD exports (almost half of which is intra-EC shipments), followed by the United States and Canada.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The United States, the EC, and Canada are the principal importing countries. Of the five major countries, Japan is the least important importer and exporter of motor vehicles. Non-OECD countries, chiefly LDC's, are the recipients of 49 percent of Japanese exports, 44 percent of the exports of the United Kingdom, one-third of EC external exports, and 28 percent of U.S. exports. The remainder of U.S. exports go primarily to Canada (61 percent); Canada's exports go primarily to the United States as do 31 percent of the EC's external exports.

Over 60 percent of U.S. imports come from Canada, almost one-fourth from the EC, and one-tenth from Japan. EC imports from external sources are small; intra-EC shipments supply virtually the entire EC market. The United Kingdom is the greatest external EC supplier, accounting for about 45 percent of EC imports of motor vehicles from external sources.

The United States supplies virtually all imports to Canada and about half of Japan's entries. The bulk of United Kingdom's imports comes from the Community. The large volume of mutual trade between the United States and Canada reflects the results of the previously mentioned Automotive Products Agreement between the two nations.

Trade flows among the five major countries are generally in the direction of countries having lower tariffs. The two principal importers, the United States and Canada, have low average tariffs when compared with Japan (which has the highest tariff averages, a stiff commodity tax on cars, and the least imports) and an agreement for duty-free trade in motor vehicles with each other. For the European Community, the vast bulk of its imports are intra-Community shipments which move duty free. Imports from external sources are subject to high tariffs and have correspondingly little volume.

#### Trade-agreement concessions

As seen in the tabulation below, for all of the five major countries, January 1, 1972, average tariff levels for motor vehicles are far below levels existing on pre-trade-agreement base dates. The bulk of reductions reflect the results of reciprocal negotiations. Japan, in 1971-1972, made a series of reductions in all of its rates on motor vehicles, thereby reducing the Japanese average below the level shown to about 7.6 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	13.0	3.2
European Community	22.4	11.0
United Kingdom	31.1	13.9
Japan	32.2	16.9
Canada	26.7	7.3

All MFN provisions for motor vehicles in the tariff schedules of the EC, United States and Japan have been the subject of GATT concessions. In the Canadian schedule only 63 percent of the provisions, covering 18 percent of MFN imports have GATT concessions; in the United Kingdom schedule, 86 percent of the provisions covering 99 percent of MFN imports have GATT concessions.

The membership of the EC had made concessions under the GATT on their national tariffs prior to the adoption of the Common External Tariff. Of the 97 concessions in the national tariffs, 47 were at rates above the CXT autonomous rates, four at the CXT rate, and 46 below the CXT rate.

Tariffs on passenger cars, the largest trade item, have been reduced in trade-agreement concessions by all five major countries (see table I-2-I). About 53 percent of U.S. imports of motor vehicles in 1970 were products of Canada duty-free under the preferential Automotive Products Agreement. United States MFN rate reductions for passenger automobiles are about 70 percent below the statutory level. Canadian imports of passenger cars by companies meeting certain criteria are free of duty under the Automotive Products Agreement.

Table I-2-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on passenger automobiles

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	10%	6.5%	3% <u>2/</u>	692.10
Canada-----	27.5%	17.5%	Free, 15% <u>3/</u>	43803-1
European Community--	29%	22%	11%	87.02 AI(b)
United Kingdom-----	33.3%	14.7% - 22.5%	11%	87.02 (c); (1); (b)
Japan-----	35%; 40%	35%; 40%	10% <u>4/</u>	87.021 (1); (2); (3)

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Products of Canada are preferentially free of duty.

3/ Duty-free treatment is accorded only to imports covered by the Automotive Products Agreement and entered by qualified Canadian automotive producers.

4/ Unilateral action by Japan on April 1, 1971, reduced the final stage rates of the Kennedy Round from 17.5 percent, 20 percent, and 30 percent ad valorem to 10 percent ad valorem. Later, in a joint U.S.-Japan declaration, Japan announced a further reduction to 8 percent ad valorem, effective April 1, 1972. Another 20 percent reduction went into effect in November 1972, resulting in a rate of 6.4 percent ad valorem.

Other shipments of passenger cars into Canada are subject to Canadian tariffs which have been reduced 45 percent from statutory levels.

The Community's autonomous rates have been reduced by slightly over 62 percent since pre-trade-agreement base dates; the United Kingdom rates have been reduced by about 78 percent. The Japanese tariff rates have been cut by about 71 to 75 percent. In 1972, in further unilateral cuts Japan lowered its rates on passenger cars to 6.4 percent ad valorem.

### Aircraft

Aircraft includes airships, balloons, gliders, kites, flying machines, rotochutes, and parts. 1/

1/ For specific coverage of this subsector see BTN headings 88.01-03.

# MFN tariffs

Average MFN tariff rates for total imports of aircraft products are clustered between 4.8 and 9.3 percent ad valorem for four of the five major countries. Only Japan maintains substantially higher average tariffs (chart I-2-G). The arithmetic averages range from 7.6 percent ad valorem for Canada to 14.6 percent for Japan; the weighted averages from 4.8 (Canada) to 14 percent (Japan). However, the dutiable-product averages for Canada rise markedly (arithmetic, 11 percent; weighted, 7.5 percent). All imports by Japan and the United States, and shipments into the Community from external countries, are on an MFN basis; 98

Chart I-2-G. -- Average MFN tariff rates on aircraft  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

percent of Canada's imports as well as 88 percent of shipments to the United Kingdom receive MFN treatment. Intra-EC duty-free shipments are equal to almost one-fourth of EC entries from outside sources. Also, a considerable amount of U.S. imports of aircraft enter under tariff items 806.30 and 807.00. Under item 806.30, articles of metal that have been subject to a process of manufacture in the United States, exported for processing and returned for further processing, are required to pay duty only on the value of foreign processing. Through item 807.00, imported articles assembled in foreign countries with fabricated components which have been manufactured in the United States are dutiable upon the full value of the imported product less the value of the U.S. fabricated components it contains.

Canada is the only nation of the five with MFN duty-free provisions for aircraft (see table I-2-J). It is also the nation with the highest tariff provisions (in the 15.1-20 percent ad valorem bracket). Canada

Table I-2-J.--Distribution, by duty level, of MFN tariff provisions for aircraft

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

and the United Kingdom have the majority of their provisions in the 5.1-10 percent ad valorem range. The bulk of U.S. tariff provisions are in the 0.1-5 percent range, although over one-third of U.S. provisions are

in the 10.1-15 percent bracket. The vast majority of Japanese tariff provisions for aircraft are in the 10.1-15 percent ad valorem group; while 80 percent of the Community's provisions are equally divided between the 0.1-5 percent and the 5.1-10 percent ranges (Community tariffs for aircraft weighing over 15,000 kilograms, and component parts for such aircraft, have been temporarily suspended for the past several years).

In terms of imports, the entirety of U.S. imports enter at rates of 0.1-5 percent ad valorem, as do 88 percent of shipments to the Community; 100 percent of the imports into the United Kingdom are in the 5.1-10 percent group (table I-2-K). Nearly two-thirds of Canadian

Table I-2-K.--Distribution, by duty level, of MFN imports of aircraft

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

imports are in the 5.1-10 percent range, while close to four-fifths of shipments to Japan enter in the 10.1-15 percent range.

The most complex tariff structures for aircraft belong to Canada and Japan, with 13 and 14 lines respectively. The schedule of the EC has 10 lines, the United States has 8 lines, and the United Kingdom 4 lines.

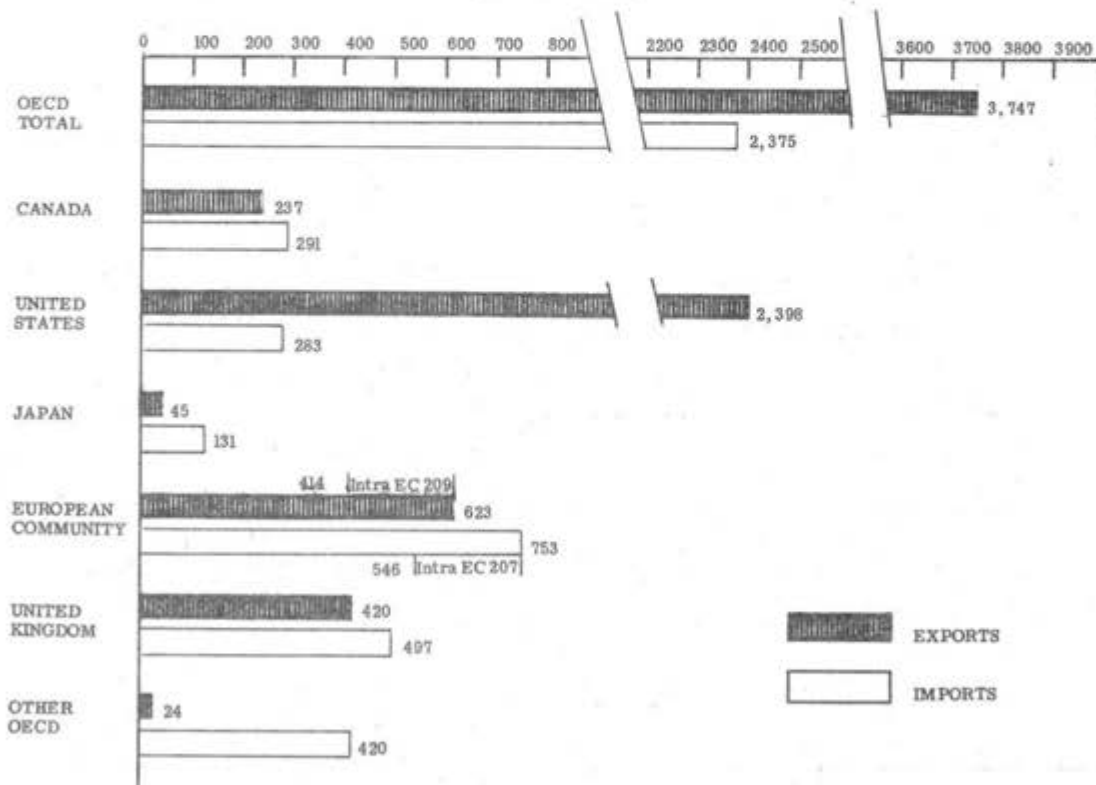

#### Trade importance

OECD exports of aircraft in 1969 totaled \$3.7 billion, or about 14 percent of total export trade in transport equipment (chart I-2-H).

Imports were nearly \$2.4 billion or about 13 percent of 1969 OECD import trade in the transport equipment sector. The second largest category of OECD imports of transport equipment, aircraft ranks 13th in value of total imports among the 119 industrial product categories. U.S. exports in 1969 were \$2.4 billion, while imports, which consist chiefly of parts, amounted to \$283 million. U.S. imports in 1971 were valued at nearly \$297 million. In MFN imports of the other countries, aircraft ranks 6th among the 119 industrial categories for Canada, 11th for the Community, 26th for the United Kingdom, and 29th for Japan.

Chart I-2-H -- OECD trade in aircraft, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Trade network

The five major countries account for over 99 percent of OECD exports and 82 percent of imports of aircraft (tables I-2-L and M). The United States, by far the largest exporter, is the source of over three-fifths of OECD export shipments. Country of destination data are unavailable for one-fourth of U.S. exports. The European Community is the largest importer, with shipments from outside origins amounting to \$546 million. Intra-EC imports were valued at an additional \$207 million. The Community depends heavily on the United States for aircraft, and as mentioned above, has suspended its duties on large aircraft. However, the entry into the Community of the United Kingdom with its strong aircraft industry may cause a reinstitution of the EC suspended aircraft tariff. The United States ships over one-fourth of its exports which have been accounted for to the Community, and over 30 percent of its known shipments to non-OECD nations, chiefly LDC's. Twelve percent of known U.S. exports are shipped to Canada; nearly 8 percent go to Japan.

The United States is the principal supplier of aircraft to all of the other four major countries. Nearly 98 percent of Japan's imports, 93 percent of Canada's, 91 percent of entries into the United Kingdom and four-fifths of shipments to the Community from outside sources have their origin in the United States. Canada, Japan, the Community and the United Kingdom are all net importers of aircraft. Only the United States is a net exporter.

Trade-agreement concessions

Except for Japan, average tariffs of the major countries on January 1, 1972, were significantly lower than the average levels on pre-trade-agreement base dates. As the following table illustrates, the largest drop, nearly 23 percentage points, was in the U.S. tariff. GATT concessions cover all U.S., EC, and United Kingdom MFN provisions; between 85 and 92 percent of Canada's provisions (84 to 100 percent of imports); and 57 percent of Japan's provisions (but covering 96 percent of imports). Thirty-five GATT concessions were made in EC member state national tariffs prior to the adoption of the Common External Tariff, 20 of these were at rates above and 15 at rates below the new CXT rate.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	27.8	5.0
European Community	12.3	5.2
United Kingdom	20.0	7.0
Japan	15.0	14.0
Canada	26.3	7.6

Tables I-2-N and I-2-0 show concessions which have been made in the major country tariffs on aircraft and aircraft parts.

Miscellaneous Transport Equipment

The remaining categories of transport equipment, which will not be discussed in detail, are ships and boats and other transport equipment.

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	27.5%	9%	5%	694.60
Canada-----	27.5% 27.5%	Free; 13.5% Free; 5%	Free; 7.5% Free; 5.0%	44051-1; 44052-1; 44055-1; 44056-1
European Community--	17%; 12% <sup>2/</sup>	17%; 10% <sup>2/</sup>	8.5%; 5% <sup>2/</sup>	88.03
United Kingdom-----	20%	14%; 20%	7%	88.03
Japan-----	15%	15%	15%	88.03

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Duty is suspended for parts used in aircraft constructed within the Community.

The relative world trade importance of the categories can be seen in chart I-2-D at the beginning of the discussion of transport equipment.

U.S. trade has been as follows (in millions of dollars):

<u>Items</u>	<u>Exports</u>	<u>Imports</u>	
	<u>1969</u>	<u>1969</u>	<u>1971</u>
Ships and boats <u>1/</u>	184	40	48
Other transport equipment	144	72	84

For each of these categories and for each of the five major countries, there are listed in table I-2-P arithmetic and weighted average MFN rates

Table I-2-P.--Average MFN tariff rates on miscellaneous types of transport equipment, and the highest rate bracket in which provisions of the major tariffs fall

Type of transport equipment	Canada	United States	Japan	European Community	United Kingdom
Ships and boats:					
Arithmetic average-----	11.1	5.8	6.2	2.1	2.6
Weighted average-----	17.3	4.0	5.1	0.8	0.2
Highest rate bracket-----	20.1-25	9.1-10	14.1-15	6.1-7	7.1-8
"Other" transport equipment:					
Arithmetic average-----	11.9	9.4	8.1	6.5	11.6
Weighted average-----	17.0	7.3	7.8	7.5	14.1
Highest rate bracket-----	20.1-25	17.1-20	14.1-15	15.1-17	20.1-25

of duty for total imports, and the highest duty bracket in which provisions of each of the five tariffs fall. In a simple count of "highest" and "lowest" rankings of this data, Canada has the largest number of "highest" rankings (6 out of a possible 6). The Community has the most "lowest" rankings (3 out of 6).

1/ Pleasure craft only; vessels which are not "yachts or pleasure boats" are not considered imports into the United States.

## Industrial Sector I-3

## ORES, METALS, AND METAL MANUFACTURES

Ores, metals, and metal manufactures include all nonprecious metallic ores and concentrates and all base metals and articles thereof, except the following products: waste from the manufacture of iron and steel, other slag and ash, and office equipment made from base metal. The four main subcategories of this sector, grouped by stage of processing, are: Ores and concentrates, iron and steel, nonferrous metals, and metal manufactures. 1/

MFN tariffs

The arithmetic averages for MFN tariff rates on ores, metals, and metal manufactures for the five countries range from a low of 6.3 percent ad valorem for the European Community to 9.6 percent ad valorem for Japan (chart I-3-A). The rates based on weighted averages are lower and range more widely, 2.1 percent for Japan to 7.4 percent for Canada.

For dutiable products only, the European Community has the lowest arithmetic average (7 percent), whereas the United States has the lowest weighted average (6.3 percent). Canada has the highest arithmetic average (13.8 percent) and weighted average (12.4 percent).

The distribution of tariff provisions by duty level is shown in table I-3-A. The largest portion of rate provisions is in the bracket of 5.1-10 percent ad valorem for all countries except Canada--the degree of concentration in this bracket ranges from 49.5 percent for the United States

---

1/ For the specific coverage of this sector, see BTN headings 26.01, 26.03, 73.01-.35, 73.38-.40, chapters 74-82, headings 83.01-.03 and 83.06-.15.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-3-A. -- Average MFN tariff rates on ores, metals and metal manufactures  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1973 on about four-fifths of the Japanese rates in this sector; over 7 percent of the rates were excepted from unilateral reductions while the remainder were reduced by amounts ranging from 5 percent to 100 percent.

to 66.3 percent for the European Community. For Canada, approximately two-fifths of its tariff provisions are MFN duty free and another one-third fall in the 15.1-20 percent bracket.

Imports of ores and metals receiving preferential tariff treatment are significant for the United Kingdom, Canada, and the European Community among the five major countries. Such treatment was accorded 59 percent of entries into the United Kingdom, 14 percent into Canada, and 13 percent into the European Community. Most of the MFN imports of Japan, the European Community, and the United Kingdom enter duty free, whereas one-quarter and two-fifths, respectively, of U.S. and Canadian entries are duty free (table I-3-B). About one-third of EC and United Kingdom imports

Table I-3-B.--Distribution, by duty level, of MFN imports of ores, metals and manufactures

(In percent)

enter in the 5.1-10 percent bracket; about one-third of U.S. entries fall in the 0.1-5 percent bracket and another one-third in the 5.1-10 percent bracket. Canadian entries that are not entered duty free are imported chiefly under the following duty rate brackets: 15.1-20, 0.1-5, and 5.1-10 percent.

The United States has the most detailed schedule for ores, metals, and metal manufactures with 686 lines, while the United Kingdom has the least, with 250 lines. Canada has 389 lines; the European Community, 406 lines; and Japan, 357 lines.

#### Trade importance

Ores, metals, and metal manufactures comprise one of the most important industrial sectors, ranking third in OECD exports and first in imports. The sector accounts for 15 percent of OECD industrial exports and about 17 percent of industrial imports. For the United States, the sector is the fourth most important in exports. It ranked second in U.S. imports during 1969-70. Imports by the GATT tariff study countries were valued at \$15.4 billion in 1967 and \$25 billion in 1970. Intra-EC shipments were an additional \$3.9 billion in 1967 and \$6.8 billion in 1970. OECD 1969 imports were \$27.5 billion (including \$5.7 billion of intra-EC shipments) and exports were \$24.2 billion (chart I-3-B).

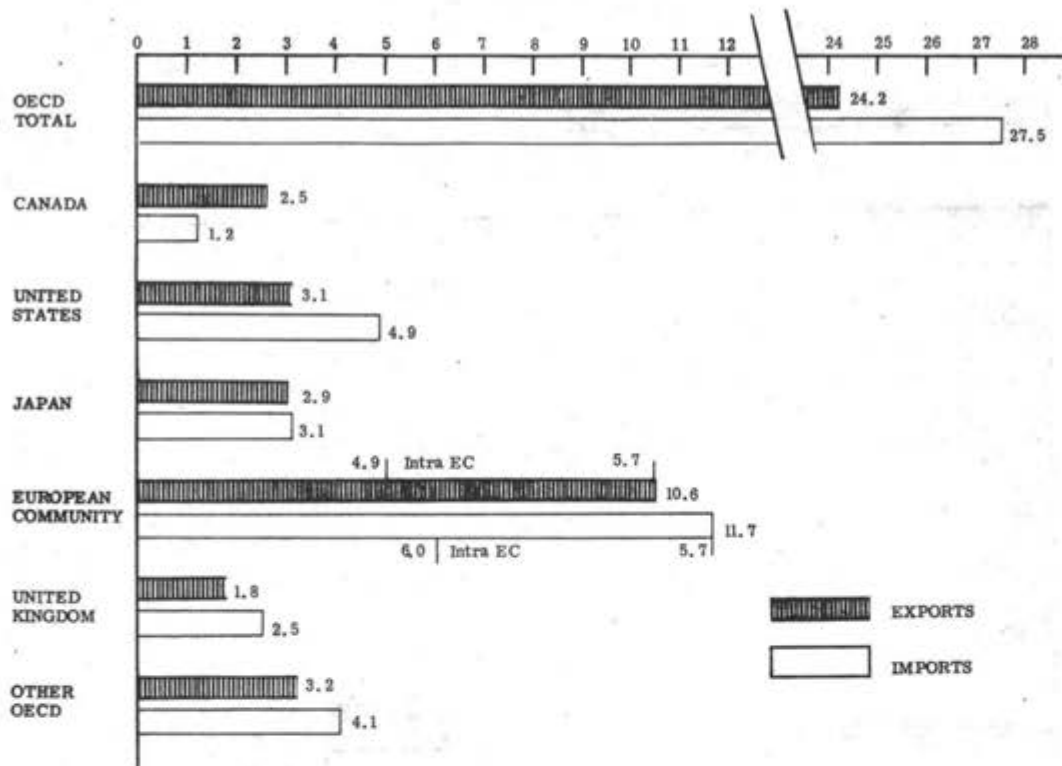

#### Trade network

The five major countries account for about 85 percent of OECD exports and imports of ores, metals, and metal manufactures. Nearly two-thirds of OECD exports go to the five major countries; over 15 percent to LDC's. Almost 60 percent of OECD imports are supplied by the five major countries.

About one-quarter of U.S. exports go to less developed countries (chart I-3-C), where substantially higher tariffs and other trade barriers generally are encountered. Canada is the principal developed market for U.S. products, followed by the European Community. The United States

Chart I-3-B. -- OECD trade in ores, metals, and metal manufactures, 1969

(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

takes one-half of Canada's exports; other import markets for Canada are the United Kingdom, the European Community, and Japan. Japan ships over one-third of its exports to both the United States and to the LDC's. Intra-EC exports are equal to more than half of the Community's total shipments. The LDC's take about one-quarter of the EC's outside exports; nearly 20 percent go to the United States, and about 5 percent to the

Chart I-3-C. -- United States trade in ores, metals, and metal manufactures, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

United Kingdom. The United Kingdom ships almost 25 percent of its products to the LDC's, 20 percent to the European Community, and 10 percent to the United States (table I-3-C).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, ores, metals, and metal manufactures ranked first in industrial imports for Canada and the European Community and second for the United States, Japan, and the United Kingdom. United States imports of ores, metals, and metal manufactures were valued at \$4.3 billion in 1967, \$4.9 billion in 1969, and \$6.1 billion in 1971. Canada and Japan each supply about one-quarter of U.S. imports; the European Community and LDC's each about 15 percent (chart I-3-C). The United States supplies about two-thirds of the Canadian market. Non-OECD countries, principally LDC's are the source for three-quarters of Japan's imports. About half of imports into the European Community are from outside sources; chief suppliers are the LDC's, "other" OECD countries, the United States, and the United Kingdom. The non-OECD nations are the major source of

the United Kingdom's imports, followed by "other" OECD countries, Canada, and the European Community. Japan is not a significant supplier to any major country except the United States (see table I-3-D).

### Trade composition

Ores, metals, and metal manufactures are divided into four subsectors: Ores and metal waste, iron and steel, nonferrous metals, and metal manufactures. The iron and steel subsector is the largest for exports and nonferrous metals the largest for imports in OECD trade. The relative importance of the four subsectors is shown in chart I-3-D.

Chart I-3-D. -- OECD trade in ores, metals and metal manufactures, by type, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

On January 1, 1972, average tariff levels for ores, metals, and metal manufactures in the United States, the United Kingdom and Canada were substantially below levels existing on pre-trade-agreement base dates.

The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. Specific duties are important for the United States, accounting for about one-third of the tariff lines and covering 47 percent of imports in 1967. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Some of Japan's tariff rates in this sector were unilaterally reduced in 1972, but these reductions are not reflected in the tabulation.

Pre-trade-agreement      January 1, 1972

(Percent ad valorem)

United States	17.0	4.6
European Community	3.8	2.9
United Kingdom	10.3	4.3
Japan	3.9	2.1
Canada	22.1	8.4

Concessions under the GATT have been made on all MFN provisions for ores, metals, and metal manufactures in the tariff schedules of the United States, as well as on 96 percent of the provisions (covering virtually all imports) in the Community's Common External Tariff. Only 70 percent of Canada's provisions, covering about two-thirds of Canadian imports are under the GATT; Japan's GATT concessions cover about 92 percent of its provisions and 95 percent of imports; and GATT concessions for the United Kingdom have been made on 91 percent of United Kingdom provisions relating to two-thirds of imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on ores, metals and metal manufactures negotiated under the GATT. The number of such concessions totaled 880, of which 608 reflected rates higher than the autonomous rate established in the CXT, 73 were at the CXT rate, and 199 were below the CXT rate.

Trade complaints

In its survey of trade barriers, the Tariff Commission had 369 complaints against practices or policies which affect trade in products in the sector for ores, metals and metal manufactures. Complaints were registered against virtually all developed countries, with the United States, the European Community, Canada and Japan being the object of most of the complaints. The complaints were almost equally divided between the developed countries and LDC's. Half of the complaints against LDC's were lodged against countries in Latin America, especially Mexico, Argentina, Brazil, Colombia, and Venezuela. Outside of Latin America, the countries mentioned most often were Spain, Greece, Egypt, India, and Pakistan. Embargoes, licensing practices and quotas headed the list of complaints, followed by import duties, subsidies, and various taxes or fees. The principal complaints are summarized in the paragraphs which follow.

Embargoes.--Of the many complaints concerning embargoes and similar practices which effectively exclude imports, most dealt with LDC's. However, Japan, the United States and other developed countries were also the subject of complaints. Mexico was most frequently mentioned by U.S. producers for practices which were in effect embargoes. Licenses to import are required by Mexico but it was reported that they are denied if the product is manufactured locally. This applies to a range of products such as clamps, all types of wrenches, pipe cutters, vises, screwdrivers, and hinges. For mechanic's hand tools, it was stated that Mexican officials will not permit imports of products that cannot be

manufactured locally if a substitute product can be produced. It was also reported that Mexico has an embargo on various steel products.

The practice of refusing to grant import licenses for steel products, hammers, and screwdrivers was reported as being common in Portugal and Chile. Ceylon will not permit imports of goods which are considered by the government to be luxury items. U.S. importers criticize the U.S. Maritime Administration's prohibition on the purchase of foreign-built containers by U.S. flag vessels governed by a U.S. operating differential subsidy contract. Another U.S. importer complained that products containing Cuban nickel and/or cobalt, whether produced in Cuba or not, are prohibited entry into the United States. The United States has an embargo on uranium imports for enrichment of domestic ores or use in domestic power reactors. The December 16, 1966, economic sanctions on Southern Rhodesia by the United Nations came under criticism from one U.S. importer of chromite. <sup>1/</sup> Other countries specifically mentioned as having embargoes on metals or metal manufactures were: Japan, Kuwait, Malta, South Africa, Senegal, Colombia, and Venezuela.

Licensing practices.--Many complaints were received from both U.S. producers and importers about licensing practices. It was reported that in Mexico and Colombia the availability of a license for steel hand tools depends on the local manufacturing of that product. Pakistan requires an import license for steel hand tools from the United States

---

<sup>1/</sup> Since January 1972, imports from Rhodesia of certain strategic and critical materials, including ferrochrome produced from Rhodesian chromite, have been allowed pursuant to a general license issued under the Rhodesian Sanctions Regulations.

but is said to waive this requirement for Communist countries and Denmark. An export license is required to ship thorium compounds from India. In the Republic of Malagasy, prior authorization is needed for the importation of metal casks and drums. The United States requires a special license to buy or sell fissionable materials. Another complaint against the United States centered on the fact that export licenses are required when exporting molybdenum concentrate and oxide and ferromolybdenum to certain countries. Other countries specifically mentioned as having unfavorable licensing practices adverse to U.S. trade were: Australia, Belgium, Luxembourg, Jamaica, Japan, Malta, Mexico, the Netherlands, and New Zealand.

Quantitative restrictions.--Many U.S. producers complained of quantitative restrictions encountered in trading with foreign countries. In the case of steel hand tools, it was reported that South Africa has a system of quotas based on the ability of domestic industries to produce similar products. Australia will only issue an import license for aluminum products when domestically produced products are unavailable. Indonesia and Singapore both implement quotas to protect their local industries. For products such as pliers and wrenches, Mexico and South Africa apply quotas by restricting the amount of licenses issued. One U.S. importer complained that foreign suppliers are persuaded to impose voluntary quotas on products of iron and steel in an effort to discourage more severe restrictions. Other countries mentioned as establishing quotas for iron and steel products were: Egypt, Ireland, Korea, the Netherlands, New Zealand, Yugoslavia, and countries of Latin America.

Special and/or additional taxes and fees.--Numerous complaints were received in this category concerning an assortment of taxes perceived as trade barriers by U.S. producers. A special steel fund tax of 2 to 20 pesos per net kilogram is levied in Argentina on imports of iron and steel. A 0.3 percent tax (based on the customs value) for foreign trade promotion is assessed on iron ore imports into Austria. It was reported that EC and EFTA countries have levied "compensating" and "equalization" taxes on farm tools. As a device to raise additional revenue to supplement its turnover tax, Greece assesses a special tax of 0.5 percent on the c.i.f. value of aluminum for a "university building" fund.

Import duties.--There were numerous complaints against import duties. It was noted that in Mexico duties on metal eyeglass cases can range as high as 550 percent, while duties on mechanic's hand tools are usually 100 percent. For pliers, screwdrivers and testing equipment, it was reported that duties in Latin American and African countries range from a low of 20 percent to a high of 180 percent of the c.i.f. value.

Several objections were raised against the discriminatory aspects of customs unions and other preferential trading arrangements. One U.S. producer of steel complained that the European Community has many preferential agreements for steel products or manufactures with third countries. A producer of metal eyeglass cases complained of discrimination from the Commonwealth preferences in shipments to Australia, Canada, New Zealand, and Western Hemisphere Commonwealth territories. A U.S. producer of steel hand tools reported that, in trading with

Pakistan, he was levied a higher import duty than his competitors from certain other countries. Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua were all mentioned as maintaining excessive duties on goods imported from countries outside of the Central American Common Market.

Subsidies and other government aids.--It was reported that Greece and Italy assist their exports of iron and steel products through direct tax rebates. Australia pays a bounty to encourage local production of pyrites. It was noted that Argentina, Colombia, Peru, and Venezuela have practices which in effect subsidize export products of their local metal industry. A coking coal subsidy in the European Community reduces the cost of EC steel products and thereby enhances their competitive position compared with foreign products. The government of the United Kingdom has set up investment grants for the establishment of domestic production capacity for aluminum. Other countries which furnish some type of subsidy or government assistance to exports include France, India, Italy, Japan, Netherlands, and numerous LDC's including Pakistan, the Philippines and Spain.

Government procurement.--Complaints in this category were registered by U.S. producers as well as by U.S. importers. Several complaints involved the "buy national" policies of the European Community and Japan on steel products. Concerning steel mill products used in construction, it was reported that in Argentina and Canada, manufacturers must use materials and labor of domestic origin on public works projects unless such materials are not available. One U.S. exporter of steel mill products

complained of the provincial regulations found in Canada which restrict bidding by non-Canadian companies for government contracts, unless their head office is in Canada. It was said that in the Netherlands only contractors of the European Community may submit bids for the production of steel mill products. Many U.S. importers complained of the "buy American" restrictions maintained by some states on numerous products. Other importers complained that purchases by the U.S. Department of Defense must be domestically produced products unless there is a 50 percent price advantage in purchasing imported products. For some state-financed projects, one U.S. importer complained of the prohibition on the use of imports.

Export restraints.--Complaints in this category were primarily registered by U.S. importers, but several complaints were received from U.S. producers. A number of countries maintained embargoes or quotas on exports of ores, metals and metal manufactures to the United States. A producer stated that exports of monazite from Brazil and India were prohibited because of the thorium content of monazite. Mexico was cited as having placed export restraints on ores in order to promote the development of domestic processing industries. U.S. importers complained about the "voluntary export restraints" of the European Community and Japan on their shipments of steel mill products to the United States, stating that such limitations restricted competition in the United States and encouraged inflation. 1/

---

1/ See Chapter VIII for a discussion of "voluntary" export restraints of steel-mill products by certain countries to the United States.

Border tax adjustments.--Taxes on value added (TVA) and turnover taxes drew most of the complaints lodged against border tax adjustments. The EC and EFTA countries were cited for turnover taxes on grass shears, pruning shears, axes, hatchets, hammers, and other miscellaneous garden tools. A number of EC member states and other European countries were similarly cited for turnover taxes on steel and aluminum. Italy was reported to have a compensation tax of 24 percent of c.i.f. value ( in addition to duty) plus an administration fee and a state fee on imports of aluminum. Belgium-Luxembourg maintained a transmission tax of 7 percent of c.i.f. value (plus duty); this amount plus supplemental charges were changed to a TVA tax.

Health and safety standards.--Two U.S. producers of enameled products complained of hygienic technical standards that their exported products had to meet. Brazil was cited as requiring imports of certain machines and appliances to be accompanied by two copies of safety certificates issued by competent authorities stating that the goods in question were produced in accordance with specified safety standards. Importers stated that U.S. standards posed problems for imports and cited the Department of Transportation requirement that compressed gas cylinders be checked by official U.S. inspectors during the manufacturing process, but no provision was made for foreign inspections. U.S. importers also stated that high pressure gas cylinders had to be tested in the United States even if they had already been tested in the country of origin. Importers also stated that the standards that are prescribed for boilers, pressure vessels, plumbing and heating equipment, and

fire-fighting equipment often are expensive or difficult for imports to meet. In the case of the boilers and pressure vessels, states and municipalities often require the American Society of Mechanical Engineers seal of approval which is available outside of North America only at great cost.

Port and statistical taxes, etc.--U.S. producers cited a number of instances where countries maintain customs administration fees and statistical fees. Producers of aluminum complained of statistical fees maintained on their products by Austria, Switzerland, and Jamaica. Italy was also cited for such fees by a steel producer. In Jamaica, these statistical fees amounted to 0.5 percent of the c.i.f. value, as compared to 1 percent in Italy. Italy was also mentioned by a steel producer because of its customs administration fee of 0.5 percent of the c.i.f. value. Similarly, a producer of hand, farm and garden tools complained of administration fees maintained by the EC countries. Jamaica was cited by an aluminum producer for its administration fee of 5 percent.

Miscellaneous practices.-- Other areas which drew complaints in smaller numbers than those discussed above are industrial product standards, stamp taxes, and antidumping practices. Government monopolies of the steel industry in many countries were mentioned as major nontariff trade barriers. Direct or indirect government intervention has appeared in most steel industries outside of the United States. It has been stated that as much as 60 to 70 percent of the free world's steel producing capacity is either directly owned or

effectively controlled by governments. Examples of this government ownership or control are visible in the steel industries of Japan, the United Kingdom, Spain, Argentina, the Philippines, Mexico, Yugoslavia and South Korea.

In the Commission's survey, respondents were requested to give their assessment of the restrictive effect of the barriers they reported by indicating whether trade in the affected products would show a "small," "moderate," or "significant" increase if the barrier (either alone or in combination with other barriers) were removed and, if possible, to estimate a dollar value for the increase. Only about 40 percent of the complaints received were accompanied by any assessment of the effect of the barriers encountered in trade in ores, metals and metal manufactures. Ninety-seven of the complaints were accompanied by an estimate of a "significant" increase in trade if the barrier (or barriers) were removed; 50 estimated "moderate" increases and only 10 reported a "small" increase. Estimates of trade increases ranged from \$4,000 to \$20 million annually, and a total of all the estimated increases which were furnished for this category of products amounted to about \$72 million. A considerable number of the respondents who indicated the effect as "small," "moderate," or "large" did not attempt to estimate the value of the increase which might result with a removal of the barrier.

## Ores and Metal Waste

Ores and metal waste include iron ore and concentrates; ores and concentrates of nonferrous base metals; iron and steel scrap; and ash and residues of metals or metallic compounds, except those of iron and steel. 1/

MFN tariffs

Among the five major countries, only the United States has a weighted average tariff for all MFN imports of ores and metal wastes (1.3 percent ad valorem); all imports of the four other countries enter under duty-free provisions. The United States and Canada have the highest arithmetic averages (3.0 and 2.9 percent ad valorem, respectively), whereas the Japanese rate is 0.3 percent ad valorem and the European Community's rate is 0.1 percent. The United Kingdom has no duty on ores and metal waste.

Canada and the United States have the highest arithmetic average tariffs for MFN dutiable products (11.9 and 10.1 percent ad valorem, respectively) followed by Japan (7.5 percent) and the European Community (1.5 percent). Japan, Canada, and the United States are the only major countries that have imports entered under dutiable provisions and consequently have weighted average tariffs (7.5, 7.1, and 7.0, respectively) (chart I-3-E).

The tariff levels appearing above for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on all Japanese rates in this subsector.

---

1/ For the specific coverage of this subsector, see BTN heading 26.01, 26.03, and 73.03.

Chart I-3-E. -- Average MFN tariff rates on ores and metal waste  
(Percent ad valorem)

\* Nearly all items in this sector are duty free; figures for Japan do not reflect the unilateral reduction (by 20 percent) made in 1972 on the dutiable Japanese items in this sector.

Source: Compiled from national tariffs and trade statistics.

Virtually all imports into the United States, Japan, and Canada were accorded MFN treatment. Preferential treatment is accorded about one-tenth of the European Community's imports and two-fifths of the United Kingdom's imports.

All MFN tariff provisions of the United Kingdom, and virtually all for Japan and the European Community are duty free. About three-quarters of the provisions of Canada and the United States are duty free; the bulk of the remaining provisions for the United States are in the 5.1-10 percent bracket. About one-tenth of the Canadian provisions are in the 5.1-10 percent bracket and another one-tenth in the 10.1-15 percent bracket (table I-3-E).

Table I-3- E.--Distribution, by duty level, of MFN tariff provisions for ores and metal waste

Note.--Due to rounding, figures may not add to 100 percent

In terms of MFN imports of ores and metal waste, all shipments into the United Kingdom, the European Community, and Canada, and virtually all into Japan are duty free. For the United States, 81 percent of entries are duty free; about one-tenth of U.S. imports are assessed rates ranging from 5.1-10 percent ad valorem (table I-3-F).

Table I-3-F.--Distribution, by duty level, of MFN imports of ores and metal waste

(In percent)

1/ A negligible quantity of imports are dutiable.

The United States exhibits the most complex tariff schedule for ores and metal waste, with 40 tariff lines; the United Kingdom has the simplest, only 3 lines. Schedules for Canada have 33 lines; for Japan, 29 lines; and for the European Community, 20 lines.

### Trade importance

Ores and metal waste account for about 10 percent of OECD exports and about 20 percent of OECD imports of all ores, metals, and metal manufactures. OECD exports totaled \$2 billion in 1969, imports were \$5.1 billion (chart I-3-F). Among the 119 industrial subsectors, ores and

Chart I-3-F . -- OECD trade in ores and metal waste, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

metal waste rank third in value of aggregate imports of the GATT tariff study countries. For Japan it is the most important subsector in imports; for the European Community the rank is third; and for the United States it is fifth. Metallic ores and concentrates and roasted iron pyrites

(BTN 26.01) constitute the most important category in the ores and metal waste subsector in imports of Japan, the European Community and the United States. In 1967, Japanese imports of metallic ores and concentrates and roasted iron pyrites were valued at \$1.2 billion; the European Community at \$886 million; and the United States at \$815 million.

### Trade network

The five major countries account for about 80 percent of OECD exports and 95 percent of imports (tables I-3-G and H). The largest supplier to the world is Canada, accounting for about one-third of OECD exports, followed closely by the United States. The principal importing countries are the European Community (including intra-EC shipments), Japan, the United States, and the United Kingdom.

About half of Canadian exports go to the United States and one-fifth to the European Community. About one-third of U.S. exports are received by Japan and nearly one-quarter by the European Community. Intra-EC shipments are over nine times greater than external exports.

Eighty percent of Japanese imports are from non-OECD countries, principally from the LDC's. The only other significant supplier to Japan is the United States. Over half of EC outside imports come from non-OECD sources, primarily the LDC's; other principal suppliers to the European Community are Canada and the United States. External shipments to the European Community are four times greater than intra-EC imports. Virtually all U.S. imports come from Canada (over one-third) and from non-OECD countries (three-fifths). About two-thirds of United Kingdom imports come from non-OECD countries, mostly the LDC's; nearly 15 percent is supplied by Canada.

Trade-agreement concessions

The tabulation below shows average rates of duty for the five countries on pre-trade-agreement base dates and on January 1, 1972. All averages are own-trade-weighted, except for Canada, which is an arithmetic average. The European Community, the United Kingdom and Japan had own-trade-weighted averages of zero on both dates. The low average pre-trade-agreement tariff levels for the United States and Canada had been reduced significantly by January 1, 1972. Japan, in November 1972, made unilateral 20 percent reductions in all of its dutiable provisions on ores and metal waste, under which imports have been negligible or nil. Among the five major countries, only for the United States are specific duties important--accounting for slightly more than one-quarter of its tariff lines.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	6.1	1.3
European Community	0.0	0.0
United Kingdom	0.0	0.0
Japan	0.0	0.0
Canada	6.5	2.9

All MFN provisions for ores and metal waste in the tariff schedules of the European Community and the United Kingdom have been the subject of GATT concessions. In the U.S. schedule, 93 percent of the provisions, covering 98 percent of MFN imports have GATT concessions; and in the Canadian schedule, 33 percent of the provisions, covering 31 percent of MFN imports. In the Japanese schedule, 79 percent of tariff provisions, covering 97 percent of MFN imports are fully covered by GATT concessions;

for 21 percent of the provisions, covering 3 percent of MFN imports, only part of an item is covered.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on ores and metal waste negotiated under the GATT. The number of such concessions totaled 23, of which all were at the CET rate.

The major category of ores and metal waste is metallic ores and concentrates (BTN heading 26.01) accounting for about 80 percent of such imports for the GATT tariff study countries. The major MFN importers are Japan, the European Community, and the United States. Tariff rates, including specific reductions are shown in table I-3-I.

Table I-3-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on metallic ores and concentrates

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free; 9%-20.8% AVE <sup>2/</sup> Free; 23.8% AVE <sup>2/</sup> 0.3%-65% AVE <sup>2/</sup>	Free; 4.5%-20% AVE Free--9.6% AVE 0.3%-26% AVE	Free--10% AVE <sup>3/ 4/</sup> Free--9.6% AVE <sup>3/ 4/</sup> Free--13% AVE <sup>3/ 4/</sup>	601.03-.66 602.10-.30 603.10-.40; 521.17
Canada-----	Free; 25% <sup>5/</sup>	Free; 15% <sup>5/</sup>	Free; 15% <sup>5/</sup>	32900-1---33400-1
European Community--	Free	Free	Free	26.01
United Kingdom-----	Free	Free; 10%	Free	26.01
Japan-----	Free  Free	Free  15%	Free  7.5%	26.01-1---01-6(1); 26.01-7---01-8 26.01-6(2) <sup>6/</sup>

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Range of ad valorem equivalents of specific rates of duty of 0.05 cents to 50 cents per pound, calculated on 1971 import values.

<sup>3/</sup> About 88 percent by value of U.S. imports in 1971 were duty free, and most of the remainder were dutiable at 9.6 percent AVE.

<sup>4/</sup> Range of ad valorem equivalents of specific rates of 0.12 cents to 25 cents per pound.

<sup>5/</sup> Eight of the 9 tariff classes were duty free.

<sup>6/</sup> Temporary duties in effect on imports of ores of over 39 percent manganese content and for imports exceeding the stipulated quota for certain other manganese and tungsten ores.

### Iron and Steel

The iron and steel subsector includes (1) unworked iron and steel (such items as pig iron, powders, and ingots), (2) ferroalloys, and (3) mill products of iron and carbon, high-carbon and alloy steel, such as bars, rods, angles, shapes, sections, sheets and plates, wire, railway tracks, and tubes and pipes. 1/

#### MFN tariffs

Among the five major countries, Canada and the European Community have the lowest MFN arithmetic tariff averages (5.2 and 6.3 percent ad valorem, respectively) for all iron and steel products; Japan has the highest average (9.4 percent). However, on a weighted basis, Japan has the lowest average (5.5 percent) and the United Kingdom, the highest (9.7 percent) (chart I-3-G).

For dutiable products, the European Community has the lowest MFN arithmetic tariff average (6.5 percent ad valorem); the United Kingdom has the highest (10.7 percent). On a weighted basis, Japan has the lowest average (5.5 percent) and the United Kingdom again the highest (10.9 percent).

The average MFN tariff rates on iron and steel are about the same for all products and dutiable products for the United States, Japan, and the European Community. There are significant differences in these tariffs for Canada and the United Kingdom, reflecting a number of duty-free provisions (affecting the arithmetic average) and duty-free entries (affecting the weighted average).

---

1/ For the specific coverage of this subsector, see BTN headings 73.01-.02 and 73.04-.18.

Chart I-3-G. -- Average MFN tariff rates on iron and steel  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reduction (by 20 percent) made in 1972 on most Japanese rates in this sector; several rates were made duty-free.

Source: Compiled from national tariffs and trade statistics.

The bulk of all imports by all of the five major countries, except the United Kingdom and excluding intra-EC shipments, receive MFN treatment; preferential rates are important in the United Kingdom where over one-half of iron and steel imports in 1967 received preferential tariff treatment. Intra-EC shipments, which move free of duty, are several times larger than EC imports from outside sources.

Most of the MFN tariff provisions of Japan, the European Community, and the United States are in the 5.1-10 percent ad valorem bracket. The principal bracket for the United Kingdom is 5.1-10 percent, whereas almost half of the Canadian provisions are duty free. The European Community has no provisions over 10 percent ad valorem, the U.S. provisions do not exceed

15 percent, Canadian and Japanese provisions are not above the 20 percent bracket, and the United Kingdom has its highest rates (4 percent of its provisions) in the 20.1-25 percent bracket. Canada and the United Kingdom have significant duty-free provisions; the European Community and the United States have a few duty-free provisions; and Japan has no duty-free provisions (table I-3-J).

Table I-3-J.--Distribution, by duty level, of MFN tariff provisions for iron and steel

(In percent)

15.1-20.0 percent----	7.6	-	-	-	9.8
20.1-25.0 percent----	-	-	-	-	.9
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

Of the five major countries, the United States exhibits the most complex schedule for iron and steel, with 198 lines; the United Kingdom has the simplest, 76 lines. Schedules for the European Community and Canada have 165 lines; and for Japan, 98 lines.

#### World production

In 1969, world production of pig iron (unworked iron) and ferroalloys combined amounted to 460 million short tons, of which an estimated 410 million tons were consumed in the production of 633 million tons of raw steel, including steel ingots and castings (unworked steel). World output of mill products from raw steel is estimated at 450 million short tons. The quantity of world production of pig iron (including ferroalloys), raw steel, and steel-mill products in 1969, in millions of short tons, by selected countries, was as follows:

<u>Country</u>	<u>Pig iron (including ferroalloys)</u>	<u>Raw steel</u>	<u>Steel-mill products</u>
(Millions of short tons)			
Canada	8	10	6
United States	98	141	94
Japan	66	91	74
European Community	87	118	96
United Kingdom	18	30	24
All other	183	243	156
Total	460	633	450

The figures for "all others" in this tabulation include 1969 U.S.S.R. production of 90 million tons of pig iron, 122 million tons of raw steel, and 85 million tons of steel-mill products.

#### Trade importance

Iron and steel account for about one-third of OECD trade in ores, metals, and metal manufactures. OECD exports totaled \$10.4 billion in

Chart I-3-H. -- OECD trade in iron and steel, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

1969, imports were \$8.3 billion (chart I-3-H). By 1970, OECD exports and imports had risen to \$13.1 and \$10.4 billion, respectively. About three-quarters of iron and steel imports by the GATT tariff study countries consist of mill products. Among the 119 industrial subsectors, iron and steel mill products rank fifth in value of aggregate imports of the GATT tariff study countries. For Canada it is the ninth most important subsector in imports; for the United States it is third. U.S. imports of iron and steel amounted to \$1.8 billion in 1969, and increased to \$2.7 billion in 1971. Among the combined most-favored-nation imports of iron and steel, the most important BTN heading is

73.13, sheets and plates of iron and steel, hot-rolled or cold-rolled.

The major MFN importers of such iron and steel are the United States (\$989 million in 1971), the European Community, and Canada.

### Trade network

The five major countries account for about 90 percent of OECD exports and nearly 80 percent of imports (tables I-3-L and M). The largest supplier to the world is the European Community (excluding intra-EC exports), followed by Japan. The principal importing countries are the United States and the European Community (excluding intra-EC imports). The European Community exports principally to "other" OECD countries, the LDC's, and the United States; Japan ships chiefly to the LDC's and the United States. Intra-EC shipments are about equal to the Community's exports to outside sources. EC imports from outside sources are about one-third of intra-EC imports.

#### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, were substantially below levels existing on pre-trade-agreement base dates. The lower levels, in part, reflect concessions granted in reciprocal negotiations. However, the use of specific duties is significant in the schedules of the United States, the United Kingdom, and Canada, particularly in the subdivision of iron and steel mill products. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figures are arithmetic averages.

Pre-trade-agreement      January 1, 1972

(Percent ad valorem)

United States	18.5	6.6
European Community	8.2	6.3
United Kingdom	31.5	9.7
Japan	10.1	5.5
Canada	18.7	5.2

All MFN provisions for iron and steel semimanufactured products (accounting for about three-quarters of total iron and steel imports by the GATT tariff study countries) in the tariff schedules of the European Community, the United States, and the United Kingdom have been the subject of GATT concessions. In the Japanese schedule, 85 percent of the provisions covering 95 percent of MFN imports have GATT concessions; in the Canadian schedule, 53 percent of the provisions, covering 78 percent of MFN imports.

All the national tariffs of European Community members prior to adoption of the Common External Tariff contained concessions under the GATT. Of 200 concessions in the national tariffs, 170 were at rates above the CXT autonomous rates, 5 at the CXT rate, and 25 were below the CXT rate.

Carbon steel pipes and tubes and angles, shapes, and sections are important imports for the United States. Tariff rates for these products, including specific reductions, for the United States and certain other major countries are shown in tables I-3-N and I-3-O.

For certain carbon steel pipes and tubes, trade-agreement concessions resulted in reductions from the statutory levels by 60 percent by the United States, 41 or 50 percent by Canada, 50 percent by Japan, 29 or 36 percent by the European Community, and 15 percent by the United Kingdom. Carbon steel pipes and tubes were excluded from the Kennedy Round by the United States and one of the two classes covering such items was excluded by Canada. Rates for the other class were cut by 8 percent. As with other steel-mill products, the aggregate of trade-agreement concessions granted by the European Community and Japan on steel pipes and tubes were granted during the Kennedy Round. Reductions during the Kennedy Round by the United Kingdom were by 3 percent.

Table I-3-N.--Pre-trade-agreement tariff rates compared with January 1, 1972

United Kingdom-----	20%	17.5%	17%	73.18
Japan-----	15%	15%	7.5%	73.18-2

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ The ad valorem equivalents (AVE) shown are based on U.S. imports during 1970 and represent specific rates of duty of 0.75¢, 1.25¢, and 1.75¢ per pound. The AVE which is underlined represents the rate for the principal items of trade.

3/ The ad valorem equivalents shown are based on U.S. imports during 1970 and represent specific rates of duty of 0.3¢, 0.625¢, and 0.875¢ per pound. These items were not subject to concessions in the Kennedy Round. The AVE which is underlined represents the rate for the principal items of trade.

4/ Only one of the two tariff classes was subject to concessions in the Kennedy Round.

For angles, shapes, and sections, overall reductions from statutory rates by the United States were among the most significant of the five major countries--50, 68, 70 or 78 percent. Canadian reductions were by 56 percent; for the European Community, by 30 to 44 percent; for the United Kingdom, 20 percent; and for Japan, 50 percent. During the Kennedy Round, the following percentage reductions in duties came into force: The United States, 13, 26 or 50 percent; Canada, 22 percent; the European Community, 30 to 44 percent; Japan, 50 percent; and the United Kingdom, 20 percent. For the European Community, the United Kingdom, and Japan, all reductions from "autonomous" or general rates were accomplished during the Kennedy Round of negotiations.

Table I-3-0.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on angles, shapes, and sections

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> The ad valorem equivalents (AVE) shown are based on U.S. imports during 1970 and represent specific rates of .2 cents per pound and .2 cents per pound plus 8 percent ad valorem.

<sup>3/</sup> The ad valorem equivalents shown are based on U.S. imports during 1970 and represent specific rates of .1 cent per pound and .1 cent per pound plus <sup>4/</sup> percent ad valorem.

<sup>4/</sup> Additional duties are applied in class 609.86 and are based on content of chromium, molybdenum, tungsten, or vanadium.

<sup>5/</sup> The ad valorem equivalents shown are based on U.S. imports during 1970 and represent specific rates of .1 cent per pound plus 2 percent ad valorem.

<sup>6/</sup> The official rate was the greater of either a specific rate of B7 10s per ton and B6 per ton for the pre- and post-Kennedy Round periods, respectively, or the ad valorem rate as shown.

## Nonferrous Metals

The nonferrous metals subsector includes both unwrought and semi-manufactured (worked) metals. The principal nonferrous metals are copper, lead, zinc, nickel, aluminum, tin, manganese, and uranium. <sup>1/</sup>

MFN tariffs

Among the five major countries, tariff averages for nonferrous metals on January 1, 1972, ranged from a 1.4 percent weighted ad valorem average for all products in the United Kingdom to a 12 percent arithmetic average for dutiable products in Japan. For most countries, arithmetic averages are significantly higher than weighted averages (chart I-3-I).

For all nonferrous metal products, Canada has the lowest arithmetic average tariff (5.1 percent ad valorem) and Japan the highest (10.8 percent). The United Kingdom and the European Community have the lowest weighted average tariffs (1.4 and 1.7 percent, respectively); Japan again has the highest (6.1 percent).

For nonferrous metal dutiable products, the European Community has the lowest arithmetic average tariff (6.9 percent ad valorem) and Japan the highest (12 percent). The United States has the lowest weighted average (3.8 percent); the highest weighted averages are 7.1 percent (the United Kingdom), 6.9 percent (the European Community), and 6.8 percent (Japan).

---

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 74.01-.08, 75.01-.05, 76.01-.07, 77.01-.02, 77.04, 78.01-.05, 79.01-.04, 80.01-.05, and 81.01-.04.

Chart I-3-1. -- Average MFN tariff rates on non-ferrous metals  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions made in 1972 on three-fifths of the Japanese rates in this sector; about 17 percent of the rates were excepted from unilateral reductions, while the remainder were reduced by amounts ranging from 6 percent to 100 percent.

Source: Compiled from national tariffs and trade statistics.

Arithmetic tariff averages for dutiable products are significantly higher than for all products for Canada and the United Kingdom, reflecting a number of duty-free provisions. In the schedules of the United Kingdom, the European Community, and Canada, where the bulk of nonferrous metal imports enter duty free, weighted tariff averages for dutiable products are well above averages for all products.

About half of the MFN tariff provisions for the United States, the European Community and the United Kingdom are in the 5.1-10 percent bracket;

over half of the Canadian provisions are duty free; and, for Japan, one-third are in the 10.1-15 percent bracket and one-quarter in the 5.1-10 percent bracket. All of the five major countries have some duty-free provisions. The European Community has no provisions above the 10.1-15 percent bracket; Canada and Japan have about 15 percent of their rate provisions above 15 percent ad valorem (table I-3-P).

Table I-3- P.--Distribution, by duty level, of MFN tariff provisions for non-ferrous metals

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

In terms of MFN imports of nonferrous metals, duty-free entries are important for the United Kingdom (four-fifths of all entries), the European Community (three-quarters), and Canada (one-half). Two-thirds of Japanese entries are in the 5.1-10 percent bracket; over half of U.S. imports are in the 0.1-5 percent bracket and over one-fourth are duty free (table I-3-Q).

Table I-3- Q.--Distribution, by duty level, of MFN  
imports of non-ferrous metals

Duty level	(In percent)

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Imports of nonferrous metals by all of the major five countries except the United Kingdom are primarily on an MFN basis; in 1967, about two-thirds of United Kingdom imports were entered on a preferential basis.

Of the major countries, the United States exhibits the most complex schedule for nonferrous metals with 266 lines; the United Kingdom has the simplest, 84 lines. Schedules for Canada have 169 lines; for the European Community, 111 lines; and for Japan, 110 lines.

#### World production

The United States is the principal free-world producer of nonferrous metals, with an estimated annual value of output exceeding \$4 billion, the greater part of which is accounted for by the production of aluminum and copper. Canada, the European Community, and Japan are believed to produce nonferrous metals valued at somewhat less than half that of the United States. The United Kingdom is a relatively small producer. Among other world producers, the output of nonferrous metals by the U.S.S.R.

is nearly comparable in total value to that of the United States and derives most of its value from the production of copper, aluminum, and manganese. Zambia and Chile produce large amounts of copper, and Australia has a substantial output of aluminum, copper, lead, and zinc.

#### Trade importance

In 1969, nonferrous metals accounted for 26 percent of OECD exports and 37 percent of OECD imports of the ores, metals, and metal manufactures sector. OECD exports totaled \$6.3 billion; imports were \$10.2 billion (chart I-3-J). In 1967, unwrought copper, an important commodity in the nonferrous metal group, ranked sixth in value of aggregate imports of the GATT tariff study countries. For the European Community it is the second most important subsector in imports; for the United Kingdom, the rank is fifth; and for the United States, eighth. United States imports of all nonferrous metals amounted to \$1.5 billion in 1969 and 1971. Copper matte, unwrought copper, and copper waste and scrap (BTN 74.01) is by far the most important category in trade terms. In 1967, the major importing countries—the European Community (\$878 million), the United States (\$543 million), Japan (\$371 million), and the United Kingdom (\$178 million)—accounted for 92 percent of combined MFN imports.

#### Trade network

The five major countries account for 85 percent of OECD exports and 88 percent of imports (tables I-3-R and I-3-S). The major OECD exporter

Chart I-3-J . -- OECD trade in non-ferrous metals, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

to the world is the European Community, accounting for about one-third of OECD exports (including intra-EC shipments), followed by Canada and the United States. The principal OECD importer is the European Community (even excluding intra-EC imports), followed by the United States, Japan, and the United Kingdom.

Intra-EC imports which move duty free, are about half as large as imports from outside sources. Imports by the European Community from outside sources are supplied principally by the LDC's. United States imports are furnished primarily by Canada and the LDC's.

Trade-agreement concessions

On January 1, 1972, as the tabulation below shows, average tariff levels for nonferrous metals in the United States, Canada, and the United Kingdom were substantially below levels existing on pre-trade-agreement base dates. Of the five major countries, specific duties are important for the United States and Japan.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	9.9	2.7
European Community	2.2	1.7
United Kingdom	3.7	1.4
Japan	9.4	6.1
Canada	17.6	5.1

All MFN provisions for unwrought copper (an important commodity group within the nonferrous metal subsector) in the tariff schedules of the European Community, the United States, and Japan have been the subject of GATT concessions. In the Canadian schedule, 45 percent of the provisions, covering 78 percent of MFN imports have GATT concessions; in the United Kingdom schedule, 40 percent of the provisions, cover none of MFN imports.

All EC member state national tariffs prior to adoption of the Common External Tariff contained concessions under the GATT. Of 200 concessions in the national tariffs, 149 were at rates above the CXT autonomous rates, 25 were at the CXT rate, and 26 were below the CXT rate.

Tariffs on unwrought copper, the largest import category in this subsector for the OECD countries, have been reduced through trade-agreement concessions for the United States and Canada and for certain provisions

in the Japanese schedule. In the schedules of the European Community and the United Kingdom, unwrought copper remained duty free throughout the period (table I-3-T).

Table I-3-T.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on unwrought copper

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round

United Kingdom-----	Free	Free	Free	74.01(B)
Japan-----	Free	Free	Free	74.01-1
	10%	10% 7.8%; 8.7% AVE <sup>3/</sup>	8.5% 6.9% AVE <sup>3/</sup>	74.01-2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> About 98 percent of U.S. imports were dutiable at 1.6 percent or 1.7 percent ad valorem equivalent based on imports in 1971.

<sup>3/</sup> Ad valorem equivalents of specific rates of 24 yen, 27 yen, or 30 yen per kilogram, calculated on average unit value of 1972 imports.

## Metal Manufactures

Metal manufactures include a variety of articles of iron and steel, copper, nickel, aluminum, and certain articles of magnesium, lead, zinc, and tin. Also included are tools (e.g., spades, saws, and drills), cutlery and parts thereof, household equipment (e.g., saucepans, non-electric cooking and heating apparatus, and picture frames of base metal), metal containers, and other metal manufactures (e.g., barbed wire, nails, springs, and lamps of base metal). <sup>1/</sup>

MFN tariffs

Among the five major countries, tariff averages for metal manufactures on January 1, 1972, ranged from a weighted average of 7.7 percent ad valorem for all products for the United States to a 16.7 percent weighted average for dutiable products for Canada. For all of the major countries, except Canada, average tariffs for all products and dutiable products are the same, or only slightly different, reflecting few duty-free provisions and little duty-free trade (chart I-3-K).

For all metal manufactures, the European Community has the lowest arithmetic average tariff (7.9 percent ad valorem); Canada and the United Kingdom have the highest (11.7 percent). The United States has the lowest weighted average tariff (7.7 percent); the United Kingdom again has the highest (11.9 percent).

For dutiable metal manufactures, the European Community has the lowest arithmetic average tariff (7.9 percent ad valorem) and Canada the highest (15.6 percent). The United States and the European Community have the lowest weighted average tariffs (8 percent); the highest weighted average is 16.7 percent (Canada).

---

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 73.19-.35; 73.38-.40; 74.09-.19; 75.06; 76.08-.16; 77.03; 78.06; 79.05-.06; 80.06; 82.01-.15; 83.01-.03; 83.06-.05.

Chart I-3-K. -- Average MFN tariff rates on metal manufactures  
(Percent ad valorem)

For Canada and the United States, the arithmetic average tariffs for dutiable products are higher than such averages for all products, reflecting one-quarter of the Canadian provisions and two percent of the U. S. provisions that are duty free. Weighted tariff averages for dutiable products are above such averages for all products for Canada, and to a limited extent, for the United States, as the result of duty-free entries of metal manufactures.

The bulk of all imports by all of the five major countries, except the United Kingdom and excluding intra-EC shipments, receive MFN treatment; preferential rates are important in the United Kingdom, covering about one-third of its metal manufacture imports in 1967. Intra-EC shipments, which move free of duty, are twice as large as EC imports from outside sources in 1969.

Most of the MFN tariff provisions of Japan, the European Community, and the United Kingdom, as well as about half of the U.S. provisions, are in the 5.1-10 percent ad valorem bracket. For the United States, about one-fifth of its provisions are in the 0.1-5 percent bracket. For Canada, about half of its provisions are in the 15.1-20 percent bracket; another quarter of Canada's provisions are duty free. The only other duty-free provisions are in the U.S. schedule, accounting for about two percent of its provisions (table I-3-U).

Table I-3-U.--Distribution, by duty level, of MFN tariff provisions for metal manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	24.9	2.3	-	-	-

30.1-40.0 percent---	-	1.0	-	-	-
40.1-50.0 percent---	-	.8	-	-	-
Over 50 percent----	-	.2	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

For MFN imports of metal manufactures, the majority of entries for Japan and the European Community are assessed rates between 5.1-10 percent ad valorem, as are 61 percent of the entries for the United Kingdom. Half of Canadian imports are in the 15.1-20 percent bracket; over one-third are duty free. The United States is the only other major country with duty-free entries; one-third of U.S. imports are in the 0.1-5 percent bracket and another third in the 5.1-10 percent bracket (table I-3-V).

Of the five major countries, the United States exhibits the most complex schedule for metal manufactures with 514 tariff lines; the United Kingdom has the simplest, 94 lines. The Canadian schedule has 389 lines; Japan, 131 lines; and the European Community, 111 lines.

Note.--Due to rounding, figures may not add to 100 percent.

### Trade importance

In 1969, metal manufactures account for 23 percent of OECD exports and 14 percent of OECD imports of ores, metals, and metal manufactures. OECD exports of metal manufactures totaled \$5.5 billion in 1969 (chart I-3-L) and \$6.5 billion in 1970. OECD imports of metal manufactures

Chart I-3-L . -- OECD trade in metal manufactures, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

totalled \$4 billion in 1969, and \$4.8 billion in 1970. United States imports amounted to \$772 million in 1969 and \$953 million in 1971. The most important BTN heading in this subsector is 73.32, iron or steel bolts, nuts, screws, rivets, and washers. The United States is the largest single MFN importer of the products included in this BTN heading (\$105 million in 1971), followed by Canada; combined imports by these two countries accounted for the bulk of imports by all GATT tariff study countries.

### Trade network

The five major countries account for about 87 percent of OECD exports and three-fourths of OECD imports (tables I-3-W and I-3-X). The

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Note.--Complete country of origin data are not available for 10 percent of Canadian imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

major OECD exporter is the European Community, accounting for almost half of OECD exports, followed by the United States, Japan, and the United Kingdom. The principal OECD importer is the European Community (including intra-EC imports), followed by the United States.

Intra-EC imports, which move duty free, are twice as large as imports from outside sources. Imports by the European Community from outside sources are supplied principally by "other" OECD countries, the United States, and the United Kingdom. U.S. imports are furnished primarily by Japan, the European Community, and Canada.

Trade-agreement concessions

On January 1, 1972, as the tabulation below shows, average tariff levels for metal manufactures in all major countries were substantially below levels existing on pre-trade-agreement base dates.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	34.8	7.7
European Community	15.8	8.0
United Kingdom	17.5	11.9
Japan	17.9	8.9
Canada	27.1	11.7

All MFN tariff provisions for metal manufactures in the tariff schedules of the United States and the United Kingdom have been the subject of GATT concessions. In the EC and Japanese schedules, all provisions are bound in GATT except in the area of cutlery. Canada's GATT concessions range from 76 percent of the provisions, covering 59 percent of MFN imports, in the "other" metal manufactures groups to 95 percent of the provisions covering 100 percent of MFN imports in the cutlery area.

All EC member state national tariffs prior to adoption of the Common External Tariff contained concessions under the GATT. Of 457 concessions, for metal manufactures 289 were at rates above the CXT autonomous rates, 20 were at the CXT rate, and 148 were below the CXT rate.

Tariffs on stainless steel cutlery, an important type of import for the OECD countries, have been reduced through trade-agreement concessions for all of the five major countries, except the European Community (table I-3-Y). The most significant reductions, overall, were made by the

Table I-3-Y.--Pre-trade-agreement tariff rates compared with January 1, 1972.  
MFN tariff rates on certain stainless steel cutlery  
(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

	58.9%-62.2% AVE <sup>3/</sup>	19.8%-26.1% AVE <sup>4/</sup>	19.8%-26.1% AVE <sup>2/</sup> <sup>4/</sup>	650.54; .7515
Canada-----	35%	25% <sup>2/</sup>	25% <sup>2/</sup>	42902-1
European Community--	17% or 19%	17% or 19% <sup>2/</sup>	17% or 19% <sup>2/</sup>	82.09; 82.14A
United Kingdom-----	20%	25% or 20%	18% <sup>5/</sup>	82.09(A); 82.14
Japan-----	20%	18% or 20%	9% or 10%	82.09-2; 82.14-2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> All items were excluded from trade-agreement concessions in the Kennedy Round.

<sup>3/</sup> The ad valorem equivalents (AVE) shown are based on U.S. imports in 1970 and represent a compound rate of duty of 2¢ each plus 45% ad valorem.

<sup>4/</sup> The ad valorem equivalents shown are based on U.S. imports in 1970 and represent a compound rate of duty of 1¢ each plus 12.5% or 17.5% ad valorem.

<sup>5/</sup> When the official rate is either a specific or an ad valorem rate, the latter is shown here.

United States (cuts ranged from 58 to 67 percent below statutory levels) and Japan (50 percent). Canada reduced rates from general levels by 29 percent, and the United Kingdom had reductions of 10 or 28 percent. Cutlery was not subjected to concessions in the Kennedy Round by the United States, Canada, or the European Community. The Japanese overall reductions of 50 percent were negotiated during the Kennedy Round, as was the reduction of the duty of one class of cutlery by the United Kingdom (10 percent); the other class underwent a 28 percent duty reduction; however, the pre-Kennedy Round rate on this latter class was the result of an earlier increase from the general rate.

## CHEMICALS

The chemicals sector covers chemical elements, organic and inorganic chemical compounds, and semimanufactured and finished chemical products, including dyeing, tanning, and coloring materials, medical and pharmaceutical products, plastics, and perfume and toilet preparations. 1/

MFN tariffs

World MFN imports of chemicals face average tariff rates in the five major countries very similar to those for industrial products taken as a whole. The arithmetic averages range from 7.7 percent ad valorem (Canada) to 11.2 percent (United Kingdom) for all products and from 9.7 percent (United States) to 13.5 percent (Canada) for dutiable products. The weighted averages range from 8 percent (United States) to 13.1 percent (United Kingdom) for all products and from 9.1 percent (United States) to 14 percent (United Kingdom) for dutiable products (chart I-4-A). All tariff averages or rates for the United States shown in this product sector which cover certain benzenoid chemicals reflect the effect of assessing U.S. duties on those benzenoid chemicals on the American Selling Price system of customs valuation through the conversion of the amount of duty collected on

---

1/ For the specific coverage of this sector, see BTN headings 15.11; 27.05; 28.01-.58; 29.01-.45; 30.01-.05; 32.01-.13; 33.01-.06; 34.01-.02, -.04, -.05, -.07; 35.03-.04, -.06; 36.01-.05, -.09; 38.01-.03; 38.05-.19; and 39.01-.07. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Note.--Due to rounding, figures may not add to 100 percent

such chemicals to the equivalent percentage on a valuation base comparable to that used for other products.

The averages for all products and dutiable products do not differ significantly except for Canada, which has tariff averages for all products considerably below averages for dutiable products, indicating a substantial proportion of duty-free provisions and imports.

Table I-4-A illustrates the distribution of MFN tariff provisions, by duty level, for chemicals. About one-half of the provisions in the schedules of Japan and the United Kingdom range from 5.1 to 10 percent ad valorem; one-fifth of Japanese provisions are in the 10.1-15 percent bracket and 13 percent in the 0.1-5 percent bracket. About one-third of United Kingdom provisions are equally divided in the 15.1-20 and 20.1-25 percent brackets. The European Community's provisions are chiefly in the 10.1-15 percent ad valorem bracket (one-half) and in the 5.1-10 percent bracket (one-third). The United States has the highest concentration of rate provisions in the 0.1-5 percent ad valorem bracket, while Canada's heaviest allotment (43 percent) is in duty-free provisions.

In 1970, imports of chemicals receiving preferential tariff treatment were nil or negligible for four of the major countries; the United Kingdom applied preferential rates on 28 percent of imports. EC imports from outside sources are equal to two-thirds of intra-EC imports which move free of duty.

Over 70 percent of MFN imports by Japan and 45 percent of United Kingdom entries are under rates ranging from 5.1 to 10 percent ad valorem. For the European Community, two-thirds of its entries are distributed in the two brackets of 5.1-10 and 10.1-15 percent ad valorem. About one-third of U.S. imports are at rates within the 0.1-5 percent bracket; about one-fifth of imports are duty free and almost one-fourth pay duties of 5.1 to 10 percent ad valorem. For Canada, one-third of its imports are duty free and one-third are assessed rates in the 10.1-15 percent ad valorem range (table I-4-B).

All of the major countries have relatively detailed tariff schedules for chemicals. The European Community's tariff contains 756 line provisions in the chemicals sector, Japan has 616 lines, and the United Kingdom has 603 lines. Products covered in the chemicals sector are provided for in 849 rate provisions in the U.S. tariff schedule and 524 provisions in the Canadian schedule. The basic classification principles for chemicals in the U.S. and parts of the Canadian schedules differ significantly from those of the Brussels Tariff Nomenclature. Consequently, a completely accurate rearrangement of U.S. and Canadian provisions into the BTN system frequently requires multiple fractionalization of single U.S. and Canadian items and would produce a "tariff line" count of about 2,200 for the United States and 822 for Canada. However, for the United States, only about 1,073 of these lines would be meaningful in a commercial sense,

Table I-4 B.--Distribution by duty level, of MFN imports of chemicals

Duty level	(In percent)

Note.--Due to rounding, figures may not add to 100 percent

and throughout the remainder of this sector, references to U.S. tariff line count will be based on this figure. Because of the absence of better information, however, the Canadian line count is based on the figure of 822 lines for the sector.

#### Trade importance

Chemicals comprise one of the more important industrial sectors, ranking fourth in OECD exports and sixth in OECD imports. The sector accounts for 10 percent of OECD industrial exports and 8 percent of OECD industrial imports. For the United States, the sector is the third most important in exports. It ranked eighth in U.S. imports in 1967, 1969, and 1970. Chemicals ranked fourth in industrial imports for Canada in 1970, fifth for the United Kingdom and the European Community, and sixth for Japan. U.S. imports of chemicals were valued at \$773 million in 1967, \$1.3 billion in 1969, and \$1.5 billion in 1971.

Imports by the GATT tariff study countries were valued at \$6 billion in 1967 and \$9.8 billion in 1970. Intra-European Community shipments were an additional \$2.1 billion in 1967 and \$3.9 billion in 1970. Imports by the OECD countries in 1969 were \$12.6 billion (including \$3.4 billion of intra-EC shipments) and exports were \$16.2 billion (chart I-4-B). By 1970, imports by the OECD countries had risen to \$14.6 billion (including \$3.9 billion of intra-EC shipments) and exports totaled \$18.6 billion.

Source: Compiled from OECD Statistics of Foreign Trade, Series 2, 1969.

### Trade network

The five major countries account for over 85 percent of OECD exports and 75 percent of OECD imports. About half of OECD exports go to the five major countries; about one-quarter to LDC's. About 80 percent of OECD imports are supplied by the five major countries. The United States imports principally from the European Community, the LDC's, and Canada; U.S. exports chiefly go to the LDC's, the European Community, and Canada (chart I-4-C).

Chart I-4-C.--United States trade in chemicals, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The European Community is the principal exporter, accounting for almost half of OECD exports, followed by the United States, the United Kingdom, and Japan. Forty-four percent of EC exports are intra-Community shipments; one-third of EC shipments to outside destinations go to LDC's and one-third to "other" OECD countries. Almost one-third of U.S. exports are shipped to LDC's, one-fourth go to the European Community, and 17 percent to Canada. The United Kingdom exports principally to LDC's, "other" OECD countries, and the European Community. The major markets for Japan are LDC's and the United States (table I-4-C).

The European Community supplies over one-quarter of U.S. imports; LDC's nearly one-fifth; and Canada and Japan, 14 to 16 percent each (table I-4-D). Only 38 percent of EC imports come from non-member countries, the principal suppliers being the United States and "other"

OECD countries. The United Kingdom imports 40 percent of its supply from the European Community and one-fifth each from the United States and "other" OECD countries. The United States is the principal supplier to Canada and Japan, and the largest outside supplier to the European Community.

#### Trade composition

The chemicals sector is divided into six subsectors, two of which--chemical elements and compounds, and plastics--combined, account for 60 percent of OECD chemical exports and 65 percent of OECD chemical imports. The relative importance of the six subsectors is shown in chart I-4-D.

#### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, were substantially below levels existing on pre-trade-agreement

Chart I-4-D. -- OECD trade in chemicals, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

base dates. The lower levels, in large part, reflect concessions granted in reciprocal negotiations. Among the major five countries, specific rates are significant only for the United States, affecting about one-third of its tariff lines and MFN imports. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figures are arithmetic averages. Most of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 7.6 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	30.2	8.0
European Community	13.7	10.0
United Kingdom	18.2	13.1
Japan	20.0	9.5
Canada	16.5	7.7

At the Kennedy Round of GATT tariff negotiations, a separate agreement relating principally to chemicals was negotiated (the so-called "ASP package"). Under this agreement, the European Community and the United Kingdom were to make further reductions in most of their chemical rates in return for U.S. removal of its system of customs valuation for benzenoid chemicals, under which the United States assesses duties based on the value of competitive U.S. products rather than the value of the imported chemical (the American Selling Price system of customs valuation). In making the shift to normal customs valuation procedures, certain changes in tariff rates were also to be made. The Congress did not enact legislation providing authority to implement the agreement, and consequently, the agreement never came into force. If the agreement had been implemented, the weighted average duties of the three principal signatories on January 1, 1972, would have been as follows: United States, 7.3 percent ad valorem; European Community, 6.8 percent; United Kingdom, 8.6 percent.

Concessions under the GATT have been made on all MFN provisions for chemicals in the U.S. tariff schedule. For the European Community, 99 percent of the provisions, accounting for 97 percent of MFN imports, are covered by GATT concessions. The United Kingdom has 95 percent of its chemical provisions, covering 93 percent of MFN imports, under GATT concessions; for Japan, 94 percent of its provisions, covering 91 percent of MFN imports; and for Canada, 77 percent of its provisions, covering 87 percent of imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on chemicals negotiated under the GATT. The number of such concessions totaled 1,609, of which 833 reflected rates higher than the autonomous rate established in the CXT, 95 were at the CXT rate, and 681 were below the CXT rate.

#### Trade complaints

The very large number of complaints submitted to the Tariff Commission by manufacturers and traders of chemicals covered a wide array of policies and practices generally described as barriers to trade. Complaints were made against practices in every developed country and in a large number of less developed countries. The United States and Japan were the individual countries drawing the most complaints (49 and 47, respectively) but complaints against European Community countries (individually and collectively) totaled more than all those leveled at the United States and Japan combined. Among LDC's, the greatest number of complaints were against Colombia (38), Brazil (36), Mexico (34) and Spain (29).

The numerous forms of specific limitations on trade (quotas, embargoes, licensing, exchange controls, etc.) drew the largest number of complaints. Tariff and nontariff charges on imports were second in number of complaints, followed by customs procedures and practices, various forms of government participation in trade, and standards requirements. The complaints are summarized under major topic headings in the paragraphs below.

Quantitative limitations and licensing.--Complaints involving quantitative restrictions, embargoes and licensing procedures constituted the largest group of trade complaints concerning chemicals. The complaints covered most types of chemicals including pharmaceuticals, photographic chemicals, dyes, pesticides and other agricultural chemicals, intermediate chemicals, plastics materials and products, detergents, toilet goods and certain inorganic chemicals.

Japan, the country cited most for the use of quantitative restrictions, was charged by complainants with the occasional use of this kind of barrier against unspecified chemicals and with the use of quotas on sulfur and pharmaceutical products in general. Penicillin and antibiotics were specified in some complaints as objects of Japanese quantitative control. In still another complaint, Japan was reported to have applied quotas to imports of dextrine starch glues. One U.S. producer who was critical of Japan also complained that most European countries also utilized quantitative barriers in restricting entry of his products. In other complaints against European countries, both Italy and Ireland were charged with placing quantitative restrictions on tetraethyl lead and the Netherlands for a quota on penicillin. Complaints were also received concerning the quotas by Austria on antibiotics, Spain on high-density polyethylene, Finland on coal-tar distillates and Ireland on superphosphates. The United States was the target of criticism by a large U.S. importer who stated that strong protectionist views expressed in the Congress had caused his foreign suppliers informally to establish voluntary export quotas in certain industries, including the chemical industry. Quotas employed

by Spain were described as based on historic sales; those used by Japan for sulfur and by Haiti for detergents were said to be inversely related to the domestic production of the respective products; and the restriction by Singapore on detergents and certain toilet products was described as being for the protection of infant industries. Complaints against less developed countries involved Mexico, Colombia, Brazil, Cyprus, Malaysia, Singapore and Haiti; the imposition of quantitative restrictions by Colombia was said to be for balance of payments reasons.

Embargoes reported in many of the complaints were actually extremely rigid registration or other requirements by the importing country which had the effect of an embargo for the complainant's products. Such is the case with embargoes reported in a complaint against Japan, France and the United States regarding imports of pharmaceuticals. This complaint by a U.S. trade association was also directed at numerous other countries including seven countries of Central and South America as well as the Central American Common Market (CACM). In several instances complaints stated that embargoes on imports were instituted where the product was produced domestically. Mexico was involved in six of these complaints which applied to pesticides, benzoic acid, high-density polyethylene, polypropylene, tall oil, fatty acids and other chemicals. Several other countries of Central and South America were also mentioned as maintaining this type of embargo. In other complaints where embargoes were maintained to protect local production, Italy, Norway, Finland, Spain, Portugal and Turkey were named in connection with pharmaceuticals; certain underdeveloped countries prohibited imports

of U.S. reagent chemicals; and France and Japan were barred as a market for the line of chemicals of one U.S. producer. Other complaints charged that: Argentina embargoes chemicals for balance of payments reasons; Iraq and Syria refuse entry of U.S. chemicals and dyes, while Egypt permits entry of many chemical items only with special government approval; Israel bars citric acid and certain other chemicals; Italy prohibits imports of sulfur; and the United States prohibits the importation of uranium for domestic consumption.

About 50 complaints were recorded regarding restrictive licensing practices for either imports or exports of chemicals. The United States, named in six complaints, and India, named in five, were the countries most criticized for such practices; Japan, Brazil, Columbia and Pakistan were each cited in three complaints. Three U.S. complainants and one United Kingdom trade association objected to U.S. export licensing requirements, in one instance involving exports of lithium bromide, where licenses were required on shipments valued under \$500. One source pointed out that special U.S. licenses are required to buy or sell uranium, thorium or radium, while another source noted that U.S. import licenses for serums, toxins and biological products, including veterinary products, are only granted to foreign firms from lists previously approved by the U.S. Department of Health, Education and Welfare or the U.S. Department of Agriculture. Among complaints against India, one U.S. producer of furfural and furfural alcohol spoke of the complex system involved in obtaining import permits and

permits for letters of credit, while another complaint stated that import licenses were granted on the basis of the applicant's export of Indian goods.

The issuance of a license to import sulfur into Japan was reported to be related to the level of domestic production at the time of request. In Colombia, according to a U.S. producer, a license is required for imports of pharmaceuticals and agricultural and industrial chemicals valued in excess of \$20, and 45 days is required for approval. For the importation of chemicals and dyes into Pakistan, a large U.S. producer states that a license is only granted after receipt of material covered by the applicant's previous license. Complaints were reported concerning licensing restrictions by the Netherlands on penicillin, by Belgium on sodium anhydride and penicillin, and by Italy on sulfur, citric acid and crude calcium citrate. Most of the other complaints registered concerned less developed countries.

Import duties and tariff discrimination.--A number of U.S. producers of chemicals complained generally concerning the preferential treatment afforded member states within customs unions such as the European Community, the European Free Trade Association and others (LAFTA, CACM, CARIFTA) and the British Commonwealth. The preferential duties involved were noted to be particularly restrictive in regard to U.S. exports of pharmaceuticals, pesticides, dyestuffs, tires, rubber and plastics goods and certain toiletry items. However, the greatest number of complaints by far came from U.S. producers of plastics materials, mainly concerning discriminatory duties on cellulose acetate, polyester film and high-density polyethylene, but also including polypropylene, polystyrene and

polyterpene resins. Five complaints by these producers were directed against the European Community, three against Greece, two against Sweden and one against nine other countries, because of duties ranging from 7.5 percent for polyester film entering Australia to 60 percent for cellulose acetate entering Spain. Included in this range was a 36 percent duty applied by Greece to high-density polyethylene from non-EC countries; a 35 percent duty by Finland and Greece on cellulose acetate from non-EFTA and non-EC countries, respectively; a 32 percent duty by the Community on imports of polyethylene <sup>1/</sup> and polypropylene resins from non-EC countries; and, a 25 percent duty by Israel on high density polyethylene from non-EC countries.

In addition to the complaints on discriminatory tariff treatment, some 20 instances of nondiscriminatory high tariffs were reported by U.S. producers of chemicals. The product most often involved was high density polyethylene and the countries involved included Australia, Argentina, Spain, Mexico, Taiwan and the United Kingdom. Other U.S. chemicals confronted with high duties in certain foreign markets were: melamine resins in Taiwan and Korea; polyacrylamid in Australia; oral polio vaccine in the United Kingdom; black ink in Argentina, Brazil, Australia, Japan and Spain; and polyvinylchloride trays for packing fruit and vegetables in Mexico. High U.S. rates of duty were cited by an importer in regard to textile assistants, chemically treated starches, sodium alginate and cream of tartar.

---

<sup>1/</sup> The rate of duty on U.S. polyethylene entering the European Community was reduced from 32 percent to 16 percent on January 1, 1973. The higher rate had been imposed to compensate for higher U.S. tariffs applied to imports of carpets and glass as the result of escape-clause action.

Customs valuation and customs administrative procedures.--Complaints involving customs procedures in relation to imports of chemicals numbered well over 100. A large portion of these complaints pertained to customs valuation, and particularly to the U.S. practice of assessing duties on certain chemicals on the basis of the value of a competitive U.S. product rather than the actual value of the imported chemical--the so-called American Selling Price (ASP) system of customs valuation. The complainants, mainly subsidiaries of foreign producers, foreign trade associations and U.S. importers, stated that ASP discriminated excessively against foreign goods; that ASP increased rates to levels exceeding 100 percent ad valorem; that ASP values used for customs purposes frequently are higher than prices actually existing in the United States; and that the excessive complexity of administering ASP hinders trade. In several complaints, U.S. producers felt they were discriminated against because the United States uses an f.o.b. basis of customs valuation while most other countries use a c.i.f. basis. A United Kingdom trade association added that the U.S. definition of f.o.b. was different from that of the rest of the world. In charges against other countries, a U.S. producer alleged that, in the United Kingdom, valuation for his products was made on open market value instead of invoice value; a United States trade association charged France and Japan with the use of uplift in valuation; and another U.S. producer claimed that duties are assessed in Canada, Australia and New Zealand on the basis of invoice price to the importer or on the price of the goods in the country of origin, whichever is higher.

Documentation requirements were the subject of more than 20 complaints. Japan, the United States, the South American countries (particularly Brazil) and Greece were mentioned in two or more of these complaints which dealt mainly with excessive and complex documentation, as well as with unusual and cumbersome documentary requirements. Some instances of complaints in the latter category are: The requirement by Japan that forms must be submitted showing the distribution network for imports, the price of the product at each stage of distribution up to the final purchaser and the names and commissions of all middlemen; the requirement for the importation of pharmaceuticals into Greece that price data and trade names be provided on home market and third country sales, and in some instances a certificate written in Greek and signed by the health ministry of the exporting country be provided stating that the product is authorized for sale in the home market; and, the requirement by Brazil that invoices on imports have a signature from the Chamber of Commerce of the port of export.

To many U.S. exporters and importers, the customs restrictions on the entry of chemical and pharmaceutical samples into many countries were unreasonable and much too complex. Criticism of sample import restrictions was directed toward the United States, Japan, the European Community, the larger South American countries, Mexico and Greece. The United States was singled out for its cumbersome and expensive procedure for returned goods and the record keeping required for obtaining U.S. drawback was described as onerous. Six respondents cited consular formalities related to the importation of goods as a burdensome procedure

in most large South American countries as well as Japan. In several complaints involving antidumping procedures, Canada, Australia and South Africa were labelled as strict enforcers of antidumping statutes, i.e., in South Africa the law favors companies with no published price list; in Canada a problem existed because of the difficulty in determining fair trade value.

Standards.--Criticism of standards for pharmaceuticals was the most common category of complaint regarding standards for chemical products. Nonacceptance of pharmaceutical standards of the exporting country by the importing country was frequently cited by complainants; the United States, Japan, Canada and the countries of the European Community were included among importing countries who frequently insisted on applying domestic standards. In many instances this requirement necessitated that research and testing of the product be repeated in the importing country causing considerable added delay and expense for the manufacturer. Other complaints against many of the same countries as well as members of the European Free Trade Association, Australia, New Zealand and countries of Central and South America spoke of excessive requirements and registration and clearance delays which impeded, if not precluded, the importation of pharmaceuticals. In a separate complaint, a U.S. trade association reported that compulsory inspection of the plant which manufactures the product in the exporting country was required by the Canadian, United Kingdom and U.S. governments. France requires that pharmaceuticals sold in France be manufactured under the supervision of French pharmacists and public health officials.

Other complaints regarding pharmaceutical standards pertained to the stringent regulations governing the acceptance of foreign trademarks by Brazil, Greece, Portugal, Rhodesia and Syria and to the lack of patent protection in Italy.

In two complaints against Canada by U.S. producers, labelling and container requirements were named as barriers which in one instance prevented the importation of adhesives into Canada and in the other instance prevented low-volume goods, presumably paints and resins, from entering the country. A complaint was leveled at Japan for standards that prevented the use of food freezing and also the use of aerosol propellants in food containers. In one of two complaints directed against Spain concerning packaging, a U.S. exporter of polyethylene stated that imported goods had to be shipped in the original manufacturer's packing, a requirement that prevented the sale of surplus and other rehandled materials. In more generalized complaints pertaining to the chemical industry, respondents pointed out (1) that the U.S. pollution control requirements had increased the cost of exports and might be the cause of a shift in production location to areas with less stringent regulations; (2) that a trade restriction would be eliminated by the adoption of the metric system as a national standard for weights and measures by the United States and other countries currently not on that standard; (3) that there is a need for international standards to combat local discriminatory standards. The U.S. Government was urged to support international standards organizations.

Subsidies and other governmental aids.--Complaints by U.S. producers regarding subsidization and other forms of assistance given by foreign governments to exports of chemicals were directed frequently toward Japan and the European Community (principally its larger members) and toward the United Kingdom somewhat less frequently. One large U.S. producer charged Japan and the European Community with rebating sales, value-added and excise taxes on exported products; allowing accelerated depreciation and providing low-cost loans on export business; and, not subjecting foreign subsidiaries to taxes on profits generated by reselling the parent company's products in third countries. These countries are also reported to encourage the combining of companies for financial strength and Japan has been reported to permit the operation of cartels, described as "legal" cartels, on a temporary basis to assist new or disoriented industries. 1/

Another large U.S. producer included the United Kingdom along with Japan and certain EC countries in its complaints regarding tax relief, low-interest medium-term loans, concessionary financing and other direct and indirect subsidies for export business. Certain of these complaints by this and other U.S. producers involve several other developed countries--Canada, Sweden, Switzerland, Australia, New Zealand, Ireland, Norway and South Africa--as well as a number of the leading less developed countries, including Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, Spain, India, Pakistan, and the Philippines. In two separate complaints

---

1/ These cartels known as "anti-depression" cartels officially expired at the end of 1972. They are being replaced, however, particularly in the petrochemicals industry, with a "voluntary supply adjustment" plan which is expected to have an effect similar to the cartel.

against U.S. antitrust laws, a United Kingdom trade association felt that these laws inhibited normal business with U.S. companies, while a U.S. producer saw extraterritorial applications of the antitrust laws as a trade restriction.

Government participation in, and control of, trade.--Complaints regarding "buy national" policies involved mainly the United Kingdom, Japan and France and pertained to certain pharmaceuticals and chemicals. In other complaints by U.S. producers, charges of government monopoly in connection with certain chlorinated insecticides and of exclusive franchises for surfactants and magnesium oxide were leveled against Mexico, Italy in regard to salt, Greece for alcohol and saccharin, Austria for alcohol, Ceylon for caustic soda and Kuwait for industrial gases. State trading practices also were mentioned for Greece, Iceland, Pakistan, India, Indonesia, Tunisia, Kenya and Haiti. In a separate complaint against Egypt, Iraq, Syria, Ghana and Guiana, a trade association stated that these countries assigned purchasing and distribution rights for imports to local agencies and companies.

Several complaints were directed principally against countries of the European Community and other European countries regarding the treatment of pharmaceutical imports under the social security systems of those countries. In general, the social security systems are said to discriminate against imported pharmaceutical products, while strongly encouraging the use of domestic products by methods including the withholding of reimbursement for imported drugs. In another complaint on pharmaceuticals involving Spain, Greece and Turkey, authorities of those

governments were reported to have used extra-legal pressure on doctors to prescribe domestic products. Two other complaints of discrimination against imported pharmaceutical products were directed at several Latin American governments; in one of these complaints, the use of imported products was barred from welfare programs. Among complaints on chemical products, the Mexican government was reported to have required disclosure of proprietary information on imports as a condition of entry; Thailand was said to have exerted pressure on behalf of a domestic producer of polyester to the exclusion of a foreign source; and, Japan was criticized for the use of "administrative guidance" in controlling imports.

Border, port, and statistical taxes and other fees.--Complaints on value-added border taxes were reported almost entirely in connection with European countries, mainly those of the European Community, the European Free Trade Association and Spain. U.S. complainants specified value-added taxes in the range of 10-20 percent on the c.i.f. duty-paid value of the imported goods and turnover or transfer taxes in the range of 2-15 percent. Complaints on taxes and fees of other kinds were directed principally at other areas of the world. Brazil was mentioned in six complaints involving a variety of taxes, including an industrial products tax levied at 10-12 percent of landed cost, a merchant marine renewal tax at 20 percent of freight charges, a merchandise circulation tax amounting to 17 percent of duty and a 2 percent port improvement tax. Taiwan was reported to assess a 4 percent port tax. Customs surtaxes ranging from 3 percent to 30 percent were also attributed to Ecuador, Turkey, Bolivia, Argentina and Switzerland. Consular fees on

the order of 1 to 1-1/2 percent were reported as being common among Latin American and certain other countries and stamp taxes were mentioned in a few complaints.

Minimum and maximum price controls.--Price controls in the chemical area were reported to pertain almost entirely to pharmaceutical products and are rather widespread for these products. Price ceilings were in force for pharmaceuticals in Belgium, Italy, Turkey and Peru while some form of price control was reported in effect for Australia, New Zealand, Greece, India, Mexico, Portugal, Spain, Sweden, most Middle Eastern countries and several countries of South America. Several complainants felt that price controls favored the domestic rather than the imported product. In a separate complaint against Mexico, government cooperatives were reported to set floor prices for exports of lime oil.

Local content requirements.--A U.S. trade association reported that Brazil, Chile, Colombia, Ecuador, India, Peru and Turkey require some local manufacturing by foreign exporting firms in order to make their foreign products eligible for importation. In another complaint, a U.S. exporter of insecticides to Central American and Caribbean markets stated that half of the selling price of the imported product had to be accounted for by expenses incurred in the importing country. It was also reported that pharmaceutical products could only be imported into Spain for three years, after which the products had to be manufactured domestically, and that, in order to be eligible for preferential tariff rates when importing caustic soda into Brazil, the importing firm was required to purchase a certain amount of locally produced caustic soda.

Restrictive business practices.--The close cooperation among Japanese producers, trading companies and the government were given as reasons in one complaint by a U.S. plastics manufacturer for his inability to maintain sales in Japan. The operation of legal cartels in Japan in support of domestic industry, as mentioned above, has been reported in the press. The formation of cartels in the European Community, the United Kingdom and Switzerland for the expansion of export markets was reported in complaints to the Tariff Commission. The existence of cartel operations in the European Community became apparent in 1966-67 when the Senate Antitrust and Monopoly Subcommittee, investigating the high market price of medicinal quinidine, found that control of world supply and prices was held by a cartel dominated by Dutch and German producers.

Exchange controls.--Complaints concerning exchange controls were directed mainly at the countries of Latin America, but also included criticism of Greece, Turkey, Spain, India, Pakistan, the Philippines, Taiwan and Yugoslavia. The most common complaint registered pertained to the delays and other restrictions placed on the remittance of royalty and currency payments to the exporter for goods and services.

Shipping practices.--High ocean freight rates for U.S. shipments to foreign ports, mainly those of Europe and Japan, were the subjects of most complaints on shipping practices. The rates charged on U.S. export shipments were described as being as much as double the rates for the same shipments traveling in the opposite direction. Other complaints registered included one by a foreign trade association which cited the

cabotage rules and flag restrictions affiliated with U.S.-A.I.D. shipments; another by a large U.S. producer related that exports to Brazil, Colombia, Guatemala and Venezuela must be carried in ships belonging to the respective countries; and, in a third complaint, a U.S. producer attributed the refusal of U.S. flag carriers to accept cargoes destined for India to the requirement that certain chemicals carried by non-Indian vessels be off-loaded in the outer harbor of Indian ports.

Miscellaneous practices.--The following practices were objects of criticism by a few complainants: Discriminatory credit restrictions, discriminatory bilateral agreements, discriminatory sourcing, prior import deposits; investment control, and export restraints. Complaints on credit were directed toward the complex systems for obtaining letters of credit in India, Thailand, Hong Kong, the Philippines, and Iron Curtain countries. Bilateral agreements between any of the various customs unions and third countries, as well as preferential trade between Communist and third countries, were considered to result in a substantial loss of trade for the United States. Charges of discriminatory sourcing were made against Mexico and India for refusal to accept imports of certain U.S. chemical products. Restrictions pertaining to import deposits required prior to shipment of goods involved mainly South American countries (excluding Brazil), which exempted members of the Latin American Free Trade Association (LAFTA) from the required deposits, but required them from non-LAFTA countries. In complaints against U.S. export limitations, U.S. investment controls were considered

too inflexible and restraints on shipments covered by Atomic Energy Commission regulations, and on those to politically sensitive areas, were considered too restrictive. In a separate complaint, an importing organization concerned with imports of titanium oxides objected to the voluntary export control program instituted by Japan in order to avoid possible unilateral import restrictions by the United States.

In the Commission survey, respondents were requested to give their assessment of the restrictive trade effect of the barriers they reported by indicating whether trade in the affected chemical products would show a "small," "moderate" or "significant" increase if the barrier (either alone or in combination with other barriers) were removed and, if possible, to estimate a dollar value for the increase. Nearly half (45 percent) of the respondents supplied an assessment of the trade effect in terms of the three broad categories, and nearly a third assigned dollar values to the trade differential. The potential trade increase was described as "significant" in 46 percent of the responses accompanied with an assessment, as "moderate" in 38 percent, and as "small" in 16 percent. These assessments appear to be related to the size of the respondents' operations when compared with the respective dollar values assigned and when the range of dollar values is analyzed. One-fifth of the responses assigning dollar values to the trade effect estimates showed possible annual trade increases of \$1 million or more, ranging as high as \$10 million; 48 percent showed increases from \$100,000 up to \$1 million; and 32 percent showed increases of less than \$100,000. The average potential trade increase of quantified estimates reported

was somewhat above \$500,000 while the average projected increase in trade per quantified response came to about 1,500 percent of the level of trade in 1970 for that item.

Where a substantial response was obtained to the request for an estimate of potential trade increase, the data are discussed in further detail under the respective barrier headings.

Some respondents also indicated their assessment of the effect of certain specific barriers in this sector. Some dollar estimates were given of the trade effect of quantitative restrictions, ranging from \$150,000 to \$400,000 annually and termed "small" to "moderate." Estimates of trade increases that would result from removal of the embargoes in individual complaints were generally "significant," ranging from \$100,000 to \$10 million. Estimates by U.S. producers of the annual trade increase which would result from the removal of discriminatory duties on chemicals generally ranged from \$60,000 to \$500,000, but in one instance to more than \$1 million. The estimated trade increase which would occur if nondiscriminatory duties on chemicals were removed generally amounted to \$100,000 or more and, in one complaint, ranged as high as \$2 million.

## Chemical Elements and Compounds

The subsector for chemical elements and compounds includes, in addition to the elements, all inorganic and organic compounds with the exception of vitamins, hormones, glycosides, vegetable alkaloids, and antibiotics. <sup>1/</sup>

MFN tariffs

Among the five major countries, Canada has the lowest arithmetic average MFN tariff (6.4 percent ad valorem) for all chemical elements and compounds (free and dutiable, combined); the highest is the 11.5 percent average of the United Kingdom. The lowest weighted averages for all products belong to the United States (5.8 percent) and Canada (6 percent); the highest weighted average is 14.4 percent held by the United Kingdom (chart I-4-E). For dutiable products alone, Canada's average MFN tariff rates are significantly higher than those for all products, reflecting substantial duty-free provisions and imports. For dutiable products, the arithmetic and weighted averages of the five countries are all within the relatively same range between 8 and 12.3 percent ad valorem, except for the United Kingdom's weighted average which reaches 18.5 percent ad valorem.

MFN rates are granted to virtually all imports of the United States, Canada, Japan and EC entries from outside sources. Preferential rates were applied to about one-third of United Kingdom entries in 1967. Intra-EC imports, which move free of duty, are slightly larger than EC imports from outside sources.

---

<sup>1/</sup> For specific coverage of this subsector see BTN headings 15.11, 27.05, 28.01-.58, 29.01-.37, and 29.40, -.43, -.45.

Chart I-4-E. --Average MFN tariff rates on chemical elements and compounds

\*Figures for Japan do not reflect the unilateral reductions made in 1972 on over 90 percent of the Japanese rates in this sector; of the remaining rates less than half were cut by amounts ranging from 22 percent to 60 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Nearly 60 percent of Japanese and United Kingdom MFN tariff provisions have duties ranging from 5.1 to 10 percent ad valorem; half of the EC provisions are in the 10.1-15 percent range and one-third in the 5.1-10 percent bracket. Two-fifths of U.S. provisions are in the 0.1-5 percent range; over one-fifth are in the 5.1-10 percent bracket. Canada is the only major country with significant duty-free provisions (48 percent); one-third of Canada's provisions are in the 10.1-15 percent rate range (table I-4-E).

Table I-4-E ---Distribution, by duty level, of MFN tariff provisions for chemical elements and compounds

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	47.7	6.5	6.9	2.4	6.4

Note.--Due to rounding, figures may not add to 100 percent

In terms of MFN imports of chemical elements and compounds, more than one-fourth of U.S. imports enter duty free; another two-fifths are assessed at rates in the 0.1-5 percent ad valorem range. Half of Canadian imports enter duty free; another two-fifths are dutiable between 10.1 and 15 percent ad valorem. Almost three-quarters of Japanese imports are assessed at rates between 5.1 and 10 percent. European Community imports are in the 10.1-15 percent bracket (two-fifths), the 5.1-10 percent bracket (one-fifth), and duty free (16 percent). Over half of United Kingdom imports enter at rates in the 20.1-25 percent ad valorem range; another two-fifths are distributed about equally in the 5.1-10 percent and the duty-free bracket (table I-4-F).

Table I-4-F.--Distribution, by duty level, of MFN imports of chemical elements and compounds

(In percent)

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

Of the five major countries, the United States exhibits the most complex tariff schedule for chemical elements and compounds, with 708 lines; Japan has the simplest, 319 lines. Schedules for the European Community have 505 lines; for Canada, 417 lines; and for the United Kingdom, 396 lines.

#### Trade importance

In 1969, chemical elements and compounds accounted for about 35 percent of OECD exports and 38 percent of OECD imports in the chemical sector. OECD exports totaled \$5.6 billion in 1969; imports were \$4.7 billion (chart I-4-F). By 1970, OECD exports and imports had increased to \$6.4 billion and \$5.6 billion, respectively. In 1967, organic chemicals, a major component of the chemical elements and compounds group, ranked 15th among the 119 industrial subsectors in value of aggregate imports of the GATT tariff study countries.

Chart 1-4-F.--OECD trade in chemical elements and compounds, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

For the United States, however, the rank is 28th. U.S. imports of chemical elements and compounds amounted to \$645 million in 1969 and increased to \$810 million in 1971. Heterocyclic compounds and nucleic acids (BTN 29.35) are important types of chemical elements and compounds traded. In 1967, the major importer of such chemicals was the European Community (about \$94 million).

#### World production

The United States is the principal producer of industrial chemicals of the five countries under study. In 1968, the most recent year for which somewhat comparable data are available, production of industrial

chemicals by the United States was valued at about \$15 billion.

Similar production by the European Community in that year was valued at nearly three-fifths that of the United States; production by Japan and the United Kingdom was each about a fifth; and Canada about a fifteenth, of that of the United States.

### Trade network

The five major countries account for about 90 percent of OECD exports and over 75 percent of OECD imports of chemical elements and compounds (tables I-4-G and I-4-H). The two major suppliers to the world are the European Community and the United States. The European Community takes about 30 percent of U.S. exports; LDC's as a group take slightly less than 30 percent. Non-OECD countries and "other" OECD countries are the principal markets for EC outside shipments.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The principal importer is the European Community, followed by the United States and the United Kingdom. Imports by the European Community from outside sources are equal to 80 percent of intra-EC shipments, which move duty free. Major outside suppliers to the European Community are the United States, "other" OECD countries, and the United Kingdom. The United States imports principally from the European Community and the non-OECD nations; the major suppliers to the United Kingdom are the European Community, the "other" OECD countries, and the non-OECD nations.

Trade composition

The chemical elements and compounds subsector is made up of three subdivisions: organic chemicals; chemical elements, inorganic acids, oxides and halogens; and other inorganic products. Of these three, organic chemicals is by far the most important, accounting for two-thirds of OECD exports in this subsector and over 60 percent of imports.

Trade-agreement concessions

As the tabulation below shows for all of the five major countries, except the European Community, average tariff levels on January 1, 1972, for chemical elements and compounds were substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. Among the major countries, specific duties are significant only for the United States. Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 7.3 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972 1/</u>
	(Percent ad valorem)	
United States	22.2	5.8
European Community	11.3	8.4
United Kingdom	22.3	14.4
Japan	19.1	9.1
Canada	13.9	6.4

1/ Calculations of tariff averages using rates contained in the Kennedy Round "ASP package" (which was never implemented) would show January 1, 1972, rates as follows: United States, 5.6 percent; European Community, 5.8 percent; United Kingdom, 8.2 percent.

All MFN provisions for organic chemicals (the major subgroup under chemical elements and compounds) in the tariff schedules of the United States have been the subject of GATT concessions. For the European Community, 99 percent of the tariff provisions covering 99 percent of MFN imports, are fully covered by GATT concessions; for 1 percent of the imports, only part of the item is covered. In the United Kingdom schedule, 99 percent of the tariff provisions are covered, although only 89 percent of the trade has entered under these provisions. In the Japanese schedule, 92 percent of the provisions, covering 88 percent of MFN imports have GATT concessions; in the Canadian schedule, 75 percent of the provisions, covering 91 percent of MFN imports.

For chemical elements, inorganic acids, oxides and halogens, all MFN provisions in the tariff schedules of the European Community and Japan, and almost all U.S. and United Kingdom provisions, have been the subject of GATT concessions. For Canada, 83 percent of provisions, covering 87 percent of imports are under the GATT.

All MFN provisions for "other" inorganic products in the tariff schedules of the United States and the United Kingdom are under GATT concessions. For the Community, 98 percent of provisions, covering 62 percent of imports are fully covered (1 percent of the EC provisions, covering 34 percent of imports are partially covered). Eighty-seven percent of Canadian provisions, covering 95 percent of imports have been the subject of GATT concessions, along with 91 percent of Japan's provisions, covering 83 percent of imports.

All EC member state national tariffs prior to adoption of the EC's Common External Tariff contained concessions under the GATT on chemical elements and compounds. Of 643 concessions in the national tariffs, 343 were at rates above the CXT autonomous rate, 41 were at the CXT rate, and 259 were below the CXT rate.

For four important chemicals or chemical compounds in this sub-sector, the actual reductions which have occurred in the rates of the five major countries from the levels existing on pre-trade-agreement base dates can be seen in tables I-4-I (chloroacetic acid), I-4-J (benzenoid amine and amide-function compounds), I-4-K (titanium dioxide), and I-4-L (benzenoid fast color salts).

Table I-4-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on chloroacetic acid

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Percent is ad valorem equivalent of compound rate of duty (7 cents per pound plus 40 percent), calculated on the 1971 foreign invoice values of U.S. imports.

3/ Percent is ad valorem equivalent of compound rate of duty (3.5 cents per pound plus 20 percent), calculated on the 1971 foreign invoice values of U.S. imports.

4/ Percent is ad valorem equivalent of compound rate of duty (1.7 cents per pound plus 10 percent), calculated on the 1971 foreign invoice values of U.S. imports.

5/ The Canadian tariff on most dutiable MFN imports of chemicals and drugs was 20 percent ad valorem if the product was made in Canada, but only 15 percent ad valorem if not domestically produced. In a tariff revision following the Kennedy Round, most of these imported chemicals were assigned a rate of 15 percent ad valorem.

## Plastics

The subsector for plastics includes artificial resins and plastics materials; cellulose esters and ethers and articles manufactured from these materials. It does not cover a number of important articles made of plastics, such as certain footwear, headgear, umbrellas, and certain types of the following articles: Parts of aircraft and vehicles, musical instruments, furniture, and brushes. 1/

MFN tariffs

Among the five major countries, Canada and the United States have the lowest MFN arithmetic tariff averages for all plastics (combined free and dutiable) (9.9 and 10.7 percent ad valorem, respectively); the highest arithmetic average is 13.7 percent, held by the European Community. The United States has the lowest weighted tariff average (8.6 percent), about half the level for the highest average (that of the European Community) (chart I-4-G).

The dutiable product averages of the European Community, Japan, and the United States are either the same as, or not significantly different from their averages for all products, indicating the complete or nearly complete absence of duty-free provisions. Canada's dutiable product averages are just above 14 percent ad valorem, and the United Kingdom's arithmetic dutiable average rises to 13.6 percent.

---

1/ For the specific coverage of this subsector, see BTN chapter 39.

Chart I-4-G.--Average MFN tariff rates on plastics

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions made in 1972 on most Japanese rates in this sector; the remaining rates were cut by amounts ranging from 40 percent to 100 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

MFN tariff provisions for plastics are distributed widely among several rate levels, except in the schedules of the European Community and Japan. Half of EC rates fall in the range of 10.1 to 15 percent ad valorem; two-fifths are in the 15.1-20 percent range. Almost half of Japanese provisions are in the 5.1-10 percent range, with about one-third in the 10.1-15 percent bracket. The provisions of the United States are similar to Japan's in that the largest portion (37 percent) falls in the 5.1-10 percent rate range, while the 10.1-15 percent bracket

has about one-quarter of U.S. provisions. Canada has about one-quarter of its provisions in each of the following brackets: Duty free, 5.1-10 percent, and 10.1-15 percent. The United Kingdom, the only other major country with significant duty-free provisions (nearly 14 percent), has one-third of its provisions in the 5.1-10 percent bracket and one-third in the 15.1-20 percent bracket (table I-4-M).

Table I-4-M.--Distribution, by duty level, of MFN tariff provisions for plastics

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

Virtually all imports of Canada, the United States, and Japan, and EC entries from outside sources are assessed MFN rates. About 20 percent of United Kingdom imports have been granted preferential treatment. Intra-EC imports, which move duty free are four times larger than imports from outside countries.

MFN imports of plastics are more concentrated in certain rate ranges than are the rate provisions; over four-fifths of the United Kingdom's imports are assessed rates between 5.1 and 10 percent ad valorem as are two-thirds of U.S. and Japanese imports. Over

two-thirds of EC imports are in the 15.1-20 percent range. Canada is the only major country with significant duty-free imports (one-tenth); the bulk of Canadian imports enter in the 5.1-10 percent bracket (about one-third) and the 15.1-20 percent bracket (about two-fifths) (table I-4-N).

Table I-4-N.--Distribution, by duty level, of MFN imports of plastics

Duty level	(In percent)

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

For plastic products, the United States has 82 rate lines; the United Kingdom has 62 lines; the European Community, 71 lines; Canada, 109 lines; and Japan, 65 lines.

#### Trade importance

In 1969, plastics accounted for 25 percent of OECD exports and 26 percent of OECD imports in the chemical sector. OECD exports totaled \$4 billion and imports reached \$3.2 billion in 1969 (chart I-4-H). By 1970, exports had risen to \$4.7 billion and imports totaled \$3.8 billion. In 1967, among the 119 industrial subsectors, plastics materials, the major component of all plastics, ranked 27th in value of aggregate

imports of the GATT tariff study countries. For the United States, however, the rank is only 70th; U.S. imports of all plastics amounted to \$300 million in 1969 and \$306 million in 1971.

Polymerization and copolymerization products (BTN 39.02) are the most important type of plastics traded. The major importers of these products are Canada, the European Community, and the United Kingdom.

Chart I-4-H. --OECD trade in plastics, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### World production

The value of U.S. production of plastics materials and products exceeded \$11 billion in both 1969 and 1970; the value of plastics

materials accounted for more than \$4 billion of the total in both years. Comparable data are not available for the combined production of plastics materials and products by the other countries under study; however, in 1969, production of plastics materials by the European Community alone was valued at more than \$3 billion, that by Japan at nearly \$2 billion, and that by the United Kingdom at more than \$1 billion. Production of these materials by Canada is small compared with that of the foregoing countries.

#### Trade composition

The plastics subsector has two subdivisions: Plastics materials and articles of plastic. Of the two, plastics materials is far more important in terms of trade, accounting for 82 percent of OECD exports of plastics and 77 percent of imports.

#### Trade network

The five major countries account for over 90 percent of OECD exports and nearly three-quarters of OECD imports of plastics (tables I-4-0 and I-4-P). The major OECD importer and exporter is the European Community, followed by the United States.

The European Community is by far the largest supplier to the world, accounting for over 50 percent of OECD exports. Over half of EC exports are intra-EC shipments; the bulk of the remainder are exported to "other" OECD countries and the LDC's. Canada, the European Community, and the

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

LDC's each take one-fourth of U.S. exports. Nearly half of Japan's exports go to LDC's, while half of the United Kingdom's exports are divided between LDC's and "other" OECD countries. Canada is an insignificant exporter of plastics.

The European Community accounts for about half of OECD imports of which about three-quarters are intra-EC shipments. The United States, the United Kingdom, and Canada each account for about 10 percent of OECD imports. The United States supplies half of EC entries from outside sources, 85 percent of Canada's imports, and two-thirds of Japan's imports. The United Kingdom receives half of its imports from the European Community.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, average tariff levels for plastics were substantially below levels existing on pre-trade-agreement base dates. In large part, the reductions reflect concessions granted in reciprocal negotiations. Of the five major countries, only in the United States are specific duties important. Such duties are applicable to 45 percent of U.S. MFN imports of plastics materials and 21 percent of U.S. MFN imports of plastic articles. Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 9.4 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972 <sup>1/</sup></u>
	(Percent ad valorem)	
United States	51.8	8.6
European Community	20.2	15.6
United Kingdom	15.0	10.8
Japan	23.5	11.8
Canada	22.4	9.9

All MFN provisions for plastics in the tariff schedules of the European Community, the United States and Japan have been the subject of GATT concessions. For the United Kingdom, all MFN provisions for plastic articles are under GATT concessions; but for plastics materials 95 percent of provisions and 99 percent of imports are covered. For Canada, 78 percent of the provisions for plastics materials, covering 94 percent of imports are under GATT concessions, while for plastic articles 61 percent of the provisions, covering 95 percent of imports are covered.

All EC member states had made concessions on plastics in their national tariffs prior to adoption of the EC's Common External Tariff. Of 503 GATT concessions in the national tariffs, 282 were at rates above the CXT autonomous rate, 23 were at the CXT rate, and 198 were below the CXT rate.

Tables I-4-Q and I-4-R show actual reductions which have occurred in the major country tariffs on benzenoid plastics materials and selected plastic articles since pre-trade-agreement base dates.

---

<sup>1/</sup> Calculations of tariff averages using rates contained in the Kennedy Round "ASP package" (which was never implemented) would show January 1, 1972, rates as follows: United States, 8.5 percent; European Community, 9.8 percent; United Kingdom, 9.3 percent.

Table I-4-Q.--Pre-trade-agreement tariff rates compared with January 1, 1972,

The MFN rate (Post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

## Medical and Pharmaceutical Products

Medical and pharmaceutical products include vitamins; hormones; glycosides and vegetable alkaloids and their derivatives; antibiotics; animal substances for therapeutic or prophylactic use; antisera, microbial vaccines and similar products; medicaments (including veterinary medicaments); and other medical and surgical goods. Not included are certain aqueous distillates and aqueous solutions of essential oils. 1/

MFN tariffs

Among the five major countries, all except the United Kingdom have MFN arithmetic average tariffs that fall within the narrow range of 9.4 to 10.5 percent ad valorem for all medical and pharmaceutical products (combined free and dutiable); the arithmetic average tariff for the United Kingdom is 15.3 percent. All of the major countries except the United States have weighted average tariffs between 8.6 and 11.8 percent ad valorem; the U.S. average is 4.4 percent (chart I-4-I). Except for Canada, averages for dutiable products alone do not differ significantly from the all products average; Canada's arithmetic average for dutiable products is 17.1 percent and the weighted average is 14.8 percent.

Over half of Japan's MFN tariff provisions for medical and pharmaceutical products are in the range of 5.1 to 10 percent ad valorem, whereas the provisions of the other four major countries are scattered more widely. For Canada, 40 percent of its rates are duty free and

---

1/ For the specific coverage of this subsector, see BTN headings 29.38-.39, 29.41-.42, 29.44, and 30.01-.05.

Chart I-4-I. --Average MFN tariff rates on medical and pharmaceutical products

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

38 percent are in the 10.1-15 percent rate range. The United States has almost two-fifths of its rates in the 0.1-5 percent ad valorem bracket and about one-fifth in the 5.1-10 percent bracket. European Community rates are principally in the 5.1-10 percent range (two-fifths) and in the 10.1-15 percent bracket (almost one-half). Tariff provisions for the United Kingdom are in the 20.1-25 percent bracket (two-fifths) and one-fifth each in the 5.1-10 and 15.1-20 percent ad valorem ranges (table I-4-S).

Twenty-nine percent of United Kingdom imports and 13 percent of Canadian imports receive preferential tariff treatment. Preferential rate

treatment is not significant for U.S. and Japanese imports and EC entries from outside sources. Intra-EC shipments, which move duty free, are about equal to EC imports from outside sources.

In terms of MFN imports of medical and pharmaceutical products, almost three-quarters of U.S. entries are assessed rates between 0.1 and 5 percent ad valorem; two-thirds of Japanese and European Community imports are in the 5.1-10 percent bracket; half of Canadian entries are in the 10.1-15 percent bracket and over 40 percent are duty free; half of United Kingdom entries are in the 0.1-5 percent bracket and over one-quarter in the 15.1-20 percent bracket (table I-4-T).

Table I-4-T.--Distribution, by duty level, of MFN imports of medical and pharmaceutical products

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

For medical and pharmaceutical products, the United States has 58 tariff lines; the United Kingdom has 38 lines. The schedule for Canada has 89 lines; for Japan, 59 lines; and for the European Community, 54 lines.

### Trade importance

In 1969, medical and pharmaceutical products accounted for 13 percent of OECD exports and 11 percent of OECD imports in the chemicals sector. OECD exports in 1969 totaled \$2.1 billion and imports were \$1.4 billion (chart I-4-J). By 1970, exports had risen to \$2.5 billion and imports

Chart I-4-J. -- OECD trade in medical and pharmaceutical products, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

were \$1.7 billion. U.S. imports amounted to \$83 million in 1969 and increased to \$140 million in 1971. Medicaments, including veterinary medicaments (BTN 30.03), are by far the most important type of medical and pharmaceutical product traded. In 1967 the leading importers were the European Community and Japan.

#### World production

The United States is the leading producer of medical and pharmaceutical products of the five countries under study and probably the world's leading producer of these products. In 1969, U.S. production of products included in this category was valued at more than \$6 billion. Production by the European Community, the next leading producer of these products among the five countries, was valued at nearly \$4 billion in the same year; production by Japan exceeded \$2 billion and that of the United Kingdom and Canada were each less than \$1 billion.

#### Trade network

The five major countries account for about 80 percent of OECD exports and nearly 70 percent of OECD imports of medical and pharmaceutical products (tables I-4-U and I-4-V). By far the largest exporter to the world is the European Community, accounting for 45 percent of OECD exports in 1969, followed by the United States. Most of the EC outside exports go to LDC's and "other" OECD countries. Half of U.S. exports go to less developed countries, as do nearly two-fifths of United Kingdom exports.

The European Community also is the principal importer, followed distantly by Japan. Imports by the European Community from outside sources are equal to intra-EC shipments which move duty free. Principal outside suppliers to the Community are "other" OECD countries, the United States, and the United Kingdom. Japan imports principally from the European Community and the United States.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, January 1, 1972, average tariff levels for medical and pharmaceutical products were substantially below levels existing on pre-trade-agreement base dates. The reductions reflect, in large part, concessions granted in reciprocal negotiations. Specific duties are most important for the United States, since such rates occur in one-third of U.S. tariff provisions for medical and pharmaceutical products. Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 9.4 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972 1/</u>
	(Percent ad valorem)	
United States	20.7	4.4
European Community	14.2	9.4
United Kingdom	20.6	11.8
Japan	21.0	11.7
Canada	18.5	10.2

---

1/ Calculations of tariff averages using rates contained in the Kennedy Round "ASP package" (which was never implemented) would show January 1, 1972, rates as follows: United States, 4.4 percent; European Community, 6.6 percent; United Kingdom, 8.5 percent.

All MFN provisions for medical and pharmaceutical products in the tariff schedules of the United States, the European Community, and the United Kingdom have been the subject of GATT concessions. For Japan, 86 percent of the provisions, covering 79 percent of MFN imports are covered by GATT concessions; for Canada, 64 percent of the provisions and 73 percent of imports are covered.

All EC member states had negotiated GATT concessions on medical and pharmaceutical products in their national tariffs prior to the adoption of the EC's Common External Tariff. Of 133 GATT concessions in the national tariffs, 37 were at rates above the CXT autonomous rate, 16 were at the CXT rate, and 80 were below the CXT rate.

Tables I-4-W, I-4-X, and I-4-Y show actual reductions which have occurred in the levels of the major country tariffs on synthetic hormones, provitamins and vitamins, and miscellaneous drugs since pre-trade-agreement base dates.

Table I-4-W---Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on synthetic hormones

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25%	10.5%	5%; <sup>2/</sup> 10.5%	437.56-57
Canada-----	25%	20% <sup>3/</sup>	15%	92939-1
European Community--	11-17%	11-17%	818-13.6%	29.39
United Kingdom-----	Free; 10%; 33.3%	Free; 10%; 33.3%	Free; 8%; 23%	29.39
Japan-----	20%	20%; 25%	10%; 12.5%	29.39

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> In 1971, about 90 percent of imports of synthetic hormones entered at this rate.

<sup>3/</sup> The Canadian tariff on most dutiable MFN imports of chemicals and drugs was 20 percent ad valorem if the product was made in Canada, but only 15 percent ad valorem if not domestically produced. In a tariff revision following the Kennedy Round, most of these imported chemicals were assigned a rate of 15 percent ad valorem.

Table I-4-X.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on provitamins and vitamins

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	10%; 25%	3%; 8.5%	2%; 4% <sup>2/</sup>	437.82-.86
Canada-----	25%	20% <sup>3/</sup>	10%	92938-1
European Community--	9-18%	7-18%	4.5-14.4%	29.38
United Kingdom-----	10%; 33.3%	10%; 33.3%	8%; 22%	29.38
Japan-----	15%; 20%	15%; 20%	7.5-15%	29.38

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Nearly all imports of vitamins entered at this rate of duty in 1971-72.

<sup>3/</sup> The Canadian tariff on most dutiable MFN imports of chemicals and drugs was 20 percent ad valorem if the product was made in Canada, but only 15 percent ad valorem if not domestically produced. In a tariff revision following the Kennedy Round, most of these imported chemicals were assigned a rate of 15 percent ad valorem.

Table I-4-Y.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on miscellaneous drugs

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25% <sup>2/</sup>	10.5% <sup>2/</sup>	5% <sup>2/</sup>	439.5040-.5080; 440.00
Canada-----	25%	20-25% <sup>3/</sup>	10%; 15%	22001-1; 22003-1; 22005-1
European Community--	15-34%	12-34%	7.8-23.8%	30.03
United Kingdom-----	10% <sup>4/</sup>	10% <sup>4/</sup>	6.5% <sup>4/</sup>	30.03 (A)(2), (3); (B)
Japan-----	10%; 20%	20%; 25%	10%; 12.5%	30.03-4

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> For item 440.00, the rate shown is the minimum rate; the duty is assessed on the basis of the product when not in dosage form.

<sup>3/</sup> The Canadian tariff on most dutiable MFN imports of chemicals and drugs was 20 percent ad valorem if the product was made in Canada, but only 15 percent ad valorem if not domestically produced. In a tariff revision following the Kennedy Round, most of these imported chemicals were assigned a rate of 15 percent ad valorem.

<sup>4/</sup> The rate shown is the minimum rate; the duty is assessed on the basis of components of the mixture, or on the product when not in dosage form.

### Dyeing, Tanning, and Coloring Materials

Dyeing, tanning, and coloring materials include tanning and dyeing extracts; tannins and their derivatives; dyes, colors, paints, enamels, varnishes and lacquers; putty; fillers and mastics; and inks. This subsector does not cover certain inorganic products of a kind used as luminophors and certain tannates and other tannin derivatives. 1/

#### MFN tariffs

The five major countries have somewhat similar MFN arithmetic average tariffs for all dyeing, tanning and coloring materials (free and dutiable combined); such averages range from 7.8 percent for Canada to 10.5 percent for the United Kingdom. Weighted tariff averages for all products are more diverse--6.4 percent for Canada to 16.8 percent for the United States (chart I-4-K). Tariff averages for dutiable products alone do not differ significantly from averages for all products except for Canada, which has a large percentage of duty-free imports. Canada's arithmetic average rose to 13.3 percent for dutiable products and the weighted average to 14.3 percent.

Canadian MFN dutiable provisions for dyeing, tanning and coloring materials are concentrated in the range from 10.1 to 15 percent ad valorem. About half of U.S. provisions are in the 0.1-5 percent range; another one-fifth are in the 5.1-10 percent bracket.

---

1/ For the specific coverage of this subsector, see BTN chapter 32.

Chart I-4-K. --Average MFN tariff rates on dyeing, tanning, and coloring materials

\*Figures for Japan do not reflect the unilateral reductions made in 1972 on most Japanese rates in this sector; nearly all the remainder were reduced by amounts ranging from 29 percent to 47 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Roughly two-fifths of the rates for Japan and the European Community, and one-third of United Kingdom rate provisions fall in the 5.1-10 percent bracket; the next largest concentration of provisions for these countries is the 10.1-15 percent ad valorem range. Although each of the five major countries has some duty-free provisions, free provisions are significant only for Canada (table I-4-Z).

About half of imports into the United Kingdom have received preferential tariff treatment. Preferential imports into the United States, Canada, Japan and the European Community (from outside sources) are not

Table I-4-Z.--Distribution, by duty level, of MFN tariff provisions for dyeing, tanning and coloring materials

Note.--Due to rounding, figures may not add to 100 percent

one of the five major countries with significant duty free entries--55 percent; the bulk of Canada's remaining imports are assessed rates in the range of 10.1-15 percent ad valorem. About three-quarters of Japanese and United Kingdom imports are in the 10.1-15 percent rate range; two-thirds of EC imports are in the 5.1-10 percent bracket; and one-half of

U.S. entries are assessed in the 25.1-30 percent bracket, while one-third of U.S. imports are dutiable in the 0.1-5 percent bracket.

Of the five major countries, the United States exhibits the most complex schedule for dyeing, tanning, and coloring materials, with 60 lines; the United Kingdom has the simplest, 33 lines. Schedules for Japan have 55 lines; for Canada, 51 lines; and for the European Community, 42 lines.

### Trade importance

In 1969, dyeing, tanning, and coloring materials accounted for 8 percent of OECD exports and 7 percent of OECD imports of the chemical sector. OECD exports in 1969 totaled \$1.3 billion and imports were \$891 million (chart I-4-L). By 1970, exports had risen to \$1.5 billion and imports

Chart I-4-L. --OECD trade in dyeing, tanning, and coloring materials, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

were \$1 billion. U.S. imports of these chemicals amounted to \$82 million in 1969 and increased to \$123 million in 1971. Synthetic organic dyestuffs and optical bleaching agents (BTN 32.05) are the most important type of dyeing, tanning, and coloring materials traded by the GATT tariff study countries. In 1967, the major importers were the European Community, Japan, the United States, and Canada.

#### Trade composition

There are three subdivisions which comprise the dyeing, tanning and coloring materials subsector: Tanning materials, coloring materials, and paints and varnishes, etc. Of the three, tanning materials is by far the least important accounting for about 3 percent of imports in this subsector. The other two subdivisions are of about equal importance in the subsector.

#### Trade network

The five major countries account for about 80 percent of OECD exports and 75 percent of OECD imports (table I-4-BB and I-4-CC). By far the largest supplier to the world is the European Community, accounting for about half of OECD exports in 1969, followed by the United Kingdom exports. EC outside exports go principally to LDC's and the "other" OECD countries. The European Community is also the principal importer, followed distantly by the United States. Imports by the European Community from outside sources are equal to only 58 percent of intra-EC shipments which move duty free. Nearly half of EC imports from outside sources come from "other" OECD countries, while nearly half of U.S. imports come from the Community.

### Trade-agreement concessions

January 1, 1972, average tariff levels of the five major countries for dyeing, tanning and coloring materials are compared with levels existing on pre-trade-agreement base dates in the tabulation below. The reductions which have occurred between these dates in large part reflect concessions granted in reciprocal negotiations. Only in the U.S. tariff schedule are specific rates significant for these products. Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 8.5 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972 <sup>1/</sup></u>
	(Percent ad valorem)	
United States	41.8	16.8
European Community	15.8	9.9
United Kingdom	20.9	13.3
Japan	22.0	10.6
Canada	19.0	7.8

All MFN provisions for coloring materials in the tariff schedules of the European Community, the United States, and Japan have been the subject of GATT concessions. For the United Kingdom, 93 percent of the tariff provisions, covering 100 percent of MFN imports, are covered. For Canada, 84 percent of the tariff provisions covering only 24 percent of MFN imports are fully covered by GATT concessions; for 16 percent of the tariff provisions covering 76 percent of MFN imports, only part of an item is covered.

---

<sup>1/</sup> Calculations of tariff averages using rates contained in the Kennedy Round "ASP package" (which was never implemented) would show January 1, 1972, rates as follows: United States, 18.8 percent; European Community, 8.2 percent; United Kingdom, 11.2 percent.

All MFN provisions for tanning materials in tariff schedules of all of the five major countries except the European Community have been the subject of GATT concessions. For the Community, 86 percent of the provisions and all of the imports are covered. All MFN provisions for paints, varnishes, etc., in the tariff schedules of the Community, the United States and Japan are fully covered by GATT concessions. For Canada, 75 percent of the provisions and 99 percent of imports are covered; for the United Kingdom 80 percent of the provisions and 45 percent of imports. For 13 percent of United Kingdom provisions covering 55 percent, only part of an item is covered.

All EC member states had granted tariff concessions on dyeing, tanning and coloring materials in their national tariffs prior to adoption of the EC's Common External Tariff. Of 135 GATT concessions in the national tariffs, 77 were at rates above the CXT autonomous rate, 3 at the CXT rate, and 55 were below the CXT rate.

Specific reductions which have occurred in rates of the five major countries for synthetic organic dyestuffs since pre-trade-agreement base dates are shown in table I-4-DD.

Japan-----	15-25%	15-25%	7.5-12.5%	32.05-1 thru -15 (excl. -13)

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> The ad valorem equivalents (AVE) shown are based on the foreign invoice value of U.S. imports during 1970 and represent compound rates of duty of 3 cents per pound plus 20 percent ad valorem and 7 cents per pound plus 45 percent ad valorem.

<sup>3/</sup> The ad valorem equivalents (AVE) included are based on the foreign invoice value of U.S. imports during 1970 and represent compound rates of duty ranging from 3 cents per pound plus 20 percent ad valorem to 7 cents per pound plus 45 percent ad valorem; also included are ad valorem rates of 32 and 40 percent.

<sup>4/</sup> The ad valorem equivalents (AVE) included are based on the foreign invoice value of U.S. imports during 1970 and represent compound rates of duty ranging from 1.5 cents per pound plus 10 percent ad valorem to 3.5 cents per pound plus 22.5 percent ad valorem; also included are ad valorem rates of 16 and 20 percent.

Essential Oils, Perfume Materials,  
Toilet Preparations and Soaps

This subsector includes essential oils and resinoids; perfumery, cosmetics and toilet preparations; soap; organic surface-active agents; washing preparations; artificial and prepared waxes; and polishing and scouring preparations. It does not include concentrated extracts, spirits of turpentine, separate chemically defined compounds, dentifrice, and shaving creams or shampoos containing soap or organic surface-active agents. 1/

MFN tariffs

Among the five major countries, for combined free and dutiable essential oils, perfume materials, toilet preparations and soaps, the United States has the lowest MFN arithmetic tariff average (6.5 percent ad valorem); Japan has the highest average (11.8 percent). The United States also holds the lowest weighted tariff average (4.1 percent); Canada has the highest average (13.9 percent) (chart I-4-M). For dutiable products, most of the average tariffs are significantly higher than those for all products because of duty-free provisions and imports. The United States again has the lowest arithmetic and weighted tariff averages (8.7 and 7 percent ad valorem, respectively); Canada has the highest arithmetic and weighted averages (14.9 and 14.6 percent, respectively).

---

1/ For the specific coverage of this subsector, see BTN headings 33.01-.06, 34.01-.02, and 34.04-.05.

Chart I-4-M. --Average MFN tariff rates on essential oils, perfume materials, toilet preparations, and soaps

\*Figures for Japan do not reflect the unilateral reductions made in 1972 on most Japanese rates in this sector; the remaining rates were cut by amounts ranging from 40 percent to 100 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

MFN tariff provisions of the United States are chiefly free (one-fourth), in the 5.1-10 percent ad valorem range (one-third), and the 0.1-5 percent and 10.1-15 percent brackets (18 percent each). Half of the Community's provisions are in the 5.1-10 percent rate range; the bulk of the remainder fall in the 10.1-15 percent bracket. One-third of the United Kingdom's provisions are duty free; another third falls in the 5.1-10 percent bracket. Japanese provisions are one-third in the 5.1-10 percent range, over one-quarter in the 10.1-15 percent bracket and 18 percent in the 0.1-5 percent bracket. Canada has a large proportion of duty-free provisions (nearly one-third); another third of Canada's provisions are in the 15.1-20 percent ad valorem range (table I-4-EE).

Table I-4-EE.--Distribution, by duty level, of MFN tariff provisions for essential oils, perfume materials, toilet preparations, soaps

(In percent)

Note.--Due to rounding, figures may not add to 100 percent

Imports at preferential rates have been significant in the United Kingdom, where about 16 percent of total imports have been accorded preferential treatment. Preferential imports into the United States, Canada, Japan and the European Community (from outside sources) are not significant. Intra-EC imports, which move free of duty, are twice as large as EC imports from outside sources.

With respect to MFN imports of products in this subsector, a large portion of shipments for the United Kingdom and the United States are duty free (56 and 43 percent respectively). For the United States, the bulk of the remaining entries fall in the 5.1-10 percent ad valorem range; one-third of the United Kingdom imports are assessed at rates between 5.1 and 10 percent. About two-fifths of the imports of Canada, Japan, and the European Community are in the 10.1-15 percent rate range. For Canada, the bulk of the remaining imports are assessed at rates in the 15.1-20 percent range (about one-third) and the 5.1-10 percent bracket (one-quarter). About one-sixth of Japan's entries are in each of the following brackets: Duty-free, 5.1-10 percent, and 15.1-20 percent.

The remainder of the EC's imports are dutiable in the 5.1-10 percent bracket (one-third) and the duty-free bracket (one-quarter) (table I-4-FF).

Of the five major countries, the United States exhibits the most complex schedule for these chemicals, with 83 lines; the European Community has the simplest, 17 lines. Schedules for Japan have 51 lines; for Canada, 40 lines; and for the United Kingdom, 27 lines.

#### Trade importance

In 1969, essential oils, perfume materials, toilet preparations and soap accounted for 6 percent of OECD exports and imports of chemicals. OECD exports totaled \$1 billion and imports were \$738 million in 1969 (chart I-4-N). The United States imported \$73 million of these chemicals in 1969; such imports were \$79 million in 1971. BTN heading 33.01 (essential oils; concretes and absolutes; resinoids) is the most heavily traded in this subsector. In 1967, the major importers of products in heading 33.01 were the United States, the European Community, the United Kingdom and Japan.

Chart I-4-N. --OECD trade in essential oils, perfume materials, toilet preparations, and soaps, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade composition

Two subdivisions make up the essential oils, perfume materials, toilet preparations and soaps subsector: (1) essential oils and perfume materials and (2) perfumery, cosmetics, soaps, cleaning preparations, etc. Of the two, the latter is the most important accounting for 73 percent of OECD exports and 63 percent of OECD imports in this subsector.

### Trade network

The five major countries account for over 85 percent of OECD exports and three-quarters of OECD imports (tables I-4-GG and I-4-HH). By far the

largest supplier to the world is the European Community accounting for 53 percent of OECD exports in 1969, followed distantly by the United States and the United Kingdom. Intra-EC exports equal nearly half of total EC exports. The principal destination for EC outside exports, U.S. and United Kingdom exports are the LDC's. The European Community also is the principal importer, followed by "other" OECD countries. Imports by the European Community from outside sources are equal to about half of intra-EC shipments which move duty free. Imports by "other" OECD countries come principally from the European Community and the United Kingdom.

#### Trade-agreement concessions

As the tabulation below shows, average tariff levels on January 1, 1972, for essential oils, perfume materials, toilet preparations and soap for the five major countries were substantially below levels existing on pre-trade-agreement base dates. Specific duties are significant in the U.S. and United Kingdom tariff provisions for products in this subsector. Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 8.6 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u> <u>1/</u>
	(Percent ad valorem)	
United States	34.3	4.1
European Community	11.8	7.4
United Kingdom	21.3	4.3
Japan	19.3	10.8
Canada	16.2	10.4

1/ Calculations of tariff averages using rates contained in the Kennedy Round "ASP package" (which was never implemented) would show January 1, 1972, rates as follows: United States, 3.8 percent; European Community, 4.8 percent; United Kingdom, 2.8 percent.

All MFN provisions for this subsector in the tariff schedules of the European Community, the United States, and Japan have been the subject of GATT concessions. In the Canadian schedule, all provisions for essential oils and perfume materials are covered under GATT, but for perfumery, cosmetics, soaps and cleaning preparations, 68 percent of the tariff provisions, covering 98 percent of MFN imports, are fully covered by GATT concessions. For essential oils and perfume materials in the United Kingdom schedule, 82 percent of the provisions covering 98 percent of imports are fully covered by GATT; for perfumery, cosmetics, soaps and cleaning preparations, 38 percent of the provisions covering 58 percent of imports are covered.

The national tariffs of all EC member states prior to adoption of the EC's Common External Tariff contained tariff concessions on essential oils, perfume materials, toilet preparations, and soaps negotiated under the GATT. The number of such concessions totaled 75, of which 34 reflected rates higher than the autonomous rate established in the CXT, five were at the CXT rate, and 36 were below the CXT rate.

Tariffs on lemon oil, a major product in this subsector, have been reduced through trade-agreement concessions by Canada, the United States, and the European Community (table I-4-II). The United Kingdom and Japan have bound in the GATT their duty-free treatment of lemon oil. Canada has completely removed its duty; the U.S. tariff has been lowered 66 percent; and the EC rate reduction amounts to 8 percent.

Table I-4-II.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on lemon oil

(% = Percent ad valorem)

Country	Pre-trade- agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

United States-----	25%	17.5%	8.5%	452.34
Canada-----	7.5%	Free	Free	26400-1
European Community--	12%	12%	11%	33.01 AI
United Kingdom-----	Free	Free	Free	33.01 (A)(3) (a)(ii)
Japan-----	Free	Free	Free	33.01-1 (1)

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

## Other Chemicals

This basket subsector includes chemical products and preparations not included elsewhere in the chemical sector. Among the miscellaneous products included are mineral oil additives, pesticide preparations, rosin and other chemical products derived from wood, animal glue and gelatin, activated carbon, and explosives. 1/

MFN tariffs

There is little variation in the MFN tariff averages of the five major countries for miscellaneous chemicals and chemical products, n.e.s. All of the arithmetic and weighted averages both for all products and for dutiable products alone are within the range of 7.2 and 10.5 percent ad valorem, except for the Canadian averages for dutiable products, which reach 13.4 percent (arithmetic) and 15.1 percent (weighted) (chart I-4-0).

The MFN tariff provisions of Japan, the European Community and the United Kingdom are principally in the range of 5.1 to 10 percent ad valorem; one-third of EC rates are in the 10.1-15 percent bracket; one-fifth of the Japanese rates are in the 0.1-5 percent bracket; and 18 percent of the United Kingdom rates are duty free and 16 percent in the 15.1-20 percent bracket. Over two-fifths of the Canadian rates are duty free; virtually all of the remaining provisions are about equally divided between the following percent brackets: 5.1-10, 10.1-15, and 15.1-20.

---

1/ For the specific coverage of this subsector, see BTN headings 34.07, 35.03-.04, 35.06, 36.01-.05, 36.07, 38.01-.03, and 38.05-.19.

Chart I-4-O. --Average MFN tariff rates on miscellaneous chemicals and chemical products, n.e.s.

The United States has almost half of its provisions in the 0.1-5 percent ad valorem ranges; one-quarter are in the 5.1-10 percent bracket (table I-4-JJ).

Virtually all imports of the United States, Canada, Japan and EC entries from outside sources receive MFN treatment; preferential rates are important in the United Kingdom where about 21 percent of imports have received preferential treatment. Intra-EC imports, which move free of duty, are 50 percent greater than EC imports from outside sources.

Table I-4-JJ.--Distribution, by duty level of MFN tariff provisions for miscellaneous chemicals and chemical products, n.e.s.

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom

In terms of MFN imports of these miscellaneous chemicals, three-quarters of shipments into Japan and two-thirds of the entries into the United Kingdom are assessed at rates between 5.1 and 10 percent ad valorem. Two-fifths of the imports into Canada and the European Community are in the 10.1-15 percent bracket; almost one-half of Canadian entries are duty free; and one-third of EC imports are assessed at rates ranging from 5.1 to 10 percent ad valorem. One-third of U.S. entries are in the 0.1-5 percent range, another third in the 5.1-10 percent bracket and one-fifth of U.S. imports are duty free (table I-4-KK).

Table I-4-KK.--Distribution, by duty level, of MFN imports of miscellaneous chemicals and chemical products, n.e.s.

20.1-25.0 percent----	-	3.4	-	-	.5
25.1-30.0 percent----	-	8.3	-	-	-
30.1-40.0 percent----	-	-	-	-	.6
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

For this miscellaneous chemicals subsector, the United States has 87 tariff line provisions; the United Kingdom has 54 lines; Canada, 116 lines; the European Community, 72 lines; and Japan, 70 lines.

### Trade importance

In 1969, the miscellaneous chemicals subsector accounted for 13 percent of OECD exports and imports in the chemical sector. OECD exports totaled nearly \$2.2 billion and imports were \$1.6 billion (chart I-4-P). U.S. imports amounted to \$103 million in 1969;

Chart I-4-P. -- OECD trade in miscellaneous chemicals and chemical products, n.e.s., 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

such imports had decreased to \$51 million in 1971. A basket category of chemical products and preparations (BTN 38.19) is the most important in trade in the subsector. In 1967, major MFN importers in this BTN heading were the European Community, Canada, the United Kingdom, and Japan.

#### World production

The value in 1968 of U.S. production of the chemicals included in this subgroup is estimated at less than \$5 billion. Production of these chemicals by the European Community in that year is estimated to have been valued at a few billion dollars, but less than the value of U.S. production. The values of production by Japan, the United Kingdom, and Canada are each estimated to have been less than \$1 billion in 1968.

#### Trade composition

Of the two subdivisions of this subsector, semimanufactured products and finished products, the larger is semimanufactured products which accounts for roughly three-fourths of imports in the subsector.

#### Trade network

The five major countries account for about 90 percent of OECD exports and nearly 80 percent of OECD imports (tables I-4-LL and I-4-MM). The largest supplier to the world is the European Community, followed by the United States. The European Community is also the principal importer, followed distantly by the United Kingdom and Japan. EC exports to outside destinations are more than 25 percent greater than intra-EC exports, but

imports by the Community from outside sources are equal to only about two-thirds of intra-EC imports. The LDC's as a group and "other" OECD countries are the principal markets for EC external shipments. One-third of U.S. exports also go to LDC's. The United States is the principal supplier of European Community imports from outside sources. United Kingdom imports are primarily furnished by the European Community and the United States; Japanese imports come chiefly from the United States and non-OECD countries.

#### Trade-agreement concessions

The tabulation below compares January 1, 1972, average tariff levels of the five major countries with average levels existing on pre-trade-agreement base dates. Specific duties are important in the U.S. and United Kingdom tariff provisions for products in this subsector. Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 6.3 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972 <sup>1/</sup></u>
	(Percent ad valorem)	
United States	25.5	7.4
European Community	12.8	9.3
United Kingdom	10.0	7.2
Japan	18.4	7.9
Canada	17.8	7.5

<sup>1/</sup> Calculations of tariff averages using rates contained in the Kennedy Round "ASP package" (which was never implemented) would show January 1, 1972, rates as follows: United States, 7.2 percent; European Community, 6.1 percent; United Kingdom, 4.2 percent.

All MFN provisions for semimanufactured products of this subsector in the tariff schedules of the European Community and virtually all in the U.S. schedule have been the subject of GATT concessions. In the Japanese schedule, 94 percent of the provisions, covering 92 percent of the imports are under the GATT; for the United Kingdom, 88 percent of the provisions, covering 91 percent of MFN imports; and in the Canadian schedule, 68 percent of the provisions, covering 86 percent of the imports. For finished products in this sector, all MFN provisions in the tariff schedules of the United States and the European Community have been the subject of GATT concessions. In the United Kingdom schedule, 95 percent of the provisions, covering all MFN imports have GATT concessions; in the Japanese schedule, 83 percent of the provisions, covering all MFN imports; in the Canadian schedule, 83 percent of the provisions, covering 94 percent of imports.

All EC member state national tariffs prior to adoption of the EC's Common External Tariff contained concessions under the GATT on miscellaneous chemicals in this subsector. Of 120 concessions in the national tariffs, 60 were at rates above the CXT autonomous rate, 7 were at the CXT rate, and 53 were below the CXT rate. Table I-4-NN shows actual changes which have occurred in the five major country tariffs on animal glue and gelatin since pre-trade-agreement base dates.

Table I-4-NH.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on animal glue and gelatin

Japan-----	10%	10%; 25%	7.5%; 20%	35.03-1

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Range includes ad valorem equivalents, calculated on 1971 import values, representing compound rates of duty of 5 cents per pound plus 12 percent and 7 cents per pound plus 20 percent.

<sup>3/</sup> Range includes ad valorem equivalents, calculated on 1971 import values, representing compound rates of duty from 1.6 cents per pound plus 8 percent to 4.25 cents per pound plus 12.5 percent.

<sup>4/</sup> Range includes ad valorem equivalents, calculated on 1971 import values, representing compound rates of duty from 0.8 cents per pound plus 4 percent to 2 cents per pound plus 6 percent.

<sup>5/</sup> Percents are ad valorem equivalents, calculated on 1971 import values, representing compound rates of duty of 2.5 cents per pound plus 20 percent and 8 cents per pound plus 25 percent.

<sup>6/</sup> Percents are ad valorem equivalents, calculated on 1971 import values, representing compound rates of duty of 1.625 cents per pound plus 10 percent and 4 cents per pound plus 12.5 percent.

<sup>7/</sup> Percents are ad valorem equivalents, calculated on 1971 import values, representing compound rates of duty of 0.8 cents per pound plus 5 percent and 2 cents per pound plus 6 percent.

<sup>8/</sup> Plus 5 cents per pound for item 23200-1 (making an ad valorem equivalent rate of about 50 percent).

<sup>9/</sup> Or a specific rate of 10s. 6d. per hundredweight, whichever is the greater.

Note.--Ad valorem equivalents of rates of duty shown in parentheses are those in the range for the principal items of trade.

## Chapter XIV (Continued)

### INDUSTRIAL PRODUCT SECTORS

#### Introduction

Industrial products are defined in this report as all products provided for in chapters 25 through 99 of the Brussels Tariff Nomenclature. <sup>1/</sup> The industrial products have been grouped into 23 sectors for the purpose of discussing in detail the applicable tariffs, nontariff trade barriers, and the direction of major trade flows.

The format followed for the presentation for each sector includes an examination of MFN tariffs of the United States, Canada, Japan, the European Community (of six), and the United Kingdom, the sector's trade importance and trade network, the trade composition, trade-agreement concessions which have taken place, and an account of the complaints submitted to the Commission concerning trade barriers affecting products in the sector. Tariff and trade data for the most significant subsectors in each sector are discussed in the same way.

The industrial sectors are numbered according to the order of their importance in total OECD export trade in industrial products in 1969, as follows:

- I-1. Nonelectrical machinery
- I-2. Transport equipment
- I-3. Ores, metals and metal manufactures
- I-4. Chemicals
- I-5. Textiles

---

<sup>1/</sup> See the appendix to chapter XIII.

- I-6. Electrical machinery
- I-7. Pulp, paper and paperboard, and manufactures
- I-8. Coal, petroleum, natural gas and certain derived products
- I-9. Mineral products and fertilizers
- I-10. Professional, scientific and controlling instruments, clocks, and watches
- I-11. Wood and cork and manufactures
- I-12. Precious stones, precious metals and manufactures
- I-13. Rubber and rubber manufactures
- I-14. Raw hides and skins, leather and furs, and manufactures
- I-15. Footwear and travel goods
- I-16. Musical instruments, sound recording or reproduction apparatus
- I-17. Firearms, ammunition, tanks and other armored fighting vehicles
- I-18. Furniture
- I-19. Toys and sporting goods
- I-20. Photographic and cinematographic supplies
- I-21. Works of art and collectors' pieces
- I-22. Office and stationery supplies
- I-23. Manufactured articles not elsewhere specified

Sectors I-1 through I-4 are found in volume 8, sectors I-5 through I-10 in volume 9, and sectors I-11 through I-23 in volume 10. A comparison of tariffs among sectors is found in chapter IV.

Some general observations on the interpretation of the data presented in the sectors is found in chapter XIII.

## Industrial Sector I-5

## TEXTILES

Textiles include textile fibers, yarns, fabrics and similar products, made-up articles (covering a wide range of items such as household linens, tapestries, carpets, cordage, and embroidery), and clothing. It does not include medical or surgical materials, travel goods or footwear of textiles, certain rubberized fabrics, glass fibers and yarn, and articles of bedding. 1/

MFN tariffs

The textiles sector is characterized by relatively high tariff rates, and the "world" average 2/ tariff level for textiles greatly exceeds the "world" average tariff for all industrial products. The difference is illustrated in the following figures:

	<u>"World" average duty (percent ad valorem)</u>	
	<u>All products</u>	<u>Textiles</u>
All items:		
Arithmetic average-----	9.0	13.7
Weighted average-----	5.9	12.9
Dutiable items:		
Arithmetic average-----	10.7	15.1
Weighted average-----	9.8	17.6

1/ For specific coverage of this sector see BTN chapters 50-63, and headings 65.01-.05. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

2/ The "world" average is calculated from the combined tariff provisions and imports of the 13 customs areas (12 individual countries plus the European Community) included in the GATT tariff study.

For every product sector, the GATT tariff study calculated eight tariff averages (four for all items, four for dutiable items) for each of the 13 countries or customs unions included in the study, making a total of 104 averages for each sector. Of the 104 averages for the textile sector, all but three were above the country's corresponding average for all industrial products. The differences range from small amounts (less than one percentage point) to over 15 percentage points. Among the five major tariffs, Japan had the smallest differences, and the United States the largest. Of the three textile averages which fell below the country's corresponding average for all industrial products, one belonged to Japan; the remaining seven Japanese averages were above the all products averages by amounts ranging from 0.4 to 2 percentage points. All eight U.S. textile averages were above the all products averages by amounts ranging from 6.3 to 16.2 percentage points.

Among the five major tariffs, for all products (both dutiable and free combined), the highest arithmetic average of MFN tariff rates on textiles is held by the United States (17.8 percent), while the lowest (9.5 percent) is that of the European Community (see chart I-5-A). With regard to weighted averages of rates on all products, the United States again has the highest average (22.3 percent) and Japan the lowest (3.5 percent). For dutiable products only, Canada has the highest arithmetic average at 19.9 percent ad valorem and the second highest weighted average (23.8 percent); the United States has the highest weighted average at 25 percent ad valorem; and Japan has the lowest weighted average, 12.7 percent.

Chart I-5-A. -- Average MFN tariff rates on textiles  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on nearly all Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

The distribution of MFN tariff provisions by duty level is shown in table I-5-A. All five major countries have some MFN duty-free provisions for textiles (chiefly for raw fibers), but Canada has by far the largest proportion (over one-fifth of its provisions in textiles).

Table I-5-A.--Distribution, by duty level, of MFN tariff provisions for textiles and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	21.1	3.4	8.8	7.5	8.5
0.1-5.0 percent----	2.4	5.1	4.2	11.9	7.8
5.1-10.0 percent---	9.9	20.5	33.3	39.4	10.9
10.1-15.0 percent--	4.6	20.7	30.2	30.5	12.9
15.1-20.0 percent--	26.2	16.9	10.5	9.7	54.1
20.1-25.0 percent--	28.6	14.4	10.5	.9	4.8
25.1-30.0 percent--	4.4	7.2	2.1	-	1.0
30.1-40.0 percent--	2.9	6.5	.4	-	-
40.1-50.0 percent--	-	4.1	-	-	-
Over 50 percent----	-	1.4	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States has about one-fifth of its tariff provisions at rates over 25 percent ad valorem. Another one-fifth of U.S. rates are in the 5.1-10 percent bracket and an additional fifth in the 10.1-15 percent range. One-third of the Japanese and two-fifths of the Community's tariff provisions are in the 5.1-10 percent bracket; nearly another third for each in the 10.1-15 percent bracket. The Canadian tariff schedule has over one-fourth of its provisions at the 15.1-20 percent duty level and a similar proportion at the 20.1-25 percent level. Over half of the United Kingdom's textile provisions are found in the 15.1-20 percent range.

The distribution of MFN imports by duty level is shown in table I-5-B. All of the five major nations have substantial duty-free MFN imports in the textile sector, especially Japan, with nearly three-quarters of total imports duty free in 1970. It should be noted that all duty-free imports of Japan and the United Kingdom, and virtually all for the European Community, are in raw fibers. The United States and Canada have some duty-free imports in all the textile

Table I-5-B.--Distribution, by duty level, of MFN imports for textiles and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	12.3	10.8	72.5	42.2	27.5
0.1-5.0 percent----	.2	1.2	.5	3.7	4.0
5.1-10.0 percent----	4.8	9.9	13.3	12.5	2.2
10.1-15.0 percent--	.6	11.4	4.2	20.2	15.4

25.1-30.0 percent--	16.6	11.2	.7	-	.1
30.1-40.0 percent--	14.8	13.8	-	-	-
40.1-50.0 percent--	-	17.9	-	-	-
Over 50 percent----	-	.1	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

subsectors except clothing. Sixty percent of Canada's duty-free imports are in raw fibers; about 60 percent of the U.S. duty-free textile imports are in the fabrics subsector, about one-third are raw fibers.

With respect to dutiable imports, for the Community, Japan and the United Kingdom, little or no MFN imports enter at rates of 20 percent ad valorem or above. Canada and the United States have significant portions of their imports dutiable at rates above 20 percent (59.7 and 51.5 percent, respectively, of total textile imports). Imports of textiles receiving preferential tariff treatment are significant only for Canada and the United Kingdom. Preferential treatment was accorded 48 percent of total entries into the United Kingdom and 13 percent into Canada.

The United States has by far the most detailed and complex tariff schedule for textiles with slightly over 2,000 tariff lines, the European Community has the least detailed, with 209 lines. Canada has 192 lines; the United Kingdom, 269 lines; and Japan, 260 lines.

### Trade importance

Trade in textiles accounts for nearly 8 percent of world trade in all industrial products. Textiles rank fifth in both OECD imports and exports, accounting for about 9 percent of OECD industrial exports and nearly 10 percent of industrial imports. For the United States, the sector ranked sixth in 1969 U.S. exports. It was fifth most important in U.S. imports in both 1969 and 1970.

Imports by the GATT tariff study countries were valued at \$8.5 billion in 1967, and \$11.2 billion in 1970. OECD 1969 imports were \$15.2 billion (including nearly \$4.3 billion of intra-EC shipments) and exports were \$13.9 billion (see chart I-5-B).

Chart I-5-B. -- OECD trade in textiles, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for almost 87 percent of OECD exports and about 81 percent of imports. Over half of OECD exports go to the five major nations; over one-fifth to LDC's. Fifty-six percent of OECD imports are supplied by the five major countries.

About 43 percent of U.S. exports go to less developed countries (chart I-5-C), where higher tariffs and other trade barriers are more generally encountered. The European Community is the principal developed

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

market for U.S. products, followed by Canada. The United States takes over half of Canada's exports (table I-5-C). Japan ships one-fourth of

Note.--Complete country data are not available for all products covered by this table; country figures therefore do not add to total exports to the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

its exports to the United States, 4.5 percent to the European Community, and half to LDC's. Over one-fourth of the EC's outside exports go to LDC's, over 15 percent to the United States, and 7 percent to the United Kingdom. Non-OECD countries take about one-third of the United Kingdom's shipments. The Community is the principal market among the five major nations for the United Kingdom, followed by the United States.

Textiles rank fourth in MFN industrial imports for the Community, the United Kingdom and Japan, fifth for the United States, and seventh for Canada. The United States had imports of textiles valued at \$1.7

billion in 1967, \$2.3 billion in 1969, and \$3.7 billion in 1971. Nearly one-fourth of U.S. imports come from Japan, while 18 percent come from the European Community (table I-5-D). About 37 percent of Canada's imports

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

of textiles have their origin in the United States, as well as 7 percent of Japanese imports. The United Kingdom and the United States each account for 8.5 percent of shipments to the Community from outside sources. The total Community imports from all external sources were less than two-thirds as large as intra-Community shipments. The Community is the chief developed country source for the United Kingdom's imports of textiles, followed by the United States. LDC's are the chief source of textile imports for all the major countries except Canada, for which it is the second most important source, supplying 19 percent of its imports.

Forty-four percent of the imports of the United States are from LDC's, as are 40 percent of Japanese imports and EC imports from outside sources, and 35 percent of shipments to the United Kingdom. Japan is not a very significant supplier to any major country except the United States.

#### Trade composition

Textiles are divided into five subsectors, of which the fabrics and similar products subsector is the largest in OECD exports (32 percent), the textile fibers and waste subsector is the largest in imports (29 percent), and the clothing and clothing accessories subsector is second in both (about one-fourth of each). The relative importance of the five subsectors is shown in chart I-5-D.

Chart I-5-D. -- OECD trade in textiles, by type, 1969

(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Trade-agreement concessions

For the United States and Canada, average tariff levels on January 1, 1972, for textiles were substantially below the levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. However, the tariff levels of the Community and the United Kingdom remained much the same, while the Japanese tariff level rose slightly. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 2.8 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	45.5	22.3
European Community	7.9	7.6
United Kingdom	12.2	11.5
Japan	2.1	3.5
Canada	32.7	15.7

Nearly all EC and Japanese tariff rates are ad valorem, as are a high proportion of the Canadian rates. However, about 30 percent of U.S. textile rates are specific duties (covering around 40 percent of MFN imports), and one-fifth of the textile provisions of the United Kingdom entail specific duties (involving 27-38 percent of MFN imports).

Concessions under the GATT have been made on 99 percent of the MFN provisions for textiles in the tariff schedules of the European Community

and the United States, covering virtually all textile trade, as well as 95 percent of the Japanese provisions, covering 99 percent of Japan's imports of textiles. Only 88 percent of Canada's provisions are under the GATT; but these cover 99 percent of Canadian textile imports. A range of 92-95 percent of the tariff provisions of the United Kingdom are under the GATT; however, only 81-85 percent of the United Kingdom's imports enter under these provisions.

The national tariffs of all member states of the European Community prior to the adoption of the EC's Common External Tariff (CET) contained tariff concessions on textiles negotiated under the GATT. The number of such concessions totaled 885, of which 435 were greater than the autonomous rate established in the CET, 94 were at the CET rate, and 356 were below the CET rate.

#### Trade complaints

Complaints submitted to the Tariff Commission by manufacturers and traders of textiles cover a large array of policies and practices (both government and private) which were reported to constitute barriers to trade. <sup>1/</sup> The complaints involved almost every developed country and approximately 50 LDC's, including several South American countries and a large number of countries in Africa and Asia.

---

<sup>1/</sup> The nontariff trade barriers affecting textiles and textile products are among the best documented of any of the product sectors. The particular complaints listed here are samples of those submitted to the Commission during its survey for this report. Further details on these complaints and other trade barriers can be found in U.S. Department of Commerce publications Foreign Import Restrictions on Wool/Manmade Fiber Textiles, May 1971, and Foreign Regulations Affecting U.S. Textile/Apparel Exports, September 1968.

Of the total number of complaints, those directed toward LDC's (131) exceeded the total for the developed countries (98). The United States drew more complaints (39) than any other country. Among the LDC's, the greatest number of complaints were against Colombia (18) and Korea (11). Among the developed countries, following far behind the United States, were Japan (10) and South Africa (7). The complaints are summarized under major topic headings in the paragraphs below.

Quotas, embargoes, licensing and other specific limitations.--

The practices and policies most complained of to the Commission in the textile sector were the various measures for specifically limiting trade--particularly quotas, licensing practices, export restraints and embargoes. Mentioned to a lesser extent were exchange controls and minimum and maximum price and process controls.

Quantitative restrictions are widely applied to trade in textiles. Complaints on this type of restriction were directed against 39 countries and some regional trade groups, including the United States, West Germany, France, the Netherlands, Ireland, South Africa, Australia, Taiwan, Korea, and several LDC's in Central and South America and Africa. Of the five major countries, Japan and Canada were the only ones not the object of complaints involving quantitative restrictions. A U.S. manufacturer of textiles complained that South Africa and 15 LDC's, including India, Pakistan, Greece, Turkey and Spain, restricted imports in relation to their available foreign exchange, and another U.S. manufacturer complained that Colombia restricted imports of U.S. textile fibers in order to maintain a positive balance of payments. An exporter in the

United States pointed out that South Africa, in November 1971, reduced permits for imported piece goods of cotton and cotton/synthetic fibers from the United States by 50 percent without prior warning.

A producers trade association complained that restraints on the part of certain European countries vis-a-vis Japanese exports cause the Japanese exporters to concentrate on the U.S. market. A GATT study of international trade problems in textiles also mentioned this possible diversion of exports to the United States, on account of restrictions like those by Greece of Japanese textile fabrics, by Ireland of 47 items of Japanese textiles, by France of Japanese cotton textiles and finished textile goods, by the Cameroons of Japanese synthetic textiles and articles of apparel, and by Upper Volta, of Japanese textiles, by Norway of Japanese cotton textile products, and by West Germany of Japanese and Korean fabrics of synthetic fibers, woolen yarns, and fabrics. A similiar complaint was registered against Denmark whose quota restrictions, including individual buyers' quotas for Korean textile exports, were given in such uneconomically small lots that the Koreans were believed to be diverting their exports to the United States.

Complaints, registered by U.S. exporters, stated that Kenya and the Central African Republic had imposed quotas on U.S. clothing exports, and that Korea had import quota restrictions on U.S. woolen textiles. The complaint of quota restrictions on U.S. exports of textiles into France, the Netherlands, and West Germany were registered in the GATT study. Troubling U.S. exporters were quotas imposed by

Australia on knitted coats, and on jute and cloth bags and similar items by the United Kingdom. Complaints by U.S. exporters were made regarding the import quotas on U.S.-made hosiery by Iceland and Ireland.

Quantitative restrictions on imports of textiles into the United States were the objects of complaints by several U.S. importers and importers trade associations, as well as by a producers trade association in the United Kingdom. An American importer of nylon ski clothing complained that quotas for U.S. textile imports added at least 20 to 90 cents per garment, and thus impeded trade; an importer of knitwear similarly complained that U.S. quotas impeded his imports of knit gloves and mittens and other knit wearing apparel. Importers of hard fiber cordage found the U.S. absolute quota of imports of 6 million pounds from the Philippine Republic to be somewhat limiting.

Licensing practices were the second largest category of complaints (after quotas) in the Commission's study in the textile sector. One U.S. exporting company, which is a division of a large textile corporation, complained that licenses which can arbitrarily restrict U.S. exports of cotton and cotton/synthetic fiber piece goods are required by Japan, Italy, Greece, and South Africa; similar arbitrary licensing for textiles in general is required by several South American countries. Another U.S. producer of textiles complained that the granting of import licenses abroad for its exports depended on the availability of foreign exchange in a substantial number of countries (principally LDC's) and affected the quantity exported to a

moderate degree; the countries included Greece, Haiti, India, Israel, Pakistan, Portugal, Rhodesia, South Africa, Spain, Turkey, several countries of Central and South America, Bermuda, Trinidad, Barbados, Bahamas, South Vietnam, Laos, Cambodia, and all Arab countries.

In the experience of yet another U.S. producer, certain fiber exports to Colombia required import licenses which took 45 days for approval. The U.S. importer of knit wearing apparel, who had registered complaints concerning U.S. quotas, complained further that U.S. license requirements cause delays in processing his imports of knit gloves and mittens and other knit wearing apparel. License requirements for imports of textiles in general were the object of complaints by U.S. exporters against Cyprus, Jamaica, Greece, France and West Germany. In the cases of the Malagasy Republic and Malta, license requirements prompted complaints by U.S. exporters of shirts, used clothing, men's clothing, and nylon stockings. Switzerland requires import licenses for cotton fabrics and clothing and for jute textiles. Complaints were made that Nigeria, the Ivory Coast, and Austria discriminate in this import licensing against textiles from Japan and Hong Kong by making licenses difficult to obtain and thus causing these exporters to concentrate on U.S. markets.

Also prominent among the various specific limitations, and following licensing practices in frequency of complaints, were complaints involving export restraints and embargoes. The Noordwigk

Agreement was concluded in 1958 by Austria, Switzerland, Norway, and the EC countries, to protect their cotton textile manufacturing industries. Through this pact restrictions were placed on re-exports to each other's markets of finished fabrics which had been imported duty free in the grey state from Japan, Peoples Republic of China, India, Pakistan, and Hong Kong. In 1967, this agreement was extended to cover such grey fabrics from Eastern Europe and to apply also to grey cellulosic or rayon staple fabric. Since January 1969, the Noordwijk Agreement no longer applies to Switzerland, the European Community, or in re-exportation to associated African countries. The agreement was seen as a barrier to Japanese exports of grey cotton fabric and rayon staple fabric.

The Long-Term Arrangement Regarding International Trade in Cotton Textiles (LTA) negotiated under the GATT and in effect since October 1962 <sup>1/</sup> has effectively controlled and limited international trade in cotton manufactures. The Arrangement has been extended several times and was in effect through December 31, 1973. The LTA was subsumed by a multifiber "Arrangement Regarding International Trade in Textiles" which entered into force on January 1, 1974.

Embargoes and practices which have the effect of embargoes were the subject of several complaints by U.S. exporters directed principally at the developing countries. A virtual embargo against imports of U.S. cotton/synthetic piece goods was reported by a U.S. producer to exist in several LDC's. India, Pakistan, and Mexico

---

<sup>1/</sup> A short-term arrangement was in effect from October 1, 1961, to September 30, 1962. For more details on the operation of the LTA, see Chapter VIII.

were the special objects of complaints of maintaining an embargo since they do not issue import licenses for piece goods. Another producer (with subsidiaries in Colombia and Argentina) complained to the Tariff Commission that U.S. exports to Colombia of finished textile products are impeded since there is an embargo on imports of products similar to those which are produced locally. In Argentina, there has been an official decree since mid-1971 embargoing all luxury products (including textiles). Embargoes maintained by other LDC's were reported as follows: Upper Volta and Haiti embargo used clothing; Malta does not import many textiles that can be produced domestically; the Central African Republic excludes certain shirts; the Malagasy Republic excludes new sacks and bags; Indonesia, Korea, and Senegal prohibit entry of certain textiles (in the case of Senegal, particularly cotton fabrics, certain men's clothing, and blankets).

Other types of specific limitations represented among the complaints, though with less frequency, were exchange controls, minimum and maximum price and process controls, and discriminatory bilateral agreements. One U.S. exporter of cotton and cotton/synthetic piece goods, having registered complaints with respect to several other specific limitations, told the Tariff Commission that past exchange controls by Japan impeded U.S. exports to a moderate degree, estimating the probable trade increase after removal to be \$3 million, or 10 percent of 1970 trade. That same exporter complained, in addition, that in France, the buyer meets a troublesome delay in being unable to remit funds until the shipment has cleared their customs.

Another U.S. producer complained to the Commission that the Banco de Republica of Colombia fixes all rates of exchange at the time of payment for U.S. exports of fibers, though this barrier was evaluated as having small effect. A complaint against Yugoslavia, by a U.S. exporter of wool fabrics, related to the complexity of its global foreign exchange quotas allocated in relation to past imports covering most consumer goods.

In the area of price control complaints, U.S. exporters pointed to the minimum prices allowed on imports by Spain and by Austria, a device for keeping out "market disrupting" low-priced imports. It was reported that the Benelux countries and Switzerland maintain price surveillance and impose a minimum price for imports from Japan. Some of these countries are reported to suspend licenses for imports from Japan when the price of goods is considered too low.

Customs valuation and other customs procedures.--Customs valuation practices by the United States were criticized by some U.S. importers of textile fibers and other textiles as a trade barrier. Objections were made about the increase in valuation for customs purposes to reflect the increase in value of Japanese currency between the date the textile products were contracted for and the date of exportation (the importer had virtually paid for the goods at the old lower exchange rate). Importers of sisal pads from Mexico using rail transportation to the border felt the U.S. method of handling certain transportation costs in determining dutiable value discriminated against him in favor of his competitors whose location

permitted sea transportation from Mexico. Since sisal pads imported by ocean carrier are appraised on an f.o.b. basis at the port in the vicinity of the factory and those imported by rail are appraised on an f.o.b. basis at the port of entry on the border, the rail borne imports assumed a higher dutiable value. Thus rail transportation, the most desirable method of shipment from Mexico, was discouraged, in the view of these U.S. importers. Another U.S. importer of wearing apparel and linens complained that time-consuming customs procedures in the United States are costly, since they cause additional storage and service charges.

A number of objections were received from U.S. exporters concerning the customs valuation of used clothing shipped to certain less developed countries, particularly the Central African Republic, Cameroon, Chad, Congo (Brazzaville), Gabon, and the Ivory Coast. These complaints centered about arbitrary customs valuation procedures resulting in valuation levels so high that imports are virtually prohibited.

Documentation requirements by the United States were considered burdensome both by a U.S. producer exporting raw cotton (in which reports to the USDA and other quality control procedures are required), and by a U.S. importer of linens and other textile fabrics. U.S. producers exporting to LDC's found the documentation requirements for fibers shipped to Colombia burdensome, as well as the special certificates required for importation of raw wool into the United Arab Republic. South Africa requires four invoices each with

an attached 3x6 inch sample of the textile product imported from the United States. Various other complaints involving customs procedures said to impede U.S. textile exports included such devices as arbitrary classification of merchandise by Australia and Colombia. In the former country, if a product is ruled to be a substitute for another product subject to a higher duty than the first product, the duty on the goods for which it is a substitute may be imposed.

Administrative difficulties were reported to hinder U.S. exports of stockings and socks to France, while U.S. importers of polyester knit slacks and linens leveled the same complaint against the U.S. procedures. The latter group reported that it takes "5 working days at customs to log all the entries from Korea to determine if they pass the quota." Such time-consuming procedures create additional charges for storage and service. Other complaints by U.S. exporters involved consular formalities in Colombia, the Philippines, and Taiwan, and the failure of Colombia to return duty on its re-exports, as well as its strict sample regulations.

Tariff and nontariff charges on imports.--Several U.S. exporters found burdensome nondiscriminatory sales taxes imposed by Canada, Sweden, and Nigeria on exports to those countries of raw cotton, rugs, and knitted goods. Prior import deposit requirements by Greece, Indonesia, Korea, Colombia, and certain other South American countries have been the basis for complaints by U.S. exporters of cotton and cotton/synthetic piece goods, raw cotton, various fibers and other textiles. One U.S. exporter of raw cotton to Indonesia and Korea felt that trade was impeded to a significant extent since

the prior import deposits tie up capital and add to the cost of the commodity. Special additional taxes or fees such as luxury taxes, sanitary taxes, and health inspection fees in Togo, the Central African Republic, and Italy are applied to imports of new and used clothing, jute goods, natural wool, and other textiles. An American producer complained that in the course of his exports of fibers to Colombia he encountered not only discriminatory import duties and prior import deposits, but government-controlled insurance rates, 10 percent consular fees, and a \$10.00 stamp tax for each imported item. There were several complaints by U.S. importers of high U.S. import duties for carpets and other textiles; for example, an importers trade association complained that the implementation of escape-clause relief (lasting 10 years in the case of U.S. imports of certain carpets) was excessive. High Canadian and South American duty levels were cited by U.S. exporters for sails and other textiles which in the view of the U.S. producer significantly affected his trade in sails.

Government participation in trade.--Although, as a whole, the group of complaints involving government participation in trade comprised one of the less important categories of complaints for the textiles sector, the most numerous type of complaint registered within this group referred to state trading practices as impeding U.S. exports to Spain, Tanzania, Tunisia, Indonesia, Kenya, Mauritania, Haiti, and India. U.S. importers complained that the "buy American" practices at the federal, state, and local government levels impede U.S. imports, and are costly to the taxpayer in the course of government procurement. An importers association complained that

laws in Alabama and South Carolina requiring stores carrying Japanese textiles to display signs indicating that fact were handicaps to sales of textiles imported from Japan.

Standards.--This group of complaints was the least important in terms of the number of complaints registered in the textile sector. "Significant" adverse trade effects, in the view of a U.S. exporter of various textile products to Canada, were derived from Canada's requirement that, for textile products sold in Canada, the label shows the fiber content and country of origin in French and English and in a permanent and conspicuous manner. U.S. importers, on the other hand, decried U.S. labelling requirements for women's and girls' outerwear made of woven and knitted wool fabrics. Australia's requirement that its imports of raw cotton be insect-free and have a certificate stating so caused U.S. exporters to complain.

In the Commission's survey, respondents were requested to give their assessment of the restrictive trade effect of the barriers they reported by indicating whether trade in the affected products would show a "small," "moderate," or "significant" increase if the barrier (either alone or in combination with others) were removed and, if possible, to estimate a dollar value for the increase. Only relatively few of the respondents in the textile sector gave such assessments, illustrating the difficulties encountered in measuring the actual impact or significance of the majority of governmental policies and nontariff measures which businessmen feel adversely affect their competitive position in trade. Of the assessments received, almost half

estimated a "moderate" trade increase would occur if the barriers were removed, while about one-fifth were estimated as "small," and about one-third, as "significant." In most cases, respondents reported that their estimates represented the cumulative effect of removal of all barriers infringing on the product. Estimates ranging from as low as \$15,000 to \$5 million annually were given by companies as the expected increase in their trade in a textile product or a group of closely related textile products. The individual estimates of dollar value increases characterized as "moderate" equaled from 5 to 75 percent of present trade in each case. Those estimates characterized as "significant" were equivalent to as low as 10 percent in one case, but most frequently ranged from about 40 percent up to 150 percent of present trade. The relatively small number of dollar value estimates received in the textile area totaled only \$20 million.

### Textile Fibers and Raw Fiber Wastes

This subsector includes textile fibers of wool, cotton, silk, synthetic and artificial fibers, jute, hard fibers (including flax, hemp, and sisal), and other vegetable fibers. Also included are the wastes derived from processing the aforementioned fibers. 1/

#### MFN tariffs

Textile fibers, being a raw material, have the lowest tariff averages among the subsectors in textiles. For all products, all the major countries except the United States have their arithmetic averages clustered about the 2.9-4.3 percent range (chart I-5-E). The United States has the highest arithmetic average at 7.4 percent ad valorem. The weighted averages of all countries except the United States are very low, ranging from 0.1-2.2 percent, while the U.S. weighted average is 12.2 percent ad valorem. This high weighted average reflects the comparatively small amount of duty-free U.S. imports and relatively large amount of U.S. imports in high duty brackets, as compared with the other four major nations.

With regard to dutiable products, the European Community has both the lowest arithmetic average (6.4 percent ad valorem) and the lowest weighted average (5.7 percent). Japan has the highest arithmetic average at 10.2 percent ad valorem, just slightly above the U.S. level of 10.1 percent. However, the United States has the highest weighted average, which at 18.2 percent is over twice that of Japan. Over 90 percent of all imports into Canada, the Community, Japan, and the United States were accorded MFN treatment. The United Kingdom had MFN

---

1/ For specific coverage of this subsector, see BTN headings 50.01-.03; 53.01-.05; 54.01-.02; 55.01-.04; 56.01-.04; 57.01-.04 and 63.01-.02.

Chart-I-5-E. -- Average MFN tariff rates on textile fibers and waste  
(Percent ad valorem)

Source: Compiled from national tariffs and trade statistics.

imports of only 47 percent; however, 53 percent of United Kingdom imports receive preferential treatment under the Commonwealth and EFTA agreements.

As illustrated in table I-5-E, half or more of the rate provisions of Canada, Japan, and the Community for textile fibers and waste are duty free. Over one-fourth of U.S. tariff provisions are free, as are 40 percent of those of the United Kingdom. The Community has no provisions higher than 10 percent ad valorem, which is also true for

nearly all of the rate provisions of the United Kingdom. Only a negligible proportion of Canadian and Japanese provisions are above 15 percent; almost 15 percent of U.S. rates are above this level. Concerning MFN imports of textile fibers and waste, virtually all Japanese imports enter duty free, as do over 90 percent of shipments to the European Community and the United Kingdom (table I-5-F). Over three-quarters of Canadian entries are also duty free. Nearly one-third of

Table I-5-F.--Distribution, by duty level, of MFN imports of textile fibers and waste

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

U.S. imports enter duty free, another third are assessed at rates between 0.1 and 15 percent ad valorem, nearly another third at rates between 15 and 30 percent.

The United States has the most complex tariff schedule for textile fibers and waste, with 144 tariff lines; the Community has the simplest with 30 lines. The United Kingdom's schedule has 50 lines; that of Canada, 45 lines; that of Japan, 38 lines.

### Trade importance

Textile fibers and waste account for about 14 percent of OECD exports and 29 percent of OECD imports in textiles. OECD exports totaled \$2 billion in 1969, imports were \$4.3 billion (chart I-5-F). Among the

Chart I-5-F. --OECD trade in textile fibers and waste, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

119 industrial subsectors, wool fibers rank 15th and cotton 16th in value of aggregate MFN imports of the GATT tariff study countries. Wool fibers rank as the sixth most important subsector for the Community and eighth for Japan. Cotton fibers rank fifth for Japan and eighth for the Community. U.S. imports of textile fibers amounted to \$260 million in 1969, and fell to \$172 million in 1971. Cotton fibers are the most important type of textile fiber import for the United Kingdom, Japan, and Canada. United Kingdom imports of cotton fibers are valued at \$120 million, Japanese imports at \$443 million, and Canadian imports at \$40 million. Wool fiber imports are the most important for the United States and the Community. U.S. imports of wool fibers are valued at \$169 million and EC imports at \$533 million.

#### Trade network

The five major countries account for about 86 percent of OECD exports and nearly 87 percent of OECD imports of textile fibers (tables I-5-G and H.) Of the five major countries, the European Community is the largest supplier to the world, being the source for 43 percent of OECD exports, followed by the United States and the United Kingdom. In 1969, Australia was the most important of all supplying countries (shipping chiefly raw wool), but dropped from this position in 1970. The European Community and Japan are the most important importing countries, followed by the United Kingdom. Canada is, of the five, the least important both as an importer and exporter of textile fibers. Half of U.S. exports go to non-OECD countries as

Table I-5-G.--OECD exports of textile fibers and waste, 1969

well as nearly three-fifths of Japanese exports. The remainder of U.S. exports go chiefly to the European Community (18 percent) and Japan (13 percent). Almost 65 percent of U.S. imports come from non-OECD nations, 15 percent from the European Community and one-tenth from the United Kingdom.

Intra-EC imports are about one-third the value of EC receipts from outside origins, about 82 percent of which are supplied by non-OECD countries. The United States is the principal developed country supplying imports to Canada and Japan. However, non-OECD countries are the largest suppliers of textile fibers to Japan and the United Kingdom.

Generally, trade flows among the five countries are in the direction of countries having lower tariffs. The principal importers, the Community and Japan, have lower tariff averages when compared with the United States, which has generally higher averages and is the second least important importer.

#### Trade-agreement concessions

As seen in the following tabulation, for the United States and Canada, average tariff levels for textile fibers and waste are well below levels existing on pre-trade-agreement base dates. The lower current rates largely reflect concessions granted in reciprocal negotiations. The average tariff level for the Community is only slightly lower than the already low base date level, and that of the United Kingdom has not changed. Japan's average tariff level rose from zero to one-tenth of a percent. In November 1972, Japan made unilateral 20 percent reductions on all of its rates on textile fibers and wastes (except rates on silk worm cocoons and raw silk), thereby reducing the Japanese average level to about .08 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	23.0	12.2
European Community	0.9	0.5
United Kingdom	0.9	0.9
Japan	0.0	0.1
Canada	6.4	2.9

All MFN provisions for wool fibers in the EC and U.S. tariff schedules have been the subject of GATT concessions. Ninety-two percent of the provisions in the Canadian schedule have GATT concessions, as do 86 percent of the Japanese, covering all MFN imports in both cases. However, the schedule of the United Kingdom has only 78-89 percent of its provisions covered under the GATT, and these concessions deal with a mere 5-22 percent of MFN imports. All MFN provisions for cotton fibers in the tariff schedules of the Community, Canada, Japan and the United Kingdom have been the subject of GATT concessions, but only 29 percent of U.S. provisions, covering 57 percent of MFN imports.

All EC member state tariff schedules prior to the adoption of the Common External Tariff contained concessions under the GATT. Of 80 concessions in the national tariffs, 18 were at rates above the CXT autonomous rates, 42 at the CXT rate, and 20 below the CXT rate.

Trade-agreement concessions in major country tariffs dealing with wool, cotton, and manmade fibers are shown in tables I-5-I, J and K. Much of the trade in natural fibers flows without tariffs, bound free of duty (tables I-5-I and J). Japan has granted tariff reductions of 50 percent below the general rate on manmade or synthetic and artificial fibers (e.g., nylon, polyacrylonitrile, polyester, acetate) (table I-5-K).

On comparable commodities, EC reductions of MFN rates range from 33 percent to 39 percent from the "autonomous" rates, and Canada's reductions from the general rate amount to 33.3 percent. The greatest reductions on tariff rates from statutory levels on manmade fibers have been made by the United Kingdom (ranging from 72 percent to 81 percent) and the United States (70 percent to 79 percent).

An examination of the concession rates granted by five countries on manmade fibers during the Kennedy Round shows the following reductions

Table I-5-1---Pre-trade-agreement tariff rates compared with January 1, 1972,

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> All tariff items were subject to concessions granted in the Kennedy Round. About 92 percent of import trade in terms of imports in 1970 was dutiable at 7.5 percent ad valorem.

<sup>3/</sup> The ad valorem equivalents (AVE) shown are based on U.S. imports during 1970 and represent a compound rate of 10 cents per pound plus 30 percent ad valorem and a specific rate of 40 cents per pound, respectively. Small imports in three TSUS classes, whose AVE's, based on 1970 imports, were 2.7 percent, 90.6 percent, and 104.1 percent were not included in the imports represented by the AVE's as shown.

<sup>4/</sup> The ad valorem equivalents (AVE) shown are based on U.S. imports during 1970 and represent a compound rate of 2.5 cents per pound plus 7.5 percent ad valorem and a specific rate of 18.5 cents per pound, respectively. Small imports in three TSUS classes, whose AVE's, based on 1970 imports, were 0.9 percent, 21.8 percent, and 25.4 percent, were not included in the imports represented by the AVE's as shown.

<sup>5/</sup> Certain manmade fibers, for use in the manufacture of carpets, were excluded by the European Community from Kennedy Round concessions.

<sup>6/</sup> The ad valorem equivalents shown are based on United Kingdom imports during 1970 and represent a compound rate of 2s per pound plus 10 percent ad valorem as applied to various classes. About 69 percent of imports was subject to duties equivalent to 52-55 percent ad valorem.

<sup>7/</sup> The ad valorem equivalents shown are based on United Kingdom imports during 1970, subject to specific rates ranging from 3.6d. per pound to 7.2d. per pound.

## Fabrics and Similar Products

Fabrics and similar products include woven fabrics of wool, cotton, silk, synthetic and artificial fibers, jute and hard fibers and other types of fabrics, such as pile, chenilles, coated, impregnated, elastic and knitted fabrics of all fibers. 1/

MFN tariffs

MFN average tariffs of the five major countries for fabrics and similar products cover about a 12 percentage point range (see chart I-5-G). At the bottom of the range are tariffs of Japan and the Community with weighted averages of 12.2 and 13.9 percent ad valorem, respectively. At the top is Canada, with averages for dutiable products of 20.4 percent (weighted) and 25.9 percent ad valorem (arithmetic).

Virtually all imports into the United States and the European Community are accorded MFN treatment, as well as 92 percent of Japanese imports. Nearly five-sixths of Canadian imports are extended MFN treatment, but only 46 percent of United Kingdom imports are MFN, the rest receiving preferential tariff treatment.

Only Canada and the United States, of the five major countries, have duty-free provisions for fabrics and similar products in their tariff schedules (table I-5-L). Over one-third of the remaining Canadian provisions are in the 15.1-20 percent ad valorem duty range, while over one-fifth are in the 20.1-25 percent bracket. In the tariff schedules of the United States, more than one-quarter of the provisions are in the 10.1-15 percent range, one-fifth in the 15.1-20 percent range and another one-tenth in both the 20.1-25 and 25.1-30 percent ranges. The

Chart 1-5-G. -- Average MFN tariff rates on fabrics and similar products  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1971 on Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

United States is the only nation with tariff provisions over 40 percent. Forty-three percent of the Japanese provisions are in the 5.1-10 percent bracket; another third in the 10.1-15 percent range. Over half of the EC provisions are in the 10.1-15 percent bracket; 94 percent of the United Kingdom tariff provisions fall in the 15.1-20 percent range.

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

One-third of the Canadian imports pay duties of from 30.1-40 percent ad valorem. U.S. imports are scattered throughout the duty ranges with approximately one-eighth falling in the 5.1-10 percent range, one-tenth in the 10.1-15 percent and 25.1-30 percent brackets, and 15 percent in the 40.1-50 percent ad valorem range. Of Japan's imports, over half enter

in the 5.1-10 percent range, while four-fifths of EC imports pay duties ranging from 10.1-15 percent ad valorem. All United Kingdom imports fall into the 15.1-20 percent bracket.

There is a significant variation in the MFN tariff averages for the various kinds of fabrics. The averages tend to be highest for wool fabrics, followed by synthetic and artificial fabrics and cotton fabrics. The United States had the highest arithmetic averages for wool and synthetic fabrics of the five countries. Its weighted average in wool similarly exceeded that of any of the other countries, while Canada's weighted average for synthetic fabrics was slightly higher than that of the United States. For cotton fabrics, the United Kingdom had the highest arithmetic average while Canada had the highest weighted tariff average. These comparisons are shown in the table I-5-N.

Table I-5-N.--Average MFN tariff rates on selected fabrics

(percent ad valorem)

Source: Basic Documentation for the Tariff Study, GATT.

The most complex tariff schedule for fabrics belongs to the United States with 1,276 lines, the simplest is the United Kingdom's, 27 lines. Canada has 54 lines, Japan, 41 and the Community, 38.

### Trade importance

Fabrics and similar products make up the third largest category in the OECD import textile trade and the first in the export textile trade, with total 1969 OECD imports of \$3.6 billion and exports of \$4.5 billion (chart I-5-H). It is the second largest category in U.S. textile imports

Chart I-5-H. -- OECD trade in textile fabrics and similar products, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

(\$710 million in 1969, \$801 million in 1971), as well as in U.S. textile exports (\$308 million in 1969). Among the 119 categories of industrial products, cotton fabrics is the most important of the textile categories for the Community and the United States; "other" fabrics (pile, chenilles, coated, elastic and knitted fabrics of all fibers) are the most important for Canada, Japan, and the United Kingdom.

### Trade network

The five major countries account for over 89 percent of OECD exports of fabrics and about 81 percent of imports (tables I-5-0 and P). The largest exporter to the world is the European Community, followed by Japan (however, if intra-EC exports were discounted, the Community would fall to second place behind Japan). The principal importing countries are the Community (again by virtue of intra-EC shipments) and the United States. Complete country of destination data are not available for 12 percent of Canadian exports, 10 percent of U.S. exports, 13 percent of Japanese exports, 5 percent of EC exports, and 9 percent of United Kingdom exports. Of those exports accounted for, two-thirds of Japanese exports go to non-OECD countries, as do nearly two-fifths of U.S. exports and the external exports of the Community.

Table I-5-0.--OECD exports of textile fabrics and related products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The remainder of U.S. exports goes principally to Canada (over one-fourth) and the European Community (18 percent). The United States is the main developed country market for the remaining Japanese and EC exports.

Thirty percent of U.S. imports come from Japan, 16 percent from the European Community and nearly 43 percent from LDC's. EC imports from external sources are small; intra-EC shipments supply virtually the entire EC market. The United Kingdom is the Community's chief supplier among the five major countries, accounting for 18 percent of imports from outside countries. The European Community is the principal developed country supplying United Kingdom and Japanese imports. Over 43 percent of Canada's imports originate in the United States. Japan, the United Kingdom, and the Community are net exporters; the United States and Canada are net importers.

Trade-agreement concessions

Average tariff levels on fabrics of all the major countries have been significantly reduced through trade-agreement concessions, as shown in the following tabulation. The greatest reduction has been that of the U.S. tariff, being reduced by over 33 percentage points. EC member state national tariffs prior to the adoption of the Common External Tariff contained 225 GATT concessions on textile fabrics and similar products, 105 of which were at rates higher than the CXT rate, 18 at rates equaling that of the CXT, and 102 below the CXT rate. Japan, in November 1972, made unilateral reductions in all of its rates on fabrics and similar products, thereby reducing the Japanese average level to about 9.8 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	49.3	15.9
European Community	17.5	13.9
United Kingdom	24.5	17.5
Japan	19.2	12.2
Canada	37.5	17.4

GATT concessions cover all EC, U.S., Japanese, and United Kingdom MFN tariff provisions on cotton fabrics; and 84 percent of Canada's cotton fabrics provisions (but 100 percent of imports). For synthetic and artificial fabrics, GATT concessions cover all EC, U.S., and United Kingdom MFN provisions; 80 percent of Japan's MFN provisions (86 percent of imports); and 69 percent of Canada's MFN provisions (99 percent of imports).

All five major countries are participants in the Long-Term Arrangement Regarding International Trade in Cotton Textiles (LTA), a multi-lateral agreement negotiated under the sponsorship of GATT under which some 30 trading partners have entered into agreements to limit their imports or exports of cotton textiles. Certain tariff reductions of the European Community and the United States are conditional upon extension of the Long-Term Arrangement. <sup>1/</sup>

Some concessions by the five countries in tariffs dealing with woven cotton fabrics, woven synthetic and artificial fabrics, and woven woolen fabrics are shown in tables I-5-Q, I-5-R, and I-5-S. On imports of cotton fabrics, overall reductions since pre-trade-agreement base dates have been as follows: The United States, 42 to 56 percent; Canada, 33 to 43 percent; the European Community, 24 to 26 percent; the United Kingdom, 12.5 percent; and Japan, 25 percent. On imports of synthetic and artificial fabrics, similar reductions are in effect. Overall reductions by the United States were 68 percent; Canada's were 50 percent; the European Community reduced rates by 25 to 38 percent, the United Kingdom by 50 percent, and Japan by 50 percent. For woolen fabrics, reductions have been made in all of the five major country tariffs except that of the European Community.

---

<sup>1/</sup> The LTA expired on December 31, 1973. It was subsumed by a multifiber "Arrangement Regarding International Trade in Textiles" which entered into force on January 1, 1974.

Japan-----	20% <sup>6/</sup> 20%	20% <sup>6/</sup> 20%	15% <sup>6/</sup> 10%	53.11-1 53.11-2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (Post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> The ad valorem equivalents shown are based on U.S. imports during 1970 and represent compound rates of duty which ranged from 40 cents to 50 cents per pound plus 55 percent to 60 percent ad valorem.

<sup>3/</sup> Nearly all items (98 percent of 1970 imports) were excluded from Kennedy Round concessions, except for certain hand-woven and certain serge fabrics. The ad valorem equivalents shown are based on U.S. imports during 1970 and represent compound rates of duty which ranged from 30 cents to 37.5 cents per pound plus 12.5 percent to 60 percent ad valorem, and specific rates of 68 cents per pound and \$1.135 per pound. The AVE shown in parenthesis, based on 1970 imports, represented 95 percent of the import trade.

<sup>4/</sup> The ad valorem equivalents shown are based on Canadian imports during 1970 and represent compound rates of duty ranging from 30 percent to 40 percent ad val. plus 20 cents to 40 cents per pound.

<sup>5/</sup> The ad valorem equivalent shown is based on Canadian imports during 1970 and represents a compound rate of duty of 25 percent ad valorem plus 25 cents per pound.

<sup>6/</sup> Where the official rate is the greater of either a specific or an ad valorem rate, the latter is listed here.

### Clothing and Clothing Accessories

Clothing and clothing accessories for humans include all outer garments and under garments and accessories (e.g., gloves, handkerchiefs, shawls, scarves, ties) made of textile fabrics, whether woven, knitted, elasticized or rubberized. Fur and leather clothing and accessories are not included. <sup>1/</sup>

#### MFN tariffs

Generally, the tariff averages on clothing are the highest of all textile categories. For MFN imports of clothing and clothing accessories, the European Community holds the lowest tariff averages, 11.6 percent ad valorem on an arithmetic basis and 16.4 percent on a weighted basis (chart I-5-I). The highest average on total imports on an arithmetic basis is Canada's, at 22.7 percent ad valorem, with the United States average only slightly lower, 22.6 percent; the highest weighted average is that of the United States (25.9 percent), with Canada's following closely (25.2 percent). For "all items" and "dutiable items," all MFN rates are the same except for an insignificant difference in Canada's arithmetic average. This is due to the fact that of the five major countries, only Canada has any duty-free provisions for clothing (and the percentage of these duty-free Canadian provisions is very low).

---

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 60.02-.06; 61.01-.11; 65.01-.02; and 65.03-.05.

Chart I-5-I. -- Average MFN tariff rates on clothing and clothing accessories  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

MFN tariff treatment was accorded to nearly 98 percent of EC imports, 96 percent of U.S. imports, 90 percent of Canadian entries, and about three-quarters of shipments to Japan. However, almost three-fourths of United Kingdom entries were given preferential treatment.

Only Canada has duty-free tariff provisions for clothing and clothing accessories, though this involves only 1.4 percent of total Canadian tariff provisions (table I-5-T). No Canadian provision has a

Table I-5-T.--Distribution, by duty level, of MFN tariff provisions for clothing and clothing accessories

(In percent)

Note.--Due to rounding, figures may not add to 100 percent.

duty-level higher than 30 percent ad valorem. Nearly two-thirds of the Canadian tariff provisions are in the 20.1-25 percent ad valorem range. The United States has tariff rates in every bracket, except free; the largest portions of the U.S. tariff provisions are in the 5.1-10 percent, 15.1-20 percent and 20.1-25 percent ranges, with about one-fifth of the provisions in each. One-third of Japanese provisions are in the 10.1-15 percent range, about 30 percent in the 15.1-20 percent bracket and over one-fourth in the 20.1-25 percent range. With no tariff provisions at any duty level greater than 20 percent, one-third of the EC provisions are in the 5.1-10 percent bracket, over one-third in the 10.1-15 percent ad valorem class, and one-fourth in the 15.1-20 percent bracket. Over three-quarters of the tariff provisions of the United Kingdom are in the 15.1-20 percent range.

Three-fifths of Canadian imports enter at rates of 20.1-25 percent ad valorem (table I-5-U). About one-quarter of U.S. imports pay duties

Table I-5-U.--Distribution, by duty level, of MFN imports of clothing and clothing accessories

(In percent)

in each of the following brackets: 15.1-20 percent, 20.1-25 percent and 40.1-50 percent. Nearly half of Japanese imports enter in the 20.1-25 percent ad valorem duty level. About 86 percent of shipments into the Community are dutiable at rates of 15.1-20 percent ad valorem, as are 92 percent of United Kingdom entries.

#### Trade importance

In 1969, exports of clothing and clothing accessories by OECD countries were valued at \$3.3 billion; imports at \$3.9 billion (chart I-5-J). In 1970, exports rose to \$3.7 billion; imports to \$4.5 billion. Among the 119 industrial product categories, clothing ranks 11th in MFN industrial imports of the GATT tariff study countries. It ranks 7th for the United States, 21st for Canada and 23rd for the Community. U.S. imports were \$1 billion in 1969; by 1971 they rose to \$1.4 billion.

Chart I-5-I -- OECD trade in clothing and clothing accessories, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for over 84 percent of exports and about 82 percent of imports. The European Community is the largest exporter and (including intra-EC shipments) accounts for over half of OECD export shipments (table I-5-V). The value of intra-EC exports is over two times as large as EC exports to outside destinations. The Community's single largest customer is the United States. Japan, as the second largest exporter accounting for 13 percent of OECD exports, has the United States as its most important customer. The United States is the largest importer of clothing and clothing accessories, followed by

Table I-5-V.--OECD exports of clothing and clothing accessories, 1969

(Millions of dollars)

Exporters Importers	OECD total	Canada	United States	Japan	European Community	United Kingdom	Other OECD
World-----	3,283	41	211	426	<u>1/</u> 1,855	237	513

Note.--Complete country data are not available for all products covered by this table; country figures therefore do not add to total exports to the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

EC imports from outside sources (table I-5-W). Nearly a quarter of U.S. imports come from Japan. Non-OECD countries (chiefly LDC's) are the source of over half of U.S. imports, EC imports from outside countries, and shipments to the United Kingdom, as well as over 40 percent of Canadian imports. EC imports from outside origins are equal to only slightly more than one-third of intra-EC shipments. Japan has the least imports of clothing among the five major countries.

Factors other than tariffs appear to exert a significant force in the clothing trade, as trade often appears to flow into, rather than away from, the areas having the higher tariff averages, as illustrated by the fact that the United States, the largest importer, also has some of the highest tariff averages.

Table I-5-W.--OECD imports of clothing and clothing accessories, 1969

(Millions of dollars)

#### Trade-agreement concessions

All five major countries have granted trade-agreement concessions on tariffs dealing with clothing and clothing accessories. Changes in average duty levels since pre-trade-agreement base dates are shown in the following tabulation:

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	44.8	25.9
European Community	20.4	16.4
United Kingdom	20.6	19.9
Japan	27.1	18.6
Canada	43.8	22.7

All of the EC member states had made GATT concessions on clothing and clothing accessories before they changed to the Common External Tariff.

Thirteen of the 236 concession rates contained in the member state schedules were at the CXT level, 132 were higher than rates established in the CXT, 91 at lower rates. The United States has made GATT concessions on 99 percent of its MFN provisions on clothing and clothing accessories, covering all U.S. imports; Japan's concessions cover 98 percent of its provisions (97 percent of trade); all MFN provisions in the three other major tariffs are under GATT concessions.

Tariffs on knit outerclothing, a large trade item, have been reduced in trade-agreement concessions by all five major countries (see table I-5-X). Reductions in U.S. tariff rates have ranged from 53 to

Table I-5-X.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on knit outerclothing

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	90%	42.5%	21%-42.5%	372.10 (pt.), .25, .30, .35
	52.3%-84.7% AVE <sup>3/</sup>	21.3%-44.2% AVE	13.4%-44.2% AVE <sup>2/</sup> <sup>4/</sup>	373.05 (pt.), .15, .20, .25 380.02 (pt.), .04 (pt.), .57, .59, .61, .81 (pt.); 382.02 (pt.), .04 (pt.), .48, .54, .58, .78
Canada-----	55%	32.5%-35%	27.5%	56805-1; 56810-1
European Community--	21%	21%	10.5%; 18%	60.05AI and II
United Kingdom-----	43% <sup>5/</sup>	25%-33.3%	20% <sup>5/</sup>	60.05A
Japan-----	30%	30%	21%	60.05-1
	25%	25%	17.5%	60.05-2(1), (2)

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Only 7 percent of the tariff items covering about 2 percent of the value of 1970 imports was subject to concessions granted in the Kennedy Round.

<sup>3/</sup> The ad valorem equivalents (AVE) shown, based on U.S. imports during 1970, represent compound rates of duty which ranged from 45 to 50 cents per pound plus 50 to 75 percent ad valorem.

<sup>4/</sup> The ad valorem equivalents (AVE) shown, based on U.S. imports during 1970, represent compound rates of duty which ranged from 12 to 37.5 cents per pound plus 10.5 to 32.5 percent ad valorem.

<sup>5/</sup> Where the official rate is that which is the greater of either a specific or an ad valorem rate, the latter is listed here.

83 percent. Canadian tariffs have been reduced about 50 percent from the statutory level. The Community's autonomous rates have been reduced by 50 percent for jerseys and pullovers made mostly of wool and 14 percent for all other knit outerclothing. The United Kingdom rate has been reduced by 53 percent. Japanese rates have been cut by 30 percent. The rate levels and concessions shown in table I-5-X are also approximately representative of outerclothing of woven fabrics.

## Miscellaneous Textiles

The remaining categories of textiles, which will not be discussed in detail, are yarns and made-up articles and related products. The relative world trade importance of the categories can be seen in chart I-5-D at the beginning of the textiles sector.

U.S. trade has been as follows (in millions of dollars):

	Exports	Imports	
	(1969)	(1969)	(1971)
Yarns-----	137	100	343
Made-up articles-----	119	202	962

For each of the categories and for each of the five major countries, there are listed in table I-5-Y arithmetic and weighted average MFN rates

Table I-5-Y.--Average MFN tariff rates on miscellaneous types of textiles, and the highest rate bracket in which provisions of the major tariffs fall

(Percent ad valorem)						
Type of Textiles	Canada	United States	Japan <sup>1/</sup>	European Community	United Kingdom	
Yarns:						
Arithmetic average-----	11.0	14.4	10.3	7.1	11.4	
Weighted average-----	17.1	16.4	9.4	7.9	11.5	
Highest rate bracket---	20.1-25	over 50	20.1-25	13.1-14	14.1-15	
Made-up articles:						
Arithmetic average-----	16.4	15.7	11.4	11.0	17.4	
Weighted average-----	20.8	11.8	17.4	15.4	14.0	
Highest rate bracket---	30.1-40	over 50	25.1-30	20.1-25	30.1-40	

<sup>1/</sup> Figures for Japan do not reflect the unilateral reductions made in 1972 in Japanese rates.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

of duty for total imports, and the highest duty bracket in which provisions of each of the five tariffs fall. In a simple count of "highest" and "lowest" rankings in the data in this table (i.e., highest/lowest arithmetic average, weighted average, etc.), the United States had the largest number of "highest" rankings; the European Community had the largest number of "lowest" rankings.

## ELECTRICAL MACHINERY

Electrical machinery includes generators, motors, converters, and transformers; electro-magnets; primary cells and batteries; hand tools with self-contained electric motors; ignition, lighting, and signaling equipment; industrial and home heating equipment; telegraphic, telephonic, radio, and television apparatus; microphones and loud-speakers; electric traffic control equipment; electric sound or signaling apparatus; small appliances; insulators; and parts of electrical machinery and apparatus. <sup>1/</sup> This sector does not include dishwashing machines, clothes washing machines, ironing machines, or sewing machines.

MFN tariffs

Except for Canada and the United Kingdom which have some duty-free tariff provisions in this sector, the average MFN tariff rates on electrical machinery for all products for each major country do not differ from their average rates on dutiable products alone. For all products, the United Kingdom has the highest weighted average (12 percent ad valorem); the United States has the lowest at 7.2 percent (see chart I-6-A). Canada has the lowest arithmetic average (7.8 percent ad valorem); Japan and the United Kingdom share the highest at 10.8 percent. Canada has both the highest weighted and arithmetic averages for dutiable products at 15.5 percent and 14.8 percent, respectively. Both the United States and the European Community hold the lowest

---

<sup>1/</sup> For specific coverage of this sector, see BTN headings 85.01-.28. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-6-A. -- Average MFN tariff rates on electrical machinery and apparatus

(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions by approximately 50 percent made in 1972 on four-fifths of the Japanese rates, and by amounts ranging from 40 percent to 71 percent on the remaining Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

arithmetic average at 8.4 percent ad valorem. The United States has the lowest weighted average (7.2 percent).

The distribution of tariff provisions by duty level is shown in table I-6-A. The largest portion of rate provisions is in the

Table I-6-A.--Distribution, by duty level, of MFN tariff provisions for electrical machinery and apparatus

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	47.3	-	-	-	1.6
0.1-5.0 percent----	.8	24.3	-	2.3	3.2
5.1-10.0 percent---	12.5	54.1	67.3	79.3	58.7
10.1-15.0 percent--	14.1	14.4	26.4	14.9	28.6
15.1-20.0 percent--	25.4	4.5	5.5	3.4	6.3
20.1-25.0 percent--	-	1.8	.9	-	-
25.1-30.0 percent--	-	-	-	-	-
30.1-40.0 percent--	-	.9	-	-	1.6
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

5.1-10 percent ad valorem bracket for all countries except Canada, where 47 percent of the rate provisions are free. The tariffs of Canada and the United Kingdom contain MFN duty-free provisions for electrical machinery; those of the European Community, United States, and Japan do not. The rates of the United States and the United Kingdom range into the 30.1-40 percent ad valorem bracket.

Imports of electrical machinery receiving preferential treatment are noteworthy for three of the major countries. Such treatment is accorded 25 percent of entries into the United Kingdom, 4 percent into Canada, 3 percent into the United States, and intra-EC shipments far exceed imports from outside countries. Each country except Canada enters the largest portion of its MFN imports at rates ranging from 5.1-10 percent ad valorem (table I-6-B). Only Canada has duty-free MFN imports, a substantial 26 percent of MFN imports in 1970.

Table I-6-B.--Distribution, by duty level, of MFN imports of electrical machinery and apparatus

(In percent)

Note.--Due to rounding, figures may not add to 100 percent.

Canada has the most detailed tariff schedule for electrical machinery with 120 tariff lines, while the United Kingdom has the least, with 63 lines. Japan has 110 lines; the United States, 97 lines; and the European Community, 87 lines.

#### Trade importance

Electrical machinery ranks sixth among the industrial sectors in OECD exports and seventh in imports. The sector accounts for about 7 percent of OECD industrial exports and 5 percent of industrial imports. For the United States, the sector is the fifth most important in exports. It ranked sixth in 1969 U.S. imports.

Imports by the GATT tariff study countries were valued at \$4.1 billion in 1967, and \$7.2 billion in 1970. Intra-EC shipments were an additional \$1.2 billion in 1967 and \$2.4 billion in 1970. OECD 1969 imports were \$8.1 billion (including \$1.9 billion of intra-EC shipments) and exports were \$10.9 billion (see chart I-6-B). By 1970, imports increased to \$10 billion, while exports grew to \$13.2 billion.

#### Trade network

The five major countries account for nearly 90 percent of OECD exports of electrical machinery and 78 percent of imports. Over half of OECD exports go to the five major countries; over one-fourth to LDC's. Eighty-three percent of OECD imports are supplied by the five major countries.

Chart I-6-B. -- OECD trade in electrical machinery and apparatus, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series F, 1969.

One-third of U.S. exports of electrical machinery go to less developed countries (chart I-6-C), where substantially higher tariffs and other trade barriers generally are encountered. Canada is the principal developed market for U.S. products, followed by the European Community. The United States takes about three-fourths of Canada's exports. Japan ships over one-third of its exports to LDC's, 48 percent to the United States, and 5 percent to the Community (table I-6-C).

Chart I-6-C. -- United States trade in electrical machinery and apparatus, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Intra-EC exports are equal to more than three-quarters of the Community's shipments to outside markets. Of the Community's outside exports, 36 percent go to LDC's, 7 percent to the United States, and 6 percent to the United Kingdom. The United Kingdom ships nearly one-third of its products to LDC's. The Community is the principal developed market for the United Kingdom.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Electrical machinery ranks sixth in industrial imports for Canada and the United States, eighth for the European Community, ninth for Japan and tenth for the United Kingdom. United States imports of electrical machinery were valued at \$1.1 billion in 1967, \$1.8 billion in 1969, and \$2.4 billion in 1971. Japan supplies nearly one-half of U.S. imports; LDC's about one-fifth, and Canada over 14 percent (table I-6-D). The United States is the origin of more than three-fourths of Canada's imports, 71 percent of Japan's, and over 40 percent of imports into the European Community from outside sources. However, the total Community imports from all external sources were only slightly over half as large as intra-Community shipments. The United States is the chief source of the United Kingdom's imports, followed by the European Community. Japan is not a very significant supplier to any major country except the United States.

### Trade composition

Electrical machinery is divided into four subsectors, of which telecommunications apparatus is the largest in both exports and imports (34 percent of exports, 30 percent of imports). The relative importance of the four subsectors is shown in chart I-6-D.

Chart I-6-D. -- OECD trade in electrical machinery and apparatus, by type, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for electrical machinery were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan's tariff rates in this sector were unilaterally reduced in 1972 by approximately 20 percent on four-fifths of the rates and by amounts ranging from 40 to 71 percent on the remainder.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	34.5	7.2
European Community	16.9	9.3
United Kingdom	23.6	12.0
Japan	18.9	11.7
Canada	23.4	7.8

Concessions under the GATT have been made on all MFN provisions for electrical machinery in the tariff schedules of the European Community and the United Kingdom, as well as on 99 percent of the provisions of the United States (covering all electrical machinery trade). Ninety-three percent of Japan's provisions are under the GATT, covering about 82 percent of Japan's imports of electrical machinery. Canada's GATT concessions cover only 65 percent of its provisions and 80 percent of trade.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on electrical machinery negotiated under the GATT. The number of such concessions totaled 383, of which 212 reflected rates higher than the autonomous rate established in the CXT, 13 were at the CXT rate, and 158 were below the CXT rate.

#### Trade complaints

The Tariff Commission received 266 complaints from manufacturers and traders of electrical machinery against policies and practices which they felt to be detrimental to their competitive position in the world market. Half of the complaints received in this product sector concerned four general categories of trade barriers: Quantitative restrictions, embargoes and licensing practices; subsidies and other aids; industrial, health and safety standards; and import duties (in descending order of importance). Since electrical machinery is heavily traded among developed countries, it is not surprising that 70 percent of the complaints were against the major trading nations. One-fifth of the complaints were directed against the European Community, while Japan accounted for 12 percent, and the United States and the United Kingdom, 6 percent each. The less developed countries receiving the most complaints were Brazil, Spain, Mexico, and Colombia. The complaints are summarized in the following paragraphs.

Quantitative restrictions, embargoes and licensing.--About one-fifth of all the complaints received by the Tariff Commission concerning electrical machinery involved quantitative restrictions,

embargoes and licensing. Of all the nations mentioned, Japan was most frequently named as the object of complaints on quantitative restrictions. Japanese quotas were reported on the whole range of electrical machinery, including: Computers, transistors, turbine generators, power transformers, integrated circuits, power circuit breakers, communication and broadcast equipment, air conditioning equipment, and radio and television sets. Some types of quantitative restrictions on electronic products also were said to exist in the European Community, Iceland, Ireland, Korea, and the United Kingdom. U.S. producers of electrical machinery felt quantitative restrictions imposed by some European countries on Japanese and Korean imports caused the exporters of Japan and Korea to concentrate on the U.S. market. Greek quantitative restrictions were reported as favoring the European Community. Japan, Indonesia, Argentina, Brazil, Colombia, Mexico and Peru are said to apply quantitative restrictions in an attempt to protect local industry.

Embargoes on the importation of certain electronic products were reported prevalent in many Arab and Latin American countries. Peru, South Africa, Argentina, Colombia, Brazil, Ecuador and especially Mexico were mentioned as embargoing products capable of being produced locally. It was complained that Ceylon has an embargo on imports of electric lamps, considering them luxurious. Chile and Mexico embargo electric shavers. France and Japan are said to indirectly embargo certain electrical machinery by requiring licenses for the importation of such machinery and refusing to grant this license if the need can be filled locally. Egypt embargoes certain

electrical machinery unless its importation is specifically approved by a government ministry. Some Arab countries had refused to do business with a U.S. producer because of his failure to answer a questionnaire concerning his business operations in Israel.

Many countries refused to grant import licenses unless the imported product was of a type and specification not manufactured in the host country (France especially was mentioned in this regard). Complaints were registered about the licensing practices of Malta, Greece, Portugal, Turkey, Spain, the United States and South Africa. It was reported that in Mexico no licenses are issued for the importation of electric drills.

One complaint stated that only prototypes were permitted entry into Japan and then only on the condition that the technology necessary to produce additional units would be licensed to a Japanese company, thus eliminating future imports. Japanese licensing practices are said to afford the Japanese government an opportunity to coerce end users to buy Japanese products. Licensing practices in less developed countries often have been alleged to cause U.S. exporters much delay and expense. For example, in Brazil, Colombia, India, Pakistan and the Philippines, procuring an import license has an additional difficulty in that license issuance is dependent on weight and value estimates of the goods reported within a specified accuracy, in advance of the actual shipping.

Subsidies and other governmental aids.--Subsidies and other governmental aids was one of the categories of trade barriers which received the most complaints. The complaints were heard from both producers and trade associations involved in consumer and industrial electrical machinery. The vast majority of the complaints were lodged against developed countries, with Japan receiving the largest number. Many instances of direct subsidies, tax incentives and other government aids to foreign producers of electrical machinery were mentioned.

Many nations were mentioned as employing some form of income tax relief which is geared for export performance and foreign investment. France, West Germany, Italy, Japan and the United Kingdom were reported to help their exporters with a series of export aids, research and development subsidies and export credit subsidies. The same nations were named as allowing concessionary financing for the purchase of capital goods to export customers of their manufactures. There were also complaints concerning direct and indirect subsidies for business expansion and start-up costs and low-interest medium-term loans for export production (available to West European and Japanese manufacturers but unavailable to United States manufacturers).

The complaints against Japan were the most numerous and detailed. U.S. manufacturers alleged that Japanese exporters receive tax

credits and are allowed additional depreciation based on the magnitude and growth rate of export sales. Tax credits are also said to be granted to Japanese companies investing in less developed countries. It was reported that the Japanese government provides financial assistance for production costs and technological improvements under the Electronic Industry Development Emergency Law. Also mentioned in complaints were the funds made available to Japanese concerns for export market research and also the availability of low-cost insurance against both tariff increases and overseas business failures.

The Japanese External Trade Organization is reported to underwrite from 75 to 100 percent of the costs entailed by survey teams investigating the U.S. market potential for their products (e.g. 75 percent of the rental cost of overseas exhibition space, freight and handling fees, etc.). Credit information on potential U.S. customers is said to be available at low rates from this organization. It also was alleged that the Bank of Japan implicitly guarantees the debt position of major companies in order that these concerns can use the debt as a source of corporate financing. In addition, it was charged that in Japan (and Western Europe) the domestic industries receiving the most government aid were those with the highest export potential, such as computers and telecommunications apparatus. Both rewards and penalties were mentioned as encouragement to exporters to meet their goals.

Barriers to trade in power generating machinery also were frequently reported. It was complained that because of restrictive business practices in their home market and protection from import competition, producers of power generating machinery in countries such as the United Kingdom, France and Italy tend to develop excess capacity and they export their surplus products, notably to the United States. U.S. exporters feel stymied by the tendency of the policies of government-controlled utilities, which purchase power generating equipment, to be extremely nationalistic. Even the members of the European Community have fostered national industries, instead of merging them in order to take advantage of economies of scale.

Finally, some complaints were raised against the United States for sponsoring research and allowing investment tax credits to users of U.S. machinery, thus harming the competitive position of electrical machinery imported into the United States.

Standards.--In the area of industrial, health and safety standards, virtually all the complaints concerned developed countries (especially Western Europe and the United States). A frequent complaint was the expensive delay caused by quality assurance requirements and standards which must be fulfilled before an electronic product can be marketed in a foreign country. The U.S. producers felt that these time-consuming and expensive requirements have a detrimental effect on U.S. electrical machinery sales in Europe.

Foreign exporters to the United States complained that their products had to be tested to meet specifications and standards set by U.S. industrial and professional associations and the exporters felt these associations discriminated against them. Conversely, U.S. exporters charged that West European countries each require separate testing of U.S. electronic products; whereas, products made in European countries are required to pass a test in only one European country and are then automatically approved for sale in all other European nations. Belgium and France are said to allow local inspectors to set standards, instead of a central body. Indeed, some U.S. producers believe that, for certain types of electrical machinery, the European nations adopt standards so as to exclude U.S. products. In Scandinavia, socket power instruments must meet certain regulations, such that the U.S. product must be redesigned to be sold there. The fact that the United States does not generally employ the metric system is considered detrimental to trade. One complaint stated that the high U.S. environmental standards insure U.S. producers in the world market.

Import duties.--High duty rates are characteristic of less developed countries, and rates ranging from 20 to 180 percent of the c.i.f. cost were cited among LDC's in Latin America, the Far East and Africa. Manufacturers of electrical and electronic products

complained that high duties in addition to freight costs and border taxes made their exports noncompetitive. Other U.S. producers complained that no significant duty existed in Brazil if there were no Brazilian products available equivalent to the import, but if similar Brazilian products were available, an extremely high duty usually was invoked. Indonesia protects local manufacturers of major appliances and televisions with high duties. The amount respondents estimated sales would increase with the removal of these high duties ranged from a moderate 10 percent on some electrical machinery to a significant 286 percent on major appliances and televisions.

Complaints were lodged against the import duties of developed countries also. Australian duties on passive electronic components, capacitors, consumer electronic products and radio telephones were characterized as unusually high. Specifically cited was an Australian duty rate of 47.5 percent on electrical chain saws. Complaints were also made against duties on consumer electronic products in the United Kingdom and Japanese duties on advanced electronic products. Trade in heating equipment was said to be restrained in the European Community and EFTA because of high duties on replacement parts.

U.S. manufacturers felt they were at a disadvantage in competing in certain markets because of the preferential tariff treatment received by certain suppliers because of customs unions or other

preferential tariff arrangements. The European Community, the European Free Trade Area, the British Commonwealth preferences and the Central American Common Market were specifically mentioned in this regard. Also viewed as discriminatory by importers of Japanese products was the U.S. procedure of assessing duties on transistor radios and stereo amplifiers on a higher value (the home market value) than the actual contract value.

Government procurement and state trading practices.--"Buy national" policies drew the most complaints in this area. U.S. producers found the tendency toward "buy national" policies very strong in Western Europe. Of particular interest was the effect this tendency has of disadvantaging U.S. exports of electrical power generating equipment. The government-owned or regulated utilities of the European Community are said to buy almost exclusively from their own nationals. Another complaint was that although U.S. exports of power generating machinery are barred from many countries through these "buy national" policies, foreign exporters may sell to many U.S. public utilities. Thus, it was reported that there are substantial U.S. imports from countries which will purchase electric power generating machinery only from their own nationals. However, complaints were also registered against the "buy national" policies of the United States. In purchases of hydroelectric equipment for the U.S. Department of Defense, a differential of 50 percent is granted to U.S. bids for reasons of national security, thus

effectively barring foreign bids. Other U.S. government agencies, such as the Tennessee Valley Authority, are reported to give differentials to bids by American producers of power transformers.

Customs procedures and practices.--Some exporters felt the c.i.f. valuation for customs purposes used by Japan and Western Europe creates a disadvantage to U.S. exports. A U.S. company objected to the record system required for claiming drawbacks on U.S. exports, and reported it could have claimed \$400,000 in drawbacks rather than \$189,000 if recordkeeping requirements had been less onerous. Consular document requirements were found objectionable as often causing delays, costs, and fines in the less developed countries. Several complaints were made by U.S. electrical producers who believe much undetected dumping goes on in the U.S. market, while American importers complained of the uncertainty of the criteria used in determining the amount of the dumping duty to be paid. Representatives of Japanese exporters complained that enforcement of the U.S. Antidumping Law was arbitrary and unequal.

Border tax adjustments.--U.S. producers of electrical machinery complained of border tax adjustments in Belgium, France, West Germany, Italy, the Netherlands, Switzerland, the United Kingdom, Greece and the Scandinavian countries. In the European Community and Sweden, complaints stated U.S. goods were made uncompetitive through border taxes based on the price of the goods, transportation costs, customs duties and other customs charges not borne

by domestic goods. It was charged that the border taxes in Japan have the effect of doubling, tripling or even quadrupling the total monetary charges on an import. Also the Japanese commodity tax is said to be refunded to domestic producers upon exportation of their products.

Exchange and financial controls.--The majority of complaints against exchange controls concerned less developed countries. Extremely long delays in payment and conversion into dollars were reported by one U.S. company as occurring in the Philippines. The same company mentioned an inability to obtain royalty payments in dollars. The exchange controls of Greece, India, Pakistan, Spain, Turkey and many Latin American countries were also the subject of complaint. The Federal Secretariat of Yugoslavia is said to authorize a given amount of exchange for electric furnaces and ovens and importing firms divide up this quota. A complaint was lodged against the Japanese government's control of the exchange requirements of U.S. corporation branches operating in Japan. The exchange controls and quotas of the European Community and United Kingdom were reported to be a barrier to certain types of electrical machinery. In many countries, strict credit terms are interpreted by importers as financial discrimination. Also, many less developed countries demand import deposits of from 25 to 90 percent of the invoice value of the electronic commodity in question.

Export controls.--Most of the complaints dealing with export restraints were by U.S. producers objecting to the effective barring of sales to Communist bloc countries through the U.S. Export Control Act. Special complaints were raised by one U.S. company which stated that some of these controlled electrical commodities are readily available to the Communist bloc from Europe and Japan. Japanese voluntary export controls on the sale of certain electrical products were also the subject of complaints.

Restrictive business practices.--Two major U.S. producers of electrical machinery complained that a number of countries (including West Germany, Japan, Switzerland, and the United Kingdom) have formed cartels to promote exports. France, Italy, Japan, the United Kingdom, West Germany, Switzerland and Sweden were mentioned as employing dual price systems--exporting at low prices and selling at high prices in the domestic market. It was reported that local manufacturers in the European Community refuse to deal with distributors who also import. Another complaint mentioned Japanese refusals to permit foreign-owned manufacturing in Japan. It was also alleged that there was an agreement between Japanese and European industrial organizations to limit Japanese exports.

Miscellaneous practices.--Complaints also discussed: Marking requirements and weights and measures requirements in the United

States; high prior import deposits in Israel, most of the Latin American countries, Greece, Turkey and Spain; port and statistical taxes in the European Community, Denmark and Yugoslavia; consular fees in the Middle East and Latin America; and freight rates which discriminate against the United States.

Of 266 complaints, 65 respondents gave some estimate concerning the dollar value of the increase in sales which would result from the removal of these barriers. In 28 cases, "moderate" sales increases were predicted and in the remaining 37 cases, estimated increases were deemed "significant." Estimates as high as \$4 million annually were given by companies for the expected increase in their trade in a product or a group of closely related products. The sum of dollar value estimates received in the electrical machinery sector totaled \$31 million.

## Electrical Machinery for Industry

Electrical machinery for industry includes generators, motors, transformers, apparatus for making or breaking connections to electrical circuits, control panels and switchboards, electric furnaces and ovens and soldering and welding equipment. 1/

MFN tariffs

Average MFN tariffs on electrical machinery for industry imported into the five major countries range from 6.4 percent ad valorem (the EC weighted average on total imports) to 14.4 percent (the Canadian weighted average). Averages for the United States, Japan and the United Kingdom on total trade are clustered between 7.1 and 11.4 percent ad valorem. The dutiable-product averages, however, are higher for Canada (arithmetic, 13.6 percent; weighted, 15.1 percent - see chart I-6-E).

All imports by Japan and virtually all shipments into the Community from external countries are on an MFN basis; 99 percent of U.S. imports, 2/ 94 percent of Canada's imports and three-fourths of shipments to the United Kingdom also receive MFN treatment. The remaining one-fourth of United Kingdom imports receive preferential treatment.

---

1/ For specific coverage of this subsector, see BTN headings 85.01, 85.11, 85.19 and 85.22.

2/ However, for specific BTN numbers - e.g., BTN 85.19 (electrical apparatus for making and breaking circuits) which is the most important BTN heading in this subsector, the percentage of preferential imports grows due to the U.S.-Canadian Automotive Products Agreement. In 1971, Canadian products entering preferentially free accounted for 6 percent of U.S. imports of products classified under BTN 85.19.

Chart I-6-E. -- Average MFN tariff rates on electrical machinery for industry  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions by approximately 20 percent made in 1972 on most Japanese rates, and by approximately 40 percent on about one-tenth of the Japanese rates in this sector.  
Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Over 40 percent of Canadian tariff provisions are duty free. There are no duty-free provisions for electrical machinery for industry in the tariffs of the other four major countries (table I-6-E). The

Table I-6-E.--Distribution, by duty level, of MFN tariff provisions for electrical machinery for industry

(In percent)

Note.--Due to rounding, figures may not add to 100 percent.

bulk of the tariff provisions of Japan, the European Community, and the United Kingdom are in the 5.1-10 percent ad valorem range, as are about one-fourth of the Canadian provisions and nearly one-half of U.S. provisions. Nearly 30 percent of U.S. provisions are in the 0.1-5 percent ad valorem bracket.

In terms of imports, 5 percent of Canadian entries are duty free, another 43 percent enter at rates in the 10.1-15 percent ad valorem range and an additional 38 percent at 15.1-20 percent. Three-fourths or more of U.S., Japanese, EC, and United Kingdom imports are in the 5.1-10 percent bracket. Almost one-fifth of Japan's imports enter in the 20.1-25 percent range (see table I-6-F).

Canada exhibits the most complex tariff structure for electrical machinery for industry with 68 lines. Schedules for Japan have 31 lines, the Community and the United States, 17 lines, and the United Kingdom, 14 lines.

### Trade importance

OECD exports of electrical machinery for industry totaled \$3 billion in 1969, about 28 percent of OECD export trade in all electrical machinery. Imports were \$2.2 billion, or about 27 percent of total import trade in the electrical machinery sector (chart I-6-F). In 1970, imports increased to \$2.9 billion, exports to \$3.9 billion. It is the third largest category of OECD imports of electrical machinery, and

CHART I-6-F -- OECD trade in electrical machinery for industry, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

ranks 24th in value of imports among the 119 industrial product categories. United States exports in 1969 were \$633 million, when imports were valued at \$207 million. U.S. imports in 1971 were valued at \$320 million. In MFN imports of the other countries, electrical machinery for industry is 15th for the United Kingdom and Canada, 21st for the Community and 22nd for Japan.

#### Trade network

The five major countries account for 87 percent of OECD exports and 73 percent of imports. The European Community is the largest exporter, with shipments to outside destinations valued at \$755 million (intra-EC exports were an additional \$661 million). Over 40 percent of EC outside exports are shipped to LDC's. The United States sends one-fourth of its exports to Canada, 15 percent to the Community, and 37 percent to LDC's. Nearly 60 percent of Japan's exports go to LDC's, as do 35 percent of the shipments from the United Kingdom. The United States is the destination of about 70 percent of Canadian products (table I-6-G).

The European Community is the principal importer among the five major countries, followed by the United States (see table I-6-H). About 41 percent of EC outside imports come from the United States, as do 72 percent of Canadian imports, 70 percent of Japanese imports, and 38 percent of shipments to the United Kingdom. One-fourth of U.S. imports come from Japan, one-fifth each from the Community and Canada.

Trade-agreement concessions

The average tariffs of the major countries on January 1, 1972, were significantly lower than the average levels on pre-trade-agreement base dates. As the following tabulation shows, the largest drop, almost 28 percentage points, was in the U.S. tariff.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	34.6	7.1
European Community	14.9	6.4
United Kingdom	22.3	9.1
Japan	15.5	11.4
Canada	23.3	8.0

Most of Japan's tariff rates in this subsector were unilaterally reduced in 1972 by approximately 20 percent. The remainder (about one-tenth) were reduced by about 40 percent. One hundred thirteen GATT concessions were made in EC member state national tariffs prior to adoption of the Common External Tariff. Of these, 2 were at the CXT rate, 65 were above the CXT rate, and 46 below it.

GATT concessions cover all U.S., EC and United Kingdom MFN provisions; 63 percent of Canada's provisions (96 percent of imports); and 81 percent of Japan's provisions (80 percent of imports).

Specific reductions are shown in table I-6-I for electrical apparatus for making, breaking, protecting, and connecting electrical circuits.

Table I-6-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on electrical apparatus for making, breaking, protecting, and connecting electrical circuits, including non-telephone switchboards

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25% - 35%	8.5% - 17.5%	4% - 8.5% Free	685.90; 686.10, .22, .24 <sup>2/</sup> 685.91; 686.11, .23 <sup>2/</sup>
Canada-----	30%	Free; 17.5%	Free; 12.5%	43806-1; 43807-1
European Community--	16%; 14%	13%; 11%	6.5%, 8%; 5.5%	85.19A,B; 85.19C
United Kingdom-----	20%, 33%	16%, 24%, 33.3%	8%, 12%, 17%	85.19
Japan-----	15%	15%, 20%, 15%	7.5%, 10%, 15%	85.19 <sup>3/</sup>

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Almost 92 percent of U.S. imports are dutiable at 6 percent or 8.5 percent ad valorem. Products of Canada covered by the Automotive Products Agreement, representing about 6 percent of U.S. imports, are preferentially free.

<sup>3/</sup> Printed circuits used as parts of electronic calculating machines were not the subject of concessions in the Kennedy Round.

## Telecommunications Apparatus

Telecommunications apparatus covers radio broadcasting and television transmission and reception apparatus, television cameras, microphones and loudspeakers, and electrical line telephonic and telegraphic apparatus. <sup>1/</sup>

MFN tariffs

The MFN tariff averages for all of the five major countries, except Canada, are the same for all products and dutiable products (chart I-6-G). For all products, Canada has the lowest arithmetic

Chart I-6-G. -- Average MFN tariff rates on telecommunications apparatus  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions by approximately 20 percent made in 1972 on over half the Japanese rates, and by amounts ranging between 55 percent and 71 percent on the remaining Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 85.13-.15.

average (6.7 percent ad valorem) and the second highest weighted average (13.5 percent). The United Kingdom has both the highest arithmetic and weighted averages. With regard to dutiable products, Canada has both the highest weighted and arithmetic average, while the United States has both the lowest weighted and arithmetic averages.

Virtually all imports into Japan and the Community from outside sources are accorded MFN treatment. Nearly 98 percent of U.S. imports receive MFN treatment as do about 96 percent of Canadian imports. Seventy percent of United Kingdom imports receive MFN treatment, the remaining receiving preferential rates.

Over half of the Canadian MFN tariff provisions are duty free. United States, Japanese, and EC tariff provisions are chiefly in the 5.1-10 percent ad valorem bracket, as are half of the United Kingdom tariff provisions (table I-6-J). The other half of the United Kingdom tariff provisions are in the 10.1-15 percent range. About 35 percent of Canadian tariff provisions are in the 10.1-20 percent classes.

Table I-6-J.--Distribution, by duty level, of MFN tariff provisions for telecommunications apparatus

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	52.5	-	-	-	-
0.1-5.0 percent----	-	8.3	-	-	-
5.1-10.0 percent---	12.5	83.4	72.7	71.4	50.0
10.1-15.0 percent--	17.5	8.3	21.3	21.3	50.0
15.1-20.0 percent--	17.5	-	6.1	7.1	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

In terms of MFN imports of telecommunications apparatus, 95 percent of Japanese imports, 40 percent of U.S. entries, and over half of EC imports are in the 5.1-10 percent ad valorem bracket; a significant part of shipments into Canada and the United Kingdom principally enter at rates of 10.1-15 percent ad valorem (table I-6-K). Only Canada has duty-free

Table I-6-K.--Distribution, by duty level, of MFN imports of telecommunications apparatus

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

0.1-5.0 percent---	-	31.2	-	-	-
5.1-10.0 percent---	1.0	40.3	95.0	53.6	19.6
10.1-15.0 percent--	64.0	28.6	3.0	41.2	80.5
15.1-20.0 percent--	21.8	-	2.0	5.2	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

imports (13 percent) and a significant amount of imports in the 15.1-20 percent bracket (over one-fifth).

Canada exhibits the most complex tariff schedule for telecommunications apparatus, with 40 lines; the United Kingdom has the simplest, only 8 lines. Schedules for Japan have 33 lines; for the European Community, 14 lines; and for the United States, 12 lines.

#### Trade importance

Telecommunications apparatus accounts for 34 percent of OECD export trade in electrical machinery and 30 percent of import trade. OECD exports totaled \$3.7 billion in 1969, imports were \$2.5 billion (chart I-6-H). Among the 119 industrial subsectors, telecommunications apparatus ranks 17th in value of MFN imports of the GATT tariff study

Chart I-6-H -- OECD trade in telecommunications apparatus, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

countries. For the United States it is the ninth most important sub-sector in MFN imports; for Canada the rank is 12; for the United Kingdom it is 24th. United States imports amounted to \$1 billion in 1969, and increased to \$1.3 billion in 1971. Radio and television transmission and reception apparatus (BTN 85.15) is the most important type of telecommunications apparatus in the imports of the five major countries. 1967 MFN imports of radio and television transmission and

reception apparatus for the five major nations were as follows:

Canada, \$153 million; the European Community, \$104 million; Japan, \$25 million; the United Kingdom, \$58 million; the United States, \$467 million. Total U.S. imports in 1971 were \$1.2 billion.

### Trade network

The five major countries account for over 90 percent of OECD exports and about 81 percent of imports (tables I-6-L and M). The largest supplier to the world is Japan, accounting for nearly one-third of OECD exports, followed by the European Community and the United States. The principal importing countries are the United States, Canada,

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

and the European Community. Complete country of destination data are not available for 19 percent of EC exports. Non-OECD countries receive nearly 40 percent of U.S. exports, one third of known EC external exports, and about half of United Kingdom exports. The remainder of United States exports go principally to Canada (22 percent) and the Community (17 percent). Three-fourths of Canadian exports are sent to the United States, as are 60 percent of Japanese exports.

The value of intra-EC imports is about twice that of EC receipts from outside sources, about one-third of which are supplied by the United States. The United States is the principal supplier of imports by Canada, Japan, and the United Kingdom. Sixty-five percent of U.S. imports are from Japanese sources, and another 17 percent from LDC's.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, average tariff levels for telecommunications apparatus are substantially below levels existing on pre-trade-agreement base dates. Most of the

reductions reflect concessions granted in reciprocal negotiations.

Japan, in November 1972, made unilateral 20 percent reductions in over half of its rates on telecommunications apparatus, reducing the rest between 55 and 71 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	35.0	7.3
European Community	19.0	10.7
United Kingdom	20.0	13.7
Japan	24.4	9.7
Canada	23.0	6.7

All MFN provisions for telecommunications apparatus in the tariff schedules of the United States, the European Community, and the United Kingdom have been the subject of GATT concessions. In the Japanese schedule, 97 percent of the provisions, covering 98 percent of MFN imports, have GATT concessions; and in the Canadian schedule, 60 percent of the provisions, covering 85 percent of MFN imports.

All EC member state national tariffs prior to adoption of the Common External Tariff contained concessions on telecommunications apparatus under the GATT. Of 63 concessions in the national tariffs, 39 were at rates above the CXT autonomous rates, 2 at the CXT rate, and 22 below the CXT rate.

Tariffs on radio and television transmission and reception apparatus, the largest trade item, have been reduced in trade-agreement concessions by all five major countries (see table I-6-N). Reductions in U.S. MFN rates were generally 50 percent or more below statutory levels,

Table I-6-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on radio and television transmission and reception apparatus

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%	10-15%	5-10.4% <sup>2/</sup>	685.10-60
Canada-----	29%	20%	15%	44533-1; 44534-1; 44548-1
European Community--	18% - 22%	13-22%	6.5%-14%	85.15
United Kingdom-----	20%	17.5-24%	15%	85.15
Japan-----	20%, 30%	15-35%	7.5%-17.5%	85.15

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Any articles described in items 685.20-.50, if imported from Canada and intended as original motor vehicle equipment, are free of duty under the U.S.-Canadian Automotive Agreement.

except rates on solid state radio receivers which were reduced only about 17 percent. The U.S.-Canadian Automotive Products Agreement provides duty-free preferential treatment for imports of most items of telecommunication equipment, if such items are to be used as parts for motor vehicles. (For a fuller discussion of the U.S.-Canadian Automotive Products Agreement, see the sector on transport equipment.) However, only about 3-4 percent of U.S. and Canadian imports are thus affected by the Automotive Products Agreement. For all other shipments of telecommunications apparatus into Canada, reductions in Canadian tariffs from pre-Kennedy Round levels amount to 25 percent.

The Community's autonomous rates have been reduced by amounts ranging from 23 to 50 percent from pre-Kennedy Round levels. Reductions in United Kingdom MFN rates ranged from about 14 to 36 percent. The Japanese rates have also been subject to some significant reductions since pre-trade-agreement base dates.

## Electrical Equipment and Parts n.e.s.

Electrical equipment and parts, not elsewhere specified, covers various electrical apparatus, including thermionic and cathode valves and tubes, lamps and flashbulbs, electric wire and cable, capacitors, electro-magnets, primary cells, accumulators, and carbon brushes. <sup>1/</sup>

MFN tariffs

Average MFN tariffs on electrical equipment and parts imported into the five major countries range from lows of Canada's 7.3 percent ad valorem (arithmetic), and 8.3 percent (weighted) held by the United States to an arithmetic high of 11.5 percent held by Japan and a weighted high of 14.3 percent ad valorem held by the United Kingdom (chart I-6-I). Average tariffs for dutiable products alone do not differ significantly except in the case of Canada, where they increase to 15.6 percent for the arithmetic average and 16.5 percent for the weighted average.

Nearly 15 percent of the imports of electrical equipment and parts, n.e.s., into the United Kingdom, 5 percent of Canadian imports, and 4 percent of U.S. imports are accorded preferential treatment. Intra-EC imports almost equal EC entries from outside countries. There are no preferential imports into Japan and only a small amount into the Community from outside sources.

Over half of the tariff provisions of Canada are duty free, but nearly one-fourth are in the 15.1-20 percent ad valorem range (table I-6-0). Nearly one-half of U.S. tariff provisions are in the 5.1-10 percent bracket, while an additional one-fifth each of the tariff provisions are in the 0.1-5 percent class and the 10.1-15 percent class.

---

<sup>1/</sup> For the specific coverage of this subsector see BTN headings 85.02-.04; 85.10; 85.18; 85.20-.21; and 85.23-.28.

Chart I-6-1. -- Average MFN tariff rates on electrical equipment and parts, n.e.s.  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions by approximately 20 percent made in 1972 on all but one of the Japanese rates in this sector. The remaining rate was reduced by 40 percent.

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Slightly over half of Japan's tariff provisions are in the 5.1-10 percent bracket, slightly under half in the 10.1-15 percent ad valorem range. The European Community has almost three-fourths of its provisions concentrated in the 5.1-10 percent bracket, as are over one-half of the United Kingdom provisions. Four percent of the United Kingdom provisions are duty free, while an additional third are in the 10.1-15 percent bracket.

In terms of imports, over 40 percent of Canadian imports are duty free. In addition, more than one-fourth of Canadian imports are in both the 10.1-15 percent bracket and 15.1-20 percent class (table I-6-P).

Table I-6-P.--Distribution, by duty level, of MFN imports of electrical equipment and parts, n.e.s.

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	41.9	-	-	-	-
0.1-5.0 percent----	-	3.9	-	-	0.2
5.1-10.0 percent---	.7	83.1	33.2	47.9	24.4
10.1-15.0 percent--	29.3	12.3	66.9	19.2	38.3
15.1-20.0 percent--	28.0	-	-	32.9	37.0
20.1-25.0 percent--	-	-	-	-	-
25.1-30.0 percent--	-	-	-	-	-
30.1-40.0 percent--	-	.7	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Over four-fifths of U.S. imports enter in the 5.1-10 percent range, as do one-third of Japanese imports. The remaining two-thirds of Japanese imports pay duties of 10.1-15 percent ad valorem. Almost one-half of EC imports are in the 5.1-10 percent range, while another third are found in the 15.1-20 percent class. One-fourth of the imports of the United Kingdom enter at rates ranging from 5.1-10 percent ad valorem, and most of the remainder is about equally divided between the 10.1-15 and 15.1-20 percent brackets.

### Trade importance

OECD countries exported \$3 billion of electrical equipment and parts, n.e.s., in 1969, and imported \$2.4 billion (chart I-6-J). Accounting for 28 percent of OECD exports of electrical machinery, and 30 percent of imports, it is the second largest category of electrical machinery in OECD trade. It is the second largest category in U.S. imports, which have increased from \$274 million in 1967 to \$502 million in 1971.

Chart I-6-J. -- OECD trade in electrical equipment and parts, n.e.s., 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The European Community is by far the major exporter of electrical equipment and parts, shipping about \$1 billion worth to outside countries, followed by the United States (table I-6-Q). Complete country

X = Less than \$500,000.

Note.--Complete country data are not available for 28 percent of Canadian imports, 31 percent of U.S. imports, 40 percent of Japanese imports, 28 percent of EC imports and 50 percent of United Kingdom imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

unavailable for 28 percent of Canadian imports, 31 percent of U.S. imports, 40 percent of Japanese imports, 28 percent of EC imports and 50 percent of United Kingdom imports. The least significant importer of electrical equipment and parts is Japan. Over 78 percent of those Canadian imports accounted for come from the United States, as do 81 percent of known Japanese imports, 59 percent of known EC imports from outside sources and more than two-fifths of

remaining United Kingdom imports. Known EC shipments from outside sources are three-fifths as large as intra-EC imports. Over one-third of U.S. imports for which origins are known originate in LDC's, 27 percent in Japan, and 16 percent in Canada. One-third of known United Kingdom imports arrive from the European Community.

#### Trade-agreement concessions

Average tariff levels of all the major countries have been significantly reduced through trade-agreement concessions, as shown in the tabulation below. The largest drop, over 26 percentage points, was in the U.S. tariff. In 1972, Japan unilaterally reduced all but one of its rates in this subsector by approximately 20 percent. The remaining rate was reduced by 40 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	34.6	8.3
European Community	18.2	11.7
United Kingdom	25.6	14.3
Japan	21.9	12.9
Canada	22.2	7.3

Concessions under the GATT cover all MFN tariff provisions on electrical equipment and parts, n.e.s., in schedules of the European Community and the United Kingdom. In the United States schedule, 98 percent of the provisions and 99 percent of the trade are covered; in Canada's schedule, the coverage is only 62 percent of the provisions, but 85 percent of trade; and in the Japanese schedule, the coverage is 97 percent of the MFN provisions and only 68 percent of trade.

EC member state national tariffs prior to adoption of the CXT contained 13<sup>4</sup> GATT concessions on electrical equipment and parts, n.e.s., 64 of which were at rates higher than the CXT rate, 9 at the CXT rate, and 61 below it.

Table I-6-S shows concessions which have been made in the major country tariffs on electronic tubes, photocells, transistors and related electronic crystal components.

Table I-6-S.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on electronic tubes, photocells, transistors and related electronic crystal components

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	60%; 35%	30%; 12.5%	15%; 6%; Free	687.50, .60, .51, .61 <sup>2/</sup>
Canada-----	25% 25%	20% 15%; Free	15% 15%; Free	44533-1 44542-1; 44543-1
European Community--	16%-21%	12%-19%	6.5%-17%	85.21
United Kingdom-----	33.3%	10%-25% 20%	5%-20% 20%	85.21(A)-(D) 85.21(E)
Japan-----	30% 15%	15%, 20%, 30% 15%	7.5%, 10%, 15%	85.211 85.212,3

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Over 98 percent of U.S. imports are dutiable at 6 percent ad valorem; almost all of the remainder (television picture tubes) at 15 percent ad valorem. Duty-free imports from Canada represent only a negligible part of the total.

## Miscellaneous Electrical Machinery

The remaining category of electrical machinery, which will not be discussed in detail, is electrical tools and other electrical apparatus. The relative world trade importance of this category can be seen in chart I-6-D at the beginning of the discussion of electrical machinery.

U.S. trade in tools and other electrical apparatus has been exports of \$209 million and imports of \$151 million in 1969 and increased imports of \$219 million in 1971. For each of the five major countries, there are listed below arithmetic and weighted average MFN rates of duty for total imports, and the highest duty bracket in which provisions of each of the five tariffs fall.

	<u>Canada</u>	<u>United States</u>	<u>Japan</u>	<u>European Community</u>	<u>United Kingdom</u>
Arithmetic Average	8.8	7.2	8.3	8.0	9.8
Weighted Average	7.1	6.1	8.5	7.6	9.2
Highest Rate Bracket	17.1-20	17.1-20	14.1-15	11.1-12	13.1-14

In a simple count of "highest" and "lowest" rankings in this data, the United Kingdom has the largest number of "highest" rankings, the United States has the largest number of "lowest" rankings.

## PULP, PAPER AND PAPERBOARD AND MANUFACTURES

The pulp, paper and paperboard and paper manufactures sector covers: (1) paper pulp and paper waste; (2) all types of paper and paperboard, including newsprint, printing and writing paper, kraft paper and paperboard, cigarette paper, parchment, corrugated and creped paper, carbon and other copying papers, wallpapers and building board of wood pulp or vegetable fiber; (3) printed matter, including printed books and booklets, newspapers and periodicals, maps and charts, postage stamps, greeting cards, and calendars; and (4) manufactured articles of paper or pulp, such as writing pads, envelopes, postcards, registers, diaries, notebooks, binders, boxes and bags. <sup>1/</sup>

### MFN tariffs

The arithmetic averages for total imports of pulp, paper and paper manufactures range from 5.5 to 10.3 percent ad valorem; the weighted averages from 0.5 to 6.7 percent (see chart I-7-A). The United States has the lowest averages. Canada holds the highest weighted average and second highest arithmetic average, while the United Kingdom has the highest arithmetic average. For dutiable products only, Canada has the highest arithmetic average (15.2 percent ad valorem) and weighted average (15.5 percent); the United Kingdom the second highest averages (13.5 and 13 percent ad valorem, respectively).

---

<sup>1/</sup> For specific coverage of this sector, see BTN chapters 47, 48 (except heading 48.12), and 49. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-7-A. -- Average MFN tariff rates on pulp, paper and paper manufactures  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The United States holds both the lowest arithmetic average (6.6 percent) and weighted average (5 percent ad valorem).

The distribution of MFN tariff provisions for pulp, paper and paper manufactures, by duty level, is shown in table I-7-A. The tariffs of all five major countries contain MFN duty-free provisions. Over two-fifths of Canada's MFN provisions are duty free, nearly one-fourth in the 10.1-15 percent ad valorem range and over one-fifth in the 15.1-20 percent range. About 17 percent of U.S. provisions are duty free, over 30 percent in the

Table I-7-A.--Distribution, by duty level, of MFN tariff provisions for pulp, paper and paperboard and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Note.--Due to rounding, figures may not add to 100 percent.

0.1-5 percent ad valorem bracket, over 46 percent in the 5.1-10 percent bracket. Of the Japanese tariff provisions, over half are in the 5.1-10 percent bracket, while one-fifth are in the 0.1-5 percent bracket and 16 percent are free. Almost 30 percent of the European Community provisions are free, one-fifth in the 5.1-10 percent rate bracket and nearly two-fifths in the 10.1-15 percent bracket. In the tariff schedules of the United Kingdom, close to one-fourth of the provisions are duty free, nearly two-fifths in the 10.1-15 percent bracket and 18 percent in both the 5.1-10 percent and 15.1-20 percent ad valorem ranges.

Imports of pulp, paper and paper manufactures receiving preferential tariff treatment are significant for three of the five major countries. Such treatment was accorded 30 percent of entries into the United Kingdom and 3 percent into Canada. Intra-European Community shipments were equal to about three-fifths of EC imports from outside countries.

A substantial portion of MFN imports into all five major countries are duty free. Nearly 57 percent of Canadian imports, 90 percent of U.S. imports, 29 percent of Japanese entries, 37 percent of EC imports and 55 percent of entries into the United Kingdom are free (table I-7-B). An additional 59 percent of Japanese entries are in the 0.1-5 percent ad valorem bracket and over one-third of EC imports are in the 10.1-15 percent range. Only Canada has imports entering at rates over 20 percent ad valorem.

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

The United States has the most detailed tariff schedule for pulp, paper and paper manufactures with 263 tariff lines, while the European Community has the least, with 67 lines. Canada has 202 lines; the United Kingdom, 101 lines; and Japan, 69 lines. However, the multiple dispersion of U.S. and Canadian tariff items into the BTN format overstates the detail of the tariff schedules of these two countries. An adjustment for this problem yields a more accurate item count of 147 items for the United States and 121 items for Canada.

# Trade importance

Pulp, paper and paper manufactures rank seventh in OECD exports and eighth in imports. The sector accounts for about 5 percent of OECD industrial exports and 4 percent of OECD industrial imports. For the United States, the sector is the eighth most important in exports and seventh in imports.

Chart I-7-B. --OECD trade in pulp, paper, and paper manufactures, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Imports by the GATT tariff study countries were valued at \$4.5 billion in 1967 and \$6.3 billion in 1970. Intra-EC shipments were an additional \$610 million in 1967 and \$1.1 billion in 1970. OECD 1969 imports were \$6.8 billion (including \$972 million of intra-EC shipments) and exports were \$7.9 billion (see chart I-7-B). In 1970, OECD imports rose to \$7.5 billion, exports to \$9 billion.

#### Trade network

The five major countries account for about 68 percent of OECD exports and 87 percent of imports of pulp, paper and paper manufactures. Sixty-eight percent of OECD exports go to the five major countries; 22 percent to LDC's and other non-OECD countries. About 65 percent of OECD imports are supplied by the five major countries.

Over one-third of exports go to non-OECD nations, principally the less developed countries (chart I-7-C). Canada and the European Community are the principal developed country markets for U.S. products. The United States takes three-fourths of Canada's exports. Japan ships over three-fifths of its exports to LDC's and 18 percent to the United States. European Community shipments to outside countries are equal to 70 percent of intra-EC exports. Non-OECD countries take about 38 percent of European Community outside exports; 11 percent go to the United Kingdom, and 9 percent

Chart I-7-C.--United States trade in pulp, paper, and paper manufactures, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

to the United States. The United Kingdom ships nearly half of its products to LDC's and other non-OECD countries. The Community is the principal developed country market for the United Kingdom (see table I-7-C).

Pulp, paper and paper manufactures rank sixth in industrial imports for the European Community and the United Kingdom, seventh for the United States, ninth for Canada and tenth for Japan. U.S. imports of pulp, paper and paper manufactures were valued at \$1.5 billion in 1967 and \$1.7 billion in 1969 and 1970. Canada supplies about 86 percent of U.S. imports; the United States is the source of 88 percent of Canadian imports. Over four-fifths of Japanese entries come from Canada and the United States. Two-thirds of European Community imports from outside sources come from "other" OECD nations. Intra-EC imports are three-fifths as large as total Community imports from all external sources. Nearly 60 percent of

United Kingdom imports are supplied by "other" OECD countries. Of the major countries, Canada is the chief source of United Kingdom imports, followed by the United States. Japan is not a very significant importer (table I-7-D).

### Trade composition

Pulp, paper and paper manufactures trade is divided into four subsectors, of which paper and paperboard is the largest in both exports and imports, (nearly half of each), followed by paper pulp and paper waste. The relative importance of the four subsectors is shown in chart I-7-D.

Chart I-7-D. --OECD trade in pulp, paper, and paper manufactures, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for pulp, paper and paper manufactures were below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the following tabulation, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 3.2 percent.

Specific rates are important only for the United States (41 percent of the lines, covering 3 percent of imports).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	2.6	0.5
European Community	8.2	5.3
United Kingdom	8.6	5.8
Japan	5.1	4.0
Canada	26.0	8.9

Concessions under the GATT have been made on all MFN provisions for pulp, paper and paper manufactures in the tariff schedules of the European Community and the United States, as well as on 88 percent of the provisions (covering 98 percent of pulp, paper and paper manufactures trade) in Japan's tariff and 66 percent of Canada's provisions (covering 68 percent of trade). Of the tariff provisions of the United Kingdom, 91 percent, covering 72 percent of MFN imports, are fully covered by GATT concessions; for 2 percent of the provisions, covering 28 percent of MFN imports, only part of an item is covered.

The national tariffs of all member states of the European Community prior to adoption of the European Community's Common External Tariff (CXT) contained tariff concessions on pulp, paper and paper manufactures negotiated under the GATT. The number of such concessions totaled 249, of which 146 reflected rates higher than the autonomous rate established in the CXT, 56 were at the CXT rate, and 47 were below the CXT rate.

Trade Complaints

More than 200 complaints involving over 60 countries were received by the Tariff Commission concerning policies and practices which the complainants considered to be barriers to trade in the pulp, paper and paper manufactures sector. Complaints were made against almost all market economy developed countries and against all of the more important less developed countries. Two-thirds of the total number of complaints concerned restrictive practices in the LDC's. Among individual countries, France drew the largest number of complaints (10); other developed countries most frequently mentioned were Italy, Canada, Japan, and New Zealand. Among the LDC's, Greece, Turkey, Iran, Colombia, Korea, and Spain drew the largest number of objections. The principal complaints are summarized in the paragraphs below.

Licensing practices.--Licensing practices drew the largest number of complaints concerning the pulp, paper and paper manufactures sector. Nineteen countries, chiefly LDC's, were mentioned in these complaints, but only Colombia, Israel, and Mexico were mentioned more than once.

The complaints concerning licensing chiefly involved books and paper products. Generally, the objections regarded the necessity of obtaining a license, which can be a lengthy and costly process although the license may be routinely granted. Several complainants remarked that, in some cases, securing a license could be very difficult. In Mexico, a U.S. producer of paper products stated that it was practically impossible to obtain a license. In Korea, licenses for books are granted only with the approval of the Minister of Education.

One U.S. producer of technical papers stated that Colombia permitted no deviation in quantity, value, or weight from that stated on the approved license.

Import duties.--Complaints against import duties, which made up the second largest category of objections, were received against 11 countries and the British Commonwealth. The complaints were almost evenly divided between LDC's and developed countries. The United Kingdom was the only country mentioned more than once. The bulk of the complaints involved books and other paper products. Most complainants simply mentioned the existence of "high" import duties. A rate of 70 percent ad valorem was cited for children's books imported into Peru. One U.S. producer stated that Australia maintained a high duty on paper products, ostensibly to prevent "dumping" in its markets. Another U.S. producer objected to the fact that the United Kingdom had a higher duty on cellulose shoeboard than on leather fiber shoeboard, while both items can be used for the same end product.

Discriminatory import duties were the subject of complaint by three U.S. producers. The British Commonwealth countries drew objections for giving preferential duty treatment to the United Kingdom on paper products, and Hungary was criticized for applying discriminatory (non-MFN) rates to imports of shoeboard from the United States. Greece was reported as favoring the European Community in imports of cellulose boards.

Embargoes and quotas.--Six countries were reported to have embargoes on certain paper products and two countries to have quotas. New Zealand, South Africa, Hungary, and Czechoslovakia were mentioned in this regard; the rest were LDC's. The application of these restrictions took various forms. Guyana maintains quotas on paper bags from countries outside of the Caribbean Free Trade Association (CARIFTA). Hungary and Czechoslovakia maintain embargoes on shoeboard, but shoeboard from Great Britain is exempted. Egypt maintains embargoes on paper products, which can be lifted in individual cases if the approval of the appropriate government ministry is secured. India and New Zealand both maintain quotas on books, and the quota levels are linked to the amount of previous imports. South Africa does not permit entry of certain periodicals.

Documentation requirements.--Various types of documentation required by Canada, Chile, Ethiopia, France, Iran, and the United States for trade in printed materials (chiefly books) were the object of complaints. U.S. producers felt that documentation requirements for A.I.D. shipments to LDC's were so excessive that the cost of the assistance increased as a result. The other complaints mentioned a variety of documentation requirements ranging from a pro forma invoice in Iran to a recording of all royalty contracts for imported books with the Central Bank in Chile.

State trading and governmental monopolies.--Eight countries, chiefly LDC's, were reported to have governmental monopolies or state trading practices which were looked upon as hindrances to trade in certain paper products. The chief products named were newsprint, papers for periodicals, playing cards, cigarette paper, and periodicals.

Subsidies and other aids.--U.S. exporters of paper complained of having to compete with products of Australia, Denmark, Italy, Japan, Norway and Sweden which were reported to benefit from various direct or indirect governmental aids (e.g., reduced taxes on profits from export sales). Italy taxes paper sales and uses the proceeds to assist in reafforestation. Spain subsidizes newsprint production with proceeds from a tax on other types of papers, and France assists wood pulp producers with a tax on certain papers.

Miscellaneous practices.--Several other practices drew complaints. These included nondiscriminatory sales taxes, prior import deposits, port and statistical taxes, antidumping practices, consular fees, and discriminatory shipping rates. LDC's were mentioned approximately twice as often as developed countries in these miscellaneous complaints.

In the Commission's survey, respondents were requested to give their assessment of the restrictive trade effect of the barriers they reported by indicating whether trade in the affected products would show a "small," "moderate," or "significant" increase if the barrier were removed and, if possible, to estimate a dollar value for the increase. Such assessments were included in only about one-tenth of the complaints in the pulp, paper and paper manufactures sector. Most of these indicated that a "moderate" increase in trade could be expected with removal of the barrier (or barriers) complained of; the remainder indicated that a "significant" trade increase could be expected. Estimates of dollar values as high as \$30 million and as low as \$5 thousand annually were

given for the expected increase in trade in a product or a group of closely related products. The estimated dollar value increases, as a percent of the respondent's trade, ranged from 6.5 to 100 percent. The small number of dollar value estimates received in the pulp, paper, and paper manufactures sector totaled nearly \$36 million annually.

## Paper Pulp and Paper Waste

Paper pulp and paper waste cover pulp derived by mechanical or chemical means from fibrous vegetable materials, scrap articles of paper fit only for paper-making and waste paper and paperboard. <sup>1/</sup>

MFN tariffs

The United States and Canada have only duty-free provisions for paper pulp and paper waste. For the other three countries,

Chart I-7-E. -- Average MFN tariff rates on paper pulp and paper waste

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector see BTN headings 4701-.02.

average MFN tariffs for total imports of paper pulp and paper waste range from 0.1 to 4.7 percent ad valorem. The highest arithmetic average is held by the United Kingdom; the highest weighted average by Japan. The highest averages for dutiable products are held by the United Kingdom (7.5 percent ad valorem for the arithmetic average, 5.1 percent for the weighted) (chart I-7-E).

All imports by the United States, Japan, and Canada were on an MFN basis, as were virtually all shipments into the Community from external countries. Fifteen percent of total imports by the United Kingdom received preferential tariff treatment.

All of the tariff provisions of Canada and the United States are free (table I-7-E). Japan and the European Community have no rates higher than 5 percent ad valorem (over 70 percent of Japanese

Table I-7-E.--Distribution, by duty level, of MFN tariff provisions for paper pulp and paper waste

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The European Community exhibited the most complex tariff structure for paper pulp and paper waste, with 16 lines; the United States, the simplest, with 2 lines. Schedules for Japan had 7 lines; the United Kingdom, 4 lines; and Canada, 3 lines.

#### Trade importance

Paper pulp and paper waste is the second most important category in OECD trade in the pulp, paper and paper manufactures sector. OECD 1969 exports totaled \$2 billion; imports were also about \$2 billion (chart I-7-F). In 1969 U.S. exports, this subsector was the third largest category (\$307 million), while in U.S. imports, it was the second largest category (\$507 million) of pulp, paper and paper manufactures. In 1971, U.S. imports fell to about \$490 million.

Chart I-7-F. --OECD trade in pulp and paper waste, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

Canada, the United States and "other" OECD countries ship over 95 percent of OECD exports; the European Community, the United Kingdom and Japan, less than 4 percent. Canada is by far the largest exporter, shipping \$703 million in 1969 (almost 70 percent of which went to the United States). Nearly one-third of U.S. exports go to LDC's and other non-OECD nations; about one-third to the European Community, and 18 percent to Japan (table I-7-G).

Among the five major countries, the European Community is the largest importer, followed by the United States. Shipments to the Community from outside countries exceed intra-EC imports by almost 12 to 1, with 65 percent of European Community outside imports arriving from "other" OECD countries. Canadian imports are negligible; 96 percent of U.S. imports come from Canada. Eighty-nine percent of Japanese imports are shipped from Canada or the United States. Of United Kingdom imports, 70 percent come from "other" OECD nations. (table I-7-H).

Trade-agreement concessions

Except for the United Kingdom, average tariffs of the major countries on January 1, 1972, were either equal to or lower than the average levels on pre-trade-agreement base dates. As the following tabulation shows, the largest drop, over 8 percentage points, was in the Canadian tariff. Japan's tariff rates in this subsector were unilaterally reduced in November 1972, and calculations based on the new lower level would show an average of about 3.8 percent ad valorem. Specific rates are significant only for the United Kingdom, with 25 percent of its tariff lines involved but less than one percent of MFN imports.

Pre-trade agreementJanuary 1, 1972

(Percent ad valorem)

United States	0.0	0.0
European Community	2.2	1.1
United Kingdom	0.0	0.1
Japan	4.7	4.7
Canada	8.3	0.0

GATT concessions cover all U.S. and Community MFN rate provisions; two of Canada's three provisions (72 percent of imports) and 57 percent of Japan's provisions (100 percent of imports). Of the four United Kingdom tariff provisions, two, covering 1 percent of MFN imports, are fully covered by GATT concessions; the remaining two provisions, covering 99 percent of MFN imports, are only partly covered.

Thirty-two GATT concessions were made in European Community member state national tariffs prior to adoption of the Common External Tariff. Twelve of these were at rates higher than the CXT rate, 13 at rates below, and 7 at the CXT rate. Actual rates of duty for paper pulp are compared in table I-7-I.

Table I-7-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on pulp derived by mechanical or chemical means from fibrous vegetable material

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free	Free	Free	250.02
Canada-----	25%	Free	Free	2000-1
European Community--	6%; Free	6%; Free	3%; Free	47.01
United Kingdom-----	Free; 10%	Free; 10%	Free; 5%	47.01
Japan-----	5%	5%; Free	5%; Free	47.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

### Paper and Paperboard

This subsector covers all paper and paperboard which is not cut to size or shape and includes newsprint, printing and writing paper, parchment paper, draft paper and embossed or corrugated paper and certain building board (of wood pulp or vegetable fiber). However, it does not cover certain special papers, such as sensitized paper and abrasive paper. 1/

#### MFN tariffs

The United States has the lowest tariff averages for total MFN imports of paper and paperboard (5.5 percent ad valorem for the arithmetic, 0.3 percent for the weighted); the United Kingdom has the highest averages (13.9 percent and 13.3 percent, respectively) (chart I-7-G). Canada has the second lowest arithmetic average (8 percent ad valorem) and the second highest weighted average (11 percent). Except in the case of Japan, the tariff averages of the five major countries for dutiable products alone are generally higher than the averages calculated for total MFN imports. The dutiable product averages range from 4.5 percent ad valorem to over 14 percent. The United States again has the lowest averages. The United Kingdom holds the highest arithmetic average, while Canada holds the highest weighted average.

---

1/ For specific coverage of this subsector see BTN headings 48.01-.09.

Chart I-7-G. -- Average MFN tariff rates on paper and paperboard  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on virtually all Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Virtually all imports into the United States, Canada and Japan and shipments into the European Community from external countries, are accorded MFN treatment. Intra-EC shipments which move duty free are equal to 62 percent of EC imports from outside sources. Nearly 85 percent of total imports into the United Kingdom receive preferential treatment under the Commonwealth and European Free Trade Association agreements.

All of the five major countries except Japan have duty-free tariff provisions (table I-7-J). Over 40 percent of Canada's pro-

visions are free, as are nearly 11 percent of U.S. provisions, 5 percent of EC provisions and over 4 percent of those of the United Kingdom. An additional third of Canadian tariff lines are in the 10.1-15 percent ad valorem bracket. Over two-fifths of U.S. provisions are in each of the rate ranges of 0.1-5 percent and 5.1-10 percent ad valorem. Only the United States has provisions in the 30.1-40 percent ad valorem class. About 58 percent of Japanese tariff lines are found in the 5.1-10 percent ad valorem bracket, while almost one-fifth of Japan's provisions are in each of the brackets of 0.1-5 percent and 10.1-15 percent. Sixty-five percent of European Community provisions are found in the 10.1-15 percent range. Of the tariff provisions of the United Kingdom, about 58 percent are in the 10.1-15 percent bracket and over one-fourth are found in the 15.1-20 percent bracket.

In terms of MFN imports of paper and paperboard, about 22 percent of Canadian imports, 93 percent of U.S. imports, and 21 percent of European Community imports enter free. Over 70 percent of Canadian imports are in the 10.1-15 percent ad valorem range. Four-fifths of Japanese imports entered at rates in the 5.1-10 percent bracket. Nearly four-fifths of the European Community entries pay duties in the 10.1-15 percent ad valorem bracket. Over half of United Kingdom entries are in the 10.1-15 percent range, while 30 percent are found in the 15.1-20 percent range (table I-7-K).

Table I-7-K---Distribution, by duty level, of MFN imports of paper and paperboard

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States exhibits the most complex tariff schedule for paper and paperboard, with 138 tariff lines; the European Community has the simplest, only 20 lines. Schedules for Canada have 84 lines; for the United Kingdom, 45 lines; and for Japan, 26 lines.

World production

World production of paper and paperboard amounted to 192 million metric tons in 1968. The five countries under study supplied two-fifths of the output. The United States was the principal producer, accounting for 22 percent, followed by the European Community, with 7 percent; Canada, 5 percent; Japan, 5 percent; and the United Kingdom, 2 percent.

Trade importance

Paper and paperboard account for 49 percent of OECD industrial exports in the pulp, paper and paper manufactures sector and 47 percent of OECD imports. OECD exports totaled almost \$3.9 billion in 1969, imports were \$3.2 billion (chart I-7-H). Among the 119 industrial subsectors, paper and paperboard ranks seventh in value of MFN imports of the GATT tariff study countries. For the United States, it is the fourth most important subsector in MFN imports; for the European Community, the rank is seventh. U.S. imports amounted to over \$1 billion in 1969, and increased to nearly \$1.1 billion in 1971.

Chart I-7-H. -- OECD trade in paper and paperboard, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for about 65 percent of OECD exports of paper and paperboard and 88 percent of imports (tables I-7-L and M). The largest supplier to the world is Canada, accounting for 29 percent of OECD exports. The principal importing country is the United States (if intra-EC imports are excluded). Japan is, of the five, the least important both as an importer and exporter of paper and paperboard. Seventy-eight percent of Canadian exports go to the United States. Nearly two-fifths of U.S. exports

go to non-OECD countries; the remainder goes chiefly to the Community (25 percent) and Canada (16 percent). Over half of EC shipments to outside destinations go to non-OECD countries. Of the remaining EC exports, 35 percent go to "other" OECD countries. United Kingdom exports go chiefly to non-OECD countries, followed by the European Community.

Ninety-two percent of U.S. imports of paper and paperboard come from Canada, as do over three-fifths of Japanese entries. The United States supplies 94 percent of the Canadian imports and 17 percent of EC imports from outside countries. The principal source of EC outside imports is "other" OECD countries. Intra-EC imports are equal to about three-fifths of the value of EC receipts from outside sources. About 60 percent of United Kingdom imports are also supplied by "other" OECD nations.

Trade flows among the five countries are generally in the direction of countries having lower tariffs. The principal importer, the United States, has the lowest tariff averages. Canada, which is one of the least important importers, has relatively high tariff averages.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, average tariff levels for paper and paperboard are well below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations.

Japan, in November 1972, made unilateral 20 percent reductions in most of its rates on paper and paperboard, thereby reducing the Japanese average level to about 7.4 percent ad valorem. Specific rates are significant only for the United States, involving 51 percent of its tariff lines, and 4 percent of imports.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	2.0	0.3
European Community	14.2	9.5
United Kingdom	19.4	13.3
Japan	13.0	9.3
Canada	28.4	8.0

All MFN provisions for paper and paperboard in the tariff schedules of the United States and European Community have been the subject of GATT concessions. In the United Kingdom schedule, 98 percent of the provisions, covering all MFN imports, have GATT concessions, as do 81 percent of the Japanese provisions, covering 80 percent of MFN imports, and 68 percent of the Canadian provisions, covering 87 percent of MFN imports. European Community member state national tariffs prior to adoption of the CXT contained 109 GATT concessions on paper and paperboard, 69 of which were at rates higher than the CXT rate.

Trade-agreement concessions in major country tariffs dealing with kraft container board and newsprint paper are shown in tables I-7-N and I-7-O. The most significant rate reductions have taken place in the tariffs of the United States, Canada and Japan.

Table I-7-N.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on kraft container board

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Exemption from the payment of duty within the limits of a specified annual tariff quota.

## Printed Matter

Printed matter covers printed books, pamphlets, brochures, leaflets, newspapers, periodicals, maps and charts, picture and painting books for children, and printed globes and printed music. <sup>1/</sup>

MFN tariffs

The arithmetic averages for total MFN imports of printed matter range from 2.4 percent ad valorem to 6.9 percent; the weighted

Chart I-7-1. --Average MFN tariff rates on printed matter

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector see BTN chapter 49.

averages from 0.2 percent to 4 percent (chart I-7-I). Canada holds the highest averages. Japan has the lowest weighted average and the second lowest arithmetic average (2.5 percent ad valorem). The United States holds the lowest arithmetic average and the second lowest weighted average. For dutiable products only, all the tariff averages rise significantly. The highest averages are again held by Canada (16.9 percent ad valorem for the arithmetic average and 15.9 percent for the weighted average). The lowest tariff averages belong to the United States (4.8 percent for the arithmetic average and 4.5 percent for the weighted).

Virtually all imports into Japan, the Community and the United States were accorded MFN treatment. About 4 percent of Canadian imports and about 18 percent of United Kingdom imports receive preferential tariff treatment. Intra-EC shipments, which move duty free, exceed EC imports from outside sources.

All of the five major countries have a substantial proportion of duty-free MFN tariff provisions. Two-thirds of the MFN tariff provisions of Japan and the United Kingdom, almost three-fifths of Canadian provisions and nearly one-half of U.S. and EC provisions are free. Of the remaining provisions, about one-fourth of Canadian provisions are in the 15.1-20 percent ad valorem bracket, one-third of the U.S. provisions in the 0.1-5 percent bracket, and one-third of Japanese and EC lines and 17 percent of United Kingdom

provisions are in the 5.1-10 percent ad valorem range (table I-7-P). For each of the major countries, at least three-fourths of imports are free. Only Canada has imports entering at rates above 15 percent ad valorem (table I-7-Q).

### Trade importance

Printed matter is the third most important category in OECD trade in pulp, paper and paper manufactures, accounting for about 17 percent of total trade in the sector. OECD 1969 exports totaled

Chart I-7-J.--OECD trade in printed matter, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1970.

\$1.4 billion; imports were \$1.1 billion (chart I-7-J). In U.S.

exports in the sector, printed matter (\$312 million in 1969) is the second largest category, but is third largest in U.S. imports, which in 1971 were valued at \$165 million. Among the 119 industrial subsectors, printed matter ranks 35th in value of MFN imports by the GATT tariff study countries.

#### Trade network

The five major countries account for about 87 percent of OECD exports and 80 percent of imports (tables I-7-R and S). The European Community is the largest exporter, being the origin of around one-fourth of OECD export shipments. Excluding

intra-EC imports, Canada is the largest importer, with U.S. imports and European Community imports from outside sources following. The United States and the Community ship almost one-fourth of their exports to non-OECD countries; and nearly half of United Kingdom exports are sent to these destinations. The remainder of U.S. exports are shipped principally to Canada. More than two-fifths of EC outside exports are sent to "other" OECD countries. Canada and Japan together ship less than 5 percent of total OECD exports.

Over four-fifths of Canadian imports, 68 percent of Japanese imports, one-fourth of EC outside imports and one-third of United Kingdom entries come from the United States. The remainder of EC outside imports come from "other" OECD countries, while the remaining United Kingdom imports principally arrive from the Community. The Community and the United Kingdom each account for about 29 percent of U.S. imports. Another 13 percent of United States imports come from Canada.

#### Trade-agreement concessions

Average tariffs of the major countries on January 1, 1972, were lower than the average levels on pre-trade-agreement base dates. As the following tabulation shows, the largest drop was in the U.S. tariff.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	3.4	0.6
European Community	3.5	2.0
United Kingdom	3.5	2.3
Japan	0.5	0.2
Canada	8.2	6.9

GATT concessions cover all U.S., EC and Japanese MFN provisions; 83 percent of United Kingdom provisions (100 percent of imports); and 47 percent of Canadian provisions (57 percent of imports). Forty-five GATT concessions were made in European Community member state national tariffs prior to the adoption of the Common External Tariff, and 30 of these were at rates higher than the new CXT rate.

Printed books, brochures, pamphlets and similar printed matter have long been duty free (with minor exceptions) in the tariff schedules of the principal countries and the duty-free status has been bound under the GATT and other international agreements (see table I-7-T).

Table I-7-T.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on printed books, booklets, brochures, pamphlets and leaflets

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free	Free	Free	270.25
Canada-----	10% Free	10% Free	10% Free	17100-1 16900-1; 17000-1; 17210-1; 17305-1; 17310-1; 17315-1; 17320-1; 17325-1; 17330-1
European Community--	Free	Free	Free	49.01
United Kingdom-----	Free	Free	Free	49.01
Japan-----	Free	Free	Free	49.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

# Manufactured Articles of Pulp, Paper or Paperboard

Manufactured articles of pulp, paper or paperboard covers paper and paperboard cut to size or shape, note books, binders, diaries, envelopes and other stationery, boxes, bags and other packing containers. Excluded are certain manufactures such as travel goods, plaiting materials and toys of paper. <sup>1/</sup>

## MFN tariffs

Average MFN tariffs on manufactured articles of pulp, paper or paperboard imported into the five major countries range from 6.6

Chart I-7-K. --Average MFN tariff rates on manufactured articles of pulp, paper or paperboard

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector see BTN headings 48.10-.11, 48.13-.21.

percent ad valorem (the U.S. weighted average on total imports) to 16.3 percent (the Canadian weighted average) (chart I-7-K). Averages for Japan, the European Community and the United Kingdom were clustered between 7.1 and 13.6 percent ad valorem. The dutiable product averages were higher for Japan, the United Kingdom and Canada, with the most significant changes occurring in the arithmetic averages of Canada and the United Kingdom.

Virtually all imports by the United States, Japan, and shipments into the European Community from external countries were on an MFN basis; 4 percent of Canadian imports and 43 percent of United Kingdom imports received preferential tariff treatment.

Canada, Japan and the United Kingdom have duty-free MFN provisions for manufactured articles of pulp, paper or paperboard; there are none in the tariffs of the United States and the Community (table I-7-U). Only Canada and the United Kingdom have provisions

Table I-7-U.--Distribution, by duty level, of MFN tariff provisions for manufactured articles of pulp, paper or paperboard

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Note.--Due to rounding, figures may not add to 100 percent.

extending into the 15.1-20 percent ad valorem bracket (37 percent and 21 percent of the tariff provisions, respectively). Nearly 18 percent of the Canadian provisions are free and an additional two-fifths are in the 10.1-15 percent range. Twenty-eight percent of U.S. provisions are in the 0.1-5 percent ad valorem class, while 69 percent of the provisions are in the 5.1-10 percent class. About 4 percent of Japanese provisions are free. Another 71 percent of Japan's tariff provisions are in the 5.1-10 percent ad valorem bracket. Eighty percent of European Community provisions are found in the 10.1-15 percent rate range; the remaining EC provisions are in the 5.1-10 percent range. Of the provisions of the United Kingdom, 14 percent are free, 29 percent in the 5.1-10 percent rate bracket and 36 percent in the 10.1-15 percent rate bracket.

Few of the MFN imports of manufactured articles of pulp, paper or paperboard enter the five major countries duty free (table I-7-V). Over two-thirds of Canadian imports pay duties ranging from

Table I-7-V.--Distribution, by duty level, of MFN imports of manufactured articles of pulp, paper or paperboard

Note.--Due to rounding, figures may not add to 100 percent.

15.1-20 percent ad valorem. Almost 39 percent of U.S. imports enter at rates in the 0.1-5 percent ad valorem bracket; 61 percent pay

rates in the 5.1-10 percent bracket. Nearly one-third of Japan's entries are in the 0.1-5 percent rate range and an additional three-fifths in the 5.1-10 percent range. About 93 percent of EC imports enter in the 10.1-15 percent ad valorem bracket. Over one-third of United Kingdom imports are in the 5.1-10 percent rate range and more than two-fifths are in the 15.1-20 percent bracket.

The United States and Canada exhibit the most complex tariff structures for manufactured articles of paper or paperboard, with 64 and 51 lines, respectively. Schedules for the United Kingdom have 28 lines; Japan, 24 lines; and the European Community, 15 lines.

#### Trade importance

OECD exports of manufactured articles of pulp, paper and paperboard totaled \$651 million in 1969, about 8 percent of OECD export

Chart I-7-L. --OECD trade in manufactured articles of pulp, paper or paperboard, 1969

trade in all pulp, paper and paper manufactures. Imports were \$460 million, or about 7 percent of total import trade in the sector (chart I-7-L). United States exports in 1969 were \$93 million, when imports were valued at \$42 million. U.S. imports in 1971 were valued at \$61 million.

### Trade network

The five major countries account for about 78 percent of exports of paper and paperboard manufactures and 73 percent of imports. The European Community, the largest exporter, sends about 56 percent of its outside exports to LDC's and other non-OECD countries (table I-7-W) and about 30 percent to "other" OECD countries. Non-OECD countries are also the recipients of 47 percent of U.S. exports,

Table I-7-W.--OECD exports of manufactured articles of pulp, paper or paperboard, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

38 percent of the exports of Japan, and 47 percent of those of the United Kingdom. Half of Japan's exports go to the United States. About 27 percent of the exports of the United States go to Canada. Canada is not a significant exporter. The United Kingdom sends 31 percent of its exports to "other" OECD nations and an additional 14 percent to the Community.

The European Community is also the largest importer, accounting for 46 percent of total OECD imports. Three-quarters of the EC imports are intra-Community (table I-7-X). The principal sources

Table I-7-X.--OECD imports of manufactured articles of pulp, paper or paperboard, 1969

of European Community outside imports are the United States and "other" OECD countries. None of the other major countries account for as much as ten percent of OECD imports.

Trade-agreement concessions

As the following tabulation shows, for all of the five major countries average tariff levels for manufactured articles of pulp, paper or paperboard are substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. Japan, in November 1972, made unilateral 20 percent reductions in its rates on manufactured articles of pulp, paper and paperboard, thereby reducing the Japanese average level to about 5.7 percent ad valorem. Specific rates are important only for the United States (41 percent of tariff lines, covering 10 percent of MFN imports).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	30.4	6.6
European Community	19.0	12.8
United Kingdom	19.5	13.6
Japan	16.2	7.1
Canada	29.8	13.2

All MFN provisions for manufactured articles of pulp, paper and paperboard in the tariff schedules of the United States, the European Community and Japan have been the subject of GATT concessions. In the Canadian schedule, 86 percent of the provisions, covering 98 percent of MFN imports have GATT concessions. In the schedule of the United Kingdom, 93 percent of tariff provisions, covering 81 percent of MFN imports, are fully covered by GATT concessions; for 3 percent of the provisions, covering 19 percent of

MFN imports, only part of an item is covered. Of 63 concessions in the national tariffs of the European Community member countries prior to adoption of the CXT, 35 were at rates above the CXT autonomous rates, 8 at the CXT rate, and 20 below the CXT rate.

Tariffs on "other" articles of paper pulp (not including articles of paper or paperboard) appear in table I-7-Y.

Table I-7-Y.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on "other" articles of paper pulp (not including articles of paper or paperboard)

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

Japan-----	20%	20%; 15%	10%; 7.5%	48.21-2 ex.

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

## COAL, PETROLEUM, NATURAL GAS AND CERTAIN DERIVED PRODUCTS

Mineral fuels, mineral oils and products of their distillation, mineral waxes, artificial waxes, and lubricating preparations consisting of mixtures of oils or fats make up the sector for coal, petroleum, natural gas and certain derived products. The principal products of the sector are coal, lignite, peat, coke and agglomerates, crude petroleum, crude oils, petroleum gases and other gaseous hydrocarbons. 1/

### MFN tariffs

Average tariffs faced by world imports of coal, petroleum, and natural gas are, due to the large raw material composition of this category, substantially lower than tariffs for industrial products taken as a whole (chart I-8-A). For all coal, petroleum, and natural gas products, the arithmetic averages range from 3 to 9.1 percent ad valorem; the weighted averages from 0.1 to 10.5 percent. The United Kingdom, the European Community, and the United States have the lowest arithmetic averages, all at or near 3 percent ad valorem, and Japan, the highest (9.1 percent). The lowest weighted average is held by the United Kingdom and the highest by Japan. The tariff averages on all products are significantly lower than the averages on dutiable imports due to the substantial importation of duty-free fuel. For dutiable products, Canada holds the highest arithmetic average at 13.6 percent ad valorem; Japan, the highest weighted average (14.1 percent).

---

1/ For the specific coverage of this sector, see BTN headings 27.01-.04; 27.06-.14; 27.16; 34.03 and 38.04.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-8-A.-- Average MFN tariff rates on coal, petroleum and natural gas and derived products  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions made in 1972 on about half of the Japanese rates in this sector; of the remaining rates about two-thirds were reduced by amounts ranging from 21 percent to 100 percent.

\* U.S. tariff rates on petroleum and derived products have been suspended since May 1, 1973, and replaced by a system of fees charged for licenses covering imports over certain allocated quantities.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The European Community has the lowest arithmetic average (3.8 percent) and the United States, the lowest weighted average (4.1 percent).

On May 1, 1973, U.S. tariffs on petroleum and derived products were suspended and a license fee system was instituted. Under this system, fees beginning at levels generally equal to the suspended rates of duty and gradually to be phased upward, are applied to all imports over certain allocated quantities (see later discussion of MFN tariffs on crude petroleum).

The distribution of MFN tariff provisions for coal, petroleum, natural gas and derived products, by duty level, is shown in table I-8-A.

Table I-8-A.--Distribution, by duty level, of MFN tariff provisions for coal, petroleum, natural gas, and derived products

Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Data for the United States reflect the situation existing prior to modification of the U.S. import regime for petroleum effective May 1, 1973.

Note.--Due to rounding, figures may not add to 100 percent.

The tariff schedules of the five major countries all contain MFN duty-free provisions. About 60 percent of Canadian and U.S. provisions are free. Over 45 percent of United Kingdom provisions are free, as are over one-fifth of the Japanese provisions and 17 percent of EC provisions. Three-fifths of EC provisions are in the 0.1 to 5 percent ad valorem bracket, as well as over 45 percent of United Kingdom provisions and about one-fifth of Japanese and U.S. provisions. Two-fifths of the Japanese rates are about equally divided between the 5.1-10 and the 10.1-15 percent ranges. Japanese rates range into the 40.1-50 percent ad valorem bracket. The other countries have rates no higher than 25 percent.

Over three-fourths of Canadian, EC, and United Kingdom MFN imports enter free. One-fourth of Japanese imports enter free; two-thirds at duty rates of 10.1-15 percent ad valorem. Eleven percent of U.S. imports enter under tariff provisions which are free. Most of the remainder was dutiable at rates between 0.1-5 percent ad valorem (table I-8-B). Of these "dutiable" U.S. imports, however, approximately 10 percent enter with the duty suspended.

Table I-8-B.--Distribution, by duty level, of MFN imports of coal, petroleum, natural gas, and derived products

(In percent)					
Duty level	Canada	United States 1/	Japan	European Community	United Kingdom
Free-----	77.5	11.4	25.7	84.1	98.8
0.1-5.0 percent----	-	82.7	1.5	13.9	.9

15.1-20.0 percent--	.4	-	6.1	-	-
20.1-25.0 percent--	-	-	.2	-	-
25.1-30.0 percent--	-	-	.1	-	-
30.1-40.0 percent--	-	-	2.6	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

1/ Data for the United States reflect the situation existing prior to modification of the U.S. import regime for petroleum effective May 1, 1973. Also, the percentages are calculated in terms of the nominal tariff provisions and do not take into consideration large imports of "dutiable" products on which the duty is actually suspended under special conditions.

Note.--Due to rounding, figures may not add to 100 percent.

Imports of coal, petroleum, and natural gas receiving preferential treatment are insignificant for the five major countries. However, intra-Community shipments, which move duty free, equate to roughly one-fourth of Community imports from outside sources.

The European Community and the United States have the most detailed tariff schedules for coal, petroleum, and natural gas with 65 and 75 lines, respectively. The United Kingdom has the least detailed tariff schedule with 33 lines. Japan has 59 lines; Canada, 48 lines.

#### Trade importance

The coal, petroleum, and natural gas sector is one of the most important industrial sectors, ranking eighth in OECD exports and second in imports. The sector accounts for 3.5 percent of OECD industrial exports and 12.4 percent of imports. For the United States, the sector is ninth most important in industrial exports. It ranked third in 1969 U.S. imports, but dropped to fourth in 1970.

Imports by the GATT tariff study countries were valued at \$14.6 billion in 1967 and \$20.5 billion in 1970. Intra-European Community shipments were an additional \$1.2 billion in 1967 and \$1.7 billion in 1970. OECD 1969 imports were \$19.5 billion (including \$1.5 billion of intra-EC shipments) and exports were \$5.6 billion (see chart I-8-B). In 1970, OECD exports increased to \$7 billion, imports to \$23 billion.

Chart I-8-B. --OECD trade in coal, petroleum and natural gas and derived products, 1969

Source: Compiled from OECD Statistics of Foreign Trade. Series C, 1969.

### Trade network

The five major countries account for 95 percent of OECD exports and 85 percent of OECD imports of coal, petroleum, and natural gas. Over four-fifths of OECD exports are sent to OECD countries. More than

two-thirds of OECD imports have their source in LDC's. The principal exporters among the five major countries are the European Community and the United States. One-fourth of U.S. exports go to Japan; Canada, the European Community, and LDC's take one-fifth each (chart I-8-C).

Chart I-8-C.--United States trade in coal, petroleum and natural gas and derived products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The United States takes virtually all of Canada's exports. Complete country of destination data are unavailable for 10 percent of EC exports. Of those exports accounted for, nearly 60 percent are intra-EC shipments,

one-fifth go to "other" OECD countries and 10 percent to the United Kingdom. About three-fifths of United Kingdom exports are sent to "other" OECD nations (table I-8-C). Japan is an insignificant supplier.

Coal, petroleum, and natural gas ranks first in industrial imports for Japan and the European Community, second for the United Kingdom, fourth for the United States and fifth for Canada. U.S. imports of coal, petroleum, and natural gas were valued at \$2.3 billion in 1967, \$2.8 billion in 1969, and \$3.7 billion in 1971. For each of the five major countries, at least two-thirds of imports have their source in less developed countries (table I-8-D). U.S. imports have Canada as their principal

developed source. Canada, Japan, and the European Community have their major developed source in the United States. The European Community, by far the largest importer, is the major developed supplier of the United Kingdom. Intra-EC trade equals about one-fourth of EC outside imports.

#### Trade composition

The coal, petroleum, and natural gas sector is divided into four subsectors. In terms of imports, the crude petroleum subsector is the most important, accounting for two-thirds of OECD imports in the sector. In terms of OECD exports, products derived from coal, petroleum or gas comprise the largest subsector. The relative importance of the four subsectors is shown in chart I-8-D.

Chart I-8-D.--OECD trade in coal, petroleum and natural gas and derived products, by type, 1969

(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

With the exception of Japan, average tariff levels of the five major countries on January 1, 1972, for coal, petroleum, and natural gas were well below levels existing on pre-trade-agreement base dates. The Japanese figure rose slightly. The lower levels, in part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	8.9	3.7
European Community	1.0	0.7
United Kingdom	5.2	0.1
Japan	9.6	10.5
Canada	12.4	6.1

Concessions under the GATT have been made on all MFN provisions for mineral fuels and derived products in the tariff schedule of the European Community. Canada's GATT concessions cover 60 percent of MFN provisions and 28 percent of imports, while Japan's cover 69 percent of provisions and 15 percent of imports. In the United Kingdom schedule, 58 to 60 percent of the MFN provisions cover 2 percent of trade. For the United States, 94 percent of tariff provisions, covering 18 percent of imports are fully covered by GATT concessions. For 6 percent of the U.S. provisions covering 82 percent of MFN imports, only part of an item is covered; however, the remainder is covered by concessions in the bilateral agreement with Venezuela.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on coal, petroleum, and natural gas negotiated under the GATT. The number of such concessions totaled 66, of which 33 reflected rates higher than the autonomous rate established in the CXT, 11 were at the CXT rate, and 22 were below the CXT rate.

#### Trade complaints

Complaints received by the Tariff Commission concerning practices or policies adversely affecting trade in the coal, petroleum, and natural gas sector totaled 164. The complaints were about evenly divided between developed and developing countries. European Community nations were named in one-third of the complaints against developed countries, the United States in about 15 percent, and Japan in about 10 percent. Most

of the developed countries were named in the complaints at least once. Among the less developed countries, Greece, Spain, Turkey and Egypt were the most frequently mentioned of the approximately 30 developing nations identified in the complaints.

Collectively, quantitative restrictions, licensing practices and embargoes were the object of the most complaints in this product sector. Twenty-nine percent of the total number of complaints concerned these trade barriers.

Quantitative restrictions, licensing practices and embargoes.--The United States was the country mentioned most frequently as having quantitative restrictions (quotas) on petroleum and oil products (imposed for national security reasons). 1/ Yugoslavia, Belgium-Luxembourg and Japan were frequently mentioned as imposing quotas on coal, gasoline and other related fuel products. Quotas on coal and related fuels are imposed by Portugal, India, West Germany, Finland, and the Netherlands. In Brazil, quotas on coal are keyed to use of indigenous coal. For France and some other European countries, quotas are placed on petroleum specialty products traded outside of certain currency zones.

A U.S. producer of lubricating oil reported that Latin American, African and Middle Eastern countries have licensing practices which discourage imports in order to promote local industries. Another U.S. producer of fuel stated that the licensing practices of Greece, Japan, Portugal, Spain, Turkey and most Latin American countries discriminate against the U.S. product in favor of producers in the importing country or other third countries.

---

1/ Quantitative limitations on U.S. imports of petroleum and petroleum products were terminated on May 1, 1973.

Austria was cited as having discretionary and restrictive license practices for the importation of lignite. For coal and related fuels, Austria, Belgium-Luxembourg, Chile, Finland, India, Netherlands, Portugal, Turkey, and the United Kingdom were reported to require the purchase of an import license before the products are allowed into the country. The United States limits its imports and exports of natural gas under section 3 of the Natural Gas Act of 1938, which prohibits the importation or the exportation of natural gas except on order from the Federal Power Commission.

Embargoes and restrictions which have the effect of embargoes in several countries came under criticism from U.S. producers. It was reported that Brazil, Greece and Malta impose embargoes on petroleum products. Countries most frequently reported as having embargoes on coal were West Germany, India and the United Kingdom. Although the forms of the embargoes differed (geographic restrictions on U.S. deliveries in West Germany; license required but not granted in the United Kingdom), the end result of stopping the importation of specific goods was achieved.

Subsidies and other aids.--Approximately 10 percent of complaints in this sector concerned governmental aids to domestic producers or exporters. Members of the European Community were the object of the largest number of complaints regarding subsidies and other aids; complaints were made chiefly in reference to fuels, coal and coking coal. For example, it was reported that U.S. exports are adversely affected by EC members' state production aids for coking coal and disposal aids on deliveries to areas distant from the coal basin. India, Pakistan, the Philippines, Spain

and the African, Latin American and Middle Eastern nations received complaints against their subsidies for coal, coke and related fuels.

State trading, government monopolies.--Petroleum was the product most frequently mentioned as being affected by government monopolies and exclusive franchises. Ceylon, Finland, France, Greece and Spain were all cited for this practice. It was reported that many developed countries give preference to nationalized companies, especially Italy and France, with regard to petroleum products. A complaint was made against countries which exercise control over all foreign trade, mentioning Czechoslovakia, East Germany, Poland, Romania and other state managed economies.

It was reported that the state trading practices of Brazil, Egypt, France, Greece, India, Poland, and Spain inhibit the trading capacity of U.S. producers of coal, coke, petroleum, and related fuels. Preferential internal coal markets, which are detrimental to the use of U.S. coal, were reported to be operating in West Germany.

Miscellaneous.--Member states of the European Community, Greece, Spain and other European countries were reported to have border and turnover taxes on fuels which discriminate against U.S. products in favor of domestic industries and industries of third countries. Until recently, a surtax equal to the difference between the export price and an arbitrary value of 10.5 or 12.5 cents per imperial gallon was levied on Canadian imports of gasoline-type fuels. Many countries were cited as requiring prior import deposits on fuels. Nondiscriminatory consumption taxes and excise taxes were the subject of complaints against the Netherlands, Finland and several other European countries,

plus Rwanda, Tunisia, and Barbados. Miscellaneous taxes and fees, such as special import taxes, complementary taxes, port taxes, statistical taxes and stamp taxes assessed on petroleum products by many countries were mentioned as having an adverse effect on trade.

Exchange controls, as practiced by some African, Latin American and Middle Eastern nations on lubricating oils, were reported to help keep out competition and promote local blending plants and manufactures. Many less developed countries, as well as Japan and some European nations, were cited as having exchange controls which discriminate against U.S. products.

U.S. imports of gas are restricted by Canada's practice of export restraints on Canadian gas by virtue of the reserve/production requirements imposed by the Province of Alberta or the Canadian National Energy Board. The exportation of crude petroleum to Greece is limited due to a pricing practice which controls the import price of all crude petroleum.

From the responses received by the Commission concerning the coal, petroleum, and natural gas sector, only nine were submitted which attempted to assess the restrictive trade effect of the reported barriers. Five of these responses reported a "moderate" increase in their trade would be expected if the barriers were removed, while four indicated a "significant" increase in sales would be experienced. Only one respondent estimated the dollar value of the expected increase. A U.S. chemical manufacturer reported an expected \$10 million increase (which he characterized as "significant") in his imports of crude petroleum and natural gas liquids with the removal of U.S. quantitative restrictions on imports of petroleum and related products.

## Coal, Coke and Agglomerates

Coal, coke and agglomerates include coal; briquettes, ovoids and similar solid fuels manufactured from coal; lignite; peat; and coke and semi-coke of coal, lignite or peat. 1/

MFN tariffs

For all products in this subsector, the MFN tariff averages range from zero to 6 percent ad valorem (chart I-8-E). The United States

Chart I-8-E.--Average MFN rates on coal, coke and agglomerates

\* Most Japanese items in this sector are duty-free; figures for Japan do not reflect the unilateral reduction made in 1972 on one of the few Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

1/ For the specific coverage of this subsector, see BTN headings 27.01-.04.

and the European Community have the lowest arithmetic tariff averages (1.1 percent) and the United Kingdom, the highest (2 percent). U.S., Japanese and Canadian weighted average tariffs are zero or nearly zero (i.e., most imports enter free). The highest weighted average tariff is held by the United Kingdom (6 percent). Except for the European Community, the dutiable product averages are significantly higher than those for all products, due to the substantial amount of duty-free imports in this subsector. Canada holds both the highest arithmetic and weighted averages at 17.5 percent ad valorem. The Community has the lowest arithmetic average (1.2 percent); the United States, the lowest weighted average (zero).

The distribution of tariff provisions for coal, coke and agglomerates, by duty level, is shown in table I-8-E. For Canada, the

Table I-8-E--Distribution, by duty level, of MFN tariff provisions for coal, coke and agglomerates

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	92.3	85.7	81.8	10.0	75.0
0.1-5.0 percent----	-	-	9.1	90.0	-
5.1-10.0 percent----	-	14.3	9.1	-	25.0
10.1-15.0 percent--	-	-	-	-	-
15.1-20.0 percent--	7.7	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

United States, and Japan, at least four-fifths of the MFN duty provisions are free. For the European Community, 90 percent of the provisions are in the 0.1-5 percent ad valorem bracket. Three-fourths

of United Kingdom provisions are free and the remaining fourth are in the 5.1-10 percent range. Only Canada has rates above 10 percent ad valorem.

Imports of coal, coke and agglomerates receiving preferential treatment are significant only for the United Kingdom. Virtually all MFN imports of coal, coke and agglomerates into Canada, the United States and Japan enter duty free. Almost all EC imports enter at rates of duty between 0.1 and 5 percent ad valorem. One-fourth of United Kingdom MFN imports enter duty free; the remaining three-fourths at rates in the 5.1-10 percent bracket (table I-8-F).

Table I-8-F.--Distribution, by duty level, of MFN imports of coal, coke and agglomerates  
(In percent)

Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	99.8	100.0	98.6	0.1	24.8
0.1-5.0 percent----	-	-	1.4	99.9	-
5.1-10.0 percent----	-	-	-	-	75.2
10.1-15.0 percent----	-	-	-	-	-
15.1-20.0 percent----	-	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

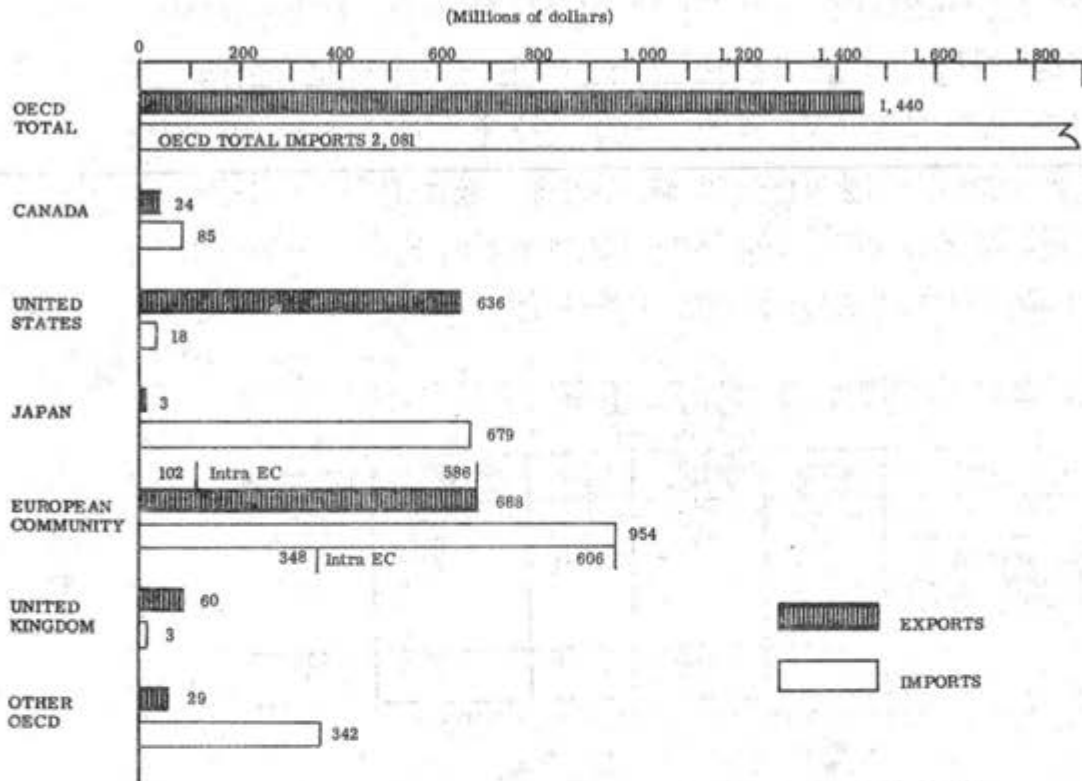

Canada has the most detailed MFN tariff schedule for coal, coke and agglomerates with 13 tariff lines, while the United Kingdom has the least with 4 tariff lines. Japan has 11 tariff lines; the European Community, 10; and the United States, 7.

#### Trade importance

Coal, coke and agglomerates account for over one-fourth of OECD industrial imports of mineral fuels and 11 percent of OECD exports. In 1969, OECD exports totaled \$1.4 billion; imports \$2.1

billion (chart I-8-F). In 1969, U.S. exports of coal, coke, and agglomerates were \$636 million; imports were \$18 million. U.S. 1971 imports

Chart I-8-F. --OECD trade in coal, coke and agglomerates, 1969

Source: Compiled from OECD Statistic of Foreign Trade, Series C, 1969.

were \$25 million. Among the 119 industrial subsectors, coal, coke and agglomerates rank 22nd in value of MFN imports by GATT tariff study countries. This category is particularly important for Japan, where coal, coke and agglomerates rank sixth in value of MFN imports. It ranks 18th for the European Community, and 19th for Canada.

### Trade network

The five major countries account for virtually all OECD exports and 84 percent of OECD imports. Over four-fifths of OECD exports go to the five major countries. If intra-EC exports are excluded, the United States is the most significant exporter of coal, coke and agglomerates (table I-8-3). Over one-third of U.S. exports are sent

Table I-8-3.--- OECD exports of coal, coke and agglomerates, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Kingdom are insignificant importers. Both Japanese imports and EC outside imports have the United States as the source of half of their imports and the non-OECD countries as the source of another two-fifths. EC outside imports are equal to about 60 percent of intra-EC imports. Virtually all Canadian imports come from the United States.

#### Trade-agreement concessions

For all the major countries except the United States, average tariff levels on January 1, 1972, for coal, coke and agglomerates were either reduced slightly or remained constant with levels existing on pre-trade-agreement base dates. For the United States, the tariff average fell nearly 16 percentage points to zero. The lower levels, in part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all

countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	15.7	0.0
European Community	3.0	2.9
United Kingdom	7.5	6.0
Japan	0.1	0.1
Canada	3.1	1.3

Concessions under the GATT have been made on all MFN provisions for coal, coke and agglomerates in the tariff schedules of the United States and the European Community. In the Canadian schedule 85 percent of tariff provisions covering 100 percent of imports are fully covered by GATT concessions; for Japan, 36 percent of provisions covering 64 percent of imports; and for the United Kingdom, 25 percent of provisions covering 75 percent of imports.

Only two tariff concessions on coal, coke and agglomerates negotiated under the GATT were contained in national tariffs of member states of the European Community prior to adoption of the EC's Common External Tariff (CXT). These two concessions were at rates below the CXT rate.

Table I-8-I compares the five major countries' rates of duty on January 1, 1972, for coal with rates on pre-trade-agreement base dates. For the most part, presently and historically, this raw material has been accorded duty-free status.

Table I-8-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on coal

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free	Free	Free	521.31
Canada-----	6.2% AVE	Free	Free	58600-1
European Community--	Free; 2%; 34% AVE <sup>2/</sup>	Free; 2%; 17% AVE <sup>2/</sup>	Free; 17% AVE <sup>2/</sup>	27.01 A, B
United Kingdom-----	Free	Free	Free	27.01
Japan-----	Free	Free	Free	27.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Italy had a rate of 2% ad valorem on part of its coal imports; West Germany had a rate of 20 DM per 100 kg on most of its coal imports; the AVE of 34 and 17 percent is calculated on 1971 import values for West Germany. The overall AVE for the European Community is estimated to be close to zero.

## Natural Gas

Natural gas includes petroleum gases and other gaseous hydrocarbons. 1/

MFN tariffs

The arithmetic averages for all products range from 0 to 15.3 percent ad valorem; the weighted averages from 0 to 10.6 percent. The United States has the lowest arithmetic and weighted average tariff (i.e., zero) and Japan, the highest arithmetic average tariff (15.3 percent) and the highest weighted average (10.6 percent). For dutiable products, the averages of Japan, the European Community and the United States are identical to those for all products. For Canada and the United Kingdom, due to their substantial MFN duty-free imports, averages on all products are significantly below those for dutiable imports alone (chart I-8-G).

The distribution of tariff provisions by duty level is shown in table I-8-J. All MFN tariff provisions of the United States are duty free, as are half of the United Kingdom provisions and one-fourth of Canadian provisions. All EC tariff provisions and half of United Kingdom provisions are in the 0.1-5 percent ad valorem bracket. One-fourth of Canadian provisions are in the 5.1-10 percent range; the other half, in the 10.1-15 percent range. The Japanese provisions are equally divided between the 10.1-15 percent ad valorem bracket and the 15.1-20 percent bracket.

In terms of imports, all U.S. imports are free, all Japanese imports in the 10.1-15 percent ad valorem range and all EC imports

---

Note.--Due to rounding, figures may not add to 100 percent.

Imports of natural gas receiving preferential treatment are significant for two of the five major countries. Such treatment was accorded one-third of entries into the European Community and 8 percent of entries into the United Kingdom.

The European Community has the most detailed MFN tariff schedule for natural gas with six tariff lines, while the United States has the least with one tariff line. Canada has four tariff lines and Japan and the United Kingdom each have two.

#### Trade importance

Natural gas accounts for about 7 percent of OECD exports in the mineral fuels sector and 3 percent of imports. In 1969, OECD exports totaled \$416 million; imports \$508 million (chart I-8-H). In 1969, U.S. exports of natural gas were \$60 million; imports were \$216 million. U.S. 1971 imports were \$369 million.

Chart I-8-H. --OECD trade in natural gas, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Trade network

Canada, the United States, the European Community and Japan account for virtually all OECD exports and over 90 percent of OECD imports. <sup>1/</sup> About 85 percent of OECD exports are sent to the five major countries, with over 40 percent destined for the United States. Canada, the largest exporter of natural gas, sends virtually all its natural gas exports to the United States. Over one-third of U.S. exports are shipped to Canada, while half go to non-OECD nations. Most of the Community's outside exports go to "other" OECD countries. EC outside exports equal one-fourth of intra-EC exports. Japan is an insignificant exporter (table I-8-L).

<sup>1/</sup> Country of destination data are unavailable for the United Kingdom.

The United States is the principal importer of natural gas among the five major countries. Virtually all U.S. imports come from Canada and all Canadian imports have their source in the United States. Most Japanese imports come from non-OECD countries. EC outside imports are insignificant, equaling 9 percent of intra-EC imports (table I-8-M).

#### Trade-agreement concessions

For all of the five major countries, except the United States, average tariff levels on January 1, 1972, for natural gas were substantially below levels existing on pre-trade-agreement base dates. The United States tariff level remained at zero. The tariff levels are

compared in the tabulation below. The lower levels, in part, reflect concessions granted in reciprocal negotiations. For all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan's tariff rates in this subsector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 8.5 percent. All of Japanese imports enter under a provision having a specific rate of duty.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	0.0	0.0
European Community	3.5	1.5
United Kingdom	10.0	2.6
Japan	20.0	10.6
Canada	19.5	8.7

Concessions under the GATT have been made on all MFN provisions for natural gas in the tariff schedules of the European Community, the United States, and the United Kingdom. In the Canadian schedule, 25 percent of tariff provisions covering 84 percent of imports are fully covered by GATT concessions; for Japan, 50 percent of the provisions, covering all imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on natural gas negotiated under the GATT. The number of such concessions totaled three, of which one reflected a rate higher than the autonomous rate established in the CET, and two were below the CET rate.

Rates of the five major countries for natural gas on January 1, 1972, are compared with rates in effect on pre-trade-agreement base dates in table I-8-N.

Table I-8-N.--Pre-trade-agreement tariff rates compared with January 1, 1972,

United Kingdom-----	10%	Free; 10%	Free; 5%	27.11
Japan-----	20%	9.9%; 20% AVE	7.9%; 20% AVE <sup>4/</sup>	27.11

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalent of specific rate of duty of 6 cents per thousand cubic ft., calculated on 1971 import values.

<sup>3/</sup> Duty suspended for an indeterminate period on all items except for certain types of commercial propane and commercial butane.

<sup>4/</sup> Ad valorem equivalent of specific rate of duty of 1,100 yen/per metric ton, calculated on 1971 import values for liquified petroleum gases.

## Crude Petroleum

Crude petroleum includes all crude petroleum and shale oils. 1/

MFN tariffs

The arithmetic and weighted average MFN tariffs of the five major countries for all products and dutiable products in the crude petroleum subsector are identical and range from zero for Canada, the European Community, and the United Kingdom to 12.2 percent for Japan. Since the U.S. and Japanese averages are identical for dutiable products and for all products, the absence of any MFN duty-free provisions for petroleum is indicated (chart I-8-I).

Chart I-8-I. -- Average MFN tariff rates on crude petroleum  
(Percent ad valorem)

\* U.S. tariff rates on petroleum and derived products have been suspended since May 1, 1973, and replaced by a system of fees charged for licenses covering imports over certain allocated quantities.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

1/ For the specific coverage of this sector, see BTN heading 27.09.

The distribution of MFN tariff provisions and imports, by duty level, are identical in this subsector (table I-8-0). For Canada,

Table I-8-0.--Distribution, by duty level, of MFN tariff provisions for crude petroleum and imports of crude petroleum

Duty level	(In percent)				
	Canada	United States <sup>1/</sup>	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Data for the United States reflect the situation existing prior to modification of the U.S. import regime for petroleum effective May 1, 1973. Also, in recent years about 5 percent of U.S. imports have actually entered with the duties suspended under special conditions.

Note.--Due to rounding, figures may not add to 100 percent.

the European Community, and the United Kingdom, all provisions for crude petroleum and imports are free. All U.S. tariff provisions have rates in the 0.1-5 percent ad valorem bracket. <sup>1/</sup> For Japan, all provisions and imports are in the 10.1-15 percent bracket. Effective May 1, 1973, the U.S. tariffs on petroleum and derived products were suspended and a system of fees for licenses was instituted, covering petroleum imports over levels of imports specifically allocated for various areas of the United States which are permitted entry without payment of a fee. The value of the fees is scheduled to increase at six-month intervals until November 1, 1975. Annually, as of May 1, 1974, the levels of petroleum imports not subject to fees shall be reduced, until, on April 30, 1980, all imports will be subject to a license fee.

Imports of crude petroleum receiving preferential treatment are insignificant.

---

<sup>1/</sup> In recent years, approximately 5 percent of U.S. imports have entered with suspended duties.

MFN tariff schedules show little detail for crude petroleum.

The United States, Canada, and the United Kingdom each have two tariff lines, while Japan and the European Community each have one.

#### World production

The United States is the world's largest producer of crude petroleum; domestic sources supply about 88 percent of consumption of crude oil and other petroleum products. In 1969, U.S. production of crude petroleum amounted to 3.4 billion barrels at an estimated value of more than \$10 billion. Based on world areas (rather than national boundaries), the greatest production and proven reserves of petroleum exist in the Middle East where Iran, Saudi Arabia, and Kuwait supply about 70 percent of the area production, which in 1969 totaled 4.5 billion barrels at an estimated value of nearly \$10 billion. Other areas with substantial production of crude petroleum are: Africa, with total production in 1969 of 1.8 billion barrels, valued at an estimated \$4 billion, of which Libya supplied about 60 percent; and, South America, with total production in 1969 of 1.7 billion barrels, estimated at a value of nearly \$4 billion, of which more than 75 percent was supplied by Venezuela. Of the five countries under study, other than the United States, Canada in 1969 produced about 400 million barrels of crude petroleum, valued at about \$1 billion, and the Community produced about 100 million barrels of the crude, valued at about \$250 million; production by the United Kingdom and Japan was negligible by comparison.

### Trade importance

Crude petroleum accounts for 9 percent of OECD exports of mineral fuels and three-fifths of imports. In 1969, OECD exports totaled \$521 million; imports \$12.2 billion (chart I-8-J). In 1969, U.S.

Chart I-8-J.--OECD trade in crude petroleum, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Intra EC trade is negligible.

exports of crude petroleum were \$6 million; imports were \$1.4 billion.

U.S. 1971 imports were \$1.3 billion. Among the 119 industrial sub-sectors, crude petroleum ranks first in value of total imports by GATT tariff study countries. This category ranks first in importance for the United States, the European Community, and the United Kingdom, second for Japan, and third for Canada.

Trade network

Canada, exporting totally to the United States, accounts for over 90 percent of all OECD exports. These Canadian shipments, which supply the western part of the United States, represented about half of Canada's crude-oil production in 1969 and accounted for nearly 40 percent of U.S. imports of crude oil. EC outside exports equal half of intra-EC shipments. The five major countries, together, account for 90 percent of OECD petroleum imports. Virtually all Canadian, Japanese, United Kingdom, and EC petroleum imports originate in LDC's, as do nearly two-thirds of U.S. petroleum imports. The European Community is by far the largest importer. Canada is the least significant importer of crude petroleum (tables I-8-P and Q).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

About a third of the U.S. imports in 1969 came from Venezuela and other Latin American sources, while the remainder was supplied by Africa and the Middle East. More than 90 percent of the crude-oil imports of the Community and the United Kingdom were supplied by Middle Eastern and African sources, while 87 percent of Japan's imports were from the Middle East.

Tariffs have little effect in determining trade flows of crude petroleum for the five countries. Trade in crude petroleum, probably the world commodity of greatest strategic value, is governed largely by supply and demand factors, national security considerations, and the policy considerations of a group of major Middle East oil producers united in the Organization of Petroleum Exporting Countries. The European Community, the United Kingdom, and Japan are almost entirely dependent on imports of crude petroleum. Imports entering

the EC and the United Kingdom are duty free, but Japan has the highest tariff average of the five countries. Imports by the United States until May 1973 were primarily controlled by quota, while Canada has found it more economical to import crude petroleum to supply its east coast rather than to ship its western production cross-country.

#### Trade-agreement concessions

Tariff levels for the United States, the United Kingdom and Canada on January 1, 1972, were significantly below those existing on pre-trade-agreement base dates. The European Community remained at zero. However, the Japanese rate rose slightly. The lower levels, in part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japanese tariff rates in this subsector were not unilaterally reduced in 1972. The United States, Japan and the United Kingdom have only specific rates in this subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	8.7	3.8
European Community	0.0	0.0
United Kingdom	5.0	0.0
Japan	10.0	12.2
Canada	10.5	0.0

Concessions under the GATT have been made on all MFN provisions for crude petroleum in the tariff schedules of the European Community. In the U.S. schedule, all of the provisions are partially covered by GATT concessions, and the remainder are covered by concessions in the

bilateral trade agreement with Venezuela. No imports of crude petroleum are bound by GATT concessions in the tariff schedules of Canada, Japan, or the United Kingdom.

In the four national tariffs of the member states of the European Community prior to adoption of the EC's Common External Tariff (CXT), there were two tariff concessions on crude petroleum negotiated under the GATT; one reflected rates higher than the autonomous rate established in the CXT and one was below the CXT rate.

Rates of duty of the five major countries for crude petroleum on January 1, 1972, are compared with rates on pre-trade-agreement base dates in table I-8-R.

Table I-8-R.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on crude petroleum, residual distillates, and unfinished oils

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Average ad valorem equivalents of specific rates of duty of .0125 cents per gallon or 0.25 cents per gallon, calculated on 1971 import values.

<sup>3/</sup> Average ad valorem equivalents of specific rate of duty of 0.5 cents per gallon, calculated on 1971 import values

<sup>4/</sup> Subject to revenue duties.

### Products Derived from Coal, Petroleum or Natural Gas

Products derived from coal, petroleum or gas include: Mineral tar; oils and products of the distillation of high temperature coal tar; pitch and pitch coke obtained from coal tar or other mineral tars; partly refined petroleum including topped crudes; gasoline, and kerosene (including jet fuel); distillate fuels; residual fuel oils; lubricating oils and greases; petroleum jelly; mineral waxes; bituminous mixtures based on asphalt, petroleum, etc.; lubricating preparations; and ammoniacal gas liquors and spent oxide (i.e., oxide produced in coal gas purification). 1/

### MFN tariffs

The MFN tariff averages of the five major countries for all products derived from coal, petroleum or natural gas range from 0.1 to 12.9 percent ad valorem. The lowest averages are held by the United Kingdom (3 percent arithmetic and 0.1 percent weighted). Most of the other averages are clustered between 3.8 percent and 7.5 percent. Japan has the highest averages (9.3 and 12.9 percent, respectively) (chart I-8-K). The dutiable product averages are generally higher than those for all products. For dutiable products, the European Community has the lowest arithmetic average (4.5 percent ad valorem). The lowest weighted average belongs to the United States (4.8 percent), followed closely by the United Kingdom (4.9 percent). Canada holds the highest arithmetic average at 13.7 percent and Japan, the highest weighted average at 12.9 percent.

---

1/ For the specific coverage of this subsector, see BTN headings 27.06-.08; 27.10; 27.12-.14; 27.16; 34.03 and 38.04.

Chart I-8-K. -- Average MFN tariff rates on products derived from coal, petroleum or natural gas  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on about half of the Japanese rates in this sector; of the remaining rates about two-thirds were reduced by amounts ranging from 21 percent to 100 percent.

\* U.S. tariff rates on petroleum and derived products have been suspended since May 1, 1973, and replaced by a system of fees charged for licenses covering imports over certain allocated quantities.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of tariff provisions by duty level is shown in table I-8-S. For the United States, Canada, and the United Kingdom, between 39 and 58 percent of rate provisions are duty free, as are 13 percent of EC provisions and 9 percent of Japanese provisions. One-fifth of U.S. provisions, one-fourth of Japanese provisions and over half of EC and United Kingdom provisions are in the 0.1-5 percent ad valorem bracket. Japan and the Community each have nearly one-third of their provisions in the 5.1-10 percent range. Canada has one-fifth of its provisions in the 10.1-15 percent range. U.S. and

<sup>1/</sup> Data for the United States reflect the situation existing prior to modification of the U.S. import regime for petroleum and petroleum products effective May 1, 1973.

Note.--Due to rounding, figures may not add to 100 percent.

Japanese rates range into the 25.1-30 percent ad valorem level; Canadian rates into the 15.1-20 percent ad valorem level.

Virtually all United Kingdom imports enter duty free. Nearly two-thirds of EC imports enter at rates between 0.1 and 5 percent ad valorem. For Canada, over three-fourths of imports enter in the 5.1-10 percent range. More than 60 percent of Japan's imports are in the 10.1-15 percent range, while 26 percent are in the 15.1-20 percent range. Japan is the only major country without duty-free MFN imports (table I-8-T). Only four percent of U.S. imports enter under tariff provisions which are free, but about 20 percent of U.S. "dutiable" imports usually enter with duties actually suspended under special conditions. The great bulk of U.S. dutiable imports pay rates between 0.1 and 5 percent ad valorem. On May 1, 1973, the U.S. tariffs on petroleum and derived products were suspended. A license fee system was instituted at this time covering all imports over certain allocated quantities. However, there are to be no fees

<sup>1/</sup> Data for the United States reflect the situation existing prior to modification of the U.S. import regime for petroleum and petroleum products effective May 1, 1973. Also, the percentages are calculated in terms of nominal U.S. tariff provisions and do not take into consideration large imports of "duty-free" products on which the duty is actually suspended under special conditions.

Note.--Due to rounding, figures may not add to 100 percent.

on motor gas and other finished petroleum products from Canada (with few exceptions) until May 1, 1974, and the fees then imposed on these Canadian products will increase at a slower rate than for other nations.

Preferential treatment of products derived from mineral fuels is significant only for the European Community, where 7 percent of entries had preferential access.

The United States has the most detailed MFN tariff schedule for products derived from fuel with 88 tariff lines, while the United Kingdom has the least with 23 tariff lines; the European Community has 56 tariff lines; Japan has 45 and Canada has 44.

#### World production

The output of petroleum products by oil refineries accounts for most of the total output of mineral fuel products covered by this subgroup. Refinery production of North America and Western Europe accounts for about

Table I-8-U.--Petroleum products: Refinery production, share of world total, and primary composition, for selected countries, 1970

1/ Excludes Sino-Soviet area output.

Chart I-8-L. -- OECD trade in products derived from coal, petroleum or natural gas, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

two-thirds of the world output, excluding the Sino-Soviet area. Table I-8-U shows for the five countries under study refinery production, share of the world output, and primary composition of refinery production in 1970.

#### Trade importance

Products derived from mineral fuels account for almost three-fifths of OECD exports of the mineral fuels and derived products sector and one-fourth of imports. In 1969, OECD exports totaled \$3.2 billion; imports \$4.7 billion (chart I-8-L). In 1969, U.S. exports of products derived from mineral fuels were \$491 million; imports were \$1.1 billion. U.S. 1971 imports were \$1.2 billion. Among the 119 industrial subsectors, products derived from mineral fuels rank fourth in value of total imports by GATT tariff study countries. The subsector ranks 2nd for the United Kingdom, 4th for Japan, 6th for the United States, 10th in value for the European Community, and 16th for Canada.

#### Trade network

The five major countries account for 92 percent of OECD exports and 73 percent of imports. Half of OECD exports are destined for the five major countries and 15 percent for the non-OECD nations. Nearly two-fifths of OECD imports have their source in LDC's. The European Community is the principal exporter of products derived from coal, petroleum and natural gas. Complete country of destination data are unavailable for 15 percent of EC exports. Of those accounted for,

44 percent are intra-EC shipments, one-fourth go to "other" OECD countries and 14 percent to the United Kingdom. Thirty-seven percent of U.S. exports go to non-OECD nations. Among the five major countries, the European Community and Japan each take about one-fifth of U.S. exports. Virtually all Japanese exports go to non-OECD nations, while virtually all Canadian exports go to the United States. Two-thirds of United Kingdom exports are shipped to "other" OECD countries; Japan and Canada are rather insignificant exporters (table I-8-V).

Table I-8-V.-- OECD exports of products derived from coal, petroleum or natural gas, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The United States is the most substantial importer of products derived from coal, petroleum or natural gas (excluding intra-EC shipments), with over 85 percent of imports arriving from non-OECD countries.

EC outside imports are equal to almost three-fifths of intra-EC shipments. Half of EC outside imports come from non-OECD nations and one-fifth from the United States. Nearly 60 percent of United Kingdom imports have their source in the European Community; almost 30 percent in less developed countries. Three-fourths of Japanese imports arrive from non-OECD countries, as do about 65 percent of Canadian imports (table I-8-W).

Table I-8-W.-- OECD imports of products derived from coal, petroleum or natural gas, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

As shown in the tabulation below, average tariff levels on January 1, 1972, for products derived from mineral fuels were substantially below levels existing on pre-trade-agreement base dates.

The lower levels, in part, reflect concessions granted in reciprocal negotiations. For all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Specific rates cover about 2 percent of United Kingdom imports, 4 percent of U.S. imports, 14 percent of Japanese imports and 21 percent of Canadian imports.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	18.9	4.6
European Community	9.5	4.8
United Kingdom	5.2	0.1
Japan	14.1	12.9
Canada	14.6	7.5

Concessions under the GATT have been made on all MFN provisions for products derived from mineral fuels in the tariff schedule of the European Community. In the U.S. schedule, 95 percent of tariff provisions covering 30 percent of imports are fully covered by GATT concessions; for 5 percent of the tariff provisions, covering 70 percent of the imports, only part of an item is covered in the GATT, but the remainder is covered in the bilateral agreement with Venezuela. For Canada, 59 percent of the provisions covering 21 percent of imports; for Japan, 80 percent of provisions covering 13 percent of imports; and for the United Kingdom, 65-70 percent of provisions covering 2 percent of imports are covered by GATT concessions.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on products derived from coal, petroleum and natural gas negotiated under the GATT. The number of such concessions totaled 59, of which 31 reflected rates higher than the autonomous rate established in the CXT, 10 were at the CXT rate and 18 were below the CXT rate.

Reductions which have occurred in rates of duty of the five major countries for certain petroleum products between pre-trade-agreement base dates and January 1, 1972, are shown in table I-8-X.

Table I-8-X.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on petroleum products, other than crude, containing 70 percent, or more, of petroleum or shale oil

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free-33.8 (11.1)% AVE <u>2/</u>	Free-16.9 (2.8)% AVE <u>3/</u>	Free-16.9(2.8)% AVE <u>3/</u>	475.05-.10; 475.25-.70
European Community--	Free-7% <u>4/</u>	Free-7% <u>5/</u>	Free-7% <u>6/</u>	27.10

Japan-----	1-54% AVE <u>9/</u>	Free-48% AVE <u>10/</u>	5%-48% AVE <u>11/</u>	27.10

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ The ad valorem equivalents (AVE) included are based on imports during 1970 and represent specific rates of 0.5-4 cents per gallon and a compound rate of 2 cents per pound plus 20 percent ad valorem; also included is a rate of 20 percent ad valorem.

3/ The ad valorem equivalents (AVE) included are based on imports during 1970 and represent specific rates of 0.125-2 cents per gallon and a compound rate of 1 cent per pound plus 10 percent ad valorem; also included is a rate of 10 percent ad valorem.

4/ The rates included represent temporary reductions or suspensions; the permanent rates range from 10 percent to 14 percent ad valorem.

5/ The rates included represent temporary reductions or suspensions; the permanent rates range from 5 percent to 14 percent ad valorem.

6/ The rates included represent temporary reductions or suspensions; the permanent rates range from 5 percent to 7 percent ad valorem.

7/ Includes ad valorem equivalents (AVE), based on imports during 1970, which represent specific rates of from 1 cent to 2-1/2 cents per gallon.

8/ Includes ad valorem equivalents (AVE), based on imports during 1970, which represent specific rates of from 1/3 cent to 2-1/4 cents per gallon.

9/ Includes ad valorem equivalents (AVE), based on imports during 1970, which represent specific rates of from 570 yen to 3,370 yen per kiloliter; also included are ad valorem rates of 20 and 30 percent.

10/ Includes ad valorem equivalents (AVE), based on imports during 1970, which represent specific rates (some temporary) of from 250 yen to 3,033 yen per kiloliter; also included are ad valorem rates of from 15 to 22.5 percent.

11/ Includes ad valorem equivalents (AVE), based on imports during 1970, which represent specific rates (some temporary) of from 125 to 3,033 yen per kiloliter; also included are ad valorem rates of from 7.5 to 20 percent.

Note.--Ad valorem equivalents (AVE) shown in parentheses are those for the principal items of trade.

## Industrial Sector I-9

## MINERAL PRODUCTS AND FERTILIZERS

The mineral products and fertilizers sector covers crude and processed minerals other than precious stones, mineral fuels, metallic ores and salts and other chemicals or metals. The sector includes such products as natural fertilizers, manufactured fertilizers, sand, gravel, marble, limestone, sulphur, iron pyrites, lime, cement, fabricated building materials, plasters, ceramics, pottery, tile, glass and glassware. <sup>1/</sup>

MFN tariffs

For all mineral products and fertilizers (combined dutiable and free), Japan has both the lowest arithmetic average, 5.3 percent ad valorem, and the lowest weighted average, 1.2 percent ad valorem (see chart I-9-A). The United States has both the highest arithmetic and weighted averages (9.8 percent and 8.8 percent, respectively). For dutiable products only, the European Community holds both of the lowest averages (7.4 percent, arithmetic and 8.3 percent, weighted). Canada holds the highest arithmetic average at 14.5 percent ad valorem and the second highest weighted average (14.8 percent). The United States has the highest weighted average at 16.6 percent ad valorem.

In 1962, following an escape-clause investigation by the U.S. Tariff Commission, the United States temporarily increased rates of duty on which concessions had been made under the GATT with

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 25.01-.32; 26.02; 26.04; 31.01-.05; 68.01-.16; 69.01-.14; 70.01-.21.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-9-A. -- Average MFN tariff rates on mineral products and fertilizer, ceramic products, and glass

\*The U.S. averages include escape-clause rates on sheet glass, on which concession rates are being restored. If the averages were calculated with concession rates on sheet glass, they would read as follows: all products; 9.3 percent arithmetic, 7.9 percent weighted; dutiable products, 11.7 percent arithmetic, 16.4 percent weighted.

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on most Japanese rates in this sector; several rates were reduced by amounts ranging from 33.3 percent to 100 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

respect to sheet glass. In 1967, the increased escape-action rates on some sheet glass were terminated; but the escape-action rates on most window glass continued. These rates are scheduled to revert to the trade-agreement rates at the close of January 31, 1974. The U.S. tariff averages shown here reflect the escape-clause rates of duty on flat glass. If the escape action were completely removed, the U.S. rates would be as follows: for all products, 9.3 percent for the arithmetic average, 7.9 percent for the weighted;

for dutiable products, 11.7 percent for the arithmetic average and 16.4 for the weighted.

The distribution of tariff provisions by duty level is shown in table I-9-A. A significant portion of rate provisions for all

Table I-9-A.--Distribution, by duty level, of MFN tariff provisions for mineral products and fertilizers, ceramic products and glass

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Note.--Due to rounding, figures may not add to 100 percent.

of the five major countries are free, ranging from one-fifth for the United States to nearly one-half for Canada. Another 14 percent of Canada's provisions are in the 10.1-15 percent ad valorem bracket, while nearly one-fourth are in the 15.1-20 percent range. The United States has about one-fifth of its provisions in each of the following classes: 0.1-5 percent, 5.1-10 percent, 10.1-15 percent. The remaining one-fifth of the U.S. tariff rates range from 15 percent ad valorem to over 50 percent. Japan, the European Community, and the United Kingdom each have about 50 to 60 percent of their tariff provisions divided between the 0.1-5 percent bracket and the 5.1-10 percent bracket.

Imports of mineral products and fertilizers receiving preferential tariff treatment are significant for most of the major countries. Such treatment was accorded 21 percent of entries into the United Kingdom, 9 percent into Canada, 3 percent into the United States, and intra-EC shipments exceed imports from outside countries. Canada and the United States are the only countries with a significant portion of their imports dutiable at rates higher than 15 percent ad valorem (table I-9-B). All five major countries

Table I-9-B.--Distribution, by duty level, of MFN imports of mineral products and fertilizers, ceramic products and glass

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

have duty-free MFN imports, ranging from the United Kingdom's 36 percent to Japan's 88 percent of total MFN imports in 1970. Half of Canada's entries are duty free, and between 7 and 8 percent fall in each of the three brackets ranging from 0.1 to 15 percent. Over one-fourth of Canadian imports are in the 15.1-20 percent range. Nearly 47 percent of imports into the United States are duty free. About one-tenth of U.S. entries are in each of the three brackets between 0.1 and 15 percent, with an additional one-fifth of U.S. imports entering at rates over 15 percent. Nearly 60 percent of EC

imports are duty free, one-tenth in the 0.1-5 percent bracket, and one-fifth in the 5.1-10 percent bracket. About 36 percent of United Kingdom entries are also duty free, one-fifth in the 0.1-5 percent range and 31 percent in the 5.1-10 percent range.

The United States has the most detailed tariff schedule for mineral products and fertilizers with 391 tariff lines, while Japan has the simplest, with 157 lines. Canada has 227 lines; the European Community, 197 lines; and the United Kingdom, 158.

#### Trade importance

Mineral products and fertilizers rank ninth in OECD exports and tenth in imports. The sector accounts for about 3 percent of both OECD industrial imports and exports. For the United States, the sector is the tenth most important in both imports and exports.

Imports by the GATT tariff study countries were valued at \$2.8 billion in 1967, and \$4 billion in 1970. Intra-EC shipments were an additional \$949 million in 1967 and \$1.5 billion in 1970. OECD 1969 imports were \$5 billion (including \$1.3 billion of intra-EC shipments) and exports were \$5.2 billion (see chart I-9-B).

#### Trade network

The five major countries account for about 89 percent of OECD exports and 80 percent of imports. Nearly 59 percent of OECD exports go to the five major countries; one-fifth to LDC's. Seventy percent of OECD imports are supplied by the five major countries.

Chart I-9-B, -- OECD trade in mineral products and fertilizers, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Over one-third of U.S. exports go to less developed countries (chart I-9-C), where higher tariffs and other trade barriers generally prevail. Canada is the principal developed country market for U.S. products, followed by the European Community. The United States takes over half of Canada's exports; the Community and the LDC's take 14 percent and 13 percent, respectively. Japan ships over one-third of its exports to LDC's, nearly two-fifths to the United States, and only 5 percent to the Community. Intra-EC exports are

Chart I-9-C. -- United States trade in mineral products and fertilizers, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

only slightly more than the Community's shipments to outside markets. Non-OECD countries take about 40 percent of the EC's outside exports; 13 percent go to the United States, and 9 percent to the United Kingdom. The United Kingdom ships over 30 percent of its products to LDC's and other non-OECD countries. The Community is the principal market for the United Kingdom among the five major countries, followed by the United States (table I-9-C).

Mineral products and fertilizers rank 8th in industrial imports for Japan, 10th for Canada, the United States, and the European Community, and 12th for the United Kingdom. U.S. imports of mineral products and fertilizers were valued at \$671 million in 1967, \$919 million in 1970, and \$956 million in 1971. Canada supplies over one-third of U.S. imports; Japan and the European Community each about 18 percent (table I-9-D). The United States is the source of 65 percent of Canada's imports and nearly 30 percent of Japan's imports. Twelve percent of Canada's imports come from the United Kingdom and almost half of Japanese imports from non-OECD nations. About one-fifth of imports into the European Community from outside sources come from the United States, but the total

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Community imports from all external sources are only slightly over three-fourths as large as intra-Community shipments. The Community is the chief source of United Kingdom imports, followed by the LDC's and other non-OECD countries. Japan is a significant supplier only to the United States.

#### Trade composition

Mineral products and fertilizers are divided into six sub-sectors, of which "other mineral manufactures" is the largest in both exports and imports (35 percent of exports, 29 percent of imports). The relative importance of the six subsectors is shown in chart I-9-D.

Chart I-9-D. -- OECD trade in mineral products and fertilizers, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for mineral products and fertilizers were below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the following tabulation, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this sector were unilaterally reduced by about 20 percent in 1972. The European Community and the United States are the only two among the five major countries having significant portions of specific rates. About 26 percent of

U.S. tariff lines, and 12 percent of EC lines, are specific duties covering about 27 percent and 9 percent of MFN imports, respectively.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	25.0	8.8
European Community	4.8	3.4
United Kingdom	15.0	5.5
Japan	1.8	1.2
Canada	19.6	7.9

Concessions under the GATT have been made on all MFN provisions for mineral products and fertilizers in the tariff schedules of the United States, as well as 99 percent of the provisions (covering all EC mineral products and fertilizers imports) in the Community's Common External Tariff. For Canada, about 75 percent of the provisions, covering about 85 percent of MFN imports, have GATT concessions; in the Japanese schedule, about 94 percent of the tariff provisions, covering about 85 percent of imports, have GATT concessions. In the tariff schedules of the United Kingdom, about 90 to 94 percent of the provisions involving about 80 percent of MFN imports have GATT concessions.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on mineral products and fertilizers negotiated under the GATT. The number of such concessions totaled 638, of which 343 reflected rates higher than the autonomous rate established in the CXT, 125 were at the CXT rate, and 170 were below the CXT rate.

### Trade complaints

The Tariff Commission received over 150 complaints concerning trade barriers in the mineral products and fertilizers sector. The complaints involved 60 countries and several regional trade blocs. LDC's were cited twice as often as developed countries. The 10 countries most frequently mentioned and the number of times they were mentioned were Japan (10), Mexico (8), Argentina (7), Spain (7), Greece (5), Italy (5), West Germany (5), India (4), and Turkey (4).

The largest number of complaints concerned types of quantitative restrictions (quotas, embargoes, licensing, or export restraints). The second largest area dealt with the various duties, taxes, fees, and other charges levied on imports of mineral products and fertilizers by several countries. Several complaints were also made against state trading and government monopolies.

Quantitative limitations.---The largest single group of complaints dealt with the embargoes maintained by several of the developing countries. Mexico and several South American countries reportedly use embargoes to protect domestic industries. The existence of embargo-like situations was another source of complaint. For example, Mexico was cited as effectively creating embargoes by refusing to issue import licenses. Similarly, certain Arab countries were listed as creating embargoes by refusing to grant letters of credit.

Complaints on licensing practices were about evenly divided between the developed countries and LDC's. U.S. producers and traders are concerned about the import licenses required in certain countries.

The process of obtaining licenses can cost a prospective importer both time and money and thus can discourage or eliminate imports.

Import quotas maintained by five countries (mostly LDC's) drew complaints. Complaints involved West Germany's import limitations on ceramic articles from Japan and Korea because it appeared that these German restrictions diverted heavy concentrations of Japanese and Korean products into U.S. markets. A large U.S. producer of household glassware reported that Spain severely limits imports of glass products not made of borosilicate glass.

Complaints were also made against the voluntary export restraints of Japan and Korea on shipments of wall tiles, mosaic tiles, and pottery to West Germany, Australia, the United Kingdom, and the United States. Another type of export limitation complaint involving developing countries, such as Mexico and Iran, concerned the restriction of exports of crude minerals in order to develop domestic refining industries.

Import duties and other charges.---The United States, Argentina, Colombia, Peru, and Venezuela were all cited as maintaining very high protective duties on certain products in the mineral products and fertilizers sector. Several complaints dealt with the discriminatory tariff treatment occasioned by the Commonwealth Preference System and regional trading groups, including the LAFTA, the Andean Pact and the European Community. Nontariff charges on imports (stamp taxes, consular fees, port taxes, etc.) imposed by numerous developing countries were also mentioned.

State trading and government monopolies.--State trading practices and the existence of government monopolies were the object of several complaints involving over 13 countries. Most of these involved LDC's where trade in certain products (e.g., salt, fertilizers, and cement) is frequently confined to the government.

In the Tariff Commission's survey of trade barriers, only 16 of the respondents in the mineral products and fertilizers sector gave an estimate for the probable increase in trade that would result from the removal of the trade barrier that they had brought to the Commission's attention. Ten of the estimates described the probable increases in trade as "moderate," stipulating that the estimates represented the cumulative effect of removal of all barriers impinging on the product. The remaining six estimates said there would be "significant" increases in trade possible with the elimination of a single barrier. The estimated increases in trade ranged from 3 to 200 percent and averaged 55.7 percent, but they totaled only \$1,890,000 and averaged only \$118,000.

## Glass and Glassware

Glass and glassware covers virtually all glass and glass manufactures including mirrors, yarn and fabrics of glass fiber, bricks, tiles and other construction materials of pressed or molded glass, glass for electric lamps, clock and watch glasses, glass containers and tableware, laboratory, hygienic and decorative glassware. 1/

MFN tariffs

The arithmetic average rates of duty on glass and glassware for the five major countries, except the United States, are clustered in the range between 8.2 percent ad valorem and 10.4 percent (see chart I-9-E). Most of the weighted averages are grouped between 10 percent and 11.2 percent. The United States has the highest averages (14 percent, arithmetic; 14.5 percent, weighted). The European Community has the lowest averages. For dutiable products, Canada's averages rise significantly, claiming the highest arithmetic average (15.8 percent ad valorem) and the second highest weighted average (14.2 percent). The highest weighted average at 14.6 percent is held by the United States. The lowest averages again belong to the European Community.

Glass and glassware is made up of two subdivisions: (1) flat glass and manufactures, and (2) glassware and other glass manufactures, n.e.s. Because of the tariff history of flat glass, it would be most desirable to discuss each of these subdivisions separately.

---

1/ For specific coverage of this subsector see BTN chapter 70.

Chart I-9-E. -- Average MFN tariff rates on glass and glassware  
(Percent ad valorem)

\*Note.--U.S. averages include escape-clause rates on sheet glass, on which concession rates will be restored January 31, 1978. If the averages were calculated with concession rates on sheet glass, they would read as follows: all products, 13.1 percent, arithmetic, 13.6 percent, weighted; dutiable products, 13.3 percent, arithmetic, 13.7 percent, weighted.

\*Note.--Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on most Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Separate tariff data are available for the two subdivisions, but a detailed breakdown of the trade network is not available, and it is necessary, therefore, to discuss the trade in flat glass within the larger framework of "glass and glassware."

The average MFN tariff rates for flat glass and manufactures and for glassware and other glass manufactures, n.e.s., are shown in charts I-9-F and G. Canada holds the lowest average rates for total trade in flat glass and manufactures; the United States, the highest. Averages for Japan, the Community, and the United Kingdom are

Chart I-9-F. -- Average MFN tariff rates on flat glass and manufactures  
(Percent ad valorem)

\* Note.--U.S. averages include escape-clause rates on sheet glass, on which concession rates will be restored January 31, 1974. If the averages were calculated with concession rates on sheet glass, they would read as follows: all products, 9.3 percent arithmetic, 11.5 percent weighted; dutiable products, 9.7 percent arithmetic, 11.6 percent weighted.

\* Note.--Figures for Japan do not reflect the unilateral reductions (by 20 percent) on virtually all Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

clustered between 7.9 and 12.1 percent ad valorem. The dutiable-product averages are higher for the United States and Canada (arithmetic, 11.3 and 10.8 percent, respectively; weighted 13.2 and 7.7 percent, respectively).

In 1962, the United States took "escape-clause" action with respect to GATT concessions then in force on sheet glass and rates of duty on imports of this product were increased. The increased rates remained in effect until 1967, when the concession rates were restored on all types of glass except on most window glass. The remaining

Chart I-9- G. --Average MFN tariff rates on glassware and other glass manufactures, n.e.s.

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent) on nearly all the Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

"escape-clause rates" will terminate at the close of January 31, 1974, and the remaining suspended trade-agreement rates will come back into operation. The U.S. tariff average rates appearing in charts I-9-E and F reflect the escape-clause rates. If the effect of the escape-clause rates were removed from these averages, the resulting U.S. average rates for all glass and glassware (chart I-9-E) would be: All products -- 13.1 percent ad valorem, arithmetic, 13.6 percent, weighted; dutiable products -- 13.3 percent,

arithmetic, 13.7 percent, weighted. For flat glass and manufactures (chart I-9-F), the U.S. rates would be: All products -- 9.3 percent ad valorem, arithmetic, 11.5 percent, weighted; dutiable products -- 9.7 percent, arithmetic, 11.6 percent, weighted.

In chart I-9-G appear the average MFN tariff rates on glassware and other glass manufactures, n.e.s., which were not affected by escape action. The United States has the highest averages for all products (15.3 percent ad valorem, arithmetic and 16.3 percent, weighted) and the European Community, the lowest averages (8.2 percent, arithmetic, 10.4 percent, weighted). Japan also has a weighted average of 10.4 percent ad valorem. For dutiable products, only the averages for Canada change significantly, with both the arithmetic and weighted averages rising about 7 percentage points.

All shipments of glass and glassware into the Community from external countries and virtually all imports by Japan are on an MFN basis. Five percent of Canada's imports, 8 percent of imports by the United States, and 18 percent of entries into the United Kingdom receive preferential tariff treatment.

All five major countries have duty-free provisions for glass and glassware, with nearly 40 percent of Canada's tariff provisions being duty free (table I-9-E). An additional one-third of Canadian provisions are in the 15.1-20 percent ad valorem bracket. About 18 percent of U.S. provisions are in both the 5.1-10 percent range and the 15.1-20 percent range, with an additional 37 percent of the provisions in the 10.1-15 percent bracket. About two-thirds of Japan's tariff provisions and those of the European Community are

Table I-9-E.--Distribution, by duty level, of MFN tariff provisions for glass and glassware

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

are in the 5.1-10 percent ad valorem range, one-fourth in the 10.1-15 percent bracket, and one-sixth in the 15.1-20 percent bracket. Over half of EC and United Kingdom imports enter at rates in the 5.1-10 percent range. Forty-five percent of imports by Japan are in the 5.1-10 percent range; another 44 percent of its entries are in the 10.1-15 percent ad valorem range.

The United States has the most complex tariff structure for glass and glassware with 153 lines. Schedules for Canada have 95 lines; Japan, 45 lines; the European Community, 39 lines; and the United Kingdom, 34 lines.

#### Trade importance

OECD exports of glass and glassware totaled \$1.1 billion in 1969, about 22 percent of OECD export trade in all mineral products and fertilizers. Imports were \$968 million, or about 19 percent of total import trade in the mineral products and fertilizers sector (chart I-9-H). The glass and glassware subsector is the third largest category of OECD imports of mineral products and fertilizers. U.S. exports in 1969 were \$178 million, and imports were valued at \$181 million. U.S. imports in 1971 were valued at \$210 million.

#### Trade network

The five major countries account for 92 percent of exports of glass and glassware and 79 percent of imports (tables I-9-G and H). Complete country of destination data are unavailable for 63 percent of Canadian exports, 6 percent of U.S. exports, and 5 percent of EC

Chart I-9-H. --OECD trade in glass and glassware, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

exports. The European Community is the largest exporter. Known EC shipments to outside countries account for nearly one-third of OECD export shipments (intra-EC exports are an additional \$307 million). Both for flat glass and manufactures and for other glass manufactures, the European Community is the most important supplier, accounting for about 60 percent of OECD exports in each of these two subdivisions of glass and glassware (including intra-EC exports); the least important exporter is Canada.

Complete country of origin data are unavailable for 18 percent of Japanese imports, 5 percent of EC imports and 14 percent of United Kingdom imports. The United States is the most important importer of glass

and glassware (about one-fifth of OECD imports), followed by the European Community and Canada. For flat glass and manufactures, the United States is also the primary importer. However, for other glass manufactures, the European Community is the most important importer. The least important importer in both of these subdivisions is Japan.

The United States sends nearly one-quarter of its known exports of glass and glassware to LDC's and about 47 percent to Canada. Canada exports glass and glassware principally to the United States and the United Kingdom. About half of Japan's exports go to LDC's and other non-OECD countries and about 40 percent to the United States. Intra-EC exports of glass and glassware, which are accounted for, are equal to about 88 percent of known external shipments which go principally to the United States, non-OECD countries and "other" OECD nations. Over two-fifths of United Kingdom exports also are sent to non-OECD countries and 13 percent arrive in the European Community.

About 44 percent of U.S. imports come from the European Community, 18 percent from Japan and 7 percent from LDC's. Over 40 percent of U.S. imports of flat glass and manufactures come from the Community and about 10 percent each from Canada and Japan. Almost two-thirds of Canadian imports of glass and glassware come from the United States, as do two-thirds of Japan's known entries. Twenty-four percent of EC outside imports of glass and glassware, which are accounted for, come from the United States, 24 percent from non-OECD countries and

20 percent from the United Kingdom. Fifty-nine percent of United Kingdom imports, for which origins are known, arrive from the European Community.

#### Trade-agreement concessions

The average tariffs of the major countries on January 1, 1972, were significantly lower than the average levels on pre-trade-agreement base dates. As the following tabulation shows, the largest rate drops consistently belonged to the United States: 33 percentage points for flat glass and manufactures, and 37 percentage points for glassware and other glass manufactures, n.e.s.

#### Flat glass and manufactures:

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	46.2	13.1
European Community	13.5	7.9
United Kingdom	1.5	7.9
Japan	20.8	12.1
Canada	23.4	6.2

#### Glassware and other glass manufactures, n.e.s.:

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	53.1	16.3
European Community	19.0	10.4
United Kingdom	18.9	12.3
Japan	20.5	10.4
Canada	26.2	10.6

GATT concessions cover all U.S., EC, Japanese and United Kingdom MFN provisions on flat glass and manufactures and 57 percent of Canada's provisions, covering 88 percent of imports. On other glass manufactures, GATT concessions cover all U.S. and EC MFN provisions; 97 percent of Japanese provisions (100 percent of imports); and 70 percent of Canadian provisions (82 percent of imports). Ninety-two percent of the United Kingdom tariff provisions on other glass manufactures, covering 70 percent of MFN imports, are fully covered by GATT concessions; for 4 percent of the provisions, covering 1 percent of MFN imports, concessions are on only part of an item.

One hundred and forty-six GATT concessions were made in EC member state national tariffs prior to adoption of the Common External Tariff. Of these concessions, 99 were at rates higher than the new CXT rates, 13 at the CXT rate and 34 below it.

Tables I-9-I and J show the trade-agreement concessions in major country tariffs dealing with unworked drawn or blown glass in rectangles (a component of flat glass and manufactures) and glass tableware for household use, hotel use, etc. (a component of glassware and other glass manufactures, n.e.s.). All of the five major countries have granted trade-agreement concessions on their tariffs on glass. The tariff rates on unworked glass were reduced by the five major countries to about one-half of the pre-trade-agreement rates. The rates of duty on glass tableware were generally reduced by at least 25 percent.

Table I-9-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on unworked, drawn or blown glass, in rectangles

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	12.0%-47.5% AVE	2.4%-22.3% AVE	2.4%-22.3% AVE	542.11-.98
Canada-----	17.5%	7.5%	7.5%	31800-1

United Kingdom-----	15%	15%	7.5%	70.05
Japan-----	10-25%	10-20%	5-10%	70.05

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ 10 percent but not less than 1 CMU per 100 kg. CMU = Common Monetary Unit = approximately U.S. \$1.

3/ 6 percent but not less than 0.60 CMU per 100 kg.

Table I-9-J.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on glass tableware for household, hotel or restaurant use

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	50%; 60%	21%-50%	10.5%-50% <u>2/</u>	546.11-.59
Canada-----	32.5%	22.5%	15%; 20%	32606-1; 32609-1; 32612-1
European Community--	24%	20%	15.5%	70.13
United Kingdom-----	20%	20%; 25%	15.5%	70.13
Japan-----	10%; 20%	20%	10%; 15% <u>3/</u>	70.13

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Tariff classes not subjected to reductions in the Kennedy Round amounted to only 13.4 percent of the value of imports in 1971.

3/ Rates were further reduced by 20 percent by Japanese unilateral reductions in November 1972.

## Other Mineral Manufactures (Except Glass)

"Other" mineral manufactures include lime, cement and fabricated building materials, clay construction materials and certain refractory construction materials, worked mica, manufactures of asbestos, and articles of ceramic materials (including household tableware). 1/

MFN tariffs

Among the five major countries, Japan and the European Community have the lowest arithmetic tariff averages (7.4 and 8.1 percent ad valorem, respectively) for total MFN imports of "other" mineral manufactures. The lowest weighted average belongs to the United Kingdom. The United States has the highest total trade averages (12.4 percent ad valorem for the arithmetic and 18.7 percent for the weighted). Except for Canada and the United States, the tariff averages for dutiable imports alone are not significantly higher than the averages calculated for total MFN imports (see chart I-9-I).

Preferential imports are significant in the trade of Canada and the United Kingdom. In Canada over 20 percent of total imports, and in the United Kingdom over 37 percent of imports are given preferential treatment.

All five major countries, except the European Community, have duty-free tariff provisions for "other" mineral manufactures (see table I-9-K). One-fourth of Canada's provisions are duty free, one-fifth in the 10.1-15 percent ad valorem bracket and over one-third in the

15.1-20 percent bracket. Nearly one-tenth of U.S. tariff provisions are free with an additional one-fifth of the provisions falling into each of the three ranges between 0.1 and 15 percent ad valorem. Only the United States and Canada have tariff provisions over 30 percent. Japan, the Community, and the United Kingdom each have approximately one-third of their rates in the 0.1-5 percent range and between 40 and 51 percent in the 5.1-10 percent bracket.

In terms of MFN trade in "other" mineral manufactures, only the United States and Canada have duty-free imports (table I-9-L).

Table I-9-L.--Distribution, by duty level, of MFN imports of manufactured mineral products, except fertilizers

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	37.1	10.7	-	-	-
0.1-5.0 percent---	1.6	16.3	22.2	36.4	43.2
5.1-10.0 percent---	9.0	5.6	59.9	42.7	45.3

25.1-30.0 percent--	-	.9	-	3.1	-
30.1-40.0 percent--	.1	4.4	-	-	-
40.1-50.0 percent--	-	.2	-	-	-
Over 50 percent----	-	10.9	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Thirty-seven percent of Canada's imports are duty free; nearly 42 percent are in the 15.1-20 percent ad valorem bracket. About one-tenth of U.S. imports are duty free. About one-sixth of U.S. imports enter in both the 0.1-5 percent range and the 10.1-15 percent range. One-fourth of U.S. entries are in the 20.1-25 percent bracket, one-tenth in the over 50 percent bracket. Sixty percent of Japan's imports are in the 5.1-10 percent ad valorem range. About two-fifths of EC imports enter in both the 0.1-5 and the 5.1-10 percent ranges. The United Kingdom also has over 40 percent of its imports in both the 0.1-5 and the 5.1-10 percent brackets.

The United States exhibits the most complex tariff schedule for "other" mineral manufactures, with 185 lines; Japan has the simplest, only 43 lines. Schedules for Canada have 123 lines; for the European Community, 81 lines; and for the United Kingdom, 54 lines.

### Trade importance

The "other" mineral manufactures subsector, in value of trade, is the largest category of mineral products and fertilizers, accounting for about 35 percent of OECD export trade and 29 percent of OECD imports in the sector. OECD exports totaled \$1.8 billion in 1969, imports were \$1.5 billion (chart I-9-J). In U.S. trade,

Chart I-9-J. -- OECD trade in manufactured mineral products, except fertilizers and glass, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

the "other" mineral manufactures subsector is also the largest category of mineral products and fertilizers. U.S. exports in 1969 were valued at \$155 million, and imports were valued at \$263 million. U.S. imports in 1971 were valued at \$288 million.

#### Trade network

The five major countries account for about 87 percent of OECD exports and 80 percent of imports (tables I-9-M and N). Complete country of destination data are unavailable for 6 percent of United Kingdom exports. The largest supplier to the world is the European Community, with its shipments to outside countries accounting for slightly over one-fifth of OECD exports, followed by Japan and the United Kingdom. The principal importing countries are the United States and the European Community, followed by Canada. Non-OECD countries receive about one-third of EC external exports and U.S. exports, 37 percent of Japanese exports and 31 percent of known United Kingdom exports. The remainder of U.S. exports go chiefly to Canada (31 percent) and the Community (16 percent). Eighty-five percent of Canada's exports go to the United States. The most important developed country destination for Japanese exports is the United States. About 14 percent of the EC's exports to outside countries are shipped to the United States, as are 17 percent of United Kingdom exports for which destinations are known. An additional 19 percent of known shipments from the United Kingdom go to the Community.

Over 40 percent of U.S. imports come from Japan, about one-fifth from the European Community and 12 percent from the United Kingdom.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Intra-EC shipments are over twice as large as EC receipts from outside sources, about 18 percent of which are supplied by the United Kingdom. The United States is the supplier of over half the imports of Canada and Japan and 18 percent of the entries into the United Kingdom. Forty-three percent of United Kingdom imports arrive from the Community.

#### Trade-agreement concessions

As the following tabulation shows, for all of the five major countries average tariff levels for "other" mineral manufactures are substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. The largest drop, almost 24 percentage points, was in the U.S. tariff. Japan, in November 1972, made unilateral 20-percent reductions in all of its rates on "other" mineral manufactures, thereby reducing the Japanese average level to about 6.6 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	42.6	18.7
European Community	14.3	8.8
United Kingdom	14.4	7.3
Japan	21.8	8.3
Canada	24.0	11.2

All MFN provisions for "other" mineral manufactures in the tariff schedules of the United States and the European Community have been the subject of GATT concessions. In the Japanese schedule, 93 percent of the provisions, covering 92 percent of MFN imports, have GATT concessions; and in the Canadian schedule, 89 percent of

the provisions, covering 97 percent of MFN imports have GATT concessions. For the United Kingdom, 89 percent of the tariff provisions, covering 91 percent of MFN imports are fully covered by GATT concessions; for 7 percent of the provisions, covering 3 percent of MFN imports, only part of an item is covered.

Specific rates are important for the United States (one-fourth of tariff lines, covering 46 percent of MFN imports), the European Community (19 percent of tariff lines, covering 38 percent of imports), and the United Kingdom (13 percent of tariff lines, covering 21 percent of MFN imports).

All EC member state national tariffs prior to adoption of the Common External Tariff contained concessions under the GATT. Of 301 concessions in the national tariffs, 186 were at rates above the CXT autonomous rates, 20 at the CXT rate, and 95 below the CXT rate.

Tariffs on glazed tile and articles of cement, concrete or artificial stone, two of the most important trade items, have been reduced in trade-agreement concessions by all five major countries (see tables I-9-0 and P). For glazed tile, the most significant reductions in duties have been granted by the United States, Japan, and the European Community. Each of these nations reduced the duty rate by at least half. The U.S. reductions took place entirely before the Kennedy Round. For articles of cement, concrete or artificial stone, very significant reductions have been made in the tariffs of all five major countries.

Table I-9-O.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on glazed tile

(% = Percent ad valorem)

United States-----	30%-55	12.5%-27%	6%-21% <u>2/</u>	511.31-.71
Canada-----	22.5%	17.5%	12.5%	28205-1
European Community--	10%	8%	4%	68.11
United Kingdom-----	10%	10%	5%	68.11
Japan-----	10%	15%	7.5% <u>3/</u>	68.11

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Floor and wall tiles, comprising about 30 percent of U.S. imports, based on values for 1971, were not subject to concessions in the Kennedy Round; about 68 percent of U.S. imports were dutiable at 7.5 percent ad valorem following the Kennedy Round.

3/ Rate was further reduced by 20 percent by Japanese unilateral reductions in November 1972.

## Manufactured Fertilizers

Manufactured fertilizers include natural sodium nitrate, natural potassic salts (crude), basic slag and other manufactured fertilizers. <sup>1/</sup>

MFN tariffs

Average MFN tariffs on manufactured fertilizers imported into the five major countries range from zero (the weighted average for Canada, the United States, and Japan on total imports) to 5.7 per cent ad valorem (the United Kingdom arithmetic average for all products) (see chart I-9-K). The dutiable-product averages are significantly

Chart I-9-K. -- Average MFN tariff rates on manufactured fertilizers  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent on three of the dutiable items and 100 percent on the remaining one) made in 1972 in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, CATT.

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 31.02-.05.

higher. The arithmetic averages range from 4 percent ad valorem for the European Community to 14.7 percent for Canada, while the weighted averages run from zero (for Canada and Japan) to 7.3 percent ad valorem (the United Kingdom). The great diversity in the averages for total products and dutiable products is due primarily to the large proportion of duty-free provisions in the tariff schedules of Canada, the United States and Japan.

Imports receiving preferential tariff treatment are significant in the United Kingdom and the European Community. Seventeen percent of United Kingdom entries and 31 percent of shipments into the Community are accorded tariff preferences.

All five major countries have duty-free provisions for manufactured fertilizers (table I-9-Q). In the tariff schedules of

Table I-9-Q.--Distribution, by duty level, of MFN tariff provisions for manufactured fertilizers

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	96.2	80.6	76.9	27.8	33.3
0.1-5.0 percent----	-	12.9	-	55.6	11.1
5.1-10.0 percent----	-	6.5	23.1	16.7	33.3
10.1-15.0 percent--	3.8	-	-	-	22.2
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Canada, the United States and Japan, such provisions form the vast majority. About one-third of EC and United Kingdom provisions are duty free. Over half of the additional EC provisions are in the 0.1-5 percent ad valorem range, while one-third of the United Kingdom provisions are in the 5.1-10 percent range and an additional one-fifth in the 10.1-15 percent range.

In terms of imports, all Canadian, U.S., and Japanese entries are duty free. Nearly two-thirds of EC entries and over half of United Kingdom entries enter duty free. No imports of manufactured fertilizers shipped to the five major countries enter at rates over 10 percent ad valorem (table I-9-R).

Table I-9-R.--Distribution, by duty level, of MFN imports of manufactured fertilizers

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	100.0	80.6	100.0	64.0	50.6
0.1-5.0 percent----	-	12.9	-	28.4	2.0
5.1-10.0 percent----	-	6.5	-	7.6	47.4
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States and Canada have the most complex tariff structures for manufactured fertilizers, with 31 and 26 lines, respectively. Schedules for the European Community have 18 lines; Japan, 13 lines; and the United Kingdom, 9 lines.

#### Trade importance

OECD exports of manufactured fertilizers totaled \$1 billion in 1969, about 20 percent of OECD export trade in all mineral products and fertilizers. Imports were \$723 million, or about 14 percent of total import trade in the mineral products and fertilizers sector (chart I-9-L). It is the fourth largest category of OECD imports of mineral products. U.S. exports in 1969 were \$218 million, when imports were valued at \$142 million.

Chart I-9-L. -- OECD trade in manufactured fertilizers, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for about 92 percent of exports of manufactured fertilizers and 69 percent of imports (tables I-9-S and T). The European Community is the largest exporter, with shipments to outside countries valued at \$350 million (intra-EC exports were an additional \$169 million). The United States, the largest importer (excluding intra-EC imports), is the destination of about one-fifth of OECD export shipments. The Community ships over 40 percent of its outside exports to LDC's and 10 percent to the United Kingdom. Canada sends 76 percent of its exports to the United States, while LDC's receive about three-fourths of U.S. export

shipments, 59 percent of Japanese exports, and 46 percent of shipments from the United Kingdom.

The United States supplies virtually all of Canadian imports and receives about 85 percent of its imports from Canada. Sixty-five percent of Japanese imports come from Canada and the United States. The European Community receives 43 percent of its outside imports from non-OECD countries and an additional 30 percent from the United States. Sixty percent of entries into the United Kingdom arrive from the Community.

#### Trade-agreement concessions

Except for Canada, average tariffs of the major countries on January 1, 1972, were lower than the average levels on pre-trade-agreement base dates or remained at zero. As the following tabulation shows, the largest drop, over 28 points, was in the United Kingdom tariff. Canada's average at the beginning of 1972 was slightly higher than its pre-trade-agreement levels.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	0.0	0.0
European Community	2.6	1.4
United Kingdom	32.0	3.6
Japan	0.0	0.0
Canada	0.0	0.6

GATT concessions cover all U.S., EC, and United Kingdom rate provisions. Ninety-two percent of the Japanese tariff provisions, covering 98 percent of MFN imports, are fully covered by GATT concessions; for 8 percent of the provisions, covering 2 percent of MFN imports, only part of an item is covered. Fifty percent of

Canada's tariff provisions covering 97 percent of MFN imports are also covered by GATT concessions.

Forty-three GATT concessions were made in EC member state national tariffs prior to adoption of the Common External Tariff, and 16 of these were at rates higher than the new CXT rate.

Concessions in each country's principal tariff provisions for potassic fertilizer and potassic fertilizer material (the most important BTN heading in this subsector) are shown in table I-9-U. The duty-free status of this product in most of the five major nations serves to illustrate the generally duty-free nature of trade in this subsector.

Table I-9-U.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on potassic fertilizer and potassic fertilizer material

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

European Community--	3%	3%	2.4%	31.04 B
United Kingdom-----	Free	Free	Free	31.04 B
Japan-----	Free	Free	Free	31.04

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

# Crude Minerals, Other Than Fertilizers and Stone, Sand and Gravel

The "other" crude minerals subsector consists of sulphur and unroasted iron pyrites, natural abrasives (excluding industrial diamonds), common salt, natural graphite, chalk, asbestos, meerschaum, amber, and other crude minerals, except stone, sand, gravel and fertilizers. <sup>1/</sup>

## MFN tariffs

For total MFN imports of "other" crude minerals, Japan holds the lowest tariff averages, 1.8 percent ad valorem on an arithmetic basis and zero on a weighted basis; the Community, while also having a weighted average of zero, has a slightly higher arithmetic average of 1.9 percent ad valorem (chart I-9-M). The highest averages on total

Chart I-9-M. -- Average MFN tariff rates on crude minerals other than stone, sand, gravel and fertilizers  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector see BTN headings 25.01-.04; 25.06-.09; 25.11-.13; 25.18-.19; 25.24-.32; 26.02; 26.04; 27.15; 71.04.

imports are held by Canada for the arithmetic (4.4 percent) and the United States for the weighted (2.6 percent). With respect to dutiable MFN imports, the Community has the lowest average tariffs (5.2 percent and 1.9 percent), Canada the highest arithmetic average (12.2 percent ad valorem), and Japan the highest weighted average (10.4 percent). U.S. arithmetic and weighted average rates for dutiable imports are 5.6 and 10.2 percent ad valorem.

MFN tariff treatment has been accorded to all imports entering the United States in recent years, to virtually all Canadian imports, and to 95 percent of all shipments into the Community from external countries. Nearly half of imports into the United Kingdom are given preferential treatment. About 13 percent of Japanese imports are from sources which received neither MFN nor preferential treatment.

For all five major countries except the United States, one-half to three-fourths of the tariff provisions for "other" crude minerals are duty free (table I-9-V). Forty-five percent of U.S.

Table I-9-V.--Distribution, by duty level, of MFN tariff provisions for crude minerals other than stone, sand, gravel and fertilizers

(In percent)

tariff provisions are duty free, while another 30 percent of the provisions are in the 0.1-5 percent ad valorem bracket. Eleven percent of the Japanese provisions, 27 percent of the EC provisions, and 42 percent of the United Kingdom provisions are also in the 0.1-5 percent range. Virtually all Japanese and EC MFN imports are duty free, as well as about 80 percent of United Kingdom imports, 89 percent of Canadian imports and three-fourths of shipments to the United States. Another 14 percent of U.S. imports enter at rates in the 5.1-10 percent ad valorem bracket. Twenty percent of MFN shipments into the United Kingdom are dutiable at rates ranging from 0.1-5 percent (table I-9-W).

Table I-9-W.--Distribution, by duty level, of MFN imports of crude minerals other than stone, sand, gravel and fertilizers

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States exhibits the most complex tariff structure for "other" crude minerals with 115 lines, the United Kingdom the simplest with 43 lines. Schedules for Canada had 78 lines; Japan, 47 lines; and the European Community, 44 lines.

#### Trade importance

OECD exports of "other" crude minerals totaled \$921 million in 1969, about 18 percent of OECD export trade in the mineral products

and fertilizers sector. Imports were about \$1.3 billion, or 25 per cent of total import trade in mineral products and fertilizers (chart I-9-N). It is the second largest category of OECD imports

Chart I-9-N. -- OECD trade in crude minerals other than stone, sand, gravel, and fertilizers, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

of mineral products and fertilizers. United States exports in 1969 were \$203 million, when imports were valued at \$227 million.

#### Trade network

The five major countries account for about 86 percent of exports and 85 percent of imports (tables I-9-X and Y). Country of destination data are unavailable for 19 percent of U.S. exports, 29 percent

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Note.--Complete country of origin data are not available for 9 percent of Canadian imports, 6 percent of U.S. imports, 9 percent of Japanese imports, 18 percent of EC imports, and 6 percent of United Kingdom imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

of Japanese exports, and 7 percent of EC exports. Canada, the largest exporter, is the origin of almost one-third of OECD export shipments. Country of origin data are unavailable for 9 percent of Canadian imports, 6 percent of U.S. imports, 9 percent of Japanese imports, 18 percent of EC imports, and 6 percent of United Kingdom imports. The European Community is the largest importer, with known entries from outside sources valued at \$312 million (intra-EC imports were an additional \$112 million). Canada ships over one-third of its exports to the United States, 20 percent to the Community and 16 percent to LDC's. Nineteen percent of U.S. exports, which have been accounted for, go to LDC's, as do 20 percent of known EC exports to outside countries and 11 percent of shipments from the United Kingdom. Another two-fifths of U.S. exports, for which destinations are known, are shipped to the European Community, as are 45 percent of United Kingdom exports. Almost half of known U.S. imports come from Canada, while another third come from LDC's. LDC's also provide about 39 percent of Japan's imports, which have been accounted for. The Community receives 29 percent of its known outside imports from non-OECD countries and an additional 26 percent from the United States. Over 20 percent of entries into the United Kingdom, for which destinations are known, are supplied by the European Community; an additional fifth comes from the LDC's.

#### Trade-agreement concessions

Average tariffs of the major countries on January 1, 1972, were lower than the average levels on pre-trade-agreement base dates. As the following tabulation shows, the largest drop, about 9 percentage points, was in the Canadian tariff.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent	ad valorem)
United States	8.1	2.6
European Community	0.1	0.0
United Kingdom	1.9	1.0
Japan	0.2	0.0
Canada	13.4	4.4

GATT concessions cover 98 percent of EC provisions for "other" crude minerals and all of EC imports; 99 percent of U.S. provisions (97 percent of imports) are bound in GATT. GATT concessions cover about 88 percent of United Kingdom provisions and about 95 percent of United Kingdom imports. For Japan, about 90 percent of the provisions, covering about 68 percent of MFN imports, have GATT concessions; in the Canadian schedule about two-thirds of the provisions, covering 70 percent of MFN imports, have GATT concessions. Specific duties are important only for the United States, covering 30 percent of its tariff lines and 23 percent of MFN imports.

EC member state national tariffs prior to adoption of the Common External Tariff contained 103 GATT concessions. Of these concessions, 32 were above the CXT rate, 16 below the CXT rate and 55 at the CXT rate.

Trade agreement concessions in major country tariffs dealing with the two most important BTN headings in this subsector, iron pyrites and sulphur, other than sublimed, precipitated or colloidal sulphur, are shown in tables I-9-Z and I-9-AA. These tables further illustrate the large amount of duty-free provisions in this subsector.

Table I-9-Z.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on iron pyrites

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Rate was further reduced by 20 percent by Japanese unilateral reductions in November 1972.

## Miscellaneous Mineral Products and Fertilizers

The remaining categories of mineral products and fertilizers, which will not be discussed in detail, are stone, sand and gravel and crude fertilizers. The relative world trade importance of these categories can be seen in chart I-9-D at the beginning of the discussion of mineral products and fertilizers.

U.S. trade has been as follows (in millions of dollars):

	Exports (1969)	Imports (1969) (1970)	
Stone, sand and gravel-----	17	21	20
Crude fertilizers-----	90	4	3

For each of these categories and for each of the five major countries, there are listed in table I-9-BB arithmetic and weighted average MFN rates of duty for total imports, and the highest duty bracket

Table I-9-BB--Average MFN tariff rates on miscellaneous types of mineral products and fertilizers, and the highest rate bracket in which provisions of the major tariffs fall.

(Percent Ad valorem)					
Type of mineral product	Canada	United States	Japan <sup>1/</sup>	European Community	United Kingdom

Highest rate bracket--	0.0	0.0	0.0	0.0	4.1-5

<sup>1/</sup> Figures for Japan do not reflect the unilateral reductions made in 1972 on Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

in which provisions of each of the five tariffs fall. In a simple count of "highest" and "lowest" rankings in the data in this table (i.e. highest/lowest arithmetic average, weighted average, etc.), the United Kingdom has the largest number of "highest" rankings and Japan has the largest number of "lowest" rankings.

## Industrial Sector I-10

**PROFESSIONAL, SCIENTIFIC AND CONTROLLING INSTRUMENTS,  
PHOTOGRAPHIC APPARATUS, CLOCKS AND WATCHES**

Professional, scientific and controlling instruments include a wide variety of high precision lenses; telescopes; surveying, navigational, geophysical, medical and dental instruments; X-ray apparatus; electrical-control apparatus; and apparatus for testing flow, depth, revolutions, etc. This sector also covers photographic cameras, other photographic apparatus, watches, clocks and watch or clock movements and cases. <sup>1/</sup> For brevity, the term "professional apparatus" is used here to refer to all products included in this sector.

MFN tariffs

The arithmetic tariff averages for all MFN imports of professional apparatus range from 8.3 percent ad valorem to 19.5 percent (chart I-10-A). The weighted averages run from 5.9 percent ad valorem to 13 percent. Canada has both the lowest weighted and arithmetic averages. The United States has the highest arithmetic average, while the United Kingdom holds the second highest arithmetic average (15.5 percent) and the highest weighted average. For dutiable products, only the tariff averages of Canada change, rising to 14.4 percent for the arithmetic average and 13.5 percent for the weighted average. The European Community holds the lowest arithmetic average for dutiable products (9.3 percent) and Japan, the lowest weighted average (9.7 percent). The United States again has the highest arithmetic average; Canada, the highest weighted average.

---

<sup>1/</sup> For specific coverage of this sector, see BTN headings 90.01-.18; 90.20-.29; 91.01-.11. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-10-A. -- Average MFN tariff rates on professional, scientific and controlling instruments, photographic apparatus, clocks and watches

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of MFN tariff provisions by duty level is shown in table I-10-A. The tariff schedules of the United States and Canada contain MFN duty-free provisions; those of Japan, the Community and the United Kingdom do not. Over 40 percent of Canada's provisions are duty free, 16 percent in the 10.1-15 percent ad valorem range and nearly one-fourth in the 15.1-20 percent range. Only 0.3 percent of U.S. tariff provisions are duty free, one-fifth are in the 5.1-10 percent ad valorem range, nearly one-fifth in the 10.1-15 percent class, 17 percent in the 20.1-25 percent bracket and 13 percent in the 25.1-30 percent bracket.

Note.--Due to rounding, figures may not add to 100 percent.

Over 70 percent of Japan's provisions, two-thirds of the EC provisions and over one-fourth of United Kingdom provisions are in the 5.1-10 percent class. Of the remaining United Kingdom provisions, over 40 percent are in the 15.1-20 percent duty range.

Over 56 percent of Canada's MFN imports of professional apparatus are duty free (table I-10-B). About 15 percent of Canada's imports,

Table I-10-B.--Distribution, by duty level, of MFN imports of professional, scientific and controlling instruments, photographic apparatus, clocks and watches

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

46 percent of U.S. entries, 79 percent of Japanese entries, one-half of EC imports and 28 percent of United Kingdom imports are in the 5.1-10 percent ad valorem bracket. In the 10.1-15 percent bracket are one-fifth of the U.S. provisions and one-half of the provisions of the European Community and the United Kingdom. Imports of professional apparatus receiving preferential tariff treatment are significant only for Canada and the United Kingdom.

The United States has the most detailed tariff schedule for professional apparatus, with 331 tariff lines, while the European Community has the least, with 61 lines. Japan has 125 lines; Canada, 260 lines; and the United Kingdom, 70 lines. However, the multiple dispersion of U.S. and Canadian tariff items into the BTN format overstates the detail of the schedules of these nations. An adjustment for this problem yields a more accurate item count of 256 items for the United States and 106 items for Canada.

#### Trade importance

The professional apparatus sector ranks 10th in OECD exports and 12th in imports. It accounts for about 3 percent of OECD industrial exports and 2 percent of industrial imports. For the United States, the sector is seventh most important in exports. It ranked 12th in 1969 U.S. imports, but fell to 13th in 1970.

Imports by the GATT tariff study countries were valued at nearly \$2.3 billion in 1967 and \$3.5 billion in 1970. OECD 1969 imports were \$3.6 billion (including \$610 million of intra-EC shipments) and exports were

\$5 billion (see chart I-10-B). In 1970 OECD imports rose to \$4.3 billion, exports to \$5.9 billion.

Chart I-10-B. -- OECD trade in professional, scientific and controlling instruments, photographic apparatus, clocks and watches, 1969

Source: "Compendium" from OECD Statistics of "Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for about 81 percent of OECD exports and 80 percent of imports. Over half of OECD exports go to the five major countries; one-fifth to LDC's. Eight percent of OECD imports are supplied by the five major countries.

Over one-fifth of U.S. exports go to less developed countries (chart I-10-C), where substantially higher tariffs and other trade barriers are

Chart I-10-C. -- United States trade in professional, scientific and controlling instruments, photographic apparatus, clocks and watches, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

generally encountered. Canada and the European Community are the principal developed markets for U.S. products, each taking about one-fifth of U.S. exports. The United States takes over two-thirds of Canada's exports. Japan ships 35 percent of its exports to LDC's, almost one-third to the United States and 15 percent to the European Community. Intra-EC exports are equal to more than half of the Community's shipment to outside markets. LDC's take over one-fifth of the EC's outside exports; one-fifth go to the United States, and about 7 percent to the United Kingdom. The United

Kingdom ships one third of its products to LDC's and other non-OECD countries. The Community is the principal developed country market for the United Kingdom (see table I-10-C).

Professional apparatus ranks 8th in industrial imports for Canada, 11th for the Community and the United Kingdom, 12th for Japan, and 13th for the United States. U.S. imports of professional apparatus were valued at \$439 million in 1967, \$590 million in 1969 and \$755 million in 1971. The European Community and Japan each supply almost one-third of U.S. imports; the United Kingdom about 6 percent (table I-10-D). The United States is the source of over three-fourths of Canada's imports and nearly three-fifths of Japan's. About 37 percent of imports into the European

Community from outside sources come from the United States and 19 percent from the United Kingdom. The United States is the chief source of the United Kingdom's imports, followed by the Community.

#### Trade composition

Professional apparatus is divided into three subsectors:

(1) professional, scientific, and controlling instruments; (2) photographic and optical apparatus; and (3) watches and clocks. Professional, scientific, and controlling instruments is the largest subsector in both exports and imports (about 56 percent of each), followed by photographic and optical apparatus. The relative importance of the three subsectors is shown in chart I-10-D.

Chart I-10-D. -- OECD trade in professional, scientific & controlling instruments, photographic apparatus, clocks & watches, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

For all five major countries, average tariff levels on January 1, 1972, for professional apparatus were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the following tabulation, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. All but one of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 7.8 percent. In the tariff of the United States, 44 percent of the tariff lines covering 30 percent of MFN imports have specific or combined specific and ad valorem rates of duty.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	47.8	12.1
European Community	15.8	10.4
United Kingdom	38.7	13.0
Japan	18.4	9.7
Canada	20.3	8.3

Concessions under the GATT have been made on all MFN provisions for professional apparatus in the tariff schedules of the United States, the European Community, Japan and the United Kingdom, as well as on 70 percent of the provisions (covering 76 percent of MFN imports) in Canada's tariff schedule.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on professional apparatus negotiated under the GATT. The number of such concessions totaled 356, of which 207 reflected rates higher than the autonomous rate established in the CXT, 5 were at the CXT rate, and 144 were below the CXT rate.

#### Trade complaints

In the Tariff Commission's survey of trade barriers, over 200 complaints were received concerning practices which affect trade in products included in the sector for professional, scientific and controlling instruments, photographic apparatus, and clocks and watches. Half of the complaints were against practices of developed countries, and more than a quarter of the total number concerned only four countries: Japan, the United States, France, and the United Kingdom. Among the 22 developing countries specifically named in

the complaints, Brazil, the Philippines, Colombia and Mexico were most frequently mentioned. Only one complaint was registered against a Communist country, East Germany, while over 10 percent were so general in nature that no specific country was mentioned.

Quantitative restrictions and licensing.--Licensing practices, embargoes and other types of quantitative restrictions were the trade barriers receiving the most complaints. Mandatory licensing for watches and watch movements, clocks, watch cases, clock parts, precision measuring tools, and eyeglass frames in France, Mexico, Brazil, Colombia, Peru, South Africa, and Venezuela was reported to be a hindrance to trade by some U.S. producers. Argentina, Brazil, Colombia, Mexico, and Peru were listed as using licensing procedures for imports to protect their national producers of medical equipment. The Netherlands was reported to have a restrictive licensing practice in regard to optical, scientific and precision instruments. The U.S. requirement of export licenses to monitor and control exports of laboratory apparatus, scientific, and industrial precision instruments caused one U.S. producer to complain.

Complaints concerning embargoes or practices which effectively exclude imports were mainly concentrated against LDC's. A U.S. producer of eyeglass frames encountered this kind of problem in trying to export to Chile, Colombia, India, Pakistan, Peru, and the Philippines. Argentina and Mexico require import licenses for tape measuring devices, but the licenses were reported to be unobtainable. Imports of

watches are barred in Egypt, unless they have been specifically approved by a government ministry, and in Ceylon, because they are considered a luxury. It was also reported that only photocopiers that are assembled or produced in Korea may be sold in Korea.

Quotas were the object of complaints by some U.S. producers. Argentina, Brazil, Colombia, Mexico, and Peru were said to impose quotas on medical equipment; France was reported to impose quotas on watches, watch movements and watch parts; Peru, on photographic products; Japan, Turkey, and most European countries, on certain scientific and technical instruments.

Standards and labelling requirements.--A producer of hospital equipment reported as a burden to his trade the fact that each state of Brazil has enacted individual standards regarding hospital equipment, and that the standards are not identical to those of the national government. Countries of the European Community drew complaints because of their activities to harmonize electrical and other standards through CEN and CENELEC. The United States also was criticized for not giving stronger support to standards organizations. Japan was cited for requiring excessive testing and evaluations on medical equipment. Complaints were received from U.S. importers concerning requirements for the Underwriters Laboratory guarantee which duplicates testing already conducted in the countries of origin and increases the cost of the imported product.

For electrical measuring devices, Canada requires that the country of origin must be stamped, etched, engraved, or labelled in a

permanent conspicuous manner on the product. For imported watch and clock movements, watch and clock cases, and dials, the United States requirement of a special marking (including the country of origin, number of jewels, name of manufacturer, number of adjustments, and metallic composition) was felt to impede trade.

Subsidies and other governmental aids.--A large U.S. producer of numerous products in this sector stated that direct or indirect governmental aids to producers in France, West Germany, Japan, and the United Kingdom gave industries in those countries an unfair competitive advantage in the U.S. market and in third country markets. The complaints against governmental assistance in these countries were concerned with (1) subsidization of research and development where end use is for commercial sales; (2) direct or indirect assistance for business expansion and start-up costs; (3) a tax system which allows the build up of exceptional reserve accounts, which can be used as interest-free working capital; (4) income tax relief geared to export performance; and (5) concessionary financing to export customers of their manufacturers for purchase of capital goods.

Nontariff charges on imports.--Taxes or other charges on imports received numerous complaints from U.S. producers. The European Community received the most complaints in regard to border tax adjustments, which were reported to range from 10 to 20 percent on the c.i.f. duty paid value of the products in question. Other countries reported to have border tax adjustments were: Japan and several West European

countries, among them Sweden and the United Kingdom. Although no specific countries were mentioned, some producers complained of port and statistical taxes, in the form of surtaxes, as being a hindrance to trade. An "additional" tax or a "complementary" tax of 5 to 15 percent was said to be collected in the Central African Republic against eyeglasses, while special import taxes were reported to be operating in South America on chlorinators.

Customs procedures.--Consular formalities, fees and documentation requirements were all reported to be barriers to the trade of products in this sector. One U.S. producer complained that for hospital supplies the Philippines requires consular invoices even on small shipments, whereas most other countries either use a standard form or do not require any special paper work on small shipments. Consular fees for hospital supplies and scientific instruments were reported to be required for shipments to several countries in Latin America and the Middle East. One U.S. producer considers the paperwork required by the United States in administering its export control regulations to be excessive and costly. Excessive general documentation requirements, accompanied by delays in clearance, were reported in several countries of South America and in other nonspecified markets. In order to export watches to Japan it was reported that a company must first submit forms showing their distribution network to be covered in Japan, prices for the product at each stage of distribution until purchased by the consumer, and finally names and commission payments of all middlemen involved in the distribution process.

Customs valuation practices were believed by some U.S. producers to have an adverse effect on their trade. Certain producers felt that the "uplift" made by Japan in some customs valuations is arbitrary and excessive. Many U.S. producers complained against the use by many countries of c.i.f. costs as a base for valuation rather than f.o.b. costs.

Government procurement.---One importer complained that the tougher "buy American" restrictions of the U.S. Defense Department have resulted in a resistance to purchases from Denmark of electric measuring instruments. A U.S. producer reported that Belgium-Luxembourg, in the period 1970-1975, will grant preferential treatment to orders from the European Community over U.S. made computers and peripheral equipment. "Buy national" policies of France, Japan, United Kingdom, and other European countries were said to inhibit trade immensely in this area.

Of the complaints received by the Commission concerning trade practices affecting products in this sector, only 28 were accompanied by an estimate or assessment of the restrictive trade effects of the barriers encountered. Fourteen of these estimated a "significant" increase in trade if the barriers complained of were removed; 12, a "moderate" increase; and 2, only a "small" change. Several of these estimates involved the removal of more than one barrier. In the cases where a dollar estimate of the trade increase was also given, increases characterized as "significant" ranged from 16 to 50 percent of the present trade, and those characterized as "moderate" from 8 to 20 percent. All of the dollar estimates given totaled only \$20 million.

## Professional, Scientific and Controlling Instruments

Professional, scientific and controlling instruments cover surveying, navigational and geophysical instruments, compasses, drawing and mathematical calculating instruments, medical and dental instruments, X-ray apparatus, testing machinery and a great variety of apparatus for checking flow, depth, revolutions, temperature and the like, including parts and accessories. Not included are control and measuring instruments which are incorporated into machines. <sup>1/</sup>

MFN tariffs

Among the five major countries, Canada has the lowest arithmetic and weighted averages (7.6 and 5.1 percent ad valorem, respectively) for total MFN imports of professional, scientific and controlling instruments. The United Kingdom has the highest total trade averages (14.8 percent ad valorem for the arithmetic and 12.2 percent for the weighted). Except for Canada, with its substantial MFN duty-free entries, the tariff averages for dutiable imports alone usually remained the same as those averages calculated for total MFN imports for any of the major countries (see chart I-10-E).

Almost one-fourth of the United Kingdom's imports receive preferential treatment under the Commonwealth and EFTA agreements. Preferential imports were not significant for any of the other five major countries.

---

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 90.14-.18; 90.20-.29.

Chart I-10-E. -- Average MFN tariff rates on professional, scientific and controlling instruments  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions in 1972 on almost 70 percent of the Japanese rates in this sector; the remaining rates were reduced by 40 percent.

Note.--Due to rounding, figures may not add to 100 percent.

bracket; nearly 56 percent in the 5.1-10 percent bracket. Virtually all entries into Japan are in the 5.1-10 percent range, as are over four-fifths of shipments into the Community from outside sources. Nearly one-fourth of United Kingdom imports are in the 5.1-10 percent rate class and another two-thirds in the 10.1-15 percent class.

Canada exhibits the most complex tariff schedule for professional, scientific and controlling instruments, with 153 tariff lines; the Community has the simplest, only 27 lines. Schedules for the United States have 104 lines; for Japan, 59 lines; and for the United Kingdom, 36 lines.

### Trade importance

Professional, scientific and controlling instruments account for about 56 percent of OECD trade in the professional apparatus sector. OECD exports totaled \$2.8 billion in 1969, imports were \$2.1 billion (chart I-10-F).

Chart I-10-F. -- OECD trade in professional, scientific and controlling instruments, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Among the 119 industrial subsectors, professional, scientific and controlling instruments rank 19th in value of MFN imports of the GATT tariff study countries. U.S. imports amounted to \$195 million in 1969 and increased to \$255 million in 1971.

### Trade network

The five major countries account for 89 percent of OECD exports and about 80 percent of imports (tables I-10-G and H). The largest supplier to the world is the United States, accounting for about one-third of OECD exports, followed by the European Community. The principal importing countries are the European Community and Canada. Country of destination data are unavailable for 9 percent of total EC exports. Non-OECD countries receive half of Japanese exports, over one-third of exports by the United Kingdom,

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

over one-fourth of EC exports for which destinations are known, and 28 percent of U.S. exports. The remainder of U.S. exports go chiefly to Canada (22 percent) and the Community (23 percent). Canada sends 72 percent of its exports to the United States. The U.S. also receives one-fourth of Japanese exports, 14 percent of known EC outside exports and 11 percent of shipments from the United Kingdom. An additional 7 percent of known EC outside exports go to the United Kingdom, while the Community receives one-fourth of United Kingdom exports.

Eighty-five percent of Canadian imports are products of the United States, as are nearly half of EC imports from outside countries, over two-thirds of Japanese imports and 44 percent of entries into the United Kingdom. For 7 percent of U.S. imports, country of origin data are unavailable. For the

remainder of U.S. imports, about two-fifths arrive from the European Community, while Canada, Japan and the United Kingdom each send the United States between 13 and 18 percent of the entries for which origins are known. Fifteen percent of shipments to the Community from outside sources arrive from the United Kingdom, as one-fourth of United Kingdom entries come from the Community. Intra-EC shipments are over two-thirds the value of EC receipts from outside sources.

Tariff flows among the five countries are generally in the direction of countries having lower tariffs. The principal importers, the European Community and Canada, have low tariff averages compared with the United Kingdom and United States, which have the highest tariff averages and are among the least important importers.

#### Trade-agreement concessions

As the following tabulation shows, for all of the five major countries average tariff levels for professional, scientific and controlling instruments are substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. Japan, in November 1972, made unilateral 20 percent reductions in all of its rates on professional, scientific and controlling instruments, thereby reducing the Japanese averages level to about 6.4 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	37.7	9.3
European Community	16.0	8.3
United Kingdom	33.9	12.2
Japan	16.1	8.0
Canada	19.4	7.6

All MFN provisions for professional, scientific and controlling instruments in the tariff schedules of the United States, the European Community, the United Kingdom and Japan have been the subject of GATT concessions. In the Canadian schedule, 66 percent of the tariff provisions, covering 67 percent of MFN imports are fully covered by GATT concessions; for 1 percent of the provisions, covering 1 percent of MFN imports, concessions cover only part of an item. The EC member states had made GATT tariff concessions on professional, scientific and controlling instruments before they changed to the Common External Tariff. One hundred forty-three of the 208 concession rates contained in the member state schedules were higher than rates established in the CXT. Table I-10-I shows concessions which have been made in the major country tariffs on electric measuring, checking, analyzing and automatically controlling instruments and apparatus.

Table I-10-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on electrical measuring, checking, analyzing and automatically controlling instruments and apparatus

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%-50% 70.7%; 113.6% AVE	10%-15.5% 15.2%; 59.3% AVE	5%-10% <sup>2/</sup> 7.6%; 29.5% AVE <sup>2/</sup>	711.98-712.49 <sup>3/</sup>
Canada-----	30%	7.5%; 22.5%	7.5%; 17.5%	44532-1; 44524-1
European Community---	16%	13%	13%; 16.5%	90.28 A, B
United Kingdom-----	50% 33.3%	28% 13.5-17.5%	28% 13.5%-17.5%	90.28 (A) 90.28 (B), (C), (D)
Japan-----	15%	15%	7.5%-15%	90.28

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Over 99 percent of imports, based on values in 1971, are dutiable at rates between 5 percent and 10 percent. Ad valorem equivalents based on compound rates of 46 cents each plus 7 percent ad valorem and \$1.12 each plus 17.5 percent ad valorem, respectively.

<sup>3/</sup> Does not include classes 712.12 and 712.27, which provide for parts of such instruments and apparatus, or classes which provide for duty-free Canadian articles of above description which are original motor vehicle equipment.

## Photographic and Optical Apparatus

Photographic and optical apparatus include photographic and cinematographic cameras and apparatus, optical mirrors, lenses, microscopes and telescopes, and eyeglass frames. Cinematographic sound recorders, photographic and cinematographic film and ordinary mirrors are not included. 1/  
MFN tariffs

Average MFN tariffs on photographic and optical apparatus imported into the five major countries range from 6 percent ad valorem (the Canadian weighted average on total imports) to 17.2 percent (the United Kingdom weighted average). Averages for the United States, Japan and the European Community on total trade were clustered between 10.6 and 13.6 percent ad valorem. The dutiable product averages, however, were higher for Canada (arithmetic, 14.4 percent; weighted, 15 percent) (see chart I-10-G).

Among the five major countries, only the United Kingdom has a significant part of its imports entering under preferential tariffs. Almost 23 percent of United Kingdom imports receive preferential treatment.

Nearly half of Canada's MFN tariff provisions for photographic and optical apparatus are duty free; the tariffs of the remaining major nations have no duty-free provisions (table I-10-J). Over one-fourth of Canadian provisions are in the 10.1-15 percent ad valorem range. One-third of the U.S. provisions are in the 5.1-10 percent ad valorem bracket, as are two-thirds of the Japanese provisions, 44 percent of the Community's

provisions and nearly one-third of those of the United Kingdom. One-fourth of U.S. provisions and over 55 percent of EC provisions are in the 10.1-15 percent ad valorem range. Forty-four percent of United Kingdom provisions and one-fifth of those of the United States are in the 15.1-20 percent range.

In terms of imports, three-fifths of Canadian entries are duty free. About 40 percent of U.S. imports enter at rates of 5.1-10 percent ad valorem and 37 percent of imports in the 10.1-15 percent rate range. Three-fourths of Japanese imports enter in the 5.1-10 percent bracket, over 70 percent of EC imports in the 10.1-15 percent bracket and more than half of United Kingdom imports in the 15.1-20 percent class (see table I-10-K).

Canada and the United States have the most complex tariff structures for photographic and optical apparatus, with 80 and 77 lines, respectively. Schedules for Japan have 39 lines; the United Kingdom, 25 lines; and the European Community, 16 lines.

#### Trade importance

OECD exports of photographic and optical apparatus totaled \$1.3 billion in 1969, about one-fourth of OECD export trade in all professional

apparatus. Imports were \$1 billion, or about 28 percent of total import trade in the sector (chart I-10-H). It is the second largest category of

Chart I-10-H. -- OECD trade in photographic and optical apparatus, 1969 \*

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

OECD imports of professional apparatus, and ranked 39th in value of imports among the 119 industrial product categories. U.S. exports in 1969 were \$226 million, when imports were valued at \$235 million. U.S. imports in 1971 were valued at \$311 million.

#### Trade network

The five major countries account for about 95 percent of OECD exports and 81 percent of imports. Japan, the largest exporter (if intra-EC exports are excluded), is the origin of 28 percent of OECD export shipments. The

European Community and the United States are the largest importers, with total EC entries valued at \$371 million and U.S. entries valued at \$235 million. Complete country of destination data are unavailable for 23 percent of Canadian exports, 18 percent of U.S. exports, 14 percent of Japanese exports, and 9 percent of EC exports. Of those exports whose destinations are known, Japan ships nearly two-fifths to the United States, 18 percent to the European Community, and 31 percent to LDC's and other non-OECD countries. Twenty-seven percent of the known U.S. exports also are shipped to non-OECD nations, while 26 percent go to Canada and 21 percent to the Community. Canada sends 50 percent of its exports, for which destination information is available, to the United States and 20 percent to the European

Table I-10-L.-- OECD exports of photographic and optical apparatus, 1969

and the United States each supply the other with over one-fifth of their known imports. Another 37 percent of shipments into the European Community,

for which the origin is known, come from the United Kingdom. Over 70 percent of known Canadian imports are from the United States, as are 70 percent of known Japanese entries. The remaining Japanese imports, which are accounted for, come principally from the Community. Over 30 percent of United Kingdom imports with known origins arrive from the United States, 28 percent from the Community, and 15 percent from Japan.

#### Trade-agreement concessions

Reductions in average duty levels on photographic and optical apparatus made by the five major countries since their pre-trade-agreement base dates are shown in the following tabulation. The reductions principally reflect trade-agreement concessions.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	34.7	11.8
European Community	17.4	11.4
United Kingdom	50.0	17.2
Japan	24.6	11.1
Canada	19.7	7.7

Of the five major countries, only Canada has not made GATT concessions on all MFN tariff provisions for photographic and optical apparatus. GATT concessions cover 76 percent of the Canadian provisions and 95 percent of Canadian imports. Prior to adoption of the Community's CXT, four GATT concessions had been made in member state national tariffs; two of the concessions were at rates higher than the new CXT rate. Specific tariff concessions which have been made on rates for photographic cameras, flash apparatus, etc., are shown in table I-10-N.

Table I-10-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on photographic cameras, flash apparatus and certain other equipment

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	20%-45%	11.5%-25%	5.5%-17% <sup>2/</sup>	722.10-.16 722.30, .34, .60, .72
Canada-----	30%	20%	15% <sup>3/</sup>	46205-1
	30%	15%	15% <sup>3/</sup>	46210-1

United Kingdom-----	50%	32%; 40%	20%	90.07 (A)
	20%	16%	10%	90.07 (B)
Japan-----	15%	15%	7.5%	90.07-1 (1)
	40%	30%	15%	90.07-1 (2)
	20%; 30%	30%	15%	90.07-2, .07-3

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Certain cameras valued under \$10 each not reduced in the Kennedy Round.

<sup>3/</sup> Rates shown are the official MFN rates, presently superseded by temporary rates of 10 percent. The temporary rates are subject to possible renewal in February, 1974.

## Watches and Clocks

Watches and clocks include all watches and clocks, watch and clock movements and cases, instrument panel clocks for vehicles and aircraft, and time of day recording apparatus. Not covered are accessories such as watch glasses, watch chains and straps. 1/

MFN tariffs

The tariff averages for watches and clocks range widely. For total imports, the range is from 8.7 percent to 26.5 percent ad valorem for the arithmetic averages and from 7.1 percent to 29.5 percent ad valorem for the weighted averages (chart I-10-I). The European Community has the lowest averages; the United States the highest. For the dutiable products, only the Canadian averages change, rising slightly.

Of the five major countries, only Canada has MFN duty-free provisions for watches and clocks (table I-10-0). Over 18 percent of Canadian MFN tariff provisions are duty free, over one-fifth in the 5.1-10 percent ad valorem bracket, and 37 percent in the 15.1-20 percent bracket. Nearly 15 percent of U.S. provisions are in both the 15.1-20 percent and 25.1-30 percent ad valorem brackets, one-fifth in the 20.1-25 percent range and over one-fourth in the 30.1-40 percent range. U.S. tariff provisions on watches and clocks rise beyond 50 percent ad valorem. In the Japanese tariff schedule, 44 percent of the provisions are in the 10.1-15 percent range, while 24 percent of the provisions are found in both the 5.1-10 percent and 15.1-20 percent rate classes. Almost 90 percent of EC tariff provisions are in the 5.1-10 percent bracket. The vast majority (nearly 71 percent) of United Kingdom tariff provisions are in the 15.1-20 percent range.

---

1/ For specific coverage of this subsector, see BTN headings 91.01-.11.

Chart I-10-1. -- Average MFN tariff rates on watches and clocks  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions in 1972 on most Japanese rates in this sector; several rates were reduced by amounts ranging from 32 percent to 66 percent.

Note.--Due to rounding, figures may not add to 100 percent.

### World production

Output of watches in the principal watch-producing countries of the world increased from 121 million units in 1965 to 163 million units in 1969. Switzerland supplies nearly 45 percent of world output; nearly 40 percent of the output in 1969 came from the five major countries whose tariffs are being compared. Among the five countries, Japan and the European Community are the largest producers, each accounting for 13 percent of world output. The United States ranks next in importance in the world output of watches, accounting for 11 percent of the total, followed by the United Kingdom, which accounts for 2 percent of the total. Canada is not a significant producer of watches.

### Trade importance

OECD countries exported \$938 million of watches and clocks in 1969, and imported \$567 million (chart I-10-J), accounting for 19 percent of OECD exports in the professional apparatus sector and 16 percent of imports. It is the smallest category within this sector in OECD trade. It is also the smallest category of professional apparatus in U.S. imports, which have increased from \$139 million in 1967 to \$190 million in 1971.

### Trade network

The five major countries account for only 38 percent of OECD exports and about 78 percent of imports (tables I-10-Q and R). Of the five major countries, the European Community is the principal exporter, shipping \$135 million to outside countries. Canada is the least important exporter. Nearly three-fourths of Japanese exports, over one-third of U.S. exports and one-fourth

Chart I-10-J. -- OECD trade in watches and clocks, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

of EC and United Kingdom exports go to non-OECD countries. Sixty-one to 86 percent of the imports of the United States, United Kingdom, European Community and Japan come from "other" OECD countries; Canada's imports enter mainly from the United States and the United Kingdom. Of the five major countries, the United States is the most important importer although it has the highest tariff averages. Intra-EC imports equal about three-fourths the value of EC shipments to outside nations.

#### Trade-agreement concessions

Average tariff levels of all the major countries have been significantly reduced through trade-agreement concessions, as shown in the

following tabulation. The largest reduction was a total of 51 percentage points in the United States tariff average. Specific duties are significant for the United States (89.3 percent of tariff lines, 94.3 percent of MFN imports), the European Community (16.7 percent of tariff lines, 60 percent of imports) and the United Kingdom (11.8 percent of tariff lines, 15 percent of imports).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	80.7	29.5
European Community	12.6	7.1
United Kingdom	33.3	15.9
Japan	24.4	14.1
Canada	26.9	14.0

Concessions under the GATT cover all MFN tariff provisions on watches and clocks in the schedules of the United States, Japan, the United Kingdom, and the European Community. In Canada's schedule, 74 percent of the provisions and 96 percent of the trade are covered. EC member state national tariffs prior to adoption of the CXT contained 81 GATT concessions on watches and clocks, 26 of which were at rates higher than the CXT rate.

Trade-agreement concessions in major country tariffs dealing with watches are shown in table I-10-S. The U.S. rates of duty on watches were reduced by 75 percent from the pre-trade-agreement rate; the Japanese by 75 percent; and the United Kingdom by 50 percent. The reductions in the rates of duty on watches granted by Canada and the Community were somewhat less. The Community, however, had lower pre-trade-agreement rates than the other nations.

Table I-10-S.--Pre-trade-agreement tariff rates compared with  
January 1, 1972, MFN tariff rates on watches

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States <sup>2/</sup> ----	120.5% AVE <sup>2/</sup>	35.6% AVE	31% AVE	715.0503
Canada-----	35% <sup>3/</sup>	30% <sup>4/</sup>	20%	36600-1
European Community--	13% <sup>5/</sup>	11% <sup>6/</sup>	8.6% <sup>7/</sup>	91.01
United Kingdom-----	33.3%	33.3-20%	10%-17%	91.01
Japan-----	30%-40% <sup>8/</sup>	30%; 30% plus 300 yen per piece; 40%	7.5%-10%	91.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> The ad valorem equivalent of the duty shown has been computed based on the imports of the individual components of the watches; i.e., the movements and the cases.

<sup>3/</sup> Not less than 40¢ each.

<sup>4/</sup> Not less than 40¢ each when imported under MFN or general tariff.

<sup>5/</sup> Not less than 0.50 CMU each.

<sup>6/</sup> Not less than 1.20 CMU nor more than 1.50 CMU each.

<sup>7/</sup> Not less than 0.40 CMU nor more than 1.05 CMU each.

<sup>8/</sup> Fifty percent with gold or platinum case.

Note.--The duties shown for the United States are not for total imports of watches, but rather are representative of imports in a wide range of articles.

## INDUSTRIAL PRODUCT SECTORS

### Introduction

Industrial products are defined in this report as all products provided for in chapters 25 through 99 of the Brussels Tariff Nomenclature. <sup>1/</sup> The industrial products have been grouped into 23 sectors for the purpose of discussing in detail the applicable tariffs, nontariff trade barriers, and the direction of major trade flows.

The format followed for the presentation for each sector includes an examination of MFN tariffs of the United States, Canada, Japan, the European Community (of six), and the United Kingdom; the sector's trade importance and trade network; the trade composition; trade-agreement concessions which have taken place; and an account of the complaints submitted to the Commission concerning trade barriers affecting products in the sector. Tariff and trade data for the most significant subsectors in each sector are discussed in the same way.

The industrial sectors are numbered according to the order of their importance in total OECD export trade in industrial products in 1969, as follows:

- I-1. Nonelectrical machinery
- I-2. Transport equipment
- I-3. Ores, metals and metal manufactures
- I-4. Chemicals
- I-5. Textiles

---

<sup>1/</sup> See the appendix to chapter XIII.

- I-6. Electrical machinery
- I-7. Pulp, paper and paperboard, and manufactures
- I-8. Coal, petroleum, natural gas, and certain derived products
- I-9. Mineral products and fertilizers
- I-10. Professional, scientific and controlling instruments, clocks, and watches
- I-11. Wood and cork and manufactures
- I-12. Precious stones, precious metals and manufactures
- I-13. Rubber and rubber manufactures
- I-14. Raw hides and skins, leather and furskins, and manufactures
- I-15. Footwear and travel goods
- I-16. Musical instruments, sound recording or reproduction apparatus
- I-17. Firearms, ammunition, tanks and other armored fighting vehicles
- I-18. Furniture
- I-19. Toys and sporting goods
- I-20. Photographic and cinematographic supplies
- I-21. Works of art and collectors' pieces
- I-22. Office and stationery supplies
- I-23. Manufactured articles not elsewhere specified

Sectors I-1 through I-4 are found in volume 8, sectors I-5 through I-10 in volume 9, and sectors I-11 through I-23 in volume 10. A comparison of tariffs among sectors is found in chapter IV.

Some general observations on the interpretation of the data presented in the sectors is found in chapter XIII.

## WOOD AND CORK AND MANUFACTURES

The wood and cork and manufactures sector includes unmanufactured and semifinished wood or cork, pulpwood, and manufactured articles essentially of wood and cork. The sector excludes: Pulp, paper, and paperboard (and related products); furniture; toys and musical instruments; parts of firearms; smoking pipes; buttons; and pencils. <sup>1/</sup>

### MFN tariffs

MFN imports of wood and cork and manufactures into the five major countries usually face somewhat lower average tariffs than those for industrial products taken as a whole. The arithmetic averages for all products in the wood and cork sector range from 5.5 to 8.2 percent ad valorem; the weighted averages from 0.5 to 5.7 percent (chart I-11-A). The United Kingdom has the lowest arithmetic average tariff (5.5 percent) and Canada the highest (8.2 percent). The lowest weighted average is held by Japan (0.5 percent) and the highest by Canada (5.7 percent). For dutiable products only, the averages range from 6.3 percent to 15.4 percent ad valorem. Japan has the highest weighted average (15.4 percent). Canada has both the highest arithmetic average and second highest weighted average (14.2 percent and 13.4 percent, respectively). The substantial importation of MFN duty-free goods into all the major countries (particularly Japan) causes averages on all products to be significantly below those for dutiable imports alone.

---

<sup>1/</sup> For the specific coverage of this sector, see BTN chapters 44 and 45. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-II-A.--Average MFN tariff rates on wood, cork, and manufactures  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions by 20 percent on about one-fourth of the Japanese rates in this sector; in addition one class was reduced by 40 percent and one other by 100 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of tariff provisions by duty level is shown in table I-11-A. Tariff schedules for the five major countries all contain MFN duty-free provisions for wood and cork. Between 35 and 43 percent of the provisions of Canada, the United States, and Japan in this sector are duty free, as are 15 percent of European Community provisions and nearly one-fourth of those of the United Kingdom. All five major countries, except Canada, have one-fourth to over one-third of their provisions in the 5.1-10 percent ad valorem bracket. Over one-fourth of the Canadian provisions are in the 10.1-15 percent range, and a small portion of Canadian rates range into the 40.1-50 percent ad valorem bracket. The

highest rates of the United States and Japan are in the 30.1-40 percent bracket; the European Community and the United Kingdom have no rates above the 20 percent ad valorem level. The majority of MFN imports by the five major countries enter free (table I-11-B).

Table I-11-B.--Distribution, by duty level, of MFN imports of wood and cork and manufactures

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Imports of wood and cork and manufactures receiving preferential treatment are significant only for the United Kingdom, where one-fourth of total imports come from sources which receive preferences in dutiable products. Intra-EC shipments are equal to almost one-fourth of Community imports from outside sources.

The United States has the most detailed tariff schedule for wood and cork and manufactures with 130 tariff lines, while the European Community has the least detail with 47 tariff lines; Canada has 60 tariff lines and Japan and the United Kingdom each 74.

#### Trade importance

The wood and cork manufactures sector ranks 11th in OECD industrial exports and 9th in imports among the 23 industrial sectors. The sector accounts for 2 percent of OECD industrial exports and 3.6 percent of imports. For the United States, the sector is the 12th most important in industrial exports. It ranked 9th in 1969 and 1970 U.S. imports.

Imports by the GATT tariff study countries were valued at \$4 billion in 1967 and \$5.7 billion in 1970. Intra-EC shipments were an additional \$225 million in 1967 and \$332 million in 1970. OECD 1969 imports were \$5.7 billion (including \$295 million of intra-EC shipments) and exports were \$3.3 billion (see chart I-11-B). In 1970 OECD imports increased to \$6.1 billion and exports to \$3.6 billion.

#### Trade network

The five major countries account for 65 percent of OECD exports and nearly 90 percent of OECD imports. Most OECD exports of wood and cork go to developed countries, and three-fifths of OECD imports are supplied by developed countries. Canada is the principal exporter of wood and cork, followed by the United States. Japan draws half of U.S. exports; Canada and the European Community take most of the remainder

(chart I-11-C). The United States takes over three-fifths of Japanese exports and three-fourths of Canadian exports. EC exports to outside markets equal over three-fifths of intra-EC shipments. The United Kingdom is an insignificant supplier of wood, cork and manufactures (table I-11-C).

Wood and cork and manufactures rank 3rd in industrial imports for Japan, 8th for the United Kingdom, 9th for the United States and the European Community, and 12th for Canada. U.S. imports of wood and cork, and manufactures were valued at \$730 million in 1967, \$1.1 billion in 1969 and \$1.3 billion in 1971. The United States, Japan, and the

Chart I-11-C.--United States trade in wood and cork and manufactures, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

European Community are substantial importers of wood and cork and manufactures. Over half of U.S. imports are supplied by Canada; one-fourth by less developed countries. The United States is the source of over one-third of Japanese imports; LDC's, of over two-fifths. The imports of the European Community and the United Kingdom principally come from "other" OECD countries and non-OECD nations. Canada is not a very significant purchaser of wood, cork and manufactures (table I-11-D).

### Trade composition

Wood and cork and manufactures are divided into four subsectors: Wood and cork in the rough, wood-based panels, semimanufactured wood or cork products, and manufactured articles. The subsector covering semifinished products of wood and cork is the largest in both OECD exports and imports (58 percent of imports and 47 percent of exports), followed by wood and cork in the rough. The relative importance of the four subsectors is shown in chart I-11-D.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

For the United States, the United Kingdom, the European Community, and Canada, average tariff levels on January 1, 1972, for wood and cork and manufactures were below levels existing on pre-trade-agreement base

dates; for Japan, average tariff levels remained constant. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	14.4	4.4
European Community	1.6	1.2
United Kingdom	11.7	2.2
Japan	0.5	0.5
Canada	17.5	8.2

Concessions under the GATT have been made on all MFN provisions for wood and cork and manufactures in the tariff schedules of the European Community and on virtually all U.S. provisions. In the Canadian schedule, 89 percent of the tariff provisions, covering 99 percent of MFN imports are fully covered by GATT concessions; for the United Kingdom, 92 percent of provisions, covering 98 percent of imports. For Japan, 65 percent of tariff provisions covering 6 percent of MFN imports are fully covered by GATT concessions; for 7 percent of the provisions covering 1 percent of MFN imports, only part of an item is covered.

The national tariffs of all member states of the European Community prior to adoption of the Common External Tariff (CET) contained tariff concessions on wood and cork and manufactures negotiated under the GATT.

The number of such concessions totaled 197, of which 116 reflected rates higher than the autonomous rate established in the CXT, 28 were at the CXT rate, and 53 were below the CXT rate.

#### Trade complaints

The Tariff Commission received 59 complaints from manufacturers and traders of wood and cork and manufactures; about 40 percent of the complaints dealt with standards, about 25 percent with quantitative restrictions and licensing practices. Two-thirds of the complaints were against developed countries, principally the United States.

Standards.---Respondents complained that the lack of international standards among countries for calculating strength values of plywood and other lumber products and the inequality in standards among nations in land utilization hindered or distorted international marketing of forestry products. It was stated that since West German building codes vary from district to district, a wide range of materials are restricted. Complainants mentioned that in West Germany only five veneer plys in 3/8 inch softwood plywood may be used. In the United States, imported lumber products must be tested to meet specifications and standards set by U.S. industrial and professional associations designed for U.S. products. Foreign suppliers feel these standards are discriminatory because they are tailored to the U.S. product. Australia, New Zealand, Italy, and South Africa require certificates stating that imported lumber is disease free. U.S. producers of marine safety equipment complained that U.S. equipment must be approved during the manufacturing stage; this approval,

however, is not applicable to foreign equipment. The fact that the United States does not use the metric system of measure was felt to cause discrimination against U.S. products in the world market.

Quantitative restrictions and licensing.--U.S. importers claimed that the United States forced voluntary quotas upon foreign suppliers of plywood and lumber. Egypt was alleged to have embargoes in effect on wood manufactures unless the imports are specifically approved by a government ministry; Senegal embargoes certain construction materials. Iceland was reported to have global quotas on building board and reconstituted wood. Irish quotas on cork and cubes were a source of complaint. In addition, complaints were received concerning the requirement of import licenses for wood and related products by Malta, Italy, Cyprus, Barbados, Japan, Canada, and Latin America.

Miscellaneous practices.--Tunisian state trading practices regarding hardwood and hardwood products were felt to hamper trade. Brazilian government franchises on timber and alleged government control of imports by Canada, Japan, and Latin America were also considered to hinder international trade of wood products. U.S. importers of wood complained that the U.S. procedure of assessing duties on bases other than the actual purchase price discouraged trade. It was alleged that U.S. valuation based on the market price at the date of exportation, which may differ from the price at the time of the order, causes uncertainty as to the amount of the duty to be eventually paid.

U.S. producers felt that because of high shipping rates outbound from the United States they were unable to ship or produce lumber in

quantities large enough to compete with wood shipped under the shipping conference rate out of Canada. U.S. producers also complained of inadequate shipping facilities to Caribbean nations. A U.S. importer of Philippine lauan veneer objected to paying a higher U.S. duty on lauan veneer than on other veneers. Canada, Japan, and Latin America were reported to have special taxes on imports of wood and related products.

In the Commission's survey, respondents were requested to give their assessment of the restrictive trade effect of the barriers they reported by indicating whether trade in the affected product would show a "small," "moderate," or "significant" increase if the barrier were removed and, if possible, to estimate a dollar value for the increase. Only 10 respondents gave such assessments. Six estimated a "significant" trade increase and four a "moderate" increase. The number of dollar value estimates received in the wood and cork and manufactures area totaled about \$2 million.

## Wood and Cork in the Rough

Wood and cork in the rough include fuel wood; wood waste; wood charcoal; wood roughly squared or half-squared; natural cork, unworked, crushed, granulated and ground; and waste cork. <sup>1/</sup>

MFN tariffs

Arithmetic average MFN tariffs of the five major countries for all products in this subsector range from 0.3 to 4.8 percent ad valorem (chart I-11-E). Japan has the lowest arithmetic average tariff (0.3 percent ad valorem) and Canada the highest (4.8 percent). All the weighted

Chart I-11-E.--Average MFN tariff rates on wood and cork in the rough  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 44.01-04 and 45.01.

averages are extremely low, the highest being only 0.2 percent ad valorem. The substantial importation of MFN duty-free goods into the five major countries causes averages on all products to be significantly below averages for dutiable imports alone. For dutiable products only, Canada has the highest arithmetic average (12.9 percent); the United States the highest weighted average (6.4 percent). The lowest arithmetic average is that of Japan at 3.8 percent ad valorem; the lowest weighted average belongs to the Community (3.4 percent).

The distribution of MFN tariff provisions by duty level is shown in table I-11-E. At least 55 percent of the provisions of each of the

five major countries are duty free. Only the United States and Canada have rates over 10 percent for wood and cork in the rough. Virtually all MFN imports in this subsector enter the five major countries duty free (table I-11-F). With such large proportions of MFN imports duty free, imports of wood and cork in the rough receiving preferential tariff treatment are insignificant.

Table I-11-F.--Distribution, by duty level, of MFN imports of wood and cork in the rough

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Japan has the most detailed tariff schedule for wood and cork in the rough with 23 tariff lines, while Canada has the least detailed with 8 tariff lines. Schedules for the United States have 10 tariff lines; the United Kingdom and the European Community, each 9 lines.

#### Trade importance

Wood and cork in the rough comprise the second largest category of both OECD exports and imports in the wood and cork and manufactures sector (accounting for 17 percent of exports and 35 percent of imports). In 1969, OECD exports totaled \$555 million; imports, \$2 billion (chart I-11-F). In 1969, U.S. exports of wood and cork in the rough were \$305 million; imports were only \$34 million. U.S. 1971 imports were \$31 million. Among the 119 industrial subsectors, wood and cork in the rough ranks 20th in value of total imports by the GATT tariff study countries. Wood and cork in the rough rank third in value of MFN imports for Japan.

#### Trade network

The five major countries account for almost 80 percent of OECD exports and 90 percent of OECD imports. Japan takes nearly half of the

Chart I-11-F.--OECD trade in wood and cork in the rough, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

OECD exports of wood and cork in the rough. The United States is the principal exporter, accounting for roughly one-half of total OECD exports (table I-11-G). If intra-EC exports are excluded, the four remaining major countries each account for less than one-tenth of OECD exports. Japan is, by far, the principal importer of wood and cork in the rough, followed distantly by the Community. Non-OECD nations supply two-thirds of OECD imports, including 65 percent of Japanese imports. Canada, the United States, and the United Kingdom are insignificant importers in this subsector (table I-11-H).

Trade-agreement concessions

Reductions in the already low average duty levels on wood and cork in the rough made by the five major countries since their pre-trade-agreement base dates are shown in the following tabulation. The lower levels principally reflect concessions granted in reciprocal negotiations. For all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Though specific rates are significant in the tariffs of the United States and Canada, only a small proportion of imports are assessed at specific rates.

	<u>Pre-trade-agreement</u> (Percent ad valorem)	<u>January 1, 1972</u>
United States	0.2	0.1
European Community	0.5	0.2
United Kingdom	0.5	0.2
Japan	0.0	0.0
Canada	10.3	4.8

Concessions under the GATT have been made on all MFN provisions for wood and cork in the rough in the tariff schedules of the United States and the European Community. GATT concessions cover 75 percent of Canada's tariff provisions and all Canadian MFN imports; 78 percent of United Kingdom provisions (87 percent of imports); and about two-thirds of Japanese provisions, covering 6 percent of imports.

The national tariffs of all member states of the European Community prior to adoption of the Common External Tariff (CXT) contained tariff concessions on wood and cork in the rough under the GATT. The number of such concessions totaled 41, of which 22 were at rates above the CXT autonomous rate, 13 were at the CXT rate, and 6 were below the CXT rate.

Specific tariff concessions made by the five major countries on wood in the rough, the largest category of trade in this subsector, are shown in table I-11-I, which illustrates the primarily duty-free status of products in this subsector.

Table I-11-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on wood in the rough

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free	Free	Free	200.35, .60
Canada-----	Free	Free	Free	50000-1; 50010-1; 50040-1

	8%; Free	6%	3%; Free	44.03 B
United Kingdom-----	Free	Free	Free	44.03 (A)(B)
	10%	8%	4%	44.03 (C)(1)
Japan-----	20%	20%	Free	44.03-1
	5%	5%	5%	44.03-2
	Free	Free	Free	44.03-3

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

## Wood-Based Panels

Wood-based panels include plywood, reconstituted wood, blockboard, inlaid wood, wood marquetry, and laminated wood products such as veneered panels and sheets. <sup>1/</sup>

MFN tariffs

Arithmetic average MFN tariffs of the five major countries for wood-based panels range from 10.8 to 18 percent ad valorem; the weighted averages from 5.9 to 15.9 percent. For all products, the United Kingdom

Chart I-II-G.--Average MFN tariff rates on wood-based panels  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 44.15 and 44.18.

has both the lowest arithmetic and weighted tariff averages and Japan holds the highest averages. The averages for dutiable products are identical to those for all products since there are no duty-free provisions in this subsector (chart I-11-G).

The distribution of MFN tariff provisions by duty level, is shown in table I-11-J. The tariff schedules of the five major countries contain

Table I-11-J.--Distribution, by duty level, of MFN tariff provisions for wood-based panels

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	-	-	-	-	-
0.1-5.0 percent----	-	-	-	-	25.0

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

no MFN duty-free provisions for wood-based panels. Half of the provisions of both the United States and the United Kingdom are in the 5.1-10 percent ad valorem bracket, as are one-fourth of the Canadian provisions. Three-fourths of the provisions of Canada and all EC provisions are in the 10.1-15 percent bracket. Three-fifths of the Japanese provisions are in the 15.1-20 percent bracket, as are 30 percent of those of the United States and one-fourth of United Kingdom provisions.

All Canadian, European Community and over four-fifths of Japanese imports enter at rates between 10.1 and 15 percent ad valorem. Nearly 60 percent of U.S. imports enter at rates between 15.1 and 20 percent ad valorem; the remaining U.S. imports enter in the 5.1-10 percent range. About 90 percent of United Kingdom imports enter at rates in the 0.1-5 percent range (table I-11-K).

Table I-11-K.--Distribution, by duty level, of MFN imports of wood-based panels

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

0.1-5.0 percent----	-	-	-	-	88.4
5.1-10.0 percent----	-	42.1	-	-	8.1
10.1-15.0 percent----	100.0	-	82.0	100.0	-
15.1-20.0 percent----	-	57.9	18.0	-	3.4
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Imports of wood-based panels receiving preferential tariff treatment are significant for the United Kingdom, the United States, and the European Community. Such treatment is accorded two-thirds of total United Kingdom imports and about 16 percent of total U.S. and EC imports.

The United States has the most detailed MFN tariff schedule for wood-based panels with 24 tariff lines, while the Community has the least detailed with 3 tariff lines; Canada has 8 tariff lines; Japan has 5 and the United Kingdom, 4.

#### Trade importance

Wood-based panels account for about 12 percent of OECD exports of wood and cork and manufactures and 11 percent of OECD imports. In 1969, OECD exports of wood-based panels totaled \$393 million; imports, \$651 million (chart I-11-H). In 1969, U.S. imports of wood-based panels were \$253 million. U.S. 1971 imports were \$263 million. This subsector is the third most important category of wood and cork and manufactures in terms of imports.

Chart I-11-H. -- OECD trade in wood-based panels, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

Country of destination data are not available in OECD statistics for the United States and the United Kingdom. The European Community, Japan and Canada collectively account for two-thirds of known OECD exports of wood-based panels. The five major countries account for more than 90 percent of OECD imports. Over four-fifths of OECD exports of wood-based panels, for which destinations are known, go to the five major countries; about two-fifths of OECD imports are supplied by the five major countries. If intra-EC exports are excluded, Japan is the primary known exporter (table I-11-L). Over 70 percent of Japanese exports go to the United States. Though OECD country of

destination data are unavailable, it is possible to state that Canada receives about one-fourth of U.S. exports, while Denmark receives roughly one-fifth and the United Kingdom, about 12 percent. Nearly three-fifths of Canada's exports are sent to the United Kingdom.

Intra-EC exports exceed EC outside shipments by about three to one. The United States is the most significant importer, followed by the United Kingdom. Three-fifths of U.S. imports have their source in non-OECD nations; another fourth comes from Japan. About 40 percent of United Kingdom imports come from "other" OECD countries, 30 percent from non-OECD nations. EC imports from outside countries are equal to about half of intra-EC imports. Canadian and Japanese imports are insignificant (table I-11-M).

Trade-agreement concessions

As the tabulation below shows, for all of the five major countries average tariff levels for wood-based panels on January 1, 1972, were below levels existing on pre-trade-agreement base dates. The largest reduction was in the U.S. tariff average which fell 19 percentage points. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. For all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan's tariff rates in this subsector were not unilaterally reduced in 1972.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	34.1	15.1

Japan	20.0	15.9
Canada	31.7	13.8

Concessions under the GATT have been made on all MFN provisions for wood-based panels in the tariff schedules of the United States and the European Community. In the Canadian schedule, 88 percent of tariff provisions, covering 100 percent of imports, are fully covered by GATT concessions; in the United Kingdom schedule, 75 percent of the provisions, covering 93 percent of imports; and in the schedule of Japan, 40 percent of the provisions, covering 82 percent of imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on wood-based panels negotiated under the GATT. The number of such concessions totaled 17, of which 12 reflected rates higher than the autonomous rate established in the CXT, 1 was at the CXT rate, and 4 were below the CXT rate.

Specific tariff concessions made by the five major countries on plywood, the largest category of trade in this subsector, can be seen in table I-11-N, where substantial reductions for the United States, the United Kingdom and Canada and moderate reductions for the European Community and Japan are shown.

Table I-11-N.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on plywood

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	40%; 50%	17%-40%	7.5%-20% <sup>2/</sup>	240.10-.25
Canada-----	35%	20%	15% <sup>3/</sup>	50715-1
European Community----	15%	14%; 15%	13%	44.15
United Kingdom-----	10%	10%	5%	44.15 (A)
Japan-----	20%	20%	15%; 20%	44.15

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> About three-fourths of U.S. imports in 1972 were dutiable at 20 percent ad valorem and most of the remainder at 7.5 percent or 10 percent ad valorem.

<sup>3/</sup> Rate shown is the official MFN rate, presently superseded by a temporary rate of 10 percent. The temporary rate is subject to possible renewal in February, 1974.

Semimanufactured Products  
of Wood and Cork

Semimanufactured products of wood and cork include all lumber, paving blocks, railway or tramway sleepers, staves, hoopwood, split poles, piles, pickets, stakes, wooden sticks, wood wool, and wood flour. Also covered in this subsector are planed, tongued, grooved, U-jointed, and beaded wood; cellular wood panels; wooden beadings; and natural cork in blocks, plates, sheets or strips. 1/

MFN tariffs

Arithmetic average MFN tariffs for all semimanufactured wood or cork products range from 2.3 to 5.4 percent ad valorem; the weighted averages from 0.2 to 2.2 percent. For all products (combined free and dutiable), the United States has the lowest arithmetic average tariff and Japan, the highest. The lowest weighted average is held by the European Community (0.2 percent) and the highest by Canada (2.2 percent). The substantial importation of MFN duty-free semimanufactured products of wood and cork into the five major countries, causes the averages for dutiable products only to be significantly greater than those for all products. For dutiable products, Canada has the highest arithmetic average (10.8 percent ad valorem) and the second highest weighted average (9.4 percent). Japan holds the highest weighted average at 10.3 percent.

---

1/ For the specific coverage of this subsector, see BTN headings 44.05-.14; 44.16-.17; 44.19 and 45.02.

The Community has the lowest arithmetic average (5.3 percent) and the United States, the lowest weighted average (4 percent) (chart I-11-I).

Chart I-11-I.--Average MFN tariff rates on semi-manufactured wood or cork products  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 on an insignificant part of Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of MFN tariff provisions by duty level is shown in table I-11-0. All of the five major countries have a significant proportion of duty-free tariff provisions. Over 65 percent of U.S. provisions are duty free, as are three-fifths of Canada's provisions, two-fifths of Japan's provisions, one-fourth of United Kingdom provisions and 17 percent of those of the United Kingdom. About half of the EC and United Kingdom provisions are in the 0.1-5 percent ad valorem bracket,

Table I-11-0.--Distribution, by duty level, of MFN tariff provisions for semi-manufactured wood or cork products

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	59.4	65.7	39.3	16.7	24.1
0.1-5.0 percent----	6.3	14.3	17.9	55.6	48.2

Note.--Due to rounding, figures may not add to 100 percent.

as are 18 percent of Japan's provisions. Canada, the United States and Japan have between 16 and 29 percent of their provisions in the 5.1-10 percent range. At least three-fourths of the imports of all five major countries enter duty free (table I-11-P). Only Canada has a

Table I-11-P.--Distribution, by duty level, of MFN imports of semi-manufactured wood or cork products

Note.--Due to rounding, figures may not add to 100 percent.

significant amount of imports entering at rates above 10 percent. With such large proportions of MFN imports entering duty free, imports of semimanufactured wood and cork products receiving preferential treatment are insignificant.

The United States has the most complex MFN tariff schedule for semifinished products of wood and cork with about 70 tariff lines, while

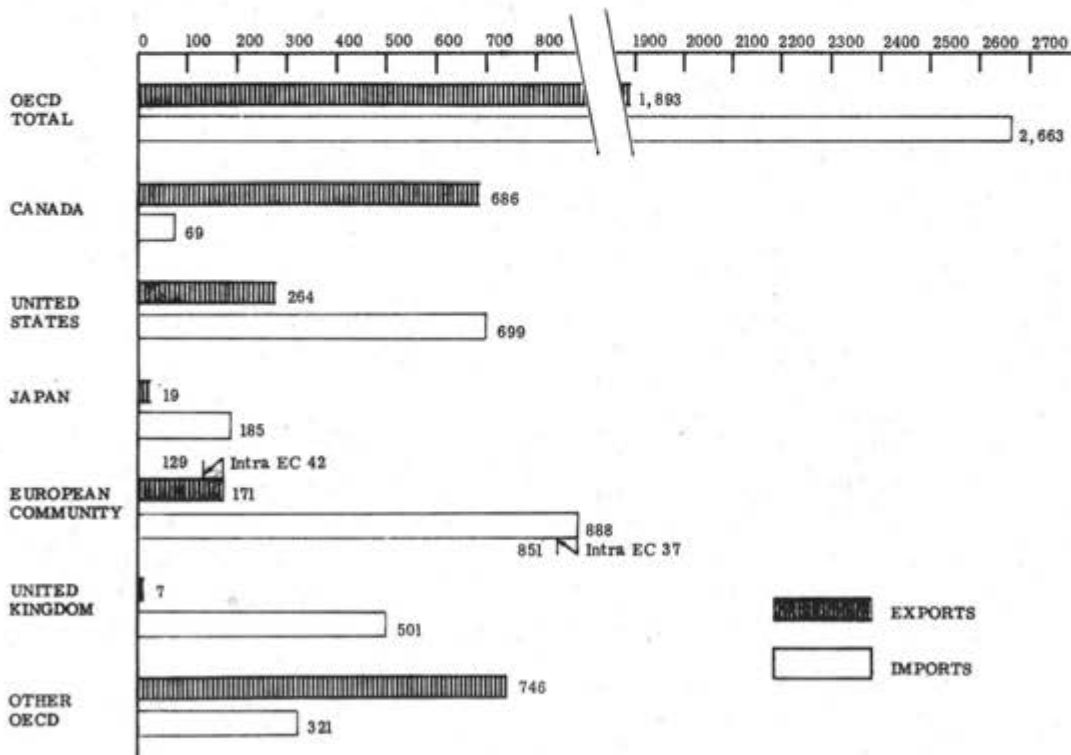

the European Community has the simplest with 18 tariff lines; Canada has 32 tariff lines; the United Kingdom has 29 tariff lines and Japan has 28 tariff lines.

### Trade importance

Semimanufactured products of wood and cork account for 58 percent of OECD exports of wood and cork and manufactures and 47 percent of imports. In 1969, OECD exports totaled \$1.9 billion; imports \$2.7 billion (chart I-11-J). In 1969, U.S. exports of semimanufactured products of wood and cork were \$264 million; imports were \$699 million. U.S.

Chart I-11-J.--OECD trade in semi-manufactured wood or cork products, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

1971 imports were \$831 million. Among the 119 industrial subsectors, semimanufactured products of wood and cork rank 10th in value of MFN imports by GATT tariff study countries; 11th in value for total U.S. imports; 13th for Japan; 4th for the Community and 6th for the United Kingdom.

### Trade network

The five major countries account for three-fifths of OECD exports of semimanufactured wood and cork products and almost 90 percent of OECD imports. Canada is the principal exporter, followed distantly by the United States and the European Community (table I-11-Q). Japan and the United Kingdom are insignificant exporters. The European Community

#### Trade-agreement concessions

Reductions in average duty levels on semimanufactured products of wood and cork which have taken place in tariffs of the five major countries since pre-trade-agreement base dates are shown in the following tabulation. The largest reduction, nearly 10 percentage points, was made in the tariff of the United Kingdom. The lower levels,

for the most part, reflect concessions granted in reciprocal negotiations. For all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. The United States and the United Kingdom have specific rates in this sub-sector (7.1 and 3.4 percent of tariff lines, respectively) which cover less than 2 percent of imports in both cases.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	5.5	0.5
European Community	0.4	0.2
United Kingdom	10.6	0.7
Japan	1.1	0.8
Canada	13.9	4.4

Concessions under the GATT have been made on all MFN provisions for semimanufactured products of wood and cork in the tariff schedules of the United States and the European Community. In the United Kingdom's schedule, 93 percent of tariff provisions covering 100 percent of MFN imports are fully covered by GATT concessions; in the Canadian schedule, 94 percent of the provisions covering 99 percent of MFN imports. For Japan, 57 percent of tariff concessions covering 1 percent of MFN imports are fully covered by GATT concessions; for 7 percent of the provisions covering 1 percent of MFN imports, only part of an item is covered.

The national tariffs of all member states of the European Community prior to adoption of the Common External Tariff (CET) contained tariff concessions on semimanufactured products of wood and cork negotiated

under the GATT. The number of such concessions totaled 75, of which 44 reflected rates higher than the autonomous rate established in the CXT; 10 were at the CXT rate; and 21 were below the CXT rate.

Specific tariff concessions made by the five major countries on softwood lumber appear in table I-11-S.

Table I-11-S.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on softwood lumber

(% = Percent ad valorem)

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Range of ad valorem equivalents of specific rates of duty of \$4, \$3, or \$1 per 1000 feet board measure, calculated on 1971 import values.

## Manufactured Articles of Wood and Cork

Manufactured articles of wood and cork include items such as picture frames, cases, boxes, crates, coopers' products, carpentry and joinery, household utensils, tools and tool handles, spools, bobbins, lamps, bowls, ornaments, and items of cork and agglomerated cork. Some important manufactures of wood not included are furniture, toys, and musical instruments. 1/

MFN tariffs

Arithmetic average MFN tariffs for all manufactured articles of wood and cork range from 6.5 to 11.4 percent ad valorem; the weighted averages from 4.4 to 11.8 percent. The United Kingdom has the lowest arithmetic average tariff and Japan, the highest. The lowest weighted average is held by the United Kingdom and the highest by Canada. For dutiable products only, the European Community and Japanese averages are identical to those for all products (reflecting their lack of duty-free provisions). The remaining averages are somewhat higher. Canada has the highest averages for dutiable products only (16.2 percent ad valorem for the arithmetic and 14.8 percent for the weighted). The European Community has the lowest arithmetic average (7.9 percent) and the United States has the lowest weighted average (8 percent) (chart I-11-K).

---

1/ For the specific coverage of this subsector, see BTN headings 44.20-.28, and 45.03-.04.

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Canada has an additional 70 percent of its imports in the 10.1-15 percent ad valorem range. Half of U.S. imports enter at rates between 5.1-10 percent ad valorem. While 70 percent of Japan's imports are in the 5.1-10 percent range, about 30 percent are in the 10.1-15 percent bracket. European Community imports are split between the 5.1-10 percent rate range and the 15.1-20 percent range.

Imports of manufactured articles of wood and cork receiving preferential treatment are significant only for the United Kingdom, where half

of total imports come from sources accorded preferential treatment on dutiable products.

The United States has the most detailed MFN tariff schedule for manufactured articles of wood and cork with 77 tariff lines, while Japan and the European Community have the least with 18 and 17 tariff lines, respectively; Canada has 39 tariff lines and the United Kingdom has 32.

### Trade importance

Manufactured articles of wood and cork account for 13 percent of OECD exports of wood and cork and manufactures and 7 percent of imports. In 1969, OECD exports totaled \$413 million; imports \$371 million (chart I-11-L). In 1969, U.S. exports of manufactured articles of wood and

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

cork were \$49 million; imports were \$142 million. U.S. 1971 imports were \$151 million.

### Trade network

The five major countries account for two-thirds of OECD exports and nearly 85 percent of OECD imports. If intra-EC exports are excluded, the principal exporter is Canada. About 96 percent of Canadian exports go to the United States. Most U.S. exports are shipped to Canada and non-OECD nations. Most Japanese exports are destined for the United States. Complete country of destination data are unavailable for 6 percent of EC exports and 10 percent of United Kingdom exports. Of known EC outside exports, the United States, "other" OECD countries, and non-OECD nations each receive about 30 percent. The United Kingdom is not a significant supplier (table I-11-V). The United States is the

### Trade-agreement concessions

For the five major countries, average tariff levels on January 1, 1972, for manufactured articles of wood and cork were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal

negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most Japanese tariff rates in this subsector were unilaterally reduced in 1972; calculations based on Japan's new reduced rates would show an average level of about 9.0 percent. The United States and Canada have specific rates in this subsector (30 percent and 3 percent of tariff lines, respectively) which cover 10 percent of U.S. imports and less than 1 percent of Canadian imports.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	21.2	5.1
European Community	16.5	10.9
United Kingdom	19.3	4.4
Japan	18.4	11.3
Canada	19.7	10.8

Concessions under the GATT have been made on all MFN provisions for manufactured articles of wood and cork in the tariff schedules of the European Community and on nearly all MFN provisions for the United Kingdom. In the Canadian schedule, 87 percent of the tariff provisions, covering 99 percent of MFN imports are fully covered by GATT concessions; in the Japanese schedule, 83 percent of provisions covering 67 percent of MFN imports. For the United States, 99 percent of tariff concessions covering 72 percent of MFN imports are fully covered by GATT concessions. For 1 percent of the U.S. provisions, covering 28 percent of MFN imports, only part of an item is covered.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on manufactured articles of wood and cork negotiated under the GATT. The number of such concessions totaled 64, of which 38 reflected rates higher than the autonomous rate established in the CXT; 4 were at the CXT rate; and 22 were below the CXT rate.

Specific tariff concessions made by the five major countries on wood shingles and shakes appear in table I-11-X. The United States and Canada maintained duty-free status; however, reductions for the European Community, the United Kingdom, and Japan were significant.

Table I-11-X.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on wood shingles and shakes

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free	Free <sup>2/</sup>	Free <sup>2/</sup>	200.85
Canada-----	Free	Free	Free	50015-1
European Community--	14%	14%	7%	44.28 C
United Kingdom-----	20%	20%	15%	44.28 (G)
Japan-----	20%	20%	10%	44.28-2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> There is no trade agreement commitment with respect to the duty-free status of red cedar shingles and shakes. All other wood shingles and shakes are bound free in the GATT.

## PRECIOUS STONES, PRECIOUS METALS AND MANUFACTURES

Precious stones, precious metals and manufactures include pearls, natural and synthetic precious and semiprecious stones, all forms of silver, gold, and platinum (except gold bullion), noncirculating coins, and jewelry (including imitation jewelry). <sup>1/</sup>

### MFN tariffs

Average tariff levels for the precious stones and precious metals sector are moderately lower than those for industrial products taken as a whole. For all products (dutiabale and free), the arithmetic averages range from 3.9 to 12.5 percent ad valorem; the weighted averages from 0.3 to 5.6 percent. The European Community has the lowest arithmetic average tariff (3.9 percent) and the United States and Japan the highest (12.5 and 12.3 percent, respectively). The lowest weighted average is held by the European Community (0.3 percent) followed by the United Kingdom (0.8 percent), and the highest by Canada (5.6 percent) (chart I-12-A). Tariff averages on all products are significantly lower than averages on dutiable imports alone due to the numerous duty-free provisions and the substantial MFN importation of duty-free precious stones and metals. Canada, with the highest arithmetic average (18.3 percent) and the highest weighted average (22 percent) for dutiable items, varies most significantly in

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 71.01-.03; 71.05-.16; and 72.01. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart 1-12-A. -- Average MFN tariff rates on precious stones, precious metals, and manufactures  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

this regard. Japan has the lowest weighted average for dutiable products at 5.5 percent ad valorem and the Community the lowest arithmetic average (5.3 percent).

There are striking differences in the average duty levels for the three subdivisions of this sector. Precious stones and pearls, the most important in trade, have low rates of duty

usually associated with raw materials. Unworked or semimanufactured precious metals, for most of the five major countries, have duty levels in the range usually associated with intermediate products. The finished articles of precious stones or precious metals have relatively high duties.

For the sector as a whole, the distribution of MFN tariff provisions, by duty level, is shown in table I-12-A. The largest

Table I-12-A.--Distribution, by duty level, of MFN tariff provisions for precious stones, precious metals, and manufactures

Note.--Due to rounding, figures may not add to 100 percent.

portion of Canadian and United Kingdom rate provisions are free (51.2 and 36 percent, respectively). Tariff schedules of the United States, Japan, and the European Community also contain a significant number of duty-free provisions for precious stones and precious metals. The largest portions of rate provisions for the United States are in the 10.1-15 and 15.1-20 percent ad valorem brackets (22.2 percent in each). For Japan, 32.5 percent of the provisions fall in the 15.1-20 percent ad valorem bracket; and for the European Community, 46.2 percent are in the 0.1-5 percent ad valorem bracket. The rates of Canada and Japan range into the 20.1-25 percent ad valorem bracket. Only the United States has rates over 25 percent.

The largest portion of MFN imports for all countries except Japan enters duty free; for Japan slightly more than 40 percent enter free; most of the remainder enters at low rates between 0.1 and 5 percent ad valorem (table I-12-B).

Table I-12-B.--Distribution, by duty level, of MFN imports of precious stones, precious metals, and manufactures

Note.--Due to rounding, figures may not add to 100 percent.

Imports of precious stones and precious metals receiving preferential tariff treatment are insignificant for the five major countries. Intra-European Community shipments are equal to 36 percent of Community imports from outside sources.

The United States has the most detailed tariff schedule for precious stones and precious metals, with 90 tariff lines, while the United Kingdom has the least, with 25 lines. Canada has 41 lines; Japan, 40 lines; and the European Community, 39 lines.

#### Trade importance

The precious stones and precious metals sector ranks 12th in OECD exports and 11th in imports. The sector accounts for about 2 percent of OECD industrial exports and imports. For the United States, the sector ranks 14th in industrial exports. It was 11th in 1969 U.S. imports but dropped to 12th in 1970.

Imports by the GATT tariff study countries were valued at \$2.5 billion in 1967, and \$3.1 billion in 1970. Intra-EC shipments were an additional \$173 million in 1967 and \$304 million in 1970. OECD 1969 imports were \$3.9 billion (including \$264 million of intra-European Community shipments) and exports were \$2.9 billion (see chart I-12-B). In 1970, OECD imports were \$3.5 billion; exports \$2.5 billion.

Chart I-12-B. -- OECD trade in precious stones and precious metals, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for over 90 percent of OECD exports and imports. Nearly two-thirds of OECD exports go to the five major countries; one-fifth to non-OECD countries. About half of OECD imports are supplied by the five major countries.

The European Community, the United Kingdom, and less developed countries collectively take almost 70 percent of U.S. exports; separately each draws between 20 and 25 percent (chart I-12-C).

Chart I-12-C. -- United States trade in precious stones and precious metals, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Complete country of destination data are unavailable for 8 percent of Canadian exports, 16 percent of Japanese exports and 7 percent of EC exports. Of the remaining exports, the United States takes 92 percent of Canada's exports. Over one-fourth of the export shipments of the European Community are intra-European Community trade. Non-OECD countries take about 30 percent of the European Community's outside exports, for which destinations are known; LDC's and the United States, one-fourth. The United Kingdom ships one-third of its exports to the European Community and approximately equal amounts (25 percent) to the United States and non-OECD (i.e., chiefly Commonwealth) countries (see table I-12-C). Japan is not a significant exporter.

U.S. imports of precious stones, precious metals and manufactures were valued at \$603 million in 1967, \$834 million in 1969, and \$793 million in 1971. Non-OECD countries and the United Kingdom each supply about 30 percent of U.S. imports; the European Community and LDC's supply approximately 20 percent each (table I-12-D).

X = Less than \$500,000.

Note.--Complete country of origin data are not available for 9 percent of Canadian imports and 7 percent of EC imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

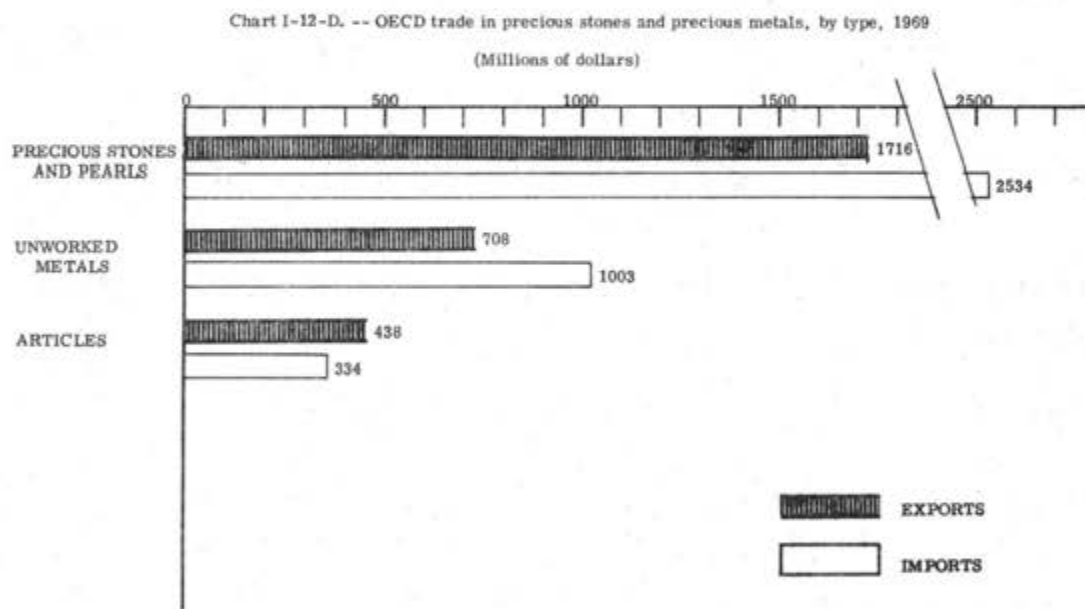

Complete country of origin data are unavailable for 9 percent of Canadian imports and 7 percent of EC imports. The United States is the source of over half of Canada's imports. Over half of Japanese imports come from non-OECD countries. Among the OECD countries, the European Community and the United States each supply about 15 percent of Japan's entries. Non-OECD countries and the United Kingdom each supply between 36 and 39 percent of EC imports from outside countries, LDC's one-fourth, and the

United States one-tenth. Intra-Community shipments amount to over one-fourth of EC imports from external sources, for which origin data are available. Non-OECD (chiefly Commonwealth) countries are the major source of United Kingdom imports (about two-thirds).

#### Trade composition

Trade in precious stones, precious metals, and manufactures is divided into three subsectors, of which precious stones and pearls is by far the largest in both exports and imports (approximately 60 percent of each), followed by unworked precious metals (chart I-12-D).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

For the United States, Japan, and Canada, average tariff levels on January 1, 1972, for precious stones, precious metals, and manufactures were substantially below levels existing on

pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this sector were unilaterally reduced in 1972. <sup>1/</sup> Calculations based on Japan's new reduced rates would show an average level of about 2.6 percent. The EC and United Kingdom tariff levels remained relatively constant at a low level.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	11.3	3.1
European Community	0.3	0.3
United Kingdom	0.7	0.8
Japan	6.2	3.2
Canada	19.3	8.9

Concessions under the GATT have been made on all MFN provisions for precious stones, precious metals and manufactures in the tariff schedules of the United States and the European Community. Seventy-three percent of Canada's provisions, covering 68 percent of Canadian imports, have GATT concessions. Eighty-eight percent of Japanese provisions, covering 90 percent of imports, are bound under the GATT as are 80 percent of United Kingdom provisions, covering 75 percent of imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on precious stones and metals

---

<sup>1/</sup> BTN categories 71.12, 71.13, 71.14(2), 71.15(2), and 71.16, applicable to a negligible amount of imports, are not subject to the 20 percent reductions.

negotiated under the GATT. The number of such concessions totaled 48, of which 14 reflected rates higher than the autonomous rate established in the CXT; 15 were at the CXT rate; and 19 were below the CXT rate.

#### Trade complaints

In its survey of trade barriers, the Tariff Commission received about 35 complaints from manufacturers and traders of precious stones, precious metals, and manufactures. About half of the complaints were against quantitative restraints and licensing, and one-fourth against import duties or taxes. Complaints were equally divided between the developed and the less developed countries. About one-third were directed against nine countries in Western Europe, particularly France.

Quantitative restraints and licensing.--Quotas on jewelry were reported in Finland, New Zealand and France (France allows only 18 karat gold jewelry to enter, banning lesser qualities). Embargoes against gold and silver filigree jewelry were reported in Malta; against diamonds (considered a luxury) in Ceylon, and against precious jewelry in Venezuela, Mexico and Spain. All the foregoing quotas and embargoes were reported to be administered through various licensing systems. It was also reported that licensing practices in all the more important Latin American countries, Middle Eastern and North African countries and the Asian subcontinent virtually ban U.S. jewelry exports. Articles of more than 50 percent gold are reported to be embargoed by Japan, unless such articles are indispensable for industrial or other use. U.S. gold exports to Japan are also impeded because Japanese gold users are required to buy from the Japanese

government. In the United States, citizens are not allowed to hold or trade gold without a license issued by the Treasury Department.

Import duties, taxes and other charges.--The level of import duties on jewelry in several Western European countries, Canada, Japan and the Philippines drew complaints. Additional taxes or charges on jewelry imports in the form of sales taxes, border tax adjustments, luxury taxes, equalization taxes and fees for testing products containing precious metals were the subject of complaints against Sweden, the United Kingdom, Norway, France, Belgium-Luxembourg, Spain, and West Germany. A U.S. exporter objected to Canada assessing duty on the wholesale value of his goods, rather than the actual import price into Canada, thereby increasing the duty collection by one-third. Venezuela, for purposes of duty assessment, values gold-filled jewelry which is more than 5 percent gold as pure gold jewelry.

Miscellaneous practices.--Swiss industrial standards regarding jewelry require that silver plate must be fused to base metal (not electroplated). The complexity of United Kingdom and French hall-marking procedures, verifying metal content, quality and authenticity of imported precious metals, was reported burdensome to trade. Air cargo rates on jewelry were reported higher when shipping from the United States than when shipping to the United States.

None of the respondents to the Commission's survey indicated the amount of increase which would result if the reported trade barrier were removed.

## Precious Stones and Pearls

Precious stones and pearls include all unworked pearls, gem and industrial diamonds, and other precious and semiprecious stones (including synthetic). <sup>1/</sup>

MFN tariffs

Average MFN tariffs for precious stones and pearls are close to world tariff averages for raw materials (i.e., zero in many cases). Arithmetic averages for all products range from zero to 5.3 percent ad valorem; weighted averages from zero to 3.4 percent (see chart I-12-E). For all products, with the exception of Japan,

Chart I-12-E. -- Average MFN tariff rates on precious stones and pearls

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 71.01-.03.

all weighted averages are zero; arithmetic averages are low, Japan having the highest (5.3 percent ad valorem). For dutiable products only, Japan again has the highest weighted average (5.1 percent) and the second highest arithmetic average (6.8 percent). The United States holds the highest arithmetic average at 7.4 percent. As all Canadian imports are free, both of its averages are the lowest at zero.

The distribution of MFN tariff provisions for precious stones and pearls, by duty level, is shown in table I-12-E. Most provisions of the five countries for precious stones and

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

pearls are below 10 percent ad valorem. However, Japanese rates range into the 15.1-20 percent ad valorem bracket; U.S. rates into the 20.1-25 percent bracket. The largest portion of rate provisions is in the bracket of 0.1-5 percent ad valorem for Japan and the European Community; tariff schedules for these countries also contain substantial duty-free provisions. For the United Kingdom, the largest portion of MFN provisions (50 percent) are duty free and all Canadian MFN provisions are duty free. Thirty-five percent of U.S.

rate provisions are free and another 35 percent are in the 0.1-5 percent range.

For Canada, the European Community and the United Kingdom, virtually all MFN imports are duty free, as are 57 percent of U.S. imports. The largest portion of Japanese imports enters at rates between 0.1-5 percent ad valorem (table I-12-F).

Table I-12-F.--Distribution, by duty level, of MFN imports of precious stones and pearls

(In percent)

5.1-10.0 percent----	-	-	-	-	-
10.1-15.0 percent--	-	-	-	-	-
15.1-20.0 percent--	-	-	.7	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

With the exception of the United Kingdom, imports of precious stones and pearls receiving preferential tariff treatment are insignificant for the five major countries. Such treatment is accorded two-thirds of total United Kingdom imports. Intra-European Community shipments are equal to one-eighth of Community imports from outside sources.

The United States exhibits the most complex tariff schedule for precious stones and pearls with 20 tariff lines; the United Kingdom has the simplest, 6 lines. Schedules for Canada, Japan and the Community have six to eight lines for this subsector.

#### Trade importance

Precious stones and pearls account for roughly 60 percent of OECD trade in the precious stones and precious metals sector.

In 1969, OECD exports totaled \$1.7 billion; imports \$2.5 billion. In 1970, exports and imports had dropped to \$1.4 and \$2.2 billion respectively. Among the 119 industrial subsectors, precious stones and pearls rank 14th in value of total imports by GATT tariff study countries; 10th in value for total U.S. imports, 4th for the United Kingdom; and 14th for the European Community. Diamonds account for most of the trade (69 percent) in this category. The United States is a relatively substantial importer of diamonds but not a significant exporter. U.S. MFN imports of diamonds are \$449 million; European Community MFN entries amount to \$360 million. United Kingdom imports are \$218 million from MFN sources plus \$379 million in preferential imports from Commonwealth countries. U.S. imports of all precious stones and pearls were \$607 million in 1969 and declined in 1970 to \$526 million.

#### Trade network

The five major countries account for over 90 percent of OECD exports and imports. The trade pattern reflects chiefly the trade in diamonds, most of which are mined in African countries, shipped to distribution centers in Europe, redistributed for cutting, and finally shipped to the "consuming" country. The United Kingdom accounts for almost half of OECD exports, shipping chiefly to the Community, the United States, and to IDC's (table I-12-G). The Community is the second largest exporter, followed by the United States.

The United Kingdom, the Community (including intra-EC imports), and the United States, in that order, are the principal importers, and together account for almost 90 percent of OECD total imports (table I-12-H). Complete country of origin data are unavailable

for 8 percent of EC imports. Non-OECD countries supply three-quarters of United Kingdom imports, 37 percent of U.S. entries and 49 percent of EC outside entries.

#### Trade-agreement concessions

All MFN provisions for precious stones and pearls in the U.S. and EC schedules are covered by GATT concessions, as are 89 percent of Japan's provisions, 83 percent of the United Kingdom's and 71 percent of Canada's. Significant reductions have been made in rates which were not already initially free.

The national tariffs of the EC member states prior to the adoption of the Community's Common External Tariff (CET) contained tariff concessions on precious stones and pearls negotiated under the GATT. The number of such concessions totaled 14, of which 1 reflected a rate higher than the CET rate.

## Unworked or Semimanufactured Precious Metals

Unworked or semimanufactured precious metals include all unworked or semimanufactured silver, rolled silver, gold, rolled gold on base metal or silver, platinum and platinum group metals, rolled platinum, and waste and scrap of precious metals. <sup>1/</sup>

MFN tariffs

For all products, arithmetic average MFN tariff levels on unworked or semimanufactured precious metals range from 2.9 percent ad valorem to 11 percent; weighted averages from zero to 0.8 percent (chart I-12-F). All the weighted averages are zero or nearly

Chart I-12-F. -- Average MFN tariff rates on unworked or semi-manufactured precious metals

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 71.05-.11.

zero; the European Community has the lowest arithmetic average (2.9 percent) and the United States the highest (11 percent). For dutiable products, Canada has the highest arithmetic average (15 percent) and the highest weighted average (15.2 percent); the European Community has the lowest averages. Canada's averages on all products are significantly lower than its averages on dutiable imports alone due to the large portion of duty-free tariff provisions in Canada's schedule and the substantial Canadian importation of MFN duty-free unworked metals.

The distribution of MFN tariff provisions for unworked or semimanufactured precious metals, by duty level, is shown in table I-12-I. All five major countries have MFN duty-free provisions; for Canada, 64 percent of MFN rate provisions are free.

Table I-12-I.--Distribution, by duty level, of MFN tariff provisions for unworked or semi-manufactured precious metals

(In percent)

The largest portion of rate provisions for the European Community and the United Kingdom are in the 0.1-5 percent ad valorem bracket (about 65 percent); for Japan, the 5.1-10 percent bracket (45 percent). Twenty-seven percent of U.S. rate provisions are in the 10.1-15 percent bracket, and 27 percent in the 15.1-20 percent

bracket. Rates for Japan and the European Community are all 10 percent or below; for the United Kingdom, 5 percent or below. Canadian rates range into the 15.1-20 percent bracket; U.S. rates into the 20.1-25 percent bracket.

Virtually all U.S., Canadian, EC, and United Kingdom imports of unworked or semimanufactured precious metals enter duty free; for Japan, 77 percent enter duty free (table I-12-J).

**Table I-12-J.--Distribution, by duty level, of MFN imports of unworked or semi-manufactured precious metals**

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom
Free-----	99.3	99.8	76.9	97.4	99.6
0.1-5.0 percent----	-	-	22.5	2.6	.4
5.1-10.0 percent---	.1	.1	.6	.1	-
10.1-15.0 percent--	.2	.1	-	-	-
15.1-20.0 percent--	.4	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Except in the United Kingdom, imports of unworked precious metals receiving preferential tariff treatment are insignificant for the major countries. Preferential treatment is accorded one-third of total United Kingdom imports. Intra-EC shipments are equal to roughly a third of Community imports from outside sources.

The United States and the European Community have the most detailed tariff schedules, with 22 and 17 lines, respectively. Canada has 14; Japan, 11; and the United Kingdom, 8.

### Trade importance

Unworked or semimanufactured precious metals account for roughly one-fourth of OECD trade in the precious stones and precious metals sector. In 1969, OECD exports totaled \$708 million; imports, \$1 billion. By 1970 exports and imports had dropped to \$530 and \$875 million,

respectively. U.S. imports of unworked precious metals were \$161 million in 1969 and remained relatively constant in 1970 at \$160 million.

### Trade network

The European Community, the United Kingdom, and the United States are the most significant traders of unworked precious metals among the five major countries, shipping 85 percent of OECD exports of unworked or semimanufactured precious metals, and receiving over 80 percent of OECD imports. Forty-five percent of U.S. exports go to the United Kingdom, as do 41 percent of EC outside exports. Over one-third of United Kingdom exports are shipped to the Community. At least 80 percent of the exports of each of these three countries go to OECD nations (table I-12-K).

About two-fifths of the imports of the United Kingdom come from non-OECD sources, as do 17 percent of U.S. imports and 38

Table I-12-K.—OECD exports of unworked or semi-manufactured precious metals, 1969

#### Trade-agreement concessions

Concessions under the GATT have been made on all MFN provisions for unworked or semimanufactured metals in the tariff schedules of the European Community and the United States. Forty-three percent of Canada's provisions, covering 1 percent of imports, are under the GATT, as are 64 percent of Japan's, covering 79 percent of imports, and 75 percent of the United Kingdom's, covering 17 percent of imports.

Of a total of 12 concessions contained in the national tariffs of the member states of the European Community prior to the adoption of the Common External Tariff (CET), 3 were above the CET rate.

## Articles of Precious Stones and Precious Metals

Articles of precious stones and precious metals include genuine and imitation jewelry, goldsmiths' and silversmiths' wares, articles consisting of or incorporating precious or semiprecious stones, and noncirculating coins. <sup>1/</sup>

### MFN tariffs

Average MFN tariffs of Canada, the United States, and Japan for articles in this subsector are relatively high. For all products, Japan has the highest arithmetic average (19.1 percent ad valorem) and the United States the highest weighted average (19.9 percent). The European Community has the lowest averages. The dutiable product averages range from 8.2 to 19.4 percent ad valorem for the arithmetic averages and 10.1 to 22.1 for the weighted averages. Canada has the highest averages; the European Community, the lowest (see chart I-12-G).

The distribution of MFN tariff provisions, by duty level, is shown in table I-12-M. The largest portion of MFN tariff provisions is in the 15.1-20 percent ad valorem bracket for Canada, the United States, and Japan; the 10.1-15 percent bracket for the United Kingdom, and the 5.1-10 percent bracket for the European Community. All major countries, except Japan, have duty-free provisions. Canadian and Japanese rates range into the 20.1-25 percent ad valorem bracket; U.S. rates into the 30.1-40 percent bracket.

---

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 71.12-.16 and 72.01.

Chart I-12-G. -- Average MFN tariff rates on articles of precious stones and precious metals  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1973 on about one-third of the Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

With the exception of the United Kingdom, imports of articles of precious stones and precious metals receiving preferential tariff treatment are insignificant. Such treatment is accorded roughly two-thirds of total United Kingdom imports. Intra-European Community shipments are equal to 133 percent of Community imports from outside sources.

The United States has the most detailed tariff schedule for articles of precious stones and precious metals with 48 lines; the United Kingdom has the simplest with 11. Japan and Canada have 20 lines; the Community has 14.

Trade importance

Articles of precious stones and precious metals account for roughly one-tenth of OECD trade in the precious stones, precious metals, and manufactures sector. In 1969, OECD exports totaled \$438 million; imports, \$334 million. U.S. imports of articles of precious stones and metals were \$66 million in 1969 and increased in 1970 to \$78 million.

Trade network

The five major countries account for 87 percent of OECD exports of precious stones and precious metals and almost three-fourths of imports. The European Community (including intra-EC exports) is the source of almost two-thirds of total OECD exports in this subsector; the United States, about 15 percent. Intra-EC exports equal about 72 percent of EC exports to outside nations, for which destinations are known. The Community accounts for 38 percent of OECD imports (over half of the Community's known imports are intra-EC shipments). Twenty percent of OECD imports arrive in the United States. U.S. imports are larger than entries into the Community from outside sources for which origin data are available (see tables I-12-0 and P).

Source: Compiled from OECD Statistics of Foreign Trade Series C, 1969.

Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for articles of precious stones and precious metals were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this subsector were not among the items which Japan unilaterally reduced in 1972.

	<u>Pre-trade-agreement</u> (percent ad valorem)	<u>January 1, 1972</u>
United States	86.3	19.9
European Community	6.8	4.4
United Kingdom	13.7	5.8
Japan	39.3	16.4
Canada	29.0	14.5

Concessions under the GATT have been made on all MFN provisions for articles of precious stones and precious metals in the tariff schedules of the United States, the European Community, and Japan; 95 percent of Canadian provisions, covering 82 percent of imports, and 82 percent of United Kingdom provisions, covering 46 percent of imports, are under the GATT. Prior to the adoption of the Community's Common External Tariff, 22 GATT concessions had been made in member state national tariffs; 10 at a rate higher than the new CXT rate; 8 at a lower rate and 4 at the CXT rate.

Table I-12-Q shows specific tariff concessions by the five major countries on jewelry of precious metals, the largest trade category in this subsector.

Table I-12-Q.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on jewelry of precious metal

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	50%-110%	15%-55%	12%-27.5% <sup>2/</sup>	740.05, .10, .50, .55, .70; 754.66, .67
Canada-----	45%	30%	25%	64700-1
European Community--	9%; 12%	9%; 12%	4.5%; 9%	71.12 A, B
United Kingdom-----	30%	20%; 25%	12.5%	71.12
Japan-----	50%	35%-50%	17.5%-25%	71.12

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Nearly 96 percent of imports, based on values in 1971, were dutiable at 12 percent ad valorem.

## RUBBER AND RUBBER MANUFACTURES

The sector on rubber and rubber manufactures includes raw rubber in the form of natural, synthetic and reclaimed rubber; semimanufactured forms such as plates, sheets and tubing of both unvulcanized and vulcanized rubber; and manufactured articles of rubber. Some important products containing rubber are not included in the sector. Among these are footwear, rubber mechanical or electrical appliances, rubber toys and rubberized or elasticized textile fabrics. <sup>1/</sup>

### MFN tariffs

Chart I-13-A illustrates the average tariffs for MFN imports of rubber and rubber manufactures. The arithmetic averages for all products (combined free and dutiable) range from 5.3 to 9.6 percent ad valorem, with the European Community having the lowest average and the United States the highest. The lowest weighted average for all products is held by Japan (0.6 percent), followed by the United States and the European Community (2.4 and 2.8 percent, respectively). Canada has the highest weighted average (9.8 percent). For dutiable products only, Canada has the highest arithmetic average (15.1 percent), as well as the highest weighted average (13.7 percent). The lowest weighted average for dutiable products only is held by the United States (4.4 percent), while the European Community has the lowest arithmetic average (6.7 percent).

The distribution of MFN tariff provisions for rubber and rubber manufactures, by duty level, is shown in table I-13-A. The largest

---

<sup>1/</sup> For the specific coverage of this sector, see BTN chapter 40. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-13-A. -- Average MFN tariff rates on rubber and rubber manufactures  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 20 percent) made in 1972 of Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

portion of rate provisions is between 5.1 and 10 percent ad valorem for all countries, except Canada, where over half of the rate provisions are free. The tariffs of each of the five major countries contain MFN duty-free provisions for rubber and rubber manufactures.

Table I-13-A.--Distribution, by duty level, of MFN tariff provisions for rubber and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	53.8	8.6	26.3	21.9	11.5
0.1-5.0 percent----	5.0	20.0	5.3	18.8	26.9
5.1-10.0 percent----	6.3	46.7	55.3	59.4	34.6
10.1-15.0 percent--	8.8	13.3	13.2	-	19.2
15.1-20.0 percent--	22.5	4.8	-	-	7.7
20.1-25.0 percent--	3.8	1.0	-	-	-
25.1-30.0 percent--	-	-	-	-	-
30.1-40.0 percent--	-	4.8	-	-	-
40.1-50.0 percent--	-	1.0	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

The rates of the United States range into the 40.1-50 percent ad valorem bracket. The European Community has no rates above 10 percent.

Imports of rubber receiving preferential tariff treatment are significant in only two of the major countries. Twenty-two percent of United Kingdom's total imports of rubber and manufactures and 15 percent of Canada's imports are from sources which received preferential treatment on dutiable products. Intra-EC shipments, all of which move duty free, are approximately equal in value to EC imports from countries outside the customs union.

The bulk of MFN imports by most of the major countries are either duty free or enter at rates of less than 5 percent ad valorem. For Canada, over half of MFN imports enter at rates in the 15.1-20 percent ad valorem bracket. Over one-third of EC imports are in the 5.1-10 percent range and nearly one-third of United Kingdom imports are divided between the 5.1-10 percent and 10.1-15 percent ranges. Duty-free entry is accorded virtually all Japanese imports of rubber, 65 percent of those for the Community, and 46 percent of those for the United States (table I-13-B).

Table I-13-B.--Distribution, by duty level, of MFN imports of rubber and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	28.4	46.0	93.1	65.3	19.5
0.1-5.0 percent----	19.1	48.9	.1	1.1	45.8
5.1-10.0 percent---	.7	3.3	5.9	33.6	15.8
10.1-15.0 percent--	.5	1.7	.9	-	16.0
15.1-20.0 percent--	50.2	-	-	-	2.9
20.1-25.0 percent--	1.1	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

The United States and Canada have the most detailed tariff schedules for rubber and rubber articles with 101 lines and 80 lines, respectively. Japan has 38 lines; the European Community, 32 lines; and the United Kingdom has the least detailed tariff with 26 lines. However, the multiple dispersion of U.S. and Canadian tariff items into the BTN format overstates the detail of the tariff schedules of these two countries. An adjustment for this problem yields a more accurate count of 69 items for the United States and 49 items for Canada.

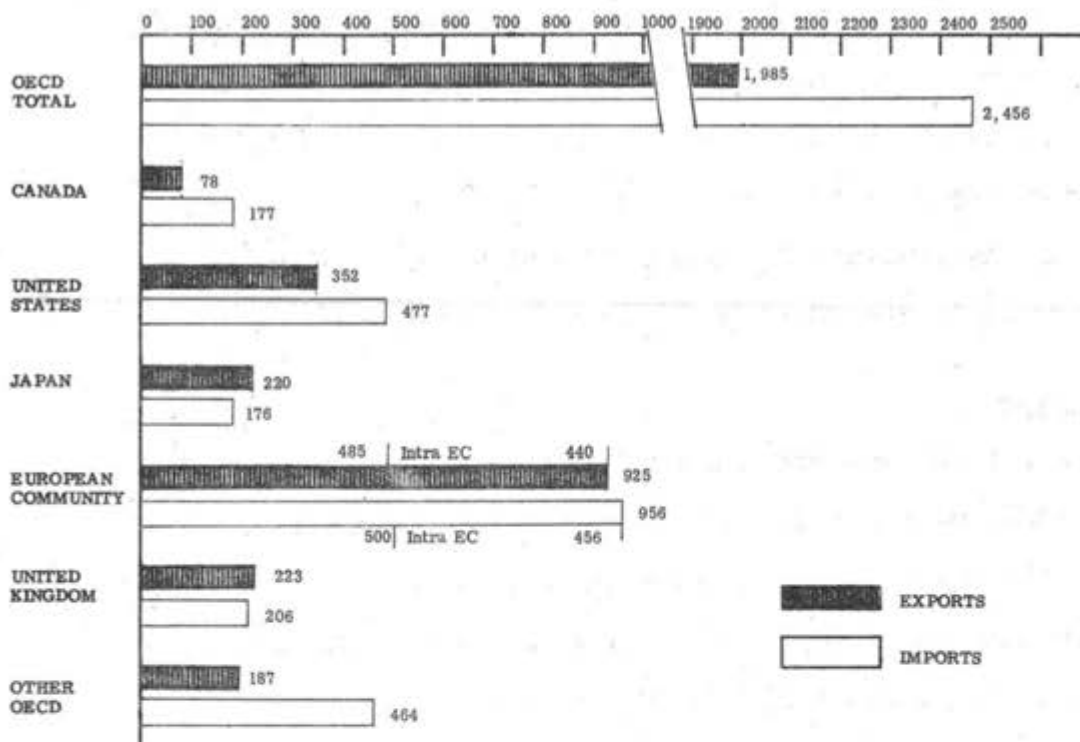

#### Trade importance

Insofar as trade among the industrial sectors is concerned, rubber and rubber manufactures rank 13th in both OECD imports and exports, accounting for 1.6 percent of OECD industrial imports and 1.2 percent of industrial exports. The position of rubber in United States trade is very similar to its OECD position. The sector ranks 14th in U.S. industrial imports and 13th in U.S. industrial exports.

Imports by the GATT tariff study countries were valued at \$1.4 billion in 1967 and \$2.1 billion in 1970. Intra-EC shipments were an additional \$302 million in 1967 and \$542 million in 1970. OECD 1969 imports were \$2.5 billion (including \$456 million of intra-EC shipments) and exports were about \$2 billion (see chart I-13-B).

Chart I-13-B. -- OECD trade in rubber and manufactures, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for 90 percent of OECD exports and 81 percent of imports. Over half of OECD exports go to the five major countries; over one-fifth to LDC's. The five major countries also supply over half of OECD imports.

Of the five major countries, Canada is the chief developed market for U.S. exports; the EC is the chief supplier of U.S. imports among the five. Nearly two-thirds of U.S. imports of rubber and rubber manufactures come from non-OECD countries, primarily from LDC's (chart I-13-C).

Chart I-13-C.-- United States trade in rubber and manufactures, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The European Community's exports to outside destinations exceed exports of any other country, and intra-EC shipments are almost as great as shipments to outside destinations. Most exports of both the United States and the United Kingdom go to non-OECD countries, while 58 percent of Japanese products go to LDC's (see table I-13-C).

Rubber and rubber manufactures rank 11th in industrial imports for Canada, 12th for Japan and 14th for the European Community, the United States, and United Kingdom. U.S. imports of rubber were valued at \$318 million in 1967, \$477 million in 1969, and \$592 million in

1971. About one-third of U.S. imports are supplied by OECD sources, 19 percent from the European Community alone. The United States is the major source of Canadian imports, supplying nearly three-fourths. For all other major countries, the bulk of rubber imports come from LDC's -- 81 percent for Japan, 62 percent for the United States, 54 percent for the United Kingdom, and 53 percent of EC imports from outside sources (see table I-13-D).

### Trade composition

The rubber and rubber manufactures sector is divided into three subsectors according to stage and processing: Crude rubber, semimanufactured products and manufactured articles. Crude rubber constitutes the largest subsector in imports, accounting for 54 percent of total OECD imports in the sector. The largest exports (60 percent of the sector) are found in the manufactured articles of rubber subsector. The relative importance of the subsectors is shown in chart I-13-D.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

Average tariff levels for all of the five major countries for the rubber and rubber manufactures sector on January 1, 1972, were significantly below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the following tabulation, where for all countries except Canada, the

figures given are weighted average duties; the Canadian figure is an arithmetic average. All of the Japanese tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 0.5 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	9.1	2.4
European Community	5.1	2.8
United Kingdom	12.5	5.8
Japan	5.0	0.6
Canada	19.8	7.0

Concessions under the GATT have been made on all MFN provisions for rubber and rubber manufactures in the tariff schedules of the United States and the European Community. The figures for Japan and the United Kingdom are 97 and 96 percent of provisions, respectively, and cover virtually all of MFN trade in rubber and rubber manufactures for the two countries. Concessions have been granted on 68 percent of Canada's provisions, covering over four-fifths of Canadian imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on rubber and rubber manufactures negotiated under the GATT. The number of such concessions totaled 101, of which 44 reflected rates higher than the autonomous rate established in the CET, 30 were at the CET rate, and 27 were below the CET rate.

#### Trade complaints

The Tariff Commission received 30 complaints from manufacturers and traders of rubber and rubber manufactures against practices and

policies which they considered to constitute barriers to their trade. The complaints were about evenly divided between developed and developing countries. The United States drew more complaints than any other single country. The areas of major complaint are described below.

Customs valuation and customs administrative procedures.--Most complaints in the category of customs procedures were against the United States. Rubber importers alleged identical rubber products were classified differently depending on the U.S. port of entry. Objections were made to application of "final list" valuation procedures to U.S. imports of certain rubber manufactures. Importers felt the United States uses the threat of antidumping actions to limit imports. Lengthy U.S. customs procedures were also cited as a cause of costly delays to rubber importers.

Another objection in the customs administration area was raised by U.S. producers and exporters and concerned a definitional problem. Some merchandise, which is defined as rubber in the United States, is classified as plastics in the Brussels Tariff Nomenclature, and as such, is usually subject to a higher duty by countries using the BTN.

Quantitative limitations and licensing.--Western European restraints on imports of Japanese rubber manufactures were said to cause Japanese exports to concentrate on U.S. markets. The Jamaican licensing requirements were the subject of complaint, as were the quotas on American synthetic rubber imposed by India.

Import duties.--A U.S. rubber producer cited the duties of three customs unions (the European Community, the European Free Trade Association,

and the Latin American Free Trade Association) as discriminatory and detrimental to trade. The complaining producer characterized as "moderate" the limiting effect which this discrimination has on his trade with these areas. Australia and Iceland were reported to have special additional import taxes on rubber products.

Miscellaneous practices.--United States dock strikes were reported to have seriously impeded imports of natural latex and rubber. It was estimated that \$900 million in sales of latex and \$882 million in sales of rubber were lost as a result of these strikes.

Specific complaints were received citing the trade arrangements of Eastern European countries. U.S. exporters viewed these barter arrangements as being detrimental to their trade. Certain exchange control policies of less developed countries were reported to hamper U.S. rubber trade. Tunisia was cited as having a special consumption tax on imported rubber manufactures. Objections were made against various port, statistical or other taxes encountered in Greece, Turkey, and Colombia.

Only six respondents gave some estimate concerning the dollar value of the increase in sales which would result from the removal of these barriers. Two respondents predicted a "moderate" sales increase and four estimated "significant" increases. The sum of dollar value estimates received in the rubber and rubber manufactures sector totaled \$3.6 million.

## Crude Rubber

Crude rubber includes raw rubber in the form of natural or synthetic rubber latex; reclaimed rubber; and waste of unhardened rubber. 1/

MFN tariffs

For all crude rubber (combined free and dutiable) there are less than 3 percentage points difference among MFN average tariffs of the five major countries. The arithmetic averages range from 1.1 percent ad valorem (European Community) to 3.4 percent (Japan). The weighted average for both the Community and Japan is zero while that of the United States is 0.3, reflecting the preponderance of duty-free imports into these countries. The highest weighted average (2.1 percent) is held by the United Kingdom. For dutiable products, both the lowest arithmetic and weighted averages are held by the European Community (3.3 and 2.6 percent ad valorem, respectively). The highest arithmetic average is held by the United States (8.2 percent) and the highest weighted average by Japan (7.1 percent) (chart I-13-E).

Most MFN provisions in the tariff schedules of the United States, Canada, Japan, and the Community are duty free. About two-fifths of United Kingdom provisions are duty free and an equal proportion have rates of 5 percent or lower. Only the United States and Canada have rate provisions extending into the 15.1-20 percent ad valorem range (table I-13-E).

---

1/ For specific coverage of this subsector, see BTN headings 40.01-.04.

Chart I-13-E.--Average MFN tariff rates on crude rubber

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on the rates for dutiable Japanese items in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

All Japanese and virtually all Community trade takes place at the duty-free level. Similarly, 90 percent of all U.S. imports of crude rubber

Table I-13-E.--Distribution, by duty level, of MFN tariff provisions for crude rubber

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent

are duty free. For Canada and the United Kingdom, the largest percentage of imports enters in the 0.1-5 percent rate range (table I-13-F).

Table I-13-F.--Distribution, by duty level, of MFN imports of crude rubber

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom
Free-----	29.2	89.7	100.0	99.6	47.3
0.1-5.0 percent----	68.9	10.3	-	.3	52.2
5.1-10.0 percent----	-	-	-	-	.4
10.1-15.0 percent--	.1	-	-	-	-
15.1-20.0 percent--	1.8	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Only Canada and the United Kingdom have a significant proportion of imports entering under preferential tariff treatment. Thirty-six percent of Canada's total imports and 62 percent of United Kingdom entries are from sources which receive preferential treatment on dutiable products. Intra-EC shipments are equal to about one-fourth of Community imports.

Canada and Japan have a relatively complex tariff schedule for crude rubber with 20 and 17 tariff lines, respectively. The EC schedule has nine lines; for the United States, eight lines; and for the United Kingdom, seven lines.

#### Trade importance

Crude rubber is the most important category in value of OECD imports in the rubber and rubber manufactures sector, and the second largest in value of OECD exports. Imports were \$1.3 billion in 1969, or about 54 percent of OECD import trade in the sector. Exports were \$536 million, or about 27 percent of total export trade

(chart I-13-F). U.S. exports in 1969 were valued at \$151 million, while imports were \$321 million. By 1971, United States imports had dropped to \$280 million.

Chart I-13-F.--OECD trade in crude rubber, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for over 98 percent of OECD exports and 88 percent of imports of crude rubber. The United States and the European Community together ship about 70 percent of OECD exports. About one-third of U.S. exports go to the Community, and another 27 percent to non-OECD destinations. The United Kingdom and "other" OECD countries are among the Community's largest customers. Intra-EC exports are almost as large as external shipments (table I-13-G). Over two-fifths of Canadian exports go to the United States.

The European Community is the largest importer, closely followed by the United States and more distantly by Japan and the United Kingdom. With the exception of Canada, all five major countries have the bulk of their imports supplied by LDC's (see table I-13-H). Over half of Canadian imports originate in the United States. As would be expected in the case of a raw material such as rubber, all five major countries are net importers.

Trade-agreement concessions

Reductions in average duty levels on crude rubber in tariffs of the five major countries since their pre-trade-agreement base dates are shown below. The reductions principally reflect trade-agreement concessions. Prior to adoption of the European Community's Common External Tariff (CET), 12 GATT tariff concessions had been made in member state national tariffs; 10 of these were at the CET rate. The United States is the only country to have any specific rates of duty, but no imports enter under them.

Pre-trade-agreement    January 1, 1972  
(Percent ad valorem)

United States	4.1	0.3
European Community	0.0	0.0
United Kingdom	7.0	2.1
Japan	4.5	0.0
Canada	8.5	2.1

GATT concessions cover all U.S. and EC provisions for crude rubber, 94 percent of Japan's provisions (100 percent of imports), 86 percent of the United Kingdom's provisions (99 percent of imports), and 80 percent of Canada's provisions (95 percent of imports).

Rates on pre-trade-agreement base dates and on January 1, 1972, for natural rubber and similar natural gums, which comprise the major heading of the subsector of crude rubber, are shown in table I-13-I.

Table I-13-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on natural rubber and similar natural gums

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free; 22.7% AVE	Free; 22.7% AVE	Free; 11.3% AVE <sup>2/</sup>	188.32, .34, .38 446.05
Canada-----	Free 5% 10%	Free 5% 10%	Free 2.5% 2.5%	61620-1 61605-1 61630-1; 61635-1
European Community--	Free	Free	Free	40.01
United Kingdom-----	10% Free	10% Free	4% Free	40.01 (A)(1), (B) (2) 40.01 (A)(2), (B) (1)
Japan-----	Free; 15%	Free; 15%	Free; 7.5%	40.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Nearly all imports are duty free; ad valorem equivalents for imports in class 188.34 (for specific rate of 2.5 cents per pound) were calculated on 1971 import values.

## Semimanufactured Rubber Products

Semimanufactured rubber products include rubber in such forms as plates, sheets, strips, and piping and tubing, whether or not vulcanized. <sup>1/</sup>

MFN tariffs

In terms of all semimanufactured rubber products, the arithmetic and weighted average tariffs of the five major countries range between 4.5 and 12.1 percent ad valorem (chart I-13-G). The United States has

Chart I-13-G.--Average MFN tariff rates on semi-manufactured rubber products

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 40.05-.09 and 40.15.

both the highest arithmetic average and the lowest weighted average for all imports. Average tariffs for dutiable products alone do not differ significantly except in the case of Canada, where they increase substantially to 16.6 percent ad valorem for the arithmetic average and 17.8 percent for the weighted average.

Forty percent of total United Kingdom imports of semimanufactured rubber products, 12 percent of U.S. imports, and 7 percent of those of Canada are accorded preferential tariff treatment. Intra-EC shipments which move duty free are greater than entries from third countries.

All of the tariff provisions of both Japan and the European Community are 10 percent or lower, with at least 69 percent of provisions falling in the 5.1-10 percent ad valorem range (table I-13-J). More than two-fifths of the United Kingdom provisions are in the 0.1-5 percent range.

Table I-13-J.--Distribution, by duty level, of tariff provisions for semi-manufactured rubber products

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	44.0	5.6	11.1	7.7	-
0.1-5.0 percent----	-	19.5	11.1	23.1	44.4
5.1-10.0 percent---	8.0	44.5	77.8	69.3	33.3
10.1-15.0 percent--	12.0	19.5	-	-	11.1
15.1-20.0 percent--	32.0	2.8	-	-	11.1
20.1-25.0 percent--	4.0	2.8	-	-	-
25.1-30.0 percent--	-	-	-	-	-
30.1-40.0 percent--	-	5.6	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Over two-fifths of U.S. tariff provisions fall within the 5.1-10 percent bracket, but the United States is the only country of those under study with provisions extending into the 30.1-40 percent range. Two-fifths of Canada's rate provisions are duty free; one-third have duties between 15.1 and 20 percent ad valorem.

For Japan, the European Community, and the United Kingdom, the largest percentage of imports enter at rates between 5.1 and 10 percent ad valorem (table I-13-K). Over 10 percent of U.S. imports enter in the 0.1-5 percent rate range; most Canadian imports in the 15.1-20 percent bracket.

Table I-13-K.--Distribution, by duty level, of MFN imports of semi-manufactured rubber products

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	32.3	-	-	0.6	-
0.1-5.0 percent----	-	91.3	0.2	10.3	37.5
5.1-10.0 percent--	4.0	7.5	99.8	89.1	58.2
10.1-15.0 percent--	.9	1.2	-	-	.3
15.1-20.0 percent--	62.4	-	-	-	4.1
20.1-25.0 percent--	.4	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States exhibits the most complex tariff schedule for semimanufactured rubber products, with 36 lines; the United Kingdom and Japan have the simplest schedules, each with 9 lines. Schedules for Canada have 25 lines, and for the European Community, 13 lines.

#### Trade importance

Semimanufactured rubber products make up the smallest of the three subsectors in terms of OECD trade in rubber and rubber manufactures. In 1969, exports were valued at \$258 million, or 14 percent of OECD exports in the sector; imports were \$191 million, nearly 9 percent of total OECD imports (chart I-13-H). U.S. exports in 1969 were \$43 million, while imports were merely \$2 million. By 1971, imports had increased to \$19 million. Over 97 percent of U.S. imports in 1971 were under BTN heading 40.09 - piping and tubing of unhardened vulcanized rubber.

Chart I-13-H.--OECD trade in semi-manufactured rubber products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The European Community is the major exporter of semimanufactured rubber products, shipping \$63 million to outside countries. The United Kingdom's exports are valued at \$45 million and those of the United States, \$43 million (table I-13-L). Only the Community, Canada, and the United Kingdom are significant importers. Most Canadian imports come from the United States. Most EC outside imports come from the United Kingdom and the Community. "Other" OECD nations are the chief source of imports for the United Kingdom (table I-13-M). Of the five countries under consideration, Canada is the only net importer.

Trade-agreement concessions

The following tabulation shows that, for all of the five major countries average tariff levels on January 1, 1972, were significantly lower than on pre-trade-agreement base dates.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	25.4	4.5
European Community	16.3	6.8
United Kingdom	12.2	8.4
Japan	15.0	8.8
Canada	23.9	9.3

Concessions under the GATT cover all provisions for semimanufactured rubber products in the schedules of the United States, the European Community, the United Kingdom, and Japan. Fifty-two percent of Canadian provisions (68 percent of imports) are covered by GATT concessions. All EC member states had made tariff concessions on semimanufactured rubber products prior to adoption of the CXT. Seventeen of the 33 concessions made by member states were higher than the CXT, while 12 were lower.

The most important single BTN heading within the subsector of semimanufactured rubber products covers piping and tubing of unhardened vulcanized rubber. Reductions in rates on these items which have occurred in the five major tariffs are shown in table I-13-N. Reductions in duties from statutory levels by the United States ranged from 84 to 71 percent. Canada reduced tariffs by 67 percent, the European Community by 61 percent, the United Kingdom by 50 percent, and Japan by 33 percent.

Table I-13-N.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on piping and tubing of unhardened vulcanized rubber

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25%; 35%	8.5%; 20%	4%; 10% <sup>2/</sup>	772.65; 771.55
Canada-----	27.5%	20%	17.5%	61800-1
European Community--	18%	14%	7%	40.09
United Kingdom-----	10%	10%	5%	40.09
Japan-----	15%	15%	10%	40.09

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Canadian articles which are original motor vehicle equipment are imported duty-free.

## Manufactured Rubber Products

The subsector for manufactured rubber products includes tires, rubber apparel, and miscellaneous articles of hardened or unhardened rubber. Some important articles containing rubber are not covered here, but are found in other sectors. Among the more important are footwear containing rubber, rubber mechanical or electrical appliances, and rubberized and elasticized textile fabrics. 1/

MFN tariffs

The weighted average MFN tariffs of the five major countries for all manufactured rubber articles range from 4.8 percent ad valorem for the United States to 13.1 percent ad valorem for Canada. The range of the arithmetic averages is small, there being a difference of only 3 percentage points among the five countries (chart I-13-I). The averages for dutiable products of Japan, the European Community, and the United Kingdom are identical to those for all products, and the U.S. average does not differ significantly. Canada, however, does exhibit a large difference between the averages for all products and for dutiable products only. The Canadian arithmetic average for dutiable products, 16.6 percent, is more than twice that for all products, reflecting the high proportion of duty-free provisions in the Canadian tariff.

Most provisions for manufactured rubber articles in the tariffs of the United States, Japan, and the United Kingdom, and all provisions in the Community's tariff, are in the range of 5.1-10 percent ad valorem

---

1/ For specific coverage of this subsector, see BTN headings 40.10-.14 and 40.16.

Chart I-13-1.-- Average MFN tariff rates on manufactured rubber articles  
(Percent ad valorem)

30.1-40.0 percent--	-	1.8	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

United States is the only country with rates extending into the 30.1-40 percent range.

Canada, the United States and the United Kingdom have notable amounts of imports receiving preferential tariff treatment. Over 43 percent of United Kingdom imports receive preferential treatment, as do 3 percent of both Canadian and U.S. imports.

Over four-fifths of U.S. imports enter in the 0.1-5 percent ad valorem rate range. All EC imports and the bulk of Japanese imports enter in the 5.1-10 percent range along with one-third of United Kingdom imports. Another three-fifths of the imports of the United Kingdom are in the 10.1-15 percent range. Despite the fact that most Canadian tariff provisions are duty free, 71 percent of Canadian imports pay duties between 15.1 and 20 percent ad valorem (table I-13-P).

Table I-13-P.--Distribution, by duty level, of MPN imports of manufactured rubber articles

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	26.2	2.0	-	-	-
0.1-5.0 percent---	-	82.7	-	-	-
5.1-10.0 percent---	.1	10.5	78.3	100.0	35.0
10.1-15.0 percent--	.6	4.6	21.8	-	61.1
15.1-20.0 percent--	71.4	-	-	-	3.9
20.1-25.0 percent--	1.7	.1	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States and Canada exhibit the most detailed tariff structures for manufactured rubber articles with 57 and 35 lines, respectively. Schedules for Japan have 13 lines; the European Community 11 lines; and the United Kingdom, 10 lines.

# Trade importance

Of the three categories of rubber and rubber manufactures traded by OECD countries, manufactured rubber products is the most important in terms of exports, and ranks second in terms of imports. OECD exports totaled \$1.2 billion in 1969, about 60 percent of total OECD exports in the sector. Exports increased to \$1.4 billion in 1970. In 1969 imports were \$932 million, or about 38 percent of total OECD imports in the sector (chart I-13-J). U.S. exports in 1969 were \$158 million; imports

Chart I-13-J.-- OECD trade in manufactured rubber articles, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

were \$154 million. United States imports in 1971 were valued at \$293 million. BTN heading 40.11 (rubber tires, tire cases, inner tubes, etc.)

accounts for over 86 percent of U.S. imports in the rubber manufactures subsector.

### Trade network

The five major countries account for 87 percent of OECD exports and three-quarters of imports (tables I-13-Q and R). The largest supplier to the world is the European Community, followed by Japan, the United States, and the United Kingdom. The European Community's exports to outside sources were valued at \$304 million in 1969 and the Community had an additional \$269 million of intra-EC export shipments. One-third of EC external shipments go to LDC's. The United States ships 40 percent of its exports to Canada, with LDC's accounting for another 32 percent. Sixty-five percent of the Japanese shipments go to LDC's.

Table I-13-Q.--OECD exports of manufactured rubber articles, 1969

Note.--Complete country of destination data are not available for all products covered by this table; country of destination figures therefore do not add to total exports to the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

When intra-EC imports are excluded from the import figures of the Community, the United States is found to be the largest importer of manufactured rubber products. Most of the imports of each of the major countries are supplied by OECD countries. The European Community is the principal supplier of imports to the United States. Four-fifths of Canadian imports of manufactured rubber products are supplied by the United States. All of the five countries, except Canada, are net exporters.

### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries average tariff levels for manufactured rubber products on January 1, 1972, were substantially below levels existing on pre-trade-agreement base dates. The reductions range from 52 to 64 percent below pre-trade-agreement levels.

In 1972, Japan unilaterally reduced its rates on manufactured rubber products by 20 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	12.6	4.8
European Community	19.4	8.3
United Kingdom	27.5	11.4
Japan	18.1	8.6
Canada	22.6	8.1

All tariff provisions of the United States, Japan, the European Community, and the United Kingdom for rubber manufactures have been the subject of GATT concessions, as have 71 percent of the Canadian provisions, covering 80 percent of Canada's MFN imports.

All national tariffs of the EC member states prior to adoption of the CXT contained concessions under the GATT. Of 56 concessions in the national tariffs, 26 were at rates above the CXT autonomous rates, 16 at the CXT rate, and 14 below the CXT rate.

Automobile tires constitute the principal item of international trade among manufactured articles of rubber. Rubber tires and tubes for motor vehicles and bicycles account for a major portion of the imports of manufactured rubber articles for four of the five countries under study; imports of these articles by the fifth country, Japan, are extremely small. Table I-13-S contains specific tariff reductions which have occurred for these articles. The United States and the United Kingdom have reduced their MFN rates on tires and tubes. Since the formation of the European Community's Common External Tariff, the

Table I-13-S.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on rubber tires and tubes for motor vehicles and bicycles

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	10%-30%	8.5%-30%	4%-15% <u>2/</u>	772.48, .51-.57, .60
Canada-----	35%	22.5%	17.5% <u>3/</u>	61815-1
European Community--	19%-22%	15%-18%	7.5%-9%	40.11
United Kingdom-----	33.3%	20%-25%	12%	40.11
Japan-----	15%-30%	15%-30%	7.5%-15%	40.11

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Over 97 percent of U.S. imports, based on values in 1971, were dutiable at 4 percent or 5 percent ad valorem.

3/ Rate shown is the official MFN rate, presently superseded by a temporary rate of 12.5 percent. The temporary rate is subject to possible renewal in February, 1974.

Community has reduced its rates of duty on tires and tubes. Japan's tariff rates have also been significantly reduced; Canada's fell by 50 percent.

Another important heading of manufactured rubber products is pneumatic mattresses and other inflatable rubber articles. Specific reductions for these products by the countries under study are shown in table I-13-T.

Table I-13-T.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on pneumatic mattresses and other inflatable rubber articles

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25%	12.5%	6%	790.39

European Community--	18%	14%	6%	40.14 B II
United Kingdom-----	20%	20%	10%	40.14 (B)
Japan-----	15%	15%	7.5%	40.14-2

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

## RAW HIDES AND SKINS, LEATHER AND FURSKINS AND MANUFACTURES

This sector covers: The hides and skins of all animals in the raw state or tanned or dressed into leather or furskins; articles made of leather or furskins, such as clothing and saddlery; and items used for industrial purposes. The sector does not include some important products made from leather or furskins, such as travel goods, handbags and leather footwear. <sup>1/</sup>

### MFN tariffs

Average MFN tariff levels of the five major countries for the raw hides and skins, leather and furskins and manufactures sector have a fairly high correlation with the average tariff levels for industrial products as a whole (see chart I-14-A). The arithmetic averages for all products in the sector (combined free and dutiable) range from 5.1 to 14.6 percent ad valorem; the weighted averages from 1.9 to 8.1 percent. For dutiable products only, all of the arithmetic averages are slightly higher; the weighted averages are substantially higher and range from 6.6 to 14.6 percent ad valorem.

For all products, the European Community has the lowest arithmetic average tariff (5.1 percent) and the United States has the highest (14.6 percent). The European Community also has the lowest weighted average (1.9 percent), while Canada has the highest weighted average (8.1 percent). The same basic relationship described above holds for dutiable products. The European Community has the lowest arithmetic (6.9 percent)

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 41.01-.10 42.01; 42.03-.05; 43.01-.04. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-14-A. -- Average MFN tariff rates on raw hides and skins, leather and furskins, and manufactures  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (by amounts ranging from 17 percent to 50 percent) made in 1972 on an insignificant part of Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

and weighted average (6.6 percent), while the United States has the highest arithmetic average (16 percent) and Canada the highest weighted average (14.6 percent).

The distribution of MFN tariff provisions by duty level is shown in table I-14-A. All five of the major countries maintained MFN duty-free provisions, with the European Community having by far the largest proportion (26 percent). Rate provisions for the various countries are so dispersed that no one duty bracket contains the largest proportion of rate provisions for a majority of countries. However, for the United States and the United Kingdom, provisions within the 5.1 to

Table I-14-A.--Distribution, by duty level, of MFN tariff provisions of raw hides and skins, leather and furskins and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	14.8	8.4	7.3	26.3	14.8
0.1-5.0 percent----	-	18.2	4.9	34.2	3.7
5.1-10.0 percent----	29.6	35.0	24.4	31.6	40.7
10.1-15.0 percent--	7.4	8.4	26.8	7.9	18.5
15.1-20.0 percent--	38.9	4.9	26.8	-	18.5
20.1-25.0 percent--	9.3	10.5	9.8	-	3.7
25.1-30.0 percent--	-	4.9	-	-	-
30.1-40.0 percent--	-	3.5	-	-	-
40.1-50.0 percent--	-	.7	-	-	-
Over 50 percent----	-	5.6	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

10.0 percent ad valorem range predominate; for the Community, provisions in the 0.1-5 percent range; for Canada, provisions within the 15.1-20 percent bracket; for Japan, provisions in both the 10.1-15 and 15.1-20 percent ranges. No country has rates over 25 percent ad valorem except the United States, which has 14.7 percent of its provisions above that level. This is somewhat counterbalanced by the fact that 61.6 percent of U.S. tariff provisions are under 10 percent--a figure surpassed only by the European Community.

Imports of articles in this sector receiving preferential tariff treatment represent 7.5 percent of the total value of 1970 imports by the countries concerned. Imports from sources eligible for preferential treatment are particularly significant in the United Kingdom and Canada (22.9 and 15.8 percent of total entries, respectively). The European Community grants such treatment to 4.4 percent of its imports, the United States to 3.6 percent, and Japan not at all. In addition to the EC preferential imports from outside countries, intra-EC shipments

(which move duty free) are equal to about 40 percent of EC entries from nonmember countries.

A high percentage of MFN imports in this sector by most of the developed countries enter duty free. Japan, the European Community, and the United Kingdom all accord free entry to over 70 percent of their MFN imports in the sector, while Canada and the United States, respectively, enter about 44 and 33 percent of their MFN imports free (table I-14-B). The duty-free trade is very largely in raw hides and skins.

Table I-14-B.--Distribution of duty level, of MFN imports for raw hides and skins, leather and furskins and manufactures

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

30.1-40.0 percent--	-	.1	-	-	-
40.1-50.0 percent--	-	-	-	-	-
Over 50 percent----	-	.1	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

None of the five major countries have free provisions for manufactured articles in this sector, and only the Community has significant duty-free imports of leather and dressed furskins. The bulk of all dutiable imports in the sector enter at rates less than 10 percent; Canada is the only country with a significant portion of its imports dutiable at rates higher than 20 percent.

The United Kingdom has the least detailed MFN tariff schedule for this sector, with 27 lines, and the United States the most detailed, with 112 lines. Canada has 37 lines; Japan, 41 lines; and the European Community, 38 lines.

### Trade importance

Raw hides and skins, leather and furskins and manufactures rank 14th in both OECD exports and imports among the 23 industrial sectors. These items make up only 1 percent of OECD industrial exports and 1.5 percent of imports. U.S. imports of these goods in 1969 were valued at \$365 million and exports at \$293 million making them, respectively, the 16th and 15th most important sectors for this country.

Imports by the GATT tariff study countries were valued at \$1.4 billion in 1967 and \$1.8 billion in 1970. OECD 1969 imports were \$2.4 billion, but declined to \$2.2 billion in 1970 (including \$327 million of intra-EC shipments). Exports rose from \$1.6 to \$1.7 billion during the same period (see chart I-14-B).

Chart I-14-B. -- OECD trade in raw hides and skins, leather and furskins and manufactures, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for 76 percent of OECD exports and 83 percent of imports. The United States ranks second to the European Community in exports in this sector. Sixty-one percent of U.S. exports go to the four other principal countries, with the European Community and Japan being the largest markets (chart I-14-C). Non-OECD countries (chiefly LDC's) receive about one-fourth of U.S. exports.

Chart I-14-C. -- United States trade in raw hides and skins, leather and furskins and manufactures, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Complete country of destination data for Canada, Japan, the Community, and the United Kingdom are unavailable. Of those EC exports accounted for, over half of the EC export total are intra-EC shipments; "other" OECD countries receive 43 percent of EC outside exports, and non-OECD destinations are the recipients of one-fourth of EC outside shipments, for which destination data are available. Among the major countries, only the United States and the United Kingdom are significant markets for EC goods. The European Community is the largest developed market for United Kingdom exports, while the United States is the principal market for Canada and Japan (see table I-14-C).

Table I-14-C.--OECD exports of raw hides and skins, leather and furskins and manufactures, 1969

Raw hides and skins, leather and furskins and manufactures rank 13th in industrial imports for the United Kingdom and the European Community, 14th for Japan, 15th for Canada, and 17th for the United States. The European Community is by far the largest importer. U.S. imports were

valued at \$292 million in 1967, \$365 million in 1969, and \$355 million in 1971. Complete country of origin data are not available for the United States and Canada. Non-OECD countries provide about one-third of Japanese imports, 61 percent of imports by the European Community and United Kingdom entries, and 44 percent of those U.S. imports for which the origin is known. The United States is the source of over half of Canada's imports and almost half of Japan's. With the exception of the United States, none of the major countries supplies more than 17 percent of any of the other's imports. LDC's are a significant supplier to not only the United States but also the United Kingdom (26 percent), the European Community (34 percent of entries from outside sources), and Japan (18 percent) (see table I-14-D).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade composition

Trade in raw hides and skins, leather and furskins and manufactures is divided into three subsectors. The value of exports is largest in the leather and dressed furskins subsector; raw hides and furskins are by far the largest category of imports and the second largest category of exports. The relative importance of the three subsectors is shown in chart I-14-D.

Chart I -14-D. -- OECD trade in raw hides and skins, leather and furskins, and manufactures by subsector, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for this sector were below levels existing on pre-trade-agreement base dates. The most substantial reduction has been in the U.S. duty level. The tariff levels are compared in the tabulation below. For all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. The only products affected by Japan's 20 percent unilateral reduction in 1972 are artificial furs and products made thereof covered by BTN 43.04. This does not significantly alter the weighted average given for Japan.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	20.7	6.0
European Community	2.2	1.9
United Kingdom	11.4	3.5
Japan	5.5	2.3
Canada	22.1	13.1

Concessions under the GATT have been made on all MFN provisions of the United States and the European Community for raw hides and skins, leather and furskins and manufactures. GATT concessions cover about 96 percent of United Kingdom provisions and about 93 percent of Canadian provisions. Concessions under the GATT also cover about 66 percent of Japan's provisions, affecting 98 percent of Japan's imports in the sector, with the lowest coverage among the categories being 47 percent.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on raw hides and skins, leather and furskins and manufactures negotiated under the GATT. The number of such concessions totaled 189, of which 106 reflected rates higher than the autonomous rate established in the CXT; 40 were at the CXT rate; and 43 were below the CXT rate.

#### Trade complaints

Seventy-five complaints were received by the Tariff Commission concerning policies and practices reported as trade barriers to products in the sector covering raw hides and skins, leather and furskins and manufactures. Ten developed countries and 14 developing countries were specifically named in the complaints. Japan

was the country most frequently cited, followed by the United States and the European Community. The United Kingdom was mentioned less frequently and Canada not at all. Complaints against LDC's represented 39 percent of the total. Forty-five percent of the complaints dealt with various kinds of specific limitations (chiefly embargoes, quotas, and licensing practices), one-fourth dealt with numerous types of nontariff charges on imports, and one-fifth with import duties.

Quotas, embargoes, and other specific limitations.--Major complaints by U.S. manufacturers in this area centered on quantitative restrictions, embargoes, and licensing practices. Japan was the country most often cited for quantitative restrictions and licensing practices. Both of these impediments were cited in regard to bovine and equine leather and associated products. Other countries where import quotas on leather were reported included Mexico, Brazil, the Philippines, Portugal, and Spain. U.S. importers cited the export quotas of Japan, France, and West Germany, aimed at maintaining a cheap source of supply of hides and skins for the local tanning industry, as important barriers to trade.

Among the various forms of specific limitations on trade, embargoes or practices which in effect do not permit trade were the most frequently mentioned in this sector. The United States was the country most often mentioned in this regard. The United States prohibits imports of ermine, fox, kolinsky, marten, mink, muskrat, and weasel furskins, which are the products of the Union of Soviet Socialist Republic or of the Peoples Republic of China. This embargo was regarded by some manufacturers as a significant impediment to their trade. A manufacturer of

shoeboard reported encountering embargoes in his efforts to export to Czechoslovakia, Hungary, Mexico, Venezuela, and New Zealand. Embargoes on leather and leather goods were reported in Egypt, Korea, and Jamaica. Some of these embargoes were only effective on items also produced by local manufacturers.

Outside of the various specific limitations on trade, the second major area of complaint concerned nondiscriminatory and discriminatory import duties. Complaints were registered against Italy, Spain, Japan, New Zealand, and the Philippines for their high duty levels on various types of shoeboard. One manufacturer regarded the higher United Kingdom duty on cellulose shoeboard, as opposed to leather fiber shoeboard, as discriminatory against his product. In regard to leather, the tariffs of Argentina, Japan, and Mexico were characterized by the complainant as "astronomical."

There were fewer complaints about discriminatory import duties than nondiscriminatory duties. The Community and Greece were charged with discriminating in respect to leather products. Japan was criticized for allowing duty-free imports of fiberboard from underdeveloped countries, while imposing a 10 percent duty on others. A complaint against Hungary concerned the application of MFN rates to shoeboard from the United Kingdom, while the same item from the United States paid a discriminatory duty.

The various nontariff charges on imports reported by manufacturers included port and statistical taxes levied by Greece, France, Italy, and Japan. Greece was the country most frequently mentioned in this respect,

particularly in regard to leather and leather products. Greece's imposition of stamp taxes on these goods was also pointed out. In addition to the above, complaints were registered against variable levies on cowhide by Portugal and border tax adjustments on leather by the West European countries in general.

Eighteen of the producers and traders submitting complaints also gave their assessments of the effect which removal of the barrier or barriers would have upon their trade. Ten reported they would expect a "significant" increase in their trade; the remaining eight would expect a "moderate" increase. Among those also giving estimated dollar amounts for the increase, the "moderate" increases were approximately 20 percent of current trade, and the "significant" increases ranged from 15 to several hundred percent of present trade levels. The projected trade increases totaled almost \$16 million.

## Raw Hides and Furskins

Covered in this subsector are raw hides and skins, including sheepskins in the wool, raw furskins, and parings and other waste of leather or composition leather. <sup>1/</sup>

MFN tariffs

All MFN tariff provisions of the United Kingdom and the European Community for raw hides and furskins are duty free. Canada, the United States, and Japan have dutiable provisions which apply to a very small part of their imports. Consequently, their weighted average duties for

Chart 1-14-E. -- Average MFN tariff rates on raw hides and furskins

\*Figures for Japan do not reflect the unilateral reductions (by 50 percent) made in 1972 on one of the approximately seven Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector see BTN headings 41.01, 41.09, 43.01.

all raw hides and furskins are less than 1 percent ad valorem (actually zero in the case of Canada) (see chart I-14-E). The United States has the highest arithmetic average for all products (6.9 percent). For the relatively few dutiable items in this subsector, the United States again has the highest arithmetic average (25.7 percent), but its weighted average (2.1 percent) is below both Japan's (6.5 percent) and Canada's (17.5 percent).

The distribution, by duty level, of MFN tariff provisions for raw hides and skins is shown in table I-14-E. Japan has the largest portion

The United States exhibits the most complex tariff schedule for raw hides and furskins, with 15 tariff lines; the United Kingdom has the simplest, only 3 lines. Schedules for Japan have seven lines; for Canada, six lines; and for the Community, five lines.

### Trade importance

In terms of trade, raw hides and furskins are the most important product category in this sector, accounting for 54 percent of total OECD imports of raw hides and skins, leather and furskins and manufactures, and 42 percent of exports. OECD imports totaled \$1.3 billion in 1969, exports \$679 million (see chart I-14-F). Among the 119 industrial

Chart I-14-F. -- OECD trade in raw hides and furskins, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

categories, raw hides and furskins rank 33rd in value of aggregate imports of the GATT tariff study countries. For the Community it is the 17th most important subsector in imports; for Japan the 19th most important; and for the United States the 40th most important. U.S. imports amounted to \$156 million in 1969, but dropped to \$105 million in 1971. Raw hides and skins accounted for \$53 million of 1971 U.S. imports, and \$52 million were of raw furskins.

### Trade network

The five major countries account for 67 percent of OECD exports and 87 percent of imports (tables I-14-G and H). The United States is the largest exporter of the group with 31 percent of the OECD total,

followed by the European Community (including intra-EC shipments) with one-fourth. The major markets for U.S. exports are Japan and the European Community. Intra-Community shipments make up 60 percent of the EC exports.

The European Community is by far the largest importer of raw hides and furskins, followed by the United Kingdom, United States, Japan, and Canada. The main exporters to the Community, the United Kingdom, and the United States are non-OECD countries, and more particularly the LDC's. The United States supplies over half of Japan's and Canada's imports. Overall, the United States and Canada have surpluses in the trade of raw hides and furskins, while the Community, the United Kingdom, and Japan have large deficits.

Trade-agreement concessions

The tabulation below shows average tariff levels for raw hides and skins existing on pre-trade-agreement base dates and on January 1, 1972. For all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. The EC average on both dates is zero; the other countries show reductions in duties from the already low base-date levels. The most significant reduction occurred in the United Kingdom average tariff, which dropped from 7.7 percent ad valorem to zero.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	0.4	0.1
European Community	0.0	0.0
United Kingdom	7.7	0.0
Japan	3.6	0.6
Canada	3.4	2.9

All MFN provisions for raw hides and furskins in the tariff schedules of the United States and European Community have been the subject of GATT concessions. Eighty-three percent of Canadian provisions, 67 percent of the provisions of the United Kingdom, and 57 percent of those of Japan, covering virtually all of these countries' imports, have had GATT concessions. Specific reductions for the two most important trade items within the group, raw furskins and raw hides and skins, are shown below (tables I-14-I and J).

All the EC member state national tariffs prior to the adoption of the Common External Tariff contained concessions under GATT. Of 21 concessions in the national tariffs, 3 were above the CXT autonomous rate and 18 were at the CXT rate.

Table I-14-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Nearly all U.S. imports in 1972 were included in classes which are statutorily duty free.

## Leather and Dressed Furskins

Included in this subsector are all kinds of leather (except waste and parings) and tanned or dressed furskins. 1/

MFN tariffs

The European Community has the lowest arithmetic (3.7 percent ad valorem) and weighted (4.2 percent ad valorem) tariff averages for total MFN imports of leather and dressed furskins. The U.S. average rates are only slightly higher than those of the Community. Japan has a high arithmetic average (15.1 percent), but its weighted average (9.8 percent)

Chart I-14-G. -- Average MFN tariff rates on leather and dressed furskins  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

1/ For specific coverage of this subsector see BTN headings 41.02-.08; 41.10; 43.02.

is below both Canada's (9.9 percent) and the United Kingdom's (11.9 percent). The relationships of the country averages that hold for all products also hold for dutiable items. Only the Community has a significant amount of duty-free imports, but the elimination of these from the calculations is not sufficient to raise the EC tariff levels on dutiable products above those of the United States (see chart I-14-G).

Virtually all imports into the United States and Japan and over 90 percent of shipments into the Community from external countries are accorded MFN treatment. Sixty-eight percent of United Kingdom imports, of which 59 percent are from developing countries, and 31 percent of Canadian imports are treated preferentially.

Ninety percent of the European Community's MFN tariff provisions are under 5 percent ad valorem (see table I-14-K). A majority of U.S.

Table I-14-K.--Distribution, by duty level, of MFN tariff provisions for leather and dressed furskins

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

However, most EC and U.S. entries are assessed rates from 0.1 to 5 percent ad valorem. Eighty-two percent of Canada's imports, 76 percent of Japan's, and 48 percent of the United Kingdom's are in the 5.1-10 percent ad valorem bracket.

The United States exhibits the most complex tariff schedule for leather and dressed furskins, with 40 tariff lines; the United Kingdom has the simplest, only 16 lines. Schedules for Canada have 33 lines, and those for the Community and Japan, 19 lines.

#### Trade importance

Leather and dressed furskins account for about one-third of OECD imports of this sector and 43 percent of exports. OECD imports totaled \$807 million and exports \$686 million in 1969 (see chart I-14-H). U.S. imports amounted to \$104 million in 1969, but dropped to \$93 million in 1971. Bovine cattle leather and horse leather accounted for \$40 million of the 1971 U.S. total.

Chart I-14-H. -- OECD trade in leather and dressed furskins, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for 84 percent of OECD exports of leather and dressed furskins and 79 percent of imports. The European Community is the largest exporter of these items, shipping \$381 million, of which \$204 million are intra-EC exports. U.S. exports total \$71 million; the United Kingdom, \$99 million; Canada, \$13 million; and Japan, \$11 million. "Other" OECD countries as a group, Canada, and the IDC's each provide a market for between 20 and 30 percent of U.S. exports (see table I-14-M).

Table I-14-M.--OECD exports of leather and dressed furskins, 1969

(Millions of dollars)

The Community is the largest importer of these items, followed by the United States and the United Kingdom (see table I-14-N). The Community is the largest source of U.S. imports, and the United States is the largest supplier to Canada. LDC's, as a group, are the most important source of imports by the Community, the United Kingdom, and Japan. None of the five major countries except the United Kingdom have a positive balance of trade in leather and dressed furskins. For trade within the five major countries and excluding intra-EC shipments, the United Kingdom has a \$40 million surplus in its balance of trade; the Community, \$11 million; and Japan, none. The United States has a \$26 million deficit and Canada a \$21 million deficit.

Trade-agreement concessions

Average tariff levels of all the major countries on January 1, 1972, were substantially below levels existing on pre-trade-agreement base dates, as shown in the tabulation below. The major part of the reductions reflect reciprocal concessions.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
--	----------------------------	------------------------

(Percent ad valorem)

United States	21.6	6.0
European Community	7.2	4.2
United Kingdom	18.5	11.9
Japan	17.8	9.8
Canada	20.8	11.9

The United States, European Community, and the United Kingdom have made concessions under the GATT on all MFN provisions for leather

and dressed furskins. Concessions have been made on 91 percent of Canada's provisions covering almost all imports. GATT concessions cover only about 47 percent of Japan's provisions and around 88 percent of trade in these items. Specific reductions on mature bovine leather and horse leather are shown in table I-14-0. It is noteworthy that all countries except Japan have reduced rates on this large trade item.

Table I-14-0.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on mature bovine leather and equine leather

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

Japan-----	20%; 15%	20%; 15%	20%; 15%	41.02-1, 2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

The national tariffs of all member states of the European Community prior to the adoption of the CXT contained tariff concessions on leather and dressed furskins. The number of such concessions totaled 126, of which 82 reflected rates higher than the CXT rate; 15 were at the CXT rate; and 29 were below the CXT rate.

## Manufactured Articles of Leather or Furskins

Included in this subsector are saddlery and harness of any material, apparel and clothing accessories of leather or furskins, leather articles for industrial use, artificial fur and articles made thereof, and other miscellaneous manufactures of leather or furskins except travel goods and footwear. 1/

MFN tariffs

For total MFN imports of manufactured articles of leather and furskins, the arithmetic tariff averages of the five major countries range from 8.7 percent ad valorem to 19.7 percent ad valorem; the weighted averages from 9.5 to 22.8 percent. The European Community has the lowest arithmetic (8.7 percent ad valorem) and weighted (9.5 percent ad valorem) averages and Canada the highest (19.7 and 22.8 percent, respectively). The U.S. arithmetic average of 17.5 percent is higher than either Japan's (15 percent) or the United Kingdom's (15.3 percent), but the U.S. weighted average of 15.6 percent is quite a bit lower than the United Kingdom's (19.2 percent) and almost as low as Japan's (15.3 percent). None of the five major countries has duty-free MFN provisions for products in this subsector, and, therefore, the dutiable product averages mirror those for all products, as shown in chart I-14-I.

Preferential tariff treatment is accorded 14 percent of U.S. total imports in this subsector, 13 percent of Canada's imports, and 46 percent of entries into the United Kingdom. Preferential shipments into the

---

1/ For specific coverage of this subsector see BTN headings 42.01; 42.03-.05; 43.03-.04. (Leather footwear and travel goods are included in industrial sector I-15, Footwear and Travel Goods.)

have a wider range than the others, extending from under 5 to over 50 percent ad valorem, with close to one-third in the 5.1 to 10 percent ad valorem bracket.

In terms of MFN imports of leather and furskin manufactures, 71 percent of the European Community's entries and one-third of U.S. imports fall in the 5.1-10 percent ad valorem bracket; half of Japan's imports are in the 10.1-15 percent ad valorem range; three-fourths of United Kingdom's entries fall in the 15.1-20 percent ad valorem bracket; and two-thirds of Canada's imports enter at rates in the 20.1-25 percent range. U.S. imports are the most widely dispersed over the duty ranges, with 20 percent of the total entering at rates above 25 percent ad valorem (see table I-14-Q).

Table I-14-Q.--Distribution, by duty level, of MFN imports of manufactured articles of leather and furskins

Note.--Due to rounding, figures may not add to 100 percent.

The United States exhibits the most complex tariff schedule for this subsector, with 79 tariff lines; the United Kingdom has the simplest, only 8 lines. Schedules for Canada and Japan have 15 lines and those for the Community, 14.

#### Trade importance

In terms of overall OECD trade, manufactured articles are the least important of the three subdivisions of this sector, accounting for only 12 percent of the total sector imports and 15 percent of the exports. OECD exports of leather and furskin manufactures in 1969 totaled \$242 million and imports \$289 million (see chart I-14-J). U.S. imports amounted to \$105 million in 1969 and \$137 million in 1971. Articles of apparel and clothing accessories accounted for \$114 million of the U.S. total in 1971.

#### Trade network

The five major countries account for 81 percent of OECD exports in this subsector and 74 percent of imports. The European Community

Chart I-14-J --- OECD trade in manufactured articles of leather or furskins, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

(excluding intra-EC shipments) is the principal exporter of these items, shipping \$80 million (see table I-14-R). The United States is the largest importer, followed distantly by the European Community (see table I-14-S). The value of trade between the five countries is small.

#### Trade-agreement concessions

As the table below displays, the average tariff levels of all countries on January 1, 1972, were significantly below the pre-trade-agreement base-date levels. The most substantial reduction has been in the U.S. tariff average and the least in the United Kingdom's.

Table I-14-R.--OECD exports of manufactured articles of leather and furskins, 1969

(Millions of dollars)

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	35.5	15.6
European Community	20.2	9.5
United Kingdom	26.1	19.2
Japan	28.5	15.3
Canada	35.9	19.7

All of the five major countries except Japan have made concessions under the GATT covering all MFN provisions in this subsector, and Japan has made concessions on 93 percent of its provisions encompassing all trade in these items. Specific reductions on leather gloves are shown in table I-14-T below.

Table I-14-T.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on leather gloves

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25%-50% 61.7%-208.2% AVE	25%-40% 30.8%-104.1% AVE	15%-35% <sup>2/</sup> 24.4%-96.7% AVE <sup>2/</sup> <sup>3/</sup>	705.35-.78
Canada-----	45%	10%-25%	10%-25%	56825-1; 56830-1; 56835-1
European Community--	19%; 17%	19%; 14%	13%; 10.5%	42.03BI, III
United Kingdom-----	30%	30%	25%	42.03(A)
Japan-----	30%	20%-25%	10%-12.5%	42.03-1, 2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Nearly half of imports, in terms of values in 1970 were subject to concessions in the Kennedy Round.

<sup>3/</sup> Range of ad valorem equivalents of specific rates of duty from \$5 to \$7 per dozen pairs.

All of the EC member state national tariffs prior to the adoption of the CXT contained concessions under the GATT. Of 42 such concessions, 21 were above the CXT rate, 7 at the CXT rate, and 14 below the CXT rate.

## FOOTWEAR AND TRAVEL GOODS

Footwear and travel goods include most types of footwear and parts of footwear; ankle and leg coverings such as spats and shin-guards for sportswear; and travel goods (including such items as trunks and suit-cases), handbags, wallets, purses, tool cases, and boxes for musical instruments and jewelry. The sector does not include knitted or crocheted footwear without applied soles; articles of asbestos; orthopedic footwear; and toys and skating boots with skates attached. 1/

### MFN tariffs

World MFN imports of footwear and travel goods face average tariffs in Canada, Japan, and the European Community substantially above those for all industrial products. In the United States, the weighted average tariff for footwear and travel goods is well above the all products average, whereas the arithmetic average is about the same as the average for all products. 2/ A similar comparison of the average tariffs for the United Kingdom reveals that the footwear and travel goods averages and the all products averages are at approximately the same level. The

---

1/ For the specific coverage of this sector, see BTN headings 64.01-.06 and 42.02. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

2/ U.S. tariff averages reported for this sector and the subsector on footwear do not reflect the effect of assessing the U.S. duty of 25 percent ad valorem, applicable to certain footwear with fabric uppers and soles of rubber or plastics, on the American selling price (ASP) of like or similar footwear produced in the United States, rather than on the actual price paid for the imported footwear. Such footwear accounts for about 3 percent of U.S. imports in this sector. The U.S. average duties would be only slightly higher than those reported here if the ASP assessment were taken into account (see subsection on footwear).

Chart I-15-A. -- Average MFN tariff rates on footwear &amp; travel goods

(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

arithmetic averages for all footwear and travel goods (combined free and dutiable) range from 9.3 to 20.7 percent ad valorem; the weighted averages from 7 to 23.5 percent (chart I-15-A). For all footwear and travel goods, the United Kingdom has the lowest arithmetic and weighted average tariffs (9.3 and 7 percent, respectively) and Canada the highest (20.7 and 23.5 percent, respectively). Few products in this sector

enter duty free; consequently there is no significant difference between average tariffs for all and dutiable products. Only average tariffs for the United States and the United Kingdom are slightly lower for all products than for dutiable products.

The distribution of tariff provisions, by duty level, is shown in table I-15-A. The greatest concentration of rate provisions is in

Table I-15-A.--Distribution, by duty level, of MFN tariff provisions for footwear and travel goods

Duty level	(In percent)				
	Canada	United States <sup>1/</sup>	Japan	European Community	United Kingdom

10.1-15.0 percent--	-	18.0	5.6	10.0	-
15.1-20.0 percent--	62.5	16.4	16.7	20.0	10.0
20.1-25.0 percent--	37.5	4.9	-	-	-
25.1-30.0 percent--	-	-	27.8	-	-
30.1-40.0 percent--	-	3.3	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Figures for the United States do not reflect the effect of assessing the U.S. rate of duty (nominally 20 percent ad valorem) for certain footwear with fabric uppers and soles of rubber or plastics on the basis of the American selling price of like or similar footwear produced in the United States rather than on the actual price paid for the imported footwear. If the effect of ASP assessment were included, the figure in the duty level range of 15.1-20 percent would be slightly smaller, by an amount which would appear in a duty-level bracket of over 50 percent ad valorem.

Note.--Due to rounding, figures may not add to 100 percent.

the bracket of 5.1-10 percent ad valorem for all countries except Canada, where 63 percent of the rate provisions fall within the 15.1-20 percent bracket. Tariffs of the United States and the United Kingdom

contain a few MFN duty-free provisions for footwear and travel goods; those of Canada, Japan, and the European Community have none. The maximum rates for the European Community and the United Kingdom are in the 15.1-20 percent bracket. Canada has items in the 20.1-25 percent bracket and Japan's rates extend into the 25.1-30 percent range. The United States has provisions in the 30.1-40 percent bracket, as well as one footwear provision (TSUS 700.60) under which higher duties are collected on certain footwear under the American selling price (ASP) system (equivalent to 58 percent ad valorem based on 1965 data; current sample data suggest the present equivalent is higher than 58 percent).

In 1970, imports of footwear and travel goods receiving preferential tariff treatment ranged from 46 percent for the United Kingdom to none for Japan. Canada grants preferential rates on 12 percent of such imports; the European Community, 4 percent; and the United States, 1 percent. Intra-European Community shipments moving free of duty are almost four times greater than European Community imports from outside sources.

MFN imports by all major countries enter at differing rates; about half of Japan's imports and roughly two-thirds of imports of the United States, the European Community, and the United Kingdom are in the 5.1-10 percent range (table I-15-B). Twenty-one percent of Japanese entries are in the 25.1-30 percent bracket. Over two-thirds of Canada's MFN imports are dutiable in the 20.1-25 percent bracket. Only the United States has duty-free MFN imports, but such entries account for less than 1 percent of total U.S. imports.

Table I-15-B.--Distribution, by duty level, of MFN imports of footwear and travel goods

(In percent)					
Duty level	Canada	United States 1/	Japan	European Community	United Kingdom

30.1-40.0 percent--	-	2.5	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

1/ Figures for the United States do not reflect the effect of assessing the U.S. rate of duty (nominally 20 percent ad valorem) for certain footwear with fabric uppers and soles of rubber or plastics on the basis of the American selling price of like or similar footwear produced in the United States rather than on the actual price paid for the imported footwear. If the effect of ASP assessment were included, the figure in the duty level range of 15.1-20 percent would be approximately 11.1, and a figure of about 3.0 would appear in a duty-level bracket of over 50 percent ad valorem.

Note.--Due to rounding, figures may not add to 100 percent.

The United States has the most detailed tariff schedule for footwear and travel goods with 61 tariff lines, while the European Community has the least with 10. The United Kingdom has 30 lines; Canada, 24 lines; and Japan, 18 lines.

#### Trade importance

Footwear and travel goods is one of the less important industrial sectors, ranking 15th in both OECD exports and imports. The sector accounts for only about 1 percent of OECD industrial exports and

imports. For the United States, the sector is the least important in exports. It ranked 13th in U.S. imports in 1969, but rose to 11th in 1970.

Imports by the GATT tariff study countries were valued at \$761 million in 1967 and \$1.3 billion in 1970. Intra-European Community shipments were an additional \$260 million in 1967 and \$453 million in 1970. Imports by the OECD countries in 1969 were \$1.5 billion (including \$400 million of intra-European Community shipments) and exports were \$1.5 billion (chart I-15-B). By 1970, imports by the OECD countries

Chart I-15-B. -- OECD trade in footwear and travel goods, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

had risen to \$1.8 billion (including \$431 million of intra-European Community shipments) and exports totaled \$1.7 billion.

### Trade network

The five major countries account for about 83 percent of OECD exports and 84 percent of imports. About 70 percent of OECD exports go to the five major countries; about 8 percent to LDC's. Almost 70 percent of OECD imports are supplied by the five major countries.

Chart I-15- C . -- United States trade in footwear and travel goods, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The European Community is by far the principal exporter, accounting for almost two-thirds of total OECD exports, followed by Japan and the United Kingdom. The United States, the principal importer, exports only a small amount of footwear and travel goods, and U.S. shipments go largely to the LDC's (see chart I-15-C). Intra-European Community exports are equal to almost three-quarters of the Community's shipments to outside sources, of which 46 percent go to the United States, 9 percent to LDC's, and 21 percent to "other" OECD countries. Japan ships about two-thirds of its exports to the United States, 12 percent to LDC's, and 6 percent to both Canada and the European Community. The United Kingdom ships 26 percent of its products to the United States, 15 percent to LDC's, and 26 percent to "other" OECD countries (table I-15-C).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, among the 23 industrial sectors, footwear and travel goods ranked 19th in industrial imports for the European Community, 20th for Japan, 11th for the United States, 13th for Canada, and 16th for the United Kingdom. United States imports of footwear and travel goods were valued at \$338 million in 1967, \$588 million in 1969, and \$888 million in 1971. The European Community supplies about 42 percent of U.S. imports; Japan and "other" OECD countries each about 17-19 percent (table I-15-D). Country of origin data are unavailable for 5 percent of EC imports and 5 percent of Canadian imports. Only about 18 percent of European Community imports for

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Note.--Complete country of origin data are not available for 5 percent of Canadian imports and 5 percent of EC imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

which origins are known come from nonmember countries, with LDC's as a group being the largest outside source. The United Kingdom imports about one-third of its supply from each of the following: The European Community, LDC's, and "other" OECD countries. The European Community is the principal supplier of Canadian imports (30 percent), followed by the LDC's (18 percent) and Japan (15 percent). The European Community is the major supplier to Japan (36 percent); other sources are LDC's (29 percent) and "other" OECD countries (21 percent).

#### Trade composition

Footwear and travel goods trade is divided into two subsectors, footwear and travel goods and handbags. Footwear is by far the largest in both OECD exports and imports (86 and 83 percent, respectively, in 1969).

#### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figures are arithmetic averages.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	28.0	11.2
European Community	19.6	12.0
United Kingdom	21.6	7.0
Japan	38.9	14.9
Canada	35.5	20.7

Concessions under the GATT have been made on all MFN provisions for footwear and travel goods of Canada as well as on 98 and 97 percent of the provisions (covering all of the trade) of the United States and the United Kingdom, respectively. For the European Community, 90 to 100 percent of the provisions, covering 76 to 100 percent of MFN imports, have GATT concessions; <sup>1/</sup> in the Japanese schedule, 84 percent of the provisions and 97 percent of the imports are covered.

The national tariffs of all member states of the European Community prior to adoption of the European Community's Common External Tariff contained tariff concessions on footwear and travel goods negotiated under the GATT. The number of such concessions totaled 51, of which 33 reflected rates higher than the autonomous rate established in the CXT, 5 were at the CXT rate, and 13 were below the CXT rate.

#### Trade complaints

Thirty-nine complaints submitted to the Tariff Commission during the investigation of trade barriers dealt with measures or practices affecting footwear and travel goods. About 60 percent were against developed countries, with Japan and the United States being the object of the greatest number of complaints (6 each) followed by Australia, Canada, and New Zealand. Fifteen complaints objected to trade obstacles encountered in numerous less developed countries.

---

<sup>1/</sup> Ninety percent of tariff provisions, covering 76 percent of MFN imports, are fully covered by GATT concessions; for 10 percent of the provisions, covering 24 percent of MFN imports, only part of an item is covered.

Embargoes, quantitative restrictions and licensing practices were the subject of half of the complaints in this sector. These practices were encountered chiefly in LDC's, and most frequently, complaints mentioned that footwear could not be shipped to these countries because either similar products were produced locally or the complainant's products were considered luxury items and not essential to the country's well-being. United States producers reported encountering quotas on footwear in Japan and in unspecified European countries. A manufacturer of eyeglass cases complained of licensing practices of Australia, Japan, New Zealand and Malta, stating that licenses were not easily obtainable for his products, and without a license, entrance into those countries was prohibited.

Importers complained of the use of the American selling price method of customs valuation for assessing duty on U.S. imports of certain fabric-upper rubber-soled footwear. One importer of footwear and luggage complained that U.S. valuation procedures are overly time consuming and resultant delays lead to additional costs to the importer due to demurrage, storage, and extra service charges.

Footwear and travel goods tariffs of many LDC's, and particularly Mexico, were reported to be prohibitive. Some LDC's were said to limit imports through high consumption taxes, or supplemental "import taxes." Tariff discrimination in the markets of Australia, Canada, and New Zealand because of the Commonwealth preference system was also

the subject of complaint. U.S. producers objected to border taxes encountered in shipping to most countries of Western Europe.

Some U.S. footwear manufacturers report that Italy, Japan, and Spain subsidize firms in the manufacture of shoes, giving producers in those countries an unfair advantage in competing in the United States market and third countries. An objection was also raised against the Canadian requirement that the country of origin must be stamped, etched, engraved, or labeled in a permanent conspicuous manner on travel goods shipped to Canada.

Only one-third of the submissions to the Commission contained an assessment of the restrictive effect of the barriers encountered. Most reported that a moderate increase in sales would be experienced if the barriers were removed; only two respondents indicated they would expect a significant increase. Estimates of a percentage increase for those respondents who estimated a moderate sales increase went as high as 28 percent.

#### Footwear

This subsector includes most types of footwear and parts of footwear, as well as ankle and leg coverings such as leggings. It does not include knitted or crocheted footwear without applied soles, orthopedic footwear, and toys and skating boots with skates attached. 1/

---

1/ For the specific coverage of this subsector, see BTN headings 64.01-.06.

MFN tariffs

Among the five major countries, the United States, the European Community, and the United Kingdom have the lowest arithmetic tariff averages (10.3, 11.1, and 11.4 percent ad valorem, respectively) for total MFN imports of footwear. <sup>1/</sup> These countries also have the lowest weighted tariff averages--the United Kingdom, 8.3 percent; the United States, 11.4 percent; and the European Community, 13.3 percent. Tariff averages, arithmetic and weighted, for total MFN imports of footwear for Canada and Japan are roughly twice the level for the other three major countries (chart I-15-D).

The average MFN tariff rates on footwear are the same for all products and for dutiable products for Canada, Japan, and the Community, and differ only slightly for the United States and the United Kingdom, where a small number of duty-free provisions exist for footwear.

Virtually all U.S. and Japanese imports of footwear, and European Community imports from outside sources receive MFN treatment; preferential rates are of importance to the United Kingdom and Canada

---

<sup>1/</sup> The U.S. tariff averages for footwear reported in this subsector do not reflect the effect of assessing the duty of 20 percent ad valorem, applicable to certain footwear with fabric uppers and soles of leather (e.g., tennis oxfords, basketball shoes, specialties for leisure, street or beach wear, and "sneakers"), on the American selling price (ASP) of like or similar footwear produced in the United States rather than on the actual price paid for the imported footwear. Such footwear accounted for 4 percent of total U.S. footwear imports in 1971. The U.S. average duties would be slightly higher than reported here if the ASP assessment were taken into account.

Chart I-15- D . -- Average MFN tariff rates on footwear  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

where 45 and 14 percent, respectively, of their footwear imports in 1967 entered under preferential rates. Intra-European Community shipments,

which move free of duty, are several times larger than European Community imports from outside sources.

Japanese, European Community, and United Kingdom MFN tariff provisions are principally in the 5.1-10 percent bracket, but one-fourth of the European Community rates are in the 15.1-20 percent bracket, and almost two-fifths of Japanese rates in the 25.1-30 percent range. The United States has slightly more than one-third of its rates in the 5.1-10 percent bracket and about one-fourth each in the 0.1-5 and 10.1-15 percent brackets. Canadian rates are about equally divided between the 15.1-20 and 20.1-25 percent brackets (table I-15-E). In terms of MFN imports of footwear, 89 percent of shipments into Canada are assessed rates between 20.1 and 25 percent; 57 percent of U.S. imports and 78 percent of United Kingdom imports are in the

Table I-15-E.--Distribution, by duty level, of MFN tariff provisions for footwear

(In percent)					
Duty level	Canada	United States <sup>1/</sup>	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Figures for the United States do not reflect the effect of assessing the U.S. rate of duty (nominally 20 percent ad valorem) for certain footwear with fabric uppers and soles of rubber or plastics on the basis of the American selling price of like or similar footwear produced in the United States rather than on the actual price paid for the imported footwear. If the effect of ASP assessment were included, the figure in the duty level range of 15.1-20 percent would be approximately 5.8, and a figure of about 4.0 would appear in a duty-level bracket of over 50 percent ad valorem.

Note.--Due to rounding, figures may not add to 100 percent.

Of the major countries, the United States exhibits the most complex schedule for footwear, with 38 lines; the European Community has the simplest, 8 lines. Schedules for the United Kingdom have 28 lines; for Canada, 17 lines; and for Japan, 13 lines.

#### Trade importance

In 1969, footwear accounted for 86 percent of OECD exports and 83 percent of OECD imports of the footwear and travel goods sector.

OECD exports and imports each totaled \$1.3 billion in 1969 (chart I-15-E) and \$1.5 billion in 1970. In 1967, among the 119 industrial subsectors, footwear ranked 43rd in value of aggregate imports of the GATT tariff study countries. For the United States, however, the rank is 16th; United States imports amounted to \$491 million in 1969, and increased to \$768 million in 1971. Footwear with outer soles of leather or composition leather, or rubber or plastic (BTN 64.02) is by far the most important type of footwear traded. In 1967, the major importer of such footwear was the United States (\$200 million); the United Kingdom entered \$61 million.

Chart I-15- E . -- OECD trade in footwear, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for almost 85 percent of OECD exports and imports (tables I-15-G and H). By far the largest supplier to the world is the European Community, accounting for 64 percent of OECD exports in 1969, followed by Japan. The principal importer is the United States, followed distantly by the European Community. The United States imports principally from the European Community, Japan, and "other" OECD countries. Imports by the European Community from outside sources are equal to less than 20 percent of intra-European Community shipments which move duty free.

Table I-15-G.— OECD exports of footwear, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Trade flows among the five countries are generally in the direction of countries having lower tariffs--intra-European Community shipments--and imports into the United States account for over three-fifths of trade. Canada and Japan, with the highest MFN tariff rates, are not very significant importers of footwear.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, except Japan, January 1, 1972, average tariff levels for footwear were substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. Only in the United Kingdom are specific duties important,

accounting for 50 percent of tariff lines and about two-thirds of MFN imports.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	25.7	11.4
European Community	19.6	13.3
United Kingdom	21.0	8.3
Japan	25.5	23.4
Canada	35.4	21.5

All MFN provisions for footwear in the tariff schedules of Canada have been the subject of GATT concessions. In the U.S. schedule, 97 percent of the provisions, covering 100 percent of MFN imports have GATT concessions; in the United Kingdom schedule, 96 percent of the provisions, covering 100 percent of MFN imports. Although 100 percent of the European Community and Japanese MFN imports are covered, only 88 and 77 percent, respectively, of the MFN provisions have been the subject of GATT concessions.

All European Community member state national tariffs prior to adoption of the Common External Tariff contained concessions under the GATT. Of 37 concessions in the national tariffs, 21 were at rates above the CXT autonomous rate, 5 at the CXT rate, and 11 were below the CXT rate.

Tariffs on footwear with uppers of leather, the largest type of imports for the United States, have been reduced through trade-agreement concessions by all five major countries (table I-15-I). U.S. post-Kennedy Round MFN rates are significantly below statutory levels;

Table I-15-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on footwear with uppers of leather

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	10%-30%	5%-20%	Free-20%	700.05-.45
Canada-----	40%	27.5%	25%	61105-2
European Community-----	20%	16%	8%	64.02A
United Kingdom-----	20%	3s./pr.-30%	5%-10%	64.02 (B)(2)
Japan-----	30%	27%	27%	64.02-1

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

Canadian tariffs have been lowered about 38 percent. The United Kingdom rate reductions range from 50 to 75 percent. Japan has made no further reductions in its duties after the Kennedy Round.

Tariffs on footwear with outer soles and uppers of rubber or plastic, also a large import item for the United States, have been reduced through trade-agreement concessions by all five major countries except the European Community (table I-15-J). Reductions in U.S. MFN rates on this type of footwear are rather substantial; reductions by Japan amount to about 33 percent from statutory rates; and reductions by Canada about 38 percent. The United Kingdom shifted from an ad valorem to a specific duty.

Table I-15-J.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on footwear with outer soles and uppers of rubber or plastic

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25%-75%	12.5%-37.5%	<sup>2/</sup> 6%-37.5%	700.51-.55
Canada-----	40%	27.5%	25%	61105-1
European Community--	20%	20%	20%	64.01
United Kingdom-----	<sup>3/</sup> 20%	10d. pr.-30%	9.6d-h/-per pair	64.01
Japan-----	15%	20%	10%	64.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> The 6 percent applies to shoes with supported vinyl uppers, zoris and other sandals, which comprise 80 percent of the imports. The remainder consists of hunting boots and rainwear, dutiable at 12.5, 25, and 37.5 percent ad valorem.

<sup>3/</sup> Plus a duty of 2d. to 3d. per pair.

#### Travel Goods and Handbags

Travel goods and handbags include such items as trunks, handbags, purses, brief cases, tool cases, boxes and cases for musical instruments and jewelry, and all similar containers, of leather or composition leather, of vulcanized fiber, of plastic sheeting, of paperboard or of textile fabric. <sup>1/</sup>

#### MFN tariffs

Among the five major countries, Canada has the highest arithmetic tariff average (18.9 percent ad valorem) for total MFN imports of travel goods and handbags, while the other four countries range between 11.9 and 13.3 percent ad valorem. The highest weighted averages are

---

<sup>1/</sup> For specific coverage of this subsector, see BTN heading 42.02.

19.9 percent ad valorem (Canada) and 15.7 percent ad valorem (the United States); the weighted averages for the other three countries range between 9.2 and 11.3 percent ad valorem (chart I-15-F).

The average MFN tariff rates on dutiable products in this sub-sector are identical to those for all products, reflecting the absence of duty-free provisions on travel goods.

Of the five major countries, preferential trade is significant for only the United Kingdom--about 40 percent of United Kingdom imports

Chart I-15- F. -- Average MFN tariff rates on travel goods and handbags  
(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

in 1967 entered at preferential rates. However, intra-European Community duty-free shipments are three times as great as European Community imports from outside sources.

United States MFN tariff provisions are concentrated in the 5.1-10 percent and 15.1-20 percent ad valorem brackets (table I-15-K).

Table I-15-K.--Distribution, by duty level, of MFN tariff provisions for travel goods and handbags

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	-	-	-	-	-
0.1-5.0 percent----	-	9.6	-	-	-
5.1-10.0 percent----	-	42.9	50.0	50.0	50.0
10.1-15.0 percent--	-	9.6	16.7	50.0	50.0
15.1-20.0 percent--	100.0	33.3	33.3	-	-
20.1-25.0 percent--	-	4.8	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Provisions for the European Community and the United Kingdom are evenly divided between the 5.1-10 and 10.1-15 percent brackets; all Canadian provisions are within the 15.1-20 percent range. Half of the Japanese provisions are in the 5.1-10 percent bracket; one-third in the 15.1-20 percent bracket.

In terms of MFN imports of travel goods and handbags, the bulk of the entries for Japan, the European Community, and the United Kingdom are dutiable between 5.1 and 10 percent ad valorem (table I-15-L). All Canadian imports are assessed between 15.1 and 20 percent; about one-third of U.S. imports are dutiable between 5.1 and 10 percent and three-fifths are in the 15.1-20 percent bracket.

Table I-15-L.--Distribution, by duty level, of MFN imports of travel goods and handbags

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	-	-	-	-	-
0.1-5.0 percent----	-	0.9	-	-	-

10.1-15.0 percent--	-	4.4	20.2	22.3	16.9
15.1-20.0 percent--	100.0	58.9	9.1	-	-
20.1-25.0 percent--	-	.1	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Of the five major countries, the United States exhibits the most complex tariff schedule for travel goods and handbags, with 21 tariff lines; the European Community and the United Kingdom have the simplest, with 2 lines. Schedules for Canada have seven lines and Japan has six lines.

#### Trade importance

Travel goods and handbags account for about 14 percent of OECD exports and 17 percent of the imports in the footwear and travel goods sector. OECD exports in 1969 totaled \$215 million; imports were \$247 million (chart I-15-G). Among the 119 industrial subsectors, travel goods and handbags ranked 98th in value of aggregate imports of the GATT tariff study countries in 1967; for the United States the rank is 61. United States imports amounted to \$97 million in 1969 and increased to \$120 million in 1971.

Chart I-15-G . -- OECD trade in travel goods and handbags, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for 88 percent of OECD exports and 81 percent of imports of travel goods and handbags (tables I-15-M and I-15-N). The largest supplier to the world is the European Community, which accounts for 60 percent of OECD exports, followed by Japan. The principal importer is the United States, followed by the European Community. Of the five, the least important exporter is Canada; Japan is the least important importer. The United States imports principally from the LDC's, Japan, and the European Community.

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Intra-European Community shipments are almost four times as great as European Community imports from outside sources, half of which are supplied by IDC's.

The United States, the major importer of travel goods among the five countries, has an average weighted tariff higher than all other major countries except Canada. The second largest volume of trade is intra-European Community shipments which are duty free.

#### Trade-agreement concessions

As the tabulation below shows, for all the five major countries, average tariff levels for travel goods and handbags are substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. For the five major countries, only in the United Kingdom are specific duties important; such rates account for 50 percent of tariff lines and covered 17 percent of United Kingdom MFN imports in 1967.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	42.9	15.7
European Community	19.4	9.2
United Kingdom	25.0	10.6
Japan	47.0	11.3
Canada	35.6	18.9

All of the European Community member state national tariffs prior to adoption of the Common External Tariff contained concessions under the GATT. Of 14 concessions in the national tariffs, 12 were at rates above the CXT autonomous rate and 2 were below the CXT rate.

For the five major countries, all MFN provisions for travel goods and handbags have been the subject of GATT concessions. Specific

concessions made on handbags appear in table I-15-0. Reductions in U.S. MFN rates range from 56 to 71 percent below statutory levels; Canadian and Japanese tariffs have been lowered 50 percent. The Community's rates have been substantially reduced. The United Kingdom rate has been reduced 60 percent.

Table I-15-0.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on handbags

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35% 45%	17.5% 20%	10% 20%	2/706.0820 2/706.6020

European Community--	19-21%	15-17%	7.5-15%	42.02(pt.)
United Kingdom-----	25%	15-20%	10%	42.02A
Japan-----	20-40%	20-40%	10-20%	42.02(pt.)

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Item 706.0820 covers handbags of leather, except reptile leather, whereas item 706.6020 consists chiefly of handbags of plastic.

<sup>3/</sup> Includes all handbags except those made from straw and sisal.

## Industrial Sector I-16

**MUSICAL INSTRUMENTS, SOUND RECORDING AND  
REPRODUCTION APPARATUS**

Musical instruments, sound recording and reproduction apparatus cover: Musical instruments, including pianos, organs, and other electronic and electrostatic musical instruments; sound recorders and reproducers, including magnetic television image and sound recorders and reproducers; and parts and accessories for the foregoing, including phonograph records, sound tapes, and blank material for sound recording. It excludes film, microphones, amplifiers, head phones, etc., not in the same cabinet as instruments falling within this heading. It also excludes sound recorders or reproducers combined with a radio receiving set. 1/

MFN tariffs

World MFN imports of musical instruments and sound recording or reproduction apparatus face average tariffs not significantly at variance with those for industrial products taken as a whole. The arithmetic averages of the five major countries for all products in the sector range from 7.6 to 10.3 percent ad valorem; the weighted averages from 6.7 to 11.7 percent (chart I-16-A). For all products, the European Community has the lowest arithmetic average tariff and the United Kingdom, the highest. The lowest weighted average for all products is held by the United States (6.7 percent) and Canada has the highest (11.7 percent).

---

1/ For specific coverage of this sector, see BTN chapter 92. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-16-A. -- Average MFN tariff rates on musical instruments, sound recording and reproduction apparatus  
(Percent ad valorem)

The averages for dutiable products only do not differ significantly from the all products averages except in the case of Canada, which has a 14.5 percent arithmetic average and a 12.9 percent weighted average, reflecting the fact that only Canada has a significant portion of duty-free imports in the sector.

The distribution of MFN tariff provisions for musical instruments and sound recording and reproduction apparatus, by duty level, is shown in table I-16-A. The largest portion of rate provisions are between 5.1 and 10 percent ad valorem for all the major countries except Canada, where slightly more than one-third of the rate provisions are free. The

Table 1-16- A.--Distribution, by duty level, of MFN tariff provisions for musical instruments, sound recording and reproduction apparatus

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

United States and the United Kingdom also have duty-free provisions for musical instruments and sound recording and reproduction apparatus (7 and 9.1 percent of provisions, respectively), but Japan and the European Community do not. The European Community has no rates below 3.1 percent ad valorem; Japan has no rates below 7.1 percent ad valorem. The rates of Canada and the United Kingdom range into the 15.1-20 percent ad valorem bracket; only the United States and Japan reach higher levels, 25.1-30 percent and 40.1-50 percent ad valorem, respectively.

At least three-fourths of the MFN imports of the United States, Japan, the European Community and half of those of the United Kingdom enter at duty rates between 5.1 and 10 percent ad valorem; for Canada, the largest portion enters at rates between 10.1 and 15 percent ad valorem (table I-16-B). Only Canada and the United Kingdom have duty-free MFN imports (9.7 percent and 0.2 percent, respectively).

Imports of musical instruments, sound recording and reproduction apparatus receiving preferential tariff treatment are significant in the

Table I-16-B.--Distribution, by duty level, of imports of musical instruments, sound recording and reproduction apparatus

Note.--Due to rounding, figures may not add to 100 percent.

United Kingdom, where 20 percent of total imports are accorded preferential entry. Such treatment is accorded less than 1 percent of total imports into the United States and 3 percent of total shipments into Canada. Intra-European Community shipments, which move duty free, are equal to almost 85 percent of Community imports from outside sources.

Canada and the United States have the most detailed MFN tariff schedules for musical instruments, sound recording and reproduction apparatus with 70 and 55 tariff lines, respectively, while the European Community has the least with 29 lines. The United Kingdom has 33 tariff lines; Japan, 32 lines.

#### Trade importance

The musical instruments, sound recording and reproduction apparatus sector is one of the less important in the industrial area, ranking 16th in both OECD exports and imports. The sector accounts for less than 1 percent of OECD industrial exports and less than 1 percent of OECD industrial imports. For the United States, the sector was the 17th most important in 1970 industrial exports. It ranked 15th in 1969 U.S. imports.

Imports by the GATT tariff study countries were valued at \$641 million in 1967 and \$988 million in 1970. Intra-European Community shipments were an additional \$100 million in 1967 and \$211 million in 1970. OECD 1969 imports were \$1.1 billion (including \$155 million of intra-European Community shipments) and exports were \$1.4 billion (see chart I-16-B). In 1970, OECD imports increased to \$1.4 billion, exports to \$1.6 billion.

Chart I-16-B. --OECD trade in musical instruments, sound recording and reproduction apparatus, 1969

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

Trade network

The five major countries account for almost 95 percent of OECD exports and 85 percent of OECD imports. Slightly over three-fifths of OECD exports go to the five major countries; most of the remaining two-fifths is about evenly divided between "other" OECD countries and IDC's, although some exports are sent to the non-OECD developed countries. Over four-fifths of OECD imports are supplied by the five major countries.

Japan, the European Community, and the United States are the principal exporters. Canada, Japan, the European Community, the United Kingdom, and the less developed countries collectively draw almost 90 percent of U.S. exports (see chart I-16-C); the European Community alone draws nearly 30 percent of U.S. exports and each of the other countries between 10 and 17 percent. The United States takes virtually all of Canada's exports. Japan ships nearly 60 percent of its exports to the United States and 20 percent to the less developed countries. Country of destination data are unavailable for over one-fifth of total EC exports. Of the remaining EC exports, nearly half are intra-European Community shipments. Over one-third of the European Community's known outside exports go to "other" OECD countries, nearly one-fourth go to the United States and one-fifth to the less developed countries. The United Kingdom ships nearly 40 percent of its exports to the United States, 15 percent to the European Community, and 18 percent to "other" OECD countries (see table I-16-C).

The United States is the principal importer, followed by the European Community. United States imports of musical instruments, sound recording

Chart I-16-C. -- United States trade in musical instruments, sound recording and reproduction apparatus, 1969

(Millions of dollars)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

and reproduction apparatus were valued at \$220 million in 1967, \$423 million in 1969, and \$371 million in 1971. Japan supplies about 70 percent of U.S. imports; the European Community and the United Kingdom about 10 percent each. The United States supplies almost half of Canada's imports; Japan supplies 30 percent. Japan receives around two-thirds of its imports from the United States. Data concerning

Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for musical instruments, sound recording and reproduction apparatus were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan's tariff rates in this sector were unilaterally reduced in 1972; the reductions were equal to 20 percent of the rates in effect on January 1, 1972.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	38.8	6.7
European Community	17.5	8.3
United Kingdom	33.3	8.4
Japan	31.1	10.0
Canada	23.9	9.3

Concessions under the GATT have been made on all MFN provisions for musical instruments, sound recording and reproduction apparatus in the tariff schedules of the United States, the European Community, Japan, and the United Kingdom. In the Canadian schedule, 63 percent of the tariff provisions, covering 31 percent of MFN imports are fully covered by GATT concessions; Canada's coverage drops as low as 47 percent of the tariff provisions and 16 percent of MFN imports in the sound recorders, reproducers and sound recordings subsector.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on musical instruments, sound recording and reproduction apparatus negotiated under the GATT. The number of such concessions totaled 80, of which 48 reflected rates higher than the autonomous rate established in the CXT; 5 concessions were at the CXT rate; and 27 were below the CXT rate.

#### Trade complaints

Producers and traders of musical instruments and sound recording and reproducing apparatus submitted 213 complaints to the Tariff Commission concerning practices and policies which they considered to adversely affect their trade. Two-thirds of the complaints concerned practices of developed countries. Every market-economy developed country was named in the complaints at least once. The European Community countries drew a total of 37 complaints; Japan 30; the United Kingdom, 15; and the United States, 11. Twenty-five developing countries were named in the complaints, with Brazil, Chile, Argentina, India, and the Philippines mentioned most frequently.

Subsidies and other aids.--One-fourth of the complaints received in this sector were made by large U.S. producers of sound recorders and reproducers against various forms of direct or indirect governmental assistance received by their foreign

competitors. Among the types of assistance which the complainants found objectionable were the following:

- A tax system allowing the build-up of exceptional reserve accounts which provide interest-free working capital;
- Income tax relief in various forms geared to export performance or foreign investment;
- Low-interest loans for export production;
- Concessionary financing to export customers;
- Government advertising and promotion of exports;
- Partial payment of travel expenses to foreign countries for the development of exports;
- Underwriting export market research, legal costs in trade disputes, and overseas exhibitions;
- Supplying credit information on potential foreign customers;
- Subsidization of research and development;
- Tax relief for entertainment expenses in soliciting export sales;
- Guarantee of debt position by the state banks, thereby enabling use of debt as a source of corporate financing;
- Low-cost insurance covering: 1) market research and overseas advertising costs when sales projections based on the promotion fail to materialize; 2) exporter's credit risks; 3) tariff increases;
- Tax deductions for a reserve fund to develop overseas markets;
- Rewards or penalties to encourage exporters to meet specified goals.

Virtually all of these aids were reported to be available to producers in Japan, and several were said to be available to

industries in EC member countries, the United Kingdom, Sweden, Norway, Switzerland, Ireland, South Africa, New Zealand, Spain, Canada, and Venezuela.

Import duties.--High import duties were reported in Australia and the United Kingdom on consumer electronic products. Several countries were cited for assessing higher duties on phonograph records and recorded tapes than on books, and the complainant felt the Florence Agreement should be modified to extend duty-free treatment to these products under the same conditions as such treatment is extended to printed matter.

The European Community customs union under which duties are not collected on intra-EC imports was objected to as a discrimination against the United States. The United States was criticized for applying discriminatory duties on musical instruments and recordings from China and other Communist nations.

Licensing practices, embargoes, and quantitative restrictions.--Licenses for home electronic products were reported to be periodically imposed by the European Community and the United Kingdom. A complaint was made against the licensing procedures in Brazil, Colombia, India, Pakistan, the Philippines, and other nonspecified countries, which demand that the weight and value of the goods must be provided in advance of actual shipping. One U.S. producer complained of the U.S. requirement of a license for the export of certain magnetic recorders and reproducers.

A U.S. producer complained that Arab countries imposed an embargo on his shipments when he failed to supply information concerning business operations with Israel. European Community members, the United Kingdom, and Japan were reported to have periodically imposed quotas on imports of home electronic products, including sound recording and reproducing equipment.

Nontariff charges on imports.--Several products in this sector, particularly phonograph records and recorded tapes, are subject to special consumption taxes or other nontariff charges in many countries of the world. One-fourth of the complaints received in the sector were concerned with such charges, which were reported to exist in almost all of the 50 countries named in the complaints.

Customs procedures.--Customs valuation practices came under criticism from both U.S. producers and importers. The major complaint by U.S. producers is that most other countries of the world assess duties on the c.i.f. value, whereas the United States uses an f.o.b. type value, a situation which was felt to be discriminatory to U.S. exports and favoring U.S. imports. U.S. importers of consumer electronic products complained that burdensome customs valuation procedures under which the Customs Bureau often requests information concerning home market and third country sales when determining "export value," under section 402 of the Tariff Act of 1930, significantly impede imports to the United States.

A large U.S. producer of consumer electronic products reported his trade to be hampered by the lack of uniform commodity

descriptions among nations, the amount of paper work required for compliance with U.S. export control regulations, as well as the documentation concerning freight, insurance, and other costs required in filing customs declarations in foreign countries. The same producer felt the excessive record-keeping requirements connected with the U.S. drawback system make it impossible for him to collect the substantial amounts in drawback payments to which he is entitled.

Only two respondents in the sector for musical instruments, sound recording and reproducing apparatus gave a dollar value assessment of the restrictive trade effects of the barriers they encountered. Both indicated that a "significant" increase in sales could be expected if the reported barriers were removed. Dollar estimates for the various products involved ranged from \$50,000 to \$300,000 annually, and totaled \$1.5 million. The dollar estimates represented a 20 to 150 percent increase over present trade in the products.

## Sound Recorders, Reproducers and Sound Recordings

Sound recorders, reproducers and sound recordings include not only sound recorders and reproducers, but also their parts and accessories, as well as phonograph records and sound tapes, including blank material for sound recording. <sup>1/</sup>

MFN tariffs

Among the five major countries, the United States has the lowest arithmetic average tariff (5.7 percent ad valorem) for all products (combined free and dutiable), and Japan the highest (9.6 percent) (see chart I-16-E). The United States also holds the lowest weighted

Chart I-16-E.--Average MFN tariff rates on sound recorders, reproducers and sound recordings  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by 20 percent) made in 1972 on nearly all Japanese rates in this sector; several rates were reduced by 65 percent or 73 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector, see BTN headings 92.11-13.

tariff average for all products (5.5 percent); Canada holds the highest (11.1 percent). For dutiable products only, the United States has both the lowest arithmetic average (6.6 percent) and the lowest weighted average (5.5 percent); Canada has both the highest arithmetic average (13.3 percent) and the highest weighted average (11.8 percent). The tariff averages for dutiable products alone are not significantly higher than the averages calculated for all products, except in the case of the arithmetic average of Canada, since the amount of Canada's duty-free provisions causes Canada's arithmetic average on all products to be lower than the average for dutiable products alone.

Virtually all imports into the United States, Canada, the European Community and Japan are accorded MFN treatment. One-fourth of the United Kingdom's imports receive preferential treatment. Intra-EC imports, which move duty free, are equal to 70 percent of EC imports from outside sources.

The distribution of tariff provisions for sound recorders, reproducers and sound recordings, by duty level, is shown in table I-16-E.

Table I-16-E.--Distribution, by duty level, of MFN tariff provisions for sound recorders, reproducers and sound recordings

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	47.4	13.3	-	-	18.2
0.1-5.0 percent----	-	20.0	-	20.0	9.1
5.1-10.0 percent---	21.1	60.0	73.4	73.4	63.7
10.1-15.0 percent--	15.8	6.7	26.7	6.7	9.1
15.1-20.0 percent--	15.8	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

By far the largest portion of rate provisions are between 5.1 and 10 percent ad valorem for all countries except Canada, where almost half of the provisions are free. The United States and the United Kingdom also have some duty-free provisions, but none are found in the schedules of the European Community and Japan. The provisions of all the countries except Canada reach upper limits in the 10.1-15 percent bracket; about 16 percent of Canada's provisions extend into the 15.1-20 percent bracket.

In terms of MFN imports, 96 percent of U.S. imports, 68 percent of Japanese imports, 93 percent of European Community imports, and 62 percent of United Kingdom imports enter at duty rates between 5.1 and 10 percent ad valorem. Over half of Canada's imports pay duties between 10.1 and 15 percent ad valorem (see table I-16-F). Canada is the only

Table I-16-F.--Distribution, by duty level, of imports of sound recorders, reproducers and sound recordings

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

country with significant duty-free imports, 6.4 percent of total entries.

The United States, Japan, and the European Community each have 15 tariff lines in this subsector; the United Kingdom has 11 tariff lines and Canada, 38 lines.

### Trade importance

Sound recorders, reproducers and sound recordings account for about 85 percent of OECD trade in the sector for musical instruments and sound recording and reproduction apparatus. OECD exports of sound recorders, reproducers and sound recordings totaled \$1.2 billion in 1969; imports were \$1 billion (chart I-16-F). For the United States, imports amounted to \$360 million in 1969 but dropped to \$291 million in 1971. Sound recorders and reproducers are the most important trade item both in the subsector and the sector as a whole. U.S. imports of recorders and reproducers totaled \$245 million in 1971.

Chart I-16-F.--OECD trade in sound recorders, reproducers and sound recordings, 1969

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

### Trade network

The five major countries account for over 90 percent of OECD exports and over 85 percent of imports. Japan is by far the major exporter. U.S. exports are approximately half those of Japan, the Community's external shipments, for which destinations are known, about one-third (table I-16-G). The United Kingdom accounts for less than 10 percent of OECD exports, and

Canada for virtually none. The United States ships slightly more than one-fourth of its exports to the European Community, while non-OECD countries receive somewhat less than one-fourth of U.S. exports. The United States takes almost 60 percent of Japan's exports. Japan also ships almost one-fourth of its exports to non-OECD countries. Data on

the destinations of 27 percent of EC exports are unavailable. With regard to those accounted for, the European Community ships about 30 percent of its external exports to non-OECD and 35 percent to "other" countries.

The United States is by far the principal importer, taking almost 40 percent of total OECD imports. EC imports from outside sources rank second among the five major countries in OECD imports in this subsector; the remaining countries, by comparison, are relatively unimportant (table I-16-H). Information on the country of origin of 32 percent of total EC

Table I-16-H.--OECD imports of sound recorders, reproducers and sound recordings, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

imports in this sector is unavailable. Over 75 percent of U.S. imports come from Japan, and over 10 percent come from the United Kingdom. The United States supplies nearly half of Canada's imports, over two-thirds of Japan's imports, almost half of the European Community's known external imports, and accounts for over two-fifths of the United Kingdom's

imports. The European Community supplies nearly one-third of the United Kingdom's imports.

Among the five countries, the largest volume of two-way trade flows between the United States and Japan. This trade flow is basically from Japan, which has relatively high average duties and is the smallest importer, to the United States, which has the lowest duty averages and is the largest importer.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, average tariff levels for sound recorders, reproducers and sound recordings are substantially below levels existing on pre-trade-agreement base dates. Most of the reductions reflect concessions granted in reciprocal negotiations. Japan, in November 1972, made unilateral 20 percent reductions in all of its rates on sound recorders and sound recordings, thereby reducing the Japanese average level to about 8 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	38.5	5.5
European Community	17.0	8.2
United Kingdom	33.3	7.8
Japan	33.7	10.0
Canada	19.7	7.0

All MFN provisions for sound recorders, reproducers and sound recordings in the tariff schedules of the United States, Japan, the European Community, and the United Kingdom have been the subject of

GATT concessions. In the Canadian schedule, only 47 percent of the provisions, covering 16 percent of MFN imports, are completely covered by GATT concessions.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on sound recorders, reproducers and sound recordings negotiated under GATT. The number of concessions totaled 48, of which 29 reflected rates higher than the autonomous rates established in the CET; 1 was at the CET rate; and 18 were below the CET rate.

Tariffs on phonographs, dictating machines, and other sound recorders and reproducers, the largest trade item, have been reduced in trade-agreement concessions by all five major countries (see table I-16-I). In most cases the reductions have been by 50 percent or more.

Table I-16-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on phonographs, dictating machines, and other sound recorders and reproducers

Japan-----	15%	15%-30%	7.5%-15%	92.11

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

## Musical Instruments

Musical instruments include pianos, organs and all other string, wind, percussion, electronic, and electrostatic musical instruments, and parts and accessories for such instruments. <sup>1/</sup>

MFN tariffs

Among the five major countries, for all musical instruments (dutiable and free combined) the European Community has the lowest arithmetic average MFN tariff (8 percent ad valorem) and Canada has the highest (12.1 percent) (see chart I-16-G). Japan has the lowest

Chart I-16-G.-- MFN tariff rates on musical instruments

(Percent ad valorem)

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

<sup>1/</sup> For specific coverage of this subsector see BTN headings 92.01-.10.

weighted average (7.8 percent) and Canada, the highest (12.9 percent). Average tariffs for dutiable goods only do not differ significantly from the averages for all products except in the case of Canada, where substantial duty-free imports cause average MFN tariff rates on dutiable products only to be considerably higher than average rates for all products.

Virtually all imports of musical instruments into the United States, Canada, Japan, and shipments into the European Community from external sources are accorded MFN treatment. Ten percent of United Kingdom imports are given preferential treatment. Intra-EC imports, which move duty free, exceed EC imports from outside sources.

The distribution of MFN tariff provisions for musical instruments, by duty level, is shown in table I-16-J. Sixty-five percent of U.S.

Table I-16-J.--Distribution, by duty level, of MFN tariff provisions for musical instruments

Duty level	(In percent)				
	Canada	United States	Japan	European Community	United Kingdom
Free-----	21.9	5.0	-	-	4.5

Note.--Due to rounding, figures may not add to 100 percent.

rate provisions, 79 percent of EC provisions, and all of Japan's provisions are between 5.1 and 10 percent ad valorem. The largest portion of Canadian and United Kingdom provisions have rates in the 10.1-15 percent ad valorem range. One-fifth of Canada's provisions are duty free; the United States and the United Kingdom each have about 5 percent of their provisions free; Japan and the Community

have none. The provisions of the European Community reach upper limits in the 10.1-15 percent rate bracket; Canada and the United Kingdom in the 15.1-20 percent bracket, and the United States in the 25.1-30 percent bracket.

In terms of MFN imports of musical instruments, all of Japan's imports, about 60 percent of U.S. imports, and 70 percent EC imports are assessed duties between 5.1 and 10 percent ad valorem. The 10.1-15 percent rate bracket covers two-thirds of United Kingdom imports and two-fifths of Canadian imports. Canada is the only country with significant duty-free imports (21 percent of total MFN entries) (table I-16-K).

Table I-16-K.--Distribution, by duty level, of MFN imports of musical instruments  
(In percent)

Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	21.2	-	-	-	0.2
0.1-5.0 percent----	-	8.0	-	11.6	19.0
5.1-10.0 percent---	.5	58.8	100.0	69.5	6.5
10.1-15.0 percent--	41.4	-	-	19.0	66.4
15.1-20.0 percent--	36.8	33.3	-	-	7.9
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States has the most complex tariff schedule for musical instruments, with 40 tariff lines; the European Community has the simplest, 14 lines. Schedules for the United Kingdom have 22 lines; for Canada, 32 lines; for Japan, 17 lines.

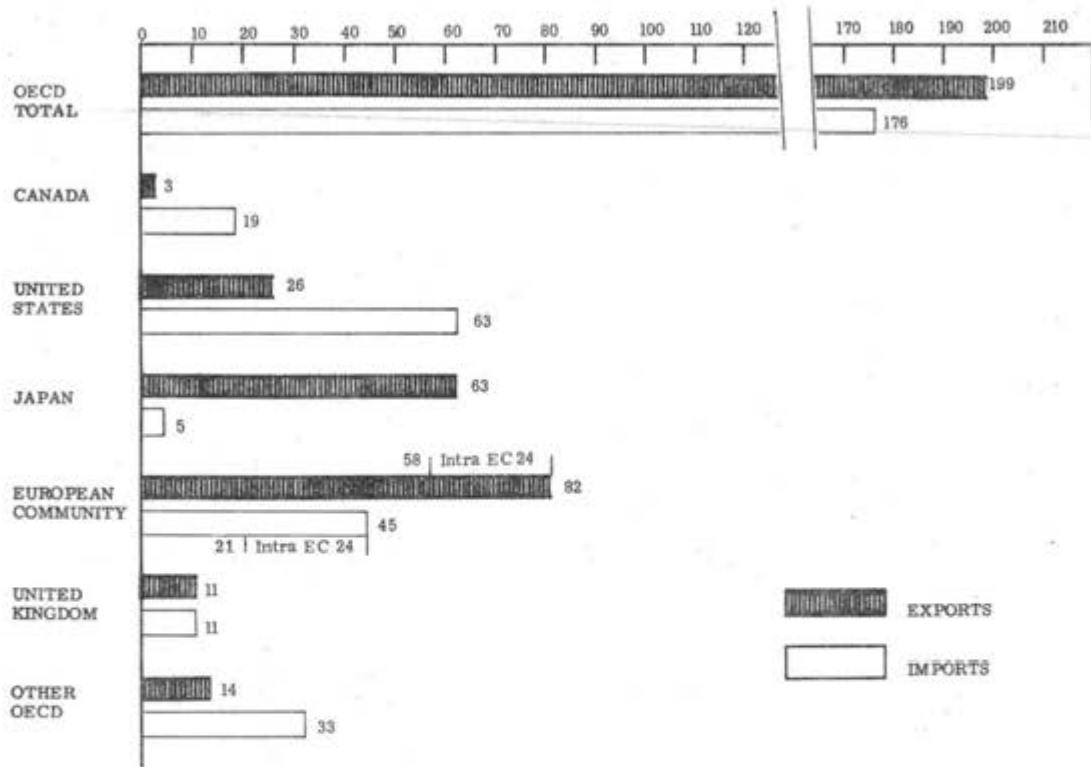

#### Trade importance

Musical instruments account for about 15 percent of OECD trade in the sector on musical instruments, sound recording and reproduction

apparatus. OECD exports totaled \$199 million in 1969; imports were \$176 million (chart I-16-H). United States imports amounted to \$63 million in 1969 and increased to \$80 million in 1971.

Chart I-16-H. -- OECD trade in musical instruments, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for over 90 percent of OECD exports and over 80 percent of imports (tables I-16-L and M). The largest suppliers to the world are Japan and the European Community; Japanese exports and EC external shipments each equal around 30

Table I-16-L.-- OECD exports of musical instruments, 1969

percent of total OECD exports. The United States is the principal importing country, drawing over 35 percent of total OECD imports. U.S. exports go principally to Canada and non-OECD countries. Half of the U.S. imports are provided by Japan; one-third by the European Community.

#### Trade-agreement concessions

As the tabulation below shows, for all of the five major countries, average tariff levels for musical instruments are substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. Japan, in November 1972, made unilateral 20 percent reductions in all of its rates on musical instruments, thereby reducing the Japanese average level to about 6.2 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	39.8	10.8
European Community	19.0	8.4
United Kingdom	33.3	11.3
Japan	18.5	7.8
Canada	28.6	12.1

Concessions under the GATT have been made on all MFN provisions for musical instruments in the tariff schedules of the United States, Japan, the European Community, and the United Kingdom. Canada's GATT concessions cover 81 percent of Canadian rate provisions and 84 percent

of Canadian imports of musical instruments. Seven percent of Canadian provisions, covering 5 percent of imports are partially covered.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on musical instruments negotiated under the GATT. The number of such concessions totaled 32, of which 19 reflected rates higher than the autonomous rate established in the CXT; 4 were at the CXT rate; and 9 were below the CXT rate.

Tariff rates on pianos and musical instrument parts, the two largest trade items in the subsector, have been reduced in trade-agreement concessions by all five major countries. Rate reductions which have occurred in these two categories are shown in tables I-16-N and I-16-O.

Table I-16-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on pianos

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	40%	17%	8.5% <sup>2/</sup>	725.01, .03

United Kingdom-----	33.3%	17%	17%	92.01
Japan-----	20%	20%	10%	92.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> As a result of escape-clause action, the rate of duty on pianos other than grand pianos in effect in January 1, 1972, was 13.5 percent ad valorem. If no further action is taken, this rate is scheduled to be reduced in stages beginning February 21, 1974, with the final stage, 8.5 percent ad valorem, scheduled to become effective on January 1, 1976.

Table I-16-O.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on parts and accessories of musical instruments

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%-45%	Free-34%	Free-20% <sup>2/</sup>	726.10-.80

European Community--	18%	8%; 18%	4%; 9%	92.10
United Kingdom-----	20%	6.7%-22.2%	5%-17%	92.10
Japan-----	15%	15%	7.5%	92.10

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> About 85 percent of U.S. imports, based on values in 1971, are dutiable at 7.5 percent to 9.5 percent ad valorem.

## Industrial Sector I-17

FIREARMS, AMMUNITION, TANKS AND OTHER  
ARMORED FIGHTING VEHICLES

This sector covers side-arms (e.g., swords), all firearms, munitions of war, ammunition, tanks and other armored fighting vehicles. <sup>1/</sup> These products will be collectively referred to as arms and ammunition. The major part of international shipments in this sector consists of military equipment, which reflects governmental transactions and for which tariffs normally are suspended and have no significance. The tariffs discussed here are relevant only for trade in firearms and ammunition for nonmilitary use.

MFN tariffs

For all arms and ammunition (combined free and dutiable), arithmetic average MFN tariffs of the five major countries range from 6.4 to 21.1 percent ad valorem; the weighted averages from 9 to 20.9 percent (see chart I-17-A). The European Community has both the lowest arithmetic and weighted average tariffs and Japan has both of the highest averages. For dutiable products, the averages are virtually identical to those for all products, reflecting the limited number of duty-free provisions in this sector. Only Canada's averages change significantly (14.9 percent for the arithmetic and 16.6 percent weighted), since one-fifth of Canadian provisions are free.

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 87.08 and 93.01-.07.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-17-A. --Average MFN tariff rates on firearms, ammunition, tanks and other armored fighting vehicles

The distribution of MFN tariff provisions by duty level is shown in table I-17-A. Nearly 90 percent of Japan's provisions, over half of Canada's provisions and one-fifth of U.S. provisions range from 15.1 to 20 percent ad valorem. Over one-fourth of U.S. and Canadian provisions, half of the Community's and 70 percent of those of the United Kingdom are in the 5.1 to 10 percent ad valorem bracket. The tariff schedules of the United States, Canada, and the European Community contain duty-free provisions for firearms; those of Japan and the United Kingdom do not.

Table I-17-A.--Distribution, by duty level, of MFN tariff provisions of firearms, ammunition, tanks and other armored fighting vehicles

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	18.5	7.7	-	11.1	-

Note.--Due to rounding, figures may not add to 100 percent.

The major share of imports into the United States, the European Community, and the United Kingdom enter under rates between 5.1 and 10 percent ad valorem. Seventy percent of Canadian imports are in the 15.1-20 percent bracket, as are nine-tenths of Japanese imports (table I-17-B).

Table I-17-B.--Distribution, by duty level, of MFN imports of firearms, ammunition, tanks and other armored fighting vehicles

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	4.4	2.9	-	-	-
0.1-5.0 percent----	-	2.4	-	5.2	1.9
5.1-10.0 percent----	25.6	75.3	-	55.7	90.5
10.1-15.0 percent--	-	16.2	-	39.1	-
15.1-20.0 percent--	70.0	1.1	91.1	-	7.6
20.1-25.0 percent--	-	1.9	-	-	-
25.1-30.0 percent--	-	.1	8.9	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Commercial imports of arms and ammunitions receiving preferential tariff treatment are insignificant for all the major countries except the United Kingdom; preferential treatment is accorded one-sixth of total

United Kingdom imports of firearms. Intra-European Community shipments are equal to nearly 30 percent of Community imports from outside sources.

The United States and Canada have the most detailed MFN tariff schedules for firearms with 48 and 27 tariff lines, respectively, while Japan has the least, with 9 tariff lines; the European Community has 16 tariff lines and the United Kingdom, 10 lines.

#### Trade importance

The firearms sector is one of the less important industrial sectors, ranking 17th in exports and 22nd in imports. The sector accounts for less than 1 percent of OECD industrial exports and imports. For the United States, the sector is the 11th most important in industrial exports. It ranked 21st in U.S. imports in 1969 but dropped to 22nd in 1970.

Imports by the GATT tariff study countries were valued at \$241 million in 1967 and \$327 million in 1970. Intra-European Community shipments were an additional \$18 million in 1967 and \$28 million in 1970. OECD 1969 imports were \$417 million (including \$14 million of intra-European Community shipments) and exports were \$1.2 billion (see chart I-17-B). In 1970, OECD imports and exports remained at about the same level as the year before -- \$398 million and \$1.1 billion, respectively.

#### Trade network

Because a large part of international shipments in this sector are military transactions for which complete trade statistics are not published, only an incomplete picture of the trade network of this sector

Chart I-17-B. --OECD trade in firearms, ammunition, tanks, and other armored vehicles, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

is available. The five major countries account for nearly 95 percent of OECD exports and over 75 percent of OECD imports (tables I-17-C and I-17-D). The largest portion of OECD exports appears to go to the United States and the European Community. Almost half of OECD imports are supplied by the five major countries; one-fourth by the United States alone.

The United States is the major exporter of arms and ammunition, accounting for nearly two-thirds of total OECD exports. The United States is also the principal importer. U.S. imports were valued at \$75 million in 1967, \$117 million in 1969, and \$88 million in 1971. Canada is the source of over 65 percent of those U.S. imports which

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

are accounted for in published statistics; the European Community is the source of 18 percent. The United States is the source of roughly three-quarters of Canadian imports for which the origin is known. The European Community is also a major importer of firearms. Of the EC imports of known origin, intra-Community shipments equal one-fourth of total imports from outside sources. Japan is an insignificant purchaser and supplier of firearms.

#### Trade-agreement concessions

For all of the five major countries, average MFN tariff levels on January 1, 1972, for arms and ammunition were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. All of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average level of about 16.7 percent. The United States maintains specific rates on firearms covering 40 percent of tariff lines which account for 20 percent of imports.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	55.0	9.1
European Community	18.1	9.0
United Kingdom	25.0	10.7
Japan	24.0	20.9
Canada	26.2	12.1

Concessions under the GATT have been made on all MFN provisions on firearms and ammunition in the tariff schedules of the United States,

the European Community, and the United Kingdom. In the Canadian schedule, 81 percent of the tariff provisions, covering 98 percent of MFN imports are fully covered by GATT concessions. No Japanese provisions are bound by GATT concessions.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on arms and ammunition negotiated under the GATT. The number of such concessions totaled 18, of which 12 reflected rates higher than the autonomous rate established in the CET; 2 were at the CET rate; and 4 were below the CET rate.

Table I-17-E shows concessions which have been made in the major country tariffs on shotguns valued over \$50 each. Reductions of at least one-third from the pre-trade-agreement rate were made in all the major tariffs, except that of Japan.

Table I-17-E.--Pre-trade-agreement tariff rates compared with January 1, 1972.  
MFN tariff rates on shotguns valued over \$50 each

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	65%	16%	8%	730.45
Canada-----	30%	22.5%	20%	44100-1
European Community--	18%; 16%	14%; 16%	10.5%; 8%	93.04A, B
United Kingdom-----	25%	14%; 12%	14%; 12%	93.04A, B
Japan-----	30%; 20%	30%; 20%	30%; 20%	93.04-1, 2

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

Trade complaints

Only a few complaints were received by the Tariff Commission concerning barriers which affect trade in arms and ammunition. Three-fourths of the small number of complaints were against developed countries, with the United States being the country most frequently cited, followed by Belgium and New Zealand. The three complaints concerning developing countries involved Brazil, Chile, and Gabon.

Criticism was directed at the United States for maintaining embargoes or other limitations and testing requirements on imported firearms when similar restrictions are not applied to domestic products. Other countries mentioned as having embargoes on firearms were Brazil and Chile; New Zealand is reported to have an embargo on certain cartridges for sporting guns. A U.S. producer of products in this sector objected to U.S. export controls. Belgium requires a license to import any weapon.

An importers association complained against a U.S. Department of Defense requirement that certain items contained in this sector must be purchased from particular U.S. firms. A U.S. producer complained that most foreign governments give procurement preferences to domestic products if they are available. A complaint also concerned the additional or complementary tax on firearms in Gabon.

One respondent reported that if the U.S. prohibition on importation of pistols and revolvers were lifted, a "significant" increase in imports of these firearms could be expected.

## Industrial Sector I-18

## FURNITURE

The furniture sector covers all furniture designed to be placed on the floor or ground, except mirrors. It also includes mattresses, bedding, and similar stuffed furnishings; folding seats and beds; automobile seats; and medical, dental, surgical or veterinary furniture. The sector does not include pneumatic and water mattresses; stone or ceramic furniture; furniture specially designed as parts of refrigerators, television sets, gramophones, etc.; toy furniture; and lamps and light fittings. 1/

MFN tariffs

For all products (combined dutiable and free) in the furniture sector, arithmetic average MFN rates of duty of the five major countries range from 8.2 to 14.2 percent ad valorem; the weighted averages from 7.6 to 19 percent (chart I-18-A). The European Community has the lowest arithmetic average tariff on furniture and Canada and the United Kingdom the highest (14.2 and 14 percent, respectively). The lowest weighted average is held by the United States, followed closely by the European Community (8.4 percent); and Canada again has the highest average. For dutiable products only, all of the averages, except the Canadian arithmetic average, remain the same as those for all products. The Canadian arithmetic average rises to 17.6 percent ad valorem and

---

1/ For the specific coverage of this sector, see BTN chapter 94. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-18-A. -- Average MFN tariff rates on furniture  
(Percent ad valorem)

\* Figures for Japan do not reflect the unilateral reductions (by approximately 30 percent) made in 1972 on Japanese rates in this sector.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

the weighted average does not change, reflecting the significant amount of Canadian duty-free provisions and the insignificant amount of trade which enters under them.

The distribution of MFN tariff provisions for furniture, by duty level, is shown in table I-18-A. The Canadian schedule contains MFN duty-free provisions for furniture; those of the remaining four major countries do not. Over two-fifths of U.S. and Japanese provisions are in the 5.1-10 percent ad valorem range, as are over four-fifths of those

Table I-18- A.---Distribution, by duty level, of MFN tariff provisions for furniture

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	19.2	-	-	-	-
0.1-5.0 percent----	-	11.8	-	-	-
5.1-10.0 percent----	7.7	44.1	44.4	83.3	60.0
10.1-15.0 percent--	-	26.5	55.6	16.7	-
15.1-20.0 percent--	69.2	14.7	-	-	40.0
20.1-25.0 percent--	3.8	2.9	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

of the European Community and three-fifths of United Kingdom provisions. The 10.1-15 percent rate range contains over half of Japanese provisions and more than one-fourth of U.S. provisions. Nearly 70 percent of Canada's provisions are in the 15.1-20 percent range. United Kingdom rates extend into the 15.1-20 percent bracket; Canadian and United States rates into the 20.1-25 percent bracket. Japan and the Community have no rates above 15 percent.

Imports of furniture receiving preferential tariff treatment are significant for the United Kingdom and the United States among the five major countries; such treatment is accorded about 40 percent of the entries of each of these countries. The preferential imports into the United States consist almost entirely of furniture for use in motor vehicles (e.g., automobile seats) entered free of duty under the U.S.-Canadian Automotive Products Trade Agreement. Intra-EC shipments exceed imports from outside countries by over 400 percent.

Virtually all MFN imports by the United Kingdom and the European Community enter at rates between 5.1 and 10 percent ad valorem. Over half of U.S. MFN imports enter at rates of 5.1-10 percent; another 37 percent

of U.S. imports are in the 0.1-5 percent bracket. Canada has virtually all imports dutiable at the rates in the 15.1-20 percent bracket. Four-fifths of Japan's imports pay duties in the 5.1-10 percent ad valorem range (table I-18-B).

Table I-18-B.--Distribution, by duty level, of MFN imports of furniture

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	0.1	-	-	-	-
0.1-5.0 percent----	-	37.4	-	-	-
5.1-10.0 percent----	1.5	55.9	80.4	99.8	99.5
10.1-15.0 percent----	-	2.2	19.6	.2	-
15.1-20.0 percent----	98.3	4.5	-	-	.5
20.1-25.0 percent----	.1	-	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

The United States has the most detailed tariff schedule for furniture with 34 tariff lines, while the United Kingdom has the least with 5 lines. Canada has 26 lines; Japan, 9 lines; and the European Community, 6 lines.

#### Trade importance

Furniture is one of the least important of the 23 industrial sectors, ranking 18th in OECD exports and 17th in imports. The sector accounts for 0.6 percent of OECD industrial exports and imports. For the United States, the sector is the 20th most important in exports. In 1969 and 1970, furniture ranked 19th in U.S. imports. U.S. imports of furniture were valued at \$89 million in 1967, \$192 million in 1969, and \$230 million in 1970.

Imports by the GATT tariff study countries were valued at \$343 million in 1967 and \$624 million in 1970. Intra-EC imports were an

additional \$208 million in 1967 and \$444 million in 1970. OECD 1969 imports were \$938 million (including \$408 million of intra-EC shipments) and exports were \$906 million (chart I-18-B).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for 82 percent of OECD furniture exports to the world and 80 percent of imports. Sixty-seven percent of OECD exports go to the five major countries; 12 percent to LDC's. About three-fourths of OECD imports are supplied by the five major countries.

One-half of U.S. exports go to less developed countries (chart I-18-C), where higher tariffs and other trade barriers generally are

Chart I-18-C. --United States trade in furniture, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

encountered. Canada is the principal developed market for U.S. exports. Virtually all Canadian exports of furniture go to the United States. Over half of Japanese furniture exports go to the United States; about 30 percent to less developed countries. EC outside exports equal about two-fifths of intra-EC exports. Less developed countries take 29 percent of EC outside exports; 15 percent go to the United States.

The United Kingdom ships 30 percent of its products to less developed countries and nearly one-fourth to the European Community (table I-18-C).

Canada supplies nearly one-half of U.S. imports (chiefly automobile seats); LDC's, 16 percent; and the Community, 12 percent. The United States supplies 70 percent of Canadian imports. Japanese furniture imports are negligible. European Community imports from outside sources are relatively small, equaling only one-fifth of intra-EC shipments. The Community is the single most important source of United Kingdom imports (table I-18-D). "Other" countries supply about 40 percent of United Kingdom imports; non-OECD nations, about 30 percent.

Trade-agreement concessions

For the five major countries average tariff levels for furniture are substantially below levels existing on pre-trade-agreement base dates. The reductions reflect, in large part, concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan, in November 1972, made unilateral 20 percent reductions on all of its rates for furniture, thereby reducing the Japanese average level to about 8.6 percent ad valorem.

Pre-trade-agreement    January 1, 1972  
 (Percent ad valorem)

United States	33.7	7.6
European Community	17.9	8.4
United Kingdom	28.0	10.1
Japan	21.8	10.7
Canada	32.8	14.2

Concessions under the GATT have been made on all MFN provisions for furniture in the tariff schedules of the United States, the United Kingdom, the Community, and Japan. GATT concessions cover 81 percent of Canada's provisions and 100 percent of Canadian imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on furniture negotiated under the GATT. The number of such concessions totaled 50 of which 21 reflected rates higher than the autonomous rate established in the CXT, 12 were at the CXT rate, and 17 were below the CXT rate.

Trade-agreement concessions in major country tariffs dealing with chairs are shown in table I-18-E. The U.S. rate of duty was reduced by nearly 80 percent from the pre-trade-agreement rate; the Canadian rate by over 55 percent; the EC rate by 53 percent; the Japanese rate by 50 percent; and the United Kingdom rate by 30 percent.

Table I-18-E.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on chairs

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	40%	17%	8.5%	727.30
Canada-----	45%	25%	20% <sup>2/</sup>	51901-1
European Community--	18%	17%	8.5%	94.01B
United Kingdom-----	20%	14%	10%	94.01(A)(2)(b)
Japan-----	20%	20%	15%	94.01-3

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Rate shown is the official MFN rate, presently superseded by a temporary rate of 15 percent. The temporary rate is subject to possible renewal in February, 1974.

Trade complaints

Only a few complaints were received by the Tariff Commission concerning barriers to trade in the furniture sector. Iceland, Japan, and the United States were the only developed countries cited in the complaints. Among the nine developing countries named, Mexico and the Philippines received the most complaints, while Argentina, Cyprus, Egypt, Guyana, Haiti, Jamaica, and Malta were also mentioned.

Taken as an aggregate, licensing practices, embargoes, and other quantitative restrictions were the barriers which received the most complaints in this sector. In Cyprus, Jamaica, and Malta, it was reported that licenses are required before any goods can be brought into these countries. In Egypt, it was cited that there is an embargo on household furniture unless the goods have been specifically approved by a government ministry. Haiti and Mexico were also alleged to have embargoes on household furnishings and upholstered furniture. Global quotas on furniture in Iceland were reported by one U.S. furniture producer as a hindrance to his trading in this country.

One U.S. producer complained of the Mexican requirement that firms trading there must purchase Mexican insurance policies rather than the U.S. insurance which is issued at a lower price. Another complaint concerned Mexican tax laws which discriminate in favor of borrowing money from Mexican sources rather than from the United States at cheaper rates. For goods such as hospital equipment, it

was cited that consular fees are required in the Philippines and are dependent on the value of the goods. The Philippines also require consular invoices on small shipments while most other countries either have standard forms or do not require this special paperwork for small shipments. Special import taxes ranging from 4-10 percent were alleged to be operating in Argentina and Guyana.

A complaint was lodged against the United States by a U.S. importer of furniture who feels that the disruptive effects of the labor unions discourage imports into the United States. One complaint was registered against Brazilian exchange controls.

Among the few complaints received by the Commission concerning this sector, only one response was accompanied by an assessment of the restrictive trade effect of the reported barrier. A large furniture manufacturer estimated that if Mexican restrictions which have the effect of a virtual embargo were lifted, his exports to Mexico would increase significantly and amount to \$2 million annually.

## Industrial Sector I-19

## TOYS AND SPORTING GOODS

Toys and sporting goods include: Toys of all kinds whether designed for children or adults; equipment for indoor or outdoor games; appliances and apparatus for sports, gymnastics, or athletics; certain requisites for fishing, hunting, or shooting; carrousels and other fairground amusements; and carnival articles, tricks, novelties, and Christmas tree decorations. Certain related articles, however, are not included. Among these are sports footwear, hunting firearms, children's bicycles, fireworks, tents, and camping goods. 1/

MFN tariffs

World MFN imports of toys and sporting goods face average tariffs considerably higher than those for industrial products taken as a whole (see chart I-19-A). The arithmetic averages range from 10.5 to 17 percent ad valorem; the weighted averages from 12.8 to 18 percent. For all products (combined free and dutiable), the European Community has the lowest arithmetic average tariff (10.5 percent) and Canada the highest (17 percent). The lowest weighted average is held by the European Community (12.8 percent) and the highest by Canada (18 percent). For dutiable products only, the averages are almost identical to those for all products, reflecting the very limited number of duty-free provisions in this sector.

The distribution of tariff provisions by duty level is shown in table I-19-A. The largest portion of rate provisions are in the bracket

---

1/ For the specific coverage of this sector, see BTN chapter 97.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Note.--Due to rounding, figures may not add to 100 percent.

are in the bracket of 10.1-15 percent ad valorem. The tariff schedules of the United States, Canada, and the European Community contain MFN duty-free provisions for toys and sporting goods; those of Japan and the United Kingdom do not. The United Kingdom's lowest rate is between 2 and 3 percent ad valorem; Japan has no rates under 5 percent, and none higher than 15 percent. The rates of Canada and the United Kingdom range into the 20.1-25 percent ad valorem bracket; only the United States reaches a higher level, the 40.1-50 percent bracket.

The largest portion of MFN imports enters Canada, the United States, and the European Community at duty rates of 15.1-20 percent ad valorem; for Japan and the United Kingdom, the largest portion enters at rates between 10.1-15 percent ad valorem (table I-19-B). Only Canada and the

Table I-19-B.--Distribution, by duty level, of MFN imports of toys and sporting goods

(In percent)

Note.--Due to rounding, figures may not add to 100 percent.

United States have duty-free MFN imports, a small 1.3 percent and 0.2 percent of their respective total imports in 1970.

Imports of toys receiving preferential tariff treatment are significant for some of the major countries. Such treatment is accorded 9.5 percent of total imports into Canada, 62.3 percent of total shipments

into the United Kingdom. Intra-European Community shipments are equal to 90 percent of Community imports from outside sources.

The United States and Canada have the most detailed MFN tariff schedules for toys and sporting goods with 85 and 54 tariff items, respectively, while Japan has the least with 12 tariff lines; the United Kingdom has 19 tariff lines and the European Community 14.

### Trade importance

The toys and sporting goods sector is one of the less important in the industrial area, ranking 19th in OECD exports and 18th in imports. The sector accounts for less than 1 percent of OECD industrial exports and imports. For the United States, the sector is the 18th most important

Chart I-19-B. -- OECD trade in toys and sporting goods, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

in industrial exports. It ranked 17th in 1969 U.S. imports, but rose to 15th in 1970.

Imports by the GATT tariff study countries were valued at \$580 million in 1967 and \$960 million in 1970. Intra-European Community shipments were an additional \$82 million in 1967 and \$139 million in 1970. OECD 1969 imports were \$899 million (including \$126 million of intra-European Community shipments) and exports were \$868 million (see chart I-19-B). In 1970, OECD imports increased to \$1.1 billion, exports to \$1 billion.

#### Trade network

The five major countries account for almost 90 percent of OECD exports and over 80 percent of OECD imports. Over 70 percent of OECD exports go to the five major countries; most of the remainder is almost equally divided between "other" OECD countries and non-OECD countries, chiefly LDC'S. Nearly 68 percent of OECD imports are supplied by the five major countries (tables I-19-C and D).

Canada, Japan, the European Community, and the less developed countries collectively draw almost 80 percent of U.S. exports; individually each draws almost 20 percent (chart I-19-C). The United States takes nearly 80 percent of Canada's exports. Japan ships almost 60 percent of its exports to the United States, 13 percent to the European Community, and 12 percent to LDC's. Nearly half of the exports of the European Community are intra-European Community shipments. The United States takes over one-third of the European Community's outside exports.

Chart I-19-C. -- United States trade in toys and sporting goods, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The United Kingdom ships roughly equal amounts (about 20 percent) of its exports to the United States, the European Community, "other" OECD countries, and non-OECD countries.

United States imports of toys were valued at \$211 million in 1967, \$307 million in 1969, and \$446 million in 1971. Japan supplies about one-third of U.S. imports; the European Community about 15 percent (table I-19-D). The United States is the source of 40 percent of Canada's

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

imports and nearly 50 percent of Japan's imports. About 23 percent of EC imports from external sources come from Japan; the United States, the United Kingdom, and the less developed countries each provide an addition 15 percent. Intra-Community shipments are almost as large as total Community imports from all outside sources. Almost half of the United Kingdom's imports come from LDC's, but the United States does provide 15 percent.

#### Trade composition

Toys account for slightly more than half of imports in this sector by the GATT tariff study countries. Athletic equipment is the next largest category, covering about 17 percent of imports (but about one-fourth for the United States), followed by equipment for parlor and table games.

#### Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for toys were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan's tariff rates in this sector were unilaterally reduced by 20 percent in 1972.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	55.3	13.9
European Community	22.2	12.8
United Kingdom	25.3	13.4
Japan	25.5	13.3
Canada	32.0	17.0

Concessions under the GATT have been made on all MFN provisions for toys in the tariff schedules of the United States, the European Community, Japan, and the United Kingdom. In the Canadian schedule, 96 percent of the tariff provisions, covering 98 percent of MFN imports are fully covered by GATT concessions.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on toys negotiated under the GATT. The number of such concessions totaled 59, of which 40 reflected rates higher than the autonomous rate established in the CET, no concessions were at the CET rate, and 19 were below the CET rate.

Specific tariff concessions made by the five countries in the largest trade category of toys (BTN 97.03-toys other than dolls and wheeled toys to be ridden by children) can be seen in table I-19-E. Very substantial reductions have been made in the tariffs of both the United States and Japan; Canadian and United Kingdom tariffs have been reduced by half, and the rates of the Community by a smaller amount.

Table I-19-E.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on certain toys

United Kingdom-----	25%	25%	12.5%	97.03 (A)&(B)
Japan-----	40%	20%	10%	97.03

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> All but one of the tariff items were subject to concessions granted in the Kennedy Round. These concessions covered 96 percent of the import trade, in terms of 1970 imports.

<sup>3/</sup> The ad valorem percent in parenthesis is the rate applicable to the principal import category (TSUS 737.90). Imports entering that category accounted for two-thirds of U.S. toy imports in 1970.

<sup>4/</sup> Rate shown is the official MFN rate, presently superseded by a temporary rate of 15 percent. The temporary rate is subject to possible renewal in February, 1974.

### Trade complaints

U.S. manufacturers and traders of toys and sporting goods submitted 49 complaints to the Tariff Commission concerning obstacles which they encounter in trade with 18 countries. Two-thirds of the complaints were against practices of developing countries. The four countries mentioned most frequently and the number of complaints against each were Japan (7), Hong Kong (7), Taiwan (7), and Korea (6). Other developed countries, besides Japan, which drew complaints were Canada, the United States, Australia, West Germany, Italy, and Iceland. The notifications to the Commission were fairly evenly scattered among 18 types of practices which the respondents felt constituted obstacles

to trade. Those most frequently mentioned were: (1) embargoes, quotas, and licensing practices; (2) border tax adjustments and other nontax charges on imports; and (3) customs valuation practices.

Of the 12 U.S. producers and traders of toys and sporting goods who indicated possible trade increases if the barriers were removed, 7 stated the increases would be small, 4 indicated moderate increases, and 1 a significant increase. Several of the respondents felt that removal of any of the individual barriers mentioned would result in an increase in trade, but about one-third of those indicating trade effects felt that more than one barrier would have to be removed for increases in trade to ensue. Ten producers and traders placed monetary values on their estimates of possible trade increases totaling \$5,750,000. The estimated increases in trade ranged from 1.2 to 34.4 percent of present shipments.

## PHOTOGRAPHIC AND CINEMATOGRAPHIC SUPPLIES

Photographic and cinematographic supplies include: Unexposed and exposed and developed photographic film (including cinematograph film and sound track); plates and paper for all purposes; certain flash light materials; and developing chemicals. Excluded are cameras; enlargers; exposure meters; flash bulbs; photographic paste; gums, varnishes or similar products; film for mechanical sound recording; and waste or scrap materials. <sup>1/</sup>

### MFN tariffs

The arithmetic average MFN tariffs of the five major countries range from 3.6 to 18.8 percent ad valorem; the weighted averages from 3.5 to 22.4 percent (chart I-20-A). For all products (combined free and dutiable), the United Kingdom has the lowest arithmetic average tariff and Japan, the highest. The lowest weighted average is held by the United States and Japan again has the highest average. Most of the averages are clustered between 3.5 and 9.6 percent ad valorem.

For dutiable products only, the arithmetic averages of most countries are higher than those for all products. Canada's averages for dutiable products are significantly higher than those for all products (14 percent for the arithmetic average; 16.2 percent for the weighted average). Japan's averages remain the highest. The European Community has the lowest arithmetic average (5.6 percent) and the United States has the lowest weighted average (3.5 percent).

---

<sup>1/</sup> For the specific coverage of this sector, see BTN chapter 37. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-20-A. -- Average MFN tariff rates on photographic and cinematographic supplies

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions made in 1972 on three-fourths of the Japanese rates in this sector; the remainder were reduced by amounts ranging from 25 percent to 60 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of MFN tariff provisions for photographic and cinematographic supplies, by duty level, is shown in table I-20-A. About half of the MFN rate provisions of Canada and the United Kingdom are duty free. The European Community and the United States also have a significant portion of duty-free provisions, but Japan has none.

Table 1-20-A.--Distribution, by duty level, of MFN tariff provisions for photographic and cinematographic supplies

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom
Free-----	48.8	16.7	-	25.0	56.3

40.1-50.0 percent--	-	-	2.5	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Nearly half of U.S. provisions are in the 0.1-5 percent ad valorem range, while about half of the Japanese provisions are in the 10.1-15 percent bracket. Nearly one-third of the EC provisions are in the 0.1-5 percent bracket and another 44 percent are found in the 5.1-10 percent bracket. One-fourth of U.S. provisions and about one-third of those of the United Kingdom are in the 5.1-10 percent range. Only Japan has provisions (nearly 28 percent) ranging above 20 percent ad valorem, with some extending into the 40.1-50 percent bracket.

Almost one-fourth of total imports into Canada and 7 percent of the entries into the United Kingdom are from sources which receive preferential treatment on dutiable products. EC imports from outside countries are equal to only about 80 percent of intra-EC shipments.

Virtually all MFN imports of photographic and cinematographic supplies by the United States enter at duty rates between 0.1 and 5 percent ad valorem; over 90 percent of EC entries and two-thirds of the United Kingdom imports pay duties between 5.1 and 10 percent ad valorem (table I-20-B). For Japan, one-third of its entries are assessed at

Table 1-20-B.--Distribution, by duty level, of MFN imports of photographic and cinematographic supplies

Note.--Due to rounding, figures may not add to 100 percent.

rates from 10.1-15 percent and one-quarter at rates from 25.1-30 percent. Over two-fifths of Canadian imports enter duty free; another one-third are assessed rates between 15.1 and 20 percent ad valorem. None of the five major countries, except Canada, have significant duty-free imports. Over 40 percent of Japan's imports enter at rates higher than 20 percent ad valorem.

Japan has the most detailed tariff schedule for photographic and cinematographic supplies with 40 tariff lines, while the United Kingdom and the European Community have the least, with 17 lines each; the United States has 28 tariff lines, and Canada, 33 lines.

#### Trade importance

The photographic and cinematographic supplies sector ranks 20th both in OECD industrial exports and imports, and accounts for less than 1 percent of each. For the United States, the sector is the 16th most important in industrial exports. It ranked 22nd in imports in 1969, but rose to 21st in 1970.

Imports by the GATT tariff study countries were valued at \$370 million in 1967 and \$560 million in 1970. Intra-EC shipments were an additional \$122 million in 1967 and \$207 million in 1970. OECD 1969 imports were \$667 million (including \$152 million of intra-EC shipments) and exports were \$818 million (chart I-20-B). In 1970, OECD imports rose to \$783 million (including intra-EC shipments) and exports were \$961 million.

Chart I-20-B. -- OECD trade in photographic and cinematographic supplies, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade network

The five major countries account for almost 98 percent of OECD exports and about 77 percent of OECD imports of photographic and cinematographic supplies (tables I-20-C and I-20-D).

Table I-20-C.--OECD exports of photographic and cinematographic supplies, 1969

(Millions of dollars)

1/ Includes intra-EC shipments.

Note.--Country of origin data are not available for 27 percent of Canada's imports, 10 percent of U.S. imports, 17 percent of Japan's imports, 15 percent of EC imports, and 22 percent of United Kingdom imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

If intra-EC exports are excluded, the United States is the largest exporter of photographic and cinematographic supplies. Country of destination data are not available in OECD statistics for almost one-fifth of U.S. exports, 14 percent of Japan's exports, 12 percent of EC exports and one-fourth of United Kingdom exports in this sector. For the remainder of U.S. exports, the Community and the LDC's are the principal markets, receiving about one-fourth each; the "other" OECD countries take an additional 17 percent (chart I-20-C). The United States takes four-fifths of

Chart I-20-C. -- United States trade in photographic and cinematographic supplies, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Canada's small exports and over 30 percent of Japanese exports for which destinations are known. Japan also ships over 40 percent of its remaining exports to LDC's. Intra-EC exports are equal to about 45 percent of total EC exports for which destination information is available. The LDC's take over one-fourth of those EC outside exports which are accounted for; one-fifth go to the United States, and 10 percent go to the United Kingdom. The United Kingdom ships almost one-third of its exports, for which destinations are reported, to LDC's and the other non-OECD countries, one-third to "other" OECD countries, and 10-14 percent each to the European Community, the United States, and Canada.

The European Community is the principal importer of photographic and cinematographic supplies among the five major countries. Country of origin data for 15 percent of EC imports, 27 percent of Canada's imports, 10 percent of U.S. imports, 17 percent of Japan's imports, and 22 percent of United Kingdom imports are unavailable. Of imports into the European Community from outside sources for which origins are known, most come from the United States; intra-Community imports are equal to over half of total EC imports. The European Community supplies over three-fifths of those U.S. imports accounted for, the United Kingdom and Japan over one-eighth each and Canada around one-tenth. The United States is the source of over three-fourths of Japan's remaining imports for which origins are known, nearly 60 percent of Canadian imports for which origins are known, and 38 percent of known imports into the United Kingdom. The European Community is the largest known source of United Kingdom imports.

Trade composition

The photographic and cinematographic supplies sector is not divided into subsectors. The most important BTN heading is 37.02, unexposed film in rolls, with combined MFN imports by the GATT tariff study countries amounting to \$110 million in 1967. The major importers are the European Community (\$24 million) and the United States (\$22 million). By 1971, U.S. imports of unexposed film in rolls had risen to \$53 million.

BTN headings 37.01, unexposed photographic films and plates in the flat, and 37.03, undeveloped sensitized paper, paperboard and cloth, each have combined most-favored-nation imports of \$60-\$70 million. The European Community and the United States are again the main importers.

Trade-agreement concessions

Average tariff levels on January 1, 1972, for photographic and cinematographic supplies for all the five major countries were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Japan's tariff rates shown in the tabulation were further reduced unilaterally in 1972. Calculations based on Japan's new reduced rates would show a weighted average of roughly 17.9 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	25.2	3.5
European Community	17.7	7.6
United Kingdom	21.6	7.8
Japan	29.2	22.4
Canada	12.4	7.2

Concessions under the GATT have been made on all MFN provisions for photographic and cinematographic supplies in the tariff schedules of the United States, the European Community, and the United Kingdom. Forty-two percent of Canada's provisions, covering three-fourths of Canadian imports, are covered under the GATT. In the Japanese schedule, 85 percent of provisions, covering 67 percent of Japan's imports, are fully covered by GATT concessions; for 3 percent of provisions, covering 6 percent of MFN imports, only part of an item is covered.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CET) contained tariff concessions on photographic and cinematographic supplies negotiated under the GATT. The number of such concessions totaled 99, of which 77 reflected rates higher than the autonomous rate established in the CET, 6 were at the CET rate, and 16 were below the CET rate.

Specific tariff concessions made by the five major countries in the largest category of photographic and cinematographic supplies, BTN 37.02--unexposed film in rolls, can be seen in table I-20-E. Reductions from the pre-trade-agreement rates have been made in the tariffs of the United States, the European Community, and the United Kingdom. Canada has eliminated its duty on such goods.

Table I-20-E.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on unexposed film in rolls

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	25%; 9.6%-40% AVE	6.25%; 2.4%-10% AVE	5%; 1.2%-5% AVE <sup>2/</sup>	723.05, .15; 723.10
Canada-----	10%	Free	Free	46240-1
European Community---	20%	16%	12.8%	37.02
United Kingdom-----	25%	4.8%-7.9% AVE; <sup>3/</sup> 20%	9%; 16%	37.02 (A), (B)
Japan-----	10%; 30%	20%-40%	15%-40%	37.02

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> About 93 percent of U.S. imports (calculated on 1971 import values) were dutiable at 5 percent ad valorem or 5 percent ad valorem equivalent; range of ad valorem equivalents based on a specific rate of 0.05 cents per 16.5 square inches.

<sup>3/</sup> Range of ad valorem equivalents of specific rate of 1/4 pence per linear foot for 35mm width, calculated on 1969 import values.

### Trade complaints

The Tariff Commission received 179 complaints from traders and producers of photographic and cinematographic supplies. Thirty-eight percent of the complaints were against various forms of quantitative limitations (chiefly screen-time quotas) and licensing practices; 20 percent against subsidies and about 30 percent against various discriminatory and nondiscriminatory excise taxes, film taxes, and import duties. Two-thirds of the complaints were against less developed countries, with 31 nations specifically named in this group. Seventeen developed countries were named in the complaints. Spain drew the largest number of complaints against any single country. Complaints against developed countries dealt primarily with subsidies.

Subsidies.--The practice most criticized as a distortion of trade in photographic and cinematographic supplies was subsidies for national film production. Members of the European Community received a substantial number of complaints against government subsidization and aids to national film industries. The German National Film Institute subsidizes German film production with aid grants. In Belgium, the Ministry of Economic Affairs grants a subsidy to domestic film producers equal to 80 percent of the admission tax on domestic films, 25 percent on short subjects and 5 percent on newsreels. French films are subsidized through a special account which derives its income from film release taxes, special admission taxes, and repayment of loans and grants to producers. Interest-free loans are given to French producers based on the probable quality of the film. The Italian government subsidizes full-length feature Italian films, as well as giving cash awards to features and shorts based on merit.

Complaints against EFTA nations were also numerous. The Norwegian government makes loans for cultural films and gives grants to cover production costs of other films. Danish film producers receive a rebate of 15 percent of the admission tax. The Danish Film Foundation makes grants and loans to Danish producers based on quality criteria. The Swedish film industry receives subsidies in the form of direct grants; quality awards; funds for offsetting losses, meeting the expenses of the Swedish Film Institute, and public relations activities. The Swiss government awards prizes, grants production credits and allows deficit offsets designed to encourage local production. The Austrian government guarantees repayment of 80 percent of loans extended to film

producers by private banks. The Austrian Ministry of Education administers a fund of \$12 million for the promotion of Austrian films. In the United Kingdom, direct subsidies and low interest loans are readily available to the domestic film industry. Locally produced South African films are eligible for subsidization when gross earnings reach R20,000; after that point, government payments match gross earnings, and after earnings of R40,000, government payments are on a basis of R2 for each rand grossed. A fund of \$10 million is maintained by the Canadian government to subsidize private film production through grants, loans, and awards for outstanding films.

Among less developed countries, the Greek government refunds 6 percent of the admission tax collected on Greek films during the first five years of their exhibition. Spain subsidizes exhibitors of Spanish films. The Portuguese National Motion Picture Foundation (part of the Portuguese government) subsidizes local production. To encourage local film production, the Israeli government provides subsidies, endorses bank loans, and rebates a portion of the admission tax. The Indian government grants loans to film producers covering up to 75 percent of production costs. Egypt, Indonesia, and Pakistan also subsidize domestic film production. Several Latin American governments were reported to subsidize exports of films.

Quotas and licensing.--Most complaints in this category were against screen-time quotas. In Canada, 60 percent of total television time must be devoted to Canadian television films; no foreign country

is allowed more than 30 percent of the remaining time. Britain requires an 86 percent television screen-time quota for British television films. British Commonwealth practices were the target of several complaints by U.S. producers. It was mentioned that 20 percent of the total number of feature motion picture films shown in New Zealand must be British. Fifteen percent of all films shown in Australia must be British and 2 percent must be Australian. Presently in effect in Australia is a stipulation by the Postmaster General stating that, after a television station has been broadcasting for three years, 50 percent of the programs should be Australian in content.

Though Japan has no official screen-time quota, voluntary industry arrangements exist requiring that domestic films be shown 40 days per theater for a combined total of 1,280 days affecting 32 designated theaters. Pakistani regulations require that 15 percent of screen-time be allotted for domestic films in theaters that primarily show foreign films, while foreign films may be shown only 5 percent of the time in other theaters. A new Korean regulation requires that first-run theaters, playing only imported films in the past, must now show locally produced films three months of the year.

Argentine first-run theaters must show Argentine films for at least one week of each quarter of the year; other theaters must devote 33 percent of screen-time to Argentine films. Twelve percent of all films shown in Brazil must be Brazilian. In France, domestically produced feature films must be shown five weeks per quarter. Italy requires that domestic pictures must be shown 100 days per year; domestic short subjects 180 days per year. Spain requires one Spanish film be shown for every

four films which have had the Spanish language dubbed in. Also there are quotas on the number of imported films dubbed in Spanish. The amount of the quota depends on the country of origin.

Virtually all remaining complaints dealing with quotas, licensing, and other forms of specific limitations were against less developed countries. It was reported that India usually will negotiate with foreign film suppliers regarding the quantity of film imports permitted into India, only if the foreign supplier is willing to distribute Indian films abroad. In Mexico, once a local manufacturer is established, import licenses frequently are not granted. In Brazil, feature films may only be rented, not purchased. Ceylon has embargoes against films, considering them luxuries.

Discriminatory and restrictive government practices in granting import licenses were reported prevalent in Turkey, Ecuador, and Austria. In Korea, import licenses are required. Currently, there are only 15 authorized Korean importers of films. In Italy, internal authorization for distribution of films is refused to countries which restrict Italy's films. In West Germany, internal authorization is necessary to distribute foreign films. The Spanish regulations controlling the internal distribution of foreign films are not applicable to domestically produced films. Licenses are needed for foreign films taking part in Spanish film festivals.

Taxes and other nontariff charges.--The French film release tax was felt to be discriminatory since, due to bilateral agreements, many countries are exempt. The Italian admission tax rebate is contingent

on whether or not the film originated in the European Community. There is a charge on imports of color prints distributed in Spain by the Motion Picture Export Association of America; there is no charge on the same item if imported by independent Spanish distributors. The Spanish dubbing tax was alleged to be a release tax not paid by the domestic industry and paid at a higher rate by the United States than other foreign countries. In Argentina, the Netherlands, Denmark, Italy, and Turkey, the theater admission tax is higher for foreign films.

General complaints were received from U.S. film distributors against the admission taxes levied in Denmark, West Germany, France, and Spain.

Miscellaneous.---Hungary was reported to inflate the value basis to which an ad valorem tariff is applied by 100 percent. Objection was made against Japanese preferential tariff treatment for photographic products from developing countries in Asia, Africa, and Latin America. Australia and Canada have rates of duty that were criticized because they are assessed on the fair market (current domestic) value, rather than the declared value at the U.S. port of shipment. Elaborate certification programs with regard to industrial standards for photographic supplies were reported to exist in Germany and Japan. Brazil and South Africa require that all U.S. photographic products be labeled according to metric system specifications. Argentine foreign film importers must manufacture all black and white release prints in Argentina. Dubbing for all foreign films to be released in Spain and France must be done in those

countries. Egyptian exchange controls require that 40 percent of remittable sums from film revenues remain in Egypt.

Respondents in the Commission's survey of trade barriers were requested to give an assessment of the effect of the barriers reported on their trade (as significant, moderate, small or nil), and where possible, estimate the dollar value of the increase in trade which could be expected if the barriers were removed. No assessments were received with the complaints against trade barriers encountered by photographic and cinematographic supplies.

## Industrial Sector I-21

## WORKS OF ART AND COLLECTORS' PIECES

Works of art and collectors' pieces include: Paintings; drawings and pastels; original engravings; prints; lithographs; sculptures and statuary; postage, revenue, and similar stamps for collectors; and collectors' pieces of botanical, mineralogical, historical or archaeological interest; and antiques of an age exceeding 100 years. 1/

MFN tariffs

In most countries of the world, articles included in this sector are usually duty free. Consequently, for all works of art and collectors' pieces (combined dutiable and free), the arithmetic average tariffs of the five major countries range from zero to 4.4 percent ad valorem; the weighted averages from zero to 0.4 percent. Most of the tariff averages are zero or near zero; only the Canadian arithmetic average is relatively high (4.4 percent). Tariff averages on all products are significantly lower than averages on dutiable imports alone, due to the substantial MFN importation of duty-free works of art and collectors' pieces under numerous duty-free provisions. For dutiable products only, Canada has the highest arithmetic average (19.5 percent) and the highest weighted average (21.3 percent). The European Community and Japan have zero for both averages (chart I-21-A).

---

1/ For the specific coverage of this sector, see BTN chapter 99.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-21- A -- Average MFN tariff rates on works of art and collectors' pieces

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of MFN tariff provisions for works of art and collectors' pieces, by duty level, is shown in table I-21-A. Virtually all MFN provisions are duty free. Roughly one-fourth of Canadian provisions

(concentrated in the range between 15.1 and 25 percent ad valorem), 6 percent of U.S. provisions (in the 5.1 - 10 percent bracket) and one-fourth of United Kingdom provisions (in the 5.1 - 10 percent range), are, however, subject to duty. Of the five major countries, only Canadian rates range above the 10 percent ad valorem level. Virtually all MFN imports of works of art and collectors' pieces are duty free (table I-21-B).

Table I-21-B.--Distribution, by duty level, of MFN imports of works of art and collectors' pieces

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

Note.--Due to rounding, figures may not add to 100 percent.

Imports of works of art and collectors' pieces receiving preferential tariff treatment are insignificant for the five major countries. Intra-European Community shipments equal 30 percent of Community imports from outside sources.

Canada and the United States have the most detailed MFN tariff schedules for works of art and collectors' pieces with 22 and 16 tariff lines, respectively, while Japan and the European Community have the least with 6 lines each. The United Kingdom has eight tariff lines.

#### Trade importance

The works of art and collectors' pieces sector ranks 22nd among the 23 industrial sectors in OECD exports and 21st in imports. The sector

accounts for less than half of 1 percent of industrial exports and imports. For the United States, the sector also is 22nd in industrial exports. It ranked 20th in 1969 and 1970 U.S. imports.

Imports by the GATT tariff study countries were valued at \$316 million in 1967 and \$441 million in 1970. Intra-Community shipments were an additional \$19 million in 1969 and \$17 million in 1970. OECD 1969 imports were \$488 million (including \$15 million intra-EC shipments); exports were \$334 million (see chart I-21-B).

Chart I-21-B, -- OECD trade in works of art and collectors' pieces, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for 83 percent of OECD exports and 91 percent of OECD imports. Eighty percent of OECD exports go to the five major countries, the United States alone accounting for nearly two-fifths. Over 70 percent of OECD imports are supplied by the five major countries; one-fifth by "other" OECD countries.

The United Kingdom, the European Community, and Canada, collectively, take three-fourths of U.S. exports (the United Kingdom alone accounting for one-third); the European Community and Canada take one-fifth each (chart I-21-C). The United Kingdom and the European Community are by

Chart I-21-C. -- United States trade in works of art and collectors' pieces, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

far the principal exporters, accounting for two-thirds of OECD exports, and the United States takes half of their exports. By comparison, the United States, Canada, and Japan are small exporters (table I-21-C).

Table I-21-C.-- OECD exports of works of art and collectors' pieces, 1969

U.S. imports of art and collectors' pieces were valued at \$137 million in 1967, \$185 million in 1969, and \$191 million in 1971. The United States is the largest importer. The European Community is the source of almost half of U.S. imports; the United Kingdom over one-fourth (table I-21-D). The United Kingdom is the second largest importer. EC imports from outside sources are equal to less than one-third of U.S. imports; imports by Canada and Japan are even smaller (table I-21-D).

Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for works of art and collectors' pieces either remained duty free or were below levels existing on pre-trade-agreement base dates. The lower levels largely reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	0.0	0.0
European Community	0.0	0.0
United Kingdom	0.8	0.4
Japan	15.2	0.0
Canada	6.7	4.4

For the United States, Japan, the United Kingdom, and the European Community, concessions under the GATT have been made on all MFN provisions for works of art and collectors' pieces. Twenty-three percent of Canadian provisions covering 1 percent of imports are under the GATT. National tariffs of member states of the European Community prior to the adoption of the EC's Common External Tariff (CET) contained no GATT concessions on works of art and collectors' pieces.

#### Trade complaints

In trade in works of art, collectors' pieces and antiques, the usual elements of commercial competition are frequently present in only a modified form or degree and may be almost entirely absent. This unique aspect of the trade probably accounts for the fact that the Tariff Commission received only two complaints of trade barriers in this sector, even though transactions in these goods are usually subject to the same types of taxes, fees, and various regulations or controls that gave rise to numerous complaints in other product sectors. Many countries prohibit the export of articles included in this sector if they are considered to be national treasures.

The two complaints received by the Commission concerned licensing requirements and quotas maintained by two small countries as part of their mechanism for conserving scarce foreign exchange.

## Industrial Sector I-22

## OFFICE AND STATIONERY SUPPLIES

Office and stationery supplies include: Stylograph pencils and pens; fountain pens; pen holders; pen nibs and nib points; writing slates; date, sealing and similar stamps; typewriter ribbons; ink pads; sealing wax; filing cabinets, racks, etc. of base metal; and staples, paper clips, fittings for files, etc. of base metal. The sector excludes inks other than printing inks, eyebrow and other cosmetic pencils, and mathematical drawing pens. 1/

MFN tariffs

The arithmetic average MFN rates of duty of the five major countries for all office and stationery supplies (combined dutiable and free) range from 7.2 percent ad valorem to 16.1 percent. The weighted averages run from 9.2 percent to 17.2 percent. Canada has both of the highest averages and the European Community has both of the lowest averages (chart I-22-A). For dutiable products, only the averages of Canada change rising to 17 percent for the arithmetic average and 17.7 percent for the weighted average.

Table I-22-A illustrates the distribution of tariff provisions by duty level. For Japan and the European Community about three-fourths of their tariff provisions are within the 5.1 to 10 percent ad valorem bracket; for the United Kingdom over 90 percent; and for the United States 44 percent. Another one-fifth of U.S. provisions are in the 0.1-5 percent ad valorem range. The largest portion (three-fifths)

---

1/ For the specific coverage of this sector, see BTN headings 83.04-.05, and 98.03-.09.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart I-22-A. -- Average MFN tariff rates on office and stationery supplies

Note.--Due to rounding, figures may not add to 100 percent.

of Canadian rate provisions are in the 15.1-20 percent bracket. Only Canada, among the five major countries, has MFN duty-free provisions. United States rates range into the 30.1-40 percent bracket; Canadian rates into the 20.1-25 percent bracket. Japan has no rates above 20 percent; the European Community has none above 15 percent; and the United Kingdom has none above 10 percent.

In 1970, none of the major countries, except the United Kingdom, entered imports of office and stationery supplies under preferential rates. About one-fourth of United Kingdom imports of office and stationery supplies are granted preferential treatment. EC imports from outside sources equal about 55 percent of intra-EC imports (which move duty free). The United States, Japan, the European Community, and the United Kingdom have no duty-free MFN imports; about 3 percent of Canadian entries are duty free (table I-22-B). Four-fifths of Canadian

Note.--Due to rounding, figures may not add to 100 percent.

imports and two-thirds of Japanese imports enter at rates between 15.1 and 20 percent ad valorem. The brackets of 0.1-5 percent and 15.1-20 percent ad valorem each contain over one-third of U.S. entries.

Almost 98 percent of the imports of the United Kingdom enter at rates in the 5.1-10 percent bracket, as do two-thirds of EC imports.

The Canadian and U.S. office and stationery supplies tariff schedules are the most detailed with 37 and 36 tariff lines, respectively; the United Kingdom's schedule is the least detailed with 12 tariff lines. Japan has 19 lines and the European Community has 16 lines.

### Trade importance

The office and stationery supplies sector is the least important of the 23 industrial sectors for both OECD exports and imports. OECD 1969 imports were \$171 million (including \$42 million of intra-EC shipments) and exports were \$244 million (chart I-22-B). The sector

Chart I-22-B. -- OECD trade in office and stationery supplies, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

accounts for less than 1 percent of OECD industrial exports and imports. In 1969, the office supplies sector ranked 21st in U.S. exports and was the least important sector in U.S. imports, accounting for \$43 million in U.S. exports and \$18 million in U.S. imports (chart I-22-C).

Chart I-22-C. -- United States trade in office and stationery supplies, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Imports of office and stationery supplies by the GATT tariff study countries were valued at \$88 million in 1967 and \$123 million in 1970. Intra-EC shipments were an additional \$29 million in 1967 and \$45 million in 1970.

Trade network

The five major countries account for 92 percent of OECD exports of office and stationery supplies and 73 percent of imports. Nearly 30 percent of OECD exports go to the five major countries; 20 percent to less developed countries. About 90 percent of OECD imports are supplied by the five major countries.

Complete country of destination data are unavailable for the United States, the Community and the United Kingdom. Of the U.S. exports accounted for, 45 percent go to LDC's. Canada, the European Community, and Japan are the principal developed markets for U.S. products. Japan ships one-fourth of its exports to the United States; one-fifth to less developed countries. Of those EC exports that can be accounted for, about 36 percent are intra-EC exports, 45 percent go to LDC's and 30 percent go to "other" OECD countries. United Kingdom exports with known destinations go primarily to "other" OECD countries and non-OECD countries. Canada is an insignificant exporter (table I-22-C).

Japan supplies over 44 percent of U.S. imports; the European Community about 39 percent (table I-22-D). The United States is the source of virtually all Canadian imports, almost half of Japanese imports, and over one-fourth of European Community imports from outside sources. EC outside imports equal about three-fifths of intra-EC imports. The European Community and the United States are the chief sources of United Kingdom imports.

Trade-agreement concessions

For all of the five major countries, average tariff levels on January 1, 1972, for office and stationery supplies were substantially below levels existing on pre-trade-agreement base dates. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the following tabulation, where weighted average duties are given for all countries except Canada; the Canadian figure is an arithmetic average. Most of Japan's tariff rates in this sector were unilaterally reduced in 1972. Calculations based on Japan's new reduced rates would show an average of about 13 percent ad valorem.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	32.7	11.9
European Community	18.7	9.2
United Kingdom	20.0	9.6
Japan	24.1	16.3
Canada	32.7	16.1

Concessions under the GATT have been made on all MFN provisions for office and stationery supplies in the tariff schedules of the United States, the United Kingdom and the European Community; on 89 percent of Canadian provisions covering 95 percent of Canadian imports; and on 95 percent of Japanese provisions covering 85 percent of Japanese imports.

The national tariffs of member states of the European Community prior to adoption of the Common External Tariff (CET) contained 51 tariff concessions on office and stationery supplies negotiated under the GATT. Of these 51 GATT concessions, 33 were at rates higher than the autonomous rate established in the CET; 2 were at the CET rate, and 16 were below the CET rate.

Some concessions by the five major countries in tariffs dealing with fountain pens, including stylographic pens, ball point pens and pencils, and combination pens and pencils are shown in table I-22-E. Reductions were made in all of the five major tariffs.

Table I-22-E.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on fountain pens, including stylographic pens and ball-point pens and ball-point pencils, and combination pens and pencils

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	72.4% AVE <sup>2/</sup>	48.6% AVE	24.3% AVE <sup>3/</sup>	760.05
Canada-----	27.5%	22.5%	20% <sup>4/</sup>	65500-1
European Community--	22%	18%	13%	98.03A
United Kingdom-----	20%	14%	10%	98.03
Japan-----	25%; 20%	25% <sup>5/</sup>	20% <sup>5/</sup>	98.03-1(2)A 98.03-1(2)B

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalent of compound rate of duty of 6 cents each plus 40 percent ad valorem, calculated on 1972 import values.

<sup>3/</sup> Ad valorem equivalent of compound rate of duty of 2 cents each plus 13.5 percent ad valorem, calculated on 1972 import values.

<sup>4/</sup> Rate shown is the official MFN rate, presently superseded by a temporary rate of 15 percent. The temporary rate is subject to possible renewal in February, 1974.

<sup>5/</sup> For ball-point pens and pencils, the rate of duty is the greater of a specific rate or the ad valorem rate shown.

Trade complaints

In the office and stationery supplies sector, the Tariff Commission received 79 complaints against practices and policies which the respondents considered barriers to trade. Most of the complaints were submitted by, or on behalf of, manufacturers of writing instruments. Over 30 countries, almost all of which were Western Hemisphere developing nations, were named in the complaints. The eight countries mentioned most often and the number of times they were mentioned were: Argentina (7), Chile (5), Colombia (5), the Dominican Republic (4), Peru (4), Spain (4), Uruguay (4), and Paraguay (4).

The complaints were chiefly against a variety of nontariff charges on imports, licensing practices, exchange controls, and embargoes.

Nontariff charges.--Almost half of the complaints received concerned various taxes, fees, and deposits. Over 28 countries were mentioned in complaints dealing with various taxes or fees, among which were port taxes, statistical taxes, stamp taxes, and consular fees. For Chile, Colombia and Peru, the size of prior import deposits, which averaged 117 percent of c.i.f. value, was the object of complaint.

Embargoes, licensing practices and exchange controls.--Colombia is reported to maintain an embargo on assembled writing equipment. Mexico uses an embargo on foreign goods to encourage local manufacturers. Ceylon has designated imported writing equipment a luxury, which results in the prohibition of imports, and Ecuador similarly embargoes imports to conserve foreign exchange.

Eleven countries, eight of which were in South America, were cited for their licensing practices related to importation of writing instruments. One complaint stated that an import license is especially difficult to obtain in Chile, and after it is granted the merchandise must be shipped within 150 days from the license date or the importer will become subject to a fine of 100 percent of the c.i.f. value of the merchandise. A complaint lodged against Mexico stated that license approval often takes from 30 - 180 days.

Exchange controls maintained by eight Latin American countries and Spain also drew complaints. Complaints against Costa Rica and the Dominican Republic stemmed from the fact that exporters have had to wait a number of months for converted dollars to be remitted to them from the central banks.

Only two of the complaints were accompanied by an assessment of the significance or importance of the reported obstacles to trade. A respondent characterized as "small" the restrictive effect of Japanese payment arrangements which tie up capital for unusually long periods, but estimated a 25 percent increase in trade if the practice were changed. In another complaint, Mexican licensing practices were described as a "moderate" restriction on the respondent's shipments to Mexico, and a 44 percent increase in trade was estimated if the requirement were removed. The estimated trade increases in these two complaints totaled \$17,000.

## MANUFACTURED ARTICLES, NOT ELSEWHERE SPECIFIED

This sector covers all the miscellaneous industrial manufactured products which are not classified in industrial product sectors I-1 through I-22. Among specific products included here are: Candles; matches; caseins; albumins and their derivatives; glues; manufactures of straw or esparto and other plaiting materials; paper-based floor coverings with or without linoleum coating; head-bands and hat frames; umbrellas and walking sticks; artificial flowers; wigs, hairpieces and other articles of human hair; baby carriages and invalid carriages; parachutes; orthopedic appliances; brooms and brushes; buttons; smoking pipes; vacuum flasks and mechanical lighters. 1/

### MFN tariffs

Arithmetic average MFN tariffs of the five major countries for all products (combined free and dutiable) in this miscellaneous sector range from 7.9 to 14 percent ad valorem; the weighted averages from 8.5 to 13.4 percent. The European Community has both the lowest arithmetic and weighted average tariffs and Canada has both of the highest. For dutiable products, only the Japanese and Canadian averages vary significantly from those for all products. Canada's averages rise to 17.8 percent for

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

the arithmetic and 17.5 percent for the weighted. Japan's averages are 12.6 for the arithmetic and 12.2 for the weighted (chart I-23-A).

Chart I-23-A. --Average MFN tariff rates on manufactured articles not elsewhere specified

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions in 1972 on about 84 percent of the Japanese rates in this sector; several of the remaining rates were reduced by 29 percent or 47 percent.

Source: Compiled from Basic Documentation for the Tariff Study, GATT.

The distribution of MFN tariff provisions, by duty level, is shown in table I-23-A. Over half of the rate provisions of Japan and the Community are in the 5.1-10 percent ad valorem bracket, along with one-third of U.S. provisions and nearly half of United Kingdom provisions. Canada has 53.2 percent of its rate provisions in the 15.1-20 percent ad valorem bracket. The tariff schedules of all the five major countries contain MFN duty-free provisions for some articles

in this miscellaneous sector. One-fifth of U.S. provisions, one-fourth of the Community's and 13 percent of United Kingdom provisions are in the 0.1-5 percent range. Canada, the United States, and the United Kingdom have rates over 25 percent ad valorem.

At least two-thirds of the MFN imports of the United States and the United Kingdom enter at duty rates of 5.1 to 10 percent ad valorem, as do one-fifth of Canada's imports, 45 percent of Japan's imports and one-half of EC imports (table I-23-B). For Canada, one-fourth of MFN entries

Table I-23-B.--Distribution, by duty level, of MFN imports of manufactured articles not elsewhere specified

are free; one-fourth in the 15.1-20 percent ad valorem range and another fourth in the 20.1-25 percent range. One-fourth of Japan's imports are free; one-fourth of EC imports are in the 0.1-5 percent bracket.

Imports of miscellaneous manufactured articles receiving preferential tariff treatment were insignificant for all of the five major countries except the United Kingdom, where preferential treatment was accorded 60 percent of total United Kingdom imports.

The United States has the most detailed tariff schedule for the miscellaneous manufactured articles in this sector, with 280 tariff lines, while the United Kingdom has the least with 87 tariff lines; the European Community has 102 tariff lines; Canada, 124; and Japan, 94. The multiple dispersion of U.S. and Canadian tariff lines into the BTN format overstates the detail of the tariff schedules of these two countries. An adjustment for this problem yields a more accurate item count of 221 items for the United States and 90 items for Canada.

#### Trade importance

The miscellaneous manufactured articles sector is one of the least important of the industrial sectors, ranking 21st in OECD exports and 19th in imports. The sector accounts for less than half of 1 percent of OECD industrial exports and imports. For the United States, the sector is the 19th most important in industrial exports. It ranked 18th in 1969 U.S. imports, but rose to 16th in 1970.

Imports by the GATT tariff study countries were valued at \$652 million in 1967 and \$1 billion in 1970. Intra-European Community shipments were an additional \$115 million in 1967 and \$188 million in 1970. OECD

1969 imports were \$862 million and exports \$838 million (chart I-23-B).

In 1970, OECD imports increased to \$1.1 billion, exports to \$968 million.

Chart I-23-B. -- OECD trade in manufactured articles not elsewhere specified, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade network

The five major countries account for approximately three-fourths of OECD exports and imports. The United States and the European Community are both major importers of the manufactured articles in this sector; the European Community and Japan are the most substantial exporters (table I-23-C and I-23-D). United States imports were valued at \$248 million in 1967, \$254 million in 1969 and \$298 million in 1971. Because of the miscellaneous character of products in this sector, complete country of origin and destination statistics are not compiled by the OECD on

trade flows in these items. Consequently, no further comments on trade flows can be made.

#### Trade-agreement concessions

For the five major countries, average tariff levels on January 1, 1972, for miscellaneous manufactured articles were below levels existing on pre-trade-agreement base dates. The greatest reduction occurred in the U.S. tariff, which fell by over 20 percentage points. The lower levels, for the most part, reflect concessions granted in reciprocal negotiations. The tariff levels are compared in the tabulation below, where for all countries, except Canada, the figures given are weighted average duties; the Canadian figure is an arithmetic average. Most Japanese tariff rates in this sector were unilaterally reduced in 1972. <sup>1/</sup> Calculations based on Japan's new reduced rates would show an average level of about 7.4 percent.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	29.2	9.1
European Community	12.0	8.5
United Kingdom	17.0	11.0
Japan	10.2	9.2
Canada	21.4	14.0

In the U.S. tariff schedule, 97 percent of the tariff provisions, covering all MFN imports, are fully covered by GATT concessions; for the European Community, 95 percent of provisions, covering 94 percent of imports; for Canada 78 percent of provisions, covering 91 percent of

---

<sup>1/</sup> BTN headings 35.05, 65.06, 65.07, 98.01, 63.031, 96.022(3), 98.101, and 98.110 were totally exempt from the 20 percent reductions.

imports; for the United Kingdom, 92 percent of provisions, covering 80 percent of imports; and for Japan, 90 percent of provisions, covering 48 percent of imports.

The national tariffs of all member states of the European Community prior to adoption of the EC's Common External Tariff (CXT) contained tariff concessions on miscellaneous manufactured articles in this sector negotiated under the GATT. The number of such concessions totaled 240, of which 154 reflected rates higher than the autonomous rate established in the CXT, 16 were at the CXT rate, and 70 were below the CXT rate.

Actual changes which have occurred since pre-trade-agreement base dates in major country tariffs dealing with wigs and toupees; umbrellas; artificial flowers, foliage and fruit; and baskets and bags of willow are shown in tables I-23-E, I-23-F, I-23-G and I-23-H.

Table I-23-E.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on wigs, toupees, chignons and similar articles

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%	14%	7%	790.70

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

#### Trade complaints

U.S. producers and traders of the miscellaneous manufactured articles contained in this basket sector submitted 108 complaints to the Tariff Commission concerning policies or practices which they considered barriers to trade. Over forty countries were named in the complaints. Two-thirds of the complaints were against practices in developed countries. The eight countries mentioned most often and the number of times they were mentioned were Japan (13), the United States (8), France (8), the United Kingdom (7), Sweden (6), West Germany (5), the Philippines (4), and Egypt (4).

As would be expected in a basket category containing a large number of unrelated products, the complaints named most of the practices which are looked upon as distortions to trade. There was only one area of noticeable concentration. About one-third of the complaints concerned

various forms of specific limitations in trade. A large number of the numerous products which fall in this miscellaneous sector were reported to be under quotas, licensing requirements, or outright embargoes in several developing countries. Complaints of this type against the major developed countries were relatively few. Importers of brooms objected to the U.S. tariff quotas on brooms, stating that the over-quota rate was actually prohibitive of imports. Importers of umbrellas complained against Japan's voluntary limitations on umbrella exports to the United States.

Several of the products in the sector, but matches in particular, are found in state trading or government monopolies in both developed and developing countries.

Only nine respondents submitted their estimates of the increase in trade that would occur if the indicated barrier were removed. Six of these responses indicated "moderate" increases in trade, two indicated a "significant" increase, and one a "small" increase. None of the respondents gave a dollar estimate of the expected trade increase.

## Chapter XV

### AGRICULTURAL PRODUCT SECTORS

#### Introduction

Agricultural products are defined in this report as all products provided for in chapters 1 through 24 of the Brussels Tariff Nomenclature. <sup>1/</sup> The agricultural products have been grouped into 9 sectors for discussing in detail the applicable tariffs, nontariff trade barriers, and the direction of major trade flows.

The format followed for the presentation of each sector includes an examination of MFN tariffs of the United States, Canada, Japan, the European Community (of six) and the United Kingdom, the sector's trade importance and trade network, the trade composition, trade-agreement concessions which have taken place and a summary of the trade complaints submitted to the Commission concerning trade barriers affecting products in the sector. Tariff and trade data for the most significant subsectors in each sector are also discussed in the same manner.

The agricultural sectors are numbered in the order of their importance in 1969 total agricultural export trade of the OECD countries, as follows:

- A-1. Foodstuffs
- A-2. Grains
- A-3. Animals and products thereof
- A-4. Oil seeds, fats and oils, and their products
- A-5. Beverages and spirits
- A-6. Dairy products
- A-7. Fish, shellfish and products
- A-8. Tobacco
- A-9. Miscellaneous agricultural and forestry products

A comparison of tariffs among sectors is found in chapter IV. Some general observations on the interpretation of the data presented in the sectors is found in chapter XIII.

---

<sup>1/</sup> See the appendix to chapter XIII.

## Agricultural Sector A-1

## FOODSTUFFS

Foodstuffs include: Edible vegetables, fruits and nuts; cereal flours and meals; coffee, tea, spices, sugar, and cocoa; preparations of or substitutes for some of the foregoing products; and miscellaneous food preparations and components. 1/

MFN tariffs

Among the five major countries under study, MFN average tariffs on foodstuffs vary considerably. The arithmetic averages for all foodstuffs (free and dutiable combined) range from 7.5 to 21.8 percent ad valorem and the weighted averages from 3.8 to 54.3 percent. For dutiable products alone, the MFN arithmetic averages range from 8.8 to 24 percent ad valorem, the weighted averages from 7.4 to 61.4 percent (see chart A-1-A).

Variable import levies used by the European Community and the United Kingdom are not included in the calculations of the average MFN duties discussed here. The European Community applies variable levies for 358 of its 596 tariff lines for foodstuffs; however, less than 8 percent of EC imports enter under these

---

1/ For the specific coverage of this sector, see BTN headings 04.05-.06; 07.01-.06; 08.01-.13; 09.01-.10; 11.01-.09; 17.01-.05; 18.01; 18.03-.06; 19.01-.08; 20.01-.06; 21.01-.07; 22.10.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart A-1-A.--Average MFN tariff rates on foodstuffs

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging between 14 percent and 100 percent made in 1972 on almost one-fifth of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

variable levy provisions. 1/ Thus, the European Community arithmetic average tariffs are probably understated to a considerable degree and weighted average tariffs are probably understated to a lesser degree. 2/ The United Kingdom has variable levies for 5 of its 284 tariff lines for foodstuffs, covering less than 0.4 percent of United Kingdom imports in 1970. 3/

Japan has the highest arithmetic and weighted average MFN tariffs both for all products and for dutiable products considered alone. The United Kingdom (considering only fixed rates) has both the lowest average rates for dutiable foodstuffs and also the lowest arithmetic average MFN rate on all products, but the United States has the lowest weighted average duty for all foodstuffs. Canadian duties are slightly below those of the United States in the arithmetic averages and

---

1/ Variable levies are import charges imposed chiefly on agricultural imports. The charge is equal to the difference between an official minimum import price and the actual c.i.f. price of the imported product. The levies are calculated at frequent intervals in response to changes in world prices in order to guard the internal market against the effects of low outside prices.

Ninety-eight percent of EC tariff provisions for foodstuffs under variable levies are in 5 of the 10 foodstuffs subsectors: Prepared or preserved fruit; cocoa and cocoa preparations; sugar and confectionery; products of the milling industry, preparations of cereals; and "other" foodstuffs.

For 19 of the 238 EC provisions which are subject to fixed duties, a countervailing fee may be collected in addition to the duty under certain conditions.

2/ The range of relative heights of the variable levies for this sector is quite wide. For example, the ad valorem equivalent of the levy on white undenatured sugar is 196 percent and for raw undenatured sugar, 133 percent, while for dried whole eggs without the shell the levy equals about 82 percent (including the supplementary levy), 66 percent for fresh or preserved eggs, 61 percent for lactose, 51 percent for wheat flour and 50 percent for wheat groats and meal.

3/ The five United Kingdom provisions with variable levies are all in the subsector for products of the milling industry and preparations of cereals.

above the U.S. rates in the weighted averages. The rates of the European Community (even exclusive of variable levies) are above both the U.S. and Canadian rates in all four averages.

The distribution, by duty level, of MFN tariff provisions for foodstuffs is shown in table A-1-A. Each of the five major countries has duty-free provisions, ranging from 9 percent of Japanese

Table A-1- A.--Distribution, by duty level, of MFN tariff provisions for foodstuffs

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 60 percent of EC provisions, covering 8 percent of EC imports in this sector in 1970.

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 2 percent of United Kingdom provisions, covering 0.4 percent of United Kingdom imports in this sector in 1970.

provisions to 29 percent of Canadian provisions. The United Kingdom has one-fourth of its provisions in the range of 0.1-5 percent ad valorem, 43 percent in the 5.1-10 percent bracket, while most of the remainder are either duty free or dutiable in the 10.1-15 percent range. Provisions of the other four countries are more widely dispersed. Japan and the United States are the only two countries with rates above 40 percent ad valorem and each has provisions in all of the duty ranges shown in the table. Three-fifths

of U.S. provisions, however, are not higher than 10 percent ad valorem, whereas 70 percent of Japanese provisions are above 10 percent. The largest portion of U.S. provisions (28 percent) is in the 5.1-10 percent duty range. Nearly one-fourth of EC MFN fixed tariff provisions have rates in each of the rate brackets between the 10.1-20 percent ad valorem range, and one-fifth fall in the 5.1-10 percent range. Canadian dutiable provisions fall chiefly in the three brackets ranging from 5.1-20 percent ad valorem.

Four of the five countries accord preferential tariff treatment to a significant part of their imports. Preferential duties are applied to about 7 percent of U.S. imports, 14 percent of Canadian imports, one-fourth of EC imports from outside sources, and 39 percent of imports by the United Kingdom.

Less than one percent of EC MFN imports are duty free; over half are dutiable at rates between 5.1 and 10 percent ad valorem, and the remainder fall chiefly between 10.1 and 20 percent ad valorem. Nearly 12 percent of Japanese imports, one-fifth of United Kingdom imports, nearly half of Canadian imports, and over 60 percent of U.S. imports enter duty free. Japan has 38 percent of its imports dutiable at rates above 50 percent ad valorem; 18 percent of Japan's imports pay duties of 25.1 to 30 percent ad valorem. The United Kingdom has two-fifths of its imports dutiable between 0.1 and 5 percent ad valorem, and a quarter pay rates in the 5.1-10 percent range. Canada and the United States (each of which has a large portion of duty-free imports) have about one-fifth of imports dutiable between 5.1 and 10 percent ad valorem (see table A-1-B).

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 60 percent of EC provisions, covering 8 percent of EC imports in this sector in 1970.

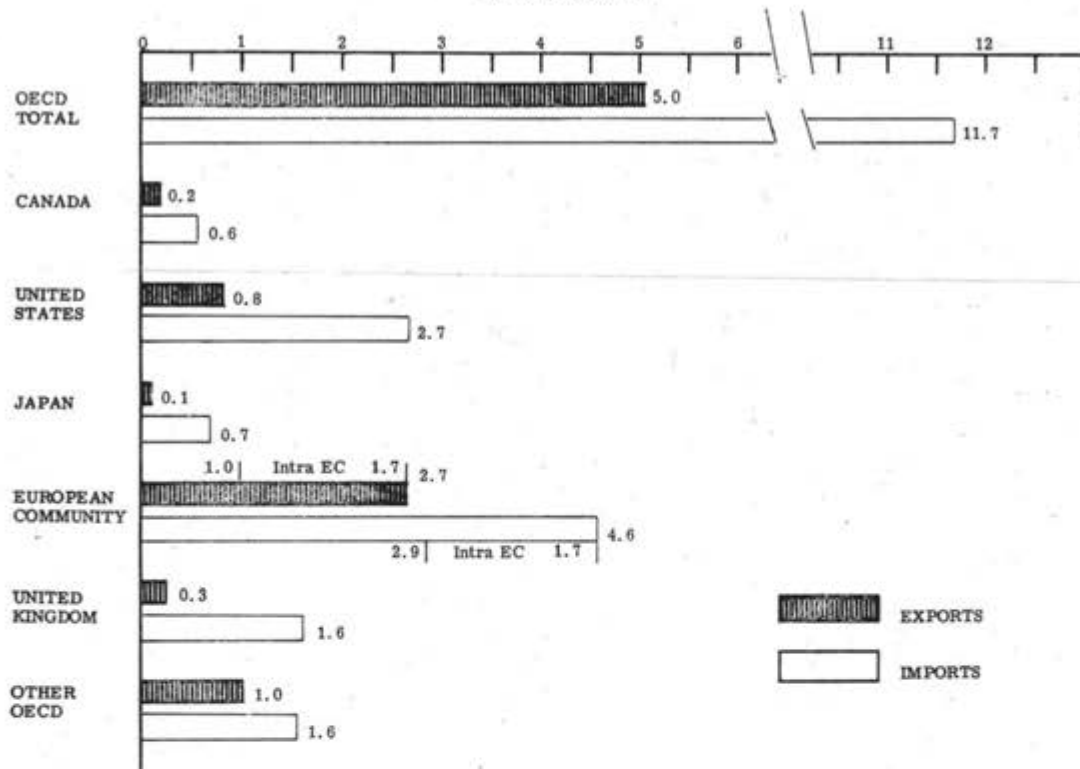

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 2 percent of United Kingdom provisions, covering 0.4 percent of United Kingdom imports in this sector in 1970.

The United States and the European Community have the most detailed tariff schedules for foodstuffs, with 767 and 596 lines, respectively. The number of lines for Canada, the United Kingdom, and Japan range between 200 and 300.

#### Trade importance

The most important of the nine agricultural sectors is foodstuffs, which ranks first in both OECD exports and imports. OECD exports amounted to \$5 billion in 1969 and \$5.6 billion in 1970; imports totaled \$11.7 billion in 1969 and \$13.2 billion in 1970 (see chart A-1-B). In 1970, the foodstuffs sector accounted for 22 percent of OECD agricultural exports and 36 percent of imports. For the United States, the sector ranks third in agricultural exports and first in imports. U.S. exports of foodstuffs accounted for about 13 percent of total U.S. agricultural exports in 1970.

Chart A-1-B. --OECD trade in foodstuffs, 1969  
(Billions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

Imports of foodstuffs by the 13 GATT tariff study countries <sup>1/</sup> were valued at \$11 billion in 1970. Intra-European Community imports were an additional \$1.9 billion. The ratio of foodstuffs imports to exports is about 3 to 1 for the United States and Canada and about 6 to 1 for Japan and the United Kingdom. Imports by the Community are about 1 1/2 times as large as exports (about three times as large if intra-EC shipments are excluded).

<sup>1/</sup> The thirteen "countries" are the United States, Canada, Japan, the United Kingdom, Denmark, Norway, Austria, Finland, Sweden, Switzerland, Australia, New Zealand and the six nations of the European Community (considered as one unit).

Trade network

Almost 80 percent of OECD exports of foodstuffs go to other OECD countries, whereas almost two-thirds of imports (which are more than double the value of exports) come from non-OECD sources, principally the less developed countries. This large difference between import and export trade patterns illustrates the variety of products included in the foodstuffs sector.

The principal suppliers of foodstuffs to world markets are Brazil (reflecting the importance of coffee), the European Community, and the United States. Colombia, Mexico, and Spain are of moderate importance. The leading sources of U.S. imports are Brazil, the Philippines, and Colombia; those for the European Community are Brazil, Spain, Ivory Coast, and Morocco; and those for the United Kingdom are the European Community, the Republic of South Africa, Spain, and Australia. The United States supplies nearly half of Canadian imports of foodstuffs and is the fourth leading supplier of Japanese imports, behind Taiwan, the Ryuku Islands, and Cuba.

The European Community is the largest exporter among the five major countries, shipping \$967 million in foodstuffs to countries outside the Community and an additional \$1.7 billion to Community destinations, followed by the United States, with \$819 million; the two together account for 70 percent of total OECD exports. The United States has an important market in less developed

countries (37 percent of exports), but over half of U.S. exports go to the countries under study, with Canada receiving nearly 30 percent of U.S. foodstuffs exports (see chart A-1-C). The largest markets

Chart A-1-C. --United States trade in foodstuffs, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

for EC external exports are non-OECD countries (mostly less developed countries), the smaller ("other") OECD countries, and the United Kingdom.

The other three major countries also send important percentages of their relatively small exports to less developed countries (table A-1-C).

Developing countries supply almost 90 percent of U.S. imports of foodstuffs, 70 percent of EC entries from outside sources, almost half of United Kingdom imports, and one-third of Canada's imports (table A-1-D).

Of the 11 percent of U.S. imports which come from OECD countries, about half are supplied in almost equal proportion by the European Community and Canada. "Other" OECD countries supply the bulk of EC imports

from outside sources which do not originate in LDC's. Canada imports the bulk of its OECD foodstuffs and nearly half of its total imports of foodstuffs from the United States. Thirty-nine percent of United Kingdom OECD imports of foodstuffs come from the European Community, and a slightly larger amount from "other" OECD countries.

#### Trade composition

There are 10 subdivisions in the foodstuffs sector; their relative importance is shown in chart A-1-D. Fresh or dried fruit and edible nuts make up the most important subsector in OECD trade, accounting for almost one-fourth of OECD foodstuffs imports and more than one-fourth of exports. Coffee, tea,

Chart A-1-D. -- OECD trade in foodstuffs, by type, 1969

Source: Compiled from national tariffs and trade statistics.

and maté comprise the second most important subsector, with little importance in OECD exports, but accounting for more than one-fifth of OECD foodstuffs imports and nearly 16 percent of combined exports and imports. The other subsectors, ranked by total OECD trade (exports plus imports) are: Fresh or dried vegetables; sugar and confectionery; "miscellaneous" foodstuffs;

cocoa and preparations; prepared or preserved vegetables (except dried); prepared or preserved fruit (except dried); milling industry products and cereal preparations; and spices.

#### Trade-agreement concessions

As shown in the tabulation below, each of the five major countries has had a reduction in its arithmetic average MFN tariff from levels existing on pre-trade-agreement base dates, ranging from the Canadian reduction of over 60 percent to the Japanese reduction of 13.5 percent. The January 1, 1972, average for Japan does not reflect 1972 unilateral reductions of 14 to 100 percent, made on nearly one-fifth of Japanese tariff provisions for foodstuffs.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	22.1	11.2
European Community	<u>1/</u> 21.0	<u>1/</u> 13.8) Plus vari-
United Kingdom	13.5	<u>2/</u> 7.5) able levies
Japan	25.2	21.8
Canada	22.2	8.6

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 40 percent of EC tariff lines which continue to be subject to fixed duties alone; it does not include any tariff lines (60 percent of total EC provisions) subject to a variable levy.

2/ For the United Kingdom, the January 1, 1972, figure is an arithmetic average of rates of duty in all tariff lines subject to fixed rates only, excluding lines covered by variable levies. Variable levies are used by the United Kingdom in 5 of its 284 tariff lines for this sector.

Prior to the adoption of the Common External Tariff (CXT) by the European Community, the national tariff schedules of each of the members of the Community contained tariff concessions negotiated under the GATT. Of the 741 total concessions, 364 were above the CXT rate; 71 were at the CXT rate; and 306 were below the CXT rate.

Each of the five major countries has made GATT concessions on some of its tariff provisions for foodstuffs. About 17 percent of Canadian tariff lines, about 60 percent of EC lines, nearly two-thirds of Japanese lines, and about 90 percent of U.S. lines are covered by GATT concessions. About 36 percent of United Kingdom lines are fully covered by GATT concessions and an additional one-fifth are covered in part.

#### Trade complaints

In the Tariff Commission's survey, more than 200 complaints were received from manufacturers and traders of foodstuffs against policies and practices which they considered to be barriers to trade. About two-thirds of the complaints applied to developed nations; most of the remainder applied to countries of Latin America. Almost all developed countries were named in the complaints, but the United States and Japan were the individual countries drawing the most complaints (28 and 25, respectively); however, the European Community countries as a group received more complaints than either the United States or Japan. The United Kingdom and Mexico each drew 11 complaints; Canada drew 5. Twenty-four developing countries were named.

The various forms of quantitative trade limitations and licensing practices were the subject of the largest number of complaints. Other practices on which several complaints were received were health and sanitation standards, labelling and container regulations, variable levies, and import duties.

The complaints are summarized under major topic headings in the paragraphs below.

Quantitative limitations and licensing.--Complaints regarding quantitative limitations, embargoes, and licensing requirements were the most numerous (more than 50) of any complaint category. Import quotas were the subject of more than half of these complaints and were directed almost entirely at the United States, Japan, and the European Community, notably France.

In a few responses concerning the U.S. Sugar Act, a U.S. importer and a foreign trade association were critical of the quotas allocated under the Act, while a producers trade association supported the quotas. In other complaints against the United States, quotas on chocolate crumb, confectionery, certain syrup and molasses, ice cream, milk powder, and wheat flour were cited; a tariff quota on potatoes was said to act as a barrier when prices were low. Trade increases that would result from removal of U.S. quotas on sugar were described as significant; the increase which would result from removal of the Section 22 quota on ice cream was estimated in excess of \$3 million.

Quantitative restrictions charged against Japan involved citrus fruits, apples, leguminous vegetables, cereal flours, tea, cranberry sauce, and relishes. An importers trade association pointed out, however, that progress had been made in the liberalization of quantitative restrictions by Japan on fresh and prepared oranges, fruit puree and pastes, pineapple fruit pulp, ketchup and tomato sauce, beans, peas, cereal flours, malt, ice cream powder, and grape, milk, and malt sugars.

General complaints leveled against the European Community in regard to quotas pertained to fresh and preserved fruit, canned tomatoes and tomato concentrates, and licorice extract. Complaints of quota limitations made by France applied to fresh, frozen, and preserved fruit and vegetables, and to dried prunes where the latter were packaged in units of less than 50 kilograms. In a single complaint, a U.S. industry committee, commenting on trade restrictions regarding foodstuffs as well as products of other industries, gave the opinion that quantitative restraints by European countries on imports from Japan cause Japanese exporters to concentrate their marketing efforts on the United States.

Embargoes were the subject of two complaints against Italy--one concerning canned pineapple containing corn syrup and one concerning tomatoes, eggplant, and capsicum. In other complaints concerning embargoes, a trade association for fruit and vegetable producers reported that Mexico had arbitrarily terminated imports of certain food items; a large U.S. producer of canned and frozen vegetables reported that

Jamaica had placed several food items on "ban," "restricted," or "prohibited" lists. Kuwait was cited for an embargo on flour and Guyana for banning instant coffee, except that made from beans produced in CARIFTA countries.

Strict import licensing requirements by many countries have the effect of quantitative restrictions in many instances. Japan was the country most frequently named in licensing complaints which concerned imports of dried and freeze-dried fruits, pulses, sugar, and syrups. The complaints referred to the restrictive effect of the licensing and the uncertainty of receiving requested import certificates. France was named in two complaints concerning trade in fresh, frozen, and preserved fruit and vegetables; one complaint reported import licenses difficult to obtain. Other developed countries named in general complaints against licensing requirements were Canada, Sweden, Norway, Denmark, and Finland; products involved included fruits and vegetables in various forms, cereal products, glucose, and malt extract. Registration and licensing procedures required by most Latin American countries were also a source of dissatisfaction to two U.S. trade associations.

Standards.--Complaints on standards were the second most numerous (more than 40) of the various types of trade complaints on foodstuffs. Standards concerning health and sanitation, labelling and containers, and product content were those most frequently mentioned in complaints. Trade increases which would result from elimination of these requirements were generally estimated to be significant or moderate.

Japan, the United States, European Community countries, and Latin American countries were those mentioned frequently in complaints regarding standards. Japanese quarantine regulations were described as overly strict; fresh fruit entering Japan must be entered in the green state and allowed to ripen under Japanese supervision; and only approved additives are permitted for use as food flavors, colors, or preservatives. One complainant noted that the importation of dried prunes into Japan was banned because ascorbic acid was included as a preservative and another respondent reported that fruit cake also was barred because it contained 0.1 percent benzoate of soda solution. In a labelling complaint, a U.S. trade association objected to the requirement by Japan that the name of the importer, the date of importation, and the net weight in metric units be printed on container labels.

U.S. quarantine, sanitation, and labelling requirements were the object of criticism in several complaints. In one instance, a complaint was directed at New York State for requiring the name and address of the importer on food labels. In two complaints regarding product content, the requirement by California that flour be enriched with niacin was described as impractical, while in a third complaint a foreign trade association objected to the fact that the milk solids to milk fat ratio required for U.S. milk chocolate was different from the ratio found in whole milk. U.S. marketing order requirements under which certain fruits and vegetables imported into the United States must meet the same grade, size, quality, and maturity standards that are

applied to domestic produce were criticized. Similarly, U.S. sanitation and labelling requirements were subject to considerable criticism by importers, although the requirements apply equally to domestic output.

Complaints on product content requirements directed at European Community members and other European countries included an objection to a restriction against the adding of color to Florida oranges as well as to a West German regulation controlling the minimum and maximum content of certain additives to imports of honey. West German and United Kingdom requirements were reported to preclude the use of certain antioxidants necessary to maintain stability in shelled walnuts; West German, Italian, and Austrian imports of fruit treated with the fungicide diphenyl ether are prohibited or must be labelled as unfit for human consumption. West German container requirements, as mentioned in one complaint, prohibit the use of containers other than in mandatory sizes; French regulations require, as stated in another complaint, that the country of origin of canned goods be marked on (usually embossed on) the end of the can. Canada was named in one U.S. complaint for banning U.S. imports of fruits and vegetables that do not meet U.S. marketing order requirements for size and quality, yet permitting the entry from other countries of imports not meeting U.S. marketing order standards. At least a half dozen other complaints were directed against the larger South and Central American countries for requiring extensive label detail on imported goods as well as discriminatory administrative procedures related to sanitary regulations.

Variable levies.---Several complaints were registered against the European Community for its use of variable levies in connection with imported foodstuffs. The Community applies variable levies to preserved fruit, containing added sugar above specified levels, as well as to such products as sugar, molasses, eggs, chocolate, cereal flours and meals, and preparations of flour, starch, or malt. Some respondents complained specifically about levies applied to sugar and to canned fruits with sugar added. Others complained that levies raised the price of imports to the target price for domestic products, thereby eliminating price competition; they further objected to the frequent changes in levies and the failure of the importing country to publish new rates promptly. Denmark, Norway, and Sweden were targets of complaints that higher levies on apples were applied in fall and winter months. A variable surcharge on sugar imported into the United Kingdom is used to subsidize the domestic production of beet sugar.

Import duties.---One respondent complained of the discriminatory effect of preferential rates existing among Commonwealth and European Community countries in respect to imports of fresh oranges. Most other complaints pertained to the high rates of duty levied on foodstuffs entering certain countries. Among the latter instances were complaints against West Germany in regard to citrus fruit products, the United Kingdom for fruits and vegetables in general, Austria for canned fruit cocktail, and Mexico for both fresh and canned fruits and vegetables. Two other complainants were concerned about an increase in duties on

fruits and vegetables, particularly peas, by the United Kingdom and Denmark as a result of their entry into the European Community.

Subsidies and other governmental participation in trade.--Charges of subsidizing exports were leveled against the European Community and Japan by a few complainants, including a trade association. The latter organization cited EC subsidies on exports of canned fruit to all destinations and on canned tomatoes and tomato concentrates to countries other than the United States. Italy was also reported to subsidize exports of tomato preserves.

Among other complaints concerning government policies and practices affecting trade, one U.S. importer was critical of the "buy American" policy for its discrimination against foreign foodstuffs, while another complaint regarded state monopolistic practices by Austria in connection with salt and wheat flour. Other complaints concerning state trading practices in connection with wheat flour were lodged against Canada, Switzerland, Norway, Spain, and Portugal.

Customs valuation and customs administrative procedures.--Complaints under this heading were limited in number and applied to the United States, Mexico, Norway, and the Arab Republic of Egypt. A British trade association complained of the complexity of U.S. valuation methods which at different times involved foreign, export, and U.S. value. U.S. trade associations objected to the Mexican practice of assessing duty on the higher of the invoice value, or an official value for the goods, noting that the official value is sometimes unreasonable. One of the same U.S. trade associations was critical of Norway for levying duties

on a quantity rather than a value basis. The complaint against the Arab Republic of Egypt was directed at customs documentation requirements.

Miscellaneous practices.--A number of other trade barriers each drew responses from one or two complainants. The barriers described included restrictive business practices, shipping practices, minimum and maximum price controls, exchange controls, investment controls, prior import deposits, and border, port, excise, sales, and other taxes. Specific complaints reported included the following: (1) Australian fruit (peach) canners, in 1971, started a two price system setting lower prices for exported goods; (2) high port and inland freight charges in the United States add substantially to the cost of U.S. exports; (3) the European Community stipulates a minimum price for imports of canned tomatoes and tomato concentrate into the Community; (4) it is practically impossible for American firms to establish and freely operate offices in Japan; and (5) prior import deposits are required by most Latin American countries. Many of the foregoing miscellaneous barriers related to trade in foodstuffs are discussed in greater detail in connection with other commodity groups.

In the Commission's survey, respondents were asked to give their assessment of the restrictive trade effect of the barriers they reported by indicating whether trade in the affected foodstuffs would show a "small," "moderate," or "significant" increase if the barrier was removed and, if possible, to estimate a dollar value for the increase.

About 25 percent of the respondents gave an assessment of the effect in terms of the three broad categories, but less than 10 percent assigned dollar values to the trade differential. The potential trade increase was described as "significant" in 60 percent of the assessed responses, as "moderate" in 23 percent, and as "small" in 17 percent. Dollar estimates of potential trade increases were too few to present a meaningful indicator for the commodity group; the individual estimates which were received ranged from \$2,000 to \$20 million, and totaled \$28 million. The percent increase in the respondents' trade was consistently estimated at about 50 percent, but rose as high as 500 percent with one complaint.

## Fruits and Edible Nuts, Fresh or Dried

All fresh or dried edible fruits and nuts, other than those nuts chiefly used for the extraction of oil, are covered in this subsector of the foodstuffs sector. 1/

MFN tariffs

As shown in chart A-1-E, fruits and edible nuts face arithmetic average MFN tariffs in the five major countries ranging from 2.8 to 15 percent ad valorem for all products (combined free and dutiable) and weighted average duties ranging from 2 to 25 percent. Canada has the lowest arithmetic average, while the United States has the lowest weighted average. The highest arithmetic and weighted averages belong to Japan. Averages for dutiable products only do not differ significantly from the all products averages for Japan, the European Community, and the United Kingdom. Canada's dutiable products averages are about four percentage points above the all products average. The U.S. weighted average for dutiable products is 9 percentage points above the corresponding all products average.

Sixty percent of Canada's MFN tariff provisions for edible fruits and nuts are duty free and none of its provisions are dutiable above 15 percent ad valorem (see table A-1-E). Over 28 percent of U.S. provisions are dutiable between 0.1 and 5 percent ad valorem, about 24 percent are between 5.1 and 10 percent ad valorem, and 16 percent

---

1/ For the specific coverage of this subsector, see BTN headings 08.01-.09; 08.12.

Chart A-1-E, -- Average MFN tariff rates on fruits and edible nuts, fresh or dried  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by 50 percent or 100 percent made in 1972 on several of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

are duty free. The two rate brackets between 0.1 and 10 percent each have about two-fifths of United Kingdom provisions.

Japanese provisions also are concentrated in two rate ranges, 5.1-10 percent (44 percent of provisions) and 15.1-20 percent (one-third

of provisions). About two-fifths of the Community's provisions pay duties in the 5.1-10 percent ad valorem range, one-fifth

Table A-1-E ---Distribution, by duty level, of MFN tariff provisions for fresh or dried fruit and edible nuts

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

are in the 10.1-15 percent range, and 16 percent in the 15.1-20 percent bracket. All EC provisions in this subsector are subject to fixed duties and none to variable levies. 1/

Except for Japan, each of the major countries accords preferential tariff treatment to some imports. In 1970, preferential treatment was given to about 3 percent of imports by the United States and Canada, about 30 percent of EC imports from outside countries, and nearly 40 percent of United Kingdom imports of fresh or dried fruits and edible nuts.

Over 80 percent of U.S. imports and nearly two-thirds of Canadian imports of fruits and edible nuts enter free of duty (see table A-1-F).

1/ For 17 of the 61 EC tariff provisions in this subsector, a countervailing fee may be collected in addition to the duty under certain conditions.

Table A-1-F.--Distribution, by duty level, of MFN imports of fresh or dried fruit and edible nuts

(In percent)

30.1-40.0 percent----	-	2.6	-	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

The United Kingdom, with nearly one-fourth of its imports duty free, has over 60 percent of imports dutiable between 0.1 and 5 percent ad valorem. About 40 percent of EC imports are dutiable between 15.1 and 20 percent ad valorem, with most of the rest dutiable in the two brackets between 5.1 and 15 percent. Nearly three-fourths of Japanese imports pay rates between 25.1 and 30 percent ad valorem.

The United States has the largest number of tariff lines in this subsector (113) and Japan, with 34 lines, has the fewest. The European Community has 61 lines; the United Kingdom has 53 lines; and Canada has 42.

#### Trade importance

Fresh or dried fruits and edible nuts is one of the most important agricultural subsectors, ranking fourth in 1969 OECD exports and imports among the 28 agricultural subsectors. Products in this subsector accounted for over 6 percent of total OECD agricultural exports and nearly 9 percent of imports in 1969. For the United States, the subsector was the fourth most important of

the 28 subsectors in 1969 exports and the sixth most important in imports. Combined OECD imports were about twice as large as exports; each of the five major countries had more imports than exports in 1969 (see chart A-1-F).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, combined imports by the 13 GATT tariff study countries were valued at \$2.4 billion, accounting for over one-fifth of foodstuffs imports. Intra-EC shipments were an additional \$385 million, compared to \$909 million of EC imports from outside the Community.

### Trade network

The five major countries account for two-thirds of OECD exports and over 85 percent of OECD imports of fresh or dried fruits and edible nuts. More than 86 percent of OECD exports go to other OECD countries, but over half of imports come from non-OECD sources, mostly from less developed nations.

The European Community is the largest OECD exporter, shipping \$588 million in 1969, \$394 million of which was traded within the Community. U.S. exports of \$247 million are greater than EC external shipments of \$194 million. The other three countries have very small exports, as shown in table A-1-G. The largest markets for the

of its outside imports from less developed countries, and the United States receives over 90 percent from these sources. Non-OECD sources supply 60 percent of United Kingdom entries and over half of this portion is from less developed countries. Most

Japanese imports also come from the developing nations, while Canada imports over 60 percent of its fresh or dried fruits and edible nuts from the United States.

Trade-agreement concessions

In the tabulation below, the arithmetic average of MFN tariff rates on fresh or dried fruits and edible nuts for each of the five major countries on pre-trade-agreement base dates are compared with January 1, 1972, average tariffs. The Japanese 1972 average does not reflect unilateral reductions of 50 or 100 percent made in 1972 on several Japanese provisions in this subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	16.2	9.8
European Community	11.9	11.7
United Kingdom	10.8	6.6
Japan	20.0	15.0
Canada	11.0	2.8

Each of the members of the European Community had negotiated national tariff concessions on fresh or dried fruits and edible nuts prior to establishment of the EC's Common External Tariff. These concessions totaled 189, of which 93 were above the CXT rate, 18 were at the CXT rate, and 78 were below the CXT rate.

GATT concessions cover some of the tariff lines of each of the five major countries for this subsector. Less than 10 percent of Canadian provisions, about 60 percent of EC and Japanese provisions, and over two-thirds of U.S. provisions are covered by

GATT concessions. Nearly half of United Kingdom lines are fully covered, and an additional fifth are partially covered by GATT concessions.

Actual rate changes which have occurred for fresh or dried grapes since pre-trade-agreement base dates are shown in table A-1-I.

Table A-1-I.--Pre-trade-agreement tariff rates compared with January 1, 1972.  
MFN tariff rates on fresh or dried grapes

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	5.4-31.2% AVE <sup>2/</sup>	1.7-15.6% AVE <sup>3/</sup>	Free-15.6 AVE <sup>4/</sup>	147.60-.75
Canada-----	Free-25%	Free-10%	Free-10%	9401-1; 9402-1; 9910-1
European Community--	9-22%	8-22%	6-22%	08.04
United Kingdom-----	1.6-10% AVE <sup>5/</sup>	1.6-20% AVE <sup>6/</sup>	1.6-20% AVE <sup>6/</sup>	08.04
Japan-----	20%	20%	5-20%	08.04

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percents are ad valorem equivalents, calculated on 1971 import values, representing specific rates of 2-2.5 cents per pound and 25 cents per cubic foot.

<sup>3/</sup> Percents are ad valorem equivalents, calculated on 1971 import values, representing specific rates of 1-2.5 cents per pound and 5.25-12.5 cents per cubic foot.

<sup>4/</sup> Range includes ad valorem equivalents of from 1.7-15.6 percent, calculated on 1971 import values, representing specific rates of 1-2.5 cents per pound and 5.25-6 cents per cubic foot. About 40 percent of the imports of fresh or dried grapes entered free of duty in 1972.

<sup>5/</sup> Range includes ad valorem equivalents, calculated on 1971 import values, representing specific rates of from 2s. to 10s. 6d. per hundred weight.

<sup>6/</sup> Range includes ad valorem equivalents, calculated on 1971 import values, representing specific rates of from 2s. to 14s. per hundred weight.

For the European Community, although there was no change from the autonomous rate on fresh grapes, there was a decrease in duties on dried grapes in the Kennedy Round. For the United Kingdom, the range of ad valorem equivalents does not show a reduction in tariffs, but there were reductions of about 50 percent in specific-rate duties.

on two of seven tariff provisions for fresh and dried grapes in the Kennedy Round. In the Canadian tariff schedule, fresh grapes are either duty free or have relatively low duties. Canada made GATT concessions on dried grapes in 1948, but there were no further reductions in the Kennedy Round. U.S. duties on fresh or dried grapes were substantially reduced from the pre-trade-agreement levels before the beginning of the Kennedy Round, and there were further reductions in the Kennedy Round. Japan has had some reductions in duties on dried grapes.

### Fruit, Prepared or Preserved (Except Dried)

Prepared or preserved fruit (except dried) includes fruit and fruit peel, preserved by freezing, provisionally preserved in brine or preserved in airtight containers in sugar syrup, juice or water. This subsector also includes jams, marmalades, fruit jellies, fruit purees and pastes; fruit and nuts otherwise prepared or preserved; and flours of certain fruits. This subsector does not include fruit juices. 1/

#### MFN tariffs

Excluding the Japanese weighted averages, the five major countries have higher average MFN tariffs in this subsector than their individual averages on foodstuffs as a whole. The United Kingdom's 7.5 percent ad valorem arithmetic average on all products is the lowest of the arithmetic averages of the five countries, and equal to its average for foodstuffs as a whole, but the other arithmetic averages for the subsector are generally several percentage points higher than for foodstuffs as a whole. Excluding Japan, weighted averages for the individual countries also are several percentage points higher than for weighted averages for foodstuffs as a whole. Averages for all products and for dutiable items only do not differ significantly in this subsector. Japan has the highest weighted and arithmetic averages, with arithmetic averages of 27.2 percent and weighted averages of 39.8 percent ad valorem (chart A-1-G). Calculated from fixed duties only,

---

1/ For the specific coverage of this subsector, see BTN headings 08.10; 08.11; 08.13; 11.04; 20.03-20.06.

Chart A-1-G. -- Average MFN tariff rates on prepared or preserved fruit (except dried)  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by 20 percent made in 1972 on two of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

the European Community has the second highest average MFN tariffs. <sup>1/</sup> The European Community applies variable levies on 40 of its 75 tariff lines, covering one-fourth of EC imports in 1970. These levies are not included in the calculation of average MFN tariffs discussed here. The U.S. arithmetic averages are between 14 and 15 percent, while the weighted averages are both 10.1 percent ad valorem.

About one-fifth of Canadian provisions and about one-fourth of United Kingdom provisions for prepared or preserved fruit are duty free (table A-1-J). Japan has no duty-free provisions, and

Table A-1-J .--Distribution, by duty level, of MFN tariff provisions for prepared or preserved fruit (except dried)

Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 53 percent of EC provisions, covering 25 percent of EC imports in this subsector in 1970.

the European Community and the United States each have less than 10 percent of their provisions duty free. Almost 60 percent of

<sup>1/</sup> The effect of variable levies in this subsector can be illustrated with regard to EC imports of canned peaches and fruit cocktail. The duties alone on these products are 24.4 and 23.2 percent ad valorem. With the additional effect of the levies (which are charged on the amount of sugar added to these canned fruits), the total charge of duties and levies has been equal to about 29 and 28 percent, respectively.

United Kingdom provisions are about evenly divided between the two rate brackets between 5.1 and 15 percent ad valorem. Canada has one-fifth of provisions dutiable between 15.1 and 20 percent, 38 percent of provisions between 10.1 and 15 percent, and the rest of provisions between 0.1 and 10 percent. The United States, with a broader range of duties than the other countries (exceeding 50 percent ad valorem for a few provisions), has nearly one-third of provisions dutiable between 5.1 and 10 percent ad valorem and nearly one-fifth of provisions dutiable between 15.1 and 20 percent ad valorem. Both Japan and the European Community have more than one-fifth of provisions in each of the ranges 15.1-20 percent ad valorem, 20.1-25 percent, and 30.1-40 percent.

Except for Japan, imports receiving preferential tariff treatment are significant for each of the five major countries. In 1970 preferential treatment was given to 56 percent of imports by the United Kingdom, 15 percent of U.S. imports, 12 percent of Canadian imports, and about 8 percent of European Community imports from outside sources.

Only the United Kingdom and Canada have large percentages of imports entering duty free (one-fourth of Canadian imports and about 30 percent of United Kingdom imports) (table A-1-K). Most U.S. imports are dutiable at rates no higher than 15 percent ad valorem. The two rate ranges between 0.1 and 10 percent each cover nearly 30 percent of U.S. imports and the range of 10.1-15 percent covers one-fourth of U.S. imports. Similarly, the United Kingdom has a high concentration of imports in these duty ranges and

Table A-1-K ---Distribution, by duty level, of MFN imports of prepared or preserved fruit (except dried)

only about 1 percent of imports dutiable at higher rates. Canadian dutiable imports are concentrated in the 10.1-15 percent ad valorem range (43 percent of imports) and the 15.1-20 percent range (23 percent of imports). The European Community has half of its imports dutiable between 15.1 and 20 percent ad valorem, 19 percent dutiable between 20.1 and 25 percent and 21 percent between 10.1 and 15 percent. Japan has nearly three-fourths of imports dutiable at rates ranging from 40.1 to 50 percent ad valorem.

The United States has the most detailed tariff schedule for prepared or preserved fruit, with 236 lines. The European Community is second, with 75 lines; and the United Kingdom is third, with 55 lines. Canada and Japan have 34 and 29 lines, respectively.

#### Trade importance

Prepared or preserved fruit is one of the less important of the 28 agricultural subsectors, ranking 24th in 1969 OECD exports and 18th in imports. The subsector is also one of the smaller subdivisions of foodstuffs. OECD imports (\$545 million in 1969) are

about twice as large as exports, and for each of the five major countries imports were larger than exports in 1969 (see chart A-1-H).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Among the 28 agricultural subsectors, prepared or preserved fruit ranked 13th in U.S. exports and 18th in U.S. imports in 1969, accounting for slightly over one percent of total U.S. agricultural exports.

In 1970, imports by the 13 GATT tariff study countries were valued at \$502 million. Intra-EC shipments were an additional \$73 million.

### Trade network

The United States exported \$76 million in prepared or preserved fruits in 1969, about one-third of which went to the European Community and one-fourth to Canada. The European Community shipped \$33 million to outside countries (intra-EC exports were an additional \$60 million). Japan's exports were valued at \$31 million, over 40 percent of which went to the United States. Canada and the United Kingdom shipped small amounts (table A-1-L).

Table A-1-L.--OECD exports of prepared or preserved fruit (except dried), 1969

of Canada's imports come from the United States and 40 percent from non-OECD countries. The United States imports considerable quantities of prepared or preserved fruits from Mexico, the Philippines, Japan, and Taiwan; the European Community from the Communist countries, Spain, and South Africa; the United Kingdom from South Africa, Australia, and Spain; and Japan from the Ryukyu Islands.

#### Trade-agreement concessions

Arithmetic average MFN tariffs for prepared or preserved fruits on pre-trade-agreement base dates are compared with January 1, 1972, average MFN rates in the tabulation below for each of the five major countries. The 1972 average for the European Community does not reflect tariff provisions under variable levies (over half of EC

provisions); and the 1972 Japanese average does not reflect unilateral reductions of 20 percent made on 2 of the 29 Japanese provisions.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	32.4	14.0
European Community	<u>1/</u> 24.9	<u>1/</u> 20.6 (plus variable levies)
United Kingdom	34.8	7.5
Japan	27.5	27.2
Canada	32.0	10.1

Each of the members of the European Community had negotiated GATT tariff concessions on prepared or preserved fruits prior to the adoption of the EC's Common External Tariff. The total number of these concessions was 93, of which 45 were above the CXT rate; 43 were below the CXT rate; and 5 were at the CXT rate.

Each of the five major countries has a substantial portion of its tariff provisions for prepared or preserved fruit covered by GATT concessions. Over 35 percent of Canadian provisions, about 60 percent of EC provisions, over 80 percent of Japanese provisions, and over 95 percent of U.S. provisions for the sub-sector are covered by GATT concessions. About 50 percent of United Kingdom provisions are fully covered by GATT concessions and another 38 percent are covered in part.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 47 percent of EC tariff lines which continue to be subject to fixed duties alone; it does not include any tariff lines (53 percent of the total) subject to a variable levy.

Canned pineapple accounts for a substantial part of the preserved fruit imported by the five countries. U.S. imports of this commodity in 1970 were valued at more than \$28 million and accounted for about a third of the value of imported preserved fruit. Imports of canned pineapple in 1970 by the United Kingdom and Japan were each valued at nearly \$20 million and represented about three-fourths of Japan's imports in this subsector, but a much smaller portion of United Kingdom imports.

Table A-1-N.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on canned pineapple

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	17.7% AVE <sup>2/</sup>	6.7% AVE <sup>3/</sup>	6.7% AVE <sup>3/</sup>	148.9820
Canada-----	35.0% AVE <sup>4/</sup>	14.0% AVE <sup>5/</sup>	Free	10605-1
European Community--	23-25%	23-25% <sup>6/</sup>	22-24% <sup>6/</sup>	20.06 B II a,b
United Kingdom-----	1.2% AVE <sup>7/</sup>	3.8% AVE <sup>8/</sup>	3.7% AVE <sup>9/</sup>	20.06 (M)
Japan-----	35%	53.3% AVE <sup>10/</sup>	53.3% AVE <sup>10/</sup>	20.06-1 (1)

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalent of specific rate of duty (2 cents per pound), calculated on 1971 import values; does not take into account preferential rates on products of the Philippines.

<sup>3/</sup> Ad valorem equivalent of specific rate of duty (0.75 cents per pound), calculated on 1971 import values; does not take into account preferential rates on products of the Philippines.

<sup>4/</sup> Ad valorem equivalent of specific rate of duty (5 cents per pound), calculated on 1971 import values.

<sup>5/</sup> Ad valorem equivalent of specific rate of duty (2 cents per pound), calculated on 1971 import values.

<sup>6/</sup> In addition to the rates shown, there are additional levies based on sugar content.

<sup>7/</sup> Ad valorem equivalent of specific rate of duty (1 s. 6.5 d. per cwt), calculated on 1971 import values.

<sup>8/</sup> Ad valorem equivalent of specific rate of duty (5 s. 7d. per cwt), calculated on 1971 import values.

<sup>9/</sup> Ad valorem equivalent of specific rate of duty (5 s. 6d. per cwt), calculated on 1971 import values.

<sup>10/</sup> Ad valorem equivalent of specific rate of duty (72 yen per kg.), calculated on 1970 import values.

Pre-trade-agreement tariff rates for canned pineapple are compared with January 1, 1972 rates, for the five major countries in table A-1-N. Rates of duty on canned pineapple did not change appreciably over the Kennedy Round for four of the five countries, but the rate for Canada was reduced from 2 cents per pound (14 percent ad valorem equivalent) to duty free. The European Community and the United Kingdom had slight reductions in duties during the Kennedy Round.

Viewed over a longer period of time, rate changes were more substantial. For the United States, the pre-Kennedy Round specific rate was less than half the rate on the pre-trade-agreement base date. For Canada, tariff rates decreased by more than 50 percent prior to the Kennedy Round. On the other hand, both Japan and the United Kingdom had substantial increases in their rates from their respective pre-trade-agreement base dates.

Tariffs on frozen strawberries containing added sugar on January 1, 1972, are compared with pre-trade-agreement base date rates in table A-1-O. None of the five countries had any reductions in the Kennedy Round. For Japan and the European Community, there has been no change from the pre-trade-agreement base date tariffs. (The European Community also has an additional duty on added sugar which varies.) The U.S. tariff, equal to the Japanese tariff on the pre-trade-agreement base date, decreased by 60 percent before the beginning of the Kennedy Round. The Canadian duty decreased by one-third from the pre-trade-agreement base date level.

Table A-1-0.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on frozen strawberries, containing added sugar

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%	14%	14%	146.7520
Canada-----	17.8% AVE <sup>2/</sup>	11.9% AVE <sup>3/</sup>	11.9% AVE <sup>3/</sup>	10704-1
European Community--	26%	26% <sup>4/</sup>	26% <sup>4/</sup>	20.03
United Kingdom-----	5.5% AVE <sup>5/</sup>	9.8% AVE; <sup>6/</sup> 15%	9.8% AVE; <sup>6/</sup> 15%	20.03
Japan-----	35%	35%	35%	20.03

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Rate is ad valorem equivalent of specific rate of duty (3 cents per pound), calculated on 1971 import values.

<sup>3/</sup> Rate is ad valorem equivalent of specific rate of duty (2 cents per pound), calculated on 1971 import values.

<sup>4/</sup> Imports with a sugar content exceeding 13 percent by weight are subject to a variable levy in addition to duty.

<sup>5/</sup> Rate is ad valorem equivalent of specific rate of duty (9 s. per cwt), calculated on 1971 import values. (The tariff is not clear on whether an additional duty would have been charged for added sugar).

<sup>6/</sup> Rate is ad valorem equivalent of specific rate of duty (16 s. per cwt), calculated on 1971 import values. (The tariff is not clear on whether an additional duty would have been charged for added sugar).

By the beginning of the Kennedy Round, there was an increase in the specific rates and ad valorem equivalents of the United Kingdom.

On January 1, 1972, ad valorem rates and ad valorem equivalents ranged from 11.9 percent for Canada to 35 percent for Japan.

## Fresh or Dried Vegetables

The fresh or dried vegetables subsector covers all of the common vegetables cultivated for food, such as potatoes, tomatoes, beans, peas, lentils, other leguminous vegetables, roots and tubers, cucumbers, squash, pumpkins, eggplant, and, in addition, mushrooms, olives, parsley, tarragon, horseradish, and garlic. 1/

MFN tariffs

For the five major countries, average MFN tariffs on all fresh or dried vegetables (free and dutiable combined) do not differ significantly from averages for dutiable products only. The arithmetic and weighted averages for the European Community (fixed duties only), the United States, and Japan all lie between 10.7 and 14.1 percent ad valorem. The EC average does not take into consideration variable levies applicable to 2 of its 49 tariff lines, accounting for nearly one-fourth of EC imports, for the subsector. 2/ The Canadian averages are the lowest, all falling between 5.4 and 8.3 percent ad valorem. United Kingdom averages lie between 9.1 and 10.1 percent (see chart A-1-I).

Duty-free status applies to 35 percent of Canada's MFN tariff provisions, 18 percent of U.S. provisions, and 12.5 percent of Japan's (table A-1-P). Forty-two percent of U.S. provisions are equally divided between the 5.1-10 percent ad valorem range and the 10.1-15 percent range.

---

1/ For the specific coverage of this subsector, see BTN headings 07.01; 07.04; 07.05; and 07.06.

2/ For 2 of the remaining 47 tariff lines a countervailing fee may be collected in addition to the duty under certain conditions.

Chart A-1-I. --Average MFN tariff rates on fresh or dried vegetables  
(Percent ad valorem)

Almost two-thirds of Japan's provisions also fall in these brackets. Two-thirds of the EC fixed duty provisions are divided between the two brackets ranging from 10.1 to 20 percent ad valorem. The United Kingdom has one-fifth of its provisions in the 0.1-5 percent range and half in the 5.1-10 percent ad valorem bracket.

Table A-1-P.-- Distribution, by duty level, of MFN tariff provisions for fresh or dried vegetables

(In percent)					
Duty level	Canada	United States	Japan	European Community 1/	United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

1/ Data for the European Community are fixed tariff rates only and do not reflect variable levies which apply to 4 percent of EC provisions, covering 24 percent of EC imports in this subsector in 1970.

Three of the five countries accord preferential tariff treatment to some imports of fresh or dried vegetables. In 1970, preferences were given to one-fifth of United Kingdom imports, about 9 percent of EC imports from outside sources, and less than 1 percent of Canadian imports.

Almost one-fifth of Japan's imports enter duty free and 45 percent pay rates ranging from 5.1 to 10 percent ad valorem. Half of U.S. imports fall in the duty range of 10.1 to 15 percent ad valorem and almost one-third in the 5.1-10 percent bracket. Canada, Japan, and the United Kingdom have considerably over half of their imports in duty ranges no higher than 10 percent ad valorem, while the United States and the European Community have considerably more than half of their imports in ranges above 10 percent ad valorem. Two-fifths of EC imports which pay fixed duties are in the 10.1 to 15 percent bracket and one-fourth between 15.1 and 20 percent. Nearly three-quarters of

United Kingdom entries and 80 percent of Canadian imports fall in the two brackets between 0.1 and 10 percent ad valorem (table A-1-Q).

Table A-1-Q.--Distribution, by duty level, of MFN imports of fresh or dried vegetables

Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 4 percent of EC provisions, covering 24 percent of EC imports in this subsector in 1970.

The U.S. tariff schedule for this subsector contains 95 lines. The Japanese schedule has only 8 lines. Canada, the European Community, and the United Kingdom each have about 50 lines.

#### Trade importance

The fresh or dried vegetables subsector is one of the more important of the agricultural subsectors, ranking seventh in exports and eighth in imports among the 28 agricultural subsectors in 1969 OECD trade. Of the 10 subsectors of foodstuffs, this is the second largest in exports and the fourth in imports. As shown in chart A-1-J, OECD imports are considerably larger than

Chart A-1-J. -- OECD trade in fresh or dried vegetables, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

exports for OECD countries as a whole and for each of the five major countries, except the United States. In U.S. 1969 trade, this subsector ranked 10th in exports and 11th in imports among the 28 agricultural subsectors, accounting for nearly 18 percent of U.S. foodstuffs exports and nearly 3 percent of U.S. total agricultural exports.

Imports of fresh or dried vegetables by the 13 GATT tariff study countries were valued at \$1.1 billion in 1970. Intra-EC shipments were an additional \$490 million, a figure about one-third larger than EC imports from external sources. OECD 1969 imports totaled \$1.5 billion; exports were \$946 million.

### Trade network

Of the five countries, the European Community is the largest exporter, shipping \$195 million to outside destinations in 1969 and \$450 million to EC members. About 30 percent of EC external exports go to the United Kingdom and 42 percent to "other" OECD countries. The United States is the second largest exporter, shipping \$144 million in 1969, with \$64 million going to Canada and \$28 million to LDC's (table A-1-R).

Table A-1-R.-- OECD exports of fresh or dried vegetables, 1969  
(Millions of dollars)

Exporters Importers	OECD total	Canada	United States	Japan	European Community	United Kingdom	Other OECD

Non-OECD total----	104	8	31	4	45	4	12
LDC's-----	82	7	28	4	31	3	9

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Note.--Complete country of destination data are not available for 5 percent of U.S. exports and 67 percent of Japanese exports; country of destination figures therefore do not add to total exports to the world. In some cases figures will not add to totals due to rounding.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Over one-third of OECD imports come from non-OECD countries, mostly from less developed nations. The European Community imported \$358 million from outside sources in 1969; the United Kingdom,

\$223 million; and the United States, \$143 million. Over three-fourths of imports by the United States and Japan and external imports by the Community come from non-OECD nations, including the LDC's. Eighty-five percent of Canadian imports come from the United States. The United Kingdom's imports have diverse origins, but "other" OECD countries and the European Community each supply about 30 percent (table A-1-S).

Table A-1-S.-- OECD imports of fresh or dried vegetables, 1969

(Millions of dollars)

Importers Exporters	OECD total	Canada	United States	Japan	European Community	United Kingdom	Other OECD

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

In the tabulation below, for each of the five major countries arithmetic average MFN tariffs for fresh or dried vegetables on

January 1, 1972, are compared with levels existing on pre-trade-agreement base dates. The 1972 average for the European Community does not include about 4 percent of EC tariff lines which are covered by variable levies, nor does the Japanese average reflect unilateral action taken in 1972 changing one of the eight Japanese provisions to duty-free status.

	<u>Pre-trade-agreement</u> (Percent ad valorem)	<u>January 1, 1972</u>
United States	24.4	10.8
European Community	<u>1/</u> 13.6	<u>1/</u> 12.8 (plus variable levies)
United Kingdom	10.5	9.7
Japan	15.7	11.2
Canada	19.4	5.4

Before adoption of the EC's Common External Tariff, each of the members of the European Community had negotiated national tariff concessions under the GATT. Of the total 144 such concessions, 87 were above the CXT rate, 48 were below the CXT rate, and 9 were at the CXT rate. GATT concessions cover about 6 percent of Canadian tariff lines, nearly 39 percent of EC lines, over three-fourths of U.S. lines, and nearly 88 percent of Japanese lines. Over one-fifth of United Kingdom lines are fully covered by GATT concessions and another 18 percent are covered in part.

---

<sup>1/</sup> For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, some of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average of the 47 EC tariff lines which continue to be subject to fixed duties alone; it does not include two tariff lines subject to a variable levy.

Tariffs of the five countries for fresh or chilled tomatoes are shown in table A-1-T. Only Japan and the United Kingdom had tariff reductions for these products during the Kennedy Round. Japan's tariff decreased by 50 percent, while the United Kingdom reduced rates on tomatoes imported between November and March from 10 percent to 8 percent ad valorem. Rates of the European Community and Canada were unchanged in

Table A-1-T.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on fresh or chilled tomatoes  
(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round

Canada-----	Free-10.7% <u>3/</u>	Free-10.7% <u>3/</u>	Free-10.7% <u>3/</u>	8724-1
European Community--	11%; 18% <u>4/</u>	11%; 18% <u>4/</u>	11%; 18% <u>4/</u>	07.01 M
United Kingdom-----	4.2-10% <u>5/</u>	10-26.7% <u>5/</u>	8-26.7% <u>5/</u>	07.01 (K)
Japan-----	10%	10%	5%	07.01

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Rates included are ad valorem equivalents of specific rates of duty, calculated on 1971 import values. Rates vary according to seasonal considerations.

3/ Range includes an ad valorem rate of 10%; the ad valorem equivalent (10.7%) of a specific rate of duty was calculated on 1971 import values. Rates vary according to seasonal considerations.

4/ The 11 percent rate is applicable from November 1 to May 14; the 18 percent rate from May 15 to October 31. Under the EC's Common Agricultural Policy, instituted after the Common External Tariff (pre-trade-agreement rate) was established, a countervailing fee in addition to the Customs duty is applicable.

5/ Range includes ad valorem rates and ad valorem equivalents of specific rates, calculated on 1971 import values. Rates vary according to seasonal considerations.

1972 from their pre-trade-agreement rates, while the range of the United Kingdom rates and ad valorem equivalents, both before and after the Kennedy Round, was considerably higher than the pre-trade-agreement range of tariffs on fresh or chilled tomatoes. The Japanese tariff is the lowest of the five.

### Prepared or Preserved Vegetables (Except Dried)

Prepared or preserved vegetables (except dried) include vegetables which are frozen, in temporary preservative, preserved by acetic acid or vinegar, or otherwise preserved or prepared. 1/

#### MFN tariffs

There is a wide range in the average MFN tariffs of the five major countries for prepared or preserved vegetables. The United Kingdom has the lowest average MFN tariffs both for all products (combined free and dutiable) and dutiable products alone (chart A-1-K). All United Kingdom averages are in the range of 7.4 to 9.4 percent ad valorem. Japan and the European Community have the highest averages. Five of the 27 EC tariff lines in the subsector, covering 0.2 percent of EC imports, are subject to variable levies. These variable levy items are not included in the calculation of EC tariff averages. Thus, EC arithmetic average tariffs are probably understated. Based on fixed duties only, the EC arithmetic average for all products is 15.8 percent ad valorem and for dutiable products, 16.6 percent. Both EC weighted averages are 20.8 percent.

The Japanese arithmetic averages are 21.3 percent ad valorem; the weighted averages are both 19 percent. The all products averages for the United States and Canada fall within the range of 11.5 to 13.6 percent ad valorem; for dutiable products, the averages range from 13 to 16 percent.

---

1/ For the specific coverage of this subsector, see BTN headings 07.02; 07.03; 11.03; 11.05; 11.06; 20.01; and 20.02.

Chart A-1-K. -- Average MFN tariff rates on prepared or preserved vegetables (except dried)

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by 20 percent made in 1972 on all but one of one-third of the Japanese rates in this sector; the remaining rate was reduced by 33 percent.

Source: Compiled from national tariffs and trade statistics.

The distribution, by duty level, of MFN tariff provisions for prepared or preserved vegetables is shown in table A-1-U. Nearly 30 percent

Table A-1-U.--Distribution, by duty level, of MFN tariff provisions for prepared or preserved vegetables (except dried)

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 19 percent of EC provisions, covering 0.2 percent of EC imports in this subsector in 1970.

of Canadian provisions are free of duty. The United Kingdom has 10 percent of its provisions duty free; the United States, 6 percent; and the European Community, 5 percent of its fixed rate duties. Nearly one-third of U.S. provisions and nearly two-thirds of United Kingdom provisions are dutiable between 5.1 and 10 percent ad valorem. The United Kingdom has no provisions in ranges above 15 percent ad valorem, but the other four countries have a significant proportion of provisions dutiable between 15.1 and 20 percent ad valorem, ranging from 22.1 percent of U.S. provisions to 34.4 percent of Canadian provisions. Over 40 percent of Japanese provisions are in the duty range between 20.1 and 25 percent, as are 23 percent of EC fixed rate duties.

A large portion of United Kingdom imports (41 percent in 1970) are given preferential treatment. Preferential treatment is also extended to about 15 percent of EC imports from sources outside the Community, less than 3 percent of Canadian imports, and a negligible percentage of U.S. imports.

Canada is the only country of the five with significant duty-free imports (19 percent of Canadian entries). Except for the United Kingdom, each of the countries has well over half of its imports dutiable above the 10 percent duty level (see table A-1-V). Over half of United Kingdom

Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 19 percent of EC provisions, covering 0.2 percent of EC imports in this subsector in 1970.

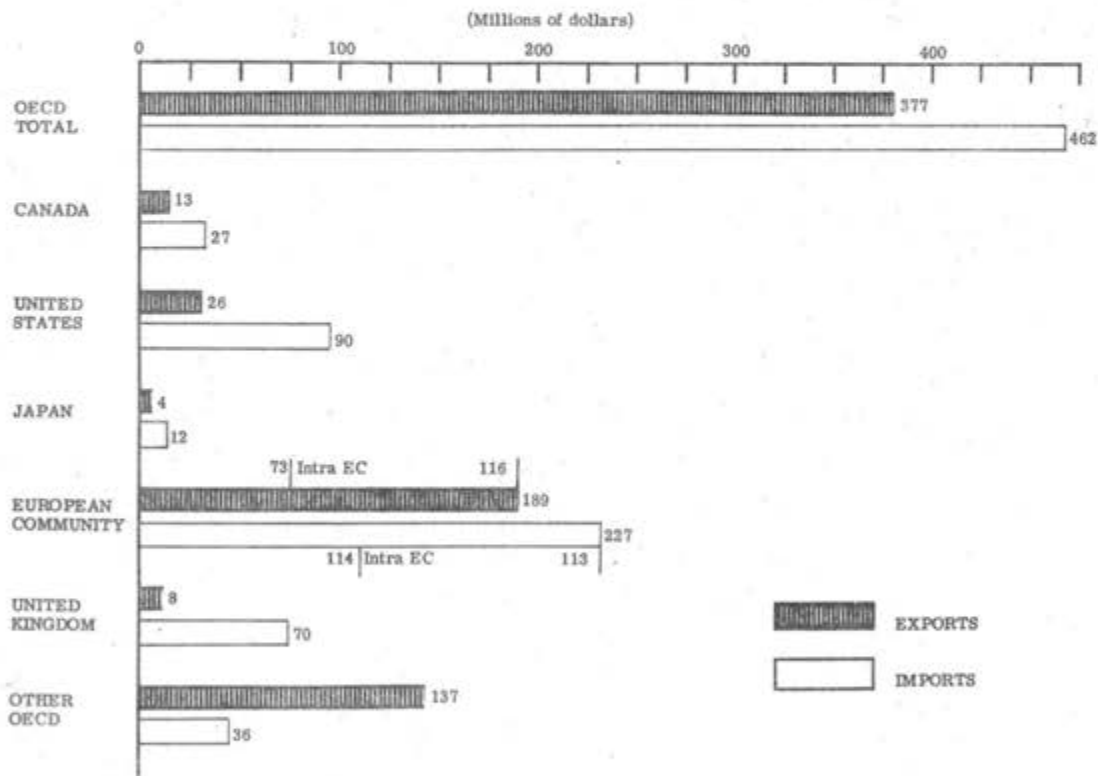

imports are dutiable at rates between 0.1 and 5 percent ad valorem, while about 76 percent of Canadian imports enter at rates of 10.1-20 percent, and two-thirds of U.S. imports meet duties of 10.1-15 percent. Two-fifths of Japanese entries enter in the 20.1-25 percent range, as do two-thirds of EC imports subject to fixed rates of duty.

The United States, with 140 lines, has by far the most detailed tariff schedule. The other four countries have between 17 and 32 lines.

### Trade importance

In value of trade, prepared or preserved vegetables make up one of the smaller subsectors, ranking 22nd in OECD exports and 21st in imports in 1969 among the 28 agricultural subsectors. It is also in the lower quarter of trade values among the 10 subsectors of foodstuffs. As shown in chart A-1-L, for each of the five major countries, imports exceed exports. For

Chart A-1-L -- OECD trade in prepared or preserved vegetables, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

the United States, this subsector ranks 20th in exports and 17th in imports among the 28 agricultural subsectors, accounting for about 3 percent of U.S. exports of foodstuffs and less than one-half of one percent of total U.S. agricultural exports in 1969.

In 1970, imports by the 13 GATT tariff study countries were valued at \$402 million. Intra-EC shipments were worth an additional \$147 million. OECD imports in 1969 were \$462 million; exports were \$377 million.

#### Trade network

The five countries under study account for less than two-thirds of OECD exports in this subsector, but receive 92 percent of OECD imports (see tables A-1-W and A-1-X). The European Community is the largest

Table A-1-W.-- OECD exports of prepared or preserved vegetables (except dried), 1969

exporter of the five major countries shipping \$73 million to outside destinations in 1969. Intra-EC shipments are considerably larger than EC exports to nonmember countries. U.S. exports were only \$26 million in 1969.

EC imports from sources outside the Community were about as large as intra-EC shipments in 1969. The European Community, the largest importer, gets 70 percent of its imports (from external sources) from non-OECD sources. Two-fifths of Canadian imports originate in the United States.

Trade-agreement concessions

The tabulation below compares arithmetic average MFN tariffs on pre-trade-agreement base dates with arithmetic average rates on January 1, 1972. The 1972 average for the European Community does not include about 19 percent of EC lines which are covered by variable levies. For Japan, the 1972 average does not reflect unilateral reductions made in 1972 on one-third of the Japanese lines in this subsector (one-third reduction on one line and 20 percent reduction on five lines).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	25.3	12.1
European Community	<u>1/</u> 18.4	<u>1/</u> 15.8 (plus variable levies)
United Kingdom	14.2	8.4
Japan	25.3	21.3
Canada	33.0	11.5

Prior to the establishment of the Common External Tariff for the European Community, members of the Community each had negotiated tariff concessions under the GATT. These concessions totaled 71, of which 26 were above the CXT rate, 34 were below the CXT rate, and 11 were at the CXT rate.

GATT concessions have been made on some tariff lines for each of the five major countries. Less than 10 percent of Canadian lines, over half of EC lines, over 80 percent of Japanese lines, and 97 percent of U.S.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, some of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 22 EC tariff lines which continue to be subject to fixed duties alone; it does not include 5 tariff lines subject to a variable levy.

lines have been covered under the GATT. For the United Kingdom, 40 percent of the tariff lines for this subsector have been fully covered and another 15 percent have been covered in part.

Changes which have occurred since pre-trade-agreement base dates in tariffs on frozen asparagus are shown in table A-1-Y. The United Kingdom,

Table A-1-Y.--Pre-trade-agreement tariff rates compared with January 1, 1972.

MFN tariff rates on frozen asparagus

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	50%; 35%	25%; 17.5%	25%; 17.5%	137.8540; 138.00
Canada-----	30%	22.5%	22.5% <sup>2/</sup>	9001-1
European Community--	19%	19%	18%	07.02
United Kingdom-----	10%	10%	10%	07.02
Japan-----	15%	10%	10%	07.02

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> MFN rate has been superseded by a temporary rate of 15 percent ad valorem, subject to possible renewal in February, 1974.

which along with Japan had the lowest January 1972 rate of the five countries, had no rate reduction on frozen asparagus from its pre-trade-agreement base rate. Japan, which reduced its pre-trade-agreement tariff of 15 percent ad valorem to 10 percent ad valorem prior to the Kennedy Round, had no further reduction in the Kennedy Round. The EC tariff was reduced very slightly from the pre-trade-agreement rate during the Kennedy Round. Canada and the United States each had GATT tariff reductions on frozen asparagus both prior to the Kennedy Round and during the Kennedy Round. For the United States, 1972 tariffs were half as large as pre-trade-agreement rates.

## Coffee, Tea and Maté

This subsector covers green or roasted coffee; coffee substitutes containing coffee; coffee husks and skins; and tea and maté. <sup>1/</sup> Excluded are coffee extracts, essences, concentrates and similar preparations.

MFN tariffs

The United States, Canada and the United Kingdom have low duties on coffee, tea and maté (chart A-1-M). The United States has a weighted average for all products (combined free and dutiable) of less than one-tenth of one percent. Japan and the European Community have markedly higher averages. For all products, the Japanese weighted average is 7.2 percent ad valorem, the arithmetic average is 16.5 percent; both of Japan's averages for dutiable products reach almost 30 percent. The EC averages on all products and dutiable products range between 9.6 and 13.4 percent. For all five countries, however, both arithmetic and weighted averages are substantially below average tariffs on foodstuffs as a whole (excluding Japan's arithmetic average for dutiable products).

The five countries have tariff schedules with between 4 and 10 lines in this subsector. Canada has three-quarters of her tariff lines free of duty and the rest at no greater than 5 percent ad valorem rates. Over 70 percent of U.S. provisions are duty free; and none of the provisions of the United States or the United Kingdom exceed 10 percent ad valorem. Japan has 40 percent of her provisions duty free, 30 percent in each of the rate brackets of 15.1-20 percent and 30.1-40 percent

---

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 09.01-09.03.

Chart A-1-M.-- Average MFN tariff rates on coffee, tea and mate

Preferential tariff treatment has been accorded to about 13 percent of United Kingdom imports and nearly 24 percent of EC imports from sources outside the Community.

Virtually all U.S. imports of coffee, tea, and maté, over 95 percent of Canadian imports, and more than three-quarters of Japanese imports enter duty free. The United Kingdom has 43 percent of imports duty free and the rest at rates no higher than 5 percent ad valorem. The European Community has almost all of its imports dutiable between 5.1 and 10 percent ad valorem (table A-1-AA).

In addition to tariffs, world trade in coffee has been subject to international regulation. In 1962, 53 countries entered into the

International Coffee Agreement (I.C.A.) designed primarily to achieve price stability through the establishment of export quotas for the producing countries, as well as to provide adequate foreign exchange earnings for those countries. The I.C.A., renegotiated in 1968, established quotas (which were later suspended) based on the historic market shares of countries producing and exporting coffee. A discussion of the operation of the I.C.A. appears in the section of Chapter VIII on "Voluntary export restraints" and other export controls.

#### Trade importance

For the OECD countries as a whole, coffee, tea, and maté comprise one of the most important agricultural subsectors in imports and least important in exports. Among the 28 subsectors, it ranks 5th in imports and 26th in exports. In foodstuffs, the subsector ranks 9th in exports and second in imports. As shown in chart A-1-N, exports by OECD

Chart A-1-N. -- OECD trade in coffee, tea, and maté, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

countries are insignificant compared to imports. For the United States, this subsector is of negligible importance in exports, but is the most important subsector in imports, accounting for nearly 17 percent of total U.S. agricultural imports in 1969.

In 1970, imports by the 13 GATT tariff study countries were valued at \$3.1 billion. Intra-EC shipments were an additional \$27 million. OECD imports in 1969 were \$2.6 billion.

### Trade network

The suppliers of coffee, tea, and maté are principally the less developed countries. In 1970, the earnings of the producing countries from exports of coffee reached an estimated \$3.4 billion, with Brazil and Colombia commanding by far the largest shares of the export market. The five major countries under study have very small exports (table A-1-BB);

Table A-1-BB.-- OECD exports of coffee, tea and maté, 1969

X = Less than \$500,000.

Note.--Data for the world line is overstated due to the inclusion of coffee extracts, essences and concentrates, which are not covered by the subsector on coffee, tea, and maté in the following amounts: OECD total 25; Canada, 4; United States, 1; Japan 1; European Community 14; United Kingdom, 1. Country of destination data, therefore, do not add to total exports to the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

they are numbered among the 21 importing members of the International Coffee Agreement, and together account for about 75 percent of world coffee imports.

For the subsector as a whole, the five countries account for 84 percent of OECD imports. The United States, with imports of \$949 million in 1969, accounts for over 37 percent of OECD imports of coffee, tea, and maté and is the world's most important consuming country for the products in this subsector. The European Community is second, with \$801 million of imports, followed by the United Kingdom, with \$275 million. Canada and Japan have lower levels of imports, together accounting for just over 5 percent of OECD imports (see table A-1-CC).

Trade-agreement concessions

In the tabulation below, arithmetic average MFN tariffs of the five major countries for coffee, tea, and maté on pre-trade-agreement base dates are compared with January 1, 1972, average tariffs. The Japanese 1972 average does not reflect unilateral reductions of 14 or 85 percent made in 1972 on about one-third of Japanese tariff lines in the subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	2.5	1.3
European Community	22.0	11.9
United Kingdom	5.7	2.7
Japan	29.6	16.5
Canada	2.5	0.5

GATT concessions cover all of U.S. and EC lines, about 70 percent of United Kingdom and Japanese lines, and half of Canadian lines for this subsector. Each of the members of the European Community had granted GATT tariff concessions in their national tariff schedules for this subsector prior to establishment of the EC's Common External Tariff. These concessions totaled 21, of which 17 were above the CXT rate and 4 were below the CXT rate.

Duty levels for tea on pre-trade-agreement base dates are compared with January 1, 1972, levels in table A-1-DD. For the United States and Canada, tea was duty free on the pre-trade-agreement base dates and it remained duty free. For the United Kingdom, duties on tea had been eliminated before the Kennedy Round. In the Kennedy Round, EC tariffs decreased by 50 percent. Japanese duties on black tea remained constant, but duties on other types of tea were reduced.

Table A-1-DD.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on tea

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	Free	Free	Free	160.50
Canada-----	Free	Free	Free	2805-1

United Kingdom-----	7.8% AVE <u>2/</u>	Free	Free	09.02
Japan-----	35%	35% <u>3/</u>	20%; 35% <u>3/</u>	09.02

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Ad valorem equivalent, calculated on 1971 import values, representing a specific rate of 4d. per pound.

3/ Does not include tea waste, which is free of duty.

## Cocoa and Cocoa Preparations

Cocoa and cocoa preparations include raw or roasted cocoa beans; cocoa powder; cocoa butter and cocoa paste; chocolate and other food preparations containing cocoa. <sup>1/</sup>

MFN tariffs

Average MFN tariffs of the five major countries for cocoa and cocoa preparations vary from 2 to 20 percent for arithmetic average tariffs on all products (combined free and dutiable) and from 0.7 to 7.4 percent for weighted averages (chart A-1-0). The average MFN tariffs presented in chart A-1-0 for the European Community are calculated from fixed duties only and do not include EC provisions subject to variable levies. The European Community has variable levies on 23 of its 27 tariff lines, covering 3.3 percent of EC imports in 1970. The United Kingdom has the lowest average tariffs for all products; Japan holds the highest averages (not considering EC variable levies). The United States has the lowest average tariffs for dutiable products alone (3.5 percent arithmetic, 3.8 percent weighted). Again, not considering EC variable levies, Japan also has the highest averages for dutiable products alone (22.9 percent arithmetic, 15.6 percent weighted). All of the countries, except Canada, have lower average tariffs in this subsector than their averages for all foodstuffs.

Most U.S. MFN tariff provisions for cocoa and cocoa preparations are either duty free (27 percent) or dutiable between 0.1 and 5 percent ad valorem (64 percent). One-fourth of Canada's provisions are duty

---

<sup>1/</sup> For the specific coverage of this subsector see BTN headings 18.01; 18.03; 18.04; 18.05; 18.06.

Chart A-1-O. -- Average MFN tariff rates on cocoa and cocoa preparations  
(Percent ad valorem)

Source: Compiled from national tariffs and trade statistics.

free and 50 percent between 10.1 and 15 percent ad valorem. The United Kingdom has 57 percent of provisions duty free and another 29 percent

dutiable between 0.1 and 5 percent ad valorem. Japan has a fairly even spread of rates between duty free and 40 percent (see table A-1-EE).

Table A-1-EE.--Distribution, by duty level, of MFN tariff provisions for cocoa and cocoa preparations

Total-----	100.0	100.0	100.0	100.0	100.0

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 85 percent of EC provisions, covering 3 percent of EC imports in this subsector in 1970.

The fixed duty rates of the European Community all fall between 5.1 and 20 percent, with half of provisions between 10.1 and 15 percent ad valorem.

Preferential tariff treatment is accorded to about 11 percent of United Kingdom imports, 18 percent of Canadian imports and over 60 percent of EC imports from countries outside the Community.

Almost 90 percent of United Kingdom MFN imports, three-fourths of U.S. and Canadian imports, and over half of Japanese imports enter duty free. Eighty-five percent of EC imports, entering under fixed-duty provisions, are dutiable between 5.1 and 10 percent ad valorem (table A-1-FF).

The tariff schedules of the five countries contain between 7 and 27 tariff lines in this subsector.

Table A-1-FIP.--Distribution, by duty level, of MFN imports of cocoa and cocoa preparations

(In percent)					
Duty level	Canada	United States	Japan	European Community <sup>1/</sup>	United Kingdom

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 85 percent of EC provisions, covering 3 percent of EC imports in this subsector in 1970.

The United Kingdom has the least detailed schedule and the European Community has the most detailed schedule.

#### Trade importance

Of the 28 agricultural subsectors, cocoa and cocoa preparations ranked 19th in 1969 OECD exports and 10th in OECD imports. It is fourth in importance in exports and fifth in imports among the 10 subsectors of foodstuffs. As shown in chart A-1-P, OECD total imports are nearly three times as large as exports and each of the five major countries has considerably larger imports than exports. For the United States, the subsector ranks 25th in exports and 8th in imports among the 28 agricultural subsectors.

Chart A-1-P. -- OECD trade in cocoa and cocoa preparations, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, imports by the 13 GATT tariff study countries were valued at \$937 million. Intra-EC shipments were worth an additional \$163 million. OECD imports in 1969 totaled \$1.1 billion; exports were \$402 million.

#### Trade network

The European Community, shipping \$118 million to outside destinations in 1969, is the only significant exporter among the five countries (table A-1-GG). The Community also is the largest importer, entering \$373 million from outside sources (intra-EC imports were

\$160 million). United States imports totaled \$227 million and the United Kingdom entries \$149 million (see table A-1-HH). Less developed countries are the major suppliers of cocoa and cocoa preparations, accounting for over two-thirds of OECD imports, over 93 percent of EC outside imports, over 80 percent of U.S. imports and nearly 70 percent of United Kingdom imports.

To prevent evasion of sugar quotas established under the provisions of the Sugar Act of 1948, the Secretary of Agriculture may limit the importation of such products to a quantity which he determines will not substantially interfere with the objectives of the Act. Beginning in 1972, imports of confectionery and certain sweetened chocolate became subject to quota control. The formula for determining the quota results in limiting annual imports to a quantity not to exceed 5 percent of U.S. consumption of domestically produced chocolate and confectionery.

Table A-1-HH.--OECD imports of cocoa and cocoa preparations, 1969

(Millions of dollars)

Major exporters of cocoa are Ghana, Brazil, the Dominican Republic, Ivory Coast, Nigeria, and Ecuador. In 1972, after a number of years of negotiations, an agreement was reached to form an organization to regulate cocoa exports with a quota system similar to the ones developed for coffee and sugar. The agreement took effect in October, 1973. The European Community is a party to the agreement, but the United States is not.

#### Trade-agreement concessions

The tabulation below compares pre-trade-agreement average MFN tariffs for cocoa and cocoa preparations with January 1, 1972, arithmetic average tariffs for each of the five major countries. The 1972 figure

for the European Community is calculated on fixed duties only and excludes tariff lines covered by variable levies (over 85 percent of EC provisions).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	22.1	2.5
European Community	<u>1/</u> 22.8	<u>1/</u> 12.1 (plus variable levies)
United Kingdom	9.4	2.0
Japan	31.9	20.0
Canada	29.2	10.1

The national tariffs of each of the members of the European Community contained GATT tariff concessions prior to the establishment of the EC's Common External Tariff. Of the 23 total such concessions, 6 were above the CXT rate; 5 were at the CXT rate; and 12 were below the CXT rate.

Each of the five major countries has made concessions under the GATT on some of its tariff lines for this subsector. For Canada, less than 9 percent of tariff lines are covered under the GATT, but each of the other four countries has the bulk of its tariff lines covered by GATT concessions. Over 70 percent of United Kingdom lines,

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 4 EC tariff lines which continue to be subject to fixed duties alone; it does not include any of the 23 tariff lines subject to a variable levy.

three-fourths of Japanese lines, over 85 percent of EC lines and all U.S. lines for the subsector are covered under the GATT.

Pre-trade-agreement tariff rates for unsweetened cocoa powder are compared with January 1, 1972 rates, in table A-1-II. During the period, the Japanese tariff has undergone the least reduction among the five major tariffs.

Table A-1-II.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on unsweetened cocoa powder

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	17.6% AVE <u>2/</u>	4.4% AVE <u>3/</u>	2.2% AVE <u>4/</u>	156.40
Canada-----	35%	22.5%	15% <u>5/</u>	2200-1
European Community--	27%	27%	16%	18.05
United Kingdom-----	8.6% AVE <u>6/</u>	1.8% AVE <u>7/</u>	Free	18.05
Japan-----	35%	30%	30%	18.05

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Ad valorem equivalent, calculated on 1971 import values, representing a specific rate of 3 cents per pound.

3/ Ad valorem equivalent, calculated on 1971 import values, representing a specific rate of 0.75 cents per pound.

4/ Ad valorem equivalent, calculated on 1971 import values, representing a specific rate of 0.37 cents per pound.

5/ MFN rate has been superseded by a temporary rate of 10 percent ad valorem, subject to possible renewal in February, 1974.

6/ Ad valorem equivalent, calculated on 1971 import values, representing a specific rate of 14s. per hundredweight.

7/ Ad valorem equivalent, calculated on 1971 import values, representing a specific rate of 3s. per hundredweight.

## Sugar and Confectionery

Sugar and confectionery include raw beet and cane sugar; refined sugar; sugars and syrups (including artificial honey and caramel); sugar confectionery and other sugar preparations (except confectionery containing cocoa). 1/

MFN tariffs

Average MFN tariffs on sugar and confectionery have a very wide range among the five major countries. The United Kingdom has the lowest arithmetic average tariff, 6.1 percent ad valorem, for all products (free and dutiable items combined) (chart A-1-Q). The United States has the lowest weighted average (8.4 percent). Japan's arithmetic average tariff reaches 44.9 percent, while its weighted average extends to 102.9 percent ad valorem. Canada, with an arithmetic average just below that of the United States, has a weighted average above 34 percent ad valorem. The European Community applies variable levies to all but 1 of the 42 EC tariff provisions for sugar and confectionery. The figure shown for the European Community in chart A-1-Q (21 percent ad valorem) is the rate of duty applicable to the one item not subject to variable levies, and thus cannot be considered a representative average. In 1970, however, nearly half of EC imports of sugar and confectionery entered under this one provision. For four of the major countries, average rates for dutiable products alone do not differ significantly from averages for all products. The United Kingdom's weighted average for dutiable products is 6 percentage points above the average for all products.

---

1/ For the specific coverage of this subsector, see BTN headings 17.01-17.05.

Chart A-1-Q. -- Average MFN tariff rates on sugar and confectionery

(Percent ad valorem)

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 98 percent of EC provisions, covering 46 percent of EC imports in this subsector in 1970.

has 15.4 percent of its provisions and Canada 12.5 percent free of duty. Nearly 35 percent of United Kingdom provisions are dutiable in the 0.1-5 percent ad valorem range and another 31 percent are in the 5.1-10 percent range. One-fourth of Canada's provisions are dutiable in the 0.1-5 percent range and almost one-third in the 15.1-20 percent ad valorem range. Over one-fifth of U.S. provisions are in the 0.1-5 percent ad valorem range, nearly one-third in the 5.1-10 percent range, and over one-third between 10.1 and 25 percent. The Japanese rates are spread across a wide range with 13 percent in both the 5.1-10 percent and 20.1-25 percent brackets, 39 percent in the 30.1-40 percent bracket and 17 percent of the provisions over 50 percent ad valorem.

In 1970, preferential tariff treatment was accorded nearly one-fourth of U.S. imports, nearly two-thirds of Canadian imports and over three-quarters of United Kingdom imports.

The United Kingdom enters over one-third of its imports of sugar and confectionery free of duty; half of United Kingdom imports pay rates between 15.1 and 20 percent ad valorem. Over 90 percent of U.S. imports are dutiable at rates between 5.1 and 10 percent ad valorem. Canada has nearly three-quarters of its imports dutiable between 40.1 and 50 percent, and Japan has over 90 percent of imports dutiable above 50 percent ad valorem, many of them considerably above 50 percent, as indicated in the high Japanese weighted average tariff. All European Community imports subject to fixed duties enter in the range between 20.1 and 25 percent. Data are not available for the rate distribution of EC variable levy imports (table A-1-KK).

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 98 percent of EC provisions, covering 46 percent of EC imports in this subsector in 1970.

Canada has 16 tariff lines in this subsector, and the European Community has 42 lines. The United States and Japan each have 23 lines, and the United Kingdom has 26 lines.

### Trade importance

Of the 28 agricultural subsectors, sugar and confectionery ranked 20th in exports and 6th in imports in 1969 OECD trade. The subsector ranks fifth in OECD exports and third in imports among the 10 subsectors of foodstuffs. As shown in chart A-1-R, OECD total imports are four times greater than exports in this subsector, and for each of the five major countries except the European Community, imports are at least several times as large as exports. For the United States, the

Chart A-1-R. -- OECD trade in sugar and confectionery, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

subsector ranks 21st in exports among the 28 agricultural subsectors, accounting for less than 0.4 percent of U.S. agricultural exports, but more than 12 percent of U.S. agricultural imports in 1969.

In 1970, imports by the 13 GATT tariff study countries were valued at \$1.9 billion, and intra-EC shipments were an additional \$199 million. OECD imports in 1969 totaled \$1.7 billion; exports were \$400 million.

#### Trade network

The European Community, among the five major countries, is the most significant exporter of sugar and confectionery, shipping \$84 million to outside destinations in 1969 (intra-EC exports were \$155 million). About 70 percent of EC external exports went to nations other than the five major countries (see table A-1-LL). The United Kingdom is the

X = Less than \$500,000.

Note.--Country of origin data are overstated due to the inclusion of natural honey which is not covered by the subsector on sugar and confectionery in the following amounts: OECD total, 29; Canada, none; United States, 1; Japan, 4; European Community, 18; United Kingdom, 5. Country of origin data, therefore, do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

by far the largest importer, entering \$707 million in 1969. Except for the European Community, which supplies the bulk of its imports internally, the major countries receive most of their imports from non-OECD sources.

World trade in sugar has been regulated in a manner somewhat similar to that of coffee through the establishment of the International Sugar Agreement in 1937. Disrupted by World War II, the ISA was reestablished in 1953 and revised in 1958 and 1969. Countries subscribing

to the most recent revision numbered 49, of which 34 were exporting members. As with coffee, countries exporting sugar are subject to quotas which can be adjusted under the ISA in order to maintain prices at a reasonable level, while countries importing sugar agree to restrict imports from nonmember countries. Unlike coffee, sugar is produced by many of the importing countries. Thus, imports supplement domestic output and the leading exporting countries are not necessarily the leading producers. 1/

Cuba has been by far the principal exporter of sugar for several decades, and since 1960 has been the principal supplier of sugar imports to the USSR and the Peoples Republic of China. Other leading exporters of raw sugar have been Australia, the Philippines, Brazil, South Africa, the Dominican Republic, Taiwan, Mexico, Mauritius, and Peru. The European Community imports substantial amounts of sugar, but supplies much of its own requirements in the form of beet sugar. This internal production is reflected in the fact that internal EC shipments in the subsector comprise over 60 percent of total EC imports. The Philippines and Latin American countries other than Cuba have been the principal U.S. sources of imported sugar, since the United States reduced its quota for Cuban sugar to zero following the break in diplomatic relations between the two countries in 1960.

#### Trade-agreement concessions

Arithmetic average MFN tariffs for sugar and confectionery on pre-trade-agreement base dates are compared with January 1, 1972, arithmetic average tariffs in the tabulation below for each of the five

---

1/ A discussion of U.S. import quotas under the provisions of the Sugar Act of 1948 appears in Chapter VIII.

major countries. The 1972 figure for the European Community reflects only one of the 42 EC tariff lines for the subsector (the rest are covered by variable levies).

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	23.4	12.4
European Community	<u>1/</u> 39.4	<u>1/</u> 21.0 (plus variable levies)
United Kingdom	7.3	6.1
Japan	47.6	44.9
Canada	12.3	12.3

Before the establishment of the EC's Common External Tariff, each of the members of the European Community negotiated national tariff concessions under the GATT for sugar and confectionery. These concessions totaled 26, of which 9 were above the CXT rate; 2 were at the CXT rate; and 15 were below the CXT.

Each of the five major countries has had GATT concessions for some of its tariff lines for sugar and confectionery, but most of United Kingdom and Canadian lines are not covered. Japan has over one-fifth of its tariff lines covered under the GATT; the European Community has 45 percent, and the United States has all lines for the subsector covered.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972 figure for the Community is the rate applicable to the only EC tariff line which continues to be subject to fixed duties alone; it does not include any of the 41 EC tariff lines subject to a variable levy.

Pre-trade-agreement tariff rates for molasses are compared with January 1, 1972, rates in table A-1-NN for each of the five countries.

Table A-1-NN.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on molasses

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	11.5%; 1.8% AVE <u>2/</u>	4.9%; 0.7% AVE <u>3/</u>	4.9%; 0.7% AVE <u>3/ 4/</u>	155.35, .40
Canada-----	7.5%; 35.0% AVE <u>2/</u>	5.0%; 32.5% AVE <u>2/</u>	5.0% AVE <u>2/</u>	13700-1; 13705-1
European Community--	Free-65%	Variable levies <u>6/</u>	Variable levies <u>6/</u>	17.03
United Kingdom-----	Free-100% AVE <u>1/</u>	Free	Free	17.03
Japan-----	20%; 30%	35-229% AVE <u>8/</u>	35-229% AVE <u>8/</u>	17.03

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Rates are ad valorem equivalents of specific rates of duty (6.8 cents per gallon and 0.03 cents per pound of total sugars, respectively), calculated on 1971 import values.

3/ Rates are ad valorem equivalents of specific rates of duty (2.9 cents per gallon and 0.012 cents per pound of total sugars, respectively), calculated on 1971 import values.

4/ Most of the imports in 1971 consisted of inedible molasses and entered at the lower rate of duty (item 155.40).

5/ Rates are ad valorem equivalents of specific rates of duty, calculated on estimated 1971 import values.

6/ Autonomous rate fixed duties replaced by variable levies.

7/ Range includes ad valorem equivalents of specific rates of duty, calculated on 1971 import values.

8/ Range includes ad valorem equivalents of specific rates of duty, calculated on 1970 import values, and a minimum rate of 35 percent ad valorem for item 17.03-1. Virtually all imports in recent years entered at ad valorem equivalents of 150-175 percent.

Only Canada had any duty reductions on molasses during the Kennedy Round.

The range of EC rates on January 1, 1972, was unchanged from the pre-trade-agreement fixed rates. For the European Community, the fixed duties for molasses originally established in the CXT have been replaced by variable levies. Japanese duties on molasses increased from the pre-trade-agreement rates prior to the Kennedy Round.

Spices; Products of the Milling Industry and Preparations  
of Cereals; Miscellaneous Foodstuffs

There are three remaining subsectors of foodstuffs: Spices; products of the milling industry and preparations of cereals; and "other" foodstuffs. Included in products of the milling industry and preparations of cereals are: Flours, groats and meals made from cereals; other worked cereal grains (for example, rolled, flaked, polished); malt; starches, inulin, and gluten. "Other" foodstuffs include such products as eggs, honey, spaghetti, tapioca, foods prepared by swelling or roasting cereals, bread and other bakery products, coffee extracts, sauces, soups, and vinegar. <sup>1/</sup>

The relative importance of these subsectors of foodstuffs in OECD trade can be seen in chart A-1-D at the beginning of the discussion of foodstuffs. U.S. trade for these products is shown in the tabulation below (in millions of dollars).

	<u>Exports</u> (1969)	<u>Imports</u> (1969)      (1970)
Spices	4	51      53
Products of the milling industry, preparations of cereals	125	2      8
"Other" foodstuffs	158	97      129

---

<sup>1/</sup> For the specific coverage of spices, see BTN headings 09.04-.10; for products of the milling industry, etc., BTN headings 11.01-.02 and 11.07-.09; for "other" foodstuffs, BTN headings 04.05-.06, 22.10 and chapters 19 and 21.

The only subsector of foodstuffs in which the United Kingdom applies variable levies is the subsector for products of the milling industry. Variable levies are applied in nearly 39 percent of United Kingdom tariff lines which, in 1970, covered 18 percent of United Kingdom imports in the subsector. For the European Community, variable levies cover 99 percent of tariff lines and 99 percent of 1970 imports of products of the milling industry. In "other" foodstuffs, nearly 88 percent of the 180 EC tariff lines are covered by variable levies; in 1970, 45 percent of EC imports of "other" foodstuffs entered under variable levy provisions.

Table A-1-00 shows arithmetic and weighted average MFN rates of duty for combined free and dutiable imports, and the highest duty range containing tariff provisions for each of the five major countries. In

Table A-1-00.--Average MFN tariff rates on spices, products of the milling industry, and miscellaneous types of foodstuffs, and the highest rate bracket in which provisions of the major tariffs fall

a simple count of the highest/lowest rankings among the five countries for the two averages and the duty ranges shown, the European Community has the greatest number of "highest" rankings, followed by Japan. The United Kingdom has the largest number of "lowest" rankings, followed by the United States. Most of the United Kingdom's "lowest" rankings, however, are in the subsector for products of the milling industry in which the United Kingdom applies variable levies. The table does not reflect variable levies, which may increase both United Kingdom and EC average duties above levels suggested by the figures.

## Agricultural Sector A-2

## GRAINS

The sector for grains includes wheat, meslin (a mixture of wheat and rye), rye, barley, oats, corn, rice, buckwheat, millet, grain sorghum and miscellaneous other grains. 1/

MFN tariffs

The European Community applies variable levies to all imports of grains; none are subject to fixed duties. For the United Kingdom, variable levies cover 8 of 11 tariff lines and over half of 1970 United Kingdom imports. 2/ It has not been possible to include variable levies in the calculation of average MFN tariffs in chart A-2-A. Thus, average MFN tariffs in chart A-2-A are actually meaningful only for Canada, the United States, and Japan. 3/

Of the average tariffs for these three countries, the United States has the highest arithmetic average tariff for all products (combined free and dutiable) at 8.6 percent, followed closely

---

1/ For the specific coverage of this sector, see BTN chapter 10. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

2/ As a member of the European Community, the United Kingdom is to raise the level of minimum import prices and variable levies during a transition period from 1973-77 in order to make United Kingdom tariffs correspond with tariffs of the European Community on imports from third countries. In early May 1972, the United Kingdom's variable levy on U.S. No. 3 grade yellow corn was equivalent to 23 percent of the c.i.f. value of the corn and the levy on U.S. No. 2 grade hard winter wheat was equivalent to 33 percent of the c.i.f. value of the wheat.

3/ Illustrative of the range and height of the European Community's variable levies on grains are the following 1970 ad valorem equivalents of the variable levies on some of the products in this sector: Durum wheat, 79.7 percent; barley, 69.7 percent; corn, 47.4 percent; milled bleached long rice, 181.6 percent.

Chart A-2-A. --Average MFN tariff rates on grains

by Japan, with an average of 8.1 percent ad valorem. The Canadian arithmetic average tariff on all products of 2.5 percent is the lowest of the three countries. The Canadian weighted average tariff on all products, at 4.1 percent ad valorem, is also considerably lower than the U.S. weighted average of 7.4 percent and the Japanese weighted average of 8 percent. On dutiable products alone, U.S. average tariffs are noticeably below Japanese averages, especially the Japanese weighted average tariff of 16.6 percent.

Of the five major countries, Canada has the largest percentage of tariff provisions in the duty-free category, with 45.5 percent of provisions duty free. One-third of United Kingdom fixed rate provisions are duty free. Japan has 31 percent of its provisions duty free, and the United States has 11 percent of its provisions duty free (see table A-2-A).

Table A-2-A.--Distribution, by duty level, of MFN tariff provisions for grains

(In percent)					
Duty level	Canada	United States	Japan	European Community 1/	United Kingdom 2/
Free-----	45.5	10.5	30.8	NA	33.3
0.1-5.0 percent----	27.2	42.1	15.4	NA	33.4

Over 50 percent----	-	-	-	NA	-
Total-----	100.0	100.0	100.0	NA	100.0

1/ At least 99 percent of European Community imports in this sector are subject to variable levies rather than fixed tariff rates. It is therefore not possible to give a frequency rate distribution for the Community.

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 73 percent of United Kingdom provisions, covering 53 percent of United Kingdom imports in this sector in 1970.

None of Canadian dutiable provisions or United Kingdom fixed-duty provisions have rates above 10 percent ad valorem. The United States has two-fifths of its provisions dutiable at rates of 5 percent or less, and Japan has over one-fifth of its provisions in each of the duty ranges between 5.1 and 15 percent ad valorem.

Of the five countries, only in the United Kingdom does a significant portion of grain imports receive preferential tariff treatment. In 1970, 44 percent of United Kingdom imports entered under preferential duties.

As shown in table A-2-B, the United Kingdom has 60 percent of its fixed-duty MFN imports entering duty free. Over half of Japanese imports are also duty free. Canada has 16 percent of imports duty free and the United States has almost none.

Table A-2-B.--Distribution, by duty level, of MFN imports of grains

(In percent)

Duty level	Canada	United States	Japan	European Community 1/	United Kingdom 2/
Free-----	16.3	0.1	51.8	NA	60.5

Over 50 percent----	-	-	-	NA	-
Total-----	100.0	100.0	100.0	NA	100.0

1/ At least 99 percent of European Community imports in this sector are subject to variable levies rather than fixed tariff rates. It is therefore not possible to give an import frequency distribution for the Community.

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 73 percent of United Kingdom provisions, covering 53 percent of United Kingdom imports in 1970.

Canada has 68 percent of imports dutiable between 5.1 and 10 percent ad valorem. The United Kingdom has almost no fixed-duty imports dutiable above 5 percent ad valorem. Over half of U.S. imports are dutiable in the range of 5.1-10 percent ad valorem, and almost a quarter of imports between 10.1 and 15 percent ad valorem. Over 30 percent of Japanese imports are dutiable between 15.1 and 20 percent ad valorem. Japanese and U.S.

imports span higher duty rate ranges than the imports of Canada and the fixed rates of the United Kingdom do.

The European Community has the most detailed tariff schedule for grains with 20 product lines, followed by the United States with 19 lines. Japan has 13 lines, and Canada and the United Kingdom each have 11 lines.

### World production

The principal grains produced are wheat, corn, and rice. Of lesser importance are barley, oats, and rye. Wheat, rice, and rye are grown primarily for human food use and are considered food grains, while corn, barley, and oats are grown principally for feed for livestock. Table A-2-C shows the relative importance

Table A-2-C.--World production of grains, by specified countries, 1970

(In millions of metric tons)						
Country	Wheat	Corn	Rice	Barley	Oats	Rye

1/ Less than 500,000 metric tons.

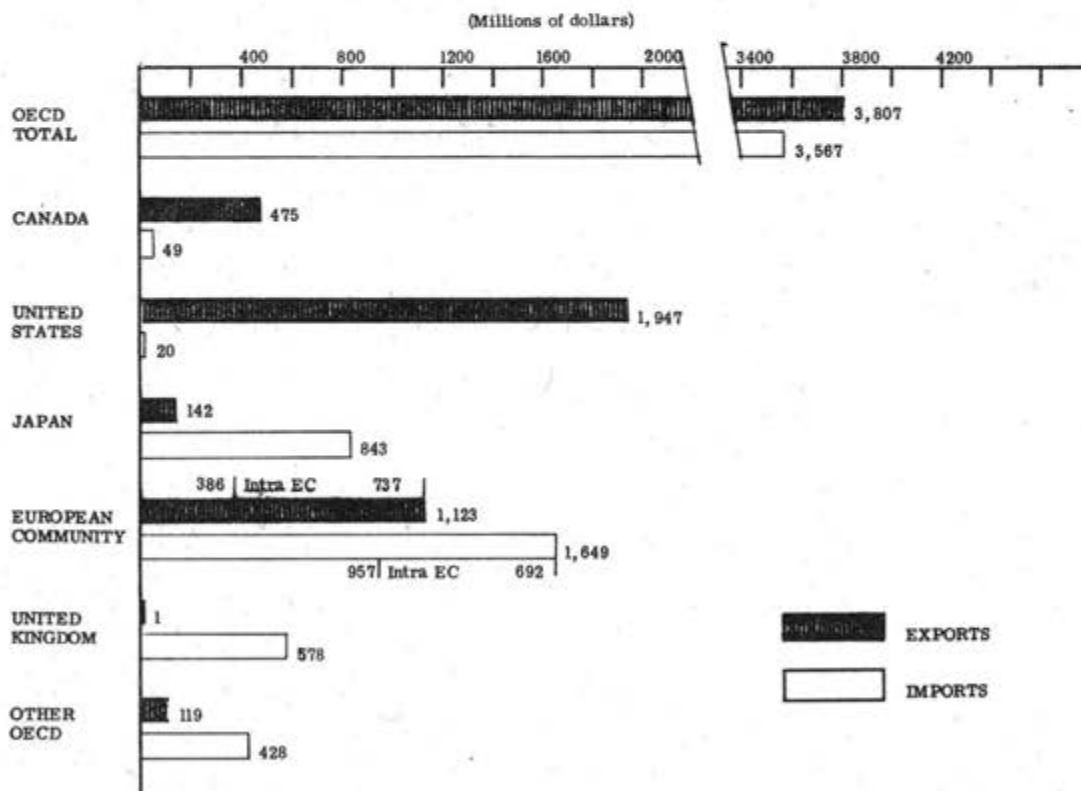

of grains output in the five countries under study to the total world output. The aggregate output of the five countries accounted for about half of the world production of corn and of oats, but substantially smaller shares of the world totals for the other

grains. The principal suppliers of grains to world markets have been the United States, the European Community, Canada, Australia, and Argentina.

### Trade importance

Grains ranked second in OECD exports among the nine agricultural sectors in 1969 and 1970 and fourth in OECD imports. In 1970, the grains sector accounted for 18 percent of OECD agricultural exports and 11 percent of agricultural imports. For the United States the sector is the most important in agricultural exports and the least important in imports.

Chart A-2-B. -- OECD trade in grains, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

Imports of grains by the 13 GATT tariff study countries in 1970 were valued at \$3.2 billion, and intra-EC shipments were an additional \$626 million. OECD imports in 1969 totaled \$3.6 billion; exports were \$3.8 billion (chart A-2-B). In 1970, OECD imports rose to \$4.1 billion, exports to \$4.6 billion.

U.S. grains exports of \$1.9 billion in 1969 and \$2.4 billion in 1970 accounted for slightly more than one-third of U.S. agricultural exports in those years. U.S. imports are not significant (\$29 million in 1970).

#### Trade network

The five major countries account for 88 percent of OECD grain imports and 97 percent of OECD exports. A large portion of OECD total imports (72 percent) and exports (62 percent) are traded with other OECD countries. Less developed countries supply 17 percent of total OECD imports and absorb 32 percent of OECD exports.

The United States, the largest exporter, accounts for over half of OECD exports of grains. An important share (44 percent) of U.S. exports goes to less developed countries; one-fifth to Japan and about 16 percent to the European Community (see chart A-2-C). Canada is the second largest exporter of the five countries, if intra-EC shipments are excluded from EC exports. The United Kingdom, the European Community, and Japan combined take over half of Canadian exports. Forty percent of Canadian exports go to non-OECD countries. EC exports to nonmember countries are

Chart A-2-C.--United States trade in grain, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

substantial (\$386 million in 1969), but are equal to only half of intra-EC grains shipments. Principal external EC markets are non-OECD countries and the smaller OECD members (table A-2-D).

For Japan, the European Community, and the United Kingdom, grain imports are considerably larger than exports, and these three countries account for over 86 percent of total OECD imports (table A-2-E). About half of imports by Japan and European

Community imports from outside sources come from the United States. The United States, Canada, and the European Community are about equally important as suppliers to the United Kingdom. Japan and the United Kingdom each import roughly 30 percent of their total imports from non-OECD countries. Forty percent of EC entries from outside sources come from non-OECD countries, principally from LDCs.

Trade in some grains is regulated by international agreement.

About nine-tenths of the world wheat and wheat flour trade has been carried out by over 50 countries who are parties to the International Wheat Agreement (IWA). However, only about half of world trade has been transacted under the terms of the IWA. All five countries under study are members of the IWA. The IWA provides a means for regular review of trading conditions and consultation among signatory countries and furnishes food aid to developing countries. 1/

#### Trade-agreement concessions

Arithmetic average tariffs on January 1, 1972, of the five major countries are compared with averages on pre-trade-agreement base dates in the tabulation below. The United States arithmetic average tariff decreased from 15.7 to 8.6 percent ad valorem. Of the other four countries, only Canada, whose average

---

1/ The current agreement which expires June 30, 1974, is the tenth in a series of treaties beginning in 1949. Earlier agreements had price provisions under which exporting countries agreed to supply, and importing countries agreed to purchase, certain quantities of wheat and flour within a given price range; the current agreement has no such price provision.

tariff decreased from 17.1 to 2.5 percent ad valorem, shows a large reduction. In view of the adoption of variable levies, which are applicable to all of EC grains imports and a significant portion of United Kingdom imports, current charges on imports into these countries probably exceed charges on pre-trade-agreement base dates (in some cases by substantial amounts). The Japanese figure does not reflect the substantial unilateral reductions made on about one-third of Japanese rates in this sector in 1972.

	<u>Pre-trade-agreement</u> (Percent ad valorem)	<u>January 1, 1972</u>
United States	15.7	8.6
European Community	<u>1/</u> 12.7	<u>1/</u> (variable levies only)
United Kingdom	7.2	<u>2/</u> 4.5 (plus variable levies)
Japan	10.5	8.1
Canada	17.1	2.5

Each of the members of the European Community had negotiated national tariff concessions under the GATT prior to establishment of the EC's Common External Tariff. Of the 30 concessions contained in the national schedules, 18 were above the CXT rate, 1 was at the CXT rate, and 11 were below the CXT rate.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, all of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT.

2/ For the United Kingdom, the January 1, 1972, figure is an arithmetic average of rates of duty in all tariff lines subject to fixed rates only, excluding lines covered by variable levies. The United Kingdom has had a system of minimum prices for cereals, cereal products and cereal byproducts since 1964. Variable levies are used by the United Kingdom in 8 of its 11 tariff lines for this sector, in order to support these minimum prices (which are often set below world market prices).

Each of the five major countries has made some concessions under the GATT on grains. For the United States, 15 out of 19 provisions are covered by GATT concessions. For Canada, about one-fourth of provisions are covered. For the United Kingdom, out of 11 provisions, 6 are covered in full and 1 in part by GATT concessions. For Japan, 4 out of 13 provisions are covered. The European Community has only 1 of its 20 provisions covered by a GATT binding (hybrid seed corn - discussed below).

Current rates on corn are compared with pre-trade-agreement rates in table A-2-F. Four of the five countries have had reductions in duties on corn imports. Canada, with a pre-trade-agreement

Table A-2-F.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on corn

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	13.7% AVE <sup>2/</sup> 50%	1.7% AVE <sup>3/</sup> ; 13.7% AVE <sup>2/</sup> 25%	0.8% AVE <sup>4/</sup> ; 13.7% AVE <sup>2/</sup> 25%	130.30, .35 135.75
Canada-----	11.3% AVE <sup>5/</sup>	4.5% AVE <sup>6/</sup>	4.5% AVE <sup>6/</sup>	5500-1
European Community--	Free; 9%	Variable levy <sup>7/</sup>	Variable levy <sup>7/</sup>	10.05
United Kingdom-----	10%	Free; 10%	Free; 10%; 5% AVE <sup>8/</sup>	10.05
Japan-----	10%	Free; 10%	Free; 10%	10.05

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percent is ad valorem equivalent of specific rate of duty (25 cents per bushel of 56 pounds), calculated on 1971 import values.

<sup>3/</sup> Percent is ad valorem equivalent of specific rate of duty (12.5 cents per bushel of 56 pounds), calculated on 1971 import values.

<sup>4/</sup> Percent is ad valorem equivalent of specific rate of duty (6 cents per bushel of 56 pounds), calculated on 1971 import values.

<sup>5/</sup> Percent is ad valorem equivalent of specific rate of duty (20 cents per bushel), calculated on 1971 import values.

<sup>6/</sup> Percent is ad valorem equivalent of specific rate of duty (8 cents per bushel), calculated on 1971 import values.

<sup>7/</sup> Autonomous rate duties replaced by variable levies. For hybrid seed corn, there is a ceiling of 4 percent ad valorem on the variable levy.

<sup>8/</sup> The rate for sweet corn on the cob was reduced to 5 percent in the Kennedy Round.

rate of 20 cents per bushel, reduced its MFN rate from 10 cents to 8 cents per bushel in 1948. The United States reduced duties on seed corn both prior to and during the Kennedy Round. Japan reduced its duties on corn for fodder prior to the Kennedy Round. The United Kingdom duty on sweet corn on the cob was reduced by 50 percent in the Kennedy Round and "other" corn imports were made duty free prior to the Kennedy Round; there has been no reduction in a type of corn described in the United Kingdom tariff as "flat white maize." In addition to the fixed rates shown in table A-2-F, the United Kingdom has had a system of variable levies on a number of grains since 1964. In 1970, variable levies covered 86 percent of United Kingdom corn imports. For the European Community, fixed duties on corn were changed to variable levies. The levy on hybrid seed corn has a GATT-bound ceiling of 4 percent ad valorem.

#### Trade complaints

Considering the volume of world trade in grains and the well-known and widespread governmental policies or actions which control or distort trade in this sector, relatively few--103--complaints were submitted to the Tariff Commission by U.S. grain interests on trade barriers.

This is probably attributable largely to the high concentration of U.S. foreign trade in grains. A rather detailed treatment of the subject by the appropriate trade association, and particularly by one major complainant, served to confirm what is already well

known about the most significant trade restrictions. These submissions and others also called attention to some additional trade barriers of lesser significance. The complaints were about equally divided between developed and developing countries. Fifteen market economy developed nations, 4 Communist countries, and 29 LDC's were named in the complaints. Mentioned most frequently were the European Community, the United States, Australia, Switzerland, Japan, and Portugal. The practices most frequently the subject of complaints were state trading and government monopolies in grain trade and variable import levies.

State trading and government monopolies.---The prevalence in many countries of state trading or government monopolies of foreign grain trade is felt to distort the international flow of grains. Such monopolies exist not only in the Communist countries, but also in several market economies, such as Canada, Japan, Austria, Finland, Greece, New Zealand, Norway, Switzerland, Portugal, South Africa, Spain, and several African countries. A state trading agency or a governmental import monopoly in operation may encompass the concepts of both tariff and quota. Government import plans may be viewed as de facto annual quotas; moreover, state trading price markups, designed to cover storage, transport and normal marketing functions, may easily conceal supplemental charges analogous to tariffs or other import charges.

Some U.S. traders reported that there is frequently no discernible discrimination against U.S. grain supplies by the state

trading authorities of many foreign countries, but among examples of discrimination cited were the preferential trade agreements of the European Community and special clearing arrangements in Algeria for grains of Russian and Bulgarian origin. U.S. exporters also reported that U.S. shipments of wheat, barley, oats, and their products to Canada could increase to some degree if state trading in these products were abolished. On the other hand, one brief submitted to the Tariff Commission pointed out that state trading can also counterbalance the restrictive effect of other barriers to grain trade, citing as an example the practice of exempting governmental purchasing authorities from the payment of duties and other discriminatory measures.

Variable levies.--Among the nontariff measures used by several countries to insulate their domestic grain market from the competition of foreign suppliers is the tariff-like import charge known as the variable levy. Variable levies are charges, applied chiefly to agricultural imports, that vary depending usually on the difference between the world market price and the domestic price of a product. Variable levies are used to equalize or reduce the gap between a lower import price and a higher domestic price, and consequently relegate imports to the role of a residual supply. A spokesman of U.S. grain interests described the variable levy system as "probably the greatest impediment to the free flow of grains of all nontariff barriers in existence." Most of the complaints received by the Tariff Commission against variable levies

were concerned with the use of levies in the European Community's Common Agricultural Policy. However, complaints were also received against the variable levy systems of Sweden, Switzerland, Denmark, and Portugal.

In the European Community, variable levies for wheat, rice, and coarse grain are changed continually to counterbalance the difference between the lowest world market price and a designated minimum import price (set near or at the domestic price). U.S. traders complained not only about the amount of the charges, but also about the uncertainty created by their constant changes.

Under the United Kingdom's minimum import price system for grains, variable charges have been levied on imports to the extent necessary to bring the import price up to the minimum price. Under the agreement covering the United Kingdom's membership in the enlarged European Community, the United Kingdom is to raise the level of its minimum import prices and bring its system into conformance with the more complicated system of the European Community during a transition period of five years (1973-77). Preferential treatment is to be given to EC grain suppliers.

Subsidies and other aids---Various governmental aids to grain production and trade, including broad agricultural support systems maintained in many countries, were criticized in submissions to the Commission as causing a major distortion to international grain trade. Heavy subsidization has encouraged uneconomical growing in

several countries at the expense of economical production in the major producing and exporting countries. Moreover, extensive governmental support has from time to time led to worldwide grain surpluses, more aggressive competition for markets and low and/or unstable world prices. Named in the complaints dealing with governmental aids and support programs were several European countries, Japan, Canada, and the United States.

Complaints voiced by U.S. grain dealers against government aids provided by other countries are directed principally against the Common Agricultural Policy (CAP) of the European Community. Such complainants point out that, despite the extremely high support prices that the CAP applies, the European Community does not impose production controls. The absence of such controls encourages uneconomic production and, at the same time, high prices restrain EC consumption.

Complainants on the matter cite soft wheat as a prime example, which became a surplus product in the Community, although its production there is generally uneconomical. EC exporters are compensated by export subsidies for the difference between the internal purchase price paid, and the lower world market price received by them. U.S. grain dealers report that in early 1970 the EC export subsidy for soft wheat (\$57 per ton) was even greater than the world market price of the product (\$50 per ton). Such heavy subsidization of wheat exports enables the Community to compete in third country markets with the much more economical exports of the United States and other countries.

U.S. grain dealers emphasize, however, that the adverse effect of EC grain subsidization is even more significant on U.S. exports destined for traditional markets within the EC countries themselves. (The complainants blame this damage to their interests not primarily on government aids, but on complementary measures thereto within the CAP, which are designed directly to restrict imports of grains.) U.S. exports of feed grains are also adversely affected by the EC support system. As U.S. feed grain exporters pointed out in their reports, the Community subsidizes the use of its surplus wheat as feed for livestock on domestic markets. By doing so, the Community encourages the substitution of EC surplus wheat for the traditional feed grain imports from the United States and other economic sources. Moreover, EC exports of feed grains, also assisted by subsidies, compete with U.S. exports of feed grains to third country markets.

U.S. grain exporters complain that Japanese support prices for wheat, barley, and rice have been equivalent to several times the world prices. However, despite such heavy support, imports of wheat and barley by Japan have increased in recent years. The rice support resulted in large surpluses and reduced imports to negligible amounts. U.S. complainants reported that Japan subsidizes the disposal of rice surpluses in domestic markets for use as livestock feed and in foreign markets by exporting to Far Eastern countries on concessional terms.

While subsidizing grain production, the United Kingdom had traditionally imported grains at about world price levels. Beginning in 1964, the United Kingdom instituted a new system of government aids for grains, involving higher domestic prices, minimum import prices and import restricting variable levies. In addition to price support programs, the United Kingdom assists farmers in the purchase of fertilizer and in expenses for field drainage and farm improvements.

Respondents in the Commission's survey reported that the United Kingdom's new policy, involving the encouragement of feed grain production (mostly of barley), has had an adverse effect on U.S. corn exports to the United Kingdom. As one of the U.S. complainants points out, after the enlargement of the European Community, the trade restricting impact of government aids for grains in the United Kingdom (and other new EC members) will depend on the future level of grain prices to be maintained by government supports in these countries. Concerned U.S. exporters point out that if the United Kingdom follows the policy of high prices and lack of production restraints (thus far unused under the CAP), they foresee the United Kingdom (and also Denmark) becoming surplus producers of grains with concomitant adverse effects on the exports of much more economically produced grains to these countries.

Canada provides a number of direct and indirect aids to help grain growers and exporters. The Canadian Wheat Board 1/ establishes

---

1/ The Wheat Board is a monopoly which represents growers of wheat, oats, and barley in the principal growing areas of Canada.

minimum prices payable to producers; any deficit the Board runs is borne by the Federal Treasury. Grains grown outside the jurisdiction of the Wheat Board are also price-supported under the Agricultural Stabilization Board. To promote the consumption and exports of domestic grains, the transport of certain grains receives governmental assistance. Moreover, the government assists exports of grains by offering credit to potential foreign importers. The Wheat Board, which exercises complete control over exports of wheat, barley, and oats, also engages in special promotional activities overseas.

In the United States, price support programs are mandatory for wheat, corn, rice, oats, rye, barley and grain sorghum. They are implemented through various measures including cash payments or loans to farmers based on the value of their production, assessed at the support price. In contrast with the CAP of the European Community, U.S. support payments are conditioned on adherence to production controls. The United States also maintains measures that directly encourage the export of grains. For example, grains and grain products have been the major commodities exported under the Agricultural Trade Development and Assistance Act (Public Law 480) that was enacted in 1954 to help move then-existing U.S. farm surpluses to needy countries unable to finance their own purchases with dollars.

U.S. exporters are being compensated under export payments programs for the difference between the domestic price and the

world price, when the latter is lower than the former. Such programs have subsidized exports of wheat made under Public Law 480, and also under AID programs, as well as assisted commercial wheat exports. U.S. Government expenditures have generally declined in recent years with the reduction of support prices to, or nearly to, world price levels, with the exception of a short period in the summer of 1972 brought on by massive sales of U.S. wheat to the U.S.S.R.

Import duties.--When compared with other measures affecting international trade in grains, import duties appear relatively unimportant. No complaints of U.S. grain dealers regarding restrictions on their exports caused by high tariff rates on grains were received by the Tariff Commission. However, complaints were directed against preferential trading systems, both multilateral and bilateral, as discriminating implicitly against third country suppliers in their application of tariffs or variable levies. Principally, the European Community was the focus of the complaints, but the Latin American Free Trade Association, the Central American Common Market, the Caribbean Free Trade Association, EC preferences for several African countries and British Commonwealth preferences were also mentioned. Also, one U.S. grain dealer stated that U.S. refusal to grant MFN treatment to several Communist countries had been a hindrance to U.S. grain exports.

Quantitative restrictions and licensing.--According to a major U.S. rice exporter, limitations on rice imports ranging from licensing

practices to total embargoes are practiced in a number of countries, most of them large producers and consumers at the same time. The complainant states that several Far Eastern countries, such as India, Pakistan, Indonesia and Thailand, with very high per capita consumption, have a total ban on commercial rice imports; thus even a small relaxation of this ban could significantly boost his exports to these countries.

In Japan, as of October 1971, stated one complainant, wheat, barley, and rice were still subject to the strict import quota system, under which the importer must apply to the government monopoly of these commodities for an import certificate which may or may not be granted. Also in Canada, licenses to import wheat, oats, and barley must be obtained from the Canadian Wheat Board, the government monopoly on most of Canadian grain trade.

In the United States, wheat is subject to quotas (which have been equivalent to less than 1 percent of domestic wheat production in recent years) imposed to prevent interference with price-support or other government programs.

A U.S. grain dealer pointed out that until recently, U.S. export controls had constituted an important barrier against U.S. grain exports to Communist countries. Though restrictions on exports to Communist nations were relaxed after 1966, validated licenses were required for U.S. dealers to export wheat and feed grains to these countries (except Poland and Romania). This complaint also referred to the U.S. provision that 50 percent of the wheat and

feed grain exports shipped to most Communist nations be carried on U.S. flag vessels. Since U.S. shipping rates are not generally competitive with the rates of foreign carriers, this requirement had some controlling effect. In June 1971, both of these export restrictions were lifted, opening up a significant grain trade.

Discriminatory bilateral agreements and sourcing.--The potential adverse effect on U.S. exports of bilateral arrangements between the European Community and various European, Mediterranean and African countries is generally known, but no estimate on the effect of this barrier on U.S. grain trade has been made. A U.S. trade source points out that the members of the Caribbean Free Trade Association restrict and/or ban imports of U.S. rice, giving first preference to rice from Guyana. Another U.S. complaint reports that U.S. exports of rice to Kenya are adversely affected by the Kenyan Government's commitment to purchase rice from Pakistan. Japan appears to practice discriminatory sourcing to some extent in its efforts to diversify the sources of farm imports, help certain developing countries in Southeast Asia, and develop markets for Japanese manufactures.

Standards.--Certain agricultural standards (i.e., sanitary and other specifications on farm product characteristics) were reported to restrict the international trade of grains. Australian quarantine regulations were said to impede the importation of corn and sorghum seed from the United States. New Zealand was mentioned as maintaining regulations on wheat imports, asking for specific statements

confirming the absence of certain diseases in large areas surrounding the locality where the imports originated.

Only 11 of the complaints received by the Commission were accompanied by an assessment of the restrictive effects of the trade barriers which were being reported. In nine cases, the respondents to the Tariff Commission survey said the removal of the reported barriers would result in a "significant" increase in their trade, two said a "moderate" increase. All of the dollar estimates for the trade increase totaled \$168 million.

## ANIMALS AND PRODUCTS THEREOF

Animals and products thereof include all live animals (except fish, crustaceans, and mollusks); meat and edible meat offal, whether fresh, frozen, dried, salted, smoked, or otherwise prepared or preserved; and preparations of meat, such as sausages and the like. 1/

MFN tariffs

For the five major trading countries, fixed weighted and arithmetic average MFN tariffs fall between 5.1 and 11.5 percent ad valorem for all products (combined free and dutiable)(see chart A-3-A). The Canadian tariff is at the low end of the range; the European Community's averages are at the top. The averages for the European Community reflect fixed duties only and do not include any of its tariff lines subject to variable levies. Variable levies apply to 115 of the 158 EC tariff lines for animals and their products and cover over two-thirds of EC imports in this sector.

For dutiable items alone, the United States has the lowest average tariffs, with a weighted average tariff of 5.7 percent and an arithmetic average of 7.3 percent. The European Community has the highest weighted

---

1/ For the specific coverage of this sector, see BTN chapters 1 and 2 and headings 16.01-16.03.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart A-3-A. -- Average MFN tariff rates on animals and products thereof  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions ranging from 20 percent to 100 percent made in 1972 on about one-sixth of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

average tariff, at 13.9 percent (based on fixed duties only) <sup>1/</sup>, while Japan has the highest arithmetic average, at 15.9 percent ad valorem.

<sup>1/</sup> In order to illustrate the level of protection effected by the Community's variable levies on animals and products thereof, the following are examples of the ad valorem equivalents of the variable levies on some of the products in this sector: Live hogs, 42.2 percent; frozen sides of beef, 53.3 percent; whole poultry with giblets, 33.5 percent; whole turkeys, 24.1 percent; smoked ham, 42.2 percent; and canned poultry (57 percent or more, poultry meat), 25.7 percent.

In all four methods of calculation shown in the chart, United Kingdom average tariffs are higher than those of the United States and Canada, and lower than those of Japan and the European Community.

The distribution of MFN tariff provisions, by duty level, is shown in table A-3-A. All five countries have substantial percentages

Table A-3- A.-- Distribution by duty level, of MFN tariff provisions for animals and products thereof

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 73 percent of EC provisions, covering 68 percent of EC imports in this sector in 1970.

of their tariff provisions duty free, ranging from 18.5 percent for the United States to over half for Japan. Nearly one-fourth of Canada's tariff provisions are dutiable between 0.1 and 5 percent ad valorem, and most of the remaining provisions are equally divided between the 10.1-15 percent range and the 15.1-20 percent range.

The United States and the United Kingdom each have about 38 percent of tariff provisions dutiable in the 5.1-10 percent ad valorem range and most of the rest of their dutiable provisions in the 0.1-5 percent ad valorem range. The bulk of Japan's dutiable provisions are about equally divided among three rate brackets: 5.1-10 percent, 10.1-15 percent and 20.1-25 percent. As reflected in its relatively high arithmetic

average MFN tariffs, the European Community has one-fifth of its fixed duty provisions in the 10.1-15 and 15.1-20 percent ad valorem ranges and 5 percent of provisions in the 25.1-30 percent range.

Imports receiving preferential tariff treatment are significant in Canada and the United Kingdom, where nearly 16 percent and 43 percent, respectively, of imports of animals and their products entered under preferential rates in 1970.

For each of the five countries, the percentage of duty-free imports is considerably lower than the percentage of tariff provisions free of duty (see table A-3-B). Nearly one-third of U.S. and United

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 73 percent of EC provisions, covering 68 percent of EC imports in this sector in 1970

Kingdom imports and over three-fourths of Canadian imports are dutiable in the 0.1-5 percent ad valorem duty range. Two-thirds of U.S. imports, over 60 percent of Japanese imports and 43 percent of United Kingdom imports are dutiable in the 5.1-10 percent rate bracket. The European Community has 37 percent of its imports which are subject to fixed rates of duty in the 10.1-15 percent rate bracket and over 15 percent

of imports in each of the rate brackets of 5.1-10 percent and 15.1-20 percent. The United States has no imports dutiable above the 5.1-10 percent ad valorem range, while the European Community had imports subject to fixed rates dutiable as high as the 25.1-30 percent range.

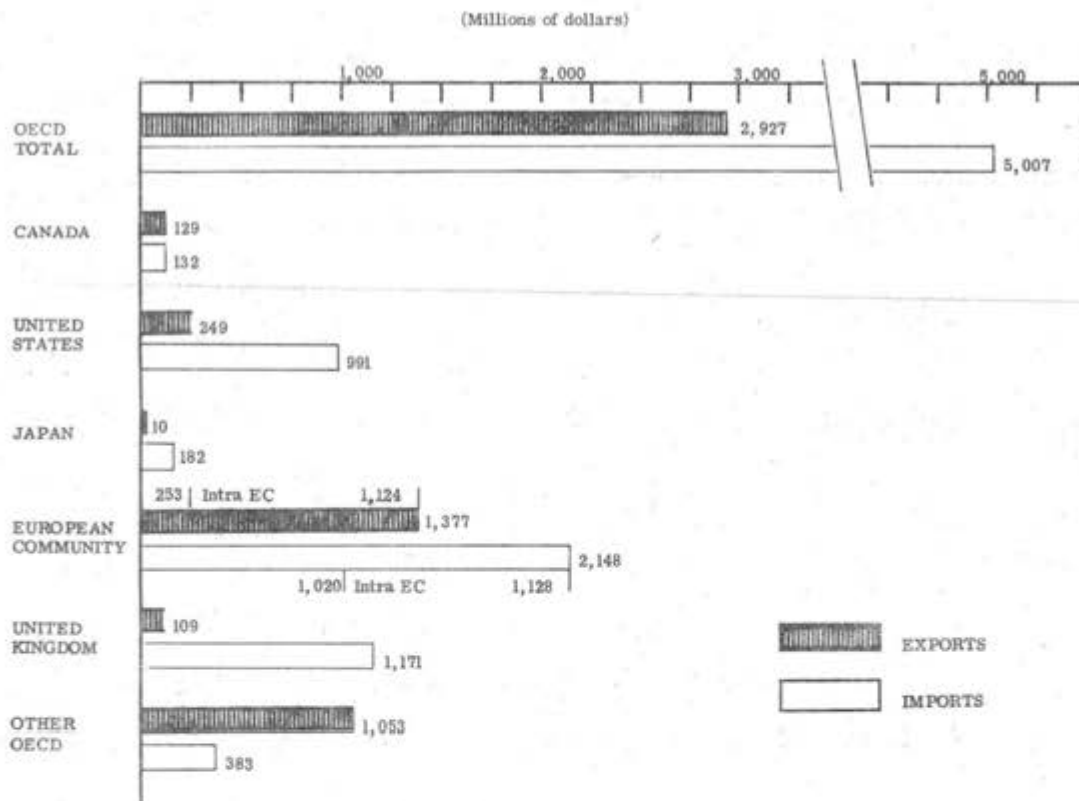

The European Community has the most detailed tariff schedule in this sector, with 158 tariff lines. The United States is second with 119 lines, followed by Canada (58 lines), the United Kingdom (52 lines), and Japan (29 lines).

#### Trade importance

The sector covering animals and their products is one of the more important of the nine agricultural sectors, ranking third in exports and second in imports in 1969 OECD trade. In 1970, OECD exports of animals and their products increased nearly 16 percent, but the rank of the sector in OECD exports fell to fourth. Animals and products account for nearly 14 percent of total OECD agricultural exports, and over 15 percent of total agricultural imports. For the United States, the sector ranked fifth in 1969 exports and second in imports among the nine agricultural sectors, accounting for 4 percent of U.S. agricultural exports and 17 percent of U.S. agricultural imports.

The 13 GATT tariff study countries imported \$3.9 billion of animals and their products in 1970. Intra-EC shipments were an additional \$1.4 billion. OECD imports in 1969 were valued at \$5 billion, and exports totaled \$2.9 billion (chart A-3-B). In 1970, imports reached \$5.6 billion, exports \$3.4 billion.

Chart A-3-B. -- OECD trade in animals and products thereof, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

### Trade network

The five major countries account for almost two-thirds of OECD exports and over 90 percent of imports. U.S. trade (\$249 million of exports and \$991 million of imports in 1969) is slightly below levels of EC trade with countries outside the Community.

The five major countries are markets for significant portions of each others' exports. The United States sends over one-fifth of its exports both to Canada and the European Community and 16 percent to Japan (chart A-3-C). The United States is also the most important market

Chart A-3-C.-- United States trade in animals and products thereof, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

among the five countries for exports of Canada, Japan, and the European Community. Less developed countries receive 29 percent of U.S. exports and one-fifth of EC exports. EC exports to outside countries are about one-fifth as large as shipments to other members of the Community (see table A-3-C).

Non-OECD countries supply about 46 percent of OECD imports (or nearly 60 percent, if intra-EC trade is excluded). Imports by the United States, the United Kingdom, and EC imports from outside sources were each valued at about \$1 billion in 1969 (see table A-3-D). Over one-fourth of U.S. imports are supplied by less developed countries, with an additional two-fifths arriving from other non-OECD countries. Similar percentages of EC imports from outside sources come from non-OECD countries and LDC's. The United Kingdom, on the other hand, has over half of its imports from OECD countries, the greatest part coming from countries other than the five under study. The United States is

a net importer in trade with Canada and the European Community in animals and animal products; Japan and the United Kingdom are net importers from the United States.

#### Trade composition

The sector for animals and products thereof is divided into three subsectors: Live animals; fresh, chilled and frozen meat; and prepared or preserved meat and meat products. Fresh, chilled or frozen meat is the most important of the three subsectors, especially in imports, where it accounts for more OECD imports than the other two subsectors combined, as shown in chart A-3-D.

Chart A-3-D. -- OECD trade in animals and products thereof, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

#### Trade-agreement concessions

The tabulation below shows arithmetic average MFN tariff rates for animals and animal products on pre-trade-agreement base dates compared with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. Each country has had significant reductions in the average level of tariffs, ranging from a 25 percent reduction for the United Kingdom to more than a 75 percent reduction in Canada's average tariff. The Japanese figure shown for 1972 does not reflect Japanese unilateral reductions by 20 to 100 percent made in 1972 on about one-sixth of the Japanese rates in this sector.

Pre-trade-agreement    January 1, 1972  
(Percent ad valorem)

United States	16.3	6.0
European Community <u>1/</u>	18.0	10.6 (plus variable levies)
United Kingdom	9.1	6.8
Japan	12.9	7.7
Canada	24.0	5.1

Each of the five major countries has negotiated GATT concessions on its tariffs for animals and their products. GATT concessions cover 15 percent of United Kingdom tariff lines, one-third of EC lines, half of Canadian lines, 62 percent of Japanese lines, and 95 percent of U.S. tariff lines for the sector. Members of the European Community had negotiated a total of 149 GATT concessions in their national tariffs on animals and animal products prior to the establishment of the EC's Common External Tariff. Of the 149 such concessions, 70 were above the CXT rate, 23 were at the CXT rate, and 56 were below the CXT rate.

Trade complaints

In the animals and animal products sector, the Tariff Commission received 180 complaints concerning practices or policies considered by the respondents to be barriers to trade. Over half of the complaints dealt with various forms of quantitative restrictions and licensing

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 43 tariff lines which continue to be subject to fixed duties alone; it does not include the 115 EC tariff lines subject to a variable levy.

practices; about one-third concerned health or other standards requirements. Sixty percent of the complaints were against Western Europe, with EFTA countries (the four Scandinavian countries plus the United Kingdom, Switzerland, and Austria) accounting for 40 percent of the total, and the European Community countries accounting for 20 percent. Eleven percent of the complaints were directed at the United States, 8 percent at Japan, and 14 percent at 18 developing countries.

Quantitative restrictions and licensing practices.--Most complaints concerning quantitative limitations or restrictive licensing were against Western Europe, where imports of poultry, beef, pork, veal, horses, and cattle were reported to be controlled by restrictive licensing in many countries. Japan was also the object of several complaints. Permission to import often appeared to be contingent upon the sale of domestic output. The European Community permits the importation of sheep and mutton only in amounts that do not interfere with domestic production and prices. Canada has had quantitative limitations on imports of turkeys. Norway, Denmark, Switzerland, the United Kingdom, and Japan were specifically cited as having quotas on meat for the purpose of protecting domestic production. The Meat Import Act under which the United States may impose restrictions on meat imports was criticized by importers.

Most complaints concerning embargoes were against less developed countries and dealt with government orders prohibiting poultry imports. In several less developed countries, an effective embargo results from the use of licensing practices to protect locally produced poultry

(i.e., when sufficient amounts are produced locally, no licenses are issued). Several Scandinavian countries embargo raw poultry and the United States prohibits entry of certain species of wild birds. In developed countries, quotas and embargoes were also implemented via licensing controls.

Standards.--Most nations have health, veterinary or sanitary regulations applicable to meat or live animals sold within their borders. These regulations, imposed for the protection of human health and to prevent the spread of animal diseases, differ among countries, sometimes significantly. The differences give rise to numerous complaints, particularly when an exporter finds his product barred from entry into a foreign market because it cannot meet required standards there, even though it is acceptable in his domestic market.

European Community nations were reported to prohibit, for health reasons, imports of U.S. horsemeat and mutton. West Germany inspection requirements effectively prohibit exports from U.S. meatpacking plants. Denmark, Switzerland, Sweden, and West Germany bar all processed poultry products containing sodium phosphates. No meat of poultry which has been fed estrogen, arsenical or antimonial substances is permitted entry into France or Italy. Italy also charges fees for mandatory veterinary inspection.

The British Commonwealth countries received a sizable number of complaints; most often cited were regulations prohibiting entry of live animals and meats from non-Commonwealth countries. The application of

stricter standards to non-Commonwealth countries (particularly by Australia and New Zealand) was felt to impede trade. Also cited were strict New Zealand quarantine practices on horses (often nine months are required before a horse is allowed entry). United Kingdom health regulations require that meat and meat products must be accompanied by a certificate stating the animal was reared in approved premises under hygienic conditions. The United Kingdom prohibits imports of U.S. pork due to hog cholera and Ireland excludes all imports of meat and meat ingredient products as a precaution against foot and mouth disease.

U.S. veterinary standards prohibit entry of cattle, sheep, goats, swine, beef, veal, lamb, and pork from countries where foot and mouth disease is found. Viewed as discriminatory by foreign suppliers is the 1967 U.S. Wholesome Meat Act stipulating that meat processing plants in foreign countries must comply with U.S. standards before their products can enter the United States. Many foreign suppliers allege that the U.S. requirements are administered for protectionist purposes (i.e. meat products from Sweden currently prohibited because of an outbreak of foot and mouth disease in Sweden in 1960). Live poultry imported into the United States is subjected to a 21 day quarantine unless originating in Canada. A veterinary certificate is also required indicating that the poultry is free of communicable poultry disease and was in the country of origin for 60 days prior to export or since hatched. Japan was also cited in the complaints as having strict quarantine regulations on animals and animal products.

Other processing regulations ranged from Commonwealth countries requiring documents certifying the time and temperature at which canned meats are cooked to Indian regulations stipulating imported poultry must be slaughtered in accordance with Moslem law.

Miscellaneous practices.--The British Commonwealth and customs unions, such as the European Community and the EFTA, were viewed by nonparticipating countries as discriminatory. The fact that imports in less developed countries are often limited by the amount of foreign exchange available was the subject of complaint. Subsidies on whole broiler chickens and parts in Denmark, Hungary, the Netherlands, and Bulgaria were said to adversely affect U.S. exports to third country markets, such as Japan, Hong Kong, Singapore, Saudi Arabia, and Kuwait. The U.S. refusal to honor food stamps for imported ground meat was said to impede imports of this commodity. Mexico used an official price for calculating the duty on live horses, causing the duty per horse to be \$600 or more. The 10 percent Mexican commodity tax on poultry meat and liver was reported to have virtually eliminated U.S. exports to that market. Japanese duties on race horses were characterized as unnecessarily high. The European Community's system of variable levies on beef, veal, and pork was the subject of several complaints. U.S. exporters felt this practice eliminated international price competition.

Fifty-seven of the complaints received by the Commission were accompanied by the complainant's assessment of the trade effect of

the reported barrier. Twenty-three indicated a "small" trade increase could be expected if the barrier were removed; 23 expected a "moderate" increase, and 11 a "significant" increase. For those cases where dollar values were estimated for the increase, increases characterized as "significant" ranged from \$100,000 to \$1.8 million annually. Estimates of expected increases in poultry sales to foreign countries with the elimination of foreign regulations against phosphates, estrogen, and other substances used in the growing and processing of U.S. poultry ranged from 2 to over 1,500 percent of the respondent's present export sales. A producers trade association estimated that if Sweden would rescind its embargo on raw poultry, U.S. sales there would become significant. The same organization also estimated if Lebanese restrictive licensing practices on poultry were discontinued, U.S. export sales would increase over 1,000 percent.

## Live Animals

Live animals include bovine cattle; sheep, lambs, and goats; poultry; horses, asses, mules, and hinnies; and all other animals. 1/

MFN tariffs

Live animals are free of duty in Japan's tariff schedules. For the other four major countries, arithmetic average MFN duties for all live animals (free and dutiable combined) range from 1.6 percent ad valorem to 5.5 percent; weighted average duties range from 0.6 to 7.1 percent. Canada has the lowest arithmetic average; the United Kingdom holds the lowest weighted average. The highest averages are those of the European Community and reflect only fixed duties in the EC tariff schedules (see chart A-3-E). Figures for the European Community do not include any tariff lines subject to variable levies, which are applied to 12 of the 29 EC tariff lines for this subsector and covered 68 percent of 1970 EC imports from sources outside the Community. The United States, with a 4.5 percent arithmetic average and a 5.9 percent weighted average, has the second highest average MFN rates on combined free and dutiable imports. On dutiable items alone, the average tariffs of the four countries are significantly higher than on all products. Canada's averages of 6.3 (arithmetic) and 5 percent (weighted) are the lowest. The Community's averages of 11.6 and 10.9 percent (fixed duties only) are again the highest.

---

1/ For the specific coverage of this subsector, see BTN headings 01.01-01.06.

Chart A-3-E.-- Average MFN tariff rates on live animals  
(Percent ad valorem)

Source: Compiled from national tariffs and trade statistics.

The four countries that have duties on live animals all have significant portions of their tariff provisions duty free. Duty-free status applies to three-quarters of Canadian and United Kingdom provisions, over half of EC fixed duty provisions, and nearly 40 percent U.S. provisions (table A-3-E). Over 30 percent of U.S. provisions for the subsector are in the 0.1-5 percent range. Nearly 13 percent of Canadian provisions, 18 percent of EC provisions, and one-fourth of United Kingdom and U.S. provisions are dutiable in the

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 41 percent of EC provisions, covering 68 percent of EC imports in this subsector in 1970.

5.1-10 percent range. The European Community has nearly 12 percent of its provisions in each of the 10.1-15 and 15.1-20 percent rate brackets.

Preferential tariff treatment for imports of live animals into the five major countries is insignificant. A significant portion of the imports of live animals enter the five countries duty free on an MFN basis.

All Japanese imports and over 90 percent of United Kingdom imports are not subject to tariffs. About one-fourth of Canadian imports, one-fifth of U.S. imports, and over one-third of EC fixed duty imports also enter free (table A-3-F). Over half of Canadian imports are dutiable at rates between 0.1 and 5 percent ad valorem; about half of U.S. imports are dutiable between 5.1 and 10 percent ad valorem. The European Community has over 40 percent of its fixed

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 41 percent of EC provisions, covering 68 percent of EC imports in this subsector in 1970.

duty imports dutiable between 5.1 and 10 percent ad valorem, as well as some entries in the 15.1-20 percent ad valorem rate range.

The United States has the most detailed tariff schedule for this subsector, with 49 lines, followed by the European Community, with 29 tariff lines. Canada has 24 lines; Japan has 13; and the United Kingdom has 8.

#### Trade importance

Among the 28 agricultural subsectors, the live animals subsector is of moderate importance, ranking 11th in both exports and imports in 1969 OECD trade. OECD exports of live animals (\$796 million in 1969) accounted for nearly 4 percent of total OECD agricultural exports, and imports of live animals (\$1.1 billion) for 3.4 percent of total imports. For the United States, the subsector is of slightly less importance, ranking 15th in exports and 13th in imports among the 28 agricultural subsectors, accounting for less than 1 percent of U.S. agricultural exports and slightly over

Chart A-3-F. -- OECD trade in live animals, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

2 percent of U.S. agricultural imports in 1969. As shown in chart A-3-F, imports were considerably larger than exports for OECD countries as a whole and for each of the five major countries except Canada.

In 1970, imports of live animals by the 13 GATT tariff study countries were valued at \$757 million. Imports by members of the European Community from other EC members were an additional \$410 million.

### Trade network

Ninety percent of OECD exports of live animals go to other OECD countries (see table A-3-G). The five major countries account for about two-thirds of OECD exports; however, excluding trade between members of the European Community, none of the five major countries has large exports of live animals. EC shipments within the Community are more than eight times the value of exports to outside countries. If intra-EC shipments are excluded, the United Kingdom, with \$71 million of exports, is the largest shipper of live animals among the five countries, followed by the United States and Canada, each with \$50 million of exports. Over half of United Kingdom exports go to "other" OECD countries. Nearly 32 percent of EC exports to outside countries go to less developed countries, as do 46 percent of U.S. exports. Canada sends 86 percent of its exports to the United States.

The five major countries also account for over 90 percent of OECD imports of live animals. One-third of OECD imports come from non-OECD sources (see table A-3-H). The European Community is the largest

Table A-3-H.-- OECD imports of live animals, 1969

importer of live animals, with \$391 million of imports from outside sources (plus \$328 million from EC members), followed by the United Kingdom and the United States, each with about \$130 million. Over 90 percent of United Kingdom imports come from the "other" OECD countries, as do over one-fourth of EC imports from outside sources. Nearly two-thirds of EC imports from outside sources come from non-OECD countries. The United States receives most of its imports of live animals from less developed countries (58 percent) and from Canada (35 percent).

Trade-agreement concessions

In the tabulation below, arithmetic average MFN tariffs on pre-trade-agreement base dates are compared with average rates in effect on January 1, 1972, for each of the five major countries. Average tariff levels of each of the five countries have undergone reductions. Japan has totally removed its tariff during the period.

	<u>Pre-trade-agreement</u> (Percent ad valorem)	<u>January 1, 1972</u>
United States	14.2	4.5
European Community <sup>1/</sup>	9.9	5.5 (plus variable levies)
United Kingdom	3.8	2.5
Japan	7.7	0.0
Canada	15.0	1.6

Each of the members of the European Community negotiated national GATT tariff concessions on live animals prior to the establishment of the EC's Common External Tariff. Of the total 31 such concessions, 9 were above the CXT rate, 8 were below the CXT rate, and 14 were at the CXT rate.

Each of the five major countries has negotiated GATT concessions on some of its tariff provisions for live animals. GATT concessions cover nearly 90 percent of U.S. provisions, over three-fourths of Japan's, 46 percent of Canada's, and well over a third of EC and United Kingdom provisions.

---

<sup>1/</sup> For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 17 tariff lines which continue to be subject to fixed duties alone; it does not include the 12 EC tariff lines subject to a variable levy.

Rates of duty for live swine on pre-trade-agreement base dates are compared with January 1, 1972, rates in table A-3-I. For the United Kingdom and Japan, all imports of live swine were duty free on pre-trade-agreement base dates. Although the Japanese permanent rate remained free, a temporary duty of 10 percent ad valorem on live swine weighing less than 50 kilograms was levied beginning in 1971. The European Community admits wild and pure-bred live swine for breeding duty free; other live swine are dutiable under variable levies. The U.S. and Canadian duties have both been reduced in trade agreements.

Table A-3-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on live swine

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	12.8% AVE <sup>2/</sup>	6.4% AVE <sup>3/</sup>	3.2% AVE <sup>4/</sup>	100.85

European Community--	Free; 16%	Free; Variable levies <sup>6/</sup>	Free; Variable levies <sup>8/</sup>	01.03
United Kingdom-----	Free	Free	Free	01.03
Japan-----	Free	Free	Free <sup>2/</sup>	01.03

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percent is ad valorem equivalent of specific rate of duty (2 cents per pound), calculated on 1971 import values.

<sup>3/</sup> Percent is ad valorem equivalent of specific rate of duty (1 cent per pound), calculated on 1971 import values.

<sup>4/</sup> Percent is ad valorem equivalent of specific rate of duty (0.5 cent per pound), calculated on 1971 import values.

<sup>5/</sup> Percent is ad valorem equivalent of specific rate of duty (3 cents per pound), calculated on 1971 import values.

<sup>6/</sup> Percent is ad valorem equivalent of specific rate of duty (1 cent per pound), calculated on 1971 import values.

<sup>7/</sup> Percent is ad valorem equivalent of specific MFN rate of duty (0.5 cent per pound), calculated on 1971 import values. Duty is presently suspended under a temporary rate, subject to possible renewal in February 1974.

<sup>8/</sup> Purebred breeding stock and wild swine are admitted free. For other live swine, autonomous rate fixed duties, have been replaced by variable levies.

<sup>2/</sup> Temporary rates, including one of 10 percent ad valorem, were in effect beginning in 1971.

## Fresh, Chilled, or Frozen Meat

Fresh, chilled, or frozen meat includes the edible meat and offal of bovine cattle, sheep, goats, pigs, horses, poultry, and other similar animals. 1/

MFN tariffs

Imports of fresh, chilled, or frozen meat into the five major countries face arithmetic average MFN tariffs ranging from 3.7 to 11.3 percent ad valorem for all meat (free and dutiable combined) and weighted average MFN tariffs of from 2.8 to 13.5 percent. For dutiable products alone, arithmetic averages are in all instances slightly higher, but the weighted averages are either identical with, or virtually the same as the weighted averages for all products (chart A-3-G). Canada has the lowest averages; the European Community averages, which reflect only the tariff lines under fixed duties, are the highest. The European Community applies variable levies to 59 of its 74 tariff lines for this subsector, covering 70 percent of 1970 EC imports from sources outside the Community. Japan's tariff averages, which are the second highest, fall slightly below those of the Community.

The distribution of MFN tariff provisions for fresh, chilled, or frozen meat, by duty level, is shown in table A-3-J. Over 70 percent of U.S. provisions and half of Japan's are about equally divided in the two rate ranges between 0.1 and 10 percent ad valorem, with the remainder of the provisions largely bearing rates above 10 percent. The

---

Total-----	100.0	100.0	100.0	100.0	100.0

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 80 percent of EC provisions, covering 70 percent of EC imports in this subsector in 1970.

United Kingdom has almost half of its provisions in the 5.1-10 percent ad valorem rate range, with the remainder either duty free or dutiable at rates no higher than 5 percent. Canada has 46 percent of all provisions in the 0.1-5 percent bracket, almost a third duty free, and the remainder in the range of 10.1-15 percent ad valorem. Forty percent of the European Community's fixed-rate provisions fall in the 10.1-15 percent range and 20 percent fall in the 15.1-20 percent range.

In 1970, over one-fifth of Canadian imports and over 30 percent of United Kingdom imports were accorded preferential tariff treatment. The United States and Japan have no preferential imports and preferential entries by the European Community from outside countries are negligible.

MFN imports of fresh, chilled, or frozen meat which enter the five major countries free of duty are nil or negligible, except for the United Kingdom where 13 percent of entries enter free (see table A-3-K).

Table A-3-K.--Distribution, by duty level, of MFN imports of fresh, chilled, or frozen meat

(In percent)					
Duty level	Canada	United States	Japan	European Community <sup>1/</sup>	United Kingdom
Free-----	0.1	0.4	3.0	0.4	13.1

5.1-10.0 percent---	-	92.2	73.4	2.5	14.3
10.1-15.0 percent--	2.0	-	.4	57.2	-
15.1-20.0 percent--	-	-	4.3	26.0	-
20.1-25.0 percent--	-	-	18.9	-	-
Total-----	100.0	100.0	100.0	100.0	100.0

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 80 percent of EC provisions, covering 70 percent of EC imports in this subsector in 1970.

Nearly 98 percent of Canadian imports and nearly 73 percent of United Kingdom imports are dutiable in the 0.1-5 percent ad valorem range. Over 92 percent of U.S. imports and nearly three-fourths of Japanese imports enter at duty rates between 5.1 and 10 percent ad valorem. Japan has nearly one-fifth of imports in the 20.1-25 percent range, the highest duty range for imports by any of the five countries. The bulk of the 30 percent of EC imports subject to fixed duties pay rates above 10 percent ad valorem.

The European Community has the most detailed tariff schedule in this subsector, with 74 lines; the United States follows with 38 lines; Japan, with 8 lines, has the least detailed schedule. Canada and the United Kingdom have 13 and 17 lines, respectively.

#### World production

World production of red meat <sup>1/</sup> amounted to about 138.9 billion pounds in 1970, as shown in the tabulation below. The five major countries account for nearly half of world output. The United States is the principal producer, accounting for about 26 percent of the world supply, and the European Community is second, with about 15 percent. Production in the Soviet Union is slightly lower than that of the European Community. The United Kingdom, Japan, and Canada each account for from 1.5 to 3.4 percent of the world output of red meat, as shown in the following tabulation (in billions of pounds):

---

<sup>1/</sup> The term "red meat" encompasses all edible meat except poultry.

	<u>Beef and veal</u>	<u>Pork</u>	<u>Total production 1/ of red meat</u>
United States	22.3	13.4	36.3
European Community	9.5	11.1	21.4
United Kingdom	2.1	2.1	4.7
Canada	1.9	1.3	3.3
Japan	0.6	1.4	2.0
World 2/	74.7	53.1	138.9

The combined production of ready-to-cook poultry meat by the five major countries and eight additional European countries was 19.6 billion pounds in 1970. About 53 percent of this total was U.S. production, while nearly 21 percent was production by the European Community.

#### Trade importance

Fresh, chilled, or frozen meat is the most important of the three subsectors of animals and animal products, accounting for nearly half of OECD exports and over half of imports. This subsector is also one of the most important of the 28 agricultural subsectors, ranking third in both exports and imports, and accounting for 6.5 percent of OECD agricultural exports and nearly 9 percent of OECD agricultural imports. For the United States, the subsector is of slightly less importance, ranking sixth in exports and fourth in imports among the 28 agricultural subsectors, and accounting for 3 percent of U.S. agricultural exports in 1969. As shown in chart A-3-H, imports are considerably larger than exports for OECD countries as a whole and for each of the five major countries.

---

1/ Production figures are for carcass weight, excluding offal. Totals include mutton, lamb, goat, and horse meat and exclude rabbit and poultry meat.

2/ "World" refers to 58 nations listed by the U.S. Department of Agriculture in Agricultural Statistics, 1972, Table 516.

Chart A-3-H. -- OECD trade in fresh, chilled, or frozen meat, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Imports of fresh, chilled, or frozen meat by the 13 GATT tariff study countries were valued at \$2.1 billion in 1970. Intra-EC shipments were an additional \$847 million. OECD imports in 1969 were valued at \$2.9 billion, exports at \$1.4 billion.

#### Trade network

The five major countries account for nearly 75 percent of OECD exports of fresh, chilled, or frozen meat. However, intra-EC shipments make up over half of OECD exports. Excluding trade between members of the Community, the five major countries have a rather small level of exports. The United States,

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

with 1969 exports of \$172 million, is the largest exporter, followed by Canada, with \$68 million. The United States is the major market for Canadian exports, while the United States has important export markets in each of the other four major countries and in less developed countries (see table A-3-L). "Other" OECD countries, as a group, export more than the combined total of the five major countries (excluding intra-EC shipments). The European Community is the largest market for exports of the "other" OECD countries.

In trade among OECD countries, imports of fresh, chilled, or frozen meat are about equal to exports. However, OECD imports from non-OECD sources are about 16 times as great as OECD exports to those countries. Non-OECD countries supply about two-thirds of Canadian, Japanese and EC imports (excluding intra-EC trade), over three-fourths of United Kingdom imports, and about

Table A-3-M.-- OECD imports of fresh, chilled, or frozen meat, 1969

(Millions of dollars)

85 percent of U.S. imports (see table A-3-M). The European Community, the United Kingdom, and the United States are the major importers of fresh, chilled, or frozen meat (each with about \$550 million of imports in 1969). Trade among the five major countries is not large, but the United States supplies about one-third of Canadian imports, over one-fourth of Japanese imports, and has minor importance as a supplier to the Community.

#### Trade-agreement concessions

In the tabulation below, arithmetic average MFN tariffs for fresh, chilled, or frozen meat on pre-trade-agreement base dates are compared with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. Average fixed rates of the European Community

and average MFN tariffs of the other four countries have all undergone reductions since pre-trade-agreement dates. Excluding the Community, reductions range from over 30 percent for the United Kingdom to 84 percent for Canada. The 1972 average shown for Japan does not reflect unilateral reductions by 33 or 100 percent made in 1972 on nearly one-third of the Japanese tariff lines in this subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	18.2	7.3
European Community <sup>1/</sup>	17.8	11.3 (plus variable levies)
United Kingdom	8.5	5.9
Japan	15.7	10.9
Canada	23.5	3.7

Each of the five major countries has made concessions under the GATT on some of its tariff lines in this subsector. GATT concessions cover over 97 percent of U.S. tariff lines, approximately two-thirds of Canadian and Japanese lines and nearly 40 percent of EC lines. For the United Kingdom, nearly 24 percent of tariff provisions are fully covered and about 6 percent are partially covered by GATT concessions.

Each of the members of the European Community had negotiated GATT tariff concessions on provisions in the national tariff schedules for fresh, chilled, or frozen meat prior to establishment of the EC's Common External Tariff. There were 57 such national concessions, 28 of which were above the CXT rate, 6 were at the CXT rate and 23 below the CXT rate.

---

<sup>1/</sup> For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 15 tariff lines which continue to be subject to fixed duties alone; it does not include the 59 EC tariff lines subject to a variable levy.

Tariff reductions which have occurred on dead poultry since pre-trade-agreement base dates are shown in table A-3-N. Of the

Table A-3-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on dead poultry

Japan-----	10%; 15%	20%	15%; 20%	02.02

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Range includes ad valorem equivalents of a specific rate of duty (10 cents per pound), calculated on 1970 or 1971 import values, and an ad valorem rate of 25 percent.

<sup>3/</sup> Range includes ad valorem equivalents of specific rates of duty (from 3-10 cents per pound), calculated on 1970 or 1971 import values, and an ad valorem rate of 12.5 percent.

<sup>4/</sup> Autonomous rate fixed duties have been replaced by variable levies.

<sup>5/</sup> Percent is ad valorem equivalent of a specific rate of duty (3d. per pound), calculated on 1971 import values.

seven U.S. tariff provisions for dead poultry, six were reduced from the pre-trade-agreement rate. Canadian duties on dead poultry were reduced to 12.5 percent ad valorem in 1961. The Canadian ad valorem rate on eviscerated poultry must be equivalent to not less than 5 cents nor more than 10 cents per pound. The European Community has replaced the fixed duties initially established in the CXT with variable levies. The United Kingdom has had no change in its tariff from pre-trade-agreement levels. Japan initially increased its duties from 1954 levels, but made a Kennedy Round reduction in its duty on turkeys from 20 percent to 15 percent ad valorem.

Rate changes which have occurred on fresh, chilled, or frozen beef since pre-trade-agreement base dates are shown in table A-3-0.

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percent is ad valorem equivalent of specific rate of duty (6 cents per pound), calculated on 1971 import values.

<sup>3/</sup> Percent is ad valorem equivalent of specific rate of duty (3 cents per pound), calculated on 1971 import values.

<sup>4/</sup> Percent is ad valorem equivalent of specific rate of duty (8 cents per pound), calculated on 1971 import values.

<sup>5/</sup> Percent is ad valorem equivalent of specific rate of duty (3 cents per pound), calculated on 1971 import values.

<sup>6/</sup> The variable levy is applicable only under certain conditions.

<sup>7/</sup> Range includes ad valorem equivalent of specific rates of duty (2/3 or 3/4 d. per pound), calculated on 1971 import values.

None of the five countries made tariff reductions on fresh, chilled, or frozen beef during the Kennedy Round. The United Kingdom initially had no duties on imports of fresh, chilled, or frozen beef, but licenses were required for imports from non-Commonwealth countries; however, the United Kingdom has since imposed tariffs. The European Community had the highest pre-trade-agreement fixed duties of the five countries, and fixed duties have remained unchanged from the pre-trade-agreement rate. Since the CXT was established, however, under the EC's Common Agricultural Policy variable levies have been added to the fixed duties on meat. Japanese tariffs have increased; Canadian and U.S. tariffs have undergone significant reductions.

## Meat Prepared or Preserved and other Meat Products

Prepared or preserved meat and other meat products include principally dried, salted or smoked meat, sausages and similar products, and meat products in airtight containers. 1/

MFN tariffs

For four of the five major countries (the United States is the exception) average MFN tariffs on prepared meat products are significantly higher than their average tariffs for the animals and animal products sector as a whole. The United States has three of its four averages for the subsector below its corresponding average tariffs for the sector as a whole (chart A-3-I). The lowest average tariffs are held by the United States, with arithmetic averages of 6.7 percent ad valorem and weighted averages of 5.1 percent (U.S. averages for all products and dutiable products are identical). Japan and the European Community have the highest average MFN tariffs. The average tariffs shown in chart A-3-I reflect only those EC provisions which have fixed duties alone; they do not reflect any tariff lines in which variable levies are applicable (44 of the 55 EC tariff lines for this subsector, covering 37 percent of EC imports in 1970). The EC weighted average rate for dutiable products subject to fixed duties alone reaches 25 percent ad valorem.

The distribution of MFN tariff rates for prepared meats, by duty level, is shown in table A-3-P. The bulk of U.S. provisions (59 percent)

---

1/ For the specific coverage of this subsector, see BTN headings 02.05; 02.06; 16.01-16.03.

Chart A-3-1. -- Average MFN tariff rates on prepared or preserved meat and other meat products  
(Percent ad valorem)

are concentrated in the 5.1-10 percent ad valorem duty range and most of the rest have duties between 0.1 and 5 percent. Canadian and United Kingdom provisions are dispersed in wider ranges of duty than those of the United States. One-third of Canada's provisions have duties between 15.1 and 20 percent; 29 percent fall in the 0.1-5 percent ad valorem bracket; and almost one-fifth are free. The United Kingdom rates have their largest concentration in the 5.1-10 percent, free, and 10.1-15 percent brackets. Japan has 37.5 percent of its provisions dutiable in the 20.1-25 percent ad valorem range. The European Community has about 18 percent of its fixed duty provisions in both the 20.1-25 percent and 25.1-30 percent ranges, and over one-third in the 15.1-20 percent range.

In 1970, nearly two-thirds of United Kingdom imports, nearly 10 percent of Canadian imports, and nearly 5 percent of EC imports were given preferential tariff treatment.

One-fourth of Canada's imports and two-fifths of European Community fixed duty imports of prepared or preserved meat are duty free (table A-3-Q). Over one-fourth of Canadian imports and almost

Table A-3-Q.--Distribution, by duty level, of MFN imports of prepared or preserved meat and other meat products

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 80 percent of EC provisions, covering 37 percent of EC imports in this subsector in 1970.

70 percent of U.S. imports are at duty levels between 0.1 and 5 percent ad valorem. No U.S. imports are dutiable above 10 percent ad valorem. Japan's imports are concentrated in two rate brackets, 10.1-15 percent and 20.1-25 percent. The European Community has over half of its fixed duty imports entering at rates between 25.1 and 30 percent ad valorem.

The European Community has the most detailed tariff schedule, with 55 lines in this subsector. The United States has 32 lines, the United Kingdom has 27 lines, Canada has 21, and Japan has 8.

#### Trade importance

The prepared or preserved meat and other meat products subsector is of moderate importance among the 28 agricultural subsectors, ranking 12th in OECD exports and imports. It accounts for 3.5 percent of OECD agricultural exports and 3.2 percent of imports. For the United States, the subsector ranks 19th in exports and 7th in imports, accounting for less than 0.5 percent of U.S. agricultural exports, but nearly 6 percent of U.S. agricultural imports. As shown in chart A-3-J, OECD countries

Chart A-3-J. -- OECD trade in prepared or preserved meat and other meat products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

as a whole, and each of the five major countries, except the European Community, are net importers of these products.

In 1970, the 13 GATT tariff study countries imported over \$1 billion of prepared or preserved meat and other meat products. Members of the European Community shipped an additional \$130 million to other EC members. OECD imports in 1969 were valued at \$1 billion, exports at \$751 million.

#### Trade network

"Other" OECD countries as a group are the chief exporters in this subsector. Among the five major countries, only the European Community

has significant exports (see table A-3-R). Shipments from the Community to outside destinations go largely to the United States (41 percent) and the United Kingdom (30 percent).

Table A-3-R.--OECD exports of prepared or preserved meat and other meat products, 1969

Three of the major countries--the United Kingdom, the United States, and the European Community--account for 93 percent of OECD imports of prepared or preserved meat and meat products. The United Kingdom is the largest importer (\$484 million in 1969), followed by the United States (\$319 million). Almost two-thirds of United Kingdom imports are supplied by "other" OECD countries (see table A-3-S).

The United States receives nearly half of its imports from non-OECD countries (largely LDC's). Most Japanese imports and EC

imports from outside sources also come from non-OECD countries. Over half of Canadian imports are from the United States.

#### Trade-agreement concessions

Average MFN tariffs of the five major countries for prepared or preserved meat on pre-trade-agreement base dates are compared in the following tabulation with average rates in effect on January 1, 1972. Reductions which have occurred in average MFN tariffs range from 10 percent for Japan to 71 percent for Canada. The 1972 Japanese figure does not reflect unilateral reductions by 20 percent, 33 percent, or 60 percent made in 1972 in several Japanese rates in this subsector.

Pre-trade-agreement     January 1, 1972  
(Percent ad valorem)

United States	17.8	6.7
European Community <sup>1/</sup>	23.1	17.5 (plus variable levies)
United Kingdom	11.1	8.7
Japan	18.8	16.9
Canada	34.5	10.0

Of the five major countries only the United Kingdom has made no GATT concessions on its tariff provisions for prepared or preserved meat. GATT concessions cover about one-fourth of EC lines, 38 percent of Japanese lines, well over 40 percent of Canadian lines, and all U.S. tariff lines for prepared or preserved meat and meat products.

Prior to the establishment of the EC's Common External Tariff, national tariffs of the members of the European Community contained a total of 61 GATT concessions. Of these GATT tariff concessions, 33 were above the CXT rate, 25 were below the CXT rate, and 3 were at the CXT rate.

Pre-trade-agreement rates on sausages are compared with rates in effect on January 1, 1972, in table A-3-T. The United States has had reductions of about 50 percent in duties on pork sausage (other than fresh) and on beef sausage prior to the Kennedy Round. In the Kennedy Round, the U.S. duty on fresh pork sausage was reduced about 50 percent

---

<sup>1/</sup> For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 11 tariff lines which continue to be subject to fixed duties alone; it does not include the 44 EC tariff lines subject to a variable levy.

Table A-3-T.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on sausages

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	4.2-30% <sup>2/</sup>	2.1-15% <sup>3/</sup>	2.1-7.5% <sup>4/</sup>	107.10-.25
Canada-----	5.3% AVE <sup>5/</sup>	1.8% AVE <sup>6/</sup>	0.9% AVE <sup>7/</sup>	1002-1
European Community--	21%; 24%	Variable levies <sup>8/</sup>	Variable levies <sup>8/</sup>	16.01
United Kingdom-----	30%	20%	15%	16.01
Japan-----	25%	25%	25%	16.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Range includes ad valorem equivalents of 4.2 and 5.5 percent, calculated on 1971 import values, and ad valorem rates of 20 and 30 percent.

<sup>3/</sup> Range includes ad valorem equivalents of 2.1 and 5.5 percent, calculated on 1971 import values, and ad valorem rates of 10 and 15 percent.

<sup>4/</sup> Range includes ad valorem equivalents of 2.1 and 2.7 percent, calculated on 1971 import values, and ad valorem rates of 5 and 7.5 percent.

<sup>5/</sup> Ad valorem equivalent of specific rate of duty (6 cents per pound), calculated on 1971 import values.

<sup>6/</sup> Ad valorem equivalent of specific rate of duty (2 cents per pound), calculated on 1971 import values.

<sup>7/</sup> Ad valorem equivalent of specific rate of duty (1 cent per pound), calculated on 1971 import values.

<sup>8/</sup> Autonomous rate fixed duties have been changed to variable levies. For liver sausage, the ceiling on the variable levy is 24 percent ad valorem.

and rates on beef sausage were again reduced 50 percent. The Canadian specific duty on sausage decreased from 6 cents to 2 cents per pound prior to the Kennedy Round, and decreased further to 1 cent per pound in the Kennedy Round, as reflected in the ad valorem equivalents in the table. United Kingdom duties on sausage were reduced by one-third prior to the Kennedy Round and by one-fourth in the Kennedy Round. The EC fixed rates originally established under the Common Agricultural Policy were replaced by variable levies. The Japanese tariff remained constant at 25 percent ad valorem, the highest fixed rate of the five countries on January 1, 1972.

## OIL SEEDS, FATS AND OILS, AND THEIR PRODUCTS

The sector for oil seeds, fats and oils, and their products includes: Oleaginous nuts and fruits, such as peanuts, copra, palm nuts and kernels, soybeans, flaxseed, cottonseed, castor beans, sunflower seed, rapeseed and mustard seed; the flour, meal, oil and residues of oil seeds, oil nuts and oil kernels; margarine and shortening; lard, rendered poultry fat, imitation lard, and other prepared animal fats. Also included are waxes of animal or vegetable origin and oil of fish and marine animals. 1/

### MFN tariffs

Arithmetic average MFN duties of the five major countries for all products (combined dutiable and free) in this sector fall within the relatively narrow range between 6.2 and 9.6 percent ad valorem (see chart A-4-A). Considering fixed duties only, the European Community has the lowest arithmetic average tariff on all products, and the United States has the highest. The average for the European Community excludes 9 of the 58 EC provisions (covering 5 percent of EC imports in the sector) which are subject to variable levies. 2/

Imports for each of the five major countries tend to fall within the lower duty or duty-free sections of tariff provisions, as indicated by the fact that each country has weighted average duties on all products

---

1/ For the specific coverage of this sector, see BTN headings 12.01; 12.02; 15.01-15.17; 23.04.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

2/ For 24 of the remaining 49 EC provisions, a countervailing fee may be collected in addition to the duty under certain conditions.

Chart A-4-A. -- Average MFN tariffs on oil seeds, fats and oils and their products  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging from 11 percent to 100 percent made in 1972 on over one-third of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

considerably lower than its arithmetic averages. The European Community has the lowest weighted average tariff on all products (excluding products subject to variable levies) and the United Kingdom has the highest, 5.8 percent ad valorem. On dutiable products alone, Canada has the highest average tariffs, with an arithmetic average of 14.1 percent ad valorem and a weighted average of 12.4 percent. The European Community has the lowest arithmetic average (excluding products covered by variable levies) and Japan has the lowest weighted average.

Imports of oil seeds, fats and oils, and their products under preferential rates are quite significant for the United Kingdom and the

United States. In 1970, 61 percent of United Kingdom imports and 54 percent of U.S. imports entered under preferential duties instead of MFN duties. In contrast, less than 10 percent of Canadian imports, less than 6 percent of EC imports originating outside the Community, and no Japanese imports were dutiable at preferential rates.

Percentages of duty-free tariff provisions for products in this sector in the tariff schedules of the major countries ranged from 17.1 percent for the United Kingdom to 43.1 percent for Canada (table A-4-A). The European Community <sup>1/</sup> and the United States each have about one-fourth of their MFN rate provisions duty free and Japan has 30 percent. The United States and the European Community each have about 28 percent of their provisions at duty rates between 0.1 and 5 percent ad valorem. Forty-six percent of the United Kingdom

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which applied to 16 percent of EC provisions, covering 5 percent of EC imports in this sector in 1970.

80 percent of their imports duty free, and the United Kingdom over half of its imports. Nearly one-fourth of Japanese imports and over one-third of U.S. imports enter duty free. Almost all imports by the five countries enter duty free or paid rates no higher than 15 percent ad valorem. Canada, the United States, and Japan have small amounts of imports at higher rates. Half of U.S. imports are divided between the two rate brackets between 0.1 and 10 percent ad valorem. Fifty-seven percent of Japanese imports and 30 percent of United Kingdom imports are dutiable at rates between 5.1 and 10 percent ad valorem.

<sup>1/</sup> The EC percentage excludes variable levy products and is therefore overstated by about 5 percent.

The United States has the most detailed tariff schedule in this sector, with 132 lines. Canada is second, with 109 lines. Japan has 66 lines, the European Community has 58, and the United Kingdom has 41.

#### World production

World production of oil seeds, fats and oils, and their products is estimated to have exceeded 134 million metric tons in 1970. Of this total, almost 85 million metric tons were accounted for by oil seeds, and over 39 million metric tons by fats and oils. The remainder consisted of oil seed cake and meal, natural waxes and products, and fatty acids and alcohols. Soybean production was the most important component of total production of the various oil seeds, and the United States accounted for 74 percent of the world total for soybeans, as shown in table A-4-C.

Table A-4-C.--Oil seeds: World production of selected items, by specified countries, 1970

Total-----	41,764	21,497	17,174		4,151

1/ Not separately reported; included in all other.

Source: U.S. Department of Agriculture, Agricultural Statistics, 1971.

Of the five countries studied, the United States is the most important producer of the principal oil seeds, except for flaxseed, which is produced principally in Canada. In fats and oils of all types included here, the United States, similarly, was the principal producer among the five countries in 1970, accounting for about 11 million metric tons, or 29 percent of the world total.

### Trade importance

Among the nine agricultural sectors, oil seeds, fats and oils, and their products ranked fourth in OECD agricultural exports in 1969 and third in imports. In 1970, the sector was the third largest in trade for both exports and imports, accounting for about 13 percent of each. For the United States, the sector ranks second among agricultural exports, sixth in imports.

Imports by the GATT tariff study countries in 1970 were valued at almost \$4 billion, and intra-EC shipments were an additional \$372 million. The sector ranks second in terms of total agricultural imports of the GATT tariff study countries. OECD 1969 imports were \$3.7 billion (including \$300 million of intra-EC shipments) (chart A-4-B), but in 1970 increased to \$4.6 billion (intra-EC shipments, \$373 million).

Chart A-4-B. -- OECD trade in oil seeds, fats and oils, and their products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

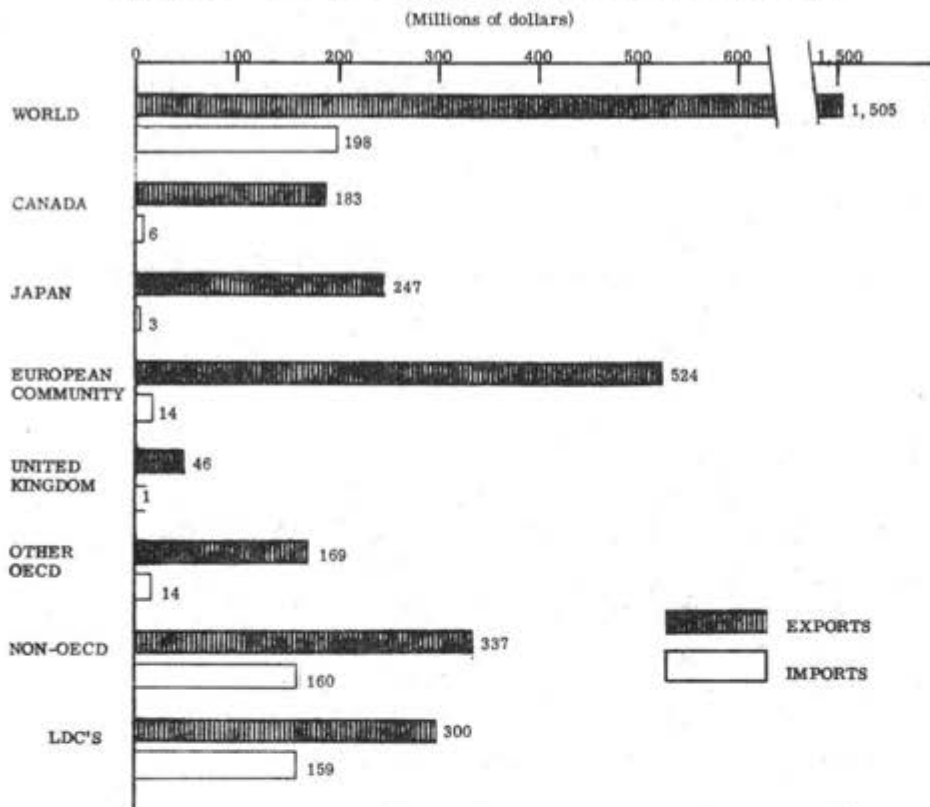

U.S. exports of \$1.5 billion comprised over one-fourth of total U.S. agricultural exports in 1969; the shipment of \$2.2 billion in these products accounted for almost one-third of U.S. agricultural exports in 1970. However, in 1969 the United States imported only \$198 million, or less than 4 percent of total U.S. agricultural imports. Soybean products are a principal component of U.S. exports.

#### Trade network

The five major countries account for 89 percent of OECD exports and 84 percent of OECD imports. The United States is by far the largest exporter of the five, supplying over 80 percent of exports of the five countries and 70 percent of total OECD exports (excluding intra-EC shipments). The largest markets for U.S. exports among the five major countries are the European Community, absorbing \$524 million, Japan (\$247 million), and Canada (\$183 million). These three countries together take over 60 percent of U.S. total shipments (see chart A-4-C). The European Community is the second largest exporter among the five countries, shipping to non-EC destinations \$204 million in 1969, mostly to countries other than those under review. Intra-EC shipments exceed exports to outside countries. Canada has exports of \$117 million; exports of the United Kingdom and Japan are negligible (table A-4-D).

The largest importer is the European Community, accounting for over half of total imports by OECD countries. Forty-five percent of OECD imports come from non-OECD sources, mostly from less developed countries, which as a group were the principal suppliers to the Community,

Chart A-4-C. -- United States trade in oil seeds, fats and oils, and their products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

the United Kingdom, and the United States. Except for the United States, each of the five major countries has more imports than exports. The United States was the principal supplier of imports by Japan and Canada, and an important supplier to the Community. Intra-EC shipments are equal to 19 percent of EC entries from outside sources (table A-4-E).

### Trade composition

The oil seeds, fats and oils, and products sector is composed of two subsectors: Vegetable oils, seeds and oilcake; and other fats, oils, waxes and products. As shown in chart A-4-D, the first subsector is much more important than the second, accounting for 83 percent of OECD trade in the sector.

Chart A-4-D. -- OECD trade in oil seeds, fats and oils, and their products, by subsector, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

Average MFN tariff levels of the five major countries on January 1, 1972, are compared with average tariff levels on pre-trade-agreement base dates in the following tabulation. The figures given for all countries are arithmetic averages. The 1972 figure for Japan does not reflect the unilateral reductions made on over one-third of Japanese rates in this sector in 1972.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	18.6	9.6
European Community	<u>1/</u> 8.4	<u>1/</u> 6.2 (plus variable levies)
United Kingdom	9.8	7.9
Japan	11.0	7.6
Canada	15.0	8.0

All but 13 percent of U.S. provisions in this sector are covered by GATT concessions. The Community has 72 percent of its provisions fully covered under the GATT and an additional 10 percent partially covered. For the United Kingdom, 24 percent are fully covered and 20 percent partially covered. Three-quarters of Japan's provisions have been the subject of GATT concessions, but only about 17 percent of Canada's.

Before adoption of the European Community's Common External Tariff, each of the members of the European Community had negotiated GATT tariff concessions in this sector. Of the 285 total concessions contained in national schedules, 137 were above the CXT rate, 105 were below the CXT rate, and 43 were at the CXT rate.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the tariff lines which continue to be subject to fixed duties alone; it does not include any tariff lines subject to a variable levy.

### Trade complaints

The U.S. Tariff Commission received 57 complaints from producers and traders of oil seeds, fats, and oils concerning practices or policies which they felt inhibited development of their trade. About three-fourths of the complaints were against developed countries. The United States was the single country drawing the largest number of complaints, but the EC countries as a group drew almost twice as many protests as the United States. <sup>1/</sup> Thirty percent of the complaints were against quantitative restrictions, embargoes and licensing; about one-third were against various nontariff charges on imports (including variable levies).

Quantitative restrictions, embargoes, and licensing.--Complaints were received concerning U.S. quotas on butter substitutes and peanuts and the Austrian and Norwegian quotas on poultry fat. Also cited was the U.S. embargo on imports of sperm and whale oil. A large U.S. exporter reported that import licenses for shipment of soybean meal into Spain are granted only when the import price is above a certain

---

<sup>1/</sup> After the Commission's survey had been completed, the United States imposed export restrictions during the summer of 1973 on soybeans, cottonseed, and certain of their products and some additional categories of farm commodities which are competitive with soybeans and cottonseed, including livestock protein feed, edible oil and animal fats. The initial restrictions were later liberalized and were terminated at the end of September. The action drew strong official protests, especially from several of the foreign governments whose populations rely heavily on U.S. supplies of the restricted products to maintain the minimum level of protein in their diets. The restraints also triggered export restrictions by various other countries in order to maintain their supplies of protein at adequate levels. These more recent restrictions resulting during the period of price-supply distortions of 1973 have not been included in the list of trade complaints discussed herein.

minimum price. A Danish import license is required for the importation of sweetened fats. Yugoslavian exchange quotas were viewed as discriminatory, and Yugoslavian foreign exchange retention quotas were also alleged to hamper trade in oils and oil seeds. A bilateral agreement between East and West Germany regarding soybean meal gives preference to West German produced soybean meal. The Indian Government requires that flaxseeds and castor beans be processed before exportation; the export of unprocessed seeds and beans is banned. Austrian and Swedish minimum price controls on unrendered poultry fat act as a trigger for levies or supplementary charges; traders alleged price fixing of this nature operates in the same manner as a quantitative restraint.

Tariffs and nontariff charges on imports.--The Hungarian meal import duty is 10 percent more for U.S. meal than for any other foreign produced meal. In Guadeloupe, a local tax is levied on U.S. soybean imports, but not on soybean imports from the European Community. The nondiscriminatory Korean import tax of 25 percent on soybeans, 70 percent on meal and 60 percent on oil was cited, with the accompanying complaint that Chilean fish meal enters Korea free of duty. Also cited were the U.S. import duty on castor oil and the Iranian nondiscriminatory import tax on oil content of soybeans (\$66 per ton). In the European Community, in order to protect domestic producers, the variable import levy on fats fluctuates with domestic supplies. Austrian, Swedish, and Swiss variable levies

similarly eliminate the price competition of imports with the edible oils and poultry fat in the domestic market. Finnish and Uruguayan turnover taxes on edible oils were cited as a barrier to U.S. exports. Austria, to pay for foreign trade promotion, levies a tax of 3 percent on the customs value of oilcake and carnauba wax imports. In the Community, charges are added if the vegetable oil price is deemed too low to cover crushing and exporting costs.

Miscellaneous complaints.--Oil traders alleged that U.S. "buy American" policies eliminate certain foreign imports. Spanish, Norwegian, and Swiss state trading practices regarding linseed oil, oilcake, and meal were viewed as detrimental to U.S. trade. U.S. producers felt Japanese subsidies on certain oil exports, EC export subsidies on lard, and EC agricultural and denaturing subsidies on rapeseed should be eliminated. A U.S. exporter felt that his poultry fat trade was impeded by "unreasonable" Swedish standards; he also felt the application of stricter standards by one country than by another disrupts the flow of trade. U.S. hempseed imports must be sterilized after entering the United States and before customs clearance. Hempseed traders estimated hempseed sales would increase 125 percent with the elimination of the U.S. sterilization standard for imported hempseed.

Twenty of the respondents to the Commission's survey in the oil seeds, fats and oils sector gave an assessment of the restrictive trade effect of the barriers they reported. Nine stated the

trade increase arising from the removal of trade barriers would be "small," seven said "moderate," and four, "significant."

The very small number of dollar value estimates for the expected trade increase totaled \$5 million.

## Vegetable Oils and Seeds, and Oilcake

Vegetable oils, seeds, and oilcake include: Oil seeds, oil nuts and oil kernels; oleaginous fruit; and the oil, meal, flour, oilcake and other residues of these products. 1/

MFN tariffs

Average MFN tariffs of the five major countries for products in this subsector are similar to those for the sector as a whole. Variable levy products are a slightly smaller percentage of EC imports in the subsector (4 percent of imports from external sources compared to 5 percent for the sector). Variable levies apply to 4 of the 21 EC provisions in the subsector. 2/ As in the sector as a whole, the European Community has the lowest arithmetic and weighted average tariffs for all products (calculated on fixed duties only and excluding variable levies); the United States has the highest arithmetic average tariff (10.4 percent), and the United Kingdom has the highest weighted average (7.7 percent). For dutiable products alone, the United States has the highest arithmetic average tariff and the European Community has the lowest (again excluding variable levies) (see chart A-4-E). Canada has the highest weighted average for dutiable products (12.3 percent), and Japan has the lowest, at 6.9 percent ad valorem.

---

1/ For the specific coverage of this subsector, see BTN headings 12.01; 12.02; 15.07; 23.04.

2/ For all but one of the remaining 17 EC provisions, a countervailing fee may be collected in addition to the duty under certain conditions.

Chart A-4-E. -- Average MFN tariff rates on vegetable oils and seeds and oilcake

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging from 11 percent to 100 percent made in 1972 on one-half of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

All five countries have significant percentages of duty-free tariff provisions in the subsector (see table A-4-F). Japan has half of its provisions duty free and Canada has slightly over half duty free. About 30 percent of the provisions of both the United States and the European Community are duty free, as are nearly 17 percent of those of the United Kingdom.

The United States has 41 percent of its provisions dutiable at rates between 0.1 and 10 percent ad valorem; but some U.S. provisions have duties of over 50 percent ad valorem. The United States is the only country of the five with any provisions dutiable above 30 percent

Table A-4-F ---Distribution, by duty level, of MFN tariff provisions for vegetable oils and seeds; oilcake

1/ Figures for the European Community cover tariff provision subject to fixed duties only; they do not include almost one-fifth EC provisions in the subsector which are subject to variable levies.

Note.--Due to rounding, figures may not add to 100 percent.

ad valorem. The European Community has 53 percent of its fixed duty provisions in the two rate brackets between 0.1 and 10 percent ad valorem, and none above 20 percent. Twenty-eight percent of Canada's provisions are in the 15.1 - 20 percent ad valorem bracket. The United Kingdom has 58 percent of its provisions in the 5.1-10 percent rate bracket. Japan has about 12 percent of its provisions in each of the two brackets between 0.1 and 10 percent.

Each of the countries except Japan has some imports of vegetable oils, seeds, and oilcake entering at preferential rates instead of MFN rates. In 1970, preferential rates were applicable to 66 percent of United Kingdom imports, 59 percent of U.S. imports, 10 percent of Canadian imports, and about 6 percent of EC imports originating outside the Community.

Large percentages of imports in this subsector enter the five countries without duty. For Canada and the European Community <sup>1/</sup> nearly 90 percent of imports are duty free (table A-4-G), as are more than one-third of U.S. and United Kingdom imports, and more than one-fourth of

Table A-4-G.--Distribution, by duty level, of MFN imports of vegetable oils and seeds; oilcake

<sup>1/</sup> Figures for the European Community cover imports subject to fixed duties only; they do not include 4 percent of EC total MFN imports in the subsector which are subject to variable levies.

Japanese imports. Over one-third of imports by the United States and the United Kingdom, and nearly two-thirds of Japanese imports are dutiable between 5.1 and 10 percent ad valorem. No imports by the United States or the United Kingdom, and less than 1 percent of imports by Japan are dutiable at rates above 15 percent ad valorem. Imports by the United Kingdom which are dutiable (63 percent of the total) are about evenly divided in the two rate brackets between 5.1 and 15 percent ad valorem.

For this subsector, the most complex tariff schedule of the five countries is that of the United States, with 68 tariff lines. Canada has 57 lines, Japan has 34, the European Community has 21, and the United Kingdom has 12.

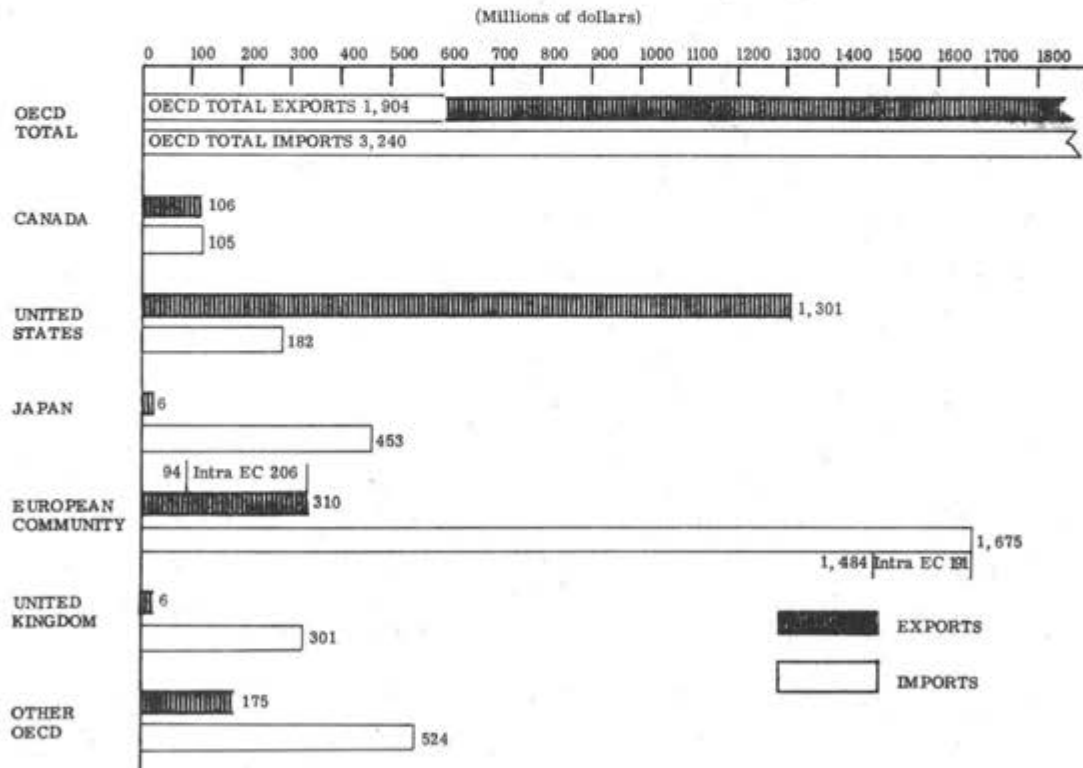

---

<sup>1/</sup> The percentage for the Community is overstated by about 4 percent because of exclusion of variable levy imports from the calculation.

### Trade importance

In OECD imports and exports, the subsector covering vegetable oils, seeds, and oilcake ranks second among the 28 agricultural product categories. It accounts for 10 percent of total OECD agricultural imports and 9 percent of agricultural exports. The subsector contains most of the OECD trade (nearly 80 percent of exports and nearly 90 percent of imports) in the sector covering oil seeds, fats and oils, and their products. Total OECD imports (worth \$3.2 billion in 1969) were nearly twice as large as exports (\$1.9 billion) (chart A-4-F). In U.S.

Chart A-4-F. -- OECD trade in vegetable oils and seeds; oilcake, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

exports in 1969, the subsector ranked second among the 28 agricultural product categories, accounting for 23 percent of total U.S. agricultural exports in that year.

#### Trade network

The five major countries account for over 90 percent of OECD exports of vegetable oils, seeds, and oilcake and 84 percent of imports. Although most OECD exports of vegetable oils, seeds, and oilcake go to other OECD countries, half of imports come from non-OECD sources, largely from less developed countries. The United States, with \$1.3 billion of exports in 1969, is by far the largest OECD exporter and has fairly large markets in the European Community, Japan, and Canada. The three countries together absorb 67 percent of U.S. exports; the European Community is the largest market, taking \$497 million (see table A-4-H). The United States exports \$220 million to less developed countries and \$147 million to OECD countries other than the five under study. Canada and the European Community have exports of slightly over \$100 million (intra-EC export shipments are an additional \$206 million). Most Canadian exports go to Japan, the European Community, and the United Kingdom, while most EC exports go to countries other than the five under study.

Imports by the five countries in 1969 ranged from \$105 million for Canada to the European Community's imports from outside sources of \$1.5 billion (intra-EC imports are an additional \$191 million). Nearly half of EC imports come from less developed countries. The United States

is the largest single supplier for the European Community, providing 37 percent of EC entries from outside sources. U.S. imports come largely from less developed countries. Over half of Japanese imports and nearly three-quarters of Canadian imports come from the United States. Over half of United Kingdom imports come from less developed countries (table A-4-I).

#### Trade-agreement concessions

The following tabulation compares average MFN rates on pre-trade-agreement base dates with rates in effect January 1, 1972. The averages shown are simple arithmetic averages. The 1972 figure for Japan does not reflect the unilateral reductions made on about half of Japanese rates in this subsector in 1972.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	13.9	10.4
European Community	<u>1/</u> 8.6	<u>1/</u> 6.4 (plus variable levies)
United Kingdom	10.4	8.3
Japan	8.2	6.8
Canada	15.0	6.8

GATT concessions cover 77 percent of U.S. provisions in this subsector. For the European Community, 52 percent of the provisions are fully covered, and an additional 24 percent partially covered. The

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the tariff lines which continue to be subject to fixed duties alone; it does not include any tariff lines subject to a variable levy.

United Kingdom has almost half of its provisions under GATT, and most of the remainder are partially covered. About two-thirds of Japan's provisions are under the GATT, but only about 9 percent of Canada's.

Members of the European Community negotiated a total of 156 GATT concessions in their national schedules prior to the establishment of the Common External Tariff. Over half of these concessions were at rates above the CXT rate, while 27 concessions were at the CXT rate and 48 were below the CXT rate.

Actual rates of duty for coconut oil applied by the five major countries on January 1, 1972, are compared with rates on pre-trade-agreement base dates in table A-4-J. The European Community, the United Kingdom,

Table A-4-J.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on coconut oil

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	11.9%; 5.1% AVE <sup>2/</sup>	9.0%; 2.6% AVE <sup>3/</sup>	9.0%; 2.6% AVE <sup>3/</sup>	176.07; 176.11 <sup>4/</sup>
Canada-----	15%; 25%	15%; 25%	10%; 17.5%	27711-1; 27731-1
European Community--	5-15% <sup>5/</sup>	5-15% <sup>5/</sup>	5-15% <sup>5/</sup>	15.07 DI, II(b) 2(aa), (bb)
United Kingdom-----	15%	15%	15%	15.07 (c)
Japan-----	10%	10% <sup>6/</sup>	10% <sup>6/</sup>	15.07-7

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percents are ad valorem equivalents of specific rates of duty (4 cents and 2 cents per pound, respectively), calculated on 1970 import values.

<sup>3/</sup> Percents are ad valorem equivalents of specific rates of duty (3 cents and 1 cent per pound, respectively), calculated on 1970 import values.

<sup>4/</sup> Items are those under which non-preferential imports enter.

<sup>5/</sup> Entry under certain headings is subject to conditions to be determined by competent authority, and may be subject under all headings, in certain conditions to a countervailing duty in addition to the customs duty.

<sup>6/</sup> Or 10 yen per kilogram, whichever is higher. The ad valorem equivalent of the specific rate, based on 1970 import values, was 8.8 percent.

and Japan have had no tariff reductions on coconut oil from pre-trade-agreement levels. The United States reduced its MFN tariffs prior to the Kennedy Round and Canada reduced its tariffs during the Kennedy Round. On January 1, 1972, duty rates on coconut oil ranged from 2.6 percent ad valorem equivalent in the U.S. tariff schedule to 17.5 percent ad valorem in the schedule of Canada. In addition to the MFN reductions shown in the table, the United States has made special preferential concessions to the Philippines on coconut oil, part of which consists of stipulated annual amounts admitted duty free until 1974.

### Other Fats, Oils, Waxes and Products

The subsector covering other fats, oils, waxes and products includes: Lard and other rendered pig fat; rendered poultry fat; fats of bovine cattle, sheep, or goats; fats and oils of fish and marine mammals; wool grease and fatty substances derived therefrom; other animal oils and fats; fixed vegetable oils; fatty acids and fatty alcohols; glycerol; beeswax and other insect waxes; vegetable waxes; and residues resulting from the treatment of fatty substances or animal or vegetable waxes. 1/

#### MFN tariffs

Canada has the highest average MFN tariffs in this subsector, with an arithmetic average tariff of 9.3 percent ad valorem on all products and an arithmetic average tariff of 13.9 percent on dutiable products alone (see chart A-4-G). The Canadian weighted average tariff of 12.5 percent on dutiable products and weighted average of 6.7 percent on all products are also considerably higher than averages of the other four countries.

Excluding variable levies, which apply to 5 of the 37 EC provisions in this subsector and cover 7 percent of EC imports, 2/ the European Community has the lowest arithmetic average tariffs (both for all products and for dutiable products alone) and the lowest weighted average on all products. The Japanese weighted average tariff of 3.8

---

1/ For the specific coverage of this subsector, see BTN headings 15.01-15.06; 15.08-15.17.

2/ For 9 of the remaining 32 EC provisions, a countervailing fee may be collected in addition to the duty under certain conditions.

Chart A-4-G. -- Average MFN tariff rates on other fats, oils, waxes and products  
(Percent ad valorem)

Source: Compiled from national tariffs and trade statistics.

percent ad valorem is the lowest on dutiable products of the five countries. Arithmetic average tariffs of the United States are the second highest of the five countries, slightly above the Japanese arithmetic averages. The United States weighted average of 4.8 percent on dutiable products exceeds only that of Japan.

Of the five countries, Canada has the largest percent of duty-free tariff provisions (32.7 percent), but over two-thirds of Canadian provisions are about equally distributed in the three rate brackets between 5.1 and 20 percent ad valorem (table A-4-K). Although Canada has no provisions at rates above 20 percent, 46 percent of Canadian provisions have rates greater than 10 percent ad valorem.

<sup>1/</sup> Figures for the European Community cover tariff provision having fixed duties only; they do not include 13.5 percent of European Community provisions (covering 7 percent of European Community imports) which are subject to variable levies.

Note.--Due to rounding, figures may not add to 100 percent.

The United States has 28 percent of its provisions at rates above 10 percent ad valorem, a small percentage of which are at duty rates exceeding 50 percent ad valorem. Only 16 percent of U.S. provisions are duty free, thus causing U.S. arithmetic average tariffs to be relatively high.

Japan has only 9.4 percent of its provisions free of duty, but an additional 72 percent of Japanese provisions are at rates no greater than 10 percent ad valorem. Twenty-two percent of EC fixed duty provisions are free and slightly less than one-third are in each of the two brackets between 0.1 and 10 percent ad valorem. The United Kingdom has 17 percent of its provisions duty free, and almost 70 percent of United Kingdom tariff provisions carry duties no greater than 10 percent ad valorem.

In 1970, preferential rates were applicable to nearly half of United Kingdom imports in this subsector. Preferential entries were not significant for the other four major countries.

All of the five countries except Japan have large percentages of duty-free imports, and three-quarters of Japanese imports are at rates between 0.1 and 5 percent ad valorem, making the all-product weighted average tariffs much lower than arithmetic averages (table A-4-L). The

<sup>1/</sup> Figures for the European Community cover imports subject to fixed duties only; they do not include 7 percent of European Community imports which are subject to variable levies.

European Community has almost 73 percent of its fixed duty imports and the United Kingdom over 70 percent of its imports duty free. Canada has 46 percent and the United States 44 percent of imports duty free. Another quarter of Canadian imports fall in the duty range between 5.1 and 10 percent, and 43 percent of U.S. imports are dutiable in the range between 0.1 and 5.0 percent. Only the United States and Japan have imports dutiable above 20 percent ad valorem.

The United States has the most detailed tariff schedule in this subsector, with 64 lines. Canada has 52 lines, the European Community has 37, Japan has 32, and the United Kingdom has 29 lines.

### Trade importance

The subsector covering other fats, oils, waxes and products is one of the least important of the categories in agricultural trade. In 1969, among the 28 agricultural product categories, the subsector ranked 16th in OECD exports and 20th in imports. In U.S. exports, the subsector ranked 5th, but only 24th in imports. The subsector accounts for about 17 percent of OECD trade in the sector for oil seeds, fats and oils, and their products. In 1969, OECD countries exported \$532 million and imported \$495 million of these products (chart A-4-H). For the GATT tariff study countries, 1970 imports were worth \$489 million, and intra-EC imports were an additional \$138 million.

Chart A-4-H. -- OECD trade in other fats, oils, waxes and products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series G, 1969.

### Trade network

The five major countries account for about 84 percent of OECD exports and imports (tables A-4-M and N). Thirty-one percent of OECD exports go to non-OECD countries and slightly over one-fifth of OECD imports come from non-OECD countries. The major OECD exporters are the United States, with \$204 million of exports in 1969, and the European Community, with \$100 million of exports (plus \$97 million of intra-EC shipments). About 40 percent of U.S. exports go to less developed countries, 18 percent to Japan, and 13 percent to the European Community. The European Community ships almost two-fifths of its outside exports to LDC's, and about one-fifth to the United Kingdom. Intra-EC shipments are almost as large as outside imports or exports by the European Community.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The European Community, the United Kingdom and Japan are the major importers. Most of the imports by Canada and Japan are supplied by the United States, and the United States was the source of nearly one-fourth of imports by the Community from outside countries in 1969. The United States and the European Community together supply about 42 percent of imports by the United Kingdom.

#### Trade-agreement concessions

For each of the five major countries, average MFN tariffs on January 1, 1972, were lower than averages on pre-trade-agreement base dates. The averages are compared in the following tabulation, where the figures given are simple arithmetic averages. The 1972 figure for Japan does not reflect unilateral reductions made on about one-fourth of Japanese rate provisions in this subsector in 1972.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	24.8	8.6
European Community	<u>1/</u> 8.4	<u>1/</u> 6.1 (plus variable levies)
United Kingdom	9.5	7.7
Japan	13.5	8.5
Canada	15.0	9.3

GATT concessions cover 97 percent of U.S. rate provisions in this subsector. About 84 percent of EC provisions are fully covered under GATT, and an additional 3 percent are partially covered. For the United Kingdom 17 percent are fully covered, and 10 percent partially covered. Almost 85 percent of Japan's provisions are under the GATT, but only about one-fourth of Canada's provisions.

Each of the members of the European Community negotiated tariff concessions under the GATT prior to the adoption of the Common External Tariff. Of the total of 129 such concessions, 56 were at rates above the CXT rate, 57 were below the CXT rate, and 16 were at the CXT rate.

Tariff rates on edible lard on January 1, 1972, are compared with pre-trade-agreement levels in table A-4-0. The United States has had no tariff reductions on lard; the rates of the United Kingdom, Japan, and Canada have been lowered from pre-trade-agreement levels. The fixed duty of the European Community has been replaced by a variable levy.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the tariff lines which continued to be subject to fixed duties alone; it does not include any tariff lines subject to a variable levy.

Table A-4-D.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on edible lard

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <u>1/</u>	MFN rate <u>1/</u>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	29.1% AVE <u>2/</u>	29.1% AVE <u>2/</u>	29.1% AVE <u>2/</u>	177.50
Canada-----	18.0% AVE <u>3/</u>	15.7% AVE <u>4/</u>	9.0% AVE <u>5/</u>	1300-1
European Community--	20%	Variable levy <u>6/</u>	Variable levy <u>6/</u>	15.01 A II
United Kingdom-----	10%	Free	Free	15.01 (A)
Japan-----	10%	11.0% AVE <u>7/</u>	8.8% AVE <u>8/</u>	15.01-1 (1)

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Percent is ad valorem equivalent of specific rate of duty (3 cents per pound), calculated on 1971 import values.

3/ Percent is ad valorem equivalent of specific rate of duty (2 cents per pound), calculated on 1971 import values.

4/ Percent is ad valorem equivalent of specific rate of duty (1.75 cents per pound), calculated on 1971 import values.

5/ Percent is ad valorem equivalent of specific rate of duty (1 cent per pound), calculated on 1971 import values.

6/ Autonomous rate fixed duty replaced by variable levies.

7/ Percent is ad valorem equivalent of specific rate of duty (15 yen per kilogram), calculated on 1970 import values.

8/ Percent is ad valorem equivalent of specific rate of duty (12 yen per kilogram), calculated on 1970 import values.

## Agricultural Sector A-5

## BEVERAGES AND SPIRITS

Beverages and spirits include beer, wine, vermouth, and other alcoholic beverages; fruit and vegetable juices; waters, lemonade and flavored carbonated drinks, ice and snow; and nearly all other beverages except coffee, tea, and milk. <sup>1/</sup> (Coffee and tea are discussed in sector A-1, "Foodstuffs"; milk is discussed in sector A-6, "Dairy Products.")

MFN tariffs

Average MFN tariffs maintained by the five major countries for beverages and spirits are spread over an extremely wide range. There are few duty-free provisions and very few duty-free MFN imports. Consequently, each country's averages for all products and for dutiable products alone do not differ significantly. Canada has the lowest averages; Japan has the highest. Arithmetic average Canadian duties are 12.1 percent ad valorem for all products and 14.4 percent ad valorem for dutiable products alone. Japanese arithmetic average duties are 41.5 percent for all products and 42.6 percent for dutiable products. For weighted average tariffs the range is even wider, from Canadian weighted averages of 7.2 and 7.6 percent to Japanese weighted average duties of 76.4 (see chart A-5-A).

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 20.07; and 22.01-22.09.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart A-5-A. -- Average MFN tariff rates on beverages and spirits

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (most of which amounted to 20 percent) made in 1972 on about three-fourths of the rates in this sector; several of the rates became duty-free, one was reduced by 20 percent, and one other, by 48 percent.

Source: Compiled from national tariffs and trade statistics.

The European Community averages (which reflect fixed duties only) are all between 33 and 36 percent ad valorem. The EC averages do not include items subject to variable levies, which apply to 32 of the 105 EC tariff lines for this sector, but covered a negligible percentage of EC imports in 1970. <sup>1/</sup> Arithmetic average tariffs of the United States are at 21.4 and 22.1 percent ad valorem. U.S. weighted average tariffs are just over 9 percent ad valorem, about 2 percentage points higher than weighted average tariffs of Canada, and several percentage points lower than weighted average tariffs of the United Kingdom.

<sup>1/</sup> In addition to EC lines covered by variable levies, over 10 percent of the EC tariff lines for this sector are subject to a countervailing fee under certain conditions.

The tariff provisions of each of the five major countries for beverages and spirits are distributed over a wide range of duty levels. Each of the five has a few duty-free provisions and each has rates above 50 percent ad valorem (table A-5-A). Most Japanese provisions are in duty ranges above 15 percent ad valorem, with approximately one-fifth in each of two rate ranges (20.1-25 percent and 30.1-40

Table A-5-A.--Distribution, by duty level, of MFN tariff provisions for beverages and spirits

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 31 percent of EC provisions, covering a negligible amount of EC imports in this sector in 1970.

percent) and 17 percent of provisions in each of the two ranges above 40 percent. Although Canada, the United States, and the United Kingdom each have provisions in the higher duty ranges, the heaviest concentration of United Kingdom provisions is in the 0.1-5 percent and 5.1-10 percent ranges, while the United States and Canada have the highest concentration of their provisions in the three ranges between 0.1 and 15 percent ad valorem. The European Community has nearly 47 percent of its fixed duty provisions evenly divided between the 15.1-20 and 20.1-25 percent ranges, 11 percent of its provisions in

the 40.1-50 percent duty bracket and 15 percent of provisions dutiable above 50 percent ad valorem.

Preferential tariffs are significant in three of the five major countries. Preferential treatment was accorded 8 percent of Canadian imports, 37 percent of EC imports and one-fourth of United Kingdom imports in 1970.

The distribution of MFN imports of beverages and spirits, by duty level, is shown in table A-5-B. Approximately 40 percent of Canadian

and United Kingdom imports are dutiable in the 0.1-5 percent ad valorem duty range. Nearly 17 percent of United Kingdom imports, 23 percent of Canadian imports and nearly two-thirds of U.S. imports are dutiable in the 5.1-10 percent ad valorem range. Nearly two-thirds of Japan's imports pay duties higher than 50 percent ad valorem, and one-fifth bear rates between 40 and 50 percent. The Community has over one-third of its

fixed duty imports entering at rates above 50 percent ad valorem, and about one-fourth paying rates between 10.1 and 15 percent.

The European Community has the most detailed tariff schedule in this sector, with 105 lines. The United States has 57 tariff lines, Canada has 51, Japan has 41, and the United Kingdom has 38.

### Trade importance

In 1969, trade in beverages and spirits accounted for 7.9 percent of OECD agricultural exports and 5.4 percent of imports, and the sector ranked fifth in exports among the nine agricultural sectors and sixth in imports. Both exports and imports increased by 19 percent in 1970.

Chart A-5-B. -- OECD trade in beverages and spirits, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

For the United States, this is the least important of the nine agricultural sectors in exports, but the fourth most important in imports, accounting for nearly 12 percent of U.S. agricultural imports in 1969. Chart A-5-B shows the relative importance of trade in beverages and spirits for each of the five major countries and for OECD countries as a whole. The U.S. trade pattern is shown in chart A-5-C.

Chart A-5-C. -- United States trade in beverages and spirits, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, imports by the 13 GATT tariff study countries were valued at \$1.7 billion. Intra-EC shipments were an additional \$380 million. OECD imports in 1970 were valued at \$2 billion, exports at \$2.1 billion.

#### Trade network

The bulk of the international trade in beverages and spirits is in spirits and wines, most of which have distinct characteristics, and are the products of certain countries or regions. Net importers of beverages and spirits are the United States and Japan, while the United Kingdom, the European Community, and Canada are net exporters.

Trade between OECD countries comprises 82 percent of OECD exports and 85 percent of imports. The United Kingdom and the European Community account for over 70 percent of OECD exports (table A-5-C). The United States is the major market for both countries, absorbing 28 percent of EC exports to outside countries and 46 percent of United Kingdom exports. Intra-EC exports are equal to 60 percent of EC shipments to outside destinations. After the United States, non-OECD countries as a group make up the largest market, receiving over one-fourth of United Kingdom exports and nearly one-fourth of external exports by the Community. Canada is the third largest exporter, shipping \$185 million in 1969, almost all of which went to the United States. The United States is a comparatively small exporter, with its major markets in Canada, less developed countries, and the European Community, in that order.

Table A-5-C.--OECD exports of beverages and spirits, 1969

(Millions of dollars)

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Note.--Due to rounding, country of destination figures may not add to total exports to the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The United States is the largest importer of beverages and spirits. U.S. entries are more than twice the level of imports from outside sources by the European Community, the second largest importer (table A-5-D). Major suppliers of U.S. imports are the United Kingdom (42 percent of the total), Canada (28 percent), and the European Community (21 percent).

Intra-EC imports (over half of which are wine) are almost as large as EC imports from outside countries. Half of imports by the Community from outside sources come from less developed countries; among developed countries, the United Kingdom is the largest Community supplier. The United Kingdom accounts for over 10 percent of OECD imports; almost

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

half of United Kingdom entries come from the European Community, 34 percent from "other" OECD countries, and most of the rest from non-OECD sources. Over three-quarters of Canadian imports come from three sources, the United States (29 percent), the European Community (28 percent), and the United Kingdom (20 percent). Japan has only negligible imports, which are supplied mostly by the United Kingdom and the European Community.

#### Trade composition

The beverages and spirits sector is divided into three subsectors: fruit and vegetable juices, wine, and other beverages and spirits. As

shown in chart A-5-D, the third subsector is the most important, accounting for 63 percent of OECD exports and 53 percent of imports of beverages and spirits. Wine is the second most important subsector. Fruit and vegetable juices made up only about 10 percent of total imports in the sector and 7 percent of exports.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

#### Trade-agreement concessions

The tabulation below compares arithmetic average MFN tariffs for beverages and spirits on pre-trade-agreement base dates with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. The U.S. average has undergone a reduction of 74 percent. The Japanese 1972 average shown below does not reflect unilateral reductions ranging from 20 to 100 percent made in 1972 on about three-fourths of the Japanese rates for this sector.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	82.3	21.4
European Community <u>1/</u>	38.2	35.6 (plus variable levies)
United Kingdom	16.2	14.1
Japan	63.6	41.5
Canada	32.0	12.1

Each of the five major countries has negotiated some GATT concessions on beverages and spirits. GATT concessions cover 97 percent of U.S. tariff lines, 83 percent of Japanese lines, approximately two-thirds of EC lines and less than 2 percent of Canadian lines. Over 18 percent of United Kingdom lines are fully covered by GATT concessions and about 45 percent are covered in part.

Each of the members of the European Community had made tariff concessions on beverages and spirits in their national schedules prior to the establishment of the Common External Tariff. There was a total of 175 of these concessions, of which 80 were above the CXT rate; 92 were below the CXT rate; and 3 were at the CXT rate.

#### Trade complaints

Few products can equal alcoholic beverages in the degree to which production and distribution are subject to such extensive

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 73 tariff lines which continue to be subject to fixed duties alone; it does not include the 32 EC tariff lines subject to a variable levy.

governmental controls and special taxation throughout the world. It is not surprising, therefore, that the beverage sector should be among those in which a large number of complaints--well over 400--were received in the Tariff Commission's survey of trade barriers. All but a few of the complaints in the beverage sector dealt with the difficulties of trade in alcoholic beverages.

Virtually every developed country and 32 developing nations were named in the complaints. The 10 countries mentioned most frequently were Japan, Mexico, France, West Germany, the United Kingdom, the United States, Canada, Italy, Denmark, and Brazil.

Roughly 40 percent of the complaints dealt with taxes, tariffs, and other charges on imports; one-fourth dealt with quotas, licensing practices and embargoes; about 10 percent concerned government monopolies or state trading, and another 10 percent concerned standards (chiefly labelling requirements). Customs procedures and valuation practices gave rise to about 7 percent of the complaints.

Import duties.--The height of import duties maintained by 14 countries, the European Community, and the Central American Common Market on beer and other malt beverages was the object of several complaints. In addition to the European Community, four other developed countries were included in these complaints. Japan was cited as having a duty of 20 percent ad valorem; the European Community, 24 percent; Canada, 12.5 cents per gallon plus a duty on the bottle;

Australia, \$1.36 per gallon, or 27.5 percent ad valorem on beer containing over 2 percent alcohol; and the United Kingdom, basically 69 cents per gallon plus supplements for alcoholic content. <sup>1/</sup> The duties imposed on whiskey and other distilled spirits by the European Community and seven other developed nations (including the United States) plus 14 developing countries were considered by respondents to the Commission's survey to be objectionably high. A domestic producers association reported that the increase in United Kingdom and Danish duties on fruit juices, as a result of entry of these two countries into the European Community, will be detrimental to U.S. fruit juice exports to these countries. Also, a charge of tariff discrimination was made by distilled beverage producers against members of customs unions and free trade areas in general, but particularly the European Community and the European Free Trade Area.

Taxes and other nontariff charges on imports.--A very large number of countries have a variety of excise, consumption, or special taxes on alcoholic beverages which are levied equally on domestic and imported products. Respondents in the Commission's survey complained of the severity of the taxes in nine western European countries, South Africa, Australia, New Zealand, Canada, Japan, the United States, and 18 developing nations as limiting

---

<sup>1/</sup> The dollar and cents charges given for Canada, Australia, and the United Kingdom are those reported by the complainants, presumably based on currency exchange rates in effect in early 1972.

exports to those countries. U.S. whiskey producers complained that imported blended whiskeys are not subject to the 30 cents per proof gallon rectifying tax assessed on blended whiskey produced in the United States. U.S. brewers, distillers, and wine producers objected to foreign border taxes levied on their exports, principally those encountered as part of the value-added tax systems used in many European countries. Prior import deposit requirements, and port and statistical taxes, stamp taxes, and consular fees were the cause of objections against several (principally developing) countries.

A few complaints were received concerning discriminatory tax treatment. U.S. whiskey producers have voiced repeated and strong objections to the French imposition of higher excise taxes on grain spirits (produced in limited quantities in France) than are imposed upon brandies and other spirits produced from fruit.

Several importers and representatives of foreign producers consider the manner in which U.S. excise taxes and import duties are assessed on whiskey and other spirituous beverages to discriminate against the importer of bottled spirits and favor the importer of bulk spirits and the producer and bottler of domestic spirits. Internal revenue taxes and import duties are assessed on a proof-gallon basis, or on a wine-gallon basis if the beverage is below proof at the time the tax is levied. In the domestic production process, the tax is determined at a time when the

beverage is at or about proof and before it has been cut to bottling strength (usually 84 to 86 proof). For spirits imported in bulk to be bottled in the United States, the tax is also determined before the spirit has been cut for bottling. However, imported bottled spirits have already been cut to below proof, and hence are taxed on a wine-gallon basis.

The practical consequence of the U.S. wine-gallon/proof-gallon system is that bottlers who import in bulk and U.S. manufacturers can produce about 16 percent more distilled spirits, by volume, per excise tax dollar than the foreign producer who exports his spirits to the United States in bottles. The bulk importer enjoys a similar advantage with respect to the import duty compared with the importer of bottled spirits. The system results in a margin of protection for the domestic producer of about \$1.85 per gallon over and above the normal import duty.

Quantitative restrictions, embargoes and licensing practices.--  
Austria, France, Denmark, and Switzerland drew complaints for quantitative limitations on imports of wine; Japan on cranberry juice; and India, Mexico, New Zealand, and Madagascar on distilled spirits. Until very recently, the United Kingdom maintained quotas on imports of rum and citrus juices from dollar areas.

Embargoes or practices which had the effect of embargoes on malt beverages and distilled liquors were the object of complaint against 15 LDC's, Canada, and New Zealand. Beer producers reported that some provinces in Canada would not permit sale of their product;

New Zealand was reported to have an absolute embargo on white spirit derivatives, such as gin and vodka.

Complaints were made against numerous countries for requiring a license for the importation of alcoholic beverages. Eleven developing countries were specifically named in the complaints as were the following developed nations: Canada (some provinces only), Denmark, France, West Germany, Norway, Switzerland, Japan, New Zealand, South Africa, the Soviet Union, Spain, and the United States. Mexico was particularly criticized in several complaints as being "uncooperative" in the granting of licenses.

Among other forms of specific limitations on trade reported to the Commission, the European Community controls the price of imported wine through the reference price system in the Community's Common Agricultural Policy for wine. If the price control measures fail to protect Common Market wines, imports may be terminated entirely by cessation of issuance of import certificates.

Mexico requires that packaging material for sale of distilled spirits be locally produced. The Dominican Republic, Korea, Tunisia, and (formerly) Japan were reported to limit foreign exchange for importation of distilled spirits. Spain confines imports of whiskey and other distilled spirits to amounts specified in bilateral agreements. The "tied house" system of retail distribution used in the United Kingdom and West Germany for malt beverages was reported as a restrictive business practice which limits the ability of foreign brewers to sell in those markets. Other practices which drew objections were the

higher markup used in selling U.S. whiskey in Canadian provincial liquor stores and in Mexico; the French prohibition against advertising grain spirits (spirits made from other materials may be advertised); and the refusal of several countries to grant an exclusive appellation of origin (United States) privilege to products sold as bourbon whiskey.

Government monopolies and state trading practices.--Many countries confine the distribution and sale of alcoholic beverages to government monopolies or state trading organizations. Several complaints were made against state trading practices in several Canadian provinces. U.S. producers of distilled spirits reported difficulties in getting the provincial liquor boards to carry their products, especially in the amount and brand varieties which the producers felt were justified by market potential. U.S. brewers report that in several Canadian provinces sale of U.S. beer is confined to the state-owned liquor stores, whereas Canadian beers can be sold in other retail outlets. Other developed countries which were included in complaints against state trading or government monopolies were Austria, Finland, Iceland, Japan, Norway, Sweden, Switzerland, and the United States (in 18 states).

Labelling requirements and other standards.--Many countries maintain elaborate labelling requirements for food products and alcoholic beverages. The following labelling requirements in the countries named were considered objectionable or unnecessary by respondents in the Commission's survey concerned with trade in fruit juices and other

nonalcoholic beverages: Importer's name and address on the label (Argentina, Chile, Mexico, and New York State); declaration number on the label (Bolivia, Brazil, Mexico, Venezuela); the label translated into Portuguese (Brazil); date of importation on the container (Japan); packaging date on the label (Venezuela); net contents shown only in metric units (Japan). U.S. producers of distilled spirits and wines complained of the complexity and diversity of labelling requirements in practically every developed country of the world and numerous LDC's. A British exporter of whiskey to the United States felt the time required to obtain label approvals in the United States was unnecessarily long. Beverage producers considered the French requirement that the name of the country of origin be embossed in the end of the can was especially costly and burdensome to their efforts to ship to the French market.

The so-called "appellations of origin" regulations, prevalent in several European countries, have long presented problems to American wine producers, and such regulations are considered by U.S. producers to be a serious nontariff barrier to U.S. wine exports. These regulations grow out of bilateral and multilateral agreements between a small group of countries consisting principally of the wine producing countries of Western Europe. The agreements provide for the international registration of wine appellations (i.e., names) by place of origin in producing countries, and that wine entering commerce in signatory countries will be labelled in accordance with internationally registered

appellations of origin. In granting registry of appellation, the wine is identified with respect to geography of origin and certain qualities or characteristics. The net result of these agreements is to provide exclusive labels to signatory countries in the marketing of designated wines.

Under the appellations of origin agreements, for example, the name "Port" is reserved to wines produced in Portugal; the name "Chianti" to wines produced in the province of Toscana, Italy; the names "Sauterne" and "Champagne" to wines produced in the Bordeaux and Champagne districts of France, respectively; and the name "Sherry" to wines produced in Spain. U.S. wine producers market domestic wines under all of these names, but U.S. regulations require that the products be clearly labeled as to origin, such as "California Burgundy," "New York State Sherry," etc. U.S. wine producers maintain that the laws and regulations of the United States relating to the labelling of American-produced wines provide ample protection to the foreign consumer and to the foreign producer against any possibility of confusing U.S. products with wines of other countries and, therefore, the prohibition in the appellations of origin requirements are unnecessary and excessive protective services. U.S. wine producers contend that a label bearing the designation "California," "New York," or "American" is easily understood throughout the world and cannot possibly be construed as being the product of a foreign producer.

Another complaint in the area of standards is that imported wines can be sold in the European Community only if they meet minimum standards (i.e., for alcohol and acid content, sweetening, and the amount of sulphur dioxide, etc.) as well as certain "supplementary conditions" under which each lot of imported wine must be accompanied by (1) a sworn statement, issued by an official agency of the country of origin, furnishing proof that the wine meets the standards for production and delivery of wine for direct human consumption in that country; and (2) a certificate of analysis stating that the wine has been prepared in accordance with methods prescribed by the EC Commission or officially used in any member state of the Community. EC regulations also stipulate that wines be blended only with other wines of the same region and at that place; this effectively prohibits blending of American wine with that produced in the Common Market. A West German requirement that beer be made only from malted barley limits imports of U.S. beer, which often contains other grains such as corn, rice and sorghum as well.

Other types of standards which caused complaints were the following: Japan requires crown corks and screw caps on fruit juice and fruit concentrate containers; West Germany has mandatory sizes for containers; EC standards for containers for liquid foods are based on the metric system (which the complainant stated was "not feasible" for U.S. products); and specifications of numerous countries on container sizes for whiskey and other distilled spirits and the amount of liquid to be contained therein (so-called "standards of fill"--e.g., if a  $\frac{4}{5}$  quart bottle is used, it must be filled to contain exactly  $\frac{3}{4}$  liter);

age requirements of Japan, New Zealand, South Africa, the United Kingdom, Hong Kong, Israel, and Spain for whiskey and certain other distilled spirits; proof restriction (usually to 86 proof or below) for distilled spirits in Austria, West Germany, Hong Kong, India, Italy, Mexico, and Singapore; U.S. cooperage standards; and the official registration of food or beverage products in numerous countries.

Customs procedures and practices.--Complaints in the area of customs procedures concerned the burdensome necessity of preparing or furnishing the numerous special documents required by many countries for customs clearances, particularly of alcoholic beverages, most of which are required in connection with compliance with health standards or labelling regulations. U.S. exporters felt that documentation requirements of U.S. Customs on shipments abroad were excessive. Mexico was reported to assess duties on fruit juices based on artificial and arbitrary values rather than the actual value of the imported article.

Subsidies.--U.S. wine producers complained of the difficulty in competing in the U.S. market and abroad with foreign wines produced and/or exported with governmental assistance. In the major wine producing countries of Europe are found programs of governmental support which include the following: Subsidized advertising and promotion programs; guaranteed prices to producers; storage of surpluses (which annually exceed the entire consumption of wine and brandy by the U.S. market) paid for by the government, stabilization of domestic markets by the control of the movement of wine to the market; purchases by

government of surplus wine and brandy; and rigid governmental import controls on foreign wine and brandy entering the domestic markets.

Very few of the large number of trade complaints received by the Tariff Commission against trade barriers in the beverages sector were accompanied by estimates of the trade importance of the reported barriers. Only 21 respondents estimated the effect that a removal of the trade barriers discussed above would have. Two indicated that a removal of the barriers would result in a moderate increase in trade, and 19 indicated that removal would result in a significant trade increase. In six cases, producers stated that more than one trade barrier would have to be removed before trade would increase. While the percent figures for the estimated trade increases ranged from about 475 to 1,750 percent, the value of the estimated trade increases in dollars only totaled \$4.5 million.

Beverages and Spirits Other than Wine and  
Fruit and Vegetable Juices

This subsector covers beer, whiskey, and other alcoholic beverages (except grape wine); waters for drinking, lemonade, carbonated soft drinks, and other nonalcoholic beverages, and preparations, and ice and snow. 1/

MFN tariffs

The important beverages in this subsector characteristically tend to be subject to high rates of duty. There are few duty-free provisions and only negligible duty-free imports in the subsector; consequently, there is little difference between each country's averages for all products and dutiable products only.

Average MFN tariffs of the five major countries for beverages in this subsector are spread over a range extending from 1.6 percent ad valorem (the United Kingdom's weighted average) to 86.9 percent (Japan's weighted average); arithmetic averages run from the United Kingdom's 10.3 percent ad valorem to the European Community's averages of 51.1 percent (all products) and 55.5 percent (dutiable products) (see chart A-5-E). The EC averages do not reflect any tariff lines subject to variable levies, which cover 4 of the 29 EC provisions for this subsector, but only a negligible part of EC imports. 2/ The U.S. weighted average tariff of 9.3 percent is the second lowest of the five countries,

---

1/ For the specific coverage of this subsector, see BTN headings 22.01-22.03; 22.07-22.09.

2/ In addition to tariff lines under variable levies, the European Community has one tariff line with countervailing fees, applicable in addition to customs duties under certain conditions.

Chart A-5-E. -- Average MFN tariff rates on beverages and spirits, other than juices and wine

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (most of which amounted to 20 percent) made in 1972 on nearly all the Japanese rates in this sector; several of the rates became duty-free, one was reduced by .8 percent, and one other, by 45 percent.

Source: Compiled from national tariffs and trade statistics.

while Canada has the second lowest arithmetic averages, (13.5 percent ad valorem on all products and 15.4 percent on dutiable products alone).

Each of the five countries' tariff schedules for beverages in this subsector have rates ranging from duty free to over 50 percent ad valorem (table A-5-E). Half of U.S. rates are evenly divided between the

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 14 percent of EC provisions, covering a negligible amount of EC imports in this subsector in 1970.

two rate ranges extending from 0.1 to 10 percent ad valorem, and most of the remainder fall in the 10.1-15 percent ranges or the 30.1-40 percent range. Three-fourths of Japan's provisions bear rates above 30 percent. One-third of the provisions of the United Kingdom have duties of 5 percent or less; about 39 percent of provisions are in the 5.1-10 percent range, and 11 percent are free. Over one-fifth of Canadian provisions are dutiable in the 0.1-5 percent ad valorem duty bracket; half of Canada's provisions are evenly divided in the three brackets between

5.1 and 20 percent ad valorem. The European Community has the largest percentage of tariff provisions dutiable above 50 percent ad valorem (28 percent of provisions) and has 12 percent of its provisions in each of the following ranges: 10.1-15 percent, 20.1-25 percent and 40.1-50 percent ad valorem.

For three of the five major countries, imports at preferential rates are significant. Preferential treatment was accorded 49 percent of United Kingdom imports, 16 percent of EC imports from outside countries, and 14 percent of Canadian imports in 1970.

The distribution, by duty level, of the five major countries' MFN imports of beverages in this subsector are shown in table A-5-F. Almost

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 14 percent of EC provisions, covering a negligible amount of EC imports in this subsector in 1970.

two-thirds of U.S. imports pay duties between 5.1 and 10 percent ad valorem; and most of the remainder bear rates in the 10.1-15 percent range. Over 90 percent of United Kingdom imports are dutiable at

rates between 0.1 and 5 percent ad valorem, and no United Kingdom imports pay duties above 10 percent. Almost two-thirds of Japan's imports pay duties higher than 50 percent ad valorem, and most of the remainder are in the rate range of 40.1-50 percent ad valorem. Imports of Canada and the European Community are more widely dispersed among the duty ranges. Canada has 39 percent of imports dutiable between 20.1 and 25 percent ad valorem, with lesser concentrations in lower ranges. Over 90 percent of imports by the European Community are dutiable at rates above 10 percent ad valorem, with 45 percent of imports dutiable between 10.1 and 15 percent, 16 percent dutiable at rates between 30.1 and 40 percent, and nearly 9 percent of imports dutiable above 50 percent ad valorem.

The United States has the most complex tariff schedule for beverages in this subsector, with 36 lines. The European Community has 29 lines, Canada and Japan each have 24 lines, and the United Kingdom has 18 lines.

#### Trade importance

Beverages and spirits other than juices and wine ranked 5th in 1969 OECD exports among the 28 agricultural subsectors and 15th in imports, accounting for nearly 5 percent of OECD agricultural exports, but less than 3 percent of imports. In U.S. trade, exports in the subsector rank 23rd, but imports rank 5th among the 28 agricultural subsectors, accounting for over 9 percent of U.S. agricultural imports.

As shown in chart A-5-F, the United States and Japan are net importers of products of this subsector, while the other three major countries are net exporters.

Chart A-5-F.-- OECD trade in beverages and spirits, other than juices and wines, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1970.

In 1970, imports of beverages and spirits other than juices and wine by the 13 GATT tariff study countries were valued at \$916 million. Intra-EC shipments were an additional \$11<sup>1</sup>/<sub>2</sub> million. OECD imports in 1969 were valued at \$922 million, exports at \$1 billion.

### Trade network

The United Kingdom is the largest exporter of beverages other than fruit juices and wines, exporting \$454 million in 1969 (table A-5-G).

Table A-5-G.--OECD exports of beverages and spirits,  
other than juices and wine, 1969

(Millions of dollars)

X = Less than \$500,000.

Note.--Due to rounding, country of destination figures may not add to total exports to the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The European Community is the second largest exporter, with \$206 million (plus \$98 million of intra-EC shipments), and Canada is third, with \$182 million. The United States and Japan are not significant exporters. Nearly half of United Kingdom exports go to the United States, nearly one-fifth to less developed countries, and about 14 percent to the European Community.

Canada ships nearly all of its exports to the United States. The European Community sends one-fourth of its external exports to the

United States, 17 percent to the United Kingdom, and nearly one-third to less developed countries. EC internal exports are equal to almost 50 percent of EC shipments to outside destinations.

The United States is by far the major importer, entering in 1969 \$280 million worth of the products of this subsector from the United Kingdom, \$183 million from Canada, and \$51 million from the European Community (table A-5-H). The three countries together supplied over

95 percent of U.S. imports. The European Community is the second largest importer, with 1969 entries of \$90 million from outside countries (plus \$85 million of intra-EC shipments), followed by the United Kingdom with \$72 million, Canada with \$36 million, and Japan with \$10 million.

Trade-agreement concessions

The tabulation below presents arithmetic average MFN tariffs on beverages and spirits other than juices and wine on pre-trade-agreement base dates compared with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. Although average tariff levels of each of the five major countries have undergone significant reductions, the January 1, 1972, average tariffs remain high, especially for the European Community and Japan. The figure shown for Japan does not reflect unilateral reductions (mostly by 20 percent) made in 1972 on nearly all the Japanese tariff rates in this subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	79.4	19.9
European Community <sup>1/</sup>	68.8	51.1 (plus variable levies)
United Kingdom	17.5	10.3
Japan	81.1	48.5
Canada	22.0	13.5

Each of the five major countries has made concessions under the GATT on some of its tariff lines for beverages and spirits other than juices and wine. Although less than 5 percent of Canadian lines are covered by GATT concessions, nearly 92 percent of Japanese lines and over 97 percent of U.S. lines are covered. For the European Community,

---

<sup>1/</sup> For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community is the average of the 25 tariff lines which continue to be subject to fixed duties alone; it does not include the four EC tariff lines subject to a variable levy.

69 percent of tariff lines are fully covered and 14 percent are partially covered by GATT concessions, while for the United Kingdom, 27 percent of tariff lines are fully covered and 18 percent are covered in part.

Each of the members of the European Community had negotiated national tariff concessions under the GATT for products of this sub-sector prior to the establishment of the EC's Common External Tariff. These concessions totaled 35, of which the 31 were at rates higher than the CXT rate, while only 2 were below the CXT rate.

Changes in tariff rates for beer made from malt are shown in table A-5-I. Tariffs of four of the five countries have undergone

Table A-5-I.--Pre-trade-agreement tariff rates compared with January 1, 1972.  
MFN tariff rates on beer made from malt

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round

Japan-----	50%	3%	20%	22.03

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percent is ad valorem equivalent of specific rate of duty (50 cents per gallon), calculated on 1971 import values.

<sup>3/</sup> Percent is ad valorem equivalent of specific rate of duty (12.5 cents per gallon), calculated on 1971 import values.

<sup>4/</sup> Percent is ad valorem equivalent of specific rate of duty (6 cents per gallon), calculated on 1971 import values.

<sup>5/</sup> Percent is ad valorem equivalent of specific rate of duty (77 cents per gallon), calculated on 1971 import values.

<sup>6/</sup> Percent is ad valorem equivalent of specific rate of duty (57 cents per gallon), calculated on 1971 import values.

<sup>7/</sup> Percent is ad valorem equivalent of specific rate of duty (\$1 5s.3d. per bulk barrel), calculated on 1971 import values, for beer not exceeding 1027° specific gravity. Also subject to an excise duty of \$1 4s. (11.8 percent ad valorem equivalent).

<sup>8/</sup> Percent is ad valorem equivalent of specific rate of duty (\$1 11 7s.6d. per bulk barrel), calculated on 1971 import values, for beer not exceeding 1030° specific gravity. Also subject to special charges and rebates in effect.

reduction since pre-trade-agreement base dates, while the United Kingdom tariff has increased to about 9 times the pre-trade-agreement base date level. Japan and the United States had tariff reductions both before and during the Kennedy Round. The Japanese rate decreased from 50 percent ad valorem to 20 percent; and the U.S. rate decreased from about 42 percent ad valorem equivalent (AVE) to 5 percent.

The Canadian rate decreased prior to the Kennedy Round from 45 percent ad valorem to 33.3 percent. The EC rate decreased from 30 percent ad valorem to 24 percent during the Kennedy Round. On January 1, 1972, tariff rates on beer made from malt ranged from 5 percent to 112.8 percent ad valorem.

## Wine

Wine includes grape must, in fermentation or with fermentation arrested; wine of fresh grapes; and vermouths and other wines of fresh grapes flavored with aromatic extracts. 1/ Excluded from this subsector is wine from fruit other than grapes.

MFN tariffs

None of the five countries have any duty-free MFN tariff provisions for wine; average MFN tariffs for all products are, therefore, equivalent to those for dutiable products. (chart A-5-G). Canada has the lowest average tariffs on wine, with an arithmetic average of 16.1 percent ad valorem and a weighted average of 6.6 percent. The United States has the second lowest average tariffs, with an arithmetic average of 17.4 percent and a weighted average of 8.8 percent. United Kingdom average tariffs are slightly above 20 percent ad valorem. Both the European Community and Japan have weighted averages higher than arithmetic averages, reflecting imports in the higher portions of their duty ranges. 2/ Arithmetic and weighted average tariffs of the European Community are 31.3 and 37.9 percent ad valorem, respectively. Arithmetic and weighted average tariffs of Japan are 61.1 (arithmetic) and 64.7 percent ad valorem (weighted).

The United States and Canada have two-thirds of their tariff provisions for wine equally divided between the 5.1-10 and 10.1-15 percent

---

1/ For the specific coverage of this subsector, see BTN headings 22.04-22.06.

2/ In about half of EC tariff lines for wine, countervailing fees in addition to customs duties are applicable under certain conditions. The fees are applicable if imported wine has a value lower than the official reference price; the effect of the fee is the same as a variable levy.

Chart A-5-G. -- Average MFN tariff rates on wine

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by 20 percent made in 1972 on three-fourths of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

ad valorem duty ranges. The remainder of Canadian provisions are equally divided between the duty range 0.1-5 percent and 40.1-50 percent ad valorem, and the remainder of U.S. provisions are evenly divided in three rate brackets: 15.1-20 percent, 30.1-40 percent, and over 50 percent ad valorem. Over three-fourths of European Community provisions are equally divided in four brackets: 10.1-15, 15.1-20, 20.1-25, and over 50 percent ad valorem. United Kingdom provisions cover a wide duty range, but the greater part are dutiable at rates below 20 percent ad valorem, with nearly 29 percent of provisions in the 5.1-10 percent ad valorem range. All Japanese provisions have rates exceeding 50 percent ad valorem. (see table A-5-J).

rate brackets between 0.1 and 15 percent ad valorem; nearly 30 percent of United Kingdom imports are in the 40.1 to 50 percent ad valorem range. All of Japan's imports and nearly two-thirds of EC imports are assessed duties greater than 50 percent ad valorem.

The European Community has the most detailed tariff schedule for wine, with 21 lines. The United Kingdom has 14 lines; Canada has 12; the United States has 9; and Japan has 3.

#### Trade importance

Among the 28 agricultural subsectors, wine ranked 17th in OECD exports and imports in 1969, accounting for 2.4 percent of OECD agricultural exports and 2 percent of imports. Wine is the least important of the 28 agricultural subsectors in U.S. exports and ranks 15th in

imports, accounting for nearly 2 percent of U.S. agricultural imports. As shown in chart A-5-H, the European Community and the "other" OECD

Chart A-5-H.-- OECD trade in wine, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

countries are net exporters of wine, while the other four major countries are net importers.

In 1970, imports of wine by the 13 GATT tariff study countries were valued at \$572 million. Intra-EC shipments were an additional \$221 million. OECD imports in 1969 were valued at \$634 million, exports at \$503 million.

### Trade network

Practically speaking, the European Community is the only exporter among the five major countries (table A-5-L). EC exports are sent to

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

\$161 million from outside sources in 1969 (intra-EC shipments were an additional \$149 million). Over two-thirds of EC outside imports come from less developed countries; most of the remaining EC external imports come from "other" OECD countries. Each of the other four countries relies on the European Community for at least half of its wine imports, and most of the remaining supplies come from "other" OECD countries. The United States is the second largest importer (\$112 million in 1969), followed by the United Kingdom (\$94 million), Canada (\$24 million), and Japan (\$2 million).

#### Trade-agreement concessions

In the tabulation below, arithmetic average MFN tariffs for wine on pre-trade-agreement base dates are compared with arithmetic average rates on January 1, 1972. Large decreases have occurred in U.S. and

Canadian average rates, but there has been no significant change in EC or Japanese averages and the United Kingdom average tariff shows an increase of over 45 percent. The January 1, 1972, average tariff for Japan does not reflect Japanese unilateral reductions by 20 percent made in 1972 on three-fourths of the Japanese rates in this subsector.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	44.0	17.4
European Community	31.0	31.3
United Kingdom	14.8	21.5
Japan	61.1	61.1
Canada	60.4	16.1

Three of the five major countries have made GATT concessions on their tariff provisions for wine. GATT concessions cover all U.S. tariff wine provisions and approximately one-fourth of EC tariff lines. For the United Kingdom, over 21 percent of tariff lines are fully covered and over 71 percent are partially covered by GATT concessions.

Except for Italy, each of the members of the European Community negotiated national tariff concessions under the GATT prior to the establishment of the EC's Common External Tariff. These concessions totaled 77, of which 37 were above the CXT rate, 39 were below the CXT rate, and 1 was at the CXT rate.

Changes in duty rates for still wine in retail-size containers which have occurred since pre-trade-agreement base dates are shown in table A-5-N. Although none of the five countries had tariff reductions in the Kennedy Round, the United States and Canada each had substantial tariff reductions prior to the Kennedy Round. Japan and the United Kingdom, on the other hand, had very substantial increases in their

Table A-5-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on wine of fresh grapes: still wine in retail size containers <sup>1/</sup>

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>2/</sup>	MFN rate <sup>2/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	30.6% AVE <sup>3/</sup>	9.2% AVE <sup>3/</sup>	9.2% AVE <sup>3/</sup>	167.30
Canada-----	56.1% AVE <sup>4/</sup>	16.8% AVE <sup>4/</sup>	16.8% AVE <sup>4/</sup>	16310-1
European Community--	18.3% AVE <sup>5/</sup>	18.3% AVE <sup>5/</sup>	18.3% AVE <sup>5/</sup>	22.05 C 1 a
United Kingdom-----	22.4% AVE <sup>3/</sup>	77.7% AVE <sup>3/</sup>	77.7% AVE <sup>3/</sup>	22.05 A 1 b
Japan-----	50%	121% AVE <sup>6/</sup>	121% AVE <sup>6/</sup>	22.05-2

<sup>1/</sup> Tariff descriptions used by the various countries for this commodity are not exactly comparable. The categories used are those most similar to TSUS item 167.30, still wine not over 14 percent alcohol in containers holding not over one gallon.

<sup>2/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>3/</sup> Ad valorem equivalent of specific rates of revenue duty calculated on 1971 import values.

<sup>4/</sup> Ad valorem equivalent specific rates of duty calculated on 1969 import values.

<sup>5/</sup> Ad valorem equivalent of "12 units of account". The EC's Common External Tariff originally established a fixed rate, later supplemented by countervailing fees, applicable under certain conditions to imports under this tariff heading.

<sup>6/</sup> Ad valorem equivalent of specific rate of duty calculated on 1972 import values.

tariffs prior to the Kennedy Round. The EC fixed tariff showed no change from the autonomous (pre-trade-agreement) rate. On January 1, 1972, tariffs on still wine in retail size containers ranged from 9.2 percent ad valorem equivalent for the United States to 121 percent for Japan. The European Community and Canada had ad valorem equivalents between 15 and 20 percent, while the United Kingdom rate was nearly 78 percent ad valorem equivalent.

## Fruit and Vegetable Juices

Fruit and vegetable juices include sweetened or unsweetened juices which are not fermented and contain no spirits. 1/

MFN tariffs

Among arithmetic average MFN tariff levels for fruit and vegetable juices maintained by the five major countries, the averages of the United States are the highest (28.8 percent ad valorem on all products and 31.5 percent on dutiable products alone). Japan and the European Community have arithmetic averages of about 25 percent ad valorem, as shown in chart A-5-I. Canada and the United Kingdom have arithmetic average tariffs considerably lower than the other three countries; Canada's all products average is 6.7 percent and the United Kingdom's is 8.5 percent; and both countries have arithmetic average tariffs just over 10 percent ad valorem for dutiable products alone. The U.S. weighted average tariff is 8.9 percent for all products and 15.8 percent for dutiable products. Japan's weighted averages are both 22.6 percent ad valorem; those of the European Community are both 19 percent. EC average tariffs shown in the chart reflect only tariff lines for which no variable levies are applicable. Variable levies are assessed on 28 of the 55 EC tariff lines for fruit and vegetable juices, but covered no EC imports in 1970. Thus, EC weighted average MFN tariffs are comparable with those of the other four countries, whereas EC arithmetic average MFN tariffs are not fully comparable.

---

1/ For the specific coverage of this subsector, see BTN heading 20.07.

Chart A-5-1. -- Average MFN tariff rates on fruit and vegetable juices

(Percent ad valorem)

Source: Division of International Trade and Economic Relations.

Canada's weighted average tariffs are about 5.5 percent ad valorem; the United Kingdom's weighted average for dutiable products is 8 percent ad valorem, and for all products is only 2.4 percent ad valorem, the lowest of the five major countries.

The U.S. high arithmetic average tariff for fruit and vegetable juices reflects the fact that nearly 17 percent of U.S. tariff provisions are at duty levels above 50 percent ad valorem (table A-5-0). On the other hand, the United States has over half of its provisions

Table A-5- O---Distribution, by duty level, of MFN tariff provisions  
for fruit and vegetable juices

(In percent)

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 51 percent of EC provisions in this subsector. No imports entered the Community under variable levy provisions in 1970.

in ranges below 15 percent ad valorem (one-fourth are in the 0.1-5 percent ad valorem range). All Japanese provisions and nearly all EC fixed duty provisions are in duty ranges above 15 percent ad valorem. Half of Japan's provisions are in the 20.1-25 percent ad valorem range, and four-fifths of European Community provisions are divided between the ranges of 15.1-20 percent and 20.1-25 percent ad valorem.

One-third of Canadian provisions, nearly 17 percent of United Kingdom provisions, and over 8 percent of U.S. provisions are free of duty. Canada has the largest concentration of its dutiable provisions in the range of 0.1-5 percent ad valorem. The United Kingdom has one-third of its provisions in the 0.1-5 percent bracket.

Preferential tariff treatment is significant in fruit and vegetable juice imports of three of the five major countries. In 1970,

11 percent of European Community imports from outside sources, 13 percent of United Kingdom imports, and over one-fourth of U.S. imports entered with preferential treatment. Canada had a negligible amount of preferential imports; Japan had none.

The United Kingdom, the United States, and Canada enter large percentages of their imports of fruit and vegetable juices duty free or at rates no higher than 5 percent ad valorem (table A-5-P). <sup>1/</sup>

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 51 percent of EC provisions in this subsector. No imports entered the Community under the variable levy provisions in 1970.

Two-thirds of United Kingdom imports enter duty free and no United Kingdom imports pay duties above 10 percent ad valorem. Nearly 90 percent of Canadian imports pay duties between 0.1 and 5 percent ad valorem. The United States enters 43 percent of its imports duty free; another 47 percent are assessed duties in the 0.1-5 percent bracket. Japanese imports pay duties between 15.1 and 40 percent ad valorem, with over 72 percent of imports falling in the 20.1-25

<sup>1/</sup> In addition to imports for which the U.S. tariff rate is free, most of the duty collected on U.S. imports of orange juice in recent years has been subsequently refunded under the drawback provisions.

percent ad valorem range. All imports by the European Community entered in the 15.1-20 percent ad valorem bracket.

The European Community has by far the most complex tariff schedule in this subsector, with 55 lines, Canada has 15 lines; Japan has 14; the United States has 12; and the United Kingdom has 6.

### Trade importance

Fruit and vegetable juices comprise one of the least important of the 28 agricultural subsectors, ranking 25th in OECD exports and imports. Trade in the subsector accounts for slightly over half of 1 percent of total OECD agricultural exports and imports. For the United States,

Chart A-5-J. -- OECD trade in fruit and vegetable juices, 1969

Source: Compiled from UNCTAD Statistics of Foreign Trade, Series T, 1969.

the subsector ranks 16th in exports and 26th in imports, accounting for nearly 1 percent of U.S. agricultural exports in 1969. As shown in chart A-5-J, OECD countries as a whole are net importers of fruit and vegetable juices, whereas the United States is a net exporter.

Imports of fruit and vegetable juices by the 13 GATT tariff study countries were valued at \$172 million in 1970. Shipments among members of the European Community were an additional \$45 million. OECD imports in 1969 were valued at \$179 million, exports at \$124 million.

#### Trade network

Over 40 percent of OECD imports of fruit and vegetable juices are supplied by non-OECD countries, with over one-third of total imports coming from less developed countries. On the other hand, only 15 percent of OECD exports go to non-OECD countries.

Among the five major countries, the United States is the principal exporter, shipping \$47 million in 1969, and accounting for nearly 38 percent of OECD exports. Nearly half of U.S. exports go to Canada, 17 percent to the European Community, and 19 percent to less developed countries. The European Community is the second largest exporter, shipping \$14 million to outside destinations. Intra-EC shipments are more than twice as large as EC external shipments (table A-5-Q).

The European Community is the major importer, entering \$48 million in 1969 from outside sources (generally non-OECD countries) (table A-5-R). Intra-EC imports are equal to about two-thirds of EC imports from outside countries. The United States supplies 17 percent of EC

imports from outside countries. Canada's imports are supplied chiefly by the United States; United Kingdom imports come principally from non-OECD countries (largely LDC's). The United States and Japan are not large importers of fruit and vegetable juices.

#### Trade-agreement concessions

The tabulation below shows arithmetic average MFN tariffs for fruit and vegetable juices on pre-trade-agreement base dates compared with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. The largest reduction has occurred in the U.S. arithmetic average, decreasing by three-fourths from the pre-trade-agreement rate, but the U.S. 1972 average remained the highest of those shown below.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	115.9	28.8
European Community <u>1/</u>	26.0	24.7 (plus variable levies)
United Kingdom	15.0	8.5
Japan	34.0	25.4
Canada	25.0	6.7

Except for Canada, each of the major countries has made GATT concessions on its tariffs for fruit and vegetable juices. GATT concessions cover about 92 percent of U.S. tariff provisions, 86 percent of Japanese

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT. The January 1, 1972 figure for the Community is the average only of the 27 tariff lines which continue to be fixed duties alone; it does not include the 28 EC tariff lines subject to a variable levy.

lines, and about three-fourths of EC lines for the subsector. For the United Kingdom, 17 percent of tariff lines are fully covered and 83 percent are partially covered by GATT concessions.

Each of the members of the European Community had negotiated national tariff concessions for fruit and vegetable juices under the GATT prior to the establishment of the EC's Common External Tariff. The total of these national concessions was 63, of which 12 were above the CXT rate and 51 were below the CXT rate.

Rates of duty for orange juice on January 1, 1972, are compared with rates applicable on pre-trade-agreement base dates in table A-5-S. The United States had the highest pre-trade-agreement tariffs for orange juice, and the highest duties on concentrated orange juice on January 1, 1972. The U.S. duty on concentrated orange juice, although reduced by 50 percent before the Kennedy Round, remained relatively high, yielding an ad valorem equivalent of over 90 percent.

For the past several years, most of the duty collected on U.S. imports of orange juice has been later refunded under the drawback provisions. Imported orange juice (mostly frozen concentrated orange juice from Brazil, Mexico and the West Indies) is mixed with domestic juice to meet U.S. commercial standards and generally sold in the United States. Under drawback regulations, 99 percent of the duty paid on imports may be refunded for re-export claims filed within eight years. The bulk of exports on which drawbacks are obtained consists of domestically produced orange juice substituted for imported frozen concentrated orange juice.

The European Community had the second highest pre-trade-agreement tariffs and the highest 1972 tariffs for unconcentrated orange juice, plus additional duties for added sugar. The European Community had small reductions in fixed duties for concentrated orange juice both prior to and during the Kennedy Round, but added variable levies for sugar content above specified amounts. Canadian duties underwent the greatest reductions of the five countries; the January 1, 1972, Canadian duty on orange juice was one-fifth of the pre-trade-agreement rate.

U.S. tariffs had undergone reductions of 50 percent for concentrated orange juice and nearly 70 percent for other orange juice prior to the

Table A-5-S.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on orange juice

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

Canada-----	25%	7.5%	5% <sup>5/</sup>	15202-1
European Community--	21%; 42%	20% <sup>6/</sup> ; 42% <sup>1/</sup>	19% <sup>6/</sup> ; 42% <sup>1/</sup>	20.07 A III, B II (a) 1, (b) 1
United Kingdom-----	10%	Free; 3%	Free; 3%	20.07 (A)(1)
Japan-----	30%; 35%	25%; 30%	25%; 30%	20.07-1

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percents are ad valorem equivalents of a specific rate of duty (70 cents per gallon), calculated on 1971 actual or estimated import values.

<sup>3/</sup> Percent is ad valorem equivalent of a specific rate of duty (20 cents per gallon), calculated on 1971 estimated unit value.

<sup>4/</sup> Percent is ad valorem equivalent of a specific rate of duty (35 cents per gallon), calculated on 1971 import values; virtually all U.S. imports of orange juice entered, as concentrated orange juice, at this rate.

<sup>5/</sup> Due to a temporary suspension of the rate since February 1973, Canadian imports of orange juice now enter free of duty.

<sup>6/</sup> Rate applies to orange juice with specific gravity less than or equal to 1.33 at 15 degrees C. Subject to variable levies in addition to fixed duties for added sugar exceeding to natural sugar content (13 percent by weight) of orange juice. If value is less than or equal to \$32.55 per 100 kg. (1972 exchange conversion) and added sugar is less than or equal to 30 percent by weight, the post-Kennedy Round rate is bound under the GATT and the combined fixed rate and variable levy may not exceed 19.2 percent ad valorem.

<sup>7/</sup> Rate applies to orange juice with specific gravity greater than 1.33 at 15 degrees C. When value is less than or equal to \$32.55 per 100 kg. (1972 exchange conversion) and added sugar exceeds 30 percent by weight, there is a variable levy in addition to the fixed duty.

Kennedy Round. The United Kingdom, with the lowest base-rate duties on orange juice, reduced its tariffs prior to the Kennedy Round to duty free for orange juice with less than 20 percent added sweeteners and to 3 percent ad valorem for orange juice with more than 20 percent of added sweeteners. Japanese rates decreased from 30 and 35 percent ad valorem to 25 and 30 percent ad valorem prior to the Kennedy Round. On January 1, 1972, MFN fixed tariffs on orange juice ranged from free to 93 percent ad valorem in the schedules of the five countries.

## DAIRY PRODUCTS

Dairy products include fresh or preserved milk, butter, cheese, and curd. <sup>1/</sup>

MFN tariffs

Average MFN tariffs on dairy products for the five major countries are presented in chart A-6-A. Average tariffs given for the European Community are not comparable with averages of the other four countries because variable levies charged on EC imports are not included in the averages. Variable levies, which are used to shield the internal market price from import competition, were applied to all but one of the 63 EC tariff provisions for dairy products, and covered nearly 100 percent of Community imports when data for this study were assembled.<sup>2/</sup>

Arithmetic average MFN tariffs for all dairy products (combined free and dutiable) range from 8.2 percent to 32.1 percent ad valorem; weighted averages range from 5.5 percent to 35.2 percent. The United Kingdom has the lowest average tariffs, and Japan has the

---

<sup>1/</sup> For specific coverage of this sector, see BTN headings 04.01-04.04. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

<sup>2/</sup> In 1970 the EC average ad valorem equivalent of variable levies applicable to milk powder with fat content of 1.5 percent or less was 150 percent ad valorem. For Cheddar cheese, the ad valorem equivalent was 133 percent. For butter, with 85 percent or less fat, the variable levy was equivalent to 480 percent ad valorem. The one fixed duty EC tariff line which remained when basic data for this study was assembled was subsequently changed to a variable levy at a later date.

Chart A-6-A.-- Average MFN tariff rates on dairy products  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging between 22 percent and 71 percent made in 1972 on three-fourths of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

highest. Canada's arithmetic average is 14.4 percent ad valorem; the weighted average is 6.9 percent. The United States has an arithmetic average of 17.1 percent ad valorem and a weighted average of 11.3 percent.

For dutiable products only, averages of Canada, the United States, and the European Community are the same as their averages for all products (they have no duty-free provisions for dairy products). The dutiable product averages of Japan are a few percentage points

higher than the all products averages; the United Kingdom weighted dutiable products average is 7.5 percentage points higher than the weighted all products average.

The distribution of MFN tariff provisions for the five major countries for dairy products is shown in table A-6-A. Two-fifths

of the U.S. provisions bear duties of 5.1 to 10 percent ad valorem; 22 percent have duties in the 10.1-15 percent range; and virtually all of the remainder pay duties ranging from 15.1 to over 50 percent ad valorem. Half of the Canadian provisions have rates between 15.1 and 20 percent; one-third are in the 10.1-15 percent range. Almost three-fourths of United Kingdom provisions are in the 5.1-10 percent rate range. Over one-third of Japan's provisions fall in the 40.1-50 percent bracket, and about two-fifths are equally divided between the two brackets ranging from 25.1 to 40 percent ad valorem.

In 1970, nearly 5 percent of Canadian imports and 22 percent of United Kingdom imports were accorded preferential tariff treatment. The other major countries had no preferential imports.

Nearly 77 percent of United Kingdom imports enter free of duty; most of the remainder paid duties ranging from 10.1 to 15 percent ad valorem. Sixty-two percent of Japanese imports pay duties in the 30.1-40 percent ad valorem range, and most of the remainder pay duties between 40.1 and 50 percent ad valorem. Ninety percent of Canadian imports and nearly 70 percent of U.S. imports are dutiable at rates between 5.1 and 10 percent ad valorem (see table A-6-B).

<sup>1/</sup> Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 98 percent of EC provisions, covering nearly 100 percent of EC imports in this sector in 1970.

The European Community has the most detailed tariff schedule for dairy products, with 63 tariff lines, followed by the United States, with 60 lines. Japan has 14 tariff lines, the United Kingdom has 11, and Canada has 6.

World production

The production of milk by the five major countries and nine other major Western producers <sup>1/</sup> amounted to 408 billion pounds in 1970. Over one-third of the output was consumed as fluid milk, nearly another third was churned into butter, and about 17 percent was made into cheese; the remainder was canned or manufactured into ice cream, dried whole milk, and other products. Production in 1970 of milk in the five countries under study was as follows:

	<u>Billion pounds</u>
European Community	161
United States	117
United Kingdom	27
Canada	19
Japan	11

Trade importance

Dairy products is one of the less important of the nine agricultural sectors, ranking 6th in exports and 8th in imports in OECD trade. Dairy products account for nearly 7 percent of OECD agricultural exports and about 4 percent of imports. For the United States, the sector ranks 7th in exports and 8th in imports among the nine agricultural sectors, accounting for about 2 percent of U.S. agricultural exports and slightly over 1 percent of imports. As shown in chart A-6-B, the United Kingdom and Japan are net importers of dairy products, while the other three major countries are net exporters. The value and pattern of U.S. trade in dairy products is shown in chart A-6-C.

---

<sup>1/</sup> The nine other producers are Austria, Denmark, Greece, Ireland, Norway, Sweden, Switzerland, Australia, and New Zealand.

Chart A-6-B. -- OECD trade in dairy products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

In 1970, imports of dairy products by the 13 GATT tariff study countries were valued at \$757 million. Intra-EC shipments were an additional \$655 million. OECD imports in 1970, which include intra-EC trade, were valued at \$1.5 billion, exports at \$1.7 billion.

#### Trade network

The five countries account for nearly three-fourths of OECD exports of dairy products (table A-6-C). The major exporter is the European Community, shipping \$368 million in 1969 to outside destinations (intra-EC exports are 50 percent greater than EC outside exports). The United States is the second largest exporter, with \$116 million

Chart A-6-C.-- United States trade in dairy products, 1969

(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

of exports in 1969. Less developed countries absorb 28 percent of OECD total exports, nearly 57 percent of EC exports to outside countries, and nearly 83 percent of U.S. exports. The largest markets for EC external exports among the five major countries are the United Kingdom (9 percent) and the United States (8 percent).

"Other" OECD countries and non-OECD developed nations supply nearly equal portions of OECD imports, together accounting for over 40 percent of total OECD entries (table A-6-D).

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The European Community accounts for half of OECD imports of dairy products, but most of the EC trade consists of intra-EC shipments. Setting intra-EC trade aside, the United Kingdom is by far the principal importer, entering almost 5 times the amount of EC imports from outside sources. Over half of the United Kingdom imports are supplied by non-OECD developed countries and most of the remainder by "other" OECD countries. "Other" OECD countries and the European Community are the largest suppliers of U.S. and Canadian imports. Japan receives half of its imports from developed non-OECD countries.

#### Trade composition

Dairy products are divided into two subsectors: Fresh and preserved milk and cream; and butter and cheese. For each of the five major countries, exports of milk and cream are considerably more important than exports of butter and cheese (excluding intra-EC trade); and imports of butter and cheese are more important than imports of milk and cream. In total OECD trade, both exports and imports of butter and cheese are more important than those of milk and cream (see chart A-6-D).

Chart A-6-D. -- OECD trade in dairy products, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

Trade-agreement-concessions

The tabulation below compares pre-trade-agreement arithmetic average MFN tariffs for dairy products with arithmetic average rates in effect on January 1, 1972, for each of the five countries. The 1972 figure for the European Community reflects only one tariff line, for which there has been no reduction from the base-date rate. For Japan, the January 1, 1972, figure does not reflect unilateral reductions by 22 to 71 percent made in 1972 on three-fourths of the Japanese MFN rates for dairy products.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	27.5	17.1
European Community <u>1/</u>	21.4	16.0 (plus variable levies)
United Kingdom	19.9	8.2
Japan	27.9	32.1
Canada	29.2	14.4

GATT concessions cover some tariff lines for dairy products in the schedules of each of the five major countries. Over 98 percent of U.S. tariff lines and about half of Japanese and United Kingdom lines are covered. Ten percent of Canada's lines are fully covered by GATT concessions and 30 percent are partially covered. Less than 2 percent of EC tariff lines for dairy products are fully covered by GATT concessions and less than 8 percent are partially covered.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect concessions under the GATT, but a few of which are subject to ceilings as a result of earlier GATT concessions. The post-trade-agreement figure for the Community reflects only the one tariff line which continued to be subject to a fixed duty alone; it does not include the 62 tariff lines subject to a variable levy. Subsequently, the fixed rate shown was also replaced by a variable levy.

Each of the members of the European Community had made some GATT tariff concessions for dairy products in their national tariff schedules prior to the establishment of the EC's Common External Tariff. Of the 29 national GATT concessions, 22 were below rates established by the CXT, while only 6 were above CXT rates, and 1 at the level of the CXT rate.

#### Trade complaints

Although international trade in dairy products is rather deeply layered in practices considered to be nontariff barriers, relatively few complaints were received by the Tariff Commission in this sector. In most developed countries, the dairy sector is one of the most highly price-supported sectors in the economy. To protect domestic prices from lower-priced foreign supplies, various measures have been employed to regulate foreign trade, and virtually all dairy products fall within some kind of import restriction. The measures used by the five countries under review include: Quantitative restrictions such as embargoes, absolute and tariff-rate quotas, and stringent licensing requirements (the United States, Canada, the United Kingdom, Japan, and individual members of the European Community); variable levies and minimum import prices (the European Community), and state trading (Japan). Some countries (e.g., the United Kingdom and the United States) have negotiated voluntary agreements with foreign suppliers from time to time to control shipments to their markets.

Overproduction has caused surplus stocks of butter, cheese, and non-fat dry milk to accumulate in some major producing countries. One

outlet for surplus stocks is the export market. Inasmuch as internal market prices are frequently higher than world prices, subsidies must be employed to encourage exports. The United States, Canada, and the European Community have implemented export programs to move stocks and to aid food-needy countries. Subsidized exports may present a barrier to exports of third countries and can cause serious dislocations in traditional trade patterns.

Virtually all of the 86 complaints received from producers and traders of dairy products against policies or practices which they considered to be barriers to trade were against developed countries. The majority of less developed countries are located in equatorial latitudes and do not conduct much international trade in perishable dairy products. Half of the complaints were directed at the Scandinavian countries, Austria and Switzerland where dairy products presently and historically have always been an important industry; 20 percent were directed at the United States. Thirty percent of the complaints concerned quantitative restrictions and licensing; 20 percent were against nontariff levies and fees; and 20 percent concerned subsidies and other governmental involvement in trade.

Quantitative restrictions and licensing.--The majority of complaints concerning quantitative limitations were directed against U.S. Section 22 quotas; particularly cited were U.S. quotas on evaporated and sweetened condensed milk, dried milk, butter, fresh or sour cream, and Edam and Gouda processed cheese. The increase in dairy imports was estimated by the respondents to be at least 50 percent if Section 22 quotas were removed. Canada was reported to

have quotas on butter and milk powder; Japan on dairy products, except fresh milk (below 13 percent fat content) and natural cheese; Norway on milk, cream, and cheese; Austria and the European Community on fresh milk; West Germany on casein for food or fodder; the United Kingdom on butter, milk, and cream (with some products embargoed), and on cheese imports from East European countries; and Switzerland on milk and cheese, contingent upon the sale of Swiss domestic dairy output. Denmark was reported to issue licenses permitting importation of milk, cream, and butter only from certain favored countries.

Licenses are required by many countries for imports of dairy products. In some cases, such as Swedish licenses for dairy imports from the Americas, the licenses are only a formality. In many cases, however, licenses are used to restrict imports, often in conjunction with a formal quota. Countries requiring licenses for some or all of their dairy imports include Austria, New Zealand, South Africa, Tanzania, the United Kingdom, Denmark, Ireland, India, Sweden, and Norway.

Quantitative controls on some imports of dairy products are used by each of the five major countries, although such controls are not a principal tool for import restriction by the European Community. Other countries employing quantitative restrictions for dairy imports include Austria, Finland, Ireland, Tanzania, Yugoslavia, Norway, Spain, and Switzerland.

Nontariff charges on imports.--Variable levies applied to imports by the European Community, Austria, Sweden, and Denmark were reported

to eliminate international price competition from the markets of those countries. For the European Community, Austria, and Sweden, all imported dairy products are subject to variable levies; nearly two-thirds of Danish imports of dairy products were subject to variable levies in 1970. Used as a protective device to insulate internal market prices against the disruptive influence of imports, variable levies can reach extremely high levels (see examples of ad valorem equivalents for EC variable levies at the beginning of this sector). Another problem mentioned in relation to these levies is the uncertainty caused by frequent changes in the levies.

Other complaints against nontariff charges on imports were made against Turkey and Mexico. Turkey was reported to have supplementary charges (levies) which increase the prices of dairy imports, thereby limiting U.S. sales. U.S. producers complained that the Mexican surtax of 3 percent on dairy products virtually eliminates U.S. dairy product exports to that country.

Subsidies and other governmental participation in trade.---Agricultural subsidies under the European Community's Common Agricultural Policy were criticized as being a means to improve the EC share in world and U.S. markets. Also specifically cited as detrimental to trade was government control of the importation of butter in Canada, Japan, Switzerland, and Austria; preserved milk in Japan; and powdered whole and nonfat milk in Switzerland.

Miscellaneous practices.--U.S. producers complained that other countries manipulate prices of their exports as a subterfuge to evade value requirements in U.S. import quotas. It was also alleged that foreign governments permit large scale misbranding of products, thereby evading U.S. import quotas. The development and exportation of so-called "subterfuge" products specifically designed to evade U.S. import controls was also a source of complaint.

Special certificates are required for the importation of butter into the United Arab Republic. New Zealand and Australian health standards for butter were reported stricter for non-Commonwealth countries. Japanese regulations permitting only specified additives to be used for flavoring, preserving, and improving food appearance were felt to hamper trade. Conversely, foreign complainants felt U.S. label and content regulations discriminate against all European food items in consumer size containers. The state of New York insists the importers name and address appear on foodstuffs and packaged goods; this regulation is not applicable to domestic producers. The standards established under the U.S. Federal Import Milk Act of 1927 for imported milk and yoghurt sold in the United States were felt to impede U.S. dairy imports.

Respondents in the Commission's survey were requested to give an assessment of the trade effect of the barriers which they reported. In the dairy products sector, 21 complaints were accompanied by a statement that a "small" trade increase would be expected if the reported

barrier were removed; in 15 cases a "moderate" increase was expected, and in 4 cases a "significant" increase. Very few of these assessments were accompanied by an estimate of the dollar value of the expected trade increase if the barrier were removed. The few estimates which were submitted ranged from \$2,000 to \$20 million annually and totaled almost \$30 million.

---

## Milk and Cream, Fresh or Preserved

The subsector for fresh or preserved milk or cream includes fresh, evaporated, condensed, or dry milk and cream, buttermilk, skimmed milk, sour milk, sour cream, yoghurt, and whey. 1/

MFN tariffs

In the tariff schedule of the European Community in the base year for which tariff data for this report were prepared, variable levies covered all but one of the 38 tariff provisions for the subsector, 2/ and EC imports in 1970 entered totally under the variable levy provisions. These levies are not included in the calculation of average EC tariffs in chart A-6-E, and thus the EC averages are not comparable to averages for the other four countries. No EC imports entered under fixed duty rates in 1970 (hence the EC weighted average duty calculations become zero).

Of the other four countries, only Japan has any duty-free provisions. Consequently, for the United States, Canada, and the United Kingdom, average MFN tariffs on all products are equal to averages on dutiable products alone. The United Kingdom, with a weighted average tariff of 5.5 percent ad valorem and an arithmetic average of 7.9 percent has the lowest tariffs of the four countries. Canada has the second

---

1/ For the specific coverage of this subsector, see BTN headings 04.01 and 04.02.

2/ The remaining fixed rate was subsequently changed to a variable levy.

Chart A-6-E.-- Average MFN tariff rates on fresh or preserved milk and cream  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging between 22 percent and 55 percent made in 1972 on two-thirds of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

lowest arithmetic average tariff (16.4 percent) among the four nations, and the United States has the second lowest weighted average tariff (7.3 percent ad valorem). Japan has the highest average tariffs, with an arithmetic average tariff of 29.5 percent and a weighted average tariff of 34.7 percent ad valorem on all products. On dutiable products

alone, the Japanese arithmetic average rises to 36.1 percent ad valorem, and the weighted average to 43.2 percent.

Provisions for milk and cream in the tariff schedules of Canada and the United Kingdom are concentrated in a few value ranges, whereas the rates of Japan and the United States are more dispersed. U.S. rates range from less than 5 percent ad valorem to over 50 percent (see table A-6-E). Nearly 86 percent of United Kingdom MFN provisions are

dutiable in the 5.1-10 percent ad valorem range. Half of Canadian MFN provisions are in the 20.1-25 percent duty range and the rest are equally divided between the 10.1-15 and 15.1-20 percent ranges. Japan has 18 percent of its MFN provisions duty free and most of the rest in the three rate brackets ranging from 25.1 to 50 percent ad valorem. Forty-one

percent of U.S. provisions have duties in the 5.1-10 percent ad valorem range, and an additional 18 percent are between 10.1 and 15 percent ad valorem.

Preferential tariff treatment is significant in imports of Canada and the United Kingdom. Nearly 22 percent of Canadian imports and nearly 74 percent of United Kingdom imports in 1970 entered with preferential treatment.

Over half of United Kingdom MFN imports pay duties between 0.1 and 5 percent ad valorem and the rest between 5.1 and 10 percent. Eighty-four percent of Canadian MFN imports fall in the 15.1-20 percent ad valorem range. Over 95 percent of U.S. imports enter at rates between 5.1 and 10 percent ad valorem. Nearly 20 percent of Japanese imports are duty free and two-thirds bear duties between 40.1 and 50 percent ad valorem (see table A-6-F).

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 97 percent of EC provisions, covering all of EC imports in this subsector in 1970.

The European Community and the United States have the most detailed tariff schedules in this subsector, the Community with 38 tariff lines and the United States with 34 lines. Japan has 11 lines, the United Kingdom has 7 lines, and Canada has 4 lines.

### Trade importance

Among the 28 agricultural subsectors, trade in milk and cream does not assume great importance, ranking 14th in OECD exports and only 23rd in imports, and accounting for only 3 percent of OECD agricultural exports. For the United States, the subsector ranks 12th in exports and 27th in imports among the 28 agricultural subsectors, accounting for 1.7 percent of U.S. agricultural exports. As shown in chart A-6-F,

Chart A-6-F. -- OECD trade in fresh or preserved milk and cream, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

the United Kingdom and Japan are net importers of milk and cream, while the United States, Canada and the European Community are net exporters.

Imports of milk and cream by the 13 GATT tariff study countries were valued at \$70 million in 1970. Intra-EC shipments were an additional \$178 million. OECD imports in 1969 (which include intra-EC shipments) were valued at \$303 million, exports at \$645 million.

#### Trade network

Over half of OECD exports go to non-OECD countries (mostly LDC's), but over 90 percent of OECD imports come from OECD sources. The European Community is the largest exporter of milk and cream, shipping \$226 million to outside destinations in 1969. Complete country of destination data are unavailable for 8 percent of EC exports. Intra-EC exports are equal to 94 percent of EC external shipments, for which destinations are known. Eighty-three percent of EC external exports go to LDC's and 11 percent to "other" OECD countries. The bulk of the exports of the other four countries, including all of Japanese exports, go to less developed countries. There is small trade among the five major countries (table A-6-G).

None of the five countries have large imports of milk and cream (table A-6-H). United Kingdom imports (\$25 million in 1969) are the largest of the five countries (if intra-EC shipments are excluded). "Other" OECD countries and non-OECD developed countries supply most of United Kingdom entries. Imports of Canada, the United States, and EC entries from outside sources are negligible; intra-EC imports, however, were \$205 million in 1969.

The striking characteristic of international trade in milk and cream is its limited volume; compared for instance, to internal trade of

the European Community. Part of the reason for this lack of trade can be attributed to the nature of some products in the subsector. Fresh milk, for instance, is bulky and perishable. Nevertheless, there are fairly large exports of milk to less developed countries. Barriers to trade, both tariffs and extensive nontariff barriers, appear to adversely affect trade in milk among the five major countries.

---

Trade-agreement concessions

Arithmetic average MFN tariffs applicable to milk and cream on pre-trade-agreement base dates are compared in the tabulation below with arithmetic average rates on January 1, 1972, for each of the five major countries. Only the United Kingdom and Canada have had significant reductions in average duties from pre-trade-agreement levels. The EC fixed rate shown for 1972 represents a single EC rate line which has had no change from the base-date rate. The January 1, 1972, rate shown for Japan does not reflect unilateral reductions by 22 to 55 percent made in 1972 on two-thirds of Japanese rates for milk and cream.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	17.5	17.1
European Community <sup>1/</sup>	19.9	16.0 (plus variable levies)
United Kingdom	24.3	7.9
Japan	22.5	29.5
Canada	27.0	16.4

Four of the five major countries have made GATT concessions on their tariff provisions for milk and cream. GATT concessions cover 97 percent of U.S. tariff lines, 73 percent of Japanese lines, and 43 percent of United Kingdom lines. Fourteen percent of Canada's provisions are fully covered and 43 percent are partially covered by GATT concessions.

France, Italy, and West Germany had made GATT tariff concessions on provisions for milk and cream in their national tariff schedules before the establishment of the EC's Common External Tariff. Of the nine national concessions, three were above the CXT rate, one was at the CXT rate, and five were below the CXT rate.

Changes which have occurred in tariff rates for condensed or evaporated whole milk in the five major tariffs are shown in table A-6-I. None of the five countries had any reductions in duties during the

---

<sup>1/</sup> For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were replaced (or supplemented) unilaterally by variable levies, none of which reflect concessions under the GATT. The January 1, 1972, figure for the Community reflects only the one tariff line which continued to be subject to a fixed duty alone at the time tariff data for this report was prepared; it does not include the 37 tariff lines subject to a variable levy. Subsequently, the fixed rate shown was also replaced by a variable levy.

Table A-6-I.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on condensed or evaporated whole milk

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	14.4-32.6% AVE <sup>2/</sup>	8.6-19.3% AVE <sup>3/</sup>	8.6-19.3% AVE <sup>3/</sup>	115.30-.40
Canada-----	25% AVE <sup>4/</sup>	20% AVE <sup>5/</sup>	20% AVE <sup>5/</sup>	4300-1, -2
European Community--	18%	Variable levies <sup>6/</sup>	Variable levies <sup>6/</sup>	04.02
United Kingdom-----	3.9-14.2% AVE <sup>7/</sup>	4.7%; 6% AVE <sup>8/</sup>	4.7%; 6% AVE <sup>8/</sup>	04.02 (A)(1)(a)
Japan-----	25-35%	30%	30%	04.02-1

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percents are ad valorem equivalents of specific rates of duty (1.8-2.75 cents per pound), calculated on 1971 import values.

<sup>3/</sup> Percents are ad valorem equivalents of specific rates of duty (1-1.75 cents per pound), calculated on 1971 import values.

<sup>4/</sup> Percent is ad valorem equivalent of specific rate of duty (3.75 cents per pound), based on estimated 1971 import value.

<sup>5/</sup> Percent is ad valorem equivalent of specific rate of duty (3 cents per pound), based on estimated 1971 import value.

<sup>6/</sup> Autonomous rate fixed duties replaced by variable levies.

<sup>7/</sup> Percents are ad valorem equivalent of specific or compound rates of duty (5s. per cwt. - 5s. 4d. per cwt. plus 10 percent), calculated on 1971 import values.

<sup>8/</sup> Percents are ad valorem equivalents of specific rates of duty (6s. - 7s. 7d. per cwt.), calculated on 1971 import values.

Kennedy Round. The European Community replaced fixed duties originally established in its Common External Tariff with variable levies developed under the EC's Common Agricultural Policy.

For the United States, Japan, and the United Kingdom, the range of tariffs became more narrow prior to the Kennedy Round. The new range of United Kingdom rates was in the lower half of the old range and the new U.S. range of tariff rates was lower than the pre-trade-agreement U.S. range. Canadian tariffs also decreased prior to the Kennedy Round. On January 1, 1972, rates of the five countries for condensed or evaporated whole milk ranged from 4.7 percent (United Kingdom) to 30 percent (Japan) ad valorem or ad valorem equivalent.

## Butter and Cheese

In addition to butter and cheese, this subsector includes curd. 1/

MFN tariffs

MFN tariff rates of the five major countries on butter and cheese are compared in chart A-6-G. All of the 25 tariff provisions of the European Community for butter and cheese are subject to variable levies; none are subject only to fixed duties. Consequently, in chart A-6-G it has not been possible to show EC charges on imports comparable with those of the other four major countries.

Only the United Kingdom has any duty-free MFN tariff provisions in this subsector. Consequently, for the other three countries, average tariffs for all products are equal to averages for dutiable products alone. The United Kingdom, with an arithmetic average of 8.8 percent and a weighted average of 5.6 percent ad valorem, has the lowest average tariffs on all products. Canada, with an arithmetic average tariff of 10.5 percent and a weighted average of 6.1 percent ad valorem, has the lowest average MFN tariffs on dutiable products considered alone. U.S. average MFN tariffs are more than 5 percentage points higher than comparable averages for Canada and the United Kingdom's arithmetic averages. Japan has by far the highest average MFN tariffs of the four major countries, with an arithmetic average tariff of 41.7 percent ad valorem and a weighted average of 35.6 percent.

---

1/ For the specific coverage of this subsector, see BTN headings 04.03 and 04.04.

A-6-G. --Average MFN tariff rates on butter and cheese  
(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging between 22 percent and 71 percent made in 1972 on Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

For Canada, Japan, and the United Kingdom, tariff provisions on butter and cheese are in a relatively narrow range of duties, as shown in table A-6-J. Half of United Kingdom provisions are in the 5.1-10 percent ad valorem range and the remainder is equally divided between the duty-free bracket and the 10.1-15 percent range. Canadian MFN tariff provisions are equally divided between the 5.1-10 and 10.1-15 percent

duty ranges. U.S. rates are spread across several rate brackets ranging from 5.1 percent ad valorem to over 50 percent. However, the largest concentration of U.S. provisions (39 percent of the total) falls in the 5.1-10 percent ad valorem range, and 27 percent of provisions are in the 10.1-15 percent range. A third of Japan's provisions are in the 30.1-40 percent range and two-thirds are in the 40.1-50 percent ad valorem duty range.

In 1970, over 18 percent of United Kingdom imports of butter and cheese and a small amount of Canadian imports entered under preferential tariff treatment.

The distribution of MFN imports of butter and cheese by the five major countries, by duty level, is shown in table A-6-K. Eighty-one percent of United Kingdom imports enter duty free. Slightly over 98 percent of Canadian imports and 68 percent of U.S. imports pay duties between 5.1 and 10 percent ad valorem. About 94 percent of Japanese imports fall in the duty range of 30.1-40 percent ad valorem.

1/ Variable levies apply to all EC tariff provisions.

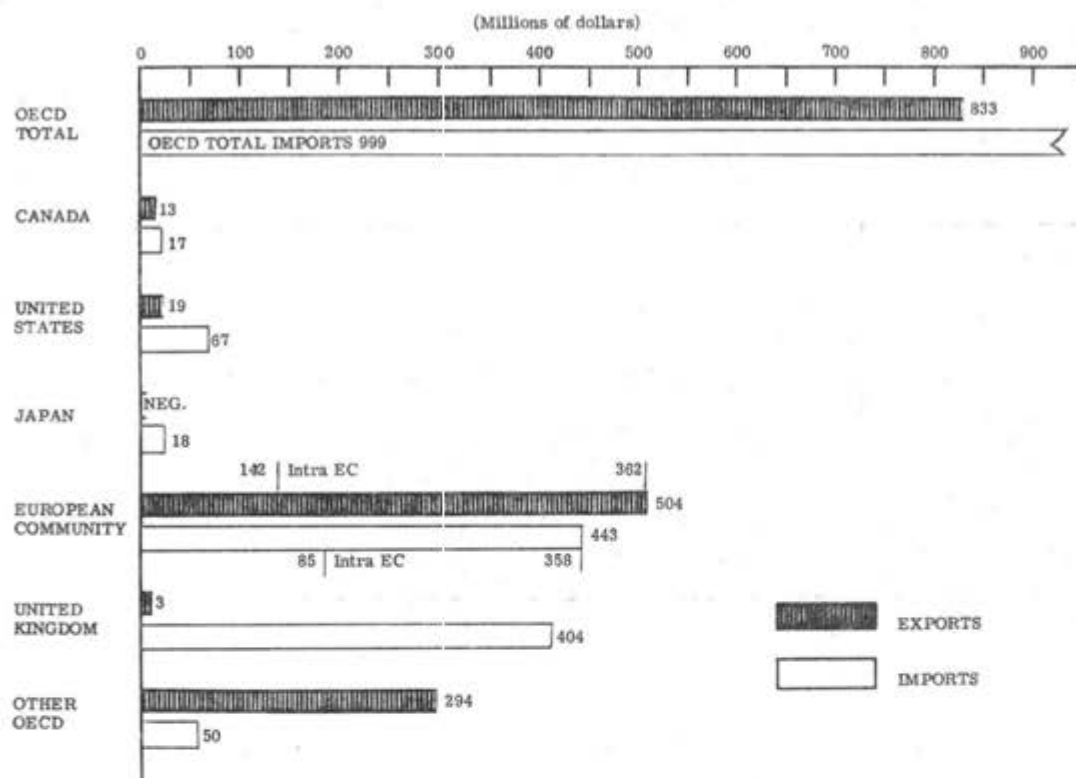

The United States with 26 tariff lines, and the European Community with 25 lines have the most complex tariff schedules for butter and cheese. The United Kingdom has 4 lines, Japan has 3, and Canada 2 lines.

### Trade importance

Butter and cheese is a fairly important subsector, ranking 9th in OECD exports and 14th in imports among the 28 agricultural subsectors, and accounting for nearly 4 percent of OECD agricultural exports and over 3 percent of OECD agricultural imports in 1969. For the United States, the subsector ranks 22nd in exports and 19th in imports among the 28 agricultural subsectors, accounting for slightly over 1 percent of U.S. agricultural imports and less than 1 percent of U.S. agricultural exports. As shown in chart A-6-H, the European Community is a net exporter of butter and cheese, while the other four major countries are net importers.

Imports of butter and cheese by the 13 GATT tariff study countries were valued at \$688 million in 1970. Intra-EC shipments were an additional

Chart A-6-H. -- OECD trade in butter and cheese, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

\$477 million. OECD imports in 1969 (which include intra-EC trade) were valued at \$999 million, exports at \$833 million.

### Trade network

Nearly three-fourths of OECD imports come from OECD countries and nearly 90 percent of OECD exports go to OECD countries (tables A-6-L and M). Less developed countries receive nearly 10 percent of OECD exports, but supply less than 1 percent of OECD imports. Developed non-OECD countries supply over one-fourth of OECD imports.

The European Community is the largest exporter, shipping \$142 million of exports to countries outside the Community in 1969.

1/ Includes intra-EC shipments.

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Intra-EC exports are two and a half times as great as external EC shipments. The United States had 1969 exports of only \$19 million; Canada, \$13 million and the United Kingdom, \$3 million. The United States and the United Kingdom are the largest single markets for exports by the European Community, each absorbing nearly one-fifth of EC external exports. Less developed countries receive one-third of EC external exports and "other" OECD countries receive 18 percent. More than half of exports by the United States and the United Kingdom go to less developed countries and nearly 70 percent of Canadian exports go to the United Kingdom.

The United Kingdom is by far the largest importer of butter and cheese (excluding intra-EC imports), entering \$404 million in 1969. Nearly 57 percent of United Kingdom imports come from non-OECD developed countries, and nearly a third come from the "other" OECD countries. Each of the other major countries receives at least half of its imports from OECD countries. The European Community, the second largest importer, with \$85 million of imports in 1969 from outside sources, receives nearly all of its outside imports from "other" OECD countries. The United States, with \$67 million of imports, enters about 39 percent of its imports from the European Community and about 42 percent from "other" OECD countries. The European Community is also the largest single supplier for imports of Canada and Japan.

#### Trade-agreement concessions

In the tabulation below, arithmetic average MFN tariffs for butter and cheese on pre-trade-agreement base dates are compared with arithmetic average rates on January 1, 1972, for the five major countries. For Canada, the United States, and the United Kingdom, substantial reductions

have occurred in their average MFN rates. The average level of the Japanese tariff has increased from the pre-trade-agreement level, but the Japanese rate shown for January 1, 1972, does not reflect unilateral reductions (by 22-71 percent) made in 1972 on all of the Japanese tariff rates for butter and cheese.

	<u>Pre-trade-agreement</u> (Percent ad valorem)	<u>January 1, 1972</u>
United States	34.0	17.0
European Community <u>1/</u>	23.1	Variable levies only
United Kingdom	12.1	8.8
Japan	35.0	41.7
Canada	33.5	10.5

Three of the five major countries have made GATT concessions on their tariff provisions for butter and cheese. GATT concessions cover all U.S. provisions and three-fourths of United Kingdom lines. GATT-bound ceilings fully cover 4 percent of EC lines and partially cover 20 percent of EC tariff lines for butter and cheese.

Each of the members of the European Community had made some national GATT tariff concessions on butter and cheese prior to the establishment of the EC's Common External Tariff. Of the 20 GATT concessions in national schedules, 3 were above the CXT rate and 17 were below the CXT rate.

Tariff rates of the five major countries for cheese on pre-trade-agreement base dates and on January 1, 1972, are compared in table A-6-N.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, all of the original fixed duties for this subsector were replaced (or supplemented) unilaterally by variable levies, none of which reflect GATT concessions, but a few of which are subject to ceilings as a result of earlier GATT concessions.

Table A-6-H.--Pre-trade-agreement tariff rates compared with January 1, 1972.  
MFN tariff rates on cheese

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	35%; 39.7% AVE <sup>2/</sup>	12-25% <sup>3/</sup>	6-25% <sup>3/ 4/</sup>	117.00-.85
Canada-----	11.8%; 12.7% AVE <sup>2/</sup>	5.4% AVE <sup>6/</sup>	5.4% AVE <sup>6/</sup>	1700-1, -2

United Kingdom-----	15%	10%; 15%	10%; 15%	04.04 (A)
Japan-----	35%	35%; 45%	35%; 45%	04.04

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Percent is ad valorem equivalent of a specific rate of duty (8.75 cents per pound), calculated on 1971 import values.

<sup>3/</sup> Range includes an ad valorem equivalent (22.7 percent) of a specific rate of duty (5 cents per pound), calculated on 1971 import values.

<sup>4/</sup> More than half of cheese imports in 1971 entered at rates of 8-10 percent ad valorem which had undergone 50 percent reductions in the Kennedy Round.

<sup>5/</sup> Percents are ad valorem equivalents of specific rate of duty (7 cents per pound), calculated on estimated 1971 import values.

<sup>6/</sup> Percent is ad valorem equivalent of specific rates of duty (3-3.5 cents per pound), calculated on estimated 1971 import values.

<sup>7/</sup> Concessions under the GATT made by the European Community before the Kennedy Round act as ceilings on variable levy charges on Glarus herb cheese (also called Schabziger) and on certain limited categories of Emmentaler, Gruyere, Sbrinz, Bergkase and Appenzeller cheeses. For Glarus herb cheese, the ceiling is 12 percent ad valorem. For the other cheeses mentioned, the ceiling is \$8.14 or \$21.70 per 100 kg., calculated on 1972 exchange rate conversions.

Of the five major countries, only the United States had tariff reductions during the Kennedy Round. By 1972, the United States had made tariff reductions on all categories of cheese, the reductions ranging from nearly 30 percent for Goya and Sbrinz cheeses to over 80 percent for Edam and Gouda cheese, and Gjetost cheese made from goat's milk. The U.S. arithmetic average duty in 1972 was 14 percent ad valorem compared to a pre-trade-agreement average of 35 percent ad valorem. Although Canada had no duty reductions during the Kennedy Round, Canadian duties on cheese were reduced more than 50 percent prior to the Kennedy Round,

giving Canada the lowest cheese duty rates for January 1, 1972. The United Kingdom had reductions of one-third on duties for blue veined cheese prior to the Kennedy Round. The European Community replaced fixed duties with variable levies in all tariff lines applicable to cheese. GATT concessions on glaris herb cheese and on limited categories of Emmenthaler, Gruyere, Sbrinz, Bergkase, and Appenzeller cheeses in effect impose a ceiling on the variable levies on these cheeses. The European Community made no duty reductions on cheese in the Kennedy Round.

Japan raised its tariffs on processed cheese prior to the Kennedy Round and had no duty reductions during the Kennedy Round. On January 1, 1972, duty rates on cheese ranged from 5.4 percent ad valorem for Canada to 45 percent ad valorem for Japan.

## Agricultural Sector A-7

## FISH, SHELLFISH, AND PRODUCTS

The sector for fish, shellfish, and products thereof includes all fresh, chilled, or frozen fish and shellfish, as well as fish and shellfish which are prepared or preserved. The items covered by the sector will hereafter be collectively referred to as fishery products. 1/ All fishery products included in this subsector must be suitable for human consumption.

MFN tariffs

Average MFN tariffs of the five major countries are shown in chart A-7-A for fishery products. For all fishery products (free and dutiable combined), arithmetic average tariffs range from 5.3 percent ad valorem to 13.4 percent ad valorem; weighted averages range from 1.6 percent to 12.3 percent (chart A-7-A). The lowest arithmetic average is held by Canada, the lowest weighted average by the United States; the European Community has the highest averages. 2/ Japan has an arithmetic average of 10.4 percent, a weighted average of 6.3 percent. The United Kingdom averages are 11.1 percent (arithmetic) and 5.9 percent (weighted). For dutiable products alone, the European Community again has the highest averages (14.7 percent and 15.7 percent). The United States has the lowest arithmetic average

---

1/ For the specific coverage of this sector, see BTN chapter 3 and headings 16.04 and 16.05.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

2/ Since 1970, a small percentage of EC tariff provisions for this sector have been subject to a compensatory tax (having the effect of a variable levy) in addition to normal customs duties. The compensatory tax is designed to keep import prices below reference prices set for certain products.

Chart A-7-A.--Average MFN tariff rates on fish, shellfish and products

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions by amounts ranging between 20 percent and 60 percent made in 1972 on over one-third of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

at 7.7 percent ad valorem and the United Kingdom has the lowest weighted average (6.1 percent). The greatest differences between the averages for all products and for dutiable products are in the averages of Canada and the United States.

The distribution, by duty level, of MFN provisions of the five major countries for fishery products is shown in table A-7-A. Japan, with 70 percent of provisions evenly divided between the rate ranges of 5.1-10 and 10.1-15 percent ad valorem, has the greater part of provisions dutiable

Table A-7-A.--Distribution, by duty level, of MFN tariff provisions for fish, shellfish and products

at higher rates than those assessed for the bulk of Canadian, United Kingdom or U.S. provisions. Canada has nearly half of its provisions duty free, and nearly one-fourth dutiable in the 5.1-10 percent range. The United States, with 29 percent of provisions dutiable between 0.1 and 5 percent, has about one-fourth of provisions free and about one-fourth dutiable in the 5.1-10 percent ad valorem range.

The United Kingdom has 45 percent of provisions dutiable between 5.1 and 10 percent ad valorem; the 17 percent of United Kingdom provisions dutiable between 25.1 and 30 percent ad valorem makes the United Kingdom arithmetic average tariff on all products higher than that of Japan and almost as high as the EC arithmetic average tariff on all products. The European Community has 35 percent of provisions in the 10.1-15 percent rate bracket and slightly over one-fifth of provisions in the 5.1-10 percent and the 15.1-20 percent ad valorem ranges.

In 1970, four of the five major countries accorded preferential tariff treatment to some imports of fishery products. Preferential duties were applied to 42 percent of United Kingdom imports, about 10 percent

of EC imports from outside countries, and a negligible percentage of Canadian and U.S. imports.

The distribution, by duty level, of 1970 MFN imports of fishery products is shown in table A-7-B. Canada enters nearly two-thirds of

Table A-7-B.--Distribution, by duty level, of MFN imports of fish, shell-fish and products

its imports and the United States over three-fourths of its imports duty free. The bulk of Japanese imports (70 percent) enter in the 0.1-5 percent ad valorem duty range, while nearly all of United Kingdom dutiable imports are admitted in the 0.1-5 and 5.1-10 percent ad valorem ranges. Canada and the European Community have significant percentages of dutiable imports reaching higher levels than the other three countries; 15 percent of Canadian imports are dutiable in the 15.1-20 percent range and 18 percent of EC imports are dutiable in the 20.1-25 percent ad valorem range. Over one-fifth of EC imports are duty free.

The United States has by far the most detailed tariff schedule in this sector, with 148 lines. The European Community has 71 lines; Canada has 43 lines; the United Kingdom has 29 lines; and Japan has 20 lines.

### World production

The 1970 world commercial catch of fish, shellfish, and mollusks (oysters, clams, snails, etc.) amounted to about 150 billion pounds (live weight). Some 35 to 40 percent of the total weight of the catch is reduced to inedible fish meal and oil and, hence, is not covered in this section. The principal species of fish for food on the basis of volume are cod, herring, Alaska pollock, tuna, mackerel, and shrimp. The major producers of fish for food are Japan, the Soviet Union, Peoples Republic of China, and the United States.

The United States attempts to protect its fishing interests on the high seas (beyond the 12-mile coastal waters) through bilateral agreements. Efforts are also underway to obtain agreement on a multilateral basis to develop a better balance between coastal and distant-water fishing interests.

### Trade importance

Among the nine agricultural sectors, fish, shellfish and their products rank eighth in OECD exports and sixth in imports, and account for about 6 percent of OECD agricultural exports and imports. For the United States, the sector also ranks eighth in exports but third in imports, accounting for about 1.5 percent of U.S. agricultural exports and about 12 percent of U.S. agricultural imports.

As shown in chart A-7-B, Canada and Japan are net exporters of fishery products, whereas the United States, the United Kingdom, and the European Community are net importers.

In 1970, imports by the 13 GATT tariff study countries were valued at \$1.9 billion. Intra-EC shipments were an additional \$157 million, or about 39 percent of the value of EC imports from countries outside the Community. OECD imports in 1969 were valued at \$1.8 billion, exports were \$1.3 billion.

Chart A-7-B. -- OECD trade in fish, shellfish and products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

### Trade network

The five major countries account for about two-thirds of OECD exports of fishery products, and almost 90 percent of imports. U.S. exports are relatively small, but the United States is the major importer, receiving 39 percent of total OECD imports (see chart A-7-C).

Japan is the largest exporter, shipping \$273 million in 1969 (see table A-7-C). The United States receives one-third of Japanese exports and is Japan's largest market. Over one-fourth of Japanese exports go to LDC's. The European Community and the United Kingdom are also important markets for Japan.

Chart A-7-C. --United States trade in fish, shellfish and products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

Canadian exports are nearly as large as those of Japan; almost 70 percent of Canadian exports go to the United States. The United States, which exported \$86 million of fishery products in 1969, finds its largest market in Japan. EC exports to countries outside the Community (\$56 million) go largely to the smaller OECD countries or to less developed countries.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Over one-fourth of OECD imports come from less developed countries. The United States is the largest importer of fishery products, with the value of U.S. imports being twice the value of entries by the second largest importer, the European Community (excluding intra-EC shipments). Non-OECD countries (mostly LDC's) supply about 46 percent of total U.S. imports, Canada over one-fourth, and Japan about 14 percent. The bulk of EC imports from countries outside the Community come from non-OECD sources and the smaller OECD nations (table A-7-D).

The United Kingdom is the third largest OECD importer, entering \$168 million of fishery products in 1969. Japan is one of the largest suppliers to the United Kingdom, accounting for almost 25 percent of its entries. The smaller OECD countries supply over 30 percent of United Kingdom imports of fishery products.

Trade composition

The fishery products sector is divided into two subsectors: Fresh, chilled, or frozen fish and shellfish; and prepared or preserved fish and shellfish. The first subsector is only slightly more important than the second in OECD exports, but imports of fresh, chilled, or frozen fish and shellfish are twice the value of imports of prepared or preserved fish and shellfish. The relative importance of the two subsectors is shown in chart A-7-D.

Chart A-7-D.--OECD trade in fish, shellfish and products, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969

Trade-agreement concessions

In the tabulation below, arithmetic average tariffs for fishery products on January 1, 1972, are compared with average levels on pre-trade-agreement base dates for each of the five major countries. The United States and Canada have had the largest decreases in arithmetic average MFN tariffs, but the other three countries also have had significant reductions. The Japanese 1972 figure shown below does not reflect unilateral reductions by 20 percent to 60 percent made in 1972 on over one-third of Japanese provisions for fish, shellfish and their products.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	17.6	5.7
European Community	16.8	13.4
United Kingdom	16.4	11.1
Japan	15.4	10.4
Canada	23.4	5.3

In each country's tariff except for Canada, GATT concessions covered more than half of tariff provisions for fishery products. Over 98 percent of U.S. provisions and a slightly lower percentage of EC provisions are under the GATT. Fifty-five percent of Japanese tariff provisions are covered; and for the United Kingdom, about 40 percent of the tariff provisions are fully covered by GATT concessions and an equal portion is partly covered. Approximately one-third of Canadian provisions for fishery products are covered under the GATT.

The national tariff schedules of the member states of the European Community contained tariff concessions on fish, shellfish and their products negotiated under the GATT before the adoption of the Common External Tariff (CET). The total number of such concessions was 180, of which 53 were above the CET rate, 24 were at the CET rate, and 103 were below the CET rate.

#### Trade complaints

In the Tariff Commission's survey, 77 complaints were received from producers and traders of fish and shellfish concerning policies or practices which they considered to be barriers to trade. The complaints were about evenly divided between developed and developing countries. The largest number of complaints received concerned standards, followed by quantitative restrictions and licensing.

Standards.---About half of the complaints were against standards, primarily labelling and container requirements. Half of these were against Latin American nations, dealing with Brazilian regulations stipulating that all cans be labelled in Portuguese, Venezuelan labelling stipulations

regarding dating, and Mexican labelling stipulations requiring the name of the importer and declaration number. Among the complaints against developed countries concerning standards were objections to the requirements of West Germany on mandatory container sizes and Germany's requirement that the production date appear on the label. France requires the country of origin be embossed on the can. U.S. producers also cited as injurious Australian planned standardization of can sizes in the metric system. Japan requires the net content of food must be labelled only in the metric system; also the name of the importer and the date of importation must appear on each container. Japan stipulates only specified approved additives may be used for flavoring, preserving, and improving the appearance of food. U.S. labelling requirements differ from the Fair Packaging and Labelling Act in the state of New York. New York State insists the name and address of the importer appear on foodstuffs and packaged goods; a similar stipulation does not apply to domestic producers.

In the category of health standards, virtually all the complaints were against the United States. Some countries specifically complained of U.S. FDA standards for mercury content in swordfish and black cod; U.S. mercury guidelines for seafood and froglegs are not accepted by most other fish consuming nations. The state of Maryland prohibits entry of shellfish unless certified by the U.S. Public Health Service to be free of pollution; this stipulation applies even though shellfish have been inspected by the U.S. Food and Drug Administration.

U.S. producers considered Peruvian mandatory inspection of imports and other Latin American country regulations requiring that sanitary certificates accompany shipments of fish as obstacles to trade.

U.S. producers felt differing analytical techniques among nations for evaluating fish were detrimental to trade.

Quantitative restrictions and licensing.--Quantitative restrictions and licensing controls accounted for 30 percent of the complaints. Japan has licensing requirements on frozen squid and quotas on herring, cod, scallops, mackerel, and sardines. Dahomey embargoes all canned fish in tins of a weight over 1 kilogram. Barbados requires licenses for importation of fish and fish products, as do several Latin American countries. South Africa and New Zealand have quotas on canned shrimp. Complaints against Western Europe dealt with Danish licensing requirements for oysters, French embargoes on lake trout implemented via licensing controls, and West German quotas on carp, herring, and shrimp, also implemented via licensing.

Miscellaneous practices.--A U.S. trader complained against governmental assistance received by exporters in Japan and the European Community, and against U.S. government procurement policies. Ceylonese fish trade is controlled by government monopoly. New Zealand and South African regulations were said to discourage importation of canned shrimp. In Brazil, the minimum value (for customs valuation) is fixed by the Bank of Brazil; if foreign products are imported at a value lower than the minimum value, the customs duty is levied on the basis of the minimum value. Mexican valuations are based on an "official"

value rather than the actual value of the imported goods; artificial values are almost invariably greater than actual values. Canned clams imported into the United States are subject to valuation on the basis of the American selling price of a competitive domestic product rather than the actual value of the imported article. Egyptian documentation regulations require special import certificates. French border taxes on fish were the subject of complaint, as were the Italian sanitary tax and inspection fee.

Estimated effect of trade barriers.--Less than one-third of the complaints submitted to the Commission in the fish and shellfish sector were accompanied by an assessment of the effect on trade of the reported barriers. In the case of 15 complaints, the respondents indicated a "significant" increase in trade would be expected if the barrier were removed, 6 expected a "moderate" increase and 2 a "small" increase. None of the respondents estimating a significant increase assigned a dollar value to their estimate; respondents estimating moderate increases assigned dollar amounts ranging from \$25,000 to \$1 million annually. U.S. producers estimated their sales of canned shrimp in New Zealand and South Africa would increase "moderately" (7 percent) with the removal of internal regulations (i.e., licensing practices and quotas discouraging imports); with the removal of Japanese frozen squid licensing requirements, U.S. producers estimated squid sales would increase a "moderate" 200 percent; with the removal of U.S. standards for mercury content in fish, importers estimated swordfish sales would increase a "significant" 100 percent and sales of black cod a "significant" 167 percent.

## Fresh, Chilled, or Frozen Fish and Shellfish

This subsector covers fish, fresh (live or dead), chilled, or frozen; and crustaceans and mollusks, fresh, chilled, frozen, salted in brine, or dried, or in shells simply boiled in water. <sup>1/</sup>

MFN tariffs

Average MFN tariffs of the five countries for fresh, chilled, or frozen fish or shellfish are shown in chart A-7-E. The United States

Chart A-7-E. --Average MFN tariff rates on fresh, chilled or frozen fish and shellfish

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reduction by 50 percent made in 1972 on 14 percent of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 03.01 and 03.03.

and Canada have large percentages of tariff provisions and imports free of duty. Consequently, U.S. and Canadian average tariffs on all products are much lower than average tariffs on dutiable products alone. Canadian average tariffs are the lowest of the five countries on all products (2.2 percent ad valorem arithmetic, 0.6 percent weighted), followed by the United States (arithmetic average, 3 percent; weighted average, 0.8 percent). Japanese average tariffs are considerably higher, (6.9 percent arithmetic, 5.7 percent weighted), but the European Community has the highest averages on all products, with an arithmetic average tariff of 11.4 percent ad valorem and a weighted average of 9.9 percent. For all products, average tariffs of the United Kingdom are slightly below those of the European Community.

The United Kingdom has the highest arithmetic average tariff for dutiable products alone, 15.5 percent ad valorem; its weighted average is considerably lower, 10 percent ad valorem. The European Community averages for dutiable products are at 13 and 13.1 percent. Japanese dutiable product averages are not significantly different from those for all products. The United States has the lowest arithmetic average for dutiable products (6.1 percent) and Japan has the lowest weighted average (5.9 percent).

Half of U.S. tariff provisions and nearly three-fourths of Canadian MFN provisions for fresh, chilled, or frozen fish and shellfish are duty free (table A-7-E). One-fifth of U.S. provisions are dutiable between 0.1 and 5 percent ad valorem and over one-fifth of U.S. and Canadian provisions between 5.1 and 10 percent. The United Kingdom, with over

Table A-7-E.--Distribution, by duty level, of MFN tariff provisions for fresh, chilled or frozen fish and shellfish

Duty level	(In percent)

one-fourth of MFN tariff provisions duty free, has 40 percent of provisions dutiable between 5.1 and 10 percent ad valorem. The United Kingdom arithmetic average is the highest of the five major countries on dutiable products and the second highest on all products because one-fifth of its provisions are in the duty range of 25.1-30 percent ad valorem.

Japan has 45 percent of its provisions in the 0.1-5 percent rate bracket and both Japan and the European Community have a third of their provisions in the 5.1-10 percent bracket. The Community has one-fourth of its provisions dutiable in the 10.1-15 percent duty range and 18 percent in the 15.1-20 percent bracket.

In 1970, preferential tariff treatment was accorded some imports by three of the five major countries. Preferential duties covered a negligible percentage of U.S. imports, nearly 10 percent of EC imports from outside sources and 42 percent of United Kingdom entries.

The great bulk of U.S. and Canadian imports enter duty free. Eighty-one percent of Japan's imports pay duties between 0.1 and 5 percent ad valorem, and about 87 percent of United Kingdom imports are in

the 5.1-10 percent ad valorem bracket. EC imports are more widely dispersed among the duty ranges, with the largest portion (31 percent) in the 10.1-15 percent bracket (table A-7-F).

Table A-7-F.--Distribution, by duty level, of MFN imports of fresh, chilled or frozen fish and shellfish

The European Community has the most detailed tariff schedule in this subsector, with 40 lines. The United States has 34 lines, Canada has 19 lines, the United Kingdom has 15 lines, and Japan has 9 lines.

#### Trade importance

Among the 28 agricultural subsectors, fresh, chilled, or frozen fish and shellfish ranked 13th in OECD exports and 9th in imports in 1969, accounting for over 3 percent of OECD agricultural sector exports and nearly 4 percent of agricultural imports. As shown in chart A-7-F, OECD exports are equal to less than 60 percent of the value of imports. Canada is a net exporter by a large margin, and the other four major countries are large net importers. The subsector accounts for 55 percent of OECD exports in the fishery products sector and 69 percent of imports. For the United States, the subsector ranked 14th in exports

Chart A-7-F. -- OECD trade in fresh, chilled or frozen fish and shellfish, 1969

Source: Compiled from UNCTAD Statistics of Foreign Trade, Series C, 1969.

and 3rd in imports among the 28 agricultural subsectors in 1969, accounting for almost 10 percent of U.S. agricultural imports but only a small percentage of exports.

Imports of fresh, chilled, or frozen fish and shellfish in 1970 by the 13 GATT tariff study countries were valued at \$1.3 billion. Intra-EC shipments were an additional \$121 million. OECD imports in 1969 were valued at \$1.2 billion, exports at \$717 million.

#### Trade network

The five major countries account for nearly two-thirds of OECD exports and over 90 percent of imports. Only about one-tenth of OECD

exports go to non-OECD countries, but over two-fifths of OECD imports come from non-OECD sources, with 32 percent originating in less developed countries.

Among the five major countries, Canada is the only significant exporter (the European Community has a substantial amount of intra-EC exports, but only \$26 million of external shipments in 1969). Over 85 percent of Canada's exports go to the United States (table A-7-G).

Table A-7-G.--OECD exports of fresh, chilled, or frozen fish and shellfish, 1969

The United States is by far the largest importer of fresh, chilled or frozen fish and shellfish, entering \$563 million in 1969, or over 45 percent of total OECD imports (table A-7-H). Over half of U.S. imports come from non-OECD countries, mostly less developed nations. Canada is the largest supplier of U.S. imports among the five major countries, supplying 28 percent of total U.S. entries. European Community imports

Table A-7-H---OECD imports of fresh, chilled, or frozen fish and shellfish, 1969

(Millions of dollars)

from outside sources (\$185 million in 1969) are at about the same level as Japan's imports. Intra-EC shipments are equal to more than half of EC outside entries. Over 70 percent of Japan's imports (\$182 million total) come from less developed countries.

#### Trade-agreement concessions

The following tabulation shows arithmetic average tariffs for fresh, chilled, or frozen fish and shellfish on pre-trade-agreement base dates compared with average MFN tariffs in effect on January 1, 1972, for each of the five major countries. Each of the five countries shows a reduction in average tariffs during the period. The 1972 average for Japan does not reflect unilateral reductions of 50 percent made in 1972 on 14 percent of the Japanese tariff lines for this subsector.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	6.9	3.0
European Community	16.1	11.4
United Kingdom	20.0	11.3
Japan	12.5	6.9
Canada	14.5	2.2

All of the five major countries have made GATT concessions on a substantial proportion of their tariff provisions for this sub-sector. GATT concessions cover well over 90 percent of U.S. tariff lines and nearly as large a percentage of EC tariff lines. Approximately 40 percent of Canadian and Japanese tariff lines are covered by GATT concessions. One-third of United Kingdom lines are partially covered under the GATT and 40 percent are fully covered.

The national tariff schedules of all of the members of the European Community contained tariff concessions on fresh, chilled, or frozen fish and shellfish before the adoption of the Common External Tariff. The total number of these concessions was 94, of which 28 were above the CXT rate, 11 were at the CXT rate, and 55 were below the CXT rate.

Table A-7-I shows duty reductions which have occurred on fresh, chilled, or frozen fillets of Atlantic ocean perch, cod, cusk, haddock, hake, and pollock. Neither the United Kingdom, with a duty of 10 percent ad valorem, nor the United States, with a duty of 6 percent ad valorem equivalent had duty reductions from pre-trade-agreement levels. Canada, which had the lowest pre-trade-agreement duty, had

Table A-7-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on fresh, chilled, or frozen fillets of Atlantic ocean perch, cod, cusk, haddock, hake, and pollock

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

United States-----	6% AVE <sup>2/</sup>	6% AVE <sup>2/</sup>	6% AVE <sup>2/</sup>	110.55
Canada-----	3.4% AVE <sup>3/</sup>	1.7% AVE <sup>3/</sup>	Free	11500-1 (part)
European Community--	18%	16.8%; 18%	15%; 18%	03.01 B I C 2, <sup>4</sup>
United Kingdom-----	10%	10%	10%	03.01 C 2
Japan-----	10%	10%	5%	03.01 2 B

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalents of specific rates of duty calculated on 1971 import values.

<sup>3/</sup> Ad valorem equivalents of specific rates of duty calculated on 1969 import values.

duty reductions both prior to and during the Kennedy Round, with the Kennedy Round reduction making Canadian imports duty free.

Japan, which had no reductions prior to the Kennedy Round, had a 50 percent tariff reduction in the Kennedy Round. The European Community had duty reductions on frozen fish fillets both prior to and during the Kennedy Round. On January 1, 1972, duty rates on the above mentioned fresh, chilled, or frozen fish fillets ranged from free to 18 percent ad valorem.

## Prepared or Preserved Fish and Shellfish

Prepared or preserved fish and shellfish include fish which are salted, in brine, dried or smoked, or otherwise prepared or preserved fish (including caviar and caviar substitutes); and prepared or preserved crustaceans and mollusks. 1/

MFN tariffs

The five major countries' average MFN tariffs for all prepared or preserved fish and shellfish (free and dutiable combined) range from the U.S. weighted average of 4.2 percent ad valorem and arithmetic average of 6.5 percent, to the European Community's weighted average of 16.1 percent and arithmetic average of 16 percent. Japan's all products and dutiable products averages are identical (13.2 percent arithmetic, 10.4 percent weighted). Most of the other dutiable products averages are slightly higher than the all products averages, with a maximum difference of 4.6 percentage points (in the weighted averages for Canada) (chart A-7-G).

As shown in table A-7-J, Canada and the United States have considerable portions of their MFN tariff provisions duty free or dutiable in the 0.1-5 percent ad valorem duty range, while Japan has no duty-free provisions, and the European Community only a negligible portion dutiable below the 5.1-10 percent ad valorem range. Slightly more than half of Japan's provisions and slightly less than half of those of the European Community are in the 10.1-15 percent range. Canada and the United

States have about one-fourth of provisions in the 5.1-10 percent rate range; Japan has over one-third of its provisions and the United Kingdom has half of its provisions in that range.

In 1970, four of the five major countries accorded preferential tariff treatment to some imports of prepared or preserved fish. Preferential duties covered a negligible percentage of U.S. and Canadian imports, 16 percent of EC imports from countries outside the Community and about one-third of United Kingdom imports.

Thirty-five percent of Canadian imports and 44 percent of U.S. imports are duty free (table A-7-K). Nearly 40 percent of U.S. imports

Table A-7-K.--Distribution, by duty level, of MFN imports of prepared or preserved fish and shellfish

are in the 5.1-10 percent rate bracket, as are almost two-thirds of Japan's imports (the remainder for Japan is in the 10.1-15 percent range). The largest concentration of European Community imports is found in the three brackets ranging from 10.1-25 percent. The United Kingdom has two-thirds of its imports entering in the 0.1-5 percent duty range.

The United States has by far the most complex tariff schedule in this subsector, with 11<sup>4</sup> lines. The European Community has 31 lines, Canada has 2<sup>4</sup> lines, the United Kingdom has 1<sup>4</sup> lines, and Japan has 11 lines.

### Trade importance

Among the 28 agricultural subsectors, prepared or preserved fish and shellfish rank 15th in 1969 OECD exports and 19th in imports. The subsector accounts for nearly 3 percent of OECD exports and less than 2 percent of OECD imports. The subsector accounts for about 45 percent of 1969 OECD exports in the fishery products sector, and about 31 percent of imports. As shown in chart A-7-H, OECD countries as a group are net

Chart A-7-H. -- OECD trade in prepared or preserved fish and shellfish, 1969

Sources: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

exporters of prepared or preserved fish and shellfish, but the United States, the European Community, and the United Kingdom are net importers. For the United States, among the 28 agricultural subsectors, this subsector ranked 18th in 1969 U.S. agricultural exports and 12th in imports, accounting for only about one-half of 1 percent of U.S. agricultural exports in 1969.

In 1970, imports of prepared or preserved fish and shellfish by the 13 GATT tariff study countries were valued at \$601 million. Intra-EC shipments were an additional \$36 million. OECD imports in 1969 were valued at \$543 million, exports at \$584 million.

#### Trade network

Japan is the only significant exporter among the five major countries, shipping \$191 million in 1969, or about one-third of total OECD exports. Major Japanese markets are the United States, to which Japan sends 29 percent of its exports, the United Kingdom (17 percent), the European Community (15 percent), and less developed countries, which receive 31 percent (table A-7-L).

Nearly 83 percent of OECD imports of prepared or preserved fish and shellfish are received by the five major countries. The European Community is the largest importer, with \$156 million worth of imports from outside sources (plus \$32 million of intra-EC shipments), nearly three-fourths of which come from non-OECD countries or the smaller OECD nations rather than the specific countries under review (see table A-7-M).

The United States, with \$127 million of imports in 1969, and the United Kingdom, with \$99 million of imports, each receive the greater part of their imports from the five major countries, with Japan the most important supplier, and Canada the second most important supplier. Japan and Canada are not significant importers.

#### Trade-agreement concessions

The tabulation below compares arithmetic average MFN tariffs for prepared or preserved fish and shellfish on pre-trade-agreement base dates with the average tariffs in effect on January 1, 1972, for each of the five major countries. Although a reduction has occurred in the average tariffs of all five countries, for the United States and Canada the reductions have been substantially greater, and January 1, 1972, average MFN tariffs were substantially lower than those of the other three major countries. The Japanese figure for 1972 does not reflect unilateral reductions by 20 percent or 60 percent made in 1972 on two-thirds of Japan's tariff lines for this subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	20.9	6.5
European Community	19.0	16.0
United Kingdom	12.9	10.8
Japan	17.9	13.2
Canada	30.4	7.7

Each of the five major countries has made concessions under the GATT on a substantial portion of its tariff provisions for prepared or preserved fish. GATT concessions cover nearly all U.S. lines, the bulk of EC lines, nearly two-thirds of Japanese lines, and roughly one-third

of Canadian lines. For the United Kingdom, 43 percent of the tariff lines for this subsector are fully covered by GATT concessions and an additional 50 percent are covered in part.

All members of the European Community had negotiated national tariff concessions under the GATT prior to the adoption of the EC's Common External Tariff (CET). Of the 86 total concessions, 25 were above the CET rate, 13 were at the CET rate, and 48 concessions were below the CET rate.

Tariff reductions on pickled or salted cod, cusk, haddock, hake, and pollock which have occurred since pre-trade-agreement base dates are shown in table A-7-N. The United States and Canada had tariff reductions prior to the Kennedy Round; and for both countries, imports

Table A-7-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on salted or pickled cod, cusk, haddock, hake and pollock

United Kingdom-----	10%	10%	10%	03.02C
Japan-----	10%; 15%	15%	15%	03.02-2(1)

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalents of specific rates of duty calculated on 1971 import values.

<sup>3/</sup> Ad valorem equivalents of specific rates of duty calculated on 1969 import values.

were made duty free during the Kennedy Round. For the European Community, duties on pickled or salted cod remained at 13 percent ad valorem, but duties on the other fish mentioned above were lowered from 15 percent ad valorem to 12 percent during the Kennedy Round. For the United Kingdom, duty rates were unchanged from the pre-trade-agreement rates (10 percent ad valorem). For Japan, the 1972 rate on salted fish was higher than on the pre-trade-agreement base date in 1954; and for other fish in the category, the rate has remained unchanged.

## TOBACCO

The tobacco sector includes unmanufactured tobacco and manufactured tobacco products for smoking, such as cigars, cigarettes and pipe and cigarette tobacco; tobacco extracts and essences; and tobacco waste. 1/  
MFN tariffs

Average MFN tariffs for tobacco are relatively high for all five major countries, when compared with average duties for other product sectors. The United Kingdom is the only one of the five major countries with any of its average tariffs below 20 percent ad valorem (chart A-8-A). Since only the United States has any duty-free MFN import provisions, and none of the five countries has any duty-free MFN imports, average tariffs for all products are equal to those for dutiable products, except for the U.S. arithmetic averages. Japanese arithmetic average tariffs reach 232 percent ad valorem; the Japanese weighted averages are 354.2 percent. 2/ The United States and the European Community have arithmetic average tariffs of approximately 50 percent ad valorem, but weighted averages for the two countries are much lower. The European Community has weighted averages of 25.9 percent ad valorem and the United States has weighted averages of 20.6 percent ad valorem. Canada has the lowest arithmetic average tariffs (27.4 percent), followed by the United Kingdom (30.2 percent).

---

1/ For the specific coverage of this sector, see BTN headings 24.01 and 24.02. The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

2/ Weighted averages shown for Japan were calculated by applying MFN duties to Japanese imports. In reality, virtually all Japanese imports enter through the government tobacco monopoly and are exempt from duty. Thus, the weighted averages shown do not reflect duty actually paid on Japanese tobacco imports.

Chart A-8-A.--Average MFN tariff rates on tobacco

(Percent ad valorem)

Source: Compiled from national tariffs and trade statistics.

The United Kingdom has the lowest weighted average tariffs (17.2 percent), followed by the United States, Canada, and the European Community.

The distribution of MFN tariff provisions for tobacco, by duty level, is shown in table A-8-A. Canadian and U.S. provisions are scattered throughout most of the duty ranges, whereas provisions of the other three countries are in only a few duty brackets. All five

countries have some provisions in duty ranges above 50 percent ad valorem; three-quarters of Japanese provisions, 44 percent of EC provisions, over one-fourth of U.S. provisions, 17 percent of United Kingdom provisions and 8 percent of those of Canada are in the over 50 percent range. Half of United Kingdom MFN tariff provisions for tobacco are dutiable in the 15.1-20 percent rate bracket. One-third of EC provisions are dutiable in the 25.1-30 percent range. The United States and Canada have the bulk of their MFN provisions dutiable above the 15 percent ad valorem level.

In 1970, over 5 percent of U.S. imports, over one-fifth of EC imports and 38 percent of United Kingdom imports were accorded preferential tariff treatment. Japan had no preferential imports and Canadian imports under preferential rates were negligible.

Over 80 percent of each country's MFN imports of tobacco are assessed duties above 15 percent ad valorem (table A-8-B). Almost three-fourths of U.S. imports and 92 percent of United Kingdom MFN imports pay duties between 15.1 and 20 percent ad valorem. All MFN

Table A-8- B.---Distribution, by duty level, of MFN imports of tobacco

imports by Japan are subject to duties above 50 percent ad valorem <sup>1/</sup>; and 92 percent of imports entering the Community fall in the 20.1-25 percent duty range. About half of Canadian imports are equally divided between the 20.1-25 and 25.1-30 percent ad valorem ranges.

The United States has the most detailed tariff schedule for tobacco, with 19 tariff lines. Canada has 12 lines, the European Community has 9, the United Kingdom has 6, and Japan has 4 lines.

#### World production

World production of tobacco amounted to 4.7 million metric tons in 1970. The five major countries produce 27 percent of world output. The United States is by far the leading producer accounting for 19 percent of the world total. World production of unmanufactured tobacco in 1970, by major producers, was as follows:

	<u>1,000 metric tons</u>
United States-----	865
Japan-----	150
European Community-----	135
Canada-----	99
All other-----	3,425
World total-----	4,674

<sup>1/</sup> Virtually all Japanese imports are actually exempt from MFN duties through importation by the tobacco monopoly.

### Trade importance

Tobacco is the least important of the nine agricultural sectors in both OECD imports and exports, accounting for 5.3 percent of OECD agricultural exports and 3.3 percent of imports in 1970. For the United States, the sector ranks fourth in exports and seventh in imports among the nine agricultural sectors, accounting for 9.8 percent of U.S. agricultural exports and about 2 percent of imports in 1970. U.S. exports and imports of tobacco declined slightly in 1970 and for the United States and OECD countries as a whole, tobacco accounted for a smaller percentage of total agricultural trade in 1970 than in the previous year. Chart A-8-B shows the relative importance of trade in tobacco among

(Chart A-8-B. -- OECD trade in tobacco, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

the major countries and total trade for OECD countries as a whole. The United States and Canada are net exporters, by a large margin, while the other three major countries are net importers.

In 1970, imports of tobacco by the 13 GATT tariff study countries were valued at just over \$1 billion. Trade between members of the European Community was an additional \$129 million. OECD imports in 1969 were valued at 1.2 billion (including intra-EC trade), exports at \$1.3 billion.

#### Trade network

The United States, exporting \$696 million of tobacco in 1969, accounts for over half of OECD exports. Twenty-nine percent of U.S. exports go to non-OECD nations, one-fourth to the European Community, one-fifth to the United Kingdom, and about 17 percent to "other" OECD countries (chart A-8-C).

The United Kingdom is the second largest exporter (if intra-EC shipments are excluded), shipping \$84 million in 1969. Nearly 70 percent of United Kingdom exports go to less developed countries. The bulk of Canadian exports go to the United Kingdom; three-fourths of EC exports to outside countries go to "other" OECD countries and non-OECD destinations. Japan is a small exporter of tobacco (see table A-8-C).

The principal tobacco importers among the five major countries are the European Community, entering \$363 million from outside sources in 1969, the United Kingdom with \$275 million, and the United States with \$129 million (table A-8-D). Major sources of supply for the

Chart A-8-C. --United States trade in tobacco, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

European Community are the United States, supplying 45 percent of EC imports from outside sources, less developed countries, and "other" OECD countries. Major sources of United Kingdom imports are the United States (53 percent); Canada (18 percent); and less developed countries (21 percent). Japanese imports totaled \$74 million and Canadian imports only \$10 million in 1969. U.S. imports come largely from less developed countries (39 percent) and from "other" OECD countries (56 percent).

### Trade composition

The tobacco sector contains two subsectors: Unmanufactured tobacco, and manufactured tobacco. Unmanufactured tobacco is by far the most important subsector (see chart A-8-D).

Chart A-8-D. --OECD trade in tobacco, by type, 1969  
(Millions of dollars)

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

### Trade-agreement concessions

The tabulation below compares arithmetic average MFN tariffs for tobacco on pre-trade-agreement base dates with arithmetic average MFN rates existing on January 1, 1972, for the five major countries. Although the reductions shown for the European Community, Canada, and especially the United States are quite large, each of the five countries retained high average tariffs on January 1, 1972, ranging from the Canadian arithmetic average of 27.4 percent ad valorem to the Japanese average of 232.5 percent.

#### Pre-trade-agreement      January 1, 1972 (Percent ad valorem)

United States	208.8	53.5
European Community	78.8	49.0
United Kingdom	NA	30.2
Japan	272.5	232.5
Canada	55.0	27.4

Four of the five major countries have made GATT concessions on some of their tariff provisions for tobacco. GATT concessions cover 89 percent of EC tobacco provisions, 84 percent of U.S. lines, approximately 80 percent of Canadian lines (many of them only partially), and less than 17 percent of United Kingdom tariff lines for tobacco.

All members of the European Community had negotiated concessions under the GATT in their national tariff schedules prior to the establishment of the EC's Common External Tariff. Of the total of 15 concessions, one was above the CXT rate and 14 were below the CXT rate.

#### Trade complaints

U.S. manufacturers and traders of tobacco and tobacco products submitted 64 complaints to the Tariff Commission concerning practices and policies which they considered barriers to trade. Forty-four countries and some customs unions were named in the complaints. Developing countries were the object of slightly more than half of the complaints. France, Italy, the European Community, Colombia and Ecuador were named most frequently.

The largest number of complaints dealt with nontariff charges on imports. The second largest area concerned government monopolies and exclusive franchises, and the third area dealt with quantitative restrictions and licensing practices.

Nontariff charges on imports.--Complaints were received against various nontariff charges on imports imposed in 14 countries, principally LDC's and members of the European Community. Excise taxes employed

by Nigeria, Finland, Sweden, and EC countries were named. In most cases, the taxes are based on retail prices and make high-priced imports even more unattainable for the consumer. The Malagasy Republic and Rwanda were reported to levy heavy consumption taxes on tobacco and tobacco products; in the Malagasy Republic these taxes ranged from 10-135 percent of the value of the imported merchandise. The producers and exporters making these complaints on taxes felt that in some cases the tax structure discriminated against U.S. tobacco products, either in favor of local products or products of a third country. Among complaints against other types of nontariff charges, Togo was cited as having a burdensome phytosanitary tax on tobacco products. Prior import deposits were reported for Ecuador and Colombia. In Ecuador such deposits equaled 100 percent of the value of the imported merchandise, and in Colombia such deposits equaled 37 percent of the value of the imports. Deposits are not refunded for 180 days in Ecuador, and they are not refunded in Colombia until the imported merchandise is "nationalized."

Government monopolies and exclusive franchises.--Major U.S. tobacco manufacturers complained against government monopolies or exclusive franchises in France, Italy, Austria, Iceland, Spain, Turkey, Haiti, and Japan. The complainants felt that the monopoly control of tobacco manufacturing and/or distribution in these countries prevented a realization of full sales potential of U.S. tobacco. For example, it was reported that the Japan Monopoly Corporation (JMC) retails its Japanese cigarette brands

in more than 200,000 authorized outlets throughout Japan while permitting imported cigarette brands only token distribution in about 1,800 retail outlets, or less, depending on the JMC attitude toward the "popularity" of a particular foreign brand. It was also reported that during the past 12 years, many Japanese retail outlets authorized to sell U.S. cigarettes have been out of stock for periods ranging up to more than a month because the JMC had decided to limit the amount of imported cigarettes. Although private importation of tobacco is not prohibited, the extremely high MFN tariff rates are prohibitive to imports other than through the monopoly.

Quantitative restrictions and licensing practices.--France, the United Kingdom, Ireland, Egypt, Colombia, and Guyana were named in complaints concerning quantitative restrictions and licensing practices. The licensing requirements maintained by three of these countries were also cited as trade barriers because of the time and expense of obtaining licenses.

Miscellaneous practices.--Other measures which were the subject of complaint in the Commission's survey included mixing regulations that require the tobacco manufactures to use certain amounts of domestic tobacco in their production (West Germany), tariff preference arrangements (the European Community, the United Kingdom, and the United States), and production or export assistance programs that may dislocate traditional trade patterns (the European Community and the United States). Australia grants lower rates of duty to imports by manufacturers who conform to mixing specifications (for use of domestic tobacco).

Fifteen of the complaints received in the tobacco sector were accompanied by an assessment of the trade effect of the reported barriers. Fourteen of these indicated "significant" increases in trade would result from the removal of the barriers; one indicated a "moderate" increase. In 13 cases increases in trade would result from the removal of a single trade barrier, and in the remaining 2 cases more than one barrier was involved. Thirteen producers and traders placed monetary values on their estimated increases in trade. The sum of their estimates was \$106.6 million. The percentage figures for the estimated increases in trade ranged from 5 to almost 4,000 percent of existing levels of trade.

## Unmanufactured Tobacco

The unmanufactured tobacco subsector includes, in addition to unmanufactured tobacco, tobacco refuse. 1/

MFN tariffs

Japanese average MFN tariffs of 355 percent ad valorem on unmanufactured tobacco are the highest of the five major countries (chart A-8-E). 2/ United Kingdom average tariffs, 16.6 percent ad valorem, are the lowest. The European Community has the second lowest arithmetic averages at 19.6 percent ad valorem, closely followed by Canadian arithmetic average tariffs (20.6 percent). The U.S. arithmetic average tariffs, at 63.7 and 69 percent ad valorem, are the second highest. Weighted average tariffs for the United States, Canada, and the European Community are slightly over 20 percent ad valorem; ranging from the U.S. weighted average of 21.1 percent to the EC average of 23.7 percent.

The distribution of MFN tariff provisions for tobacco, by duty level, is shown in table A-8-E. The United States is the only one of the five countries having duty-free provisions for tobacco, (7.7 percent of provisions). Thirty-one percent of U.S. provisions and all of Japan's provisions are dutiable at rates above 50 percent ad valorem. Nearly one-fourth of U.S. provisions are in the range between 15.1 and 20 percent ad valorem. Half of the provisions of the European Community are dutiable between 10.1 and 15 percent ad valorem and half

---

1/ For the specific coverage of this subsector, see BTN heading 24.01.

2/ Weighted averages shown for Japan were calculated by applying MFN duties to Japanese imports. In reality, virtually all Japanese imports enter through the government tobacco monopoly and are exempt from duty. Thus, the weighted averages shown do not reflect duty actually paid on Japanese tobacco imports.

Chart A-8-E.--Average MFN tariff rates on unmanufactured tobacco

(Percent ad valorem)

Source: Compiled from national tariffs and trade statistics.

are dutiable between 20.1 and 25 percent. All United Kingdom provisions are dutiable between 15.1 and 20 percent ad valorem. Canadian provisions are spread fairly evenly in ranges between 0.1 and 50 percent ad valorem, with 28.5 percent of MFN provisions in the 20.1-25 percent ad valorem range.

Preferential tariff treatment was accorded nearly 6 percent of U.S. imports in 1970, over one-fifth of EC imports from outside sources, and 40 percent of United Kingdom imports. Japan and Canada had no imports at preferential rates.

The distribution of MFN imports of unmanufactured tobacco, by duty level, is shown in table A-8-F. None of the five countries have duty-free MFN imports of unmanufactured tobacco. Canadian imports are scattered in a broad range of rates between 0.1 and 50 percent ad valorem, with concentrations in three brackets, 0.1-5 percent, 20.1-25 percent and 40.1-50 percent. The other four countries have the bulk of their imports in only a few duty ranges. Nearly 83 percent of U.S. imports

Table A-8-F.--Distribution, by duty level, of MFN imports of unmanufactured tobacco

and all of United Kingdom imports pay duties between 15.1 and 20 percent ad valorem. Nearly 96 percent of imports by the European Community are dutiable between 20.1 and 25 percent ad valorem. All Japanese imports bear duties above 50 percent ad valorem. <sup>1/</sup>

The United States has the most detailed tariff schedule in this subsector, with 13 tariff lines. Canada has seven lines, the European Community has two lines, and Japan and the United Kingdom each have one line.

#### Trade importance

Unmanufactured tobacco is fairly important in international trade, ranking 10th in OECD exports and 13th in imports among the 28 agricultural subsectors. Trade in the subsector accounts for nearly 4 percent of OECD agricultural exports and over 3 percent of imports. For the United States, the subsector ranks 3rd in exports and 14th in imports among the 28 agricultural subsectors, accounting for 9.5 percent of U.S. agricultural exports and 2 percent of imports. As shown in chart A-8-F,

---

<sup>1/</sup> Virtually all Japanese imports are actually exempt from MFN duties through importation by the tobacco monopoly.

Chart A-8-F. -- OECD trade in unmanufactured tobacco, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

the United States and Canada are net exporters of unmanufactured tobacco, while the other three major countries and OECD countries as a whole are net importers.

In 1970, imports by the 13 GATT tariff study countries were valued at \$947 million, with combined imports by the five major countries worth \$769 million, or over 80 percent of the total. Intra-EC shipments were an additional \$37 million. OECD imports in 1969 were valued at \$1 billion, exports at \$818 million.

# Trade network

The United States accounts for two-thirds of OECD exports of unmanufactured tobacco; exports from "other" OECD countries make up most of the remainder (table A-8-G). Major markets for U.S. exports, worth \$540 million in 1969, are the European Community and the United Kingdom, each

Table A-8-G.-- OECD exports of unmanufactured tobacco, 1969

receiving about 28 percent of U.S. shipments. The United States sends 8 percent of its exports to Japan, 16 percent to "other" OECD countries, and 16 percent to less developed nations. Canada, the only other country among the five with substantial exports (\$54 million), sends most of its exports of unmanufactured tobacco to the United Kingdom.

Major importers of unmanufactured tobacco are the European Community, entering \$351 million from outside countries in 1969; the United

Kingdom, with \$263 million; and the United States, with \$117 million (table A-8-H). About 45 percent of EC imports from outside sources

Table A-8-H.-- OECD imports of unmanufactured tobacco, 1969

come from the United States, 31 percent from non-OECD countries (chiefly LDC's) and one-fifth from "other" OECD countries. The United States supplies over half of United Kingdom imports; about one-fifth are supplied by Canada and most of the remainder by developing countries. "Other" OECD countries supply about 58 percent of U.S. imports, and developing nations supply most of the rest.

#### Trade-agreement concessions

The following tabulation compares arithmetic average MFN tariffs for unmanufactured tobacco on pre-trade-agreement base dates with arithmetic average rates in effect on January 1, 1972, for the five major countries.

EC and U.S. average tariffs have decreased by about one-third and Canadian average tariffs by over 50 percent. There has been no change in the average level for Japan. Data are not available on the pre-trade-agreement level for the United Kingdom.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	94.5	63.7
European Community	29.4	19.6
United Kingdom	NA	16.6
Japan	355.0	355.0
Canada	44.3	20.6

Four of the five major countries have made GATT concessions on some of their tariff provisions for unmanufactured tobacco. All United Kingdom provisions are covered by GATT concessions, as are 85 percent of U.S. lines, and half of EC lines. Fifty-seven percent of Canadian lines are fully covered by GATT concessions and 43 percent are covered in part. France, Germany, and Italy had negotiated GATT concession on unmanufactured tobacco in their national tariffs prior to the adoption of the Common External Tariff by the European Community. There was a total of three such concessions, all below the CXT rate.

Tariff rates for unstemmed oriental or Turkish-type cigarette leaf tobacco on pre-trade-agreement base dates and on January 1, 1972, are shown in table A-8-I. The United States, Canada, and the European Community had tariff reductions on this tobacco both before and during the Kennedy Round. The United States had a duty reduction by almost two-thirds prior to the Kennedy Round and a slight further reduction in the Kennedy Round. Canada reduced its duties by 50 percent in the Kennedy

Table A-8-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on oriental or Turkish type cigarette leaf tobacco, not stemmed

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers

United States-----	54.7% AVE <sup>2/</sup>	19.9% AVE <sup>2/</sup>	18% AVE <sup>2/</sup>	170.28
Canada-----	51.3% AVE <sup>3/</sup>	28.2% AVE <sup>3/</sup>	14.1% AVE <sup>3/</sup>	14201-1
European Community--	30%	28%	23%	24.01 B
United Kingdom-----	56.9%; 62.9% AVE <sup>2/</sup>	124.8%; 130.8% AVE <sup>2/</sup>	124.8%; 130.8% AVE <sup>2/</sup>	24.01 A, B
Japan-----	355%	355%	355%	24.01

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalents of specific rates of duty calculated on 1971 import values.

<sup>3/</sup> Ad valorem equivalents of specific rates of duty calculated on 1969 import values.

Round and by 45 percent prior to the Kennedy Round; or a total reduction of nearly 73 percent from the level on the pre-trade-agreement base date. The European Community also had tariff reductions before and during the Kennedy Round, making a total reduction of 23 percent by January 1, 1972, from the pre-trade-agreement rate. The Japanese rate remained constant at 355 percent ad valorem, while the rates for the United Kingdom increased by more than 100 percent; however, the United Kingdom rates are not strictly comparable with the rates of the other countries due to the inclusion of various excise taxes characterized by the United Kingdom as "revenue duties" rather than "tariff rates." On January 1, 1972, duties for the five countries ranged from 14.1 percent ad valorem for Canada to 355 percent for Japan.

## Manufactured Tobacco

This subsector includes manufactured tobacco, and tobacco extracts and essences. The major products of the subsector are cigars, cheroots, and cigarettes. 1/

MFN tariffs

Japan, with arithmetic average duties of 191.7 percent and weighted average duties of 348.4 percent ad valorem, has the highest average MFN tariffs of the five major countries on manufactured tobacco. 2/ Since none of the five major countries have any duty-free MFN tariff provisions in this subsector, average tariffs on all products are equal to those on dutiable products alone (chart A-8-G). The United States has the lowest average MFN tariffs, with an arithmetic average of 31.4 percent ad valorem and a weighted average of 16.6 percent. The United Kingdom has an arithmetic average of 32.9 percent, and a weighted average of 23.3 percent. The Canadian arithmetic average is 37.1 percent and the weighted average is 30.2 percent ad valorem. The European Community, with an arithmetic average tariff of 57.4 percent ad valorem and weighted average of 78.4 percent, has average tariffs considerably lower than those of Japan but considerably higher than those of the other three countries.

The distribution of MFN tariff provisions for manufactured tobacco, by duty level, is shown in table A-8-J. Two-thirds of Japanese provisions,

---

1/ For the specific coverage of this subsector, see BTN heading 24.02.

2/ Weighted averages shown for Japan were calculated by applying MFN duties to Japanese imports. In reality, virtually all Japanese imports enter through the government tobacco monopoly and are exempt from duty. Thus, the weighted averages shown do not reflect duty actually paid on Japanese tobacco imports.

ad valorem is very broad. The United States has a third of its provisions in the 10.1-15 percent ad valorem range; one-third of Japan's provisions and two-fifths of United Kingdom provisions are in the 15.1-20 percent rate bracket. Canada's rates are evenly distributed in five brackets, ranging from 15.1 to over 50 percent. Over two-fifths of EC provisions are in the 25.1-30 percent ad valorem range.

In 1970, preferential tariff treatment was accorded to 13 percent of United Kingdom imports of manufactured tobacco and over 7 percent of EC imports from outside sources. Japan had no imports under preferential rates; Canada and the United States had a negligible amount.

The distribution of MFN imports of manufactured tobacco, by duty level, is shown for the five major countries in table A-8-K. All Japanese MFN imports, 1/ over 91 percent of EC imports, 14 percent of United Kingdom imports, and 3 percent of U.S. imports pay duties above 50 percent ad valorem. Only the United Kingdom, with about 60 percent of imports dutiable at rates between 0.1 and 5 percent ad valorem have any imports entering at rates below 10 percent ad valorem.

1/ Virtually all Japanese imports are actually exempt from MFN duties through importation by the tobacco monopoly.

Table A-8- K.--Distribution, by duty level, of MFN imports of manufactured tobacco

(In percent)					
Duty level	Canada	United States	Japan	European Community	United Kingdom

Nearly 92 percent of U.S. imports bear duties between 10.1 and 15 percent ad valorem. Over half of Canadian MFN imports are dutiable between 25.1 and 30 Percent ad valorem.

The European Community has seven tariff lines for manufactured tobacco, the United States has six lines, Canada and the United Kingdom each have five lines, and Japan has three lines.

#### Trade importance

Manufactured tobacco does not assume great importance in OECD trade, ranking 18th in exports and 24th in imports among the 28 agricultural subsectors. Trade in manufactured tobacco accounts for 2.3 percent of OECD agricultural exports and less than 1 percent of imports. For the United States, the subsector ranks 9th in exports and 25th in imports among the 28 agricultural subsectors, accounting for nearly 3 percent of U.S. agricultural exports. As shown in chart A-8-H, the United States, the European Community, and the United Kingdom

Chart A-8-H. -- OECD total trade in manufactured tobacco, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

are net exporters of manufactured tobacco; Canada and Japan are net importers.

In 1970, imports of manufactured tobacco by the 13 GATT tariff study countries were valued at \$107 million. Intra-EC shipments were an additional \$92 million. OECD imports in 1969 were valued at \$205 million (including intra-EC shipments), exports at \$480 million.

#### Trade network

The United States is the largest exporter of manufactured tobacco, shipping \$156 million in 1969, and accounting for a third of total OECD

Table A-8-L.-- OECD exports of manufactured tobacco, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

exports (table A-8-L). Over half of U.S. exports go to less developed countries, about 15 percent to the European Community and about 19 percent to "other" OECD nations. The United Kingdom exported \$84 million of manufactured tobacco in 1969, shipping over two-thirds of its total exports to LDC's. The European Community sent \$42 million to outside countries in 1969 (chiefly to LDC's and "other" OECD nations); intra-EC shipments are more than twice as large as EC exports to outside destinations. Canadian and Japanese exports are negligible.

OECD imports of manufactured tobacco are shown in table A-8-M. Excluding intra-EC shipments, which make up almost half of total OECD imports, none of the five countries have large imports in this subsector. Imports by the United States were valued at \$13 million in 1969; EC imports from outside sources and United Kingdom imports were

Table A-8-M.--OECD imports of manufactured tobacco, 1969

each worth \$12 million; Japanese imports, \$8 million; and Canadian imports, only \$5 million. The United States supplies 17 percent of imports by the United Kingdom, one-fourth of EC imports from outside countries, 40 percent of Canadian imports, and half of Japanese imports. The European Community supplies 38 percent of U.S. imports, and half of United Kingdom imports.

#### Trade-agreement concessions

In the tabulation below, arithmetic average MFN tariff rates on manufactured tobacco are compared with rates in effect on January 1, 1972, for each of the five major countries. Although there were dramatic reductions in average tariffs from pre-trade-agreement levels, average MFN tariffs on January 1, 1972, remained generally high.

Pre-trade-agreement      January 1, 1972  
(Percent ad valorem)

United States	455.6	31.4
European Community	94.2	57.4
United Kingdom	NA	32.9
Japan	245.0	191.7
Canada	70.0	37.1

Only three of the five major countries have made GATT concessions in their tariffs for manufactured tobacco. GATT concessions cover approximately half of Canadian tariff lines, 83 percent of U.S. lines and all EC tariff lines. Except for Italy, each of the members of the European Community had negotiated concessions on manufactured tobacco under the GATT in their national tariff schedules prior to adoption of the EC's Common External Tariff. Of the 12 concessions, one was above the CXT rate and 11 were below the CXT rate.

Changes in duty rates on cigarettes since pre-trade-agreement base dates are shown in table A-8-N. The greatest duty reduction is in the U.S. tariff schedule. The United States reduced its duties prior to the Kennedy Round, yielding an ad valorem equivalent reduction of 77 percent from the pre-trade-agreement level. Canada, with the lowest duties on imports of tobacco on the three dates shown, reduced its duties by half prior to the Kennedy Round. Only the European Community had a duty reduction in the Kennedy Round, the EC duty changing from 180 percent ad valorem to 90 percent during the Kennedy Round.

Table A-8-N.--Pre-trade-agreement tariff rates compared with January 1, 1972,  
MFN tariff rates on cigarettes

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	267% AVE <sup>2/</sup>	58% AVE <sup>2/</sup>	58% AVE <sup>2/</sup>	170.65
Canada-----	50% <sup>3/</sup>	25% <sup>3/</sup>	25% <sup>3/</sup>	14315-1
European Community--	180%	180%	90%	24.02 A
United Kingdom-----	81%	592.8% AVE <sup>4/</sup>	592.8% AVE <sup>4/</sup>	24.02 A(2)
Japan-----	355%	355%	355%	24.02

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Ad valorem equivalents of compound rates of duty calculated on 1971 import values.

<sup>3/</sup> Does not include excise tax applicable to imports of cigarettes.

<sup>4/</sup> Ad valorem equivalents of United Kingdom revenue duties; the United Kingdom has no customs duty on cigarettes.

Japan had no change in its rate of 355 percent ad valorem. The United Kingdom shows a very large increase, but rate information for the United Kingdom is not strictly comparable to the data for other countries due to the inclusion of various excise taxes characterized by the United Kingdom as "revenue duties" rather than "tariff rates."

## Agricultural Sector A-9

MISCELLANEOUS AGRICULTURAL AND  
FORESTRY PRODUCTS

This sector covers a wide collection of various animal and vegetable products. Among the animal products included are hair, bristles, bladders, stomachs, horns, bones, ivory, shells, coral, natural sponges, fish waste, and feathers. The vegetable products covered in this sector include live trees and other plants, bulbs, seeds and spores, plant parts used for ornamental purposes, sugar beets and sugar cane, vegetable materials used in dyeing and tanning, residues and waste from food industries, prepared animal fodder, and many other products. <sup>1/</sup>

MFN tariffs

Average MFN tariffs in this miscellaneous group of agricultural and forestry products are relatively low for all five countries (chart A-9-A). Although average tariffs on dutiable products alone exceed 10 percent ad valorem for Canada, Japan, and the United Kingdom, all five countries have large percentages of duty-free tariff provisions and imports, so that average tariffs on all products are considerably lower than averages on dutiable products alone. Average tariffs given in chart A-9-A do not account for variable levies, which are applied to

---

<sup>1/</sup> For the specific coverage of this sector, see BTN headings 05.01-05.15; 06.01-06.04; 12.03-12.10; 13.01-13.03; 14.01-14.05; 18.02; 23.01-23.03; 23.05-23.07.

The reader should also refer to Chapter IV, "Tariffs," and Chapter XIII, "Product Sectors, Some General Observations," for a discussion of problems in comparing average tariffs and other matters relevant to data presented in this product sector.

Chart A-9-A. --Average MFN tariff rates on miscellaneous agricultural and forestry products

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (by 20 percent, 50 percent, or 100 percent) made in 1972 on an insignificant number of the Japanese rates in this sector.

22 of the 133 EC tariff provisions for the sector, covering 10 percent of EC imports of miscellaneous agricultural and forestry products in 1970. <sup>1/</sup> Only 1 of the 129 tariff lines of the United Kingdom for the sector is subject to a variable levy, and 1970 United Kingdom imports under the variable levy provision were negligible. Thus, although the exclusion of variable levies may have a significant effect on the

<sup>1/</sup> In addition to tariff provisions subject to variable levies, the European Community has two provisions subject to countervailing fees applicable in addition to customs duties under certain conditions.

comparative value of EC averages shown in chart A-9-A, it has little effect on the comparative value of United Kingdom average MFN tariffs in relation to averages of the other major countries.

Average MFN tariffs on all products are below 8 percent ad valorem for each of the five countries. For Canada, the United States, and Japan arithmetic averages range from 3.1 to 4.1 percent ad valorem, while their weighted averages range from 1.9 percent for Japan to 3.7 percent for Canada. The European Community fixed duty averages are very close to Japan's averages. The United Kingdom has an arithmetic average tariff of 7.6 percent and a weighted average of 6.6 percent.

Average MFN tariffs of Canada, Japan, and the United Kingdom are nearly identical for dutiable products, with each of the averages of the three countries within one percentage point of another in both the arithmetic and the weighted averages, and all falling between 10.1 and 12.1 percent ad valorem. U.S. arithmetic and weighted averages on dutiable products are about 5 percentage points lower than average tariffs for the other three countries. EC fixed duty averages are close to the U.S. averages.

Each of the five countries has a large percentage of tariff provisions free of duty, ranging from 34 percent for the United Kingdom to about two-thirds for Japan and Canada (table A-9-A). Nearly half of U.S. tariff provisions and over 40 percent of EC fixed rate provisions are free. The major part of dutiable provisions of each of the five major countries is found in the two rate ranges between 0.1 and 10 percent ad valorem.

Table A-9-A.--Distribution, by duty level, of MFN tariff provisions for miscellaneous agricultural and forestry products

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 17 percent of EC provisions, covering 10 percent of EC imports in this sector in 1970.

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 0.8 percent of United Kingdom provisions, covering 0.2 percent of United Kingdom imports in this sector in 1970.

31 percent of United Kingdom imports and over half of EC fixed duty imports enter duty free. Canada and the United States enter about two-thirds of their imports duty free, while 82 percent of Japan's imports pay no duties. The major part of dutiable imports of all of the five countries are assessed rates no higher than 10 percent ad valorem. The highest rate bracket in which U.S. and Canadian imports enter is 15.1-20 percent ad valorem; Japan, the European Community, and the United Kingdom have a small amount of imports in the next higher rate bracket, 20.1-25 percent ad valorem.

The United States has the most detailed tariff schedule in this sector, with 267 tariff lines, followed by Canada, with 191 lines. The European Community has 133 lines, the United Kingdom has 129 lines, and Japan has 118 lines.

#### Trade importance

Miscellaneous agricultural and forestry products rank seventh in OECD exports and fifth in imports among the nine agricultural sectors, accounting for 6.2 percent of OECD agricultural exports and 6.5 percent of imports in 1969. Both exports and imports increased slightly in absolute terms and as a percentage of OECD trade in 1970. For the United States, the sector ranked sixth in exports in 1969 and fifth in imports among the nine agricultural sectors, with exports increasing to fifth place in 1970. The sector accounts for about 3.5 percent of U.S. agricultural exports and over 4 percent of imports. As shown in chart A-9-B, OECD countries as a whole and each of the five major

Chart A-9-B. -- OECD trade in miscellaneous agricultural and forestry products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

countries, except Canada, are net importers of products in this sector. The volume and distribution of U.S. trade is shown in chart A-9-C.

In 1970, imports of miscellaneous agricultural and forestry products by the 13 GATT tariff study countries were valued at \$1.8 billion. Intra-EC shipments were an additional \$520 million. OECD imports in 1970 were valued at \$2.4 billion (including intra-EC shipments), exports at \$1.6 billion.

#### Trade network

Less than 15 percent of OECD exports of miscellaneous agricultural and forestry products are shipped to non-OECD countries (table A-9-C).

Chart A-9-C. --United States trade in miscellaneous agricultural and forestry products, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The five major countries account for nearly 80 percent of total OECD exports. The European Community, with \$270 million of exports to outside countries in 1969, and the United States, with \$206 million, together account for about three-fourths of exports by the five major countries (excluding intra-EC trade, which was valued at \$426 million in 1969).

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

Canada exported \$89 million in 1969; the United Kingdom, \$35 million; and Japan, \$32 million. The United States, the United Kingdom and LDC's each take 14 percent of EC exports to outside destinations, but 47 percent of EC external exports go to "other" OECD countries. Nearly two-thirds of U.S. exports go to the countries under study, with the largest single market being the European Community, followed by Japan and Canada. Less developed countries receive 27 percent of U.S. exports. The greater part of Japanese and United Kingdom exports go to countries other than the five under study, while most Canadian exports are sent to the United States.

The five major countries account for nearly 84 percent of OECD imports (table A-9-D). The European Community is by far the principal

Table A-9-D.--OECD imports of miscellaneous agricultural and forestry products, 1969

(Millions of dollars)

X = Less than \$500,000.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

importer, entering \$607 million from outside sources in 1969. Intra-EC imports are equal to nearly three-fourths the volume of EC entries from outside the Community. Over half of EC external imports come from the LDC's; developed non-OECD countries and "other" OECD nations together supply one-third of EC entries from outside sources. About 44 percent of U.S. imports come from less developed countries, one-fourth from Canada, and 15 percent from the European Community. Nearly half of United Kingdom imports and over half of Japanese imports come from non-OECD countries. Canada, with the fewest imports among the five countries, receives nearly 70 percent of its entries from the United States.

#### Trade composition

Miscellaneous agricultural and forestry products is divided into three subsectors: Live trees, plants, and seeds for sowing;

raw vegetable materials suitable for use in dyeing and tanning, gums and resins; and miscellaneous agricultural and forestry products not elsewhere specified. The third subsector contains about twice as many tariff lines as the other two subsectors, and has more trade than the other two subsectors combined. The relative trade importance of the three subsectors is shown in chart A-9-D.

Chart A-9-D. --OECD trade in miscellaneous agricultural and forestry products, by type, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The subsector, raw vegetable materials suitable for use in dyeing and tanning, gums and resins, accounts for less than 3 percent of OECD trade in the sector, and trade statistics are incomplete. Consequently, this subsector will not be discussed in detail.

#### Trade-agreement concessions

In the following tabulation pre-trade-agreement arithmetic average MFN tariffs for miscellaneous agricultural and forestry products are compared with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. The average tariff level for each of the major countries has undergone some reduction. Canada, with a reduction of over 80 percent, and the United States, with a reduction of 76 percent from pre-trade-agreement levels, have the greatest

changes in rate levels. The January 1, 1972, average rate for Japan does not reflect unilateral reductions of 20 percent, 50 percent, or 100 percent made in 1972 on a small number of the Japanese rates for the sector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	12.9	3.1
European Community <u>1/</u>	7.4	4.0 (plus variable levies)
United Kingdom <u>2/</u>	13.8	7.6 (plus variable levies)
Japan	6.9	4.1
Canada	18.3	3.5

Each of the five major countries has made GATT concessions on some of its tariff provisions for miscellaneous agricultural and forestry products. GATT concessions cover 97 percent of U.S. lines, 77 percent of Japanese lines, over 60 percent of EC lines, and well over one-fourth of Canadian lines. GATT concessions fully cover 38 percent of United Kingdom tariff lines and partially cover 7.6 percent.

---

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 111 tariff lines which continue to be subject to fixed duties alone; it does not include the 22 tariff lines subject to a variable levy.

2/ For the United Kingdom, the January 1, 1972, figure is an arithmetic average of rates of duty in all tariff lines subject to fixed rates only, excluding lines covered by variable levies. Since 1964, the United Kingdom has had a system of minimum prices for certain cereal by-products which fall in this sector. Variable levies are used by the United Kingdom in 1 of its 129 tariff lines for this sector, in order to support these minimum prices (which are often set below world market prices).

Each of the members of the European Community negotiated GATT concessions on miscellaneous agricultural and forestry products in its national tariff schedules prior to the establishment of the Common External Tariff. The total number of such concessions was 290, of which 115 were at the CXT rate and an almost equal number were above and below the CXT rate.

#### Trade complaints

U.S. manufacturers and traders of miscellaneous agricultural and forestry products submitted 157 complaints to the Tariff Commission concerning practices or policies which they considered to be barriers to trade. Two-thirds of the complaints were against practices found in 14 developed countries; nineteen developing nations were named in the remaining third of the complaints. The European Community as a unit and its individual member states together drew 25 complaints. The other countries mentioned most often were Japan (17), Australia (15), New Zealand (11), the United Kingdom (10), Canada (8), the United States (8), and Mexico (6).

The bulk of the complaints fell in three areas. The first of these dealt with standards and drew the largest number of complaints. The second largest area dealt with various specific limitations of imports (principally licensing, quotas, and embargoes) and the third area dealt with tariffs, taxes, and other nontariff charges on imports.

Standards.-- Thirty-one complaints were received concerning standards.

Twenty-four of these dealt with trade in seeds for planting, two with trade in cut flowers, and the remainder with plants, bulbs, and miscellaneous agricultural and forestry products. Six of the complaints named Australia; Japan was named in four, and New Zealand in three; Israel, the United Kingdom, and the European Community in two. Iran, Turkey, Syria, Cyprus, South Africa, Argentina, Chile, West Germany, and the United States were each mentioned once. A large part of these complaints were against various phytosanitary requirements which the complainant considered unreasonable. For example, Australia requires certification that the seed is grown in an area free of foot and mouth disease. For beans grown in Idaho, Australia requires a field phytosanitary inspection; and beans grown in California are not accepted in Australia unless grown in Monterrey County with a field phytosanitary inspection. Other countries which require field inspection for phytosanitary certificates are Cyprus, the United Kingdom, South Africa, and Israel. Several countries, including the European Community, permit importation only of seeds for approved plant varieties. Most countries prohibit entry of seeds if they are found to contain seeds of harmful weeds. The plant quarantine regulations of Japan and West Germany were criticized as being overly strict for minor diseases. A U.S. wholesale florist felt that U.S. flower growers have been disadvantaged in the domestic market and in export markets by the recently imposed U.S. restrictions on use of certain pesticides and fungicides.

Quantitative restrictions, embargoes, and licensing.-- Complaints were received concerning quotas imposed by France and other EC countries on cut flowers, licorice extract, and hops. Several developing countries, principally in Latin America, were reported to have embargoes on cut flowers, certain seeds that are available domestically, and Christmas trees. Licenses or other forms of import permits are required for the importation of seeds and plants in a large number of countries. New Zealand and Australia were reported to exclude frozen bovine semen exported from the United States, but permit importation from Canada.

Tariff and nontariff charges on imports.-- The fact that the European Community, Switzerland, and Sweden have seasonal tariffs on cut flowers gave rise to complaints by U.S. exporters. Various other charges were criticized because they raise the prices of imports. Italy was cited as employing a sanitary tax and an inspection fee. Japan, Canada, and Latin American countries were cited as employing numerous special taxes on imported products in this sector. Mexico was reported to charge \$28 for each phytosanitary certificate which must accompany certain imports.

Other complaints.--In addition to these three major areas of complaint, France, the Netherlands, New Zealand, and Australia were reported to subsidize the production or export of seeds. Documentation required for trading in seeds and plants in several countries was considered unnecessarily burdensome.

Thirty-nine complaints in the Commission's survey in this sector were accompanied by an assessment of the trade significance of the barriers which were reported. In nine cases, a "small" trade increase was expected if the barriers were removed. "Moderate" and "significant" increases were expected in 15 cases each. Only six of the respondents placed a monetary value on the possible increases in trade. The total estimated gain in trade indicated by these respondents was \$803 million. The percentage figures for the estimated trade increases ranged from 42 to 300 percent of current trade.

### Live Trees, Plants, and Seeds for Sowing

The subsector for live trees, plants, and seeds for sowing, includes trees, shrubs, roots, cuttings, bulbs, tubers, seeds, fruit and spores, and other items used for planting or sowing. <sup>1/</sup>

#### MFN tariffs

The range of average MFN tariffs for plants and seeds is somewhat wider than for the sector as a whole due to the relatively high United Kingdom arithmetic average tariffs of 16.4 and 17.1 percent ad valorem. The United Kingdom weighted average tariffs are slightly over 10 percent ad valorem (chart A-9-E). Canada has the highest weighted average tariff on dutiable products (11.6 percent ad valorem) and the second highest arithmetic average on dutiable products (13.1 percent), but holds the lowest arithmetic average tariff (1.4 percent) on all products (combined free and dutiable) and the second lowest weighted average (2.2 percent). The United States, with the lowest average tariffs on dutiable products alone, has average tariffs of about 3 percent ad valorem on all products. The European Community's arithmetic average tariff on all products is 7.1 percent, and the weighted average is 7.9 percent ad valorem; EC dutiable product averages are only slightly higher. Japan's all products averages are among the lowest; the dutiable product averages are both 5 percent ad valorem.

The distribution of MFN tariff provisions for plants and seeds, by duty level, is shown for the five major countries in table A-9-E. Nearly

90 percent of Canada's MFN tariff provisions are duty free, as are two-thirds of Japanese provisions, over one-fourth of U.S. provisions, and one-fifth of EC provisions. The third of Japanese provisions that are dutiable and over half of U.S. provisions are in the 0.1-5 percent ad valorem rate range. One-third of EC provisions are dutiable in the 5.1-10 percent range and over one-fourth are in the 10.1-15 percent ad valorem bracket. The United Kingdom has its provisions widely scattered throughout the ranges, with some rates above 50 percent ad valorem; one-third, however, have duties in the 5.1-10 percent rate bracket.

In 1970, preferential tariff treatment was accorded nearly 12 percent of United Kingdom imports of plants and seeds. Japan and the United States have no preferential imports, Canadian imports under preferential rates are negligible, and only 1 percent of EC imports from outside countries are given preferential tariff treatment.

The distribution of MFN imports of plants and seeds, by duty level, is shown for the five major countries in table A-9-F. More

Table A-9-F.--Distribution, by duty level, of MFN imports of live trees, plants and seeds for sowing

(In percent)

Total-----	100.0	100.0	100.0	100.0	100.0

than 80 percent of MFN imports by Canada and Japan enter duty free, and no Japanese imports are dutiable above 5 percent ad valorem. About 63 percent of U.S. imports enter at duty rates between 0.1 and 5 percent ad valorem. The European Community enters over half of its imports at rates between 5.1 and 10 percent ad valorem and has no imports which pay duties above 15 percent ad valorem. Although nearly 65 percent of United Kingdom imports are dutiable between 5.1 and 10 percent ad valorem and over 90 percent of United Kingdom imports are in duty ranges no higher than 15 percent, a small percentage of United Kingdom imports pay duties in the 30.1-40 percent ad valorem range.

The United States, with 57 tariff lines, and Canada, with 56 lines, have the most detailed tariff schedules for plants and seeds. The United Kingdom has 24 lines; the European Community, 15 lines; and Japan, 6 lines.

#### Trade importance

The live trees, plants, and seeds for sowing subsector is relatively unimportant, ranking 23rd in OECD exports and 22nd in imports among the 28 agricultural subsectors. The subsector accounts for 1.6 percent of OECD agricultural exports and about 1 percent of imports.

For the United States, the subsector is more important in rank than for OECD countries as a whole, ranking 17th in exports and 21st in imports among the 28 agricultural subsectors. However, the subsector accounts for only about 0.6 percent of U.S. agricultural trade. As shown in chart A-9-F, the European Community is a net exporter and the major trader of products in this subsector.

Chart A-9-F. -- OECD trade in live trees, plants, and seeds for sowing, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, imports of live trees, plants, and seeds for sowing by the 13 GATT tariff study countries were valued at \$225 million, or about 12 percent of imports in the miscellaneous agricultural and forestry products sector. Intra-EC shipments were an additional \$143 million. OECD imports in 1969 were valued at \$336 million, exports were \$334 million (both including intra-EC shipments).

### Trade network

The European Community is by far the major exporter of plants and seeds (table A-9-G). EC shipments to outside destinations are more than three and a half times as great as exports of the United States,

Table A-9-G.-- OECD exports of live trees, plants, and seeds for sowing, 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

imports from outside sources (\$42 million in 1969) are not substantially greater than imports by the United Kingdom and the United States (\$35 and \$32 million, respectively). The European Community supplies half of U.S. imports and over 70 percent of United Kingdom imports. The United States supplies half of Japanese imports, nearly 70 percent of Canadian imports, and over one-fifth of EC imports from outside countries. Thirty-eight percent of EC outside imports come from "other" OECD countries.

Trade-agreement concessions

Arithmetic average MFN tariffs for plants and seeds on pre-trade-agreement base dates are compared in the tabulation below with arithmetic average rates in effect on January 1, 1972, for each of the five major countries. Reductions have occurred, some of which are substantial, in the average tariff level of each of the major countries. The 1972 figure for Japan does not reflect unilateral reductions by 20 or 100 percent made in 1972 on one-third of the Japanese rates in this subsector.

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	13.0	3.0
European Community	9.9	7.1
United Kingdom	44.0	16.4
Japan	7.5	1.7
Canada	20.0	1.4

Each of the five major countries has made GATT concessions on some of its tariff rates for plants and seeds. GATT concessions cover about 45 percent of Canadian lines, 73 percent of EC lines, 98 percent of U.S. lines, and all of Japanese tariff lines for the subsector. In the tariff schedule of the United Kingdom, 21 percent of tariff lines are fully covered by GATT concessions and over 12 percent are covered in part.

Each of the members of the European Community had made tariff concessions negotiated under the GATT prior to the establishment of the Common External Tariff. The number of such concessions totaled 56, of

which 21 were above the CXT rate, 8 were at the CXT rate, and 27 were below the CXT rate.

Rates of duty applicable to live plants including trees, shrubs, bushes, roots, cuttings, and slips on pre-trade-agreement base dates are compared with rates on January 1, 1972, in table A-9-I. Japan has

Table A-9-I.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on other live plants, including trees, shrubs, bushes, roots, cuttings, and slips

1/ For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

2/ Ad valorem equivalent of specific rate of duty calculated on 1971 import values.

3/ Range of ad valorem equivalents of specific rates of duty calculated on 1934 import values.

4/ Range of ad valorem equivalents of specific rates of duty calculated on 1971 import values.

entered these plants duty free throughout the period. In the U.S. tariff schedule, there were duty reductions of 50 percent or more prior to the Kennedy Round on all of these plants except for seedlings, layers, and cuttings of fruit trees. In the Kennedy Round, U.S. imports of fruit tree seedlings, layers, and cuttings were made duty free and each of the other categories of these live plants had further duty reductions to

levels between 7.5 and 30 percent of the U.S. pre-trade-agreement duties. Canada also had numerous reductions in duties on fruit trees and other live plants before and during the Kennedy Round, as did the United Kingdom. Although no change is shown in the United Kingdom range of duties during the Kennedy Round, there were United Kingdom duty reductions on rose stocks in those negotiations. For the European Community, duties for a number of these live plants were lowered during the Kennedy Round. On January 1, 1972, the duties of the five major countries on the live plants enumerated above ranged from free to 34.8 percent ad valorem or ad valorem equivalent.

## Other Agricultural and Forestry Products, n.e.s.

Other agricultural and forestry products, not elsewhere specified, include numerous products, many of them agricultural by-products and waste products. Much of the trade in this subsector is composed of by-products from the processing of animal and vegetable products. The subsector includes items such as bones, human and animal hair, shells, plant parts used in the production of perfume; hay, clover and similar forage products; ivory, etc. 1/

MFN tariffs

Average MFN tariffs for this basket category of agricultural and forestry products are shown in chart A-9-G. Virtually all imports of bran, sharps, and other residues resulting from sifting, milling, or working of cereals and leguminous vegetables are admitted either under preferential tariff treatment or subject to variable levies in imports by the United Kingdom and the European Community. The European Community also has variable levies on sugar beets and sugar cane, and sweetened animal forage and similar preparations. These variable levies, which are not included in the calculation of average tariffs in chart A-9-G, are applicable to 22 of the 99 EC tariff lines for the subsector and covered 12 percent of EC imports in 1970. 2/

---

1/ For specific coverage of this subsector, see BTN headings 05.01-05.15; 06.03; 06.04; 12.04-12.10; 14.01-14.05; 18.02; 23.01-23.03; 23.05-23.07.

2/ In two additional EC tariff lines, countervailing fees in addition to customs duties are applicable under certain conditions.

Chart A-9-G. --Average MFN tariff rates on miscellaneous agricultural and forestry products, n.e.s.

(Percent ad valorem)

\*Figures for Japan do not reflect the unilateral reductions (by 50 percent or 100 percent) made in 1972 on an insignificant number of the Japanese rates in this sector.

Source: Compiled from national tariffs and trade statistics.

Variable levies are applied to only 1 of the 94 United Kingdom tariff lines and covered only 0.2 percent of United Kingdom imports of products in this subsector in 1970.

None of the average tariffs for the five countries exceeds 6 percent ad valorem for all products (combined free and dutiable) and all of the averages are below 12 percent for dutiable products alone. Arithmetic average tariffs on all products are slightly over 3 percent ad valorem for the European Community (fixed duties only), the United States, and Japan, while weighted averages are about 2 percent. Canadian

average tariffs on all products are about 5 percent ad valorem, and United Kingdom average tariffs are about 6 percent.

The distribution of MFN tariff provisions for this subsector, by duty level, is shown in table A-9-J. Nearly 40 percent of United Kingdom

Table A-9-J.--Distribution, by duty level, of MFN tariff provisions for miscellaneous agricultural and forestry products, n.e.s.

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 22 percent of EC provisions, covering 12 percent of EC imports in this subsector in 1970.

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 1 percent of United Kingdom provisions, covering 0.2 percent of United Kingdom imports in this subsector in 1970.

tariff provisions and nearly half of EC fixed duty tariff provisions are free of duty, while the United States, Canada, and Japan have between 55 and 67 percent of provisions duty free. The bulk of each country's dutiable provisions are in the two duty ranges between 0.1 and 10 percent ad valorem. Canada, with 11 percent of provisions in the 15.1-20 percent rate bracket, is the only major country with a large percentage of provisions dutiable in a range above 10 percent ad valorem.

Preferential tariff treatment was given to over 9 percent of Canadian imports and 48 percent of United Kingdom imports in 1970. Preferential imports are not significant for the other three countries.

The distribution of MFN imports, by duty level, is shown in table A-9-K. Nearly 40 percent of United Kingdom MFN imports and over half of Canadian and EC fixed duty imports enter duty free, as do over 70 percent of U.S. imports and over 80 percent of Japanese imports.

Table A-9-K.-- Distribution, by duty level, of MFN imports of miscellaneous agricultural and forestry products, n.e.s.

(In percent)					
Duty level	Canada	United States	Japan	European Community 1/	United Kingdom 2/

1/ Data for the European Community are for fixed tariff rates only and do not reflect variable levies which apply to 22 percent of EC provisions, covering 12 percent of EC imports in this subsector in 1970.

2/ Data for the United Kingdom are for fixed tariff rates only and do not reflect variable levies which apply to 1 percent of United Kingdom provisions, covering 0.2 percent of United Kingdom imports in this subsector in 1970.

The great bulk of dutiable imports for all five countries are assessed duties no higher than 10 percent ad valorem. Japan and the European Community are the only major countries with imports entering at rates as high as the 20.1-25 percent range.

The United States has the most detailed tariff schedule in this subsector, with 171 tariff lines, followed by Canada, with 118 lines. The European Community has 99 lines, the United Kingdom has 94 lines, and Japan has 86 lines.

#### Trade importance

Miscellaneous agricultural and forestry products, n.e.s. is a residual category, but the total trade in this great diversity of

products ranks sixth in OECD exports and seventh in imports among the 28 agricultural subsectors. This subsector accounts for 4.6 percent of OECD agricultural exports and 5.2 percent of imports in 1969. For the United States, the subsector ranks seventh in exports and ninth in imports among the 28 agricultural subsectors, accounting for about 3 percent of U.S. agricultural exports and over 3 percent of imports. As shown in chart A-9-H, OECD countries as a whole and each of the five major countries except Canada are net importers of products in this subsector.

Chart A-9-H. -- OECD trade in miscellaneous agricultural and forestry products, n.e.s., 1969

Sources: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

In 1970, imports by the 13 GATT tariff study countries totaled \$1.5 billion. Intra-EC shipments were an additional \$362 million. OECD imports in 1969 were valued at \$1.7 billion (including intra-EC trade), exports were \$970 million.

### Trade network

Over three-fourths of OECD exports are accounted for by the five major countries (table A-9-L). The European Community, with \$133 million of known exports in 1969 to outside countries, and the United

Table A-9-L.-- OECD exports of miscellaneous agricultural and forestry products, n.e.s., 1969

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

States, with \$165 million, are the major exporters. Known EC external shipments are equal to only about 47 percent of intra-EC exports.

"Other" OECD countries provide the market for about half of EC outside

exports for which destinations are known. The European Community takes over one-third of known U.S. exports; Japan, Canada, and LDC's are the other important markets for U.S. shipments. Canadian exports, worth \$76 million in 1969, go largely to the United States. Japanese and United Kingdom exports are small and are sold largely to countries other than those under study.

The five major countries account for 85 percent of total OECD imports. The European Community is by far the largest importer, entering \$555 million of imports from outside countries in 1969. The United Kingdom is second with \$194 million, followed by the United States with \$188 million, Japan with \$150 million, and Canada with only \$29 million (table A-9-M).

X = Less than \$500,000.

Note.--Complete country of origin data are not available for 17 percent of Canadian imports, 23 percent of U.S. imports, 17 percent of Japanese imports, 9 percent of EC imports, and 12 percent of United Kingdom imports; country of origin figures therefore do not add to total imports from the world.

Source: Compiled from OECD Statistics of Foreign Trade, Series C, 1969.

The bulk of European Community outside imports of these miscellaneous agricultural and forestry products come from non-OECD countries (principally

LDC's). Among the countries under review the United States is the only known significant supplier of EC imports. Most United Kingdom imports also come from non-OECD countries and countries other than the ones under study. Japan buys 55 percent of its imports for which origins are known from non-OECD countries; most of Japan's OECD imports come from the United States. Canada receives most of its imports from the United States. Canada, the less developed countries and the European Community are major suppliers of U.S. imports.

#### Trade-agreement concessions

In the tabulation below, arithmetic average MFN duties for "other" agricultural and forestry products, n.e.s. on pre-trade-agreement base dates are compared with arithmetic average MFN rates in effect

	<u>Pre-trade-agreement</u>	<u>January 1, 1972</u>
	(Percent ad valorem)	
United States	13.8	3.1
European Community <u>1/</u>	7.5	3.4 (plus variable levies)
United Kingdom <u>2/</u>	6.8	6.0 (plus variable levies)
Japan	6.3	3.6
Canada	10.0	4.6

1/ For the European Community, the pre-trade-agreement figure is the arithmetic average of the autonomous rates of duty as initially established for every tariff line pursuant to the Treaty of Rome. As the EC's Common Agricultural Policy has been developed, several of the original fixed duties were unilaterally replaced (or supplemented) by variable levies, none of which reflect trade-agreement concessions under the GATT. The January 1, 1972, figure for the Community is the average only of the 77 tariff lines which continued to be subject to fixed duties alone; it does not include the 22 EC tariff lines subject to a variable levy.

2/ For the United Kingdom, the January 1, 1972, figure is an arithmetic average of rates of duty in all tariff lines subject to fixed rates only, excluding lines covered by variable levies. The United Kingdom has had a system of minimum prices for certain cereal by-products since 1964. Variable levies are used by the United Kingdom in 1 of its 94 tariff lines for this subsector to support these minimum prices (which are often set below world market prices).

on January 1, 1972, for each of the five major countries. The 1972 average shown for Japan does not reflect unilateral reductions by 50 or 100 percent made in 1972 on an insignificant number of the Japanese rates for the subsector.

Each of the five major countries has made GATT concessions on some of its tariff provisions for products of this subsector. GATT concessions cover approximately one-fifth of Canadian lines, over 60 percent of EC lines, over three-fourths of Japanese lines and 96 percent of U.S. lines. Over 39 percent of United Kingdom tariff lines are fully covered by GATT concessions and over 7 percent are covered in part. Each of the national tariff schedules of the members of the European Community contained GATT tariff concessions prior to the establishment of the EC's Common External Tariff. Of the total of 197 such concessions, 59 were above the CXT rate, 86 were at the CXT rate, and 52 were below the CXT rate.

Rates of duty on fresh cut flowers, bouquets, wreaths, sprays, and similar articles on pre-trade-agreement base dates are compared with rates in effect on January 1, 1972, in table A-9-N. By January 1, 1972, each of the five major countries had some tariff reductions on these articles. The pre-trade-agreement base date rate for both the United States and Canada was 40 percent ad valorem. Before the beginning of the Kennedy Round, the Canadian duty on cut orchids had been lowered to 25 percent ad valorem and other Canadian rates lowered to 12.5 percent. For the United States, duties were lowered to 10 percent ad valorem before the Kennedy Round. The United Kingdom made several changes (both increases and reductions) in duty rates in this subsector before the

Table A-9-N.--Pre-trade-agreement tariff rates compared with January 1, 1972, MFN tariff rates on fresh cut flowers, bouquets, wreaths, sprays, and similar articles

(% = Percent ad valorem)

Country	Pre-trade-agreement rate <sup>1/</sup>	MFN rate <sup>1/</sup>		National tariff item numbers
		Pre-Kennedy Round	Post-Kennedy Round	
United States-----	40%	10%	10%	192.20
Canada-----	40%	25%; 12.5%	25%; 12.5%	7910-1; 7915-1
European Community--	6/1 to 10/31 24% 11/1 to 5/31 20%	24% 20%	24% 17%	06.03 A
United Kingdom-----	11%; 5.4%	1.6%-32.4% AVE <sup>2/</sup>	1.3%-32.4% AVE <sup>2/</sup>	06.03 A-H
Japan-----	20%	10%	5%	06.03

<sup>1/</sup> For the United States, the pre-trade-agreement rate is the Column 2 rate; for Canada, the General rate; for the European Community, the Autonomous rate; for the United Kingdom, the rate shown in the official tariff on January 1, 1933; for Japan, the rate shown in the official tariff on January 1, 1954.

The MFN rate (post-Kennedy Round) is the rate shown for imports from MFN sources in official tariffs on January 1, 1972. Neither the General rates nor MFN rates reflect any temporary duty suspensions which may have been in effect.

<sup>2/</sup> Range of ad valorem equivalents of specific rates of duty calculated on 1971 import values.

Kennedy Round. The only United Kingdom duty reduction in the Kennedy Round was for lilacs, but the rate was still slightly above the pre-trade-agreement rate. During the Kennedy Round, Japanese duties were reduced by 50 percent and duties on EC imports entering between November and May were reduced from 20 percent ad valorem to 17 percent. On January 1, 1972, duty rates on cut flowers, bouquets, wreaths, sprays, and similar articles ranged from 1.3 to 32.4 percent ad valorem or ad valorem equivalent, with both the highest and lowest rates contained in the tariff schedule of the United Kingdom.

Raw Vegetable Materials Suitable for Use in Dyeing and Tanning:  
Lacs, Gums, Resins, and other Vegetable Saps

The raw vegetable materials, lacs, gums, resins, and saps included in this subsector will not be discussed in detail due to the relative unimportance of the subsector and the inadequacy of available trade statistics. <sup>1/</sup> This is the least important of the 28 agricultural subsectors in OECD exports and imports. Each of the five major countries has small amounts of trade in products of this subsector, with the United States and the European Community being the largest traders. In 1970, imports by the 13 GATT tariff study countries were valued at \$154 million, with the United States importing 27 percent and the European Community importing 31 percent of the total. Intra-EC shipments were an additional \$14 million, equal to 29 percent of the value of EC imports from outside countries.

Arithmetic average MFN tariffs of the five major countries for dutiable products considered alone range from 5.3 percent for the United Kingdom to 16.8 percent for Japan; and weighted averages range from 5.8 percent for the European Community to 14.4 percent for Canada (chart A-9-I). Each country has a large percentage of duty-free tariff provisions and imports, and consequently, average MFN tariffs on combined free and dutiable products are much lower than those on dutiable products alone.

Arithmetic average MFN tariffs on all products range from 3 percent for the United States to 6.4 percent for Japan; and weighted averages

---

<sup>1/</sup> For the specific coverage of this subsector, see BTN headings 13.01-13.03.

range from 0.9 percent for Canada to 2.3 percent for the United Kingdom. The U.S. weighted average tariff on all products is 1.1 percent ad valorem.
