Monitoring of U.S. Imports of Peppers

Investigation No. 332-351

Publication 3818

November 2005

Preface

Section 316 of the North American Free-Trade Agreement Implementation Act (NAFTA Implementation Act), Public Law 103-182, requires the U.S. International Trade Commission (Commission) to monitor U.S. imports of "fresh or chilled tomatoes" and "fresh or chilled peppers, other than chili peppers," until January 1, 2009. In response, the Commission instituted investigation No. 332-350, Monitoring of U.S. Imports of Tomatoes, and investigation No. 332-351, Monitoring of U.S. Imports of Peppers, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)).

This report on the Commission's monitoring investigation covers peppers for fresh-market use and for processing. The purpose of this monitoring, as expressed in the NAFTA Implementation Act, is to enable the Commission to conduct an expedited investigation concerning provisional import relief should a petition for such relief be filed under section 202 of the Trade Act of 1974 with respect to imports from all countries, or a petition requesting such relief be filed under section 302 of the NAFTA Implementation Act with respect to imports from Canada or Mexico. Generally, such provisional relief would remain in effect, pending completion of the investigation by the Commission and the taking of final action by the President.

This report contains statistical information gathered by the Commission on the U.S. pepper industry in the course of its monitoring. This information includes (1) consumption and trade data (including U.S. imports and U.S. exports) and (2) other industry data (including U.S. production quantity, value, unit value, and harvested area; U.S. cost-of-production estimates; shipments; quantities available at major shipping points; and average U.S. shipping-point prices). The information presented in this report on the U.S. pepper industry was obtained from a number of sources, including the U.S. Department of Agriculture, the U.S. Department of Commerce, and various State agencies. This report principally includes 2000-04 data and partial-year data for 2004 and 2005.¹

¹ Nothing in this report should be construed to indicate how the Commission would find in an investigation conducted under other statutory authority covering the same or similar subject matter.

Monitoring of U.S. Imports of Peppers

Highlights

The following are highlights of the statistical data collected on peppers for fresh-market use and for processing for the 2000-04 period.

Fresh-market Peppers

- Apparent U.S. consumption of fresh-market peppers has risen steadily in recent years, with U.S. production value trending upward but with imports rising at a faster rate and accounting for a greater share of consumption (table 1). U.S. exports remain small relative to production and imports. The principal markets for U.S. fresh-pepper exports (table 3), along with the principal sources for U.S. imports (table 4), are Canada and Mexico. Nogales, AZ continues to be primary entry point for peppers imported from Mexico, with the bulk of such imports entered during December-May (table 5), coinciding with the Florida growing season. California and Florida are the primary domestic sources for fresh-market peppers (table 10). Average shipping-point prices for peppers of all sizes from Florida were down considerably during December 2004-January 2005 from levels in the same months of the previous crop-year (table 20) as a result of much greater production in 2004 relative to a smaller than normal crop in 2003 (table 10). Shipments from Florida were up considerably in 2004 compared with those in 2003, whereas shipments from California fell by more than 50 percent during the same period (table 15).
- Apparent U.S. consumption of fresh-market peppers amounted to 947,235 metric tons in 2004, a nearly 5-percent increase from 904,717 metric tons in 2003 (table 1). Consumption was valued at \$925.3 million in 2004, up by 23 percent from \$754.2 million in 2003. In 2004, the ratio of import volume to consumption volume was 27 percent, the same as that in the previous year. The ratio of import value to consumption value increased to 47 percent in 2004 from 45 percent in 2003 (table 1).
- U.S. production of fresh-market peppers rose by 4 percent from an estimated 731,101 metric tons (\$494.7 million) in 2003 to 762,172 metric tons (\$576.4 million) in 2004 (table 1). Unit values of production rose by 12 percent from \$0.68 per kilogram in 2003 to \$0.76 per kilogram in 2004. California and Florida were the leading states in pepper production during the 2000-04 period, accounting for 48 percent and 38 percent, respectively, of total U.S. production value of fresh peppers in 2004 (table 10). U.S. harvested area for peppers totaled 54,900 acres in 2004, up slightly (2 percent) from harvested acreage in 2003. Much of the increase in harvested area from 2003 to 2004 was accounted for by a rise in acreage in California to more normal levels. The area harvested in New Jersey, Georgia, and North Carolina declined in 2004 relative to their respective area harvested in 2003 (table 10).
- U.S. exports of fresh-market peppers were up slightly from 72,084 metric tons in 2003 to 73,008 metric tons in 2004 (table 1). The value of U.S. exports rose steadily during the 2000-04 period and was up significantly from \$79.2 million in 2003 to \$88.0 million in 2004. Canada continues as the leading foreign market for U.S. fresh-market pepper exports in recent years, accounting for 89 percent by volume and 90 percent by value of U.S. exports in 2004 (table 3). Other markets in recent years included Mexico, the Netherlands, and Japan. U.S. export volume was up by 4 percent during January-June 2005 as compared with

the same months in 2004. Export value was up by 16 percent during January-June 2005 as compared with that during January-June 2004 (table 3).

- U.S. imports of fresh-market peppers increased slightly from 245,700 metric tons in 2003 to 258,071 metric tons in 2004 (table 1). U.S. import volume was up significantly during January-June 2005 as compared with imports during January-June 2004. Mexico accounted for 70 percent by volume of total imports of fresh-market peppers in 2004. Other important foreign suppliers in 2004 included Canada, the Netherlands, and Israel (table 4). The bulk of imports from most major suppliers except Mexico are believed to be high-value, greenhouse-grown peppers with average unit values two times the unit values of imports from Mexico, which are largely lower-cost, field-grown green peppers.
- U.S. imports of fresh-market peppers from Mexico, entered on a July-June crop-year basis, totaled 194,968 metric tons during July 2004-June 2005, a 15-percent rise from 169,671 metric tons during July 2003-June 2004 (table 5). During the July 2002-June 2003 to July 2004-June 2005 crop-years, the bulk of U.S. fresh-market peppers imported from Mexico entered through the Nogales, AZ, Customs District, principally during November through the following June and coinciding with the peak pepper production period in Florida. Imports from Mexico during November 2004-June 2005 increased by 12 percent in volume from the level during November 2003-June 2004. During recent crop-years, imports from Canada and the European Union were greatest during those months (June-October) when Florida production was normally low (tables 6-8), although imports from Canada are entering in increasing amounts during May-June when Florida is still in production and when domestic production in California and other states is usually high. Imports of fresh-market peppers from Canada during July 2004-June 2005 were up by 14 percent in volume over the July 2003-June 2004 level (table 6). U.S. imports from the Netherlands were down by 15 percent in volume from July 2003-June 2004 to July 2004-June 2005 (table 7).

Processed Peppers

- U.S. production of processed (i.e., frozen) peppers was down by 13 percent from an estimated 25,353 metric tons in 2003 to 22,145 metric tons in 2004 (table 2). The value of production in 2004 was an estimated \$45.4 million. U.S. imports of processed peppers rose 6 percent from 20,287 metric tons in 2003 to 21,439 metric tons in 2004 (table 2). Imports of processed peppers amounted to 10,942 metric tons during January-June 2005, a 26-percent rise as compared with imports entered during the corresponding January-June 2004 period (table 9). Throughout the 2000-04 period, Spain was the primary supplier, accounting for 50 percent by volume of U.S. imports in 2004. Turkey and Chile were other important suppliers in recent years.

CONSUMPTION

Table 1
Fresh-market peppers: U.S. production, exports of domestic merchandise, imports for consumption, apparent consumption, and ratio of imports to consumption, 2000-04

Year	Production ¹	Exports ²	Imports ³	Apparent consumption	Ratio of imports to consumption

200368	1.10	1.38	.83	166
200476	1.21	1.69	.98	172

¹ Data are for bell peppers intended for fresh-market use and for processing, and are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram. Data are not reported separately for each end use.

² Data are for fresh or chilled peppers (Schedule B No. 0709.60.0000) on a fresh-weight basis.

³ Data are for fresh or chilled peppers, other than chili peppers (*Harmonized Tariff Schedule (HTS)* subheadings 0709.60.4000, 0709.60.4010, and 0709.60.4090) on a fresh-weight basis.

⁴ Calculated by Commission staff using rounded numbers.

Note.—Production data are revised annually and figures for the most recent calendar years may not match data presented in earlier reports.

Note.—Production data are estimated from raw product intended for fresh-market use and for processing, whereas export and import data are shipments of fresh-market peppers actually recorded. Thus, apparent consumption of fresh-market peppers may be somewhat smaller and the ratio of imports to consumption somewhat larger than shown.

Note.—Because of rounding, figures may not add to the totals shown.

Source: Production data estimated by Commission staff from official statistics of the U.S. Department of Agriculture, National Agricultural Statistics Service, *Vegetables*, 2002 Summary: Jan. 2003, Vg 1-2 (03), p. 35; 2003 Summary: Jan. 2004, Vg 1-2 (04), p. 35; and 2004 Summary: Jan. 2005, Vg 1-2 (05), p. 28; exports and imports compiled from official statistics of the U.S. Department of Commerce, except as noted.

¹ Data are for fresh or chilled peppers, other than chili peppers (HTS subheadings 0709.60.4000, 0709.60.4010, and 0709.60.4090) on a fresh-weight basis.

² Calculated by Commission staff using rounded numbers.

Note.—Data for the European Union include only the EU-15 countries.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Sudden drops in unit values of some suppliers are believed to result from the entry of different, lower-cost suppliers into the market.

Source: Compiled by Commission staff from official statistics of the U.S. Department of Commerce, except as noted.

¹ Data are for fresh or chilled peppers, other than chili peppers (HTS subheadings 0709.60.4000, 0709.60.4010, and 0709.60.4090) on a fresh-weight basis.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Monthly data for each District and the “all other” grouping are calculated using unrounded data; monthly totals for all Customs Districts are rounded from the actual data reported; and crop-year Customs Districts totals for each District are calculated using rounded data.

¹ Data are for prepared or preserved peppers (HTS subheadings 2005.90.5020, 2005.90.5040, and 2005.90.5510) on a processed-weight basis.

² Calculated by Commission staff using rounded numbers.

Note.—Data for the European Union include only the EU-15 countries.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Unit values for peppers from most EU countries are generally significantly higher because they are believed to include field- and greenhouse-grown peppers of colors other than green. Unit values for the EU-15 "all other" group vary considerably with a change in the countries supplying peppers in this group. Sudden drops in unit values of some suppliers are believed to result from the entry of different, lower-cost suppliers into the market.

Source: Compiled by Commission staff from official statistics of the U.S. Department of Commerce, except as noted.

Table 11
Estimated production costs for fresh-market peppers grown in a single-crop system in Palm Beach County, Florida, by average cost per acre, 2001/02 to 2003/04 crop-years

Items	<i>(In dollars)</i>		
	2001/02	2002/03	2003/04
Preharvest costs:			
Operating costs:			
Transplants	800	800	900
Fertilizer and lime	260	280	300
Fumigant	560	596	700
Other pesticides	679	718	778
Labor	426	426	431
Machinery	330	330	370
Interest	152	156	169
Miscellaneous	991	1,001	1,066
Subtotal	4,198	4,307	4,714
Fixed costs:			
Land rent	400	400	400
Machinery	125	125	125
Management	914	935	1,014
Overhead	1,143	1,169	1,268
Subtotal	2,582	2,629	2,807
Total preharvest costs	6,780	6,936	7,521
Harvest and marketing costs:			
Harvest, pack, and haul	1,760	1,760	3,278
Containers	1,045	1,045	1,045
Selling	550	550	550
Subtotal	3,355	3,355	4,873
Total production costs	10,135	10,291	12,394

Note.—These are the most current data available.

Note.—These production-cost budgets are constructed based on input prices obtained from various industry sources and are believed to reflect typical costs of production for growers in a given production area, but do not necessarily reflect the actual industry average cost of production.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Data for domestic shipments are obtained by the U.S. Department of Agriculture, from various sources, including Federal Marketing Order administrative committees, Federal-State Inspection Service, shippers, and transportation agencies. Mexico data are border-crossings from records of the U.S. Department of Agriculture.

Note.—Because of rounding, figures may not add to the totals shown.
