On July 11, 2025, the ALJ issued the Final Initial Determination ("Final ID") finding a violation of section 337 by Insta360 with respect to the D'435 patent and no violation with respect to the five utility patents. Final ID at 274-75. Specifically, the Final ID found: (1) claims 1 and 5 of the '894 patent were not infringed, were not invalid, and were satisfied for the technical prong of the domestic industry requirement; (2) claims 13 and 14 of the '840 patent were not infringed, claim 13 was not invalid but claim 14 was invalid, and claims 13 and 14 were satisfied for the technical prong; (3) claims 4 and 8 of the '832 patent were infringed, were invalid, and were satisfied for the technical prong; (4) claims 1, 2, 5, and 6 of the '052 patent were infringed (for the wide-angle lens products only), were invalid, and were satisfied for the technical prong; (5) claim 1 of the '413 patent was not infringed, was invalid, and was satisfied for the technical prong; and (6) the claim of the D'413 patent was infringed, was not invalid, and was satisfied for the technical prong. *Id.*

On July 25, 2025, GoPro filed a petition for review of the Final ID's findings of no violation for all five utility patents, and a contingent petition for review on certain issues regarding the design patent. Also on July 25, 2025, Insta360 filed a petition for review of the Final ID's finding of violation of the design patent, and a contingent petition for review on certain issues regarding four of the utility patents. On August 4, 2025, GoPro and Insta360 opposed each other's petitions.

On September 11, 2025, the Commission determined to review the Final ID in part as to the '840 patent, '052 patent, and D'435 patent. Comm'n Notice (Sept. 11, 2025); 90 FR 44710-12 (Sept. 16, 2025). Specifically, the Commission determined to review the following issues: (1) the Final ID's findings relating to the limitation "determine a smoothed trajectory of the housing based on a look-ahead of the trajectory and one or more of a weight-balance parameter, a low-light high-pass parameter, and/or a stickiness parameter" (Element 1[g(i)]) of claim 1 and the additional limitations of claim 14 for the '840 patent; (2) the Final ID's findings relating to the limitation "wherein the output images include the sub-frames remapped from the input lens distortion centered in the fields of view of the input images to the desired lens distortion centered in the reduced fields of view to transform the different lens distortion effects present in the sub-frames to the desired lens distortion such that portions of the scene depicted in the sub-frames appear to have been captured using the reduced fields of view" (Element 1[g]) of the '052 patent; (3) the Final ID's findings regarding invalidity of the asserted claims of the '052 patent in view of Okubo U.S. Patent App. Pub. No. 2006/0017817; and (4) the Final ID's infringement findings for the D'435 patent. The Commission declined to review the remainder of the issues in the Final ID, including the findings of no violation for the '894, '832, and '413 patents. The Commission also noted that it would reconsider the domestic industry findings discussed in

Order No. 18 (Dec. 19, 2024), *unreviewed by* Comm'n Notice (Jan. 21, 2025).
