Product information, including uses/applications and source(s) of imports:

A camcorder is an electronic device combining a video camera and video recorder in one device. These camcorders record video images onto media known as mini-DVD, an optical recording disc measuring 80 cm in diameter. There are four separate recording formats for mini-DVD media: DVD-R, DVD-RW, DVD-RAM, or DVD+RW. The subject camcorders can record and reproduce images using all of these formats. This particular camcorder can also record video images on an internal 20G HDD, and incorporates a USB 2.0 port to permit video images to be uploaded to and downloaded from a computer. The covered camcorders are sourced principally from Japan.

Technical comments:

A reference to a patented technology has been removed in the suggested modified description shown on page 1; such limiting criteria are generally not desirable in the HTS because they limit the scope of a duty suspension to particular firms. Moreover, CBP has no way to ascertain whether products incorporate any particular patented technology, or to determine the size of the image sensing device.

3 The Commission may express an opinion on the HTS classification of a product to facilitate consideration of the bill. However, by law, only the U.S. Customs Service is authorized to issue a binding ruling on this matter. The Commission believes that the U.S. Customs Service should be consulted prior to enactment of the bill.
