protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 777(i)(1) of the Act and 19 CFR 351.210.

Dated: June 23, 2017

Ronald K. Lorentzen,
Acting Assistant Secretary for Enforcement and Compliance

Appendix I

Scope of the Investigation

The scope of this investigation covers finished carbon steel flanges. Finished carbon steel flanges differ from unfinished carbon steel flanges (also known as carbon steel flange forgings) in that they have undergone further processing after forging, including, but not limited to, beveling, bore threading, center or step boring, face machining, taper boring, machining ends or surfaces, drilling bolt holes, and/or deburring or shot blasting. Any one of these post-forging processes suffices to render the forging into a finished carbon steel flange for purposes of this investigation. However, mere heat treatment of a carbon steel flange forging (without any other further processing after forging) does not render the forging into a finished carbon steel flange for purposes of this investigation.

While these finished carbon steel flanges are generally manufactured to specification ASME B16.5 or ASME B16.47 series A or series B, the scope is not limited to flanges produced under those specifications. All types of finished carbon steel flanges are included in the scope regardless of size (which may or may not be expressed in inches of nominal pipe size), pressure class (usually, but not necessarily, expressed in pounds of pressure, e.g., 150, 300, 400, 600, 900, 1500, 2500, etc.), type of face (e.g., flat face, full face, raised face, etc.), configuration (e.g., weld neck, slip on, socket weld, lap joint, threaded, etc.), wall thickness (usually, but not necessarily, expressed in inches), normalization, or whether or not heat treated. These carbon steel flanges either meet or exceed the requirements of the ASTM A105, ASTM A694, ASTM A181, ASTM A350 and ASTM A707 standards (or comparable foreign specifications). The scope includes any flanges produced to the above-referenced ASTM standards as currently stated or as may be amended. The term "carbon steel" under this scope is steel in which:

(i) 0.87 percent of aluminum;
(ii) 0.0105 percent of boron;
(iii) 10.10 percent of chromium;
(iv) 1.55 percent of columbium;
(v) 3.10 percent of copper;
(vi) 0.38 percent of lead;
(vii) 3.04 percent of manganese;
(viii) 2.05 percent of molybdenum;
(ix) 20.15 percent of nickel;
(x) 1.55 percent of niobium;
(xi) 0.20 percent of nitrogen;
(xii) 0.21 percent of phosphorus;
(xiii) 3.10 percent of silicon;
(xiv) 0.21 percent of sulfur;
(xv) 1.05 percent of titanium;
(xvi) 4.06 percent of tungsten;
(xvii) 0.53 percent of vanadium; or
(xviii) 0.015 percent of zirconium.

Finished carbon steel flanges are currently classified under subheadings 7307.91.5010 and 7307.91.5030 of the Harmonized Tariff Schedule of the United States (HTSUS). They may also be entered under HTSUS subheadings 7307.91.5030 and 7307.91.5070. The HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope is dispositive.

Finished Carbon Steel Flanges From Italy: Final Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Department) determines that imports of finished carbon steel flanges (flanges) from Italy are being, or are likely to be, sold in the United States at less than fair value (LTFV). The final estimated weighted-average dumping margins of sales at LTFV are listed below in the section entitled “Final Determination.”

The period of investigation is April 1, 2015, through March 31, 2016.

DATES: Effective June 29, 2017.

FOR FURTHER INFORMATION CONTACT: Moses Song or Edythe Artman, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–5041, or (202) 482–3931, respectively.

SUPPLEMENTARY INFORMATION:

Background

On February 8, 2017, the Department published the Preliminary Determination in the Federal Register. In the Preliminary Determination, we postponed the final determination until no later than 135 days after the date of publication of the Preliminary Determination, in accordance with section 735(a)(2) of the Tariff Act of 1930, as amended (the Act).

The petitioners in this investigation are Weldbend Corporation and Boltex Manufacturing Co., L.P. The two mandatory respondents in this investigation are: (1) Metalfar Prototti Industriali S.p.A. (Metalfar); and (2) Officine Ambrogio Melesi & C. S.r.l.
in this investigation, Metalfar and Melesi/ASFO, was warranted, in accordance with sections 776(a)(1), 776(a)(2)(A)–(C), and 776(b) of the Act.3

**All-Others Rate**

As discussed in the Preliminary Determination, the Department based the selection of the all-others rate on the simple average of the three dumping margins calculated for subject merchandise from Italy alleged in the petition,4 in accordance with section 735(c)(5)(B) of the Act, and determined a rate of 79.17 percent. We made no changes to the all-others rate for this final determination.6

**Final Determination**

The final estimated weighted-average dumping margins are as follows:

<table>
<thead>
<tr>
<th>Producer or exporter</th>
<th>Weighted-average dumping margins (percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metalfar Prodotti Industriali S.p.A</td>
<td>204.53</td>
</tr>
<tr>
<td>Officine Ambrogio Melesi &amp; C. S.r.l./ASFO S.p.A ..........</td>
<td>204.53</td>
</tr>
<tr>
<td>All Other Producers and Exporters ................................</td>
<td>79.17</td>
</tr>
</tbody>
</table>

**Disclosure**

The estimated weighted-average dumping margins assigned to the mandatory respondents in this investigation in the Preliminary Determination were based on adverse facts available and the Department described the method it used to determine the adverse facts available rate in the Preliminary Determination. As we made no changes to this margin since the Preliminary Determination, no additional disclosure of calculations is necessary for this final determination.

**Continuation of Suspension of Liquidation**

In accordance with section 735(c)(1)(B) of the Act, the Department will instruct CBP to require a cash deposit for such entries of merchandise. Pursuant to section 735(c)(1)(B)(ii) of the Act, CBP shall require a cash deposit equal to the weighted-average amount by which normal value exceeds U.S. price, as follows: (1) For Metalfar and Melesi/ASFO, the cash deposit rates will be equal to the estimated weighted-average dumping margin which the Department determined in this final determination; (2) if the exporter is not a firm identified in this investigation but the producer is, then the cash deposit rate will be equal to the estimated weighted-average dumping margin established for the producer of the subject merchandise; (3) the cash deposit rate for all other producers and exporters will be 79.17 percent, as discussed in the “All-Others Rate” section and as listed in the chart, above. The instructions suspending liquidation will remain in effect until further notice.

**U.S. International Trade Commission Notification**

In accordance with section 735(d) of the Act, we will notify the U.S. International Trade Commission (ITC) of our final determination. Because the final determination in this proceeding is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports, or sales (or the likelihood of sales) for importation of finished carbon steel flanges from Italy no later than 45 days after this final determination. If the ITC determines that material injury or threat of material injury does not exist, the proceeding will be terminated and all cash deposits will be refunded. If the ITC determines that such injury does exist, the Department will issue an antidumping duty order directing CBP to assess, upon further instruction by the Department, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the “Continuation of Suspension of Liquidation” section.

**Notification Regarding Administrative Protective Orders**

This notice will serve as a reminder to parties subject to administrative
protective orders (APOs) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and notice are issued and published in accordance with sections 735(d) and 777(i) of the Act and 19 CFR 351.210(c).

Ronald K. Lorentzen,
Acting Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The scope of this investigation covers finished carbon steel flanges. Finished carbon steel flanges differ from unfinished carbon steel flanges (also known as carbon steel flange forgings) in that they have undergone further processing after forging, including, but not limited to, beveling, bore threading, center or step boring, face machining, taper boring, machining ends or surfaces, drilling bolt holes, and/or deburring or shot blasting. Any one of these post-forging processes suffices to render the forging into a finished carbon steel flange for purposes of this investigation. However, mere heat treatment of a carbon steel flange forging (without any other further processing after forging) does not render the forging into a finished carbon steel flange for purposes of this investigation.

While these finished carbon steel flanges are generally manufactured to specification ASME B16.5 or ASME B16.47 series A or series B, the scope is not limited to flanges produced under those specifications. All types of finished carbon steel flanges are included in the scope regardless of pipe size (which may or may not be expressed in inches of nominal pipe size), pressure class (usually, but not necessarily, expressed in pounds of pressure, e.g., 150, 300, 400, 600, 900, 1500, 2500, etc.), type of face (e.g., flat face, full face, raised face, etc.), configuration (e.g., weld neck, slip on, socket weld, lap joint, threaded, etc.), wall thickness (usually, but not necessarily, expressed in inches), normalization, or whether or not heat treated. These carbon steel flanges either meet or exceed the requirements of the ASTM A105, ASTM A694, ASTM A181, ASTM A350 and ASTM A707 standards (or comparable foreign specifications). The scope includes any flanges produced to the above-referenced ASTM standards as currently stated or as may be amended. The term “carbon steel” under this scope is steel in which:

(a) Iron predominates, by weight, over each of the other contained elements;
(b) The carbon content is 2 percent or less, by weight; and
(c) none of the elements listed below exceed the quantity, by weight, as indicated:
(i) 0.87 percent of aluminum;
(ii) 0.0105 percent of boron;
(iii) 10.10 percent of chromium;
(iv) 1.55 percent of columbium;
(v) 3.10 percent of copper;
(vi) 0.38 percent of lead;
(vii) 3.04 percent of manganese;
(viii) 2.05 percent of molybdenum;
(ix) 20.15 percent of nickel;
(x) 1.35 percent of niobium;
(xi) 0.20 percent of phosphorus;
(xii) 0.21 percent of phosphorus;
(xiii) 3.10 percent of silicon;
(xiv) 0.21 percent of sulfur;
(xv) 1.05 percent of titanium;
(xvi) 4.86 percent of tungsten;
(xvii) 0.53 percent of vanadium; or
(xviii) 0.015 percent of zirconium.

Finished carbon steel flanges are currently classified under subheadings 7307.91.5010 and 7307.91.5050 of the Harmonized Tariff Schedule of the United States (HTSUS). They may also be entered under HTSUS subheadings 7307.91.5030 and 7307.91.5070. The HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope is dispositive.
